Survey	Institute for Human Rights and Business	NGO	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	The proposals encompass the maximum level of possible simplification. Any further simplification would undermine the goals of the ESRS and the EU's wider goals. We welcome the move away from an approach that is too prescriptive and may result in companies focusing on disclosure compliance rather than risk prevention and mitigation. However, this draft places too much hope on good practice by business, which will result in incomparable data and an uneven playing field. We suggest that a middle ground be sought by providing additional guidance, such as (i) The examples included in the previous version (ii) Guidance for transition plans, which many companies still lack clarity on (iii) Sector-specific approaches with dedicated disclosures or guidance documents, allowing the identification of sector-wide risks and a level playing field between businesses, without overburdening them.			
Survey	Institute for Human Rights and Business	NGO	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree				
Survey	Institute for Human Rights and Business	NGO	United Kingdom	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	We welcome the move away from an approach that is too prescriptive and may result in companies focusing on disclosure compliance rather than risk prevention and mitigation. However, this draft places too much hope on good practice by business, which will result in incomparable data and an uneven playing field. We suggest that a middle ground be sought by providing additional guidance, such as (i) The examples included in the previous version (ii) Guidance for transition plans, which many companies still lack clarity on (iii) Sector-specific approaches with dedicated disclosures or guidance documents, allowing the identification of sector-wide risks and a level playing field between businesses, without overburdening them.			
Survey	Institute for Human Rights and Business	NGO	United Kingdom	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree				
Survey	Institute for Human Rights and Business	NGO	United Kingdom	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	While we understand the benefit of a shorter ESRS, we would welcome the retention of the "May disclose" reporting points as they can provide a helpful framework for frontrunners who want to go beyond simple compliance. If preferable, these reporting points may be included in an Appendix to the ESRS. We welcome the move away from an approach that is too prescriptive and may result in companies focusing on disclosure compliance rather than risk prevention and mitigation. However, this draft places too much hope on good practice by business, which will result in incomparable data and an uneven playing field. We suggest that a middle ground be sought by providing additional guidance, such as (i) The examples included in the previous version (ii) Guidance for transition plans, which many companies still lack clarity on (iii) Sector-specific approaches with dedicated disclosures or guidance documents, allowing the identification of sector-wide risks and a level playing field between businesses, without overburdening them.

Survey	Institute for Human Rights and Business	NGO	United Kingdom	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	The relief on financial effects is concerning. Financial effects are a key principle of financial materiality and are also embedded in the IFRS. While we understand the difficulty in assessing anticipated financial effects, the ESRS is a key opportunity to drive methodological and technical innovation for these assessment. While initial disclosures will be limited, they will be crucial, and data will improve over time. We strongly recommend this relief be removed. The relief for "undo cost and effort" is too generic. It will allow companies to omit critical KPIs and create an uneven playing field. While it is important to reduce the burden, this is already achieved through (i) the materiality process (ii) the reduction in the number of "shall disclose" reporting indicators and (iii) the removal of the "may disclose" indicators, which are the ones that may be omitted if data collection is deemed too difficult. If further relief is required, we recommend qualifying statements.			
Survey	Institute for Human Rights and Business	NGO	United Kingdom	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	The relief for "undo cost and effort" is too generic. It will allow companies to omit critical KPIs and create an uneven playing field. While it is important to reduce the burden, this is already achieved through (i) the materiality process (ii) the reduction in the number of "shall disclose" reporting indicators and (iii) the removal of the "may disclose" indicators, which are the ones that may be omitted if data collection is deemed too difficult. If further relief is required, we recommend qualifying statements.			
Survey	Institute for Human Rights and Business	NGO	United Kingdom	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	The relief on financial effects is concerning. Financial effects are a key principle of financial materiality and are also embedded in the IFRS. While we understand the difficulty in assessing anticipated financial effects, the ESRS is a key opportunity to drive methodological and technical innovation for these assessment. While initial disclosures will be limited, they will be crucial, and data will improve over time. We strongly recommend this relief be removed. If the relief is to be retained, we recommend option 1 be prioritised over option 2.			
Survey	Institute for Human Rights and Business	NGO	United Kingdom	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree				
Survey	Institute for Human Rights and Business	NGO	United Kingdom	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	We strongly support the closer alignment with the IFRS which will simplify reporting and allow greater interoperability			
Survey	Institute for Human Rights and Business	NGO	United Kingdom	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Institute for Human Rights and Business	NGO	United Kingdom	22.S1	Comments on deleted datapoints in ESRS S1	I partially agree and partially disagree	The disclosure requirement for adequate wages is inadequate as it requires companies to determine whether wages in each context align with ILO wage-setting principles. This process will be burdensome for companies and will not allow fair comparisons. The disclosure should be amended to reference adequate, living or fair wages, benchmarked against available criteria by the ILO or - ideally - developed by the EU Commission. The percentage of workers who took family-related leave should be reintroduced as part of the work-life balance metric.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Institute for Human Rights and Business	NGO	United Kingdom	22.S3	Comments on deleted datapoints in ESRS S3	I partially agree and partially disagree	We strongly support the retention of sector-agnostic standards ESRS S3 (Affected communities) which requires "an explanation of the general approach the undertaking takes to identify and manage any material actual and potential impacts on affected communities in relation to communities' economic, social and cultural rights (for example, adequate housing…)". With the housing crisis getting increasingly worse across Europe, it's crucial that this reference be retained in the final ESRS.			
Survey	Institute for Human Rights and Business	NGO	United Kingdom	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Institute for Human Rights and Business	NGO	United Kingdom	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Institute for Human Rights and Business	NGO	United Kingdom	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	Institute for Human Rights and Business	NGO	United Kingdom	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets				
Survey	Institute for Human Rights and Business	NGO	United Kingdom	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadequwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	The disclosure requirement for adequate wages is inadequate as it requires companies to determine whether wages in each context align with ILO wage-setting principles. This process will be burdensome for companies and will not allow fair comparisons. The disclosure should be amended to reference adequate, living or fair wages, benchmarked against available criteria by the ILO or - ideally - developed by the EU Commission.			
Survey	Institute for Human Rights and Business	NGO	United Kingdom	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	The previously drafted gender pay gap metric is more appropriate and should be included ahead of this revised version			
Survey	Save the Children	NGO	Sweden	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	Save the Children believes that it is important that the double materiality approach (DMA) has been maintained in the simplification efforts as well as its alignment with the due diligence steps and international standards. Save the Children also welcomes the definition of affected stakeholders that explicitly includes "persons in vulnerable situations" (now AR 10), as children are part of this group. This is in line with the UN Guiding Principles on Business and Human Rights and the OECD Guidelines on Multinational Enterprises for Responsible Business Conduct. Specifically considering children in the DMA will allow companies to identify and assess specific impacts on children that are often severe, but many times remain invisible. Any further simplification would misalign the ESRS with international standards and companies' practice, thus creating different approaches to DMA that would make comparability among sustainability reports challenging.

Survey	Save the Children	NGO	Sweden	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	Save the Children agrees that the maintenance of the 4-part structure of the social standards is welcome as impacts, risks and opportunities vary depending on the type of stakeholders. This allows preparers to better understand the issues and communicate them internally and externally. Conversely, in the social topical standards, requirements to further disclose the characteristics of the undertaking's stakeholders, including whether these are persons in vulnerable situations, such as children and young workers, have been deleted (ESRS S1 DR related to ESRS 2 SBM-3, AR 8; ESRS S2 DR related to ESRS 2 SBM-3, AR 8; ESRS S3 DR related to ESRS 2 SBM-3, 9(a); ESRS S4, DR related to ESRS 2 SBM-3, 10(a)). This amendment ignores that impacts on different stakeholders requires different action and that a company's strategy and business model might affect stakeholders differently, such as children. For example, as exemplified by the UN Committee on the Rights of the Child in its General Comment no 25 on "children's rights in the digital environment": "The digital environment includes businesses that rely financially on processing personal data to target revenue-generating or paid-for content, and such processes intentionally and unintentionally affect the digital experiences of children. Many of those processes involve multiple commercial partners, creating a supply chain of commercial activity and the processing of personal data that may result in violations or abuses of children's rights, including through advertising design features that anticipate and guide a child's actions towards more extreme content, automated notifications that can interrupt sleep or the use of a child's personal information or location to target potentially harmful commercially driven content". Absence of this information from sustainability reports would impede investors from assessing the undertaking's sustainability performance. Save the Children recommends re-instating these DR and AR in the social standards.			
Survey	Save the Children	NGO	Sweden	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)				
Survey	Save the Children	NGO	Sweden	22.ESRS2	Comments on deleted datapoints in ESRS 2	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	Save the Children suggests that in ESRS S1 new para 2: the UN Convention on the Rights of the Child should be added to align with the text of the CSRD (Recital 49). ESRS S1 14(b): information on whether child labour is widespread or systematic in the context where companies operates and the operations that are at significant risk of incidents of child labour is important information to help companies identify and manage their material impacts. Such information is necessary already at the DMA stage. This information is also relevant for investors and users to assess the performance of the undertaking. ESRS S1 new para 34(d): parental leave is an equally important datapoint to achieve both gender equality and children's rights. Evidence shows that longer periods of paid parental leave (for both mothers and fathers) improve child health and lower poverty. ESRS S1 old para. 93(b): the datapoint on the percentage of entitled employees that took family related leave with a gender breakdown is essential to understand the real effectiveness of companies' policies as it can indicate whether there are barriers to employees in taking advantage of existing work-life balance policies. ESRS S1-1 old AR13: the description of existing policies on child labour is essential information for both investors and other users. In addition, when it comes to children's rights this is something that most companies already disclose. ESRS S1 DR related to ESRS 2 SBM-3, AR 8; ESRS S2 DR related to ESRS 2 SBM-3, AR 8; ESRS S3 DR related to ESRS 2 SBM-3, 9(a); ESRS S4, DR related to ESRS 2 SBM-3, 10(a): see answer to question 14.			
Survey	Save the Children	NGO	Sweden	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Save the Children welcomes the fact that there is no change to the definition of child labour in the Glossary as it is aligns with the international child rights legal framework (UN Convention on the Rights of the Child and ILO Conventions).			
Survey	Stockholm Resilience Centre	Academia	Sweden	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I disagree	We note grave concerns with the amended text as double materiality has been weakened in both definition and operationalization. In consequence, clarity regarding definition and approach to DMA are compromised. For example, deletion of §28 ESRS 1 appears dubiously justified under the claim that this streamlines content and simplifies understandings of the DMA, when in fact proposed changes (reformulation under §22) reduce the clarity of the DMA process. The CSRD/ESRS rests on the DM principle. The amended text must therefore explicitly specify that prominence is given to the double materiality as a general filter, and that requirements are subject to it. However, the text now refers only to materiality, introducing ambiguity and room for misinterpretation. We see serval risks with this amendment: Ambiguity will likely mean that companies use financial materiality as a general filter, in which case many environmental impacts not deemed financially material will be excluded. Different undertakings will (or have the flexibility to) identify different material impacts, even if they operate in the same sectors. This necessarily undermines reliability and comparability of said information for investors. Underreporting will create potentially large gaps in impact information, undermining assessments of risks and opportunities. How large a gap in impact information will remain unknow as impact reporting is not guided by any scientific benchmark. This will create large uncertainties regarding the representativeness and usefulness of the information generated by ESRS. Above listed issues will undermine the decision-usefulness of the information for investors, as reliable risk estimates fundamentally depend on credible impact assessments. We argue for a DMA process underpinned by scientific guidance, and that the EC solicit the expertise of the scientific community to develop this. Our organization stands ready to accept.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Stockholm Resilience Centre	Academia	Sweden	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	Guidance is valuable, but the complexity by which environmental impacts translate to risks introduces the probability of underreporting systemic risks because of a lack of understanding about the causal connections between the two. SRC recommends erring on the side of gross impact disclosure, especially for environmental impacts where systemic risks remain despite mitigation (e.g. biodiversity loss, climate tipping points). We recognize the tension/ debate in this regard and strongly recommend that EFRAG collaborate with scientific knowledge partners such as SRC and iDiv and others to ensure that streamlining does not come at the expense of relevance, reliability, and verifiability. This should be done in revision process and the aforementioned institutions express their willingness to help with field testing. Subjective materiality remains an issue for this ESRS 1 guidance (see Q11). We therefore emphasize that environmental impacts are inherently linked to human rights issues and must therefore be prioritized in a way that advances severity considerations first and foremost. For this, scientific knowledge and grounding for materiality assessments is crucial. Remediation impacts must be assessed in accordance with scientific knowledge and praxis, and valuation guidance will be needed to translate these impacts into disclosures. We believe such guidance should be informed in dialogue with scientific knowledge partners in the revision process.			
Survey	Stockholm Resilience Centre	Academia	Sweden	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	In line with our response to Q 11, we are concerned that the simplification and amendment of text has introduced an ambiguity in the materiality filter that is to guide all subsequent reporting requirements for a reporting organization. As noted under Q11, the effect of this ambiguity is likely to be a reduced usefulness of the information for all users of the disclosures, as it will undermine comparability, increase uncertainty surrounding the reliability and representativeness of the information, which in turn affects its reliability for further risk assessments.			
Survey	Stockholm Resilience Centre	Academia	Sweden	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	We recognize the tension between costs and preserving the transparency needed to achieve the objectives of the EU Green Deal. However, we have grave concerns that the current amendments and the introduced relief for "undue cost or effort", including for the calculation of metrics, will encourage perpetual underreporting. For some of the environmental impact data in the DR it is natural that the initial implementation and subsequent internal reorganization to gather such information may result in costs. As with any initial investment, this cost would be expected to abate over the subsequent years. Introducing this relief poses a high risk that companies who do not currently have appropriate data structures in place to gather the information will deem the cost too high and hence refrain from reporting, referring to this relief. This would be a highly negative outcome of the amendment. We also find the introduced relief for lack of data quality of metrics (ESRS 1 §91) to be problematic as this will undermine the relevance and usefulness of the disclosures. For both undue costs and data quality relief we recommend a structured and time limited approach, where a transition period can be granted for gradual implementation, but where after a given time period the relief shall be phased out. This would reduce the likelihood of perpetual underreporting or poor quality disclosures.			
Survey	Stockholm Resilience Centre	Academia	Sweden	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We strongly support these exceptions related to ESRS E 3 and 4.			
Survey	Stockholm Resilience Centre	Academia	Sweden	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	Faithful presentation requires that disclosed information be complete, neutral, and accurate. As noted under Q11, we see a real and tangible risk that unless the materiality filter to be used is clarified as being a double materiality filter, there is a high risk that fair presentation will be compromised as environmental and social impacts that are not deemed to be immediately financially material are likely to be excluded. This will be only a partial presentation of information and will negatively affect the usefulness of said information for both primary users and other users. We call for a clarification of fair presentation in relation to double materiality and for an involvement of the scientific community in anchoring the Qualitative Characteristics of Information for environmental impacts in science. This would ensure that the fundamental characteristics relating to relevance, completeness, neutrality, accuracy, verifiability and comparability would be satisfied. Furthermore, we suggest that guidance be developed together with scientists to support the DMA process as well as other critical decisions, such as 'appropriate level of aggregation' (e.g. ESRS 1 §51), which if left up to the discretion of individual reporting organizations will likely undermine the principle of fair presentation.

Survey	Stockholm Resilience Centre	Academia	Sweden	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We strongly maintain that intensity targets, while capturing efficiency, are highly likely to mask rising emission levels. Allowing investors to continue without absolute targets de-emphasizes pressure on them to not just ensure their portfolio companies have targets but also timebound milestones for significant reductions. Cumulative assessments are needed to ensure alignment with EU targets and global climate goals, and for this we need absolute targets. We recognize that growth of companies with relatively low carbon intensity measures will result in a growing absolute carbon footprint of that asset. If this growth means that other more carbon intense companies are removed from the market this should not affect the overall carbon footprint of an investor's portfolio and would thus be a non-issue for investors with an absolute target. However, if the entire market grows and companies with a higher carbon intensity remain on the market, supported by investors and without any timebound targets to reduce absolute (and relative) emissions, this will result in failure to meet the net zero targets and transgression of critical environmental boundaries.			
Survey	Stockholm Resilience Centre	Academia	Sweden	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	Biodiversity loss is driven by environmental pressures and IPBES has identified 5 key direct drivers/pressures. In corporate reporting it is therefore important to make a distinction between the drivers of biodiversity loss/change and biodiversity outcomes. We suggest that ESRS adopt an approach where targets for biodiversity are quantitative, location-specific, and anchored in key drivers of biodiversity change identified by IPBES. Targets should include: •GHG emissions •Land(/sea) use change •Freshwater use •Pollution •Invasive species All targets should specify a baseline year, a target year, and a geographical scope—preferably one target for each operational location. If quantitative targets are unavailable, undertakings should be required to provide a plan for developing such targets. This approach would ensure that biodiversity targets are linked to the underlying drivers of biodiversity loss and not to convoluted biodiversity metrics, such as biodiversity footprints. Such tools will not offer a consistent and comparable measure even for the same undertaking over time as the underlying models and characterization factors change as science evolves. Furthermore, to output an accurate biodiversity metric footprinting tools require location specific data on environmental pressure. Used with revenue data they return output measures that do not satisfy the qualitative characteristics of Information as stated in Appendix B or ESRS 1. An approach focused on targets for drivers of biodiversity loss would also further strengthen the alignment of ESRS with the Global Biodiversity Framework. However, we do note that the current structure of the topical standards makes these targets awkward, since the key pressures driving biodiversity loss are dispersed across different standards (see response to Q33). Despite this, these biodiversity-related targets would provide measurable and actionable information that is essential for businesses to mitigate biodiversity risk and improve their sustainability strategy.			
Survey	Stockholm Resilience Centre	Academia	Sweden	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	We feel compelled to comment on the overall structure of the ESRS in relation to biodiversity. Biodiversity loss is driven by environmental pressures. In corporate reporting it is therefore important to make a distinction between the drivers of biodiversity loss/change and biodiversity outcomes. We note a somewhat awkward structure of the ESRS, where E1-3 provide information on three key drivers of biodiversity change identified by IPBES (climate, water and pollutants), but E4 asks for information on biodiversity outcomes. The remaining two key drivers of biodiversity (land/sea use and invasive species) are 'hidden' as a DR under different topical standards. land/sea use change DR appear under E1 and E4 and invasive species appears as a sub-topic within E4 but is only a DR if biodiversity is deemed material. Combined with the issues identified in relation to DM (see response to Q11) this structure risks exclusion or underreporting of information about corporate pressures representing these two drivers of biodiversity loss which are essential for scientifically grounded assessments of biodiversity impacts. Such assessments are generally modelled since biodiversity outcomes most often cannot be measured directly without significant costs. Biodiversity impact models do, however, require information on the key environmental pressures and their location. In its current form, the essential information on environmental pressures driving biodiversity loss are scattered across 4 different topical sandards, and each must pass through the materiality filter before becoming a required datapoint.			
Survey	Stockholm Resilience Centre	Academia	Sweden	33.E_4.	ESRS E4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	We believe the issues with the structure will result in many companies not disclosing information about some or all of their environmental pressures (and locations) in a way that makes reliable and science-based biodiversity impact assessments possible. We emphasize that collection/disclosure of environmentally material environmental pressures by companies could and should be combined with empirical measures of biodiversity impacts as these methods develop. ESRS should therefore encode this flexibility to report empirical measures of biodiversity (e.g. eDNA) but this should be complementary, and not replace mandated disclosures about environmental pressure. We note that definition of 'near' to Biodiversity Sensitive Areas is now included in the new ARs, but given the importance for this definition in guiding DR E4-2, we find the definition lacking in clarity. Who determines the capacity for negative impact and based on what? Who evaluates the quality and relevant characteristics of a buffer zone, and based on what? For the AR8 §20 to have meaningful effect we recommend that scientifically anchored guidance be developed to guide the determination of 'near' in the context of BSAs. We note that DPs that covered resilience and strategy have been removed from the topical standard and replaced with a new focus on Transition Plans, where this type information should be provided instead. However, Transition Plans shall only be disclosed if they are already publicly available from the organization, leading to there being no obligation or urgency to develop such a plan. In short, it becomes very easy to opt out of disclosing information on strategy even if it is highly material.			
Survey	Stockholm Resilience Centre	Academia	Sweden	33.E_5.	ESRS E5:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	We note and strongly support that the new DR E4-5 centralizes the obligation to report location for material biodiversity impacts. However, the disaggregation principle must be accompanied by science-based guidance regarding what can be considered an appropriate level of aggregation/disaggregation (see feedback on development of scientific guidance Q11). In DPs focusing on disclosure of materials or products, a new writing has been added that "key products/materials" should be disclosed. This new focus on 'key' introduces room for undertakings to themselves decide what constitutes a key material to report, leading to underreporting of environmentally harmful products or materials if they are not considered significant enough by the reporting organization.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Stockholm Resilience Centre	Academia	Sweden	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Guidance is valuable, but the complexity by which environmental impacts translate to risks introduces the probability of underreporting systemic risks because of a lack of understanding about the causal connections between the two. Simplification must not dilute the essential message: companies operate within ecological limits. ESRS should remain a tool to effectively connect and align corporate reporting with the broader EU and international framework of economic and environmental instruments, including the Green Deal, Paris Agreement, and CBD/GBF. The structured nature of this consultation questionnaire means we have not been able to provide detailed suggestions for changes but we strongly urge EFRAG to include scientific knowledge partners in the revision process.			
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We believe that the proposed changes to the double materiality assessment (DMA) represent a significant step forward in terms of clarity and simplification, but do not fully strike the right balance between simplification and robustness. On the positive side, the clarification of the limits to be considered in identifying impacts, risks, and opportunities (IROs), the elimination of redundancies, and the integration of inputs from risk management processes all represent progress. These measures increase consistency, reduce reporting costs, and enable a more effective link between financial and impact materiality. The option to report only sub-topics when they are materially relevant is also a practical improvement, as it avoids unnecessary obligations and may encourage companies outside the CSRD's scope to engage in this exercise as a useful tool. However, the revisions raise important risks. The generalized openness to the top-down approach, without clear criteria for its application, may lead large entities to adopt less in-depth methodologies, weakening comparability and limiting the usefulness of DMA as a strategic tool for sustainability management. Similarly, the possibility of conducting only qualitative assessments, without differentiating time horizons or breaking down severity into scale, scope, and irremediable nature, reduces objectivity and undermines credibility. This excessive simplification creates ambiguities that can be exploited to minimize transparency. The clarification that positive impacts cannot be confused with legal or regulatory obligations is a valuable development, as is the reinforcement of the need to disclose ongoing remediation actions and their results when a negative impact is material. These measures strengthen transparency and alignment with international best practices, reducing risks of greenwashing.In summary,we recognize important progress, but argue that simplification should not compromise the methodological integrity of DMA.Greater clarity is needed on when and for whom the top-down approach is justified, as well as minimum safeguards for rigor in qualitative analysis.			
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	We acknowledge that the new guidance on how to consider remediation, mitigation, and prevention actions in assessing the materiality of negative impacts represents a valuable effort to address one of the most debated implementation issues — the so-called "gross vs. net" dilemma. In principle, clarification enhances transparency and comparability by establishing when to consider the effect of actions and by requiring disclosure of ongoing remediation efforts. It also prevents companies from disregarding highly relevant impacts simply because they operate in sectors with strong preventive measures already in place. However, we share some of the concerns raised within EFRAG and by practitioners. The provisions are complex and create risks of inconsistent application across entities. In particular, the rule that potential impacts must be assessed on a "gross" basis when significant ongoing actions are required can lead to excessive reporting and confusion. At the same time, allowing entities to take credit for actions implemented before the occurrence of an actual impact introduces subjectivity and may reduce comparability between entities. The balance between recognizing proactive risk management and avoiding under-reporting of material issues remains fragile. We agree with the clarification that remediation actions implemented in the same reporting period should not reduce the severity assessment of actual negative impacts. This reinforces accountability and ensures that companies remain transparent about incidents, regardless of the corrective measures taken afterward. Similarly, the clarification that positive impacts cannot be offset against negative ones is a relevant safeguard to ensure transparency and avoid misrepresentation. The guidance provided is a step forward in addressing a long-standing gap, but it still requires clarification and stronger safeguards to ensure consistent application. Clearer thresholds, illustrative examples, and minimum criteria for when gross versus net assessment applies would be essential to ensure that the process generates useful and comparable information across sectors.			
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	The proposed amendments to improve readability, conciseness, and connectivity of ESRS sustainability statements represent a positive step forward. The introduction of clearer structures, harmonized reporting logic, and the option to include executive summaries all help to reduce complexity and make disclosures more user-friendly. These changes address legitimate concerns that reports under the original ESRS risked becoming excessively lengthy and difficult for stakeholders to navigate. However, the flexibility in structuring and the strong focus on conciseness may open the door for entities to exclude relevant information under the justification of simplification. The shift to more selective disclosures, while valuable to avoid immaterial detail, creates a risk of underreporting. Connectivity with financial reporting was enhanced through closer alignment with IFRS S1/S2, which is a positive development. But it should not come at the cost of reducing the richness of the information. For instance, anticipated financial effects (Option 2) limited to qualitative disclosures would severely weaken the link between sustainability and financial information. In summary, while we support the direction of improved usability and connectivity, the amendments need clearer safeguards to ensure that conciseness does not undermine transparency. The standards should ensure that the undertakings continue to provide a comprehensive and balanced picture of its actual impacts, risks and opportunities.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We recognize that the proposed restructuring of ESRS 2 and the topical standards addresses some of the key concerns raised in the first reporting cycle. By consolidating general disclosure requirements (policies, actions, targets, and metrics) into ESRS 2 and removing duplications from topical standards, the amendments simplify the architecture, reduce preparation effort, and improve usability, while contributing also to a less repetitive content. This creates clearer reporting logic and better connectivity across disclosures, which is consistent with feedback from preparers and advisory firms. That said, we do not consider that the amendments fully strike the right balance. Without clear safeguards, there is a real risk that entities will report selectively, omitting material information that is critical for stakeholders. The simplification effort should not undermine the ESRS ambition to provide comprehensive, decision-useful and comparable sustainability information. For instance, a company with suppliers in over 30 countries, including several with high risk of forced or child labor, might choose to disclose information only for the 'top 10' countries, being that this is now the criteria. As a result, serious human rights issues in smaller markets could be left unreported, even if they are critical for stakeholders to assess.			
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	We acknowledge that the amendments significantly improve the clarity and accessibility of the ESRS. Simplified language, harmonized structures across standards, and the introduction of illustrative guidance contribute to making the standards more user-friendly, particularly for first-time reporters. These changes directly address concerns raised during the first reporting cycle about complexity and technical jargon.			
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	The introduction of the Non-Mandatory Illustrative Guidance (NMIG) represents a positive step toward supporting companies, especially those with limited experience in sustainability reporting, in the implementation of the ESRS. However, its non-binding nature raises questions about its practical effectiveness, consistency of application, and alignment with the CSRD's objectives. The NMIG provides practical examples, templates, and interpretative support that can help companies understand how to apply complex disclosure requirements, particularly in areas such as double materiality, value chain boundaries, and environmental targets. It is especially helpful for undertakings who are reporting for the first-time, who may lack internal expertise or resources to interpret the standards on their own. It can also promote convergence in reporting practices across sectors and jurisdictions, improving comparability and auditability. Being non-mandatory, companies may choose to ignore or selectively apply the guidance, leading to inconsistencies in how disclosures are prepared and interpreted. The lack of formal status may also weaken its authority in regulatory or enforcement contexts, especially if national regulators interpret the ESRS differently. Additionally, there is a clear risk that auditors and assurance providers may not treat the NMIG as a reference point, being that it is non-biding, which could then create gaps between preparers and verifiers. To enhance the usefulness and clarity of the NMIG, we recommend that EFRAG: • Clarify the expected use of the NMIG in the context of assurance and supervisory review. • Consider elevating certain parts of the NMIG to mandatory application guidance, especially where consistent interpretation is critical (e.g., materiality assessment, value chain scope). • Ensure that the NMIG is regularly updated to reflect evolving best practices, sector-specific needs, and alignment with international frameworks (e.g., ISSB, GRI, TNFD).			
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The amendments introducing new burden reliefs respond to a legitimate concern raised by many preparers, especially first-time reporters and smaller entities: the cost and effort of gathering and validating data across complex value chains. Allowing the use of reasonable and supportable information without undue cost or effort and permitting estimates or partial coverage when data is not fully available are practical measures that will reduce pressure and make implementation more feasible. The transitional reliefs and the flexibility in scope adjustments following acquisitions and disposals are also pragmatic and welcome. On the other hand, we are concerned that the reliefs, as currently drafted, may create too much discretion and risk undermining transparency. While burden reduction is important, it must not compromise the credibility and comparability of disclosures. For instance, allowing entities to omit parts of their value chain due to data limitations could result in material blind spots, particularly in sectors with high upstream or downstream impacts. Without clear guidance and disclosure obligations about the scope of estimates, users may find it difficult to assess the reliability of the reported information. We also note that while the reliefs are designed to align with ISSB's IFRS S1 and S2, the balance is not fully achieved. In certain cases, the ESRS reliefs appear broader, which could reduce interoperability. Investors and other stakeholders expect consistency between the European and global frameworks, and any perception of "lowering the bar" in ESRS may weaken confidence in the comparability of sustainability reporting.			
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	The relief was necessary to make implementation feasible, but it must be framed as either a temporary option or be better explained. Companies should demonstrate progress year-on-year in improving data quality, ensuring that the relief does not become a permanent justification for incomplete reporting. In situations where data quality on metrics is limited this relief addresses a real challenge for many undertakings, particularly smaller entities or first-time reporters. The flexibility to use reasonable and supportable information available without undue cost or effort reflects practical realities of data collection across complex value chains. It also aligns ESRS more closely with ISSB's IFRS S1 and S2, which recognize the need for proportionality in early implementation. This should reduce reporting costs and provide a more realistic path to full compliance over time. However, if companies systematically claim data quality limitations, the credibility and comparability of sustainability disclosures may be undermined. Stakeholders expect transparency about how data gaps are handled, and relief cannot become an excuse for omitting material information.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	We strongly support Option 1 as the most balanced approach to anticipated financial effects. It maintains the obligation to disclose quantitative information wherever possible, while providing relief in cases where measurement is impracticable or where uncertainty is so high that figures would not be meaningful. This is consistent with the treatment in IFRS S1 and S2, ensuring greater interoperability between ESRS and global standards. It also has the merit of clarifying conditions for relief, which in our view, provides sufficient flexibility to reduce burden while maintaining the credibility and comparability of reports. It acknowledges the challenges undertakings face, especially in early years, but still reinforces the principle that anticipated financial effects are fundamental to connectivity between sustainability and financial reporting. Option 2 would downgrade disclosures to a purely qualitative basis, leaving quantitative information entirely voluntary. This would represent a step backwards in sustainability reporting, especially in areas such as climate change, biodiversity, or pollution, where quantitative disclosures are on their way to became critical to investor decision-making.			
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	The amended paragraphs 40, 41, and 42 of ESRS E1 represent a clear effort to simplify disclosure requirements on anticipated financial effects of climate-related risks and opportunities. This simplification aligns with the broader goal of reducing the reporting burden, particularly for companies with limited resources or technical capacity. While the amendments improve clarity and alignment with IFRS S2, they may not fully meet the needs of users who require detailed and decision-useful information to assess climate-related financial risks and opportunities. The revised structure is more concise and readable, which facilitates implementation and may improve consistency across companies. The inclusion of a methodology disclosure requirement (paragraph 40(e)) enhances transparency and helps users understand how figures were calculated. Furthermore, alignment with IFRS S2 and the expectations of financial institutions supports interoperability and comparability in capital markets. However, the removal of detailed breakdowns, such as disaggregation by acute versus chronic risks, energy-efficiency classes, and expected liabilities, reduces the granularity of information available to users. The omission of scenario analysis references, previously linked to resilience assessments, also weakens the connection between strategic climate planning and financial disclosures. Moreover, the potential financial benefits from climate-related opportunities, previously addressed in paragraph 69, are no longer explicitly covered. This reduces visibility into how companies intend to capitalize on the transition to a low-carbon economy.While simplification may reduce reporting effort,it risks undermining the usefulness of disclosures for investors, analysts, and other stakeholders who need to understand the financial materiality of climate risks across time horizons, the strategic positioning of companies regarding climate opportunities, and the resilience of business models under different scenarios. To strike a better balance, we recommend that EFRAG reintroduce selected elements from the previous version, such as scenario analysis references and opportunity-related disclosures, and develop NMIG examples to guide companies in quantifying anticipated financial effects.			
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	There is a need for caution when considering whether the balance is fully achieved. While simplification has been delivered in the ESRS, some elements diverge from ISSB treatment and may cause confusion. For example, the option of purely qualitative disclosures for anticipated financial effects (Option 2) is not aligned with IFRS S1/S2, which expect quantitative information whenever possible. Allowing Option 2 would reduce comparability and undermine interoperability at precisely the point where convergence is most needed. Similarly, the broader reliefs introduced in ESRS risk creating a perception that European reporting is less rigorous than the ISSB baseline, which could damage the credibility of EU disclosures in global markets. However, one of the key strengths of the Amended ESRS is the clear effort to improve interoperability with the ISSB's IFRS S1 and S2. This alignment is critical for preparers operating internationally, who would otherwise face duplication and inconsistencies when reporting under both frameworks. The closer convergence on materiality (decision-useful information for users), the reinforcement of anticipated financial effects disclosures, and the harmonized structure around governance, strategy, risk management, and metrics/targets are positive steps.			
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	The deletion of voluntary "may disclose" datapoints improve usability and are likely to reduce costs. This simplification also increases focus, avoiding long reports filled with immaterial or redundant information, which stakeholders often found difficult to navigate. However, we are fully aware that there are risks of weakening the comprehensiveness of sustainability reporting in the EU, simplification should not come at the expense of transparency. In particular, steps must be taken to ensure that the remaining datapoints continue to capture the information that is necessary to fulfil the objectives of the EU Green Deal, especially in relation to climate, biodiversity, and social equity. In conclusion, while the reduction in datapoints is an important step towards proportionality, entities should be encouraged to disclose beyond the minimum when information is material, and EFRAG should closely monitor whether critical information gaps emerge under the amended framework.			
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We agree that the six datapoints identified are appropriately moved from voluntary ("may") to mandatory ("shall"), as they represent indicators that are decision-useful and good to ensure transparency.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	The rationale behind introducing these four additional mandatory datapoints seems reasonable, as they address areas of high stakeholder relevance and align ESRS with ongoing EU policy developments.			
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	Explicitly requiring undertakings to adopt the principle of fair presentation when preparing ESRS sustainability statements is an important clarification. This step strengthens the materiality filter by shifting the emphasis away from a purely compliance- and checklist-driven approach, towards one that prioritizes the faithful representation of material impacts, risks, and opportunities. Reducing the likelihood of excessive or immaterial information being reported, improving the relevance of disclosures for stakeholders. This amendment also enhances alignment with international standards. The concept of fair presentation is already embedded in IFRS Accounting Standards, ensuring conceptual consistency and interoperability. At the same time, adopting fair presentation introduces a necessary balance with simplification. One of the risks of the Amended ESRS is that over-simplification could create ambiguities and encourage companies to reduce reporting to the bare minimum. The fair presentation principle provides a safeguard. In conclusion, this amendment is both necessary and beneficial. It reinforces the purpose of the ESRS as more than a compliance exercise, ensuring that disclosures remain meaningful.			
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We do not support the exemption of financial institutions from reporting absolute GHG emission reduction targets. While intensity targets (e.g., emissions per unit of financing or investment) can provide useful insights into portfolio decarbonization pathways, they are insufficient on their own to convey the full scale of financed emissions and their alignment with global climate goals. There is a need to have information on both intensity and absolute figures to properly assess whether financial institutions are contributing to the EU Green Deal's objective of climate neutrality. We acknowledge the challenges faced by financial institutions in setting and achieving absolute reduction targets, given the reliance on client and investee data. However, this complexity does not justify exemption. There could be a way to put in place a phased-in approach with transitional reliefs, allowing institutions time to strengthen methodologies and data coverage. Exempting financial institutions from disclosing absolute GHG reduction targets would create a major gap in transparency and comparability, weakening both ESRS credibility and alignment with global standards.			
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	Under the previous ESRS, the requirement was clear: disclose for all countries where the undertaking employs 50 or more employees. This approach struck a fair balance between proportionality and decision-usefulness. It ensured that information was reported for all countries where there was a significant enough workforce to raise meaningful sustainability considerations, without being overly burdensome for entities with only very small presences globally. By limiting reporting to the "top 10 countries by workforce," the amendment risks excluding precisely those jurisdictions where social risks may be most acute, for example, countries with weaker labor protections, higher human rights risks, or systemic gender pay gaps. Fewer employees in such countries may still present material risks or impacts for both the company and affected stakeholders. Investors and regulators will lose visibility over these exposures, reducing the effectiveness for risk assessment. The argument of burden relief is not compelling. Once employee data is collected for workforce management, disclosing country-level information for all countries above the 50-employee threshold does not represent an unreasonable effort, especially considering the importance of these disclosures. We are in disagreement with the proposed amendment. The original threshold of 50 employees per country should be maintained, without a "top 10" limitation.			
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	There is value in clarifying the methodology for calculating adequate wages in non-EU countries. The hierarchy now proposed provides a clearer and more consistent framework for the undertakings. This reduces ambiguity, enhances comparability, and strengthens alignment with international human rights and labor standards. While the clarification is positive, practical guidance and safeguards will be necessary to ensure that entities apply the hierarchy in good faith and with sufficient rigor. For example, disclosure of the source, methodology, and assumptions used to determine adequate wages should be explicitly required. Without this, the datapoint risks becoming a minimal compliance exercise rather than a meaningful contribution to assessing social impacts in global operations. In conclusion, while we welcome clarification and agree with the direction of the amendment, we believe additional safeguards are required.			
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	I generally agree with the way the SFDR Principal Adverse Impacts (PAIs) have been incorporated into the Amended ESRS, because the approach delivers clear benefits in terms of regulatory coherence, interoperability and usability for financial market participants. By embedding SFDR datapoints directly into the ESRS architecture, undertakings can prepare one dataset that serves multiple reporting regimes (CSRD/ESRS, SFDR, EU Climate Benchmarks, and Pillar 3). This reduces duplication, provides clarity to investors subject to SFDR, and enhances consistency across the EU sustainable finance framework. As a suggestion for improvement, it would be very useful if each Disclosure Requirement (DR) explicitly included a reference indicating when a datapoint is linked to the SFDR. This would allow companies to immediately recognise that the information they are providing also fulfils an SFDR obligation, without having to consult a separate table or appendix. Such a direct reference within each DR would significantly improve usability and efficiency for preparers.

Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	EFRAG should review AR 26 in the Amended ESRS E4. While the original and now deleted AR 26 may have reflected approaches considered "outdated," it provided valuable methodological guidance for companies, particularly those in biodiversity-intensive sectors such as agriculture, forestry, infrastructure, and extractives, on how to define and disclose measurable biodiversity targets. Even non-traditional sectors (e.g., tourism, retail, real estate) are increasingly expected to address biodiversity impacts and dependencies. These sectors would benefit from practical examples such as habitat restoration (including urban habitats), nature-based solutions, or biodiversity-inclusive procurement practices. Moreover, the recommendations included in AR 26 were aligned with international frameworks, including the Kunming-Montreal Global Biodiversity Framework (Target 2 on restoration, Target 3 on conservation, Target 8 on minimizing impacts, and Target 15 on corporate disclosure), as well as guidance from the Taskforce on Nature-related Financial Disclosures (TNFD) and the Science-Based Targets for Nature (SBTN). The current AR on biodiversity targets (AR 17) appropriately emphasizes the importance of free, prior, and informed consent of local and Indigenous communities. However, it does not fully replace the practical function of AR 26, which offered concrete examples of how to express biodiversity-related targets in measurable terms. The absence of such examples may hinder companies' ability to operationalize biodiversity commitments, especially in sectors where biodiversity is not yet fully integrated into risk and impact management. Therefore, we recommend that EFRAG reintegrate a revised AR 26 that: • Retains examples such as the size and location of protected or restored areas, number of projects with improved ecological integrity, and recreated habitats; • Expands scope to include biodiversity investments, engagement with the value chain to reassess dependencies and impacts, and integration into procurement or land-use planning. Such guidance would support companies in setting material, sector-relevant, and actionable targets, while maintaining alignment with evolving global frameworks.			
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	While there is a need to acknowledge that simplification and burden reduction are important objectives of the Amended ESRS, removing this datapoint risks weakening transparency in an area that is central to social equity, fairness, and the EU's gender equality agenda. The unadjusted pay gap provides an important but limited insight, as it only measures average differences in pay between men and women without accounting for structural factors such as role, seniority, working hours, or contract type. The adjusted pay gap, by contrast, reflects whether employees performing comparable work receive equal pay. It is therefore a more accurate indicator of potential gender-based discrimination and of the effectiveness of company policies on equal pay and career progression. The adjusted gap is widely recognized as a best practice metric by investors, regulators, and civil society. Deleting it from ESRS may undermine the relevance of disclosures for users seeking to assess companies' progress on diversity, equity, and inclusion. Moreover, many undertakings calculate and disclose adjusted pay gaps, either voluntarily or in response to regulatory requirements in certain jurisdictions. It is recommended to reinstate the adjusted gender pay gap as a datapoint, to ensure that ESRS remain aligned with EU policy priorities on gender equality. Previously, this datapoint was voluntary, which allowed flexibility for entities with lower maturity while still encouraging leading companies to report. It could and should remain voluntary, but removing the option altogether is reductive.			
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	No, the current replacement and formulation of disclosure requirements G1-2 and G1-6 are not sufficient to meet the CSRD's objectives regarding SME protection. The previous G1-2 explicitly required companies to disclose policies to prevent late payments to SMEs and approaches to supplier relationships, including social and environmental criteria. This offered a clear mechanism to assess procurement practices and their impacts on SMEs. In the amended version, references to SMEs were removed, and the requirement reduced to a general statement on supplier relationships, mainly covering corruption and bribery. While aligned with simplification, this weakens visibility of SME-specific practices, particularly payment behavior and fair treatment. Companies may omit SME engagement altogether, reducing transparency and accountability. Similarly, the previous G1-6 required disclosure of average payment times, standard terms by supplier category (including SMEs), legal proceedings related to late payments, and contextual information on impacts. The amended version retains only two elements: standard payment terms (including SMEs) and number of legal proceedings. This shifts focus from impact to performance, eliminating requirements to explain how payment practices affect SMEs or to disclose improvement strategies. Such omissions undermine incentives for fairer practices, despite the CSRD's explicit aim of supporting SMEs. The removal of SME-specific disclosures limits stakeholders' ability to assess how companies contribute to or mitigate SME vulnerability, particularly in sectors where SMEs are structurally dependent on large buyers and where late payments have severe economic consequences. To align with CSRD objectives, we recommend that EFRAG: • Reintroduce SME-specific elements in G1-2 on payment policies and impact assessment; • Ensure G1-6 requires reporting on both performance (e.g., days to pay) and strategies to improve practices; • Include qualitative disclosures on SME engagement, such as support, capacity building, and fair contracting, within G1-2.			
Survey	GRACE - Empresas Responsáveis	Business association (other than association of financial institution)	Portugal	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The Amended ESRS represents a meaningful attempt to simplify reporting while still aligning with the EU Green Deal, albeit the balance might not be fully achieved. On the positive side, consolidation of requirements, clearer wording, and the reduction of immaterial datapoints will reduce reporting fatigue and may help companies focus their disclosures on the most material impacts, risks, and opportunities. This is aligned with the Green Deal's objective of steering resources towards the sustainability issues that matter most, with the principle of fair presentation acting as a safeguard, discouraging box-ticking reporting and reinforcing the link between sustainability performance and the EU's ambitions. We support burden reliefs and proportionality, but simplification should not create loopholes that weaken transparency on systemic risks. The broadened acceptance of purely qualitative DMA assessments, reduced disaggregation requirements, and the possibility to omit parts of the value chain under "undue cost or effort" could lead to the omission of information critical for tracking progress on climate neutrality, biodiversity protection, and social justice. Similarly, the proposal to exempt financial institutions from absolute GHG reduction targets and to limit workforce disclosures to the "top 10 countries" would leave significant blind spots in areas that the Green Deal explicitly aims to address, sustainable finance, and safeguarding labor rights and fair working condition.

I agree				
Survey	DGB	Trade union	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	The materiality analysis is the cornerstone of sustainability reporting, as sustainability matters are reportable only if material impacts, risks, or opportunities are identified through this process. It is reassuring and important that double materiality has been preserved, ensuring a thorough approach to sustainability reporting. The principle of double materiality must always be upheld and must not be weakened by any simplification or dilution of the regulation. We support including stakeholder engagement and recognizing employees and their representatives as key stakeholders, as suggested in the new draft. However, their involvement should not only be "central" but "mandatory" in the DMA process. It must also be added in the draft that employee representatives must participate in all key steps of the materiality analysis process. Employee representatives need to be involved in all stages of the materiality analysis, as they directly represent the interests of the workforce and possess unique insights into the everyday operations and challenges faced by employees. The amended ESRS 1 AR 11 no longer includes the explanation on stakeholder involvement in the materiality assessment process. Specifically, the previous standard emphasized that: "Engagement with affected stakeholders is central to the undertaking's ongoing due diligence process (see chapter 4 Due diligence) and sustainability materiality assessment. This in-cludes processes to identify and assess actual and potential negative impacts, which then inform the assessment of material impacts for sustainability reporting." This clarification from section 3.1 of the old standard must be reinstated. Otherwise, there is a risk that employee representatives will not be properly involved in these processes and will have no real influence.			
Survey	DGB	Trade union	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	The draft suggests that when determining material impacts, only gross risks are considered, and existing mitigation measures are not taken into account. We consider it important that companies report not just their net impacts but also their gross impacts, and the proposed text maintains this principle. For this reason, we support the draft.			
Survey	DGB	Trade union	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	Many explanations and examples, including guidance on calculations, have been removed. While this reduces the overall scope and complexity of the ESRS, it increases the need for external examples and support. Moreover, no prescribed structure of reporting is provided (e.g., general disclosures, environment, social, governance), leaving content organization to the company. This poses a risk to transparency and may make it difficult for users to locate the information they need.			
Survey	DGB	Trade union	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The elimination of duplicate requirements through the reassignment between general requirements (ESRS 2) and topic-specific standards significantly reduces the number of reporting points. However, it is unacceptable that the draft ESRS weaken stakeholder engagement by remov-ing essential reporting requirements on the involvement of employee representatives and other stakeholders. In particular, the deletion of reporting on strategic and business model changes in response to stakeholder views eliminates information that is crucial for transpar-ency and accountability. Equally concerning is the removal of provisions detailing how companies engage with their own employees and employee representatives about significant actual and potential positive or negative impacts, and how the perspectives of the workforce are reflected in decision-making processes. Unlike the old standards, the draft no longer specifies: •whether engagement takes place directly with employees or through their representa-tives, •at which stage(s) the engagement occurs, the type and frequency of such engage-ment, and •the role and highest-ranking position within the company responsible for ensuring that this dialogue happens and that its results are integrated into company practices. Leaving reporting on these critical processes optional undermines meaningful participation. Without clear and mandatory disclosure requirements, there is a high risk that employees and their representatives will not be adequately involved.

Survey	DGB	Trade union	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	Many of the 'may' (voluntary) data points should not be removed. Voluntary disclosures on working conditions for employees without collective agreements, for example, are important because they concern a particularly vulnerable group.			
Survey	DGB	Trade union	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	-The NMIG contains important explanations that were moved from the standards into the NMIG for the purpose of streamlining the standards. In our view, this does not represent a real improvement for users, since the NMIG, while not formally part of the standards, will in practice likely be treated as implementation guidelines. For this reason, and against the background of the stated goal of "burden reduction," the essential and indispensable content of the NMIG should either be reintegrated into the respective standards or the NMIG should formally become part of the standards.			
Survey	DGB	Trade union	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	The clause on "undue cost or effort" lacks sufficient clarity and leaves companies with too much discretion. Similarly, limiting the use of data in value chain reporting weakens transparency, as direct data is indispensable. In addition, the exemption for operations not deemed "significant drivers of IROs" creates excessive flexibility and weakens the reliability of reporting. The relief measures, in their current form, extend beyond what is reasonable and risk undermining the balance between feasibility and transparency.			
Survey	DGB	Trade union	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	Estimating financial effects is essential for integrating sustainability into strategy, planning, and risk management, and for determining financial materiality. Reporting these effects is key to aligning sustainability and financial reporting under the EU's double materiality approach. Companies must remain required to assess financial impacts to provide investors with reliable data and to support sound business planning.			
Survey	DGB	Trade union	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)				
Survey	DGB	Trade union	Germany	22.S1	Comments on deleted datapoints in ESRS S1	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	The reduction in both mandatory and voluntary data points far exceeds a reasonable balance between reporting effort and transparency. The deletion of the S-1 data points should be re-versed. It affects the following disclosures: •Breakdown of the company's age structure •Information on non-employees (except for their total number), as no further data is provided (e.g., deletion of disclosures on working conditions, fair remuneration, career development discussions, deaths due to illness) •Information on pension payments (social protection) •Breakdown by gender (e.g., employees without guaranteed working hours, persons with disabilities, career development discussions, training and skills development indi-cators) •Gender pay gap, adjusted by employee category or country/segment •Data point 'complaints filed with the OECD National Contact Point' •Voluntary disclosures on working conditions for employees without collective agree-ments. As part of the updated standards, several data points that were previously mandatory have now become voluntary. However, certain data points should remain mandatory, including participation in performance and career development, average training hours with a gender breakdown, parental leave uptake, and annual total remuneration adjusted for purchasing power differences. The reporting structure has been simplified to consist solely of topics and subtopics, which is acceptable as long as former sub-subtopics are fully integrated into their respective subtop-ics. While data points for S2 correspond to those of S1, those related to water and sanitation have been removed. These data points should be reinstated, as they are critical factors in the value chain outside of Europe.

Survey	DGB	Trade union	Germany	23.	Six datapoints exceptionally moved from “may” to “shall” In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, “may disclose” datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from “may” to “shall” subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	Adding a datapoint on training of the procurement team is needed to support the implementation of human rights in the supply chain. The addition of a datapoint on confirmed incidents of bribery is needed to improve transparency on the effectiveness of bribery/corruption policies and measures.			
Survey	DGB	Trade union	Germany	25.	Emphasis on ESRS being a “fair presentation” reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	Regarding fair presentation and regardless of the chosen approach - top-down or bottom-up - the result of the materiality analysis needs to be accurate, transparent, and free from distortion. The standards must ensure that any simplifications in the materiality analysis - such as the chosen approach or the omission of the consideration of time horizons or severity dimensions - do not result in incomplete or inadequate assessments. This requirement and the associated obligations should be emphasized much more strongly by the standards and clearly expressed.			
Survey	DGB	Trade union	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking’s employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	We very much welcome the improvements in country-specific reporting on employment. Reporting will now apply to the ten countries with the largest number of employees, with a threshold of 50 or more employees - instead of the previous requirement for countries repre-senting 10 % of the total workforce. For these "Top 10" countries, disclosures on employment numbers, collective bargaining coverage, and social dialogue are now mandatory. Shifting to a "Top 10" country approach is a clear step forward, as it ensures that reporting captures a larger and more representative portion of the workforce. Under the previous 10 % threshold, country-level disclosures often reflected only a small fraction of employees, leav-ing gaps in understanding the real impacts. Expanding coverage to the largest 10 countries provides more meaningful insights into how collective bargaining and social dialogue are ap-plied across different regions.			
Survey	DGB	Trade union	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	An analysis of the first year ESRS reports shows that most companies are simply reporting that they pay minimum wages, whereas the intention (as outlined in the ESRS Basis for Conclusions) is that companies should be enabled to disclose commitments to paying a wage "sufficient to support themselves and their families in dignity" as well as the extent to which they do this. This shows that the methodology for non-EU countries needs to be changed. Furthermore, the new ILO agreement on a methodology for living wages needs to be taken into account. While the proposed new methodology takes a step forward in both regards, two key changes are needed: •The methodology for reporting on 'adequate wages' should measure actual wages against an adequate/living wage for all employees, not only those within the EU. In particular, for employees outside the EU, the methodology should allow employees' actual wages to be measured: oA) against the local legal minimum wage only when this is set in line with the ILO principles on estimating living wages; or oB) against living wage estimates that are set in line with ILO principles on estimating living wages. •Companies should be able to rely on local legal minimum wages or living wage estimates when the authorities or organisations that set them provide public evidence of their alignment with the ILO principles for estimating living wages. Furthermore, the transitional provision for the EU needs to be reinstated, as not all Member States have transposed the Adequate Minimum Wage Directive.			
Survey	DGB	Trade union	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary (“may”) datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	The unadjusted gender pay gap should be kept as mandatory, since the methodology for calculating it is clear. The adjusted pay gap figure as voluntary, since the methodology for calculating the adjusted figure is not standardized.			
Survey	DGB	Trade union	Germany	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of “‘compatibility with 1.5 degrees’” for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	DGB	Trade union	Germany	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. I partially agree and partially disagree	S1 and S2: Regarding the social standards, we are opposed to the removal of key data points and the shift of previously mandatory data points to voluntary. We are concerned that the elimination of many worker-related data points will result in unspecific disclosures, providing less insight into impacts, risks, and opportunities. The reduction in specificity and granularity diminishes the usefulness of the reporting for understanding the real effects on different employee groups. At the same time, we fully support the improvements in country-specific reporting, particularly for disclosures on employment numbers, collective bargaining coverage, and social dialogue. We appreciate the clarification that, when a company applies ESRS S1, the following disclosures must always be reported: S1-5: Characteristics of the company's employees S1-6: Characteristics of the company's non-employee workers S1-16: Discrimination and other human rights violations. In addition, the draft now introduces reporting on all human rights incidents, rather than only "serious" cases. This represents a very positive improvement.

Survey	DGB	Trade union	Germany	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		In conclusion, the draft ESRS weaken stakeholder engagement by removing previously mandatory provisions. Specifically, it eliminates reporting on strategic and business model changes in response to stakeholder views, as well as requirements on how companies engage with employees and their representatives—covering who is consulted, when and how often, and which senior role is responsible. Turning these obligations into optional disclosures undermines transparency, accountability, and meaningful workforce participation. The scope of the definition of "own workforce" should be broadened to explicitly include franchise workers. On a positive note, we welcome the clarification in the draft that companies may voluntarily include information on non-material topics. In addition, the draft now includes explicit references to Article 19a(5) and Recital 52 of the CSRD, requiring management to inform and consult employee representatives and, where relevant, share their feedback with governing bodies. It also clarifies reporting on how boards are informed about the views and interests of key stakeholders, including employee representatives. This marks a notable step forward in transparency and stakeholder engagement and represents a significant enhancement in reporting clarity.			
Survey	World Benchmarking Alliance	NGO	Netherlands	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The weakening of requirements for value chain reporting in ESRS E2–E5 is particularly concerning. It would significantly reduce the decision-usefulness of disclosures. Many companies' most severe environmental impacts occur in their value chains, not their direct operations, so the current draft risks obscuring the majority of these companies' ecological footprint. Company disclosures regarding their value chain are already lagging far behind those for own operations. For example, WBA's Nature Benchmark shows that while 43% of assessed companies demonstrate evidence of reducing plastic use and waste in their own operations, only 7% and 17% respectively do so for upstream and downstream activities. Omitting value-chain metrics risks: - further reducing comparability and usefulness of disclosures for report-users, - creating uneven burden across sectors (with those with higher direct impacts disproportionately affected), and - undermining necessary collaboration along value chains to address systemic challenges. This approach would also diverge from best practice established by the TNFD, which requires disclosure of asset and activity locations across both operations and value chains. Flexibility on phased timelines may be justified, but it must not prevent companies from beginning their disclosure journey. We recommend reinstating robust value-chain disclosure requirements across ESRS E2, E3 and E4, with practical guidance to support implementation.			
Survey	World Benchmarking Alliance	NGO	Netherlands	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	E2; E3; E4; E5; S3	The removal of metric examples from ESRS E4 has created a significant gap, as companies often need support and guidance in identifying appropriate metrics to use. This runs the risk of reducing comparability and consistency, as well as making the process more complex and opaque for companies. This gap could be addressed by providing clearer references to well-established sources—such as those developed by the Science-Based Target Network (SBTN), the Nature Positive initiative, and the Taskforce on Nature-related Financial Disclosures (TNFD). The current draft does not adequately address the social–environment nexus. Many companies struggle to assess and report on how environmental impacts at specific sites (e.g. on water, biodiversity, or pollution) affect local communities. Providing illustrative examples in the NMIG for S3 would help companies understand how to disclose in these integrated cases. This would improve decision-usefulness for stakeholders while also encouraging companies to address interconnected environmental and social risks.			
Survey	World Benchmarking Alliance	NGO	Netherlands	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We recognise the need for burden reliefs, but we are concerned that some of the proposed amendments risk undermining the transparency needed to achieve the objectives of the EU Green Deal. In particular, the removal of the systematic preference for direct data in value chain metrics (ESRS 1, Paragraph 91) significantly weakens disclosure. Value-chain impacts are often where the most severe environmental harms occur, especially in relation to pollution, water, and biodiversity. Allowing companies to rely on estimates without clear safeguards risks reducing comparability and decision-usefulness, and creates disincentives for companies to invest in building robust data systems. Similarly, the weakening of location-specific disclosures poses a major gap. Actual impacts are inherently site-dependent, and aggregated reporting obscures the ecosystems and communities most affected. For example, our Nature Benchmark shows that while nearly half of companies disclose where they operate, only 10% report on whether those sites are near areas of biodiversity importance, and less than 3% have management plans for such sites. Without site-level information, investors and stakeholders cannot meaningfully assess risks or dependencies. While flexibility may be needed in early implementation, such reliefs should be clearly temporary and accompanied by guidance that encourages companies to progressively expand coverage and improve data quality and specificity over time. Otherwise, these reliefs risk entrenching current disclosure gaps rather than helping companies overcome them.

Survey	World Benchmarking Alliance	NGO	Netherlands	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I would like to skip this question and provide my feedback in Part 3				
Survey	World Benchmarking Alliance	NGO	Netherlands	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	We agree with Option 1. Quantitative disclosures on anticipated financial effects are essential for comparability, decision-usefulness, and ensuring credibility of sustainability reporting. Allowing companies to omit quantitative disclosures entirely (Option 2) risks reducing disclosures to high-level narratives that provide little insight to investors, regulators, or civil society. At the same time, reliefs must be carefully defined. Broad or indefinite reliefs create the risk that companies avoid reporting meaningful information on anticipated financial effects, particularly outside climate. To maintain integrity, these reliefs should be explicitly temporary and subject to clear disclosure of the reasons for omission, along with a timeline for when full coverage will be achieved. Without such safeguards, companies could indefinitely rely on these reliefs, undermining the objectives of the ESRS and comparability across companies. Maintaining quantitative disclosure as the baseline, while allowing targeted reliefs where methodologies are immature or uncertainty is exceptionally high, strikes the right balance between transparency and feasibility. This approach will incentivise companies and financial institutions to develop more robust methodologies over time, while ensuring that stakeholders continue to receive meaningful, decision-useful information.			
Survey	World Benchmarking Alliance	NGO	Netherlands	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	World Benchmarking Alliance	NGO	Netherlands	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	World Benchmarking Alliance	NGO	Netherlands	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Absolute targets are essential to understand an undertaking's true progress on climate. Intensity targets capture efficiency but can mask rising emissions if business activity expands. Complex estimates are not unique to financial institutions. They are common across sectors, and granting an exemption would undermine comparability and create an unlevel playing field. We also strongly support retaining ESRS E1-1 and keeping financial institutions fully in scope. Climate mitigation transition plans are vital to Europe's net-zero shift, acting as credible blueprints that provide a pathway for real-world change and investment. While all transition plans matter, those from financial institutions (FIs) are pivotal: real-economy companies cannot implement their own transition plans without financing, and the EU's transition will succeed or fail depending on the financial sector's willingness to provide "transition finance." Evidence shows the current requirements are already driving systemic change. WBA's Financial System Benchmark finds that while only a small share of global FIs currently disclose viable transition plans, more than 70% of these are European institutions – directly reflecting the impact of ESRS requirements. Removing or weakening these requirements would undermine this progress and threaten Europe's wider transition. The sector is also prepared and supportive. Many European FIs have invested in the skills needed to produce credible transition plans and are now aligning with voluntary frameworks such as the SBTi. These plans are increasingly being extended to cover nature and social issues, laying the foundation for holistic sustainability strategies. For these reasons, we urge EFRAG to retain ESRS E1-1, maintain absolute target requirements for FIs, and ensure simplification does not compromise Europe's transition to a sustainable economy.			
Survey	World Benchmarking Alliance	NGO	Netherlands	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	To date, too few companies report or take action on living wages: according to WBA's data, only 4% of the largest 2,000 companies globally pay or have a target to pay their workers a living wage. Given this, S1-9 is key to track progress and increase the visibility of this issue. However, the current methodology to calculate adequate wages entrenches global inequalities, setting a much lower standard for non-EU workers, and wrongfully equating minimum wages to adequate wages. While for EU workers companies are directed to compare actual wages with the adequate wages determined in accordance to Directive 2022/2041, outside of the EU they are directed to compare actual wages with the established minimum wage, as long as this is set in accordance with ILO wage-setting principles. However, as evidenced by WageIndicator, only 29 out of 178 countries globally have a minimum wage equal to or higher the national living wage – and most of these are in the EU. This change means the reporting standard does not, in fact, fulfil its purpose to report on whether employees earn an adequate wage, and instead creates a disparity between the standard applied to EU vs non-EU workers. This in turn affects the comparability of reports between companies depending on the geographical distribution of their workforce and undermines the disclosure's usefulness for investors and other stakeholders. We recommend: Ensure the methodology compares actual wages with living/adequate wages for all employees globally. In practice, this means no longer centring on the ILO wage-setting principles, but instead using minimum wages only when set using the ILO principles for estimating living wages; and otherwise, using other credible living wage benchmarks and estimates set in line with said ILO principles.

Survey	World Benchmarking Alliance	NGO	Netherlands	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree				
Survey	World Benchmarking Alliance	NGO	Netherlands	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Partially agree. Reliefs such as the removal of preference for direct value-chain data (para 91) and indefinite scope for partial disclosures (para 92) risk weakening transparency. Reliefs must be explicitly time-bound, with safeguards to encourage companies to improve data systems over time.			
Survey	World Benchmarking Alliance	NGO	Netherlands	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	WBA strongly supports retaining ESRS E1-1 and maintaining mandatory transition plan disclosures for financial institutions: 1. FI transition plans drive systemic change. Without FI transition plans, and the commitments to transition finance contained within them, European companies will not be able to finance their own transitions. Since their introduction, the current requirements have helped put the foundations in place for this to happen - our Financial System Benchmark shows that while only a small share of global FIs currently disclose viable transition plans, over 70% of these are European institutions, reflecting the impact of the ESRS requirements. However, removing or weakening the requirements would undermine this progress and threaten the wider economy's transition. 2. The sector is prepared and supportive. Many European FIs now not only comply with ESRS E1-1 but, having invested in the skills needed to produce transition plans, are now using the model to identify and realise financing opportunities. FIs are also increasingly aligning with voluntary frameworks, including SBTi methodologies, demonstrating that the sector can both meet mandatory requirements and go beyond these. The sector has now upskilled to the point where it can not only meet the requirements, but utilise them for economic gain - removing the requirement would undermine this capability. 3. FIs are now using transition plans to take the next step. FIs within scope of CSRD are now extending their transition planning expertise to integrate social and broader sustainability considerations, creating the foundation for holistic ESG strategies helping them progress on multiple fronts. For example, many FIs are developing transition plans focused on nature, using ESRS E1-1 as a model. Weakening ESRS E1-1 would risk dismantling this additional momentum.			
Survey	World Benchmarking Alliance	NGO	Netherlands	33.E_2.	ESRS E2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. I partially agree and partially disagree	The removal of site-specific disclosures undermines the ability to capture localised water risks and impacts. Value-chain reporting must be reinstated to reflect companies' full footprint.			
Survey	World Benchmarking Alliance	NGO	Netherlands	33.E_4.	ESRS E4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Removal of metric examples and site-specific requirements significantly weakens disclosure. ESRS should align with TNFD, SBTN and Nature Positive. Methodological guidance (e.g. AR 26) should be retained and updated.

I partially agree and partially disagree	Clarification is welcome, but requirements on board expertise (para 9(b)) remain too weak; stronger disclosures are needed to ensure boards have sustainability competence.			
Survey	World Benchmarking Alliance	NGO	Netherlands	35.ESRS1_7.4.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	We partially agree with the proposed amendments to 7.4. Reliefs for metrics. While limited reliefs can help companies address genuine challenges in data availability or measurement uncertainty, the current drafting of paragraphs 92 and 93 provides overly broad exemptions that risk undermining the ESRS as a whole. In particular, these reliefs could allow undertakings to indefinitely omit disclosure of key environmental metrics beyond climate, creating a loophole that companies could abuse. Reliefs must be explicitly temporary, with a clear expectation of progressive improvement in coverage and quality over time. Otherwise, the comparability, reliability, and faithful representation of disclosures will be compromised. We therefore recommend that: 1. Reliefs be time-bound, with mandatory disclosure of a timeline for achieving full coverage. 2. Companies be required to disclose the proportion of operations or value chain excluded, and justify why exclusions are materiality-consistent. 3. Reliefs not be applied to financial institutions' absolute targets, as these are critical for ensuring a level playing field and tracking progress toward the EU's climate and Green Deal objectives.	ESRS1	7.4 Reliefs for metrics	
Survey	World Benchmarking Alliance	NGO	Netherlands	35.ESRS2_GDR-M.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	We partially agree with the amendments to GDR-M. While we welcome the clarification on methodologies, data sources, and environmental conditions, the revised text weakens location-specific disclosures. Impacts on nature are inherently site-specific and aggregated figures alone do not provide decision-useful information for investors or stakeholders. For example, changes to ESRS E2 paragraph 10 remove the requirement to identify which facilities or sites contribute most to impacts, reducing transparency into hotspots that may drive financial, regulatory, or reputational risks. We recommend: 1. Reinserting a clear requirement for site- or facility-level disclosure of environmental metrics (at least at ecosystem level) for E2, E3, and E4. 2. Embedding this as a cross-cutting requirement within ESRS 2 GDR-M to ensure consistency across topical standards. 3. Aligning definitions and disclosure expectations with TNFD, the Nature Positive Initiative, and GRI to maximise comparability and efficiency. Without such requirements, the amended ESRS risks omitting critical data that is necessary to understand local impacts and to mobilise capital towards nature-positive outcomes. Also, we recommend that the amended ESRS explicitly include disclosure of the quantities of high-risk commodities sourced. These commodities are among the most significant global drivers of deforestation, biodiversity loss, and human rights risks, yet the current draft omits this critical datapoint. Embedding this requirement within ESRS 2 (GDR-M) would ensure consistency across topical standards (E2, E3, E4, and relevant social disclosures) and provide investors and stakeholders with decision-useful information on material supply chain risks. It would also support stronger connectivity with the EU Deforestation Regulation (EUDR)	ESRS2	General Disclosure Requirement for metrics - GDR-M	

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	World Benchmarking Alliance	NGO	Netherlands	35.E1-1.	Do you agree with the amendments of this chapter?	I disagree	WBA strongly supports retaining ESRS E1-1 and maintaining mandatory transition plan disclosures for financial institutions: FI transition plans drive systemic change. Without FI transition plans, and the commitments to transition finance contained within them, European companies will not be able to finance their own transitions. Since their introduction, the current requirements have helped put the foundations in place for this to happen - our Financial System Benchmark shows that while only a small share of global FIs currently disclose viable transition plans, over 70% of these are European institutions, reflecting the impact of the ESRS requirements. However, removing or weakening the requirements would undermine this progress and threaten the wider economy's transition. The sector is prepared and supportive. Many European FIs now not only comply with ESRS E1-1 but, having invested in the skills needed to produce transition plans, are now using the model to identify and realise financing opportunities. FIs are also increasingly aligning with voluntary frameworks, including SBTi methodologies, demonstrating that the sector can both meet mandatory requirements and go beyond these. The sector has now upskilled to the point where it can not only meet the requirements, but utilise them for economic gain - removing the requirement would undermine this capability. FIs are now using transition plans to take the next step. FIs within scope of CSRD are now extending their transition planning expertise to integrate social and broader sustainability considerations, creating the foundation for holistic ESG strategies helping them progress on multiple fronts. For example, many FIs are developing transition plans focused on nature, using ESRS E1-1 as a model. Weakening ESRS E1-1 would risk dismantling this additional momentum.	E1	Disclosure Requirement E1-1 - Transition plan for climate change mitigation	
Survey	World Benchmarking Alliance	NGO	Netherlands	35.E2-4.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The current drafting of paragraph 16(a) and AR 2 allows undertakings to define their own pollutant scope, rather than requiring systematic alignment with EU pollutant registries. This represents a major simplification compared to Set 1 and risks undermining comparability and regulatory coherence. If companies can self-define the pollutants to disclose, they may omit substances that are legally regulated or material to stakeholders, producing non-comparable and incomplete datasets. We recommend reinstating mandatory alignment with the EU pollutant registries as a baseline, with additional pollutants reported only as a complement. The current drafting of paragraph 16(b) and AR 5 allows undertakings to disclose pollutant data based on estimates without requiring disclosure of the basis, assumptions, or limitations of those estimates. This significantly reduces transparency compared to Set 1 and hampers the ability of stakeholders to assess the credibility and rigour of emissions data. We recommend that whenever estimates are used, undertakings be required to disclose: (i) the estimation methodology applied, (ii) key assumptions and data sources	E2	Disclosure Requirement E2-4 - Pollution of air, water and soil	
Survey	World Benchmarking Alliance	NGO	Netherlands	35.E3-4.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	We are concerned that the amended drafting only requires disclosure of aggregated totals in cubic meters for water consumption, withdrawal, and discharges. While paragraph 17(b) refers to "areas at water risk," this is too broad and does not require companies to identify specific sites or basins where water stress and related impacts occur. Water is inherently location-specific, and impacts depend on local conditions. Aggregated figures obscure where the most material risks and impacts arise, reducing decision-useful information for investors, regulators, and communities. For example, a company may operate in both high-risk and low-risk basins, but aggregate disclosure masks which facilities drive the greatest pressure on scarce resources.	E3	Disclosure Requirement E3-4 - Water metrics	
Survey	World Benchmarking Alliance	NGO	Netherlands	35.E4-5.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	We are concerned that the amended text of E4-5 (para. 21 and AR 9–11) removes the illustrative metric examples. While companies are still required to report biodiversity metrics, the absence of concrete examples significantly reduces clarity, comparability, and consistency. The broad categories in AR 9 and the high-level guidance in AR 10–11 are useful but insufficient on their own, leaving undertakings with limited direction on which indicators are credible and decision-useful. We recommend reinstating references to well-established sources of biodiversity metrics, such as the Science-Based Targets Network (SBTN), the Taskforce on Nature-related Financial Disclosures (TNFD), and the Nature Positive Initiative. Providing clear links to these frameworks would help companies select appropriate metrics, strengthen comparability across reports, and improve alignment with global nature-related disclosure standards.	E4	Disclosure Requirement E4-5 - Metrics related to biodiversity and ecosystems change	
Survey	World Benchmarking Alliance	NGO	Netherlands	35.S1-2.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	We're concerned that the revised draft removes the explicit requirement for companies to disclose when no engagement process or grievance mechanism exists. Without this "negative assertion," companies could omit the absence of mechanisms, leaving significant gaps in transparency. We recommend reinstating the requirement for companies to explicitly state if no engagement process or grievance mechanism exists and to provide a time-bound plan to establish one. In addition, mandatory disclosure of key effectiveness features (such as coverage, multiple access points, confidentiality/anonymity, non-retaliation, and remedy outcomes/KPIs) should be maintained to ensure comparability and usefulness for stakeholders.	S1	Disclosure Requirement S1-2 - Engagement with own workforce and workers' representatives, existence of channels for own workers to raise concerns or needs and approaches to remedy	
Survey	World Benchmarking Alliance	NGO	Netherlands	35.S1-9.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	WBA data shows that only 4% of the world's 2,000 most influential companies pay or have a target to pay a living wage. The current approach in AR 22 (para. 32) entrenches inequality by allowing minimum wages to be treated as adequate wages for non-EU workers. Since only 29 of 178 countries globally have a minimum wage at or above the national living wage, this methodology sets a much lower standard for workers outside the EU and undermines comparability between companies. We recommend revising AR 22 to require that actual wages be compared to living/adequate wages globally, not just statutory minimum wages. Where ILO-compliant living wage estimates exist, they should be the benchmark; only where they do not exist should statutory minimum wages be used. Other credible benchmarks aligned with ILO principles (e.g. WageIndicator, Anker methodology) should be referenced to ensure consistency and fairness.	S1	Disclosure Requirement S1-9 - Adequate wages	
Survey	World Benchmarking Alliance	NGO	Netherlands	35.S1-14.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	We're concerned that the amendment to para. 42 reduces the usefulness of this disclosure. Removing the requirement to report the percentage of entitled employees who actually took family-related leave makes it difficult to assess whether policies are genuinely effective. Uptake data is essential for understanding systemic challenges in gender equality and the real impact of leave policies on working parents, particularly women.	S1	Disclosure Requirement S1-14 - Work-life balance metrics	

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	World Benchmarking Alliance	NGO	Netherlands	35.G1-6.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	We're concerned that the current draft omits tax transparency, which is a critical dimension of responsible business conduct. At a minimum, companies should disclose the amount of corporate income tax paid for each jurisdiction where they are a tax resident. Ideally, disclosures should also include statutory vs. effective tax rates (STR and ETR). According to WBA's 2024 Social Benchmark, only 9% of the world's 2,000 most influential companies currently provide this information, with EU companies performing only slightly better at 17%. Adding a disclosure requirement on taxes, whether as a new standalone DR or by expanding G1-6 on payment practices, would help address this gap and strengthen accountability.	G1	Disclosure Requirement G1-6 - Metrics in relation to payment practices	
Survey	YIT Corporation	Business association (other than association of financial institution)	Finland	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Subject: Feedback on ESRS Exposure Drafts – Suggestions for Further Simplification Dear EFRAG Team, Thank you for the opportunity to provide feedback on the revised ESRS standards currently under public consultation. We appreciate the efforts made to streamline the standards and reduce the reporting burden. However, we believe there is still room for further simplification to enhance clarity and usability for reporting entities. For example, we would like to propose the following suggestions: 1.Remove Application Requirements (AR) Sections The Application Requirements (AR) sections, while intended to provide guidance, often add complexity and length to the standards. We suggest integrating the relevant content from AR sections directly into the Disclosure Requirements (DRs) text so that separate AR sections exist anymore. This would make the standards more concise and easier to follow without losing essential guidance. 2.Reduce and Clarify References The current drafts contain numerous references to other standards, frameworks, and documents. While cross-referencing is useful, excessive and unclear references can hinder comprehension. We recommend reducing the number of references and ensuring that any remaining ones are clearly explained within the text, ideally with brief contextual summaries. 3.Simplify the Double Materiality Assessment (DMA) The DMA process remains overly complex, particularly with the expectation of scoring or quantifying impacts. We propose a simplified approach where companies identify which ESRS topics are material for company from both impact and financial perspectives and provide a clear rationale for their assessment. Eliminating the need for scoring would make the process more accessible and reduce subjectivity. We hope these suggestions contribute to the ongoing improvement of the ESRS framework and support its successful implementation across diverse reporting entities. Yours sincerely, For and on behalf of YIT Oyj Tommi Kokkonen			
Survey	LG Energy Solution Wrocław Sp. z o.o.	Preparer (non-financial preparing a sustainability report)	South Korea	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We welcome all clarifications regarding the description of the DMA process. However, we would like to highlight several key points: 1. The DMA is extremely time-, resource-, and cost-intensive for companies. It requires the involvement of numerous employees who must dedicate a significant number of working hours solely to this task. 2. We recommend introducing a minimum, standardized list of disclosures applicable to all companies (similar to ESRS 2), and replacing the DMA and topical standards with sector-specific standards developed by EFRAG. These standards should be uniform and mandatory for all companies within a given industry. This approach would significantly reduce the effort and cost associated with identifying material topics. 3. If the DMA is retained, we wish to emphasize the following: - The assessment of whether a topic is material remains subjective. On one hand, this may mislead users; on the other, it may lead auditors to question the outcome of the assessment. Market practice shows that companies tend to declare topics as material out of caution, which influences benchmarks and the decisions of other companies. We recommend further clarification in this area or training provided by EFRAG for both companies and auditors. - Since there is no clear guidance on how the process should be conducted, its evaluation will depend on the auditor's interpretation. Market experience indicates that auditors often require the use of multiple assessment methods from the available catalogue. We recommend explicitly stating in paragraph 62 that the use of all tools is not mandatory. - The non-binding nature of Appendix A: List of topics may be confusing for companies. We recommend specifying a required set of topics for analysis, along with a note that companies must additionally include company-specific topics.			
Survey	LG Energy Solution Wrocław Sp. z o.o.	Preparer (non-financial preparing a sustainability report)	South Korea	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree			
Survey	LG Energy Solution Wrocław Sp. z o.o.	Preparer (non-financial preparing a sustainability report)	South Korea	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree

Survey	LG Energy Solution Wrocław Sp. z o.o.	Preparer (non-financial preparing a sustainability report)	South Korea	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We greatly appreciate the efforts to avoid overlapping information requirements between ESRS 2 and the topical standards, as well as the architectural changes to the PAT structure (replacing MDR with GD – P, A, T, M). However, we would like to emphasize that for large companies with complex internal structures and extensive value chain, preparing a sustainability report in line with the ESRS remains a highly resource-intensive task. It requires the involvement of a dedicated team and subject-matter experts from across the organization, resulting in significant effort and cost. Preparing the report requires support from external consultants, particularly during the initial years of reporting, which entails significant costs.			
Survey	LG Energy Solution Wrocław Sp. z o.o.	Preparer (non-financial preparing a sustainability report)	South Korea	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We welcome the significant improvement in the clarity and readability of the draft standards. To maintain this positive outcome, it will be essential to ensure high-quality translations into the official languages of EU Member States, as this was a major challenge with the first version of the standards. For reporting teams, the Excel-based data point mapping prepared by EFRAG is an extremely valuable tool. We strongly recommend that such a file be made available as soon as possible following the adoption of the new standards.			
Survey	LG Energy Solution Wrocław Sp. z o.o.	Preparer (non-financial preparing a sustainability report)	South Korea	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We appreciate the practical guidance provided in the NMIG regarding report preparation and data compilation. These materials will be particularly valuable for entities preparing their reports for the first time. However, we wish to highlight that the non-binding status of the NMIG may be misleading. As a non-mandatory document, it should not influence the auditor's assessment. Past experience shows that guidance issued by EFRAG, such as that related to the DMA or value chain, was also formally non-binding, yet in practice it was treated as de facto mandatory and considered by auditors during report evaluations. A similar dynamic may emerge with the NMIG, effectively making it another document that companies will be expected to comply with. Consequently, its removal from the list of mandatory materials may prove to be only nominal.			
Survey	LG Energy Solution Wrocław Sp. z o.o.	Preparer (non-financial preparing a sustainability report)	South Korea	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	We appreciate the reduction in the volume of the draft ESRS and the number of data points. However, we would like to highlight that the content of the ESRS and its accompanying documents remains extensive. The number of data points is still considerable, with individual disclosures often requiring multiple indicators and drawing from several data sources. In particular, the Environmental section (E) continues to be highly demanding and complex.			
Survey	LG Energy Solution Wrocław Sp. z o.o.	Preparer (non-financial preparing a sustainability report)	South Korea	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	We positively assess the proposed solution. Based on our own experience, we know how difficult it is to obtain reliable and accurate data, which is why we appreciate EFRAG's position allowing non-disclosure of information when its collection is either impossible or entails excessive costs. However, we would like to highlight that it will be up to the auditor to determine whether a company had valid grounds for not disclosing certain data and whether it made sufficient efforts to obtain it. Based on market experience, we are concerned that some companies may overuse this provision, while others may hesitate to apply it at all. This could affect audit outcomes. We therefore recommend that data points which may result in disproportionate effort be reclassified by EFRAG as non-mandatory. This would help ensure that companies are not solely responsible for making complex judgments—especially in cases where auditors might question the validity of use of 'undue cost or effort' principle. We are strongly convinced that EFRAG is the appropriate body to make these decisions. Additionally, we do not support the decision to exclude ESRS E1-6 from this relief (paragraph 91 ESRS 1). Calculating Scope 3 emissions is particularly challenging, as reliable data is often difficult to obtain. In our view, allowing partial disclosures in this area would be both practical and justified.			
Survey	LG Energy Solution Wrocław Sp. z o.o.	Preparer (non-financial preparing a sustainability report)	South Korea	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	We firmly believe that anticipating the financial effects of material risks is a vital component of effective risk management. However, we wish to highlight that operating within a young and heavily regulated sector such as the battery market makes estimating financial effects across different time horizons an exceptionally challenging task. As a result, this requirement entails a disproportionate administrative burden relative to the informational value of the disclosures. The difficulty in assessing financial impacts is primarily driven by evolving legislative obligations, which also affect financial liabilities. Emerging regulations designed to address the environmental and societal impacts of industrial activity, such as CBAM, CRMA, EUBR, EU ETS, IED2, frequently introduce new and difficult-to-predict cost burdens for companies. Furthermore, as we operate in a rapidly developing industry, the pace of technological change—driven by the need to adapt to a volatile market, means that risk assessments quickly become outdated. Therefore, we recommend removing this disclosure requirement or significantly simplifying it, beyond what is currently proposed under Option 2. Even large companies do not have units with sufficient resources to perform such analysis.

Survey	LG Energy Solution Wroclaw Sp. z o.o.	Preparer (non-financial preparing a sustainability report)	South Korea	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	As highlighted in our response to Question 19, estimating the financial impacts of material risks is exceptionally complex and time-consuming. The proposed data points 40, 41, and 42 in ESRS E1 impose highly detailed requirements. Collecting and processing the necessary information will involve multiple teams and departments, and the resulting data is likely to become outdated quickly. This leads to a disproportionate reporting effort relative to the value of the disclosures. We recommend removing this disclosure requirement or significantly simplifying it, beyond what is currently proposed under Option 2.			
Survey	LG Energy Solution Wroclaw Sp. z o.o.	Preparer (non-financial preparing a sustainability report)	South Korea	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree				
Survey	LG Energy Solution Wroclaw Sp. z o.o.	Preparer (non-financial preparing a sustainability report)	South Korea	22.ESRS2	Comments on deleted datapoints in ESRS 2	I disagree	As previously noted, we appreciate the efforts made to reduce the overall volume of the ESRS. However, we wish to point out that the number of required disclosures remains substantial—particularly within the Environmental section (E), which continues to be disproportionately extensive compared to other areas. It is also important to highlight that many of the required disclosures are multidimensional, with a single indicator often relying on multiple data sources. Moreover, the removal of certain data points does not necessarily translate into a reduction in workload—for instance, the deletion of the 'total GHG emissions' [ESRS E1-6] item does not alleviate the underlying reporting effort.

Survey	LG Energy Solution Wroclaw Sp. z o.o.	Preparer (non-financial preparing a sustainability report)	South Korea	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	We do not support the amendment to ESRS G1 regarding the disclosure of confirmed incidents of business conduct (Amended ESRS G1, paragraph 14). The nature, scale, and consequences of such incidents vary significantly and are often not comparable. Presenting purely quantitative data without accompanying qualitative context may mislead users and distort the perceived impact of these events.			
Survey	LG Energy Solution Wroclaw Sp. z o.o.	Preparer (non-financial preparing a sustainability report)	South Korea	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	We do not support the inclusion of E2-4, E5-4 and E5-5 new data points. We respectfully recommend its removal. For lithium-ion battery manufacturers disclosure requirement regarding qualitative information on secondary microplastics is extremely difficult to assess, particularly in relation to unintentional microplastic generation throughout the product life cycle. Moreover, the lack of standardized methodologies for identifying and quantifying secondary microplastics, especially those arising indirectly or post-consumer, makes the requirement impractical and potentially unreliable. Introducing such a disclosure at this stage risks generating inconsistent and non-comparable data across sectors. The battery industry is already subject to an increasingly complex web of regulations and reporting obligations. Introducing a new data point under E5-4 would impose an additional burden, requiring companies to collect and calculate further data. Moreover, this requirement duplicates information already mandated under other legislative frameworks, such as the Critical Raw Materials Act (CRMA) and the EU Battery Regulation (EUBR). We also see a significant risk of inconsistencies between data reported across different regulatory instruments, for example, environmental disclosures. Moreover, cross-sector data comparisons may be misleading for stakeholders who are unfamiliar with the specific characteristics and context of each industry. We do not agree with the ESRS E5-5 paragraph 18e requirement, because according to the Polish Waste Act, the producer transfers waste only to an authorized entity, which becomes its owner at the moment of takeover. In the case of handing over waste to the R12 process, the further destination will never be fully known, which is in accordance with the law and cannot burden the original producer with reporting obligations. Disclosure could therefore be misleading to the user.			
Survey	LG Energy Solution Wroclaw Sp. z o.o.	Preparer (non-financial preparing a sustainability report)	South Korea	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	LG Energy Solution Wroclaw Sp. z o.o.	Preparer (non-financial preparing a sustainability report)	South Korea	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree				
Survey	LG Energy Solution Wroclaw Sp. z o.o.	Preparer (non-financial preparing a sustainability report)	South Korea	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	LG Energy Solution Wroclaw Sp. z o.o.	Preparer (non-financial preparing a sustainability report)	South Korea	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree

Survey	OTP Bank	Bank	Hungary	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree				
Survey	OTP Bank	Bank	Hungary	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	If in sectors with strict regulations on a given topic, the primary goal should be to meet and comply with those standards. However, if the topic is material, it should still be reported. The reporting should clearly reflect that the regulatory framework covers the relevant actions, and that the objective is to fulfill those requirements. This ensures that the principle of materiality is respected, and that important topics are not omitted from the report simply due to high regulatory compliance.			
Survey	OTP Bank	Bank	Hungary	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	We also prepared a summary this year, but it was not included in the report — instead, it was issued as a separate document.			
Survey	OTP Bank	Bank	Hungary	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	It's a good that it's no longer necessary to detail each material IRO individually, especially when they are managed under a common strategy or set of actions. In our case, an additional challenge was the lack of a unified approach to PATs at group level.			
Survey	OTP Bank	Bank	Hungary	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	I wouldn't eliminate sector-specific datapoints, as they would provide much better comparability.			
Survey	OTP Bank	Bank	Hungary	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	OTP Bank	Bank	Hungary	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				
Survey	OTP Bank	Bank	Hungary	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	the goal should be to encourage companies to manage sustainability matters more consciously. However, I would develop methodological approaches to support them in doing so.			
Survey	OTP Bank	Bank	Hungary	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	while the information is important, it's very challenging to provide reliable answers. There's a clear need for well-developed methodological approaches to support companies in addressing this requirement effectively.			
Survey	OTP Bank	Bank	Hungary	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	OTP Bank	Bank	Hungary	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	OTP Bank	Bank	Hungary	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	As long as there is no unified definition or approach to the issue, comparing measures remains difficult. For example, in our case, addressing biodiversity has been particularly challenging due to the lack of available data and a consistent methodology.			
Survey	OTP Bank	Bank	Hungary	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	I have limited information on this topic.			
Survey	OTP Bank	Bank	Hungary	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	I even trust that this will support more accurate and meaningful data disclosure.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	OTP Bank	Bank	Hungary	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets				
Survey	OTP Bank	Bank	Hungary	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	OTP Bank	Bank	Hungary	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree				
Survey	OTP Bank	Bank	Hungary	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Apendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				
Survey	OTP Bank	Bank	Hungary	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	OTP Bank	Bank	Hungary	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	I see the value in the adjusted gender pay gap, and in fact, its disclosure will be mandatory starting from 2027.			
Survey	OTP Bank	Bank	Hungary	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree				
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Overall we agree that the proposed amendments strike an appropriate balance between simplifying the Double Materiality Assessment (DMA) while preserving the integrity of the framework. Clarifying the role of information materiality as an overarching filter is welcome and rightly reinforces the emphasis on the provision of information that is most decision-useful for users of reporting. Providing flexibility for reporting entities to disclose on additional topics deemed 'non-material' when specifically requested by users will help to facilitate investor stewardship and engagement. We recognise the efforts that have been made to clarify the relationship between impacts, risks and opportunities ('IROs'), topics, and sub-topics, and the flexibility to report at the level deemed appropriate for the entity. However, there is a risk that these related but distinct concepts are perceived as interchangeable. Topics address broad thematic areas for disclosure whereas IROs are specific to the entity and therefore of most relevance for users in the context of decision-making based on reporting. The emphasis should be on IROs, in keeping with the approach taken by international reporting frameworks such as IFRS S1 and S2. We would also like to see a more explicit integration of a sector-specific lens as part of the DMA, particularly for reporting entities operating in high-emitting and high impact sectors. Sector-specific guidance is important for informing effective implementation of materiality assessments and increasing understanding of the most material impacts, risks and opportunities across key sectors. In the absence of dedicated sectoral standards, we recommend that the work EFRAG has already done on this topic is repurposed as non-binding implementation guidance, building on existing SASB and GRI sectoral standards to facilitate interoperability.

Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I would like to skip this question and provide my feedback in Part 3				
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	IIGCC partially agrees that the proposed amendments provide an appropriate level of flexibility and should help to reduce overall reporting burdens by allowing for effective summarisation of key information and cross-referencing to other parts of the report. While we welcome improvements in readability and structure, we do not support any weaking of the connectivity between the narrative report and financial statements, which could have highly detrimental impacts on investor decision-making. The proposal to make cross-references to financial statements optional ('may cross-refer') rather than mandatory is concerning. From an investor perspective, connectivity between sustainability reports and financial statements is a fundamental requirement for assessing how material climate risks and opportunities impact financial position and performance. Investors need clear linkages between narrative sustainability disclosures and underlying financial statement assumptions to make informed capital allocation decisions. Without this connectivity, it will be extremely challenging for the market to meaningfully assess the financial impacts of sustainability factors. We recommend maintaining stronger emphasis on mandatory connectivity between sustainability and financial reporting to preserve the decision-usefulness as these are material disclosure rather than voluntary communication.			
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	Overall the proposed changes are sensible. We emphasise the need to ensure that higher aggregation of information at the PAT level rather than the level of IROs should not compromise users' ability to understand how the preparer of reporting is identifying and managing entity-specific, material IROs. Additionally, we recommend that the following disclosures are retained, to inform investor assessments of preparers' policies and processes for managing IROs on an ongoing basis and to support engagement efforts: Whether and when an entity plans to implement policies, action plans and targets for material topics. Information on the progress of actions or actions plans disclosed in previous periods. Key actions taken (and the results) to provide for and cooperate in or support the provision of remedy for those harmed by actual material impacts.			
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	The proposed changes make it much easier to identify requirements to comply with on a mandatory basis and the general reconfigurations proposed should help to improve accessibility. It will be important to ensure that 'may disclose' datapoints that have been moved to the Non-Mandatory Illustrative Guidance (NMIG) are still given due weight and visibility, as in many instances they could help to support implementation and provide useful illustrative examples for reporting entities.			
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	See our responses to subsequent questions for our substantive feedback on the proposed reliefs. We welcome the decision to exclude reliefs that would allow for the omission of Scope 3 GHG emissions disclosures. We support the rationale in the Basis for Conclusions that this metric is too important for supporting the goals of the Green Deal and sustainable finance more broadly. It will be important to mitigate the risk that proposed reliefs are used in a way that does not unduly inhibit users of disclosures' access to decision-useful information. We therefore recommend that EFRAG provides supporting guidance that sets out how and when preparers should use these reliefs, with illustrative examples.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	To an extent, we acknowledge the rationale underpinning the 'undue cost or effort' relief to mitigate the risk of incurring excessive costs or expending undue effort to procure data. However, without more stringent accompanying disclosures setting out how the reporting entity seeks to improve data coverage and quality over a clearly-defined time period, the relief could be seen as overly permissive. Moreover, the proposed wording leaves a considerable amount of room for subjectivity and interpretation. Perceptions of 'undue' costs and efforts will vary from entity to entity and there is a real risk that the relief is applied on a highly inconsistent basis. We therefore recommend that these reliefs are accompanied by explicit requirements for companies to set out how they intend to improve coverage and data quality within specific timeframes. Without this, investors are less able to engage with reporting entities to encourage progress and hold them to account for progress on delivering improvements. Moreover, applying these reliefs to all quantitative data points could significantly weaken data quality and fragment the readability and comprehensibility of data for investors, creating aggregation difficulties at the portfolio and sectoral levels. Additionally, while we understand the need for a degree of flexibility around the use of direct data and estimates, particularly for areas like value chain reporting where disclosures are less mature, we would caution against excessive pushback against what is referred to as 'the systematic preference for direct data'. The rollout of mandatory, standardised sustainability disclosures is a key driver in helping to increase the availability, quality and comparability of directly reported data, as well as encouraging entities across the value chain to improve their own disclosures. All things considered, direct data remains preferable to over-reliance on estimates and proxies where possible and this hierarchy should be acknowledged and preserved.			
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	We have concerns about both options presented, but in the interest of securing quantitative disclosure, our preference would be Option 1. Our strong preference however would be for EFRAG to retain both quantitative and qualitative disclosures relating to anticipated financial effects with significantly stricter criteria for reliefs. These disclosures are critical for preparers to incorporate sustainability factors into their business strategy and financial planning, and for users looking to understand how climate change is expected to impact the bottom line. The disclosure of material climate information is already required under existing IFRS accounting standards used in the EU.. The IASB's educational materials, recent illustrative examples and ISSB's works demonstrate that quantitative disclosure of anticipated financial effects is not only feasible but required when material. We support the rationale for the proposed omission of reliefs based on a lack of skills, capabilities or resources in Option 1 on the basis that it would not be compatible with the revised scope of the ESRS, which will consist of the largest, most sophisticated and well-resourced companies in the EU. However, if broadening CSRD scope to include smaller entities requires some form of capabilities-based relief, we would support a proportionate approach where such reliefs apply only to smaller companies. We agree with the concerns that Option 2 would result in the loss of highly material and decision-useful information for investors. It is also a critical component of the CSRD's financial materiality lens, as evidenced by its inclusion across all main standards that adopt a 'single materiality approach' (ISSB, TCFD, etc). We acknowledge that these disclosures can be particularly challenging, but methodologies and practices have improved in recent years and to make these disclosures voluntary would represent a significant step backwards. Supporting implementation guidance could be developed to further accelerate progress in this area.			
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	We partially agree with the proposed simplifications but have significant concerns about some of the proposed deletions. We acknowledge some improvements in coherency and welcome the revised wording on material impacts, risks and opportunities of identified financial effects. The revised wording is more consistent with the wider assessments required under the CSRD, increasing the overall coherency of the standards. We also note the increased alignment with the language used in IFRS S2. However, the proposed deletion of specific requirements to disclose potential financial effects from material physical and transition risks, and how these might materialise over the short-, medium- and long-term, fundamentally undermines the decision-usefulness of these disclosures for investors. These time horizons are essential for investment analysis, portfolio risk assessment, and integration with financial planning processes. Without this temporal granularity, investors cannot properly assess the timing of financial impacts or align sustainability risks with investment time horizons. Equally concerning is the proposed deletion of disclosures relating to the use of scenario analysis to inform assessments. Scenario analysis provides critical transparency on the assumptions underlying financial effect calculations and enables investors to understand the range of potential outcomes. This deletion limits the overall picture that investors depend upon for confidence in reported financial effects. The current balance sacrifices decision-useful information in favour of simplification. We recommend retaining the temporal specifications and scenario analysis requirements, as these elements are fundamental to meaningful financial risk assessment and are already established practice among leading companies.			
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We agree that most of EFRAG's proposed amendments strike the right balance between promoting interoperability and meeting simplification objectives, and welcome efforts to improve interoperability with the ISSB standards. Where proposed revisions could negatively impact interoperability, we generally believe the rationale provided by EFRAG has justified these decisions (e.g. rejecting reliefs on the omission of Scope 3 emissions given the importance of this metric for the Green Deal and sustainable finance). However, as noted in our previous answers, we have significant concerns about certain areas where EFRAG proposes to deviate from the IFRS S1 and S2, specifically in relation to disclosures on anticipated financial effects. We note and welcome the commitment to further joint work on interoperability between EFRAG and the IFRS Foundation. While we recognise and welcome the permanent reference to the IFRS Industry Based Guidance and SASB Standards, we remain concerned about the lack of dedicated EU sectoral standards in the ESRS. Investors have repeatedly emphasised the decision-usefulness of sector specific disclosures, particularly where reporting entities operate in high-impact and material sectors whose decarbonisation will have the greatest impact on the transition.

Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	We acknowledge and welcome the balance that has been struck in the context of the ESRS-E1 standards, where simplification efforts have, on the whole, not compromised the substance of the climate-related disclosure requirements. IIGCC has carried out mapping of the ESRS-E1 datapoints against our own proprietary disclosure frameworks and found each of them to be relevant and decision-useful for investors looking to assess the credibility of investee transition efforts and allocate capital in line with the transition. The preservation of ESRS-E1 in full must be a priority for EFRAG to ensure investors have the data they need to allocate capital in line with the goals of the EU Green Deal. We are concerned about the dilution of datapoints under ESRS-E4 (Biodiversity and ecosystems). While we are strongly supportive of the decision to make transition plan disclosures for biodiversity and ecosystems mandatory, other aspects of the standard that are important to inform investor decision-making have been diluted and largely moved to general standards or non-mandatory guidance. For example, disclosures relating to the resilience of the reporting entity's strategy and business model in relation to biodiversity and ecosystems have been moved up a level to General Disclosures. But this will likely result in a loss of decision-useful granularity that is important for investors, not least because of their context-specific nature. Additionally, while entities are expected to disclose biodiversity metrics when deemed material, the disclosure requirements under E4-5 lack specificity as to what these metrics should be (e.g. site-level disclosures). We note and support the suggestion by stakeholders to provide additional methodological guidance on metrics in future guidance and the need to align with the work of relevant frameworks, such as the Taskforce on Nature Related Financial Disclosures.			
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We support the decision to amend biodiversity transition plan disclosures to a mandatory datapoint. It would be helpful for EFRAG to take forward the development of guidance to support preparers with the implementation of these transition plans, and how they interact with wider climate transition plans. We would also recommend the introduction of additional 'comply or explain' provisions for preparers that have identified biodiversity as a material impact, risk and opportunity or dependency, but do not have a biodiversity transition plan in place. Where this is the case, these entities should be required to explain why a plan has not been developed and specify if and when one will be published.			
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We do not agree with either of the options or the broader framing of the question, which does not align with the approach we have developed to target-setting in collaboration with asset managers and owners as part of the Net Zero Investment Framework (NZIF). NZIF recommends using a broader alignment-based approach for setting targets, rather than focusing on financed emissions (this is also known as a multi criteria maturity scale). Should investors wish to express their objectives quantitively, we believe disclosures should include a mix of absolute and intensity metrics—like a scorecard—to give a holistic picture of progress. We would also note that different types of financial institutions should be encouraged to take different approaches to target-setting. For example, through their loan portfolios, banks provide new capital for companies' activities and should be encouraged to disclose both intensity and absolute emissions-based targets, as set out in IIGCC's Net Zero Standard for Banks. Both sets of targets have different uses and drawbacks. Banks should set sector-specific emissions intensity targets using a physical denominator. Sector intensity metrics are valuable because they ensure that a bank is seeking to align its activities in each sector with climate objectives, independent of overall changes in the volume of activity and any shifts between sectors. Absolute metrics remain essential for calculating financed emissions and portfolio-level climate risk assessment. However, we acknowledge that transition-supporting activities may lead to short-term increases in absolute emissions and therefore suggest that longer-term absolute metrics are more useful.			
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree				
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	We are broadly comfortable with the changes made to datapoints within the Environmental Standards that correspond to SFDR PAIs. We acknowledge and welcome the proposed deletion of wording in ESRS E1-5 that would limit disclosure to high impact sectors only. Disaggregated information on energy usage (particularly of fossil fuels) is a highly decision-useful datapoint irrespective of sector as it enables the measurement of energy efficiency improvements amongst other issues. While we agree that it should still be feasible for users of reporting to derive some of the deleted datapoints from information published elsewhere, we note that in some cases the numerator (emissions) and the denominator (energy consumption) where disclosed separately are often on an inconsistent boundary.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	We would encourage greater alignment with existing, well-established frameworks on biodiversity and ecosystems-related metrics, which the previous application requirements supported. The Taskforce for Nature-related Financial Disclosures (TNFD) have stated a list of core global disclosure indicators and metrics which provide an opportunity to align with and reduce reporting burden. The specifications outlined in AR 26 (a) and (b) aligned with TNFD core Metric C1.0 of Land/freshwater/ocean-use change, under which is it required to state: "Total surface area controlled/ managed by the organisation, where the organisation has control (km2); • Total disturbed area (km2); and • Total rehabilitated/restored area (km2)." Both AR disclosure points could be consolidated within the total rehabilitated/restored area (km2) metric. AR 26 (c) was aligned with TNFD additional Metric A23.0 Changes to nature (dependency and impact): mitigation hierarchy steps, under which it is required to state the "Proportion of sites producing and effectively implementing nature action plans.". While this technically does not measure those where ecological integrity is improved, arguably, the effective implementation of nature action plans is a suitable proxy for this as effective implementation should enable improvements in ecological integrity.			
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	IIGCC has carried out mapping of the ESRS-E1 datapoints against our own proprietary disclosure frameworks, as well as others including the Climate Action 100+ Net Zero Company Benchmark, to assess the extent to which the datapoints align with investors' data needs. Overall, ESRS-E1 provides a strong basis for assessing the credibility and integrity of transition plans, and the proposed amendments generally preserve this. However, while streamlining and reduced granularity can help to reduce reporting burdens, there is a risk that this will compromise comparability of disclosures and increase implementation costs, particularly for more complex topics that would benefit from additional guidance. In this context, we encourage EFRAG to finalise the draft transition plan guidance it was working on to support preparers' implementation efforts. Although ESRS-E1 includes limited provisions around how companies exert influence on material risks, it stops short of requiring comprehensive transparency on lobbying. ESRS G1 includes more explicit disclosures on lobbying but we would like to see stronger links made between these datapoints and transition plan disclosures under ESRS-E1. A company's external engagement—whether through industry groups or direct advocacy—can be a key metric for investors assessing its climate commitments. Related to this, the ESRS G1 disclosures lack specific requirements to disclose on indirect lobbying activities, i.e. via industry associations. Given that this typically constitutes the bulk of lobbying activities an entity is associated with, we recommend that EFRAG revises the wording here to explicitly account for both direct and indirect lobbying efforts, in line with the investor-led Global Standard on Responsible Climate Lobbying.			
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	35.E1-1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	In the absence of accompanying guidance on transition plans, preparers also require clarity on their implementation and the components to prioritise. From the perspective of the preparer, the main purpose of these plans is to set out their planned response to climate change, underpinned by forward-looking actions that ensure the business model and strategy is resilient to, and well positioned to realise opportunities arising from, climate change. We recommend that some form of guidance, leveraging the work EFRAG has already done on this topic, is taken forward to help support effective implementation and to encourage the development of plans that are genuinely useful and informative for users. With regards to key components of credible transition plans, we would emphasise: 1.Comprehensive, net zero aligned emissions targets. 2.A credible strategy to deliver those targets (including allocation of capital expenditure). 3.Demonstrable engagement to support the achievement of targets (including across the value chain). 4.The contribution to "climate solutions" and wider products/services). 5.Supporting emissions and accounting disclosure.	E1	Disclosure Requirement E1-1 - Transition plan for climate change mitigation	
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	35.E1-2.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The consistent disclosure of climate-related risks and opportunities and the quantification of potential impacts in different scenarios is critical for investors understanding and managing climate risk at portfolio level. One element missing from the current DR is to clearly request that the preparer specify the temperature related to the scenario they are using as its central assumption for forward looking planning. This will help investors understand the extent to which they are factoring in a transition, whether their assumptions about physical risk impacts are material and hence where the balance of risk lies relative to the scenarios they may be using.	E1	Disclosure Requirement E1-2 - Climate-related risks and scenario analysis	
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	35.E1-4.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Although ESRS-E1 includes limited provisions around how companies exert influence on material risks, it stops short of requiring comprehensive transparency on lobbying. ESRS G1 includes more explicit disclosures on lobbying but we would like to see stronger links made between these datapoints and transition plan disclosures under ESRS-E1. A company's external engagement—whether through industry groups or direct advocacy—can be a key metric for investors assessing its climate commitments. Related to this, the ESRS G1 disclosures lack specific requirements to disclose on indirect lobbying activities, i.e. via industry associations. Given that this typically constitutes the bulk of lobbying activities an entity is associated with, we recommend that EFRAG revises the wording here to explicitly account for both direct and indirect lobbying efforts, in line with the investor-led Global Standard on Responsible Climate Lobbying. Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	35.E1-6.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	We note that compatibility of transition plans with 1.5 degrees is not in scope of the review of the Level 2 standards, and the Standards no longer include a definition of net zero targets. However, EFRAG should provide clarity at the technical level on the level of ambition needed for transition plan targets, and their alignment with the goals set out in wider EU legislation, at the earliest opportunity. It is important for users and preparers to understand what is expected and what is feasible in this context, particularly in relation to 'Paris-aligned' targets, and whether this requires a narrow interpretation of alignment with a 1.5c pathway (as set out in the European Green Deal) or a 'well below 2c' pathway. Transition plans are, on account of their forward-looking nature, subject to inherent uncertainties and in part dependent on factors outside of the preparer's control. In this context, it may be advisable to consider disclosure requirements that focus on the extent to which transition plans are "Paris-aligned" and highlighting the plan's resilience to multiple scenarios. The ESRS-E1 disclosures do not include short-term GHG emissions reduction targets (e.g. before 2030). While medium- and long-term target disclosures are required from 2030 onwards, short-term targets are also vital to ensure that boards and management are actively steering towards decarbonisation. We caution against the proposals to no longer require updated target disclosure at 5-year intervals after 2030. The NZIF encourages investors to establish portfolio objective 'stocktakes' on a 5-yearly basis where possible as a means of reflecting on progress against portfolio alignment objectives, and to support the adjustment of net zero strategies where necessary. This helps to align investor actions with the ratchet mechanism of the Paris Agreement, as well as other interim targets under the EU Climate Law (for example the 2040 target).	E1	Disclosure Requirement E1-6 - Targets related to climate change	
Survey	Institutional Investors Group on Climate Change (IIGCC)	NGO	United Kingdom	35.E1-9.	Do you agree with the amendments of this chapter?	I disagree	We are concerned about the deletion of the provision requiring explanations on residual GHG emissions and neutralisation pathways. While we note stakeholder concerns over the reliability of long-term projections, it is precisely this uncertainty that made the disclosures of underlying assumptions so useful.	E1	Disclosure Requirement E1-9 - GHG removals and GHG mitigation projects financed through carbon credits	
Survey	TomTom NV	Preparer (non-financial preparing a sustainability report)	Netherlands	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	The amended version offers significant relief in the auditing process and enhances the practicality of conducting the DMA process. We particularly support the top-down approach and the newly introduced practical considerations.			
Survey	TomTom NV	Preparer (non-financial preparing a sustainability report)	Netherlands	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	Unclarity remains regarding the definition of "significant ongoing effort" and why it is treated differently compared to a "normal" mitigation action. While Appendix C provides some explanation, it is still complex and difficult to follow. Further simplification is needed. We agree with the overall concept of the net approach that considers both prevention and mitigation actions.			
Survey	TomTom NV	Preparer (non-financial preparing a sustainability report)	Netherlands	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	TomTom NV	Preparer (non-financial preparing a sustainability report)	Netherlands	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	GDRs are still quite lengthy.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	TomTom NV	Preparer (non-financial preparing a sustainability report)	Netherlands	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	Understandability has been improved: in particular, "Application Requirements" section is better presented.			
Survey	TomTom NV	Preparer (non-financial preparing a sustainability report)	Netherlands	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				
Survey	TomTom NV	Preparer (non-financial preparing a sustainability report)	Netherlands	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2				
Survey	TomTom NV	Preparer (non-financial preparing a sustainability report)	Netherlands	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	For companies that choose to disclose E1, even if it is not material because they are not part of a high carbon emission-producing industry, the entire E1-11 DR is unnecessary, when ESRS 2 SBM-3 suffices. This disclosure can be made as a best practice or if certain conditions are met. Furter simplification and relief is needed on this DR. Also, it is very difficult to attribute financial effects to only climate change (other variables might be involved: macroeconomics trends…), that's why qualitative information provide a better context on certain anticipated effect, especially in those situations where quantitative effects are not quantifiable for above reasons.			
Survey	TomTom NV	Preparer (non-financial preparing a sustainability report)	Netherlands	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	TomTom NV	Preparer (non-financial preparing a sustainability report)	Netherlands	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	TomTom NV	Preparer (non-financial preparing a sustainability report)	Netherlands	22.E1.	Comments on deleted datapoints in ESRS E1	I partially agree and partially disagree	We agree on the simplification of the table on GHG emissions (previously AR48), removing the milestones and targets section (which was a repetition of other DR and did not add valuable information).			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	TomTom NV	Preparer (non-financial preparing a sustainability report)	Netherlands	23.	Six datapoints exceptionally moved from “may” to “shall” In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, “may disclose” datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from “may” to “shall” subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	We disagree on the changes on G1: we believe they should not be mandatory but rather kept them voluntary.			
Survey	TomTom NV	Preparer (non-financial preparing a sustainability report)	Netherlands	25.	Emphasis on ESRS being a “fair presentation” reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	TomTom NV	Preparer (non-financial preparing a sustainability report)	Netherlands	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking’s employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	For the reader/user of the annual report, this change does not provide any real additional value. It only results in increased audit burden and an overload of information that does not enhance the report’s usefulness (i.e., a country with 60 employees out of 3,500 equals 1.7% of the workforce but has to be disclosed under the proposed legislation. Including this information does not provide any value; it merely clutter the Annual Report.)			
Survey	TomTom NV	Preparer (non-financial preparing a sustainability report)	Netherlands	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary (“may”) datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	The adjusted gender pay gap by employee category could be removed, provided that companies can still report some form of adjusted pay gap metric (adjusted by employee type, countries…) as entity-specific information in the same table. For example, in tech companies such as TomTom (which have historically employed a predominantly male workforce), the adjusted gender pay gap is necessary to accurately reflect reality and avoid misleading the reader.			
Survey	TomTom NV	Preparer (non-financial preparing a sustainability report)	Netherlands	35.E1-7.	Do you agree with the amendments of this chapter?	I disagree		E1	Disclosure Requirement E1-7 - Energy consumption and mix	
Survey	Forvis Mazars Group	Auditor	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: “[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process”.Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in “Gross versus Net” as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We welcome EFRAG's efforts to simplify the DMA process and promote a pragmatic approach to identifying material IROs. We note that the proposed changes will put greater emphasis on management's judgement given the practical considerations that are introduced. As auditors, we will especially exercise our professional judgement on topics that are not "clearly" material or immaterial, based on the documentation prepared by the undertaking. We nonetheless encourage EFRAG to further clarify that regardless of the approach adopted to perform the materiality assessment (i.e., top-down or bottom-up), the objective of the DMA is still to identify material IROs which is notably not clear under AR 23 in ESRS 2. Even if we agree with the fact that information can be presented at an aggregated level (i.e., either at topical or IRO level), we encourage EFRAG to provide further illustrations in the NMIG on how to determine "what provides the most relevant information" (see para 22 in ESRS 1). We also welcome the reinforcement of the information materiality filter. However, we deem it important to further clarify what is meant by "users of general purpose sustainability statements", how it differs from "users of sustainability statements" and how it compares to "affected stakeholders". This is key to ensure that the filter is appropriately and consistently applied. Though we recognise that it is reasonable to allow companies presenting information about non-material topics, we recommend EFRAG ensure that users can differentiate between information that is required by ESRS (including entity-specific information) and other information. We therefore recommend the presentation of information about non-material topics in an appendix to the sustainability statement. Such information should be limited to the information needed to meet specific demands from stakeholders. In this regard, we encourage clarifying the concept of "specific user" under para 108 in ESRS 1.			
Survey	Forvis Mazars Group	Auditor	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called “gross versus net” issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating ‘actual’ from ‘potential’ impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	Though we acknowledge that there has been divergence in practice regarding how to consider implemented remediation, mitigation and prevention actions in the DMA, and therefore that clarifications are needed to address the so-called "gross vs net" issue, we consider that the current proposals do not fully solve this issue. The results of the field test conducted by EFRAG will be critical to decide on the changes to be ultimately brought to ESRS 1. Para 34 and 35 in ESRS 1 read in conjunction with appendix C indeed do not sufficiently clearly and consistently state that negative impacts are generally to be assessed before mitigation, prevention and remediation actions. It is therefore unclear what the practical outcome of applying the proposed requirements will be. We believe an appendix can be helpful, but it should stay principle-based clarifying concepts introduced in the Standard such as "significant ongoing mitigation and/or prevention actions" and explaining further how such actions are to be considered in the materiality assessment of negative impacts. Adding illustrations in the NMIG, covering environmental and social impacts, for instance regarding health and safety topics, would also be useful to support consistent application of ESRS. Besides, we disagree with EFRAG's view that it is not necessary to also address risks, as we think binding guidance is equally needed given the practical questions raised in implementing the Set 1. We encourage EFRAG to collaborate with the ISSB to ensure that any clarification that may be provided in the ESRS is interoperable with the IFRS SDS. Finally, though we welcome the attempt to define positive impacts, we consider that EFRAG should clarify that any results of the undertaking's mitigation or remediation actions on its own negative impacts are not positive impacts, for instance even if such actions go beyond compliance with law and regulation.

Survey	Forvis Mazars Group	Auditor	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	We welcome the flexibility introduced, as current Standards are very strict regarding the presentation of sustainability statements, which has sometimes hampered the readability and therefore the relevance of the information presented. We support the proposals to allow the addition of an executive summary and the use of separate sub-parts and appendices in the sustainability statement. Nonetheless, we believe it is necessary to further clarify: -that the executive summary shall present fairly the undertaking's material IROs; -under which circumstances some information could be presented as an appendix since the reader might interpret that such information is less important than that presented in the main body of the statement. Besides, though we agree that the sustainability statement shall be structured in four parts, we recommend allowing companies to present the environmental, social and governance parts in the most relevant order considering their material IROs. To support the readability and the comparability of the sustainability statements, we also encourage EFRAG to propose a table for the most complex metrics (e.g. pollution). This could be done either in the ARs or the NMIG depending on whether the use of the table is mandatory or not. Last but not least, we deeply regret that though the general principle of connected information has been maintained, EFRAG now proposes to no longer be obliged to formally evidence in the sustainability statement the direct / indirect connectivity with financial statements (see para 114 and 115 in ESRS 1) whereas it is critical to present consistent information. Not only do the proposed modifications seem to contradict the requirement under para 111 (b), but they also represent a significant step backwards that may negatively impact the overall consistency of corporate reporting.			
Survey	Forvis Mazars Group	Auditor	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	Overall, we support the way EFRAG has restructured the architecture of the ESRS and the interaction between ESRS 2 and the topical Standards. We believe that the revised structure is clearer and that the streamlining of the GDRs along with the related datapoints on PATs in the topical Standards will significantly contribute to reducing the burden as the previous requirements included many overlaps. We also welcome the fact that the datapoints that have been removed regarding PATs related to topical matters have been kept as illustrative narrative information in the NMIG. Regarding point 5., though we agree in principle with the possibility given to report information on PATs at a higher aggregation level than the material IROs, we recommend EFRAG clarifying the circumstances under which such aggregation would be relevant. Finally, we support the deletion of the topical specifications to GOV, SBM and IRO as proposed by EFRAG.			
Survey	Forvis Mazars Group	Auditor	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	Overall, we agree that the proposed amendments improve the understandability, clarity and accessibility of the Standards. However, we would like to make the following comments: -Some concepts that already existed in ESRS 1 and which have raised many questions in practice are still unclear (e.g. "own operations" in para 59 in ESRS 1 – see our detailed comments in Part 3 – or "operational control" in ESRS E1). -New concepts have also been introduced without always providing the appropriate definitions / explanations (e.g. "ongoing mitigation and/or prevention actions" in para 35 in ESRS 1). -The revised Standards should be reviewed again to ensure that no datapoint is included in the ARs (for instance, see AR 6 in ESRS E4). -The "shall consider" requirements in the ARs which are elements of methodology for preparing the disclosure are not well understood (e.g. it is uncertain what is meant by mandatorily "considering" the GHG Protocol Corporate Standard when preparing GHG emissions under AR 21 in ESRS E1). We therefore suggest adopting more explicit wording on what companies should do in practice. -Finally, EFRAG should clearly indicate that the previous issued implementation guidance and FAQs are no longer to be considered once the revised ESRS come into force. EFRAG should nonetheless make a thorough review of the related content to ensure that the revised Standards and the NMIG incorporate all relevant elements that are still applicable/useful to support a consistent implementation of the new Set.			
Survey	Forvis Mazars Group	Auditor	Belgium	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We support the NMIG being non-binding and not being included in the Delegated Act on the revised ESRS, but only for as long as the NMIG contains only examples of possible items to cover when disclosing in accordance with a mandatory datapoint (mainly for narrative PAT disclosures) or explanatory content that has no implication on the way to prepare the information to report. "How to report" guidelines (i.e. methodology) should be systematically presented in the ARs and therefore be binding to ensure consistent application of the ESRS. For instance, NMIG 5 for para 51 in ESRS 1 presents helpful explanations that are relevant to consider to properly apply ESRS requirements. We therefore recommend that such explanation be included in ESRS 1. Besides, even though NMIG is non-binding, EFRAG should ensure that this guidance is consistent with the revised Standards. For instance, there is an inconsistency in the NMIG in the introductory paragraph to the flowchart for determining disclosures under ESRS whereby it is indicated that companies are asked to disclose a brief explanation of the conclusions of the materiality assessment for a given non-material topic whereas this is not a requirement in ESRS 2 IRO-2. In the future, if EFRAG continues to act as the interpreting body for ESRS, which is something we support, we believe it is important that EFRAG's answers to implementation questions asked by stakeholders be addressed through a formalized and robust due process. The distinction between what should be considered additions to the NMIG (as non-binding guidance) and what should be considered formal interpretations of the Standards (therefore binding guidance) should be made very clear. Finally, we believe that the EC should ultimately clearly explain the different levels of publication and its respective status (i.e., legal/authoritative or non-binding).

Survey	Forvis Mazars Group	Auditor	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	As auditors, we cannot comment on whether the right balance has been struck between simplifying ESRS and the need for transparency. However, the proposed reliefs need further clarification to ensure consistent application. We therefore recommend: -clarifying that applying the reliefs does not prevent from achieving a fair presentation. That said, the reliefs should, of course, be applied appropriately (e.g. they should not be applied systematically so as not to give information about the upstream/downstream value chain whereas such information would be necessary considering the material IROs identified); -providing factors or criteria to rely on to exercise one's judgment regarding the implementation of the "undue cost or effort" relief and clarifying whether the assessment of what constitutes undue cost or effort is supposed to evolve over time as access to information may improve over time; -clarifying the interactions between all the reliefs: what is a mere illustration of the general relief on "undue cost or effort" and what is an additional separate relief? It is critical to be able to clearly identify which relief applies in which situation; -precising at which level the relief in para 90 applies: is it applicable only when an "activity", due to its nature, is not expected to be a significant driver of the IROs the metric purports to represent, or is the relief also applicable at a more granular level (e.g. at subsidiary or site level). Besides, an undertaking should ensure that, overall, what is excluded from the calculation is not material. We also recommend deleting the relief on joint operations given that the general treatment of such complex transactions is not explicit in the Standard. EFRAG should therefore first clarify this. Besides, this relief is based on operational control which is a concept that is not well defined in ESRS.			
Survey	Forvis Mazars Group	Auditor	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	We believe it is important to clarify whether the relief provided under para 91 in ESRS 1 is an illustration of the general "undue cost or effort" relief or whether it can be applied following a different assessment by the undertaking. Besides, EFRAG should clarify if there is a relief applicable for the reporting of GHG emissions as the exception in para 91 in ESRS 1 seems to contradict the general relief on "undue cost or effort" notably applicable to the disclosure of all metrics in accordance with para 87 (d) in ESRS 1.			
Survey	Forvis Mazars Group	Auditor	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	Though we acknowledge the difficulties for companies in providing quantitative information about anticipated financial effects, for instance in isolating these effects with respect to a given material risk or opportunity, we support option 1 as it best preserves a high level of interoperability with IFRS SDS, while still allowing companies to withhold quantitative information if they are unable to provide such information, considering the different reliefs that can be used. Option 1 is also key to supporting connectivity between sustainability and financial information. However, we recommend that EFRAG develop NMIG to support both companies and auditors in, respectively, preparing and verifying this information, building on the IFRS Foundation's educational material issued in August 2025 on "Disclosing information about anticipated financial effects applying ISSB Standards". As an alternative approach to Option 1, and if necessary, we propose that EFRAG adopt a hybrid approach whereby climate-related anticipated financial effects would be presented according to Option 1 and whereby other anticipated financial effects would be presented according to Option 2, at least for a certain period of time, given the different levels of maturity regarding the calculation of such effects (calculation methodologies regarding climate-related anticipated financial effects being more mature than other methodologies).			
Survey	Forvis Mazars Group	Auditor	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I would like to skip this question and provide my feedback in Part 3				
Survey	Forvis Mazars Group	Auditor	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We appreciate EFRAG's efforts to preserve interoperability with IFRS SDS as much as possible considering the overall objective of burden reduction. It is indeed key to avoid duplication of efforts and to ensure that information presented under different frameworks is comparable to the greatest extent possible. Nevertheless, we question why different wording has been used in the proposed revised Standards where ESRS are meant to be fully aligned with IFRS SDS (e.g. the fair presentation principle, the general "undue cost or effort" relief, etc.). Wording that is not fully aligned without proper justification will inevitably create confusion and unnecessary analysis for companies reporting under both frameworks. Overall, we encourage EFRAG to use as much as possible the same language as the one used in IFRS SDS when the underlying principle, relief or requirement is meant to be the same. Even more, there are important areas where interoperability could be further enhanced without undermining the EC's simplification objective. Especially, we regret that EFRAG is not proposing to fully align with IFRS S2 regarding the reporting of GHG emissions by allowing companies to decide on which approach offered by the GHG Protocol it wishes to apply. Above all, this would reduce complexity for companies used to applying the GHG Protocol. This being said, we also note that the GHG Protocol is currently under revision and that referring to all options in the GHG Protocol would probably imply that EFRAG reinforce its collaboration with the Protocol.

Survey	Forvis Mazars Group	Auditor	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	First of all, we do not believe that adopting fair presentation in preparing sustainability information according to ESRS will support a more effective functioning of the materiality filter. Fair presentation is indeed often confused with materiality which makes it even more important to provide a clear definition of what fair presentation is in the context of sustainability reporting. To avoid divergent interpretations, sufficient guidance/illustrations should be provided to ensure that the consequences of the fair presentation principle are well understood, notably regarding the presentation of ESRS metrics. Section 2 in ESRS 1 should clearly make the link with para 10 on entity-specific information acknowledging that such information will be even more critical considering the fair presentation principle. Adding complementary information where necessary to achieve fair presentation is aligned with the requirement in IFRS S1. Besides, since the objective of sustainability reporting prepared according to ESRS is to present fairly the undertaking's material IROs, there are questions on how the reporting at topical level, which is allowed by ESRS 1 when certain conditions are met, can be assessed to convey a fair presentation of the material IROs. Finally, we do not believe that ESRS being a fair presentation reporting framework will alleviate the burden on companies. On the contrary, we believe that this will increase complexity as we understand fair presentation comes in addition to compliance. Sustainability reporting under ESRS is not mature enough to introduce right now fair presentation as an explicit principle in the Standards. In practice, this will increase companies' responsibility in view of the significant judgements they will have to make. Therefore, though we do not oppose to fair presentation as such, we believe adopting such principle in preparing ESRS sustainability statements can only be relevant once preparers and auditors have gained sufficient experience in this regard.			
Survey	Forvis Mazars Group	Auditor	Belgium	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	The amended methodology for the calculation of adequate wages outside of the EU set out in para AR 22(b) of ESRS S1 is not consistent with the objective of the DR as it allows for the use of statutory minimum wage established by legislation or collective bargaining agreement taking into account the ILO wage setting principles, whereas a minimum wage is often not an adequate wage. Considering the complexity of the issue and the fact that adequate wage benchmark is not always available, we recommend putting emphasis, in the disclosure requirement, on the importance of providing sufficient qualitative information to explain the methodology applied and the extent to which it enables to meet the objective of the DR.			
Survey	Forvis Mazars Group	Auditor	Belgium	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	Overall, we agree with the way that the SFDR PAI have been incorporated in the amended ESRS. This being said, we would like to insist on the need for consistency between the ESRS, the SFDR, and other EU regulations (e.g. the provisions of Pillar III disclosures on ESG risks). In particular, it is key that, when revising the SFDR and PAI indicators, the EC takes into account the simplifications that have been introduced in the revised Set of ESRS.			
Survey	Forvis Mazars Group	Auditor	Belgium	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree	We agree with the deletion of the voluntary datapoint on adjusted gender pay gap in the final text (compared to what was proposed in the so-called "v1.6") consistently with EFRAG's approach to remove all voluntary datapoints from the revised ESRS, as we understand this deletion will not prevent a company from disclosing adjusted amounts for the gender pay gap (e.g. a disaggregation by employee category or by country) if it is necessary to provide a fair presentation of the underlying material IRO, which may often be the case. Should EFRAG nonetheless want to clarify that such adjusted amounts may be relevant in addition to the required unadjusted ESRS metric depending on the entity's specific facts and circumstances, we suggest including an illustration in the NMIG related to ESRS S1.			
Survey	Forvis Mazars Group	Auditor	Belgium	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We acknowledge the efforts made by EFRAG to clarify and simplify the general requirements that are applicable to sustainability reporting under the ESRS. In particular, we welcome the promotion of a pragmatic and efficient double materiality approach, the reinforcement of the information materiality filter, the inclusion of new reliefs and the flexibilities introduced regarding the presentation of the sustainability statement. However, we have identified several critical areas (namely the fair presentation principle and the "gross vs net" approach as currently defined) where EFRAG's proposals may not reduce the reporting burden on companies. We therefore strongly encourage EFRAG to review the draft standard on these issues to better serve the objective of simplification. We also encourage EFRAG to refine its proposals on the reliefs that are now provided to ensure consistent application. Other detailed comments are included in the Excel template.			
Survey	Forvis Mazars Group	Auditor	Belgium	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. I partially agree and partially disagree	Overall, we welcome the simplification efforts and the clarifications brought by EFRAG on ESRS E1, in particular the focus on "key features" when reporting on transition plan for climate change mitigation as well as the possibility to demonstrate the 1.5°C compatibility of GHG emissions reduction targets by providing the validation of an independent third party. With respect to GHG emissions reporting boundaries, and consistently with our proposal to align ESRS E1 with IFRS S2, we recommend allowing different approaches as per the GHG Protocol. As indicated under question 34, we also regret the removal of the guidance on net-zero targets. Other detailed comments are included in the Excel template.

Survey	Forvis Mazars Group	Auditor	Belgium	33.S_4.	ESRS S4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal? Survey	Forvis Mazars Group	Auditor	Belgium	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Considering the timing of the consultation, which is concurrent with the preparation of sustainability information for FY 2025 for wave 1 companies, we urge EFRAG to clarify in the basis for conclusions which amendments are only clarifications of the current requirements and can therefore be anticipated when applying the Set 1, and which amendments introduce new (and therefore different) requirements compared to the Set 1. Besides, we regret that EFRAG has not been able to develop even limited specific guidance for the financial sector notably to take into account of the specificities of the downstream value chain. Clarifying the requirements for the calculation of financed and insured emissions is also critical. Regarding ESRS E1, we note that EFRAG has removed the definition / requirement on "net zero targets" considering that it is not able to define this concept. We recommend to at least require in ESRS E1 to clearly explain how such target has been defined and how it will be met by the undertaking in the future. The clarifications brought in the Set 1 have indeed enabled to significantly improve the transparency and consistency of this critical information. Finally, we note that the sustainability statement includes ESRS information that is standardised by the EC with the help of EFRAG, but also EU Taxonomy disclosures that are defined by the EC with the support of the Platform on Sustainable Finance. Currently, both reporting frameworks are independent overall, but we encourage the EC to identify points of convergence as much as possible to further reduce complexity for companies. For instance, the relief that is proposed in ESRS 1 for acquisitions and disposals is not consistent with the approach retained by the EC in FAQ 152 published in March 2025, which will inevitably raise questions in practice.			
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We appreciate most of the proposed changes as they will significantly streamline the DMA. Especially the simplification that topics can be deemed non-material by analyzing the companies business model and value chain will support this. Also, the introduction of fair presentation and the changes to the information materiality (e.g., allowing materiality judgement in the "Flowchart for determining disclosures under the ESRS" also for policies, actions, and targets) is welcomed. However, some aspects of the DMA process are still not fitting for the concept of fair presentation. An example is paragraph 21 (b) in which it is currently stated, that the Sust. Statement should "enable users to understand...". Fair presentation/materiality is not about enabling a general understanding, it is about communicating only the information needed for a decision of the respective user (i.e. stakeholder). Understanding, however, has no limiting effect on the information to be included. Aside from this aspect, more guidance regarding some aspects (e.g., how Scale can be assessed or how to model in DMA cases in which "severity of an impact takes precedence over its likelihood in case of a potential negative human rights impact" would be welcomed.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	While it is definitely necessary to clarify the "gross vs. net" issue, the guidance developed is complex, theoretical and not all terms are clearly defined (example for unclear definitions: significant ongoing activities; is having a compliance office to deal with bribery and corruption an significant ongoing activity, or is fulfilling the minimum legal requirements regarding safety an significant ongoing activity?). Differentiating between actual and potential impacts, first year and future years of occurrence is complex to communicate (1) to experts during the actual DMA and (2) to the reader of the report as she/he has not the same insights as the company itself. We would welcome a simpler and consistent application of the gross vs. net view for all IROs. It is also crucial to take into account that many industries are already highly regulated (e.g., health and safety for chemical industry or data protection for IT industry). Taking activities to fulfill such regulations not into account when assessing materiality of an IRO would lead to many IROs becoming material.			
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	We highly welcome this flexibility. The changes in the structure of the ESRS increase their readability: having the ARs in a box right next to the respective paragraph, deleting "explanatory" paragraphs, and combining paragraphs makes it easier to navigate and read. The latter also increases the flexibility of companies as the paragraphs are now more principles based as they still define the data to be reported but are less prescriptive. Positive is also the increased flexibility regarding the use of tables (many are shifted to "may present"), the use of appendices and the possibility shift details about the GHG calculation methodology into such appendices. Lastly, also the added possibilities to (1) exclude sensitive information and to (2) exclude certain activities from metric calculations are greatly increasing flexibility without substantially decreasing information value. Despite the positive aspects, we noticed, that new mandatory disclosures have been added – clearly against the request of the EU commission and the aim of the revision to reduce reporting burden. Additional mandatory data points should be avoided.			
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We agree, the new principles based approach can be considered a major improvement as it increases the companies flexibility. Also changes like the fact that only key actions need to be disclosed, the reduction of negative statements (i.e., something is not implemented or in place), and the clarification that targets can also be qualitative are positive.			
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We consider the NMIG as a valuable source for additional guidance on how to approach certain topics. However, we consider it as crucial, to make sure that NMIGs do not create an implicit expectation that the examples provided must be followed or justified if not applied. To achieve this, we would suggest a clear communication on NMIGs including a clarification, that the NMIG cannot be used for audit purposes. Having all "shall disclose" datapoints in the main body of the standard is valuable and having the respective ARs in a box right under the respective paragraph eases understanding. However, especially in more complex standards like E1 the ARs are quite extensive and contain requirements that previously would have been considered DPs (e.g., ESRS E1 Paragraph 14 (a) a description of "financial and investment planning" is required, then AR2 requires CAPEX/OPEX figures for the short- and medium-term and a range for the long term). It would be reasonable to either include such extensive additional details in the main body of the standard or (preferred option) indicate in the main body that significant additional requirements are located in the respective AR. While we see a lot of positive changes to make the ESRS more understandable and clearer, we do not think the reduction of datapoints will lead to a likewise reduction of report content and effort on preparer side, as e.g., sometimes several datapoints/paragraphs from the "old" ESRS have been combined in one new paragraph.			
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We consider NMIG as valuable addition to the ESRS. We also concur with the recommendation of the EFRAG to not include them in the delegated act. Having deleted content included in structured NMIG's helps to (1) ease understanding and (2) maintain some control over the content and frame the guidance correctly. However, we would welcome EFRAG to carefully consider how the single NMIG's are phrased. Example: ESRS E1 NMIG 12 (e) gives the reader the impression of a requirement to use a certain formula when calculating GHG emissions in monetary units. Such cases should either be re-located to the ARs within the standard or rephrased do clearly indicate it as voluntary.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree	Most of the reliefs are a step in the right direction. Especially the reliefs for 2. Lack of data quality, 4. Exclusion of certain activities from metrics and 7. Relief for acquisitions are helpful in overcoming the challenges preparers faced during the first ESRS reporting period. In the social area certain activities related to corporate culture (e.g., performance talks, employee surveys or corporate roles) can´t be immediately extended to acquired entities and thus presented major challenges when calculating related metrics. The three above-mentioned reliefs mitigate this problem. However, especially regarding the relief for acquisitions it should be noted, that the one-year timeframe might be insufficient. Sustainability reporting is far more complex than financial reporting, and greater flexibility should be offered to disclose metrics once the subsidiary is fully integrated.			
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	In many cases estimation will be possible and will result in meaningful disclosures. However, we encountered cases, in which this held not true; esp. in case of social (entity specific) metrics.(examples are % of employees with performance talks, or training completion rates). For such cases we consider this relief beneficial. We do not see a problem to not include a time limit for the relief. If the respective disclosure is important for stakeholders the companies have sufficient incentives to improve the respective disclosure for the next years. Furthermore, the disclosure of the planned measures to be improved gives stakeholders sufficient leverage to hold the respective company accountable and demand improvements.			
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	Preference: option2. If quantification is done by companies, it should be explicitly stated in the ESRS that ranges are possible as one single number might create the false impression of accuracy. Calculating anticipated financial effects for risks and opportunities is challenging, requires a lot of assumptions (esp. for the long-term time horizon of more than 5 yrs) and can be considered misleading by readers if those effects don't materialize eventually One example to illustrate challenges are reputational risks. The estimation of long-term reputational risks for sustainability topics can change from one year to another depending, e.g., on the political landscape and economic situation. Another example relates to the necessity to state anticipated financial effects on a risk/opportunity level. In practice this is not realistic as many risks/opportunities are interconnected and can´t be viewed in isolation. Finally, it's even uncommon to report a monetized figure in more sophisticated financial risk management systems; they usually give a broad range or qualitative indication. Furthermore, if anticipated financial effects have a certain probability of materializing, they would already be reported in companies financial reporting. Examples are the outlook in case of opportunities materializing or a provision or a contingent liability in case of a risk. While option 2 doesn't automatically leads to ISSB aligned reporting, it gives companies enough freedom to do so, i.e., they can disclose quantitative information and only "fall back" on qualitative information in cases allowed by ISSB. Please note: if option 1 should be chosen, we think it's appropriate, to place the text from AR 17 directly in the main body of the text to reflect its importance. If option 2 is chosen, that other parts of ESRS like ESRS E.1 AR 7, 40 (e) and 41 (g) should be revised and parts like E1-11 should be made voluntary.			
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	Regarding 40 (d): Depending on the site at risk it might not be possible to identify the revenue at physical risk. Sales offices, sites that provide service to the whole group (e.g. Shared Service Centers), revenue generated by datacenters which serve several customers across the globe, etc. do not generate any revenue but might be at risk. Consequently, the value of such disclosure would be decreased. Regarding 41 (c): While within Europe there are standardized energy efficiency categories for real estate, outside Europe this is not the case. Also, within Europe while the categories are standardized, the thresholds are different depending on the country. Also in general, those additional disclosures are to a large extent sector specific. Examples: for companies in the service sector stranded assets ESRS E1 – 41 (f) are oftentimes not relevant, ESRS E1 – 41 (c) might be of interest primarily for real estate companies.			
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	The biggest ISSB to ESRS differences we identified when internally mapping our 2024 Sustainability Statement to the ISSB requirements are settled with the changes described above. The anticipated financial effects have been the biggest difference we identified. Above that the now principle based ESRS that allow fair presentation should allow sufficient flexibility to fulfill ESRS and ISSB requirements with one single Sustainability Statement.

Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	While we agree that the more principle based approach and the deletion of certain "shall" datapoints is helpful , we observed some notable exceptions. In some cases, datapoints have "just" been combined and summarized in one paragraph (e.g., Waste disclosures: previously E5 37 to 40, now E5 (revised) 18 and 19 remain essentially unchanged), we do not consider this a reduction. In some cases even new requirements were added (again e.g., E5: waste with unknown destination; we observed similar examples in E1, S2 and G1). In other cases, the main body of the standard was reduced but requirements previously considered a datapoint have been moved to ARs (example: S2 AR 1: disclose how policies are communicated). Lastly, the requirements are shortened but disclosures might remain the same as a certain level of context is necessary (e.g., when describing actions). In general, we are against the new mandatory disclosure requirements that have been introduced and suggest deleting them all to fulfill the purpose of the revision of the ESRS. Lastly, the changes may help to reduce effort in data collection, documentation, and coordination with auditors. For example, the introduced options for burden reliefs may simplify internal discussions and reduce the need to justify the omission of non-material items, however, we do not expect a significant reduction in volume.			
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	First of all, we observed more moves from may to shall datapoints than the ones mentioned above (e.g., S2 (10) and (AR 1), communication of policy). In general, we do not agree with this step as it contradicts the exercise of reducing the reporting burden for companies. The datapoints mentioned above are to some extent sensitive information (G1 confirmed incidents of corruption) that rather creates legal uncertainty for the company than any benefit. Those datapoints have been voluntary in the previous ESRS version for a reason. Also, please note, that a disclosure of confirmed incidents of corruption and bribery requires extensive context. A number together with the nature of the incident is simply not creating that needed context. In general, we strongly disagree with the introduction of new mandatory datapoints as this contradicts the overarching goal of the ESRS revision.			
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	First of all, and in line with our observation reg. Q 23, we observed more new datapoints especially in E1 not listed here (e.g., E1 (AR 2) Creates a new requirement for non SBTi certified companies to benchmark their GHG emissions target, or E1 (AR 2) CAPEX/OPEX for transition plans over the short- and mid-term as well as range over long term). We do not agree to the addition of new datapoints as this contradicts the goal of reducing the burden for reporting companies.			
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	Especially auditors have relied heavily on the checklist approach when auditing ESRS Sustainability Statements and required companies to disclose information that would have considered non-material in other reporting frameworks. This pushed companies towards over-disclosing, usage of a highly technical language and in general an increased reporting burden. Due to fair presentation not being mentioned, the ESRS gave companies no effective argument to push back. Consequently, we expect the explicit statement of fair presentation to be a/the major relief for preparers. It is (1) easier to achieve comparability with other frameworks (esp. ISSB), it is (2) easier to streamline the presentation of information and (3) fair presentation can serve as a lever to effectively reduce disclosure overload and increase the efficiency of the reporting. However, in our opinion two aspects need to be refined (1) "fair presentation" should be defined within the ESRS to avoid misunderstanding (there is plenty of scientific literature about the different interpretation of "fair presentation" in Europe after the term was introduced in the accounting directive). When defining "fair presentation" we would welcome to also explicitly state that the concept of fair presentation is used to remove information but also to evaluate possible additional, entity specific information. Secondly, ESRS 1 paragraph 21 (b) in its current form ("enable users to understand…") might lead to even more disclosures as this formulation lacks to give preparer and auditor any guidance on how to limit disclosures (see our response to Q11).			
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	The non-EU hierarchy described in AR 22 (b) ii creates a significant effort for preparers: "any living wage estimate produced by an institution mandated by the public authorities of the country where the workers are based" requires multinational companies to potentially reach out to local subsidiaries around the world. People within the local subsidiaries need extensive and specialized knowledge (1) of the local language and (2) the local regulatory environment to determine the appropriate source for "living wage estimate" (which might also not be a concrete number but range, since its an estimate). On a positive side, 22 (b) iii is opening up the field for any NGO that calculates living wages, and is no longer "suggesting" companies to go for Wage Indicator or Fair Wage Network, which is good as does not call out specific organizations, allowing flexibility.			
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	Consolidation exercise limits duplication of datapoints to consider during preparation Allows having overarching disclosure and refer to this disclosure in topical chapters Word "Severe" has been removed from the disclosure of "human rights incidents", while reference to SFDR PAI indicator remained, where disclosure of "severe human rights incidents" remained, this creates inconsistency. Suggested to add "severe" back to the DR. In addition, definition of "severe" should be provided in alignment with internationally recognized standards.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	No, we do not agree with the deletion of the voluntary datapoint. We would welcome, if either only adjusted gender pay gap has to be reported or the company can choose to report either the adjusted OR unadjusted metric. The adjusted gender pay gap is in our opinion better suited to reflect the principle of "equal pay for equal work or work of equal value." Only the adjusted gender pay gap takes into account factors like role, seniority, location, and performance, it provides a precise and actionable measure of pay equity. Furthermore, starting in 2027, the European Directive on Pay Transparency (EU Directive 2023/970) will require the use of the adjusted pay gap indicator. The ESRS should align with EU legislative requirements to (1) reduce the reporting burden for companies and (2) avoid confusion and ensure stakeholders can interpret and reconcile consistent data sets.			
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	We do not see the replacement/formulation as an improvement for preparers. Compared to the old ESRS G.1-6 effectively only paragraph 33 (d) "complementary information" was deleted. In practice, companies might still have to provide this complementary information to allow the reader to understand the other disclosures under G1-6, resulting effectively in no change at all. The requirement to report this numbers explicitly for SMEs is challenging, as (1) no generally accepted definition of an SME exists and (2) this requires information about the supplier that is usually not captured in the respective systems (e.g., no. of employees or revenue).			
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	ESRS 1: In general we see the changes as a big step in the right direction: (1) emphasizing "fair presentation" incl. the revised flowchart for information materiality in NMIG, (2) moving the ESRS more towards a principles based approach, and (3) the possibility to exclude certain activities from metric calculations will lower the burden for preparers significantly. We also appreciate, that key concepts like DMA, IROs and their connection to PAT is kept. A points for criticism are (1) the lack of a definition of fair presentation and (2) the rules of when to include remediation measures for negative impacts is very theoretical and complex to apply in practice. Beyond that we would appreciate more guidance esp. in the respective NMIG (e.g., how to determine DMA thresholds). Further ESRS 1 comments: -We do not see the benefit of adding the briefing of workers representatives to ESRS (AR 11 for paragraph 33). This is (a) mentioned in the CSRD itself already and (2) no disclosure requirement but a task. -Paragraph 59 and 70 contain a list of examples (e.g., assets and liabilities). Explicit mentioning, that this is just an example would be beneficial -Paragraph 59 also specifies cases in which financial non-material entities have to be included in the sustainability statement. As it is currently written, the paragraph would require companies to test all entities not consolidated for financial reporting. It would be more efficient if entities first check the entities business model, only in case the business model differs, different IROs can occur, consequently only those entities need to be screened. -Paragraph 62 allows value chain estimations, we see the need for the clarification, that the phased in criteria to not report on the value chain for the first three years, is not applied here.			
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	ESRS 2: For ESRS 2 we largely agree with the changes. The revised PAT show, that EFRAG understood reporting reality (e.g., the now explicitly mentioned possibility to use qualitative targets, to disclose headcount as resource). Also the amount of negative statements (we do not have, etc.) was significantly reduced and the proposed options to report about anticipated financial effects are helpful. However, we still see limited cases, in which tables are still mandatory (esp. due diligence). While a description of the due diligence is valuable, limiting the format to a table is unnecessary and reduces it to a mapping exercise for the preparer and yet another overview table for the reader. Regarding the voluntary datapoints we would appreciate a more nuanced approach; in general while voluntary they provide guidance what else could be valuable for the reader and disclosed if available. Instead of deleting all voluntary datapoints one could move at least some to NMIG or keep them in ARs. Further ESRS 2 comments: -In paragraph 9 (b) it is unclear to us, whether we have to disclose a process, the outcome of the process or both. Clarification would be needed. -Paragraph 14 and 15 refer to the risk management for sustainability reporting (as in the original ESRS). However, as the risk management system and internal controls are usually two separate systems, a change in wording would be appreciated, to clearly state which system needs to be described. -Paragraph 20: it is unclear to us, why workers' representatives are explicitly mentioned as stakeholder group. -Paragraph 24: Disclosure requirements about the resilience analysis are mentioned here AND in ESRS E1. It should be located in one standard only. -AR 22 gives the impression that companies have to conduct the DMA on site level, please re-word to avoid misconceptions.			
Survey	SAP SE	Preparer (non-financial preparing a sustainability report)	Germany	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	ESRS E.1: The largely positive revisions of ESRS E.1 are (1) making the use of pre-defined tables voluntary and (2) making it possible for all companies to have an financial scope of consolidation equaling the reporting boundary under ESRS 1 AND ESRS E.1. However, especially in this ESRS we observed some new datapoints (esp. in AR 2 and AR 10) requiring companies to (1) benchmark their emission reduction target and (2) disclose resources/investments for the short-, medium- and long-term. As we consider fulfilling this new datapoints challenging, we would appreciate EFRAG to take this feedback, as well as the feedback given on the preceding pages into account and re-visit the critical parts of E.1. Further ESRS E1 comments: -As climate scenario analysis is not mandatory under ESRS, it is not explicitly mentioned, we would suggest to clearly state that fact - AR 9 states companies "shall provide its climate resilience at the reporting date". This might imply a yearly update of the resilience analysis, please clarify that this is not the case in the next ESRS version. -Paragraph 26 and AR 16 require a breakdown of targets for Scope 1, 2 and 3. We, as well as many other companies, do not set targets on scope level. We suggest to delete this requirement. -We do not see the relevance of a distinct disclosure of biogenic emissions as required by paragraph 33 -In AR 21 (a) it remains unclear how to consider optional Scope 3 sub-categories or exemptions provided in GHGP. We would appreciate a clarification. -Paragraph 35 (c) about permanence of GHG storage seems not relevant to us. Therefore, we propose to delete it. -The leasing exemption in ESRS 1 might contradict requirements from the GHG protocol. We suggest to revisit this.

Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	ESRS G.1: in our assessment G.1 has quite some parallels to S.2 revisions. While it is definitely positive to (1)allow companies to refer to the fact that the company is mandated to have a policy because of a regulation instead of disclosing the policy (again), and (2)to clarify previously unclear terms ("convictions" being clarified in paragraph 13 and AR 14), we object the change of the DP for confirmed incidents of corruption (paragraph 14) from may to shall.			
Survey	University of Warwick, Coventry, United Kingdom	Academia	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I would like to skip this question and provide my feedback in Part 3				
Survey	University of Warwick, Coventry, United Kingdom	Academia	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I would like to skip this question and provide my feedback in Part 3				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	University of Warwick, Coventry, United Kingdom	Academia	United Kingdom	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I would like to skip this question and provide my feedback in Part 3				
Survey	University of Warwick, Coventry, United Kingdom	Academia	United Kingdom	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I would like to skip this question and provide my feedback in Part 3				
Survey	University of Warwick, Coventry, United Kingdom	Academia	United Kingdom	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I would like to skip this question and provide my feedback in Part 3				
Survey	PGE	Preparer (non-financial preparing a sustainability report)	Poland	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Reduction of the number of topics to topics and subtopics (without an additional level). This is generally a positive change, but upon closer analysis, for those reporting entries in topics in brackets, it may cause difficulties in approach (both for companies and the auditor). Example: S1: Diversity and equal treatment (gender equality, equal pay for equal work, employment and integration of persons with disabilities, non-discrimination, anti-harassment) G1: Corporate culture (including anti-corruption and bribery, protection of whistleblowers and animal welfare). The explanation in ESRS1 states that we can indicate which topic applies to us, but in this arrangement – parentheses – it can be understood in different ways – to include all topics within corporate culture, which is an extremely important topic, but what about animal welfare? Will such a restriction require additional justification from the company in the report, or additional justification for the auditor that we are omitting certain issues?			
Survey	PGE	Preparer (non-financial preparing a sustainability report)	Poland	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	In the communication concerning the changes, it was emphasized that there are no non-mandatory disclosures, at the same time some of the disclosures have been transferred to the NMIG document - there is a doubt whether it contains only non-mandatory or mandatory disclosures, Some of the mandatory disclosures have a comment in the "Log of Amendmends": NMIG contains related guidance for paragraph - how should this optional document be treated since it refers to mandatory disclosures (Example: Log of Amendments E1 page 24, line 1)? If an organization decides to disclose the issues contained in the NMIG, how will it be audited and should the continuity of disclosure of the issues contained in the NMIG be maintained in the following years, if they have been shown once?			
Survey	PGE	Preparer (non-financial preparing a sustainability report)	Poland	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Regarding topics S1 and S2, simplification seems logical (we report the same topics for S1 and S2 – one list), but in the case of S2, it should be clearly stated and defined for which part of the chain the information should be collected, at what level of the supplier (should every supplier be included, or can the organisation determine its own reporting level, to what level – how deep into the chain should we go). We suggest separating S1 and S2 – the importance of own employees is incomparably greater than that of employees in the chain. Topics within S2 should only cover basic issues: employment security, health and safety, equal treatment and respect for human rights/employee rights. Appendix C – is its use mandatory or purely voluntary? It is an extensive table, which is intended to help with definitions, but in practice it can significantly hinder the "classification" of individual issues for explanations and formulations used in the list. We support the possibility of referring to other parts of the Statement when, for example, a single policy concerns multiple areas, in order to avoid repetition (we had such a situation with the Code of Ethics and Code of Conduct for PB), which can significantly affect the content and number of repetitions. Additional clarification is required for 3.2.22, which means this distinction in the practice of reporting a material topic in accordance with the thematic standard OR in accordance with the effects of risks: Information should be presented either at the topic level or at the level of impacts, risks and opportunities, depending on what provides the most relevant information, e.g. reflecting their nature or how they are managed (see the general requirement for the level of disaggregation in section 3.7).

Survey	PGE	Preparer (non-financial preparing a sustainability report)	Poland	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Regarding BP1/point 5 (e) updating disclosures on events after the end of the reporting period (ESRS 1, paragraph 94); Does this require an erratum to the already published report, or does it require supplementary information in the next reporting year? SBM-1 vs SBM-3 – a new descriptive element has been added to SBM-3, which largely overlaps with SBM-1, which may result in the need to repeat content. IRO-1 / 26 (b) the description includes information on the scope of activities and value chain, indicating whether it focuses on specific activities, business relationships, geographical areas or other factors that cause an increased risk of negative impact. This may be a repetition of information from SBM-1. IRO-2 /28 (a) once again requires the disclosure of information that has already been included in SBM-1, IRO-1, in particular regarding the links between the topics and the business model and value chain. This will make it difficult for both companies and auditors to agree on the required content of the disclosure. Simplifying environmental reporting throughout the value chain. Currently, entities are required to report throughout the value chain. Proposal to limit reporting to self-reporting or first-level supplier/contractor reporting. Such simplification would significantly improve the quality of reported data and would gradually include more actors in the value chain. Reporting throughout the value chain may be difficult due to the fact that some companies have been excluded from mandatory reporting and for some the reporting obligation has been extended over time - in such cases, companies may refuse to provide data.

I partially agree and partially disagree				
Survey	PGE	Preparer (non-financial preparing a sustainability report)	Poland	3S.E1-8.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	1.E1-8 – Gross Scopes 1, 2, 3 and Total GHG emissions Disclosure is mandatory, but in the comments section there is an explanation: [NMIG contains related guidance for paragraph 32] - won't this cause confusion that the explanations in the document that are supposed to refer to non-mandatory disclosures are mandatory disclosures? 2.E1-8 – Gross Scopes 1, 2, 3 and Total GHG emissions Clarification of the meaning of "Significant categories" is needed - what are the criteria for selecting such categories. Does this refer only to volumes of emissions?	E1	Disclosure Requirement E1-8 - Gross Scopes 1, 2, 3 emissions	
Survey	PGE	Preparer (non-financial preparing a sustainability report)	Poland	3S.E2-1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Reduced pollution data points to only relevant air, water and soil pollutants - a definition of the meaning of the term 'relevant' is needed to allow for a uniform reference point and to ensure comparability.	E2	Disclosure Requirement E2-1 - Policies related to pollution	
Survey	PGE	Preparer (non-financial preparing a sustainability report)	Poland	3S.E2-4.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The reference to the E-PRTR Regulation has been removed from the requirements due to disclosure challenges for subsidiaries/installations in non-EU territories, however, this has been moved to AR as a methodological identification for entities covered by this Regulation that wish to use this data reported for the purposes of the E-PRTR for reporting under E2 We propose to unify the source of reference - e.g. to indicate directly the reference as before PRTR for all companies in the EU. It will avoid problems during the audit and a comparison process between the companies will be ensured. Leaving a loose record will cause chaos and discrepancies in the disclosure of data, and this is not what the ESRS were for.	E2	Disclosure Requirement E2-4 - Pollution of air, water and soil	
Survey	PGE	Preparer (non-financial preparing a sustainability report)	Poland	3S.E3-4.	Do you agree with the amendments of this chapter?	I disagree	We do not agree with the rigid definition of "water consumption" related to the water balance in the presented system. In our organization, it is very difficult to meet due to the extensive portfolio of activities and various variants of water circulation, for example: water returned to cooling circuits, incomplete emptying of tanks in hydroelectric power plants, evaporation, etc. Alternatively, we request the addition of a provision introducing the possibility of justification in the event of non-balancing of volumes in the intake and discharge of water and its actual consumption	E3	Disclosure Requirement E3-4 - Water metrics	
Survey	PGE	Preparer (non-financial preparing a sustainability report)	Poland	3S.E4-5.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The need to clarify the definition: " is near such an area shall be determined". The meaning of the term "near" = if the company influences the BSA - biodiversity sensitve area) is proposed, as well as a reference to buffer zones from IBAT (based on suggestions from stakeholders). Can we understand that if we believe that we do not affect a given protected area, we do not describe it in the statement?	E4	Disclosure Requirement E4-5 - Metrics related to biodiversity and ecosystems change	
Survey	PGE	Preparer (non-financial preparing a sustainability report)	Poland	3S.S1-6.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	7. Data Points (DP): (S1) 55a Own Workforce Provide the number of number of non-employees forming part of the undertaking's own workforce, broken down into: i)people with contracts with the undertaking to supply labour ('self-employed people') ii)and people provided by third party undertakings primarily engaged in 'employment activities' (NACE code N78). Comment on the challenge: There is a need for a broader description of which workers to include in this group. Should individuals employed under a work contract in the organization but also having service contracts and/or task-specific contracts be reported in this data point?	S1	Disclosure Requirement S1-6 - Characteristics of non-employees in the undertaking's own workforce	
Survey	PGE	Preparer (non-financial preparing a sustainability report)	Poland	3S.S1-15.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Data Points (DP): (S1) 93a, 93b Work-Life Balance Provide the percentage of the company's own employees entitled to family leave and who have taken family leave, broken down by gender. Comment on the challenge: According to the description for 93a and 93b and Polish legislation, the group entitled constitutes 100%. Suggestion: It is necessary to specify the types of absences. Since caregiving leave is included in the absences, the group entitled constitutes 100%. Exclude caregiving leaves.	S1	Disclosure Requirement S1-15 - Remuneration metrics

Survey	PGE	Preparer (non-financial preparing a sustainability report)	Poland	35.S1-16.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Data Points (DP): (S1) 97b Adequate wages Provide the ratio of the highest-paid individual's salary to the median employee salary Comment on the challenge: The indicator does not clearly specify the group of employees for calculating the median. Suggestion: Consider employees employed on December 31st of the given year. Active employees – excluding suspended individuals. For this group of employees, apply the same salary components as for (S1) 97a and (S1) 98 related to the pay gap. An instruction for calculation would be helpful: 1.Create a list with the sum of annual salaries of employees employed on December 31st of the reporting year (excluding suspended individuals). 2.Sort by salaries. 3.Find the middle position (Median), excluding the highest-paid individual. 4.Numerator - total annual salary for the highest-paid individual in the organization (annual highest salary). 5.Denominator - median annual total salary of all employees (excluding the highest-paid individual). Data Points (DP): (S1) 97a Gender Equality and Diversity Provide the gender pay gap between women and men, defined as the difference in the average salary level between female and male employees, expressed as a percentage of the average salary level of male employees. Data Points (DP): (S1) 98 Gender Equality and Diversity Provide data on the gender pay gap between women and men by employee category or by country/segment, as well as broken down into regular base pay and supplementary or variable components. Comment on the challenge: The indicator does not clearly specify the group of employees for calculating the gender pay gap. Suggestion: An instruction for calculation would be helpful:	S1	Disclosure Requirement S1-16 - Incidents of discrimination and other human rights incidents	
Survey	The Biodiversity Footprint Intelligence Company	Consultant (including software vendor)	France	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	The ESRS have been greatly improved. We emphasize the need for coherent ESRS, capable of achieving their goals to provide meaningful sustainability reporting. They should be maintained and cannot be further simplified or trimmed without losing their meaning.			
Survey	The Biodiversity Footprint Intelligence Company	Consultant (including software vendor)	France	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	The Biodiversity Footprint Intelligence Company	Consultant (including software vendor)	France	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	It is helpful to reduce confusion to separate clearly mandatory and non-mandatory datapoints. However, removing entirely the non-mandatory datapoints from the Delegated Act is probably not the best solution. It is a shame companies do not have to consider the non-mandatory datapoints at all any more. It would be better if companies still had to report or explain NMIG datapoints. The move of ESRS E4 biodiversity and ecosystems metrics metric specifications to the NMIG is especially problematic because standardisation is more limited at present than with other metrics At the very least, if the NMIG remains outside the Delegated Act, they should be updated on a timely basis, particularly for guidance on topics where data/tools for reporting are evolving rapidly.			
Survey	The Biodiversity Footprint Intelligence Company	Consultant (including software vendor)	France	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The balance seems to have gone too far in the direction of burden relief. It should be adjusted back in favour of transparency. In particular, direct data should still be preferred (while estimate should be allowed, but not preferred).			
Survey	The Biodiversity Footprint Intelligence Company	Consultant (including software vendor)	France	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	The relief for lack of data quality could be removed since there is already a relief for "undue cost or effort" which means if producing direct or estimated data requires undue cost or effort, they do not have to be reported. At a minimum, a time limit for partial disclosure should be added.			
Survey	The Biodiversity Footprint Intelligence Company	Consultant (including software vendor)	France	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	The Biodiversity Footprint Intelligence Company	Consultant (including software vendor)	France	23.	Six datapoints exceptionally moved from “may” to “shall” In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, “may disclose” datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from “may” to “shall” subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	The Biodiversity Footprint Intelligence Company	Consultant (including software vendor)	France	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new “shall” datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	The Biodiversity Footprint Intelligence Company	Consultant (including software vendor)	France	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 (“when only setting intensity targets”), to disclose also the associated absolute values” (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking’s progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	I agree with the reasoning described by "those who oppose this exception" in the text of question 26.			
Survey	The Biodiversity Footprint Intelligence Company	Consultant (including software vendor)	France	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	I agree While useful, the three suggested target types (a) to (c) of AR 26 are not insufficient to properly convey the ambition a company should have with regard to biodiversity and ecosystems. In particular, it does not align with the SBTN framework – which should be used as an inspiration for a high level of ambition – or the expected contribution of companies to the achievement of the Global Biodiversity Framework. AR 26 should thus be further revised and could include: a) extent of natural ecosystems converted (no conversion target) b) land footprint reduction, natural land cover extent (% of total site area), soil organic carbon content (t/ha), soil erosion (t soil/ha/yr), terrestrial acidification (kg SO2-eq/kg) c) improvement of landscape ecosystem indicators (landscape engagement, see Table 15: "List of potential metrics for ecological and social conditions" of the SBTN draft Land targets for a list of potential indicators).			
Survey	The Biodiversity Footprint Intelligence Company	Consultant (including software vendor)	France	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of “'compatibility with 1.5 degrees'” for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	It is vitally important for principle of double materiality to be maintained in order for the information reported to be meaningful for users.			
Survey	The Biodiversity Footprint Intelligence Company	Consultant (including software vendor)	France	33.E_4.	ESRS E4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Overall, yes the balance is good and changes are meaningful. It is especially important to maintain the following points in the final version: - alignment with the Nature Positive Initiative's framework: mention of site condition & landscape condition - (partial) alignment with the TNFD in the Location Prioritization Guidance - preference for "Site-level measurement using 'state of nature metrics'" but possibility to use "Estimation using impact drivers or state of nature estimates" - definition of "Near" Biodiversity Sensitive Areas The major gap is the exclusion of supply chains from the scope of datapoints. The previous datapoint on Land use (E4-5_03 or E4-5 par 36) should be reinstated in the ESRS (instead of NMIG) and/or datapoints should cover upstream Scope 3 as much as possible since much of EU industry's effects happen in its supply chains. It should be clear that ecosystem extent, condition and species are all needed for assessing the state of nature for a material location (AR 9), rather than a selection from these. In AR 10,national and global datasets could also be mentioned as an alternative to site-level measurements and estimates when both are not feasible. Such datasets should meet strict criteria such as NPI's Credible and science-based, Responsive, Flexible, Aligned, Accessible and affordable, Auditable) and in particular should demonstrate high responsiveness, spatial resolution and accuracy.			
Survey	FERMA	Business association (other than association of financial institution)	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: “[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process”.Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in “Gross versus Net” as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	The identification of topics that are most likely to be material (top-down approach) is essential and will result in the reduction of the scope and complexity of the materiality assessment, without compromising the quality of the results and ignoring key issues. At the same time, the data and information used to draw conclusions should be comprehensive and meaningful. There should not be a detailed analysis of every single risk, but rather an overview that does not omit any critical issues. sectoral guides analyzing material sustainability issues within the same business sector would facilitate the exercise (type ESG materiality maps of the financial services company MSCI, which show the most important ESG matters by industrial sector, the Sustainability Accounting Standards Board's (SASB) ... Regarding materiality filter, FERMA is also in favour. We believe it would be coherent and reasonable to identify IROs at subtopic level (leaving the company free to choose the subtopics and not imposing an analysis and communication on the exhaustiveness of the subtopics); then to consolidate these assessments at topic level. Indeed, through this materiality assessment, companies should evaluate not just whether a topic is material, but also which parts of that topic are material. The reporting should be deeper if justified by the significance of specific IROs of each company. Communicating IROs at subtopic level has the advantage of providing a clear understanding of the organization's challenges. For the sake of readability, we could imagine having a summary communication on material topics in the general information section, then within each environment/social/governance section, a more detailed communication at IRO level. For instance, a table of a) opening remediation efforts, b) completed, c) new, d) outstanding remediation efforts at year end for material issues could be included.

Survey	FERMA	Business association (other than association of financial institution)	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	FERMA would like to insist on several points. 1) The assessment of materiality should be appraised on a net rather than gross basis, in a pragmatic way. Therefore, the assessment of materiality should take into account •The existing mitigation measures that are intrinsic or inherent or by design to the activity (e.g. mandatory third-party approval before a product is marketed). •The mitigation measures / control activities put in place by the organisation before each reassessment of the double materiality analysis. 2) If the Gross assessment approach is confirmed, sectoral guides would enable to compare different companies in a dedicated sector. The gross assessment would be the starting point for every company in the same sector. •This would enable the organization to focus on the actions still to be carried out. This would be more consistent with an Enterprise Risk Management (ERM) approach and with the global risk mapping disclosed in the dedicated chapter in the annual report of the organisations. 3) Clarify the risk manager's key role in the double materiality analysis, as he/she has the knowledge and tools needed to identify, assess and coordinate ESG risk management. •Pooling approaches would avoid over-soliciting internal contacts. •It would ensure consistency with the company's ERM system, which has the role of supervision of all risks. •This would increase efficiency for the teams in charge of the analysis rather than wasting time on pedagogy towards contributors and management. 4) Overall, the DMA should be regulated on the basis of a few methodology-process requirements to make the whole process simpler (involvement of relevant stakeholders, transparency of the process, high level of governance in the results approval, existence of internal procedure, etc.) An implementation guide based on such a practical approach on these would be recommended in our view.			
Survey	FERMA	Business association (other than association of financial institution)	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	FERMA supports this idea provided that one can found some indicators (example: GHG/revenues) that can show value creation/impacts into the value chain and not pure numbers. One could imagine an introduction presenting the organization's sustainability strategy, the material issues that are the focus of the company's attention, and a few key indicators for monitoring the deployment of this strategy, with the main milestones. In this first exercise, some companies have produced an executive summary in their report. On appendices: FERMA supports this idea as it will make reading easier. Some FERMA members decided to do so already as a matter of fact. Also, we support including data relating to the EU Taxonomy or non-material matters in specific appendices.			
Survey	FERMA	Business association (other than association of financial institution)	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	On MDRs: FERMA stresses that it's important to keep in mind the spirit of structuring responses to material challenges: policies, actions, targets. Nonetheless, one must give the company more freedom "to tell its story". The level of granularity in RFPs is far too high in our view. It is necessary to categorize these data points into compulsory data points and voluntary data points: this would still ensure comparability of information between organizations. On PAT: FERMA is not against non-mandatory guidelines as they could help to ensure that the approach is progressive over time. Nonetheless, FERMA recalls that it is important to focus one's attention on key mandatory datapoints as long as they relate to material topics. On limiting reporting on PAT's if related to material topics: Theoretically, FERMA believes it is an interesting idea. Indeed, a policy may cover several IROs within a single topic. However, FERMA also sees a risk of potentially creating additional confusion (e.g. what happens if "you don't have it" whereas others do, will it create an unintended distinction between companies eventually?) In addition, one could follow a tiered approach, depending on the size of the company, with SMEs following a non-mandatory guidance, as far as PATs are concerned. FERMA supports reinforcing flexibility and readability of streamlined disclosures by clarifying (i) that there should be no duplication of content on the same PATs in different parts of the sustainability statement, (ii) that a policy covering different topics should only be described once and (iii) that PATs can be limited to a sub-topic without triggering disclosures at the topical level – this idea will avoid redundancies and make the document easier to read. There are too many duplications and redundancy at present.			
Survey	FERMA	Business association (other than association of financial institution)	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	FERMA supports separating the mandatory requirements from the non-mandatory ones, as this approach seems to provide more transparency.			
Survey	FERMA	Business association (other than association of financial institution)	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree	FERMA strongly supports the exclusion of non-material activities from calculations as it will improve the overall data quality. If some exclusions are added into the calculation, they must be explained for transparency's purposes.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	FERMA	Business association (other than association of financial institution)	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	By adopting this relief on metrics, we will enhance both proportionality and data quality, as only material activities and risks will be assessed and monitored. This approach ensures that reporting efforts are concentrated on the areas that truly matter, avoiding the unnecessary burden of collecting exhaustive data from activities that do not significantly influence the sustainability metrics.			
Survey	FERMA	Business association (other than association of financial institution)	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	FERMA is in favour as interoperability between different framework is always desirable to achieve greater consistency. In any event, FERMA reminds that it is key that only datapoints related to material topics are reported. FERMA is in favour of the financial consolidation approach for GHG emission boundary.			
Survey	FERMA	Business association (other than association of financial institution)	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	FERMA also supports this proposal as this would also be consistent with the principles governing the preparation of financial statements. Overall, the CSRD/ESRS approach have made the DMA and sustainability reporting process a mere compliance exercise and the initial aim of comparing information was not fulfilled precisely for this reason. Emphasizing fair presentation means that sustainability reports should go beyond mechanical compliance and reflect relevant and accurate information. By adopting fair presentation we prioritize communication of substance, we encourage transparency without unnecessary complexity and inform deeply stakeholders on the company's sustainability profile.			
Survey	FERMA	Business association (other than association of financial institution)	Belgium	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	FERMA does not have a strong view on the SFDR precisely, but we wish to recall that, since its review should be issued by the Commission by the end of the year, it is important to keep as much consistency as possible between different EU dossiers related to sustainability.			
Survey	FERMA	Business association (other than association of financial institution)	Belgium	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		FERMA is a strong supporter of the Commission's ambition to simplify the ESRS (and the sustainability framework overall) without undermining the objectives of the Green Deal. Therefore, it is paramount to preserve the double materiality assessment in the CSRD while strengthening a proper ERM methodology for companies in order to allow for both consistency and efficiency between EU companies. The CSRD provides the right framework for sustainability disclosures for the first time at EU level and this ambition must be preserved. Overall, FERMA finds that most of the changes suggested are going in the right direction, especially the need to focus on material information; the identification of IROs at subtopic level; the assessment of materiality to be appraised on a net rather than gross basis or the possibility for the company to produce an executive summary in their report. FERMA recalls that it is important to focus one's attention on key mandatory datapoints as long as they relate to material topics. Regarding the DMA, sectoral guides analyzing material sustainability issues within the same business sector would facilitate the exercise (type ESG materiality maps of the financial services company MSCI, which show the most important ESG matters by industrial sector, the Sustainability Accounting Standards Board's (SASB) ...) Finally, regardless of the standards (International or European) around sustainability reporting, as Risk Managers, we need to make sure that appropriate disclosures are made in the sustainability reports vis-à-vis how companies have implemented efficient checking mechanisms to avoid or mitigate adverse environmental and/or societal impacts.

Survey	Seznam	Preparer (non-financial preparing a sustainability report)	Czechia	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I would like to skip this question and provide my feedback in Part 3				
Survey	Seznam	Preparer (non-financial preparing a sustainability report)	Czechia	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree				
Survey	Seznam	Preparer (non-financial preparing a sustainability report)	Czechia	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	In my opinion, we should keep ESRS (as well as CSDDD) as demanding as possible. Companies (also SMEs) already started to work internally to be prepared for the needed transparency, allowing them to build on it with concrete actions to improve their sustainability. If Omnibus package diminishes the demands, the companies will not change as much as it is needed to comply with Paris agreement, etc. It is not easy for them, but adaptation to harsh effects of climate change will be much more difficult. And then, no discussion will be possible anymore. By trying to be less strict to companies, we should not lose what was done by ESRS and CSDDD so far. It is from my perspective as a founder (volunteer) of an NGO, sustainability auditor at a large company and externally cooperating with academia as well.			
Survey	Seznam	Preparer (non-financial preparing a sustainability report)	Czechia	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree				
Survey	Seznam	Preparer (non-financial preparing a sustainability report)	Czechia	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1				
Survey	Seznam	Preparer (non-financial preparing a sustainability report)	Czechia	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)

Survey	Seznam	Preparer (non-financial preparing a sustainability report)	Czechia	22.E4.	Comments on deleted datapoints in ESRS E4	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	The most crucial ones should be put back			
Survey	Seznam	Preparer (non-financial preparing a sustainability report)	Czechia	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Seznam	Preparer (non-financial preparing a sustainability report)	Czechia	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Seznam	Preparer (non-financial preparing a sustainability report)	Czechia	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	Generation Investment Management and Just Climate	User (analyst, data provider, rating agency, etc.)	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	The draft ESRS propose new mandatory guidance on how to consider the implemented remediation, mitigation and prevention policies and actions when assessing the materiality of an impact (so called 'gross versus net' issue). Remediation (and other related) practices undertaken by an entity will affect the residual risk experienced by the entity, and we understand preparers and users' desire for guidance. That said, the proposed approach applying prescriptive instructions on how to consider mitigation, prevention and remediation actions in each situation gives rise to a new risk to interoperability, given that such prescriptive guidance does not apply under ISSB standards. An alternative approach, that would allow for continued interoperability, would be to request preparers explain which logic (gross or net) they have applied in their assessment of related risks. This would also reduce burden on preparers, as it would allow preparers to analyse and communicate risks in the manner to which they have become accustomed and/or would be preparing to do so under ISSB.			
Survey	Generation Investment Management and Just Climate	User (analyst, data provider, rating agency, etc.)	United Kingdom	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I disagree	Interoperability between ESRS and the ISSB Standards would be further enhanced if information that was presented to investors was required to be clearly identifiable and not obscured by information that is reported to a broader range of stakeholders. This requirement has not been included in the proposed changes.			
Survey	Generation Investment Management and Just Climate	User (analyst, data provider, rating agency, etc.)	United Kingdom	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	In general, we believe burden on preparers would be reduced if reliefs provided for in ESRS were aligned to those provided for by ISSB. In particular, the proposal to introduce a relief relating to acquisitions and disposals acquired in the reporting period will also cause differences in the reporting boundary compared to the financial statements which will cause complexity for entities to comply with both ESRS and the ISSB Standards and affect the connectivity in information provided in sustainability disclosures and the financial statements for those using ESRS.

Survey	Generation Investment Management and Just Climate	User (analyst, data provider, rating agency, etc.)	United Kingdom	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	The draft ESRS's proposal to make disclosure of quantitative information about anticipated financial effects voluntary would negatively affect interoperability with ISSB Standards. Under the draft ESRS all quantitative information about anticipated financial effects would become optional even, when that information is straightforward and readily available. Instead, Option 1 for paragraph 48(e) of ESRS 2 would enhance interoperability between ESRS and ISSB Standards and reduce the reporting burden for companies preparing information about anticipated financial effects applying ESRS. In addition, aligning the reliefs provided in ESRS with those provided for in ISSB Standards would reduce burden on preparers, and encourage greater disclosure. In particular, ISSB Standards permit an entity not to provide information about anticipated financial opportunities that relate to opportunities considered commercially sensitive (as described in IFRS S1) – this relief is not included in the draft simplified ESRS.			
Survey	Generation Investment Management and Just Climate	User (analyst, data provider, rating agency, etc.)	United Kingdom	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I disagree	Generation Investment Management LLP ("Generation") is an independent, private, owner-managed partnership dedicated to long-term investing, integrated sustainability research, and client alignment. We are also writing on behalf of Just Climate, a business established by Generation in 2021 to direct and scale capital towards the most impactful climate solutions and support capital markets to incorporate climate and just transition considerations into capital allocation decisions. We observed a very high degree of interoperability achieved between the first set of ESRS and ISSB Standards. The EFRAG draft simplified ESRS, however, propose many amendments that potentially have a significant impact on interoperability. A lack of interoperability would result in an unnecessary and unacceptable level of cost and complexity for both Generation and the companies that we invest in, as well as the risk of information not being comparable across global portfolios. We remain seriously concerned about the real risk of duplication, unnecessary complexity and fragmentation of requirements with the global baseline set by the ISSB. These risks remain in light of simplification. We believe that the most effective way for EFRAG to ensure efficient reporting is to enable companies to use the ISSB Standards as a starting point, and to build upon ISSB with specific impact disclosures, reflecting EFRAG's double materiality approach. This is referred to as 'equivalence' and follows the ISSB's 'building blocks approach'. We urge EFRAG to engage directly with the ISSB, reviewing each disclosure line by line, and to adopt full equivalency per disclosure. Our expectation of the current simplification process was that it would include this in-depth, technical interaction, and we are deeply disappointed to see this has not been the case. Where agreement cannot be made, EFRAG should publish the rationale for each item of why the difference and to whom it serves.			
Survey	Generation Investment Management and Just Climate	User (analyst, data provider, rating agency, etc.)	United Kingdom	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Organisational boundary – GHG emissions: The EFRAG draft simplified ESRS propose the use of the financial control organisational boundary for measuring GHG emissions. In addition, if reporting would fail to convey a fair presentation, it is proposed that ESRS E1 requires disclosure of Scope 1 and 2 GHG emissions based on operational control as defined in the GHG Protocol. Such an approach fails to align to the GHG Protocol, and could be further simplified, reducing burden on preparers, if ESRS were to more simply refer to the GHG Protocol and allow measurement choices aligned with that document. To conclude: We are encouraged by the opportunity for ESRS simplification, and appreciate the opportunity to respond to this consultation. We strongly encourage EFRAG to consider using this opportunity to reduce preparer burden, increase usefulness of the information to users, and increase interoperability with ISSB Standards by: applying the building blocks approach (adopting full equivalency per disclosure), requiring information relevant for investors to be clearly identified and not obscured, maintaining alignment with methodological principles defined by the GHG Protocol, and limiting the introduction of additional requirements.			
Survey	Triodos Bank N.V.	Bank	Netherlands	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I would like to skip this question and provide my feedback in Part 3

Survey	Triodos Bank N.V.	Bank	Netherlands	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I would like to skip this question and provide my feedback in Part 3				
Survey	Triodos Bank N.V.	Bank	Netherlands	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	As Triodos Bank, we acknowledge that the proposed amendments, such as the inclusion of executive summaries and the use of appendices, improve the readability and structure of sustainability statements. The emphasis on connected information and reduced fragmentation is a positive development that supports better integration with broader corporate reporting. However, while these changes enhance transparency and accessibility, the ESRS framework remains primarily focused on disclosure. It does not require companies to demonstrate progress on sustainability topics. Organizations can report on negative impacts without being expected to show how they are being addressed or improved. From Triodos Bank's perspective, this limits the transformative potential of sustainability reporting. Reporting should not only reflect the current situation but also encourage and track progress toward positive outcomes. Without mechanisms that promote improvement, sustainability statements risk becoming static records rather than tools for accountability and change. We recommend that future versions of the ESRS include provisions that encourage or require companies to disclose their trajectory toward sustainability goals. This could involve expectations around targets, actions, and progress over time, especially for material topics.			
Survey	Triodos Bank N.V.	Bank	Netherlands	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	As Triodos Bank, we welcome the streamlined approach to simplifying the standards through the elimination of duplications between ESRS 2, which reduces reporting burden whilst preserving essential content. We also endorse the renaming of minimum disclosure requirements to general disclosure requirements. Furthermore, we disagree with eliminating the requirement to disclose whether the undertaking plans to implement PAT for material topics and the timeline. Whilst we support not mandating PAT for all material IROs, transparency requires explanation when PAT are absent, particularly for material negative impacts and risks. An "explain if not" approach would better serve stakeholders: undertakings should disclose why PAT have not been developed for material topics, distinguishing these from topics where PAT may be less critical. This maintains accountability without excessive prescription, ensuring that the absence of PAT represents a deliberate strategic choice rather than oversight. Transparency about risk management decisions is essential for stakeholder confidence and comparability between undertakings. The explanations on why PAT isn't followed is a key aspect for civil organisations and NGOs, auditors and regulators to be able to assess to keep undertakings held accountable especially regarding minimisation of negative impacts.			
Survey	Triodos Bank N.V.	Bank	Netherlands	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	As Triodos Bank, we agree that the Amendments improve understandability, clarity and accessibility by improving language and eliminating "may disclose," relocating mandatory application guidance under each Disclosure Requirement (DR).The removal of "sub-subtopics" simplifies interpretation. The distinction between impact and financial materiality in the double materiality assessment supports application across sectors. We suggest these improvements: 1.Label the assurance scope on AR. Open ESRS 1 with a single sentence that Application Requirements attached to a DR are mandatory and within assurance scope. In the standards text, prefix every AR block with "Mandatory application requirements" (not just "AR"). This removes residual ambiguity created by moving content out of appendices and ensures preparers, assurers, and users interpret AR consistently. 2.Introduce stable IDs for every mandatory datapoint and AR. Assign durable identifiers (e.g., E1-6.M1 for a datapoint and E1-6.AR1 for its application requirement) and require their use in cross-references and digital tagging. Stable IDs will make the standards easier to navigate reduce mis-tagging risk and facilitate high-quality digital reporting.. 3.The exclusion of remediation actions from the materiality assessment of actual negative impacts could understate risk exposure. We recommend clearer guidance on how to reflect the outcomes of such actions. 4.The guidance on value chain reporting is pragmatic, especially the allowance for estimates and proxies. More concrete examples or thresholds for disaggregation are needed, particularly when impacts are material only to a subset of operations. We welcome the emphasis on stakeholder engagement and the recognition of civil society and NGOs as users of sustainability information and groups that can demand accountability. This aligns with our values of transparency and accountability to a broad stakeholder base. We support the guidance that positive impacts must be assessed independently and not netted against negative ones, reinforcing the importance of intentionality in impact reporting.			
Survey	Triodos Bank N.V.	Bank	Netherlands	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	As Triodos Bank, we support the decision to move certain content from mandatory requirements to Non-Mandatory Illustrative Guidance. This approach appropriately balances the need for practical guidance with the objective of reducing prescriptive requirements and compliance burden on undertakings. We agree with EFRAG's recommendation that the European Commission should not include NMIG content within the Delegated Act. Including this material in legally binding regulation would risk creating ambiguity about its status and potentially trigger additional compliance efforts, undermining the simplification objectives. However, if the European Commission decides to include NMIG content in the Delegated Act, it should be structured as an annex with clear introductory language stating that the content provides guidance and examples only. The annex introduction should explicitly clarify that undertakings are not required to justify non-compliance with these illustrative elements, distinguishing them clearly from mandatory disclosure requirements.

Survey	Triodos Bank N.V.	Bank	Netherlands	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	Triodos Bank Comments per relief: 1. Undue cost: guidance appreciated from EFRAG on what is considered on undue cost or effort. 2. Lack of data quality: actions to improve coverage considered mandatory. 3. Partial scope: the relative size in total portfolio of the partial scope should be mandatory. For proxies, sustainability data providers must be regulated to avoid distortion of estimated or calculated impact/ risk. 4. Lack of operational control: decreases incentives to improve data quality and monitoring of these topics in a systematic further down the value chain, with negative impact often hurting emerging market economies with lower regulatory standards. Reduces EU's role in pushing forward the transition to sustainable and just. Guidance needed for financial institutions. Companies, especially SMEs are looking for clarity and standardisation of sustainability information. While sustainability should not be diminished to one figure, progress should not be stopped on trying to better understand how our economic activities impact environmental and societal factors. Decisions should be made using information, based on sustainable values and a vision for the future. b) A key concern remains that not all mandatory SFDR PAI indicators are yet fully covered by ESRS datapoints. PAI 3 (GHG intensity of investee companies) and PAI 6 (Energy consumption intensity) are not directly addressed. For financial institutions this creates significant challenges: if they are required to calculate these indicators themselves, it will be resource-intensive, risk inconsistent methodologies across the market, and ultimately run counter to the policy objective of reducing reporting burdens.			
Survey	Triodos Bank N.V.	Bank	Netherlands	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	As Triodos Bank, we acknowledge the introduction of the 'undue cost or effort' relief for all elements of reporting, including the identification of material IROs and the calculation of metrics, as outlined in paragraph 89 of ESRS 1. This extension to all metrics aligns with the provisions in IFRS S1 and S2, providing necessary flexibility for preparers. However, we emphasize that actions to improve the coverage of calculations should be considered mandatory. When disclosing a metric with a partial scope, it is essential to include the relative size of the partial scope in the total portfolio. This transparency ensures that stakeholders understand the extent of the data coverage and the efforts being made to improve it. The lack of a time limit increases the risk that entities take no effort to improve the measurement. We caution for the relief for lack of operational control in joint operations as this may decrease incentives to improve data quality and monitoring further down the value chain. This could reduce the EU's role in pushing forward the transition to a sustainable and just economy, these lower regulatory and market standards negatively impacting people and nature worldwide. In conclusion, while we support the flexibility provided by the relief for lack of data quality, we believe that clear guidance and mandatory actions to improve data quality and coverage are crucial. This approach ensures that sustainability reporting remains robust, transparent, and aligned with the objectives of the EU Green Deal. Guidance would also help small and medium enterprises that often have many different sustainability data they need to deliver in different formats.			
Survey	Triodos Bank N.V.	Bank	Netherlands	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	As Triodos Bank, we strongly support Option 1 for the relief on anticipated financial effects. The fundamental objective of the CSRD is to elevate sustainability reporting to a level of rigour and utility comparable to financial reporting. Option 2, by making quantitative disclosure entirely voluntary, undermines this core goal. It would create a significant gap in decision-useful information for investors and stakeholders, and it would fail to incentivise undertakings to develop the necessary methodologies for quantifying climate-related financial impacts. Option 1 strikes the correct and necessary balance. It establishes quantitative disclosure as the clear expectation while acknowledging legitimate current challenges. The requirement for an undertaking to explain the omission of quantitative data would be critical. This transparency provides crucial insight in itself. It forces a distinction between an inability to report due to inherent, high uncertainty versus a conscious decision not to (yet) allocate the resources or develop the capabilities to do so. This "comply or explain" mechanism would challenge undertakings to be transparent about their progress and priorities. It pushes the field forward by encouraging the development of more mature reporting practices, rather than allowing a default to less informative qualitative disclosures. For sustainability reporting to be truly meaningful, it must connect impacts and risks to financial figures. Option 1 is the only choice that upholds this principle and supports the long-term integrity and purpose of the ESRS framework.			
Survey	Triodos Bank N.V.	Bank	Netherlands	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	Triodos Bank partly agrees that the amended paragraphs 40, 41, and 42 of ESRS E1 strike an appropriate and necessary balance between simplification and the essential information needs of users. The datapoints concerning the monetary amounts and percentages of assets and revenues at material physical and transition risk are important for investors and lenders to assess an undertaking's exposure. Retaining these quantitative disclosures is vital for understanding the financial implications of climate change. However, we recognize the practical challenges undertakings may face due to evolving methodologies and data availability. To ensure these disclosures are both feasible and effective, we strongly advocate for the consistent application of the "comply or explain" principle. This approach would require undertakings to disclose the required quantitative information by default. If they are unable to do so, they must provide a clear and substantive explanation for the omission. This explanation is, in itself, a valuable piece of information, offering insight into a company's risk management maturity and data infrastructure. Applying the "comply or explain" principle will increase adoption rates by providing necessary flexibility in the short term, while simultaneously fostering greater transparency. It maintains the ambition of achieving full quantitative disclosure as methodologies mature, ensuring that the reporting framework remains both practical for preparers and decision-useful for stakeholders.

Survey	Triodos Bank N.V.	Bank	Netherlands	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	As Triodos Bank, we agree that the proposed amendments achieve a balance between increasing interoperability with the ISSB's IFRS S1 and S2 standards and meeting the simplification objectives. Improved interoperability is key to realize a coherent baseline for sustainability reporting. This alignment is essential for reducing the administrative burden on companies that report under multiple frameworks and to provide investors and other stakeholders with consistent, comparable, and decision-useful data. We support the steps taken to bridge the gap between the two standards. The alignment of language for requirements, the adoption of the financial consolidation approach for GHG emission boundaries, and the permanent reference to IFRS and SASB industry guidance are significant improvements.			
Survey	Triodos Bank N.V.	Bank	Netherlands	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Triodos Bank N.V.	Bank	Netherlands	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	We acknowledge and appreciate the amendments' objective of reducing reporting burdens by streamlining the number of mandatory datapoints, especially through the removal of less relevant narrative disclosures and the prioritisation of quantitative indicators. This has indeed improved the readability and usability of the standards, which is a welcome development. At the same time, it is difficult to assess the actual extent of burden reduction. Many datapoints have been moved, merged, or reformulated rather than entirely eliminated. In practice, situations where undertakings previously had to report similar information twice, and now only once, do not necessarily translate into a proportional reduction of workload. The reported 57% reduction is therefore not fully reflected in practice. A key concern remains that not all mandatory SFDR PAI indicators are yet fully covered by ESRS datapoints. In particular, PAI 3 (GHG intensity of investee companies) and PAI 6 (Energy consumption intensity) are not directly addressed. For financial institutions this creates significant challenges: if they are required to calculate these indicators themselves, it will be resource-intensive, risk inconsistent methodologies across the market, and ultimately run counter to the policy objective of reducing reporting burdens. We therefore strongly encourage further alignment with the SFDR PAI indicators. Ensuring that datapoints such as PAI 3 and PAI 6 are directly and consistently embedded in ESRS will be critical to avoiding the unintended consequence of shifting complexity and costs onto financial institutions. In conclusion, the Amendments strike a step in the right direction, but are a living document to ensure both effective burden reduction and the preservation of high-quality, comparable information in support of the EU Green Deal objectives.			
Survey	Triodos Bank N.V.	Bank	Netherlands	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Agree with additions, one comment or suggestion to improve the metric: ESRS E4 Biodiversity and ecosystems- Disclosure of transition plan for biodiversity and ecosystems. We welcome mandatory requirement for the transition plan for biodiversity and ecosystems. As proposed, this is only applicable when a plan exists. We want to stress the importance that all high risk sectors should be required to have a transition plan. The way it is proposed now is too voluntary.			
Survey	Triodos Bank N.V.	Bank	Netherlands	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	Triodos Bank agrees with the inclusion of the four new mandatory datapoints. These datapoints clarify existing disclosure objectives and improve reporting clarity. Currently the ESRS framework requires disclosure only rather than progress. Clarity vs. Substance: The bank recognizes that the new datapoints such as the statement of compliance with ESRS 1, the separate disclosure on secondary microplastics, and the waste destination metrics help clarify reporting expectations. These additions are seen as justified exceptions that do not undermine the overall simplification effort. Triodos Bank emphasizes that while the ESRS promotes transparency, it does not require undertakings to demonstrate progress on sustainability topics. This is a critical limitation. Organizations can report on negative impacts without being expected to show how they are being addressed or improved. Triodos recommends that future iterations of the ESRS should include mechanisms that encourage or require companies to disclose their trajectory toward sustainability goals. This could involve expectations around targets, actions, and progress over time, especially for material topics.			
Survey	Triodos Bank N.V.	Bank	Netherlands	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	We strongly agree that explicitly requiring fair presentation will support more effective functioning of the materiality filter and enable more relevant reporting. As a sustainable bank making investment decisions based on sustainability information, we require meaningful insights rather than compliance-driven data. The current checklist mentality produces voluminous reports that obscure material information beneath boilerplate disclosures. This compliance-focused approach fails to serve users' needs and creates unnecessary burden for preparers. Fair presentation addresses this by requiring undertakings to exercise judgement about what information is necessary to provide a complete picture. Fair presentation should not be viewed as introducing new requirements but rather clarifying the intended approach to existing obligations. This clarification should not result in additional audit costs, as auditors should already be evaluating whether sustainability statements provide fair representation. The amendment simply makes explicit what was implicit in the framework's design. Whilst we acknowledge concerns about judgement complexity, particularly for impact materiality, these challenges exist regardless of the framework adopted. Fair presentation provides clearer guidance by establishing that the objective is complete representation rather than mechanical compliance.

Survey	Triodos Bank N.V.	Bank	Netherlands	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Triodos Bank maintains that both absolute and intensity-based GHG emissions targets are essential to ensure transparency, comparability, and accountability in climate-related disclosures. While intensity targets provide insight into efficiency improvements, they may obscure the actual growth in emissions resulting from portfolio expansion. Absolute targets, by contrast, reflect the total climate impact and are necessary to assess alignment with science-based decarbonisation pathways. Triodos Bank has adopted the absolute contraction approach as defined by the Science Based Targets initiative (SBTi). This approach is applied across all relevant asset classes and is supported by the Partnership for Carbon Accounting Financials (PCAF) methodology, which enables consistent and robust measurement of financed emissions. The Bank acknowledges the complexity involved in estimating absolute targets, particularly for financial institutions. However, such complexity is not unique to the sector and should not justify exemption. Instead, Triodos advocates for harmonised and science-based disclosures that reflect the real-world impact of financial activities and support informed decision-making by stakeholders. Importantly, Triodos Bank emphasises that high-emission sectors are precisely those in need of transition financing. Not disclosing absolute emissions risks perpetuating the financial support of high-emitting activities without sufficient accountability, thereby delaying the transition to a low-carbon economy. Transparent disclosure of absolute targets ensures that financing decisions are aligned with climate objectives and that investors have foresight into the evolution of emissions and the credibility of transition strategies. Exempting financial institutions from this requirement would undermine the integrity of the European Sustainability Reporting Standards (ESRS) and create an unlevel playing field across sectors. Triodos Bank believes that meaningful climate disclosures must go beyond compliance and reflect a commitment to fair presentation and long-term value creation. So that the financial sector works towards a long-term vision of a more sustainable and resilient society.			
Survey	Triodos Bank N.V.	Bank	Netherlands	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I would like to skip this question and provide my feedback in Part 3	Triodos Bank does not have any comments on this amendment.			
Survey	Triodos Bank N.V.	Bank	Netherlands	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	Not applicable to Triodos Bank, thus no comments.			
Survey	Triodos Bank N.V.	Bank	Netherlands	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I disagree	The Amendments have retained broad coverage of SFDR Principal Adverse Impact (PAI) indicators within ESRS, even after the general reduction of datapoints. However, not all mandatory PAIs are yet fully reflected. Two important gaps remain PAI 3 and PAI 6. For financial institutions, these gaps are highly problematic. If institutions are required to calculate such indicators themselves, this will be resource-intensive, risk inconsistent methodologies across the market, and undermine the stated policy goal of reducing reporting burdens. For the Social Standards (S1–S4), SFDR-related datapoints corresponding to PAI 10 (Severe human rights violations) and PAI 11 (UN Global Compact/ OECD Guidelines alignment) have been spread across the four standards. While this strengthens alignment with international due diligence frameworks (UNGP and OECD MNE Guidelines) and the ESRS double materiality approach, it complicates SFDR reporting. Investors must consolidate disclosures across multiple standards to report a single PAI indicator, increasing complexity and the risk of inconsistency. Greater centralisation or clearer cross-references would improve usability without undermining ESRS principles. In conclusion, the Amended ESRS improves clarity and reduces duplications, but overall coverage of SFDR PAIs is not fully preserved. Specific indicators (notably PAI 3, 6, 10, and 11) remain insufficiently addressed, and the distribution of social datapoints across multiple standards adds consolidation challenges. Addressing these issues is essential to align ESRS with SFDR requirements and ensure the intended data infrastructure supports efficient and consistent reporting.			
Survey	Triodos Bank N.V.	Bank	Netherlands	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	Triodos Bank strongly supports the inclusion of additional methodological guidance for biodiversity and ecosystems-related targets in ESRS E4, particularly within AR 26. We welcome a review of this application requirement to better reflect the evolving methodological landscape and to align more closely with science-based frameworks such as SBTN. There is a growing body of understanding around biodiversity impacts, and Triodos Bank recognizes the importance of setting meaningful targets that reflect ecological realities. However, we caution against oversimplifying biodiversity impact into a single metric or number. Biodiversity is inherently complex and context-dependent, and its measurement requires nuanced approaches that consider ecological integrity, local conditions, and the interconnectedness of ecosystems. Triodos Bank advocates for values-based action alongside quantitative metrics. While metrics such as area restored or number of sites improved are useful, they must be complemented by qualitative assessments and strategic choices that reflect a commitment to nature-positive outcomes. This includes redirecting financial flows away from harmful activities and toward regenerative practices, as outlined in our biodiversity vision paper. We recommend that AR 26 be expanded to: •Include references to ecological thresholds and tipping points. •Encourage site-specific measurement where feasible, and allow for proxy indicators where direct measurement is not possible. •Promote alignment with frameworks such as SBTN and TNFD. •Emphasize the importance of stakeholder engagement and values-driven decision-making in target setting. This approach ensures that biodiversity targets are not only measurable but also meaningful and transformative.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Triodos Bank N.V.	Bank	Netherlands	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	The gender pay gap metric in the ESRS has been aligned with SFDR PAI requirements through the mandatory unadjusted ratio. While this ensures regulatory alignment, experience from investors and asset managers indicates that the adjusted gender pay gap provides more meaningful, decision-useful information. It allows a clearer understanding of pay disparities across roles and jurisdictions, which is critical for investment assessments and corporate comparisons. Previous guidance from the ESAs suggested replacing the unadjusted metric with the adjusted indicator in the revised RTS, reflecting its practical relevance. The adjusted metric is already widely reported by companies due to investor demand, meaning that making it mandatory would not create a significant additional reporting burden. We recommend that EFRAG signal that both ESRS and SFDR PAIs should consider the adjusted gender pay gap as the primary datapoint. This would improve the quality and comparability of disclosures for investors while remaining feasible for reporting entities. If revising SFDR is not possible in the short term, the unadjusted gender pay gap should remain mandatory to maintain alignment between ESRS and SFDR. At the same time, the adjusted gender pay gap should be made mandatory in ESRS, given its higher relevance and the limited incremental effort required. In summary, requiring the adjusted metric alongside the unadjusted ratio would enhance decision-usefulness, provide investors with more granular insights, and maintain consistency across frameworks without imposing substantial additional burdens on companies. This approach balances investor needs, regulatory alignment, and practical feasibility.			
Survey	Triodos Bank N.V.	Bank	Netherlands	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree	No strong opinion.			
Survey	Triodos Bank N.V.	Bank	Netherlands	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Detailed comments provided by paragraph in part 3.			
Survey	Triodos Bank N.V.	Bank	Netherlands	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Detailed comments provided by paragraph in part 3.			
Survey	Triodos Bank N.V.	Bank	Netherlands	33.E_3.	ESRS E3:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Detailed comments provided by paragraph in part 3.			
Survey	Triodos Bank N.V.	Bank	Netherlands	33.E_4.	ESRS E4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. Survey	BDEW	Other - please specify (required)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I would like to skip this question and provide my feedback in Part 3				
Survey	BDEW	Other - please specify (required)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	The new clarifications, including Appendix C, are highly complex and don't achieve the intended goal of providing greater clarity regarding the assessment of impacts. While the additional guidance offers detailed explanations, it adds layers of complexity that may make practical application challenging, particularly for companies operating in sectors with intricate regulatory environments. An issue that remains insufficiently addressed is the distinction between gross and net assessments. In the German utilities sector, potential impacts are already mitigated by laws and regulatory frameworks. Extensive consultation processes are required for infrastructure projects, which help minimize negative effects on residents and local communities. It's unclear whether such legally required processes should be treated as mitigation measures or whether they should already be incorporated into gross assessment. This uncertainty can result in inconsistent reporting and interpretation. ESRS 1 paragraph 36 specifies that positive and negative impacts mustn't be offset against each other and that legally mandated mitigation measures do not constitute positive impacts. However, it's still unclear whether this allows for a net assessment where countermeasures are required by law. Similarly, Appendix C states: "If the potential impact was material within the reporting year, but prevention or mitigation action has been taken before the reporting date such that the impact no longer exists." In practice, this guidance is of limited utility: Potential impacts that no longer exist due to prior mitigation needn't to be reported. This raises a potential conflict with Paragraph 34, which requires evaluation of impact severity considering mitigation measures implemented before the impact occurred. Referring to "gross vs. net" without explicit mention in the ESRS isn't intuitive. The links between "gross vs. net" and "actual vs. potential" are unclear. The connection to the reporting period outlined in Appendix C is complex to follow, complicating consistent implementation. Also see feedback in part 3.

Survey	BDEW	Other - please specify (required)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	The option to provide a summary and work with annexes is, in principle, positive. From the perspective of the reporting company, greater flexibility in the overall reporting structure would be desirable in order to avoid redundancies and improve readability. For example, ESRS E1 requests information on the transition plan at the outset. Such a plan typically includes climate targets and measures, which are then requested again at a later stage. Moreover, it is not consistent to present measures before communicating the corresponding targets. Explicitly mentioning the option of including an 'executive summary' putting detailed information in the appendices increases audit reliability. While we have assumed that such flexibility was already available under the previous version, the explicit mention of certain presentation options now raises a risk that other formats might no longer be considered permissible Generally, we appreciate flexibility in reporting when full connectivity/interoperability is given. Please see Excel file attached for those cases, where we have identified divergences.			
Survey	BDEW	Other - please specify (required)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	a. It should be clarified that there is flexibility in structuring topics within the ESG areas without having to follow the ESRS order, and that paragraph numbers within ESRS chapters do not need to be addressed chronologically. b. Tagging of graphics should be enabled so that not every disclosure requirement must also be presented in text form. c. The current level of simplification of the minimum disclosure requirements is not sufficient and continues to restrict reporting options. Since the PATs form the core of the CSRD, a large portion of the report remains almost unchanged. Further simplification could be achieved by reclassifying some of the minimum disclosure requirements as application requirements. Generally, we appreciate flexibility in reporting when full connectivity/interoperability is given. Please also see the Excel file attached for those cases, where we have identified divergences.			
Survey	BDEW	Other - please specify (required)	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I disagree	Overall, the new proposals are positive. Nevertheless, implementation efforts will arise, especially for companies that are already reporting. One example is the new numbering, which requires reports to be re-tagged. The extent of this effort depends on the timing pressure created by the date of adoption. There should therefore be a transitional period in which companies already subject to reporting obligations may, for one or two reporting years, continue to apply the old ESRS on a voluntary basis. b. At the same time, the introduction of additional mandatory data points clearly contradicts the political mandate for simplification. The upgrade from "may disclose" to "shall disclose," as well as the inclusion of new data points, effectively creates new obligations. The quantitative requirements in E2 and E5 are particularly critical. For instance, in E5 – such as the disclosure of the percentage of the total weight of critical and strategic raw materials – the necessary information is not available in practice. Companies do not capture this data at the required level of granularity. In our assessment, reliable estimates are currently not feasible, leaving companies with virtually insurmountable hurdles. The argument that the removal of narrative disclosures compensates for these numerous new quantitative requirements is methodologically untenable. Narratives typically build on information that is already available, whereas quantitative disclosures require entirely new processes, significant system adjustments, and substantial costs. For more details, please notice the attached Excel Sheet.			
Survey	BDEW	Other - please specify (required)	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	The NMIG contains many clarifications that are important for understanding the mandatory reporting requirements. In some cases, the information it provides will still be necessary for preparing the report. While moving this information into a separate document may reduce the length of the mandatory reporting standards, it also raises questions. From our perspective, there is a considerable likelihood that auditors will rely heavily on the NMIG when interpreting requirements. Therefore, there is a risk that these guidelines will be interpreted by auditors as a kind of checklist which could even limit the adjustability to company specific content. As a result, this voluntary guideline could, in practice, become an indirect obligation. We therefore consider it important to clarify the status of the document.			
Survey	BDEW	Other - please specify (required)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The alignment of reporting boundaries is, in our view, a positive development; however, some uncertainties remain: ESRS 1 paragraph 59 states: "The undertaking may exclude from the sustainability reporting boundary a subsidiary that has been excluded from the scope of the consolidated financial statements due to its non-materiality from a financial perspective, unless there are specific facts and circumstances that expose the group to material impacts, risks and opportunities arising from such subsidiary." The second clause suggests that subsidiaries outside the financial reporting boundaries would still need to be analyzed in detail for materiality, which does not provide any relief compared to the current approach. In our view, this exception should either be removed entirely or clarified to specify which particular facts and circumstances would trigger such an exception, in order to avoid a detailed review of all non-consolidated subsidiaries and the associated documentation burden. The new Paragraph 92 does not yet make clear whether a "partial scope of calculation" can also refer to a shifted fiscal year. Due to additional national and European legislation such as IED or EPRTR, we are required to provide official reports on a calendar-year basis. It should be possible to report these calendar-year values even in the case of a shifted fiscal year, otherwise there will be enormous adjustment efforts and confusion among report users caused by contradictory reporting of the same data. Please also see comment above on connectivity/interoperability. For details, see attached Excel file.			
Survey	BDEW	Other - please specify (required)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	In principle, this relief is welcome. However, in our view, it would be helpful to clearly define the circumstances in which such a provision applies. Otherwise, it could lead to differing interpretations by companies and auditors. Also see feedback in part 3.

Survey	BDEW	Other - please specify (required)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	We generally support Option 2, i.e., voluntary reporting of quantitative data. All material sustainability risks can and must be reported in the risk report of the financial statements. Separate reporting in the non-financial section is redundant. Also see feedback in part 3.			
Survey	BDEW	Other - please specify (required)	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	40d: It is more logical and beneficial to evaluate the monetary amount and percentage of revenue at material physical risk after considering climate change adaptation actions. Evaluating risks before adaptation actions creates unnecessary alarm, misrepresents the company's actual vulnerability, and undermines the value of proactive climate resilience strategies. 41d: All reporting should follow accounting recognition criteria, across financial and non-financial reporting. 42: Users don't benefit from this information. Also see feedback in part 3.			
Survey	BDEW	Other - please specify (required)	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We welcome the alignment of the methodology with the GHG Protocol regarding the financial control approach. However, it should be more clearly explained in which cases reporting under the operational control approach is additionally required (ESRS E1 AR19). Furthermore, it remains unclear under which types of ownership interests proportional accounting should apply (ESRS E1 AR20).			
Survey	BDEW	Other - please specify (required)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree				
Survey	BDEW	Other - please specify (required)	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I disagree	In our view, the amendments to ESRS 1 under the principle-based approach do not lead to simplification. Rather than providing structural clarity, they shift key uncertainties onto companies. This increases reliance on ESRS 2, even though the logical linkage between IROs, Topics, and MDRs remains weak there. The renaming of "matters" to "topics" and the option to choose between topic and subtopic levels create a "do-it-yourself logic." While this may offer short-term flexibility, it reduces comparability, complicates auditability, and makes overall application more complex. In our view, it would have been more effective to strengthen the topical standards to enhance precision, consistency, and verifiability.			
Survey	BDEW	Other - please specify (required)	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree				
Survey	BDEW	Other - please specify (required)	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree				
Survey	BDEW	Other - please specify (required)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	BDEW	Other - please specify (required)	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Setting absolute targets for financial institutions can lead to wrong incentives, as every investment leads to additional emissions, even and especially when financing green technologies. This contradicts the Green Deal's primary goal of redirecting financial flows. By reporting the mandatory absolute Green house emissions as a simple metric, which is not a target, the required transparency is given.			
Survey	BDEW	Other - please specify (required)	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I would like to skip this question and provide my feedback in Part 3				
Survey	BDEW	Other - please specify (required)	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	We cannot assess the complexity of this topic and rely on the results of the proposed field test.			
Survey	BDEW	Other - please specify (required)	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I disagree	Investors can and in practice already do address their individual requirements to their investees bilaterally. There is no need for covering the SFDR requirements in a general regulatory approach.			
Survey	BDEW	Other - please specify (required)	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	Companies with significant environmental impacts should inform themselves about the current state of scientific knowledge. This is not a regulatory task.			
Survey	BDEW	Other - please specify (required)	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree				
Survey	BDEW	Other - please specify (required)	Germany	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree	We welcome the deletion of ESRS G1 33(a). However, collecting data for the unchanged requirement of the new data point 20(a) ("the percentage of its payments aligned with these standard terms") remains challenging. While it is possible to describe the standard payment terms, it would be difficult to determine how many payments actually complied with these terms. To capture deviations from the standard payment terms, we consider data point 20(b), regarding pending legal proceedings for late payment, to be sufficient. We advocate, however, that the requirements on payment practices should also be removed. They generate extremely high administrative effort without yielding substantial sustainability information or benefits for the report users.			
Survey	BDEW	Other - please specify (required)	Germany	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	In our view, reporting should be clearly limited to Tier 1 suppliers, in line with the CSDDD. Extending beyond this would disproportionately increase complexity and be regulatorily inconsistent. Practical implementation would be virtually impossible.

Survey	BDEW	Other - please specify (required)	Germany	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	BDEW	Other - please specify (required)	Germany	33.E_2.	ESRS E2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Survey	BDEW	Other - please specify (required)	Germany	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		The proposed amendments achieve the goal of simplification only to a very limited extent. Positive elements certainly include the stronger emphasis on fair presentation, the clarification that unnecessary or disproportionate efforts ("undue cost or effort") should be avoided, as well as the alignment of the CO_2 consolidation perimeter primarily with the financial control approach, which can contribute to greater consistency in practice. At the same time, the assertion that eliminating numerous data points results in significant relief is, in our view, misleading, as these consist almost exclusively of narrative disclosures. By contrast, new quantitative data points have been introduced—contrary to the clear political mandate—which will entail considerable additional effort. The actual relief effect will therefore, in our view, be minimal. Proposals for genuine simplification would include, for example: limiting specific topics such as substances and microplastics exclusively to manufacturers and importers; applying the E5 requirements only to manufacturing companies; and clearly restricting the value chain to Tier 1. Moreover, we consider it essential to strengthen the topical standards in a targeted manner to enhance precision and comparability. In our view, this would be far more effective than shifting an increasing number of questions to the discretion of companies and auditors. Such targeted limitations and structural improvements would significantly reduce the reporting burden while simultaneously increasing the relevance and quality of the disclosures.			
Survey	Transparency International France	NGO	France	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	We welcome the fact that the proposed amendments have retained the Double Materiality Assessment, and we believe that the amendments to the Double Materiality Assessment process have struck an acceptable balance between simplification and robustness.

Survey	Transparency International France	NGO	France	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	Transparency International France	NGO	France	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We see the merits of standardising General Disclosure Requirements (GDRs) for policies, actions and targets (GDR-PAT) across the topical standards. However, we believe this could lead to reporting companies not disclosing material information in three main instances: (1)deleting Disclosure Requirements (DRs) requiring certain specific datapoints risks companies omitting material information from their disclosures. For example, deleting DR 10c) requiring companies to provide "details on the establishment of internal whistleblower reporting channels, including whether the undertaking provides for information and training to its own workers and information about the designation and training of staff receiving reports". (2)deleting DRs on the company's timetable for implementing a policy where it does not have a policy in place. For example, DR 10 b) (amended) stated, "where the undertaking has no policies on anti-corruption or anti-bribery consistent with the United Nations Convention against Corruption, it shall state this and whether it has plans to implement them and the timetable for implementation". Amended DR 10b (now DR 8) now states, "In addition to the information required by ESRS 2 GDR-P, the undertaking shall disclose: a) the circumstance when it has no policies on anti- corruption or anti-bribery consistent with the United Nations Convention against Corruption". We find the wording "the circumstance when" to be unclear and recommend amending ESRS 2 paragraph 30 (62 amended) to include the wording "and the timetable for implementation" after "it shall disclose this fact". (3)lack of requirement for companies to disclose their plans and/or timeline for implementing policies or procedures where these are not in place.			
Survey	Transparency International France	NGO	France	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	While it is positive that voluntary disclosures have been retained, the legal status of the NMIG remains unclear. This uncertainty risks limiting its effectiveness within the ESRS, as stakeholders may question the authority of the guidance. Placing voluntary disclosures in a separate document, particularly one whose legal standing is not yet defined, creates a risk that key examples will be overlooked. For example, the guidance in NMIG 1 relating to paragraph 7 (Policies – anti-corruption and bribery) which, provides important information that enables stakeholders to hold companies accountable for their approach to anti-bribery and corruption.			
Survey	Transparency International France	NGO	France	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	The lack of a clear legal status of the NMIG within the ESRS framework reduces its authority and risks weakening its role in guiding consistent sustainability reporting.			
Survey	Transparency International France	NGO	France	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We welcome the move to make new DR 10 (c) mandatory and the recognition of the importance of training for high-risk teams, such as procurement. Sales and business development teams are all higher risk Recommendation: Retain wording as included in the amended exposure draft in new DR 10 (c).			
Survey	Transparency International France	NGO	France	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		No DRs on "corporate culture" despite being a G1 Business Conduct sub-topic. A company may not be prompted to disclose material information on how it fosters its corporate culture, and related actions, targets and metrics, by ESRS GDR-P because companies do not tend to have a specific policy on their culture. Opportunity to reinsert DRs on beneficial ownership. The April 2022 exposure draft G2 Business Conduct at DR G2-8 stated: "43. The undertaking shall provide information about its beneficial owners (as defined in article 3(6) of Directive (EU) 2015/849) and control structure. 44. The principle to be followed under this disclosure requirement is to provide transparency on the individuals who ultimately own or control the undertaking's organisational and control structure, including beneficial owners. 45. The disclosure required by paragraph 43 shall include information on the identity of who the ultimate beneficial owners or those who control the undertaking are, together with their respective ownership or control percentages." This DR was removed from the November 2022 exposure draft because, "the EFRAG considered the information to be superfluous in the context of beneficial ownership registers in the EU and a tenuous link to bribery/corruption." As included in the due process note. However, a ruling of the Court of Justice of the European Union (CJEU) on 22 November 2022 annulled provisions in the 5th Anti-Money Laundering Directive requiring public access to beneficial ownership information. This means that DR G2-8 is no longer superfluous and is indeed critical for understanding corruption and bribery related IROs and performance. We would like to note that this submission is supported by Transparency International France and Transparency International UK.

Survey	WaterAid	NGO	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	WaterAid largely agree with the changes made, and hold that Chapter 3 of ESRS 1 has been made significantly simpler and clearer. We agree with that the materiality filter has been reinforced, and support this decision. In particular as paragraph 10 (11) specifies that if the undertaking concludes that a topic related to one or more material impacts, risks or opportunities is not covered, or not covered with sufficient granularity by an ESRS, it shall provide additional entity-specific disclosures on that topic. It strengthens the case for not treating the exercise as a check-list. Moreover, we believe that the clarified requirement specifying the information to be reported at sub-topical level (AR 21 For para. 50) will result in more focused and streamlined reporting. However, we have some reservations around the aggregation and disaggregation criteria for reporting information at the right level. AR 23 for para. 52 specifies that "The undertaking shall consider disaggregating reported information by location–such as by site, water basin or local ecosystem–when material impacts, risks or opportunities are highly dependent on local context." We support this, but hold that the undertaking shall not only consider, but should be required to disaggregate information when IROs are highly dependent on local context.			
Survey	WaterAid	NGO	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	WaterAid finds the newly added guidance helpful in resolving the 'gross vs net issue'. We support the approach to disregard implemented actions when assessing materiality of potential impacts, as we agree with the members of the EFRAG SRB who hold that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported.			
Survey	WaterAid	NGO	United Kingdom	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	WaterAid support the introduction of the option to have an 'executive summary', as well as the option to use appendices for the most granular information. We also strongly commend the effort of EFRAG to reduce duplications, in particular in reference to PAT, which we think will significantly improve the conciseness of the reports			
Survey	WaterAid	NGO	United Kingdom	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	WaterAid largely agrees with the changes proposed. We recognise that the drastic reduction in datapoints to a large degree has been achieves through avoiding duplication, and streamlining requirements, whilst still maintaining the integrity of the Directive. However, we have strong reservations with regards to undertakings no longer having to disclose plans to implement a PAT for material topics and associated timeline. We strongly hold that in order to drive action beyond reporting, undertakings should be held accountable to actually deliver on policies, actions, and targets, within a specified timeframe. Removing this requirements and limiting undertakings to only having to disclose on PAT without specifying when and how is a significantly missed opportunity which significantly weakens the Directive.			
Survey	WaterAid	NGO	United Kingdom	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	WaterAid support the changes made. We commend the shift of all 'shall disclose' datapoint into the main body of the standard and the shift of mandatory Application Requirements to be situated below the associated DR. This significantly clarifies the structure and the flow of the text, and makes requirements more clear.			
Survey	WaterAid	NGO	United Kingdom	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	WaterAid considers the NMIG useful, with clarifying guidance which will assist the process of disclosing accurate and relevant information.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	WaterAid	NGO	United Kingdom	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	WaterAid agrees with many of the proposed changes. We support the exclusion of non-material activities from calculations, as we agree that this will reduce the unnecessary reporting burden. We also support that when disclosing financial effects, the information is now limited to plans that are already announced. However, we have reservations regarding the data relief for "undue cost or effort". Whilst we recognise that data collection comes at a cost for which there may need to be reliefs, we still hold that introducing such relief, both for metric in value chains, as well as own operation may send the wrong signal as it may discourage transparency, and limit the shift towards the data availability which we need to see. We also hold reservations against the systematic preference for primary data from the value chain being removed. Whilst we recognise that the lack of maturity of counterparts in the value chain may lead to unreliable data, we still hold that primary data should be prioritised since collecting this data will likely lead to improvements and strengthening in value chain capacity over time. Furthermore, under the scope of horizontal burden-reduction reliefs, we also hold significant reservations of the replacement of the anticipated LSME with VSME, and VSME being used as the harmonising voluntary standard for all companies not in scope for CSRD. Especially in light of the undertakings not in scope for CSRD is expected to increase through the EC Omnibus Proposal. Whilst a more simplistic standard may be justified for SMEs, VSME does not provide the appropriate granularity of data. Since VSME was not designed to be used for this purpose, we urge that EFRAG is tasked to review VSME and ensure that it will drive the appropriate data collection to be in line with the wider EU Green Deal.			
Survey	WaterAid	NGO	United Kingdom	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	WaterAid agrees with the relief presented in Paragraph 91, and considers it reasonable that a metric can only be partially reported when the underlying data is insufficient. We also support that any actions taken to increase data coverage and the progress made to increase data coverage should be reported. However, we hold that a time limit should be imposed for own operations to ensure that companies do not abuse this, and report indefinitely about parts of the relevant scope.			
Survey	WaterAid	NGO	United Kingdom	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	WaterAid supports option 1, and in line with some EFRAG SRB members hold that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. We also note that Option 1 is in line with the Objective of EFRAG's mandate on the ESRS simplification, which is to ensure that the revisions do not undermine the interoperability with other global reporting Standards. As Option 1 is substantially aligned with the IFRS relief, we support this option.			
Survey	WaterAid	NGO	United Kingdom	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	WaterAid support the effort to increase interoperability with other global standards, and IFRS S1 and S2 in particular. We think that the proposed amendments strike the right balance between interoperability and maintaining the integrity of the EU Directive, and the wider aims of the EU Green Deal. In particular, we support EFRAG's decision to not allowing to omit Scope 3 GHG emissions when impracticable.			
Survey	WaterAid	NGO	United Kingdom	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	WaterAid	NGO	United Kingdom	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	WaterAid largely agrees with the reductions made, and considers that the systematic review has achieved the purpose of simplification. However, we do believe some deleted aspects of datapoints should be maintained, as noted in some of our reservations for other questions. In particular, ESRS 2. 30 (62 amended), where both the reference to timeframe and whether the undertaking plans to implement a PAT for material topics has been eliminated.			
Survey	WaterAid	NGO	United Kingdom	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	WaterAid strongly support the shift of 'may' to 'shall' for the six listed datapoints. The datapoints all make explicit a separate critical element of required information, and should make the disclosure clearer without adding a big reporting burden.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	WaterAid	NGO	United Kingdom	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	WaterAid support the inclusion of the four new datapoints as we agree that it will help clarify reporting requirements.			
Survey	WaterAid	NGO	United Kingdom	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	WaterAid firmly agrees with those members of EFRAG SRB and SR TEG who note that both absolute and intensity targets are needed to capture the full understanding on the green transition. Solely setting intensity targets, whilst capturing efficiency, could still mask rising emission levels.			
Survey	WaterAid	NGO	United Kingdom	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	WaterAid recognises the effort that has gone into consolidating the indicators, and feel that the revised standard has achieved the right level of simplification without substantially limiting the coverage.			
Survey	WaterAid	NGO	United Kingdom	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	In line with the broader objective to improve interoperability with other standards, it would be beneficial to ensure stronger alignment with relevant content from science-based frameworks such as SBTN.			
Survey	WaterAid	NGO	United Kingdom	33.S_1.	ESRS S1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	WaterAid strongly urges that 'water and sanitation' is made applicable not only to S2 but also to S1 under the new topic workforce and workers in the value chain ([Draft] Amended ESRS S1/S2), sub-topic other labour-related human rights. Water and sanitation can be a material topics for own workers, even within the EU. For example, in Spain, migrant seasonal agricultural workers (MSAWs) living in informal settlements often lack reliable clean water for drinking, cooking, and hygiene. A recent study led by the Biomedical Research Institute of Lleida (IRBLleida) and the University of Lleida (UdL) highlighted the precarious water situation faced by these workers in regions like Andalusia and Murcia in Spain. Many MSAWs live in areas without basic amenities such as running water, sanitation, or electricity. Settlements, often located near farmlands, include shantytowns and abandoned buildings, lacking facilities for drinking water or hygiene. Workers frequently must rely on distant, often unsafe water sources, such as public taps or irrigation pools. Water sources can be as far as 8 kilometres from settlements. MSAWs frequently transport water by foot or bicycle in containers that include repurposed pesticide barrels, risking chemical contamination. Clean water is further complicated by restricted or inconvenient access to town water sources (Source: https://equityhealthj.biomedcentral.com/articles/10.1186/s12939-024-02112-8) As this example demonstrates, inadequate access to water and sanitation can both be a significant risk and an impact, even within an undertakings own workforce, within an EU context.			
Survey	BDO	Auditor	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I would like to skip this question and provide my feedback in Part 3				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	BDO	Auditor	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	•We would appreciate further clarification and illustrative examples of what qualifies as a 'significant ongoing action' to promote consistent interpretation and application across preparers. •There appear to be some inconsistencies between paragraph 35 and Appendix C. Appendix C seems to imply that a gross approach applies to all potential impacts in the current reporting year, while paragraph 35 indicates that a gross approach is only required when significant ongoing actions are necessary. •Moreover, Appendix C prescribes a net approach for future years in cases of significant actions, which conflicts with the guidance in paragraph 35. •We also note that paragraphs 34 and 35 focus on the materiality assessment, whereas Appendix C addresses both the assessment and the reporting requirements. This dual focus may lead to confusion in practice. •In light of the above, we are of the view that the principles in the main part of the standard paragraphs should be strengthened. •Overall, we recommend retaining Appendix C as part of non-mandatory implementation guidance (NMIG) and for it to be amended with illustrative examples and additional guidance, and for it to be ensured that there are no contradictions with the standard itself. •Finally, we suggest refining the wording in Appendix C to clarify that gross reporting of potential impacts—after prevention and mitigation actions—should continue in future years, but only where significant ongoing actions are required to reduce the severity or likelihood of those impacts.			
Survey	BDO	Auditor	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	•We welcome the inclusion of an executive summary at the beginning of the sustainability statement (as per ESRS 1.109) as well as option to present certain disclosures in appendices (refer to ESRS 1.110). •Regarding the executive summary, we recommend requiring a balanced summary that reflects the most material IROs, which would help ensuring fair presentation and enhancing the reliability of the executive summary for assurance purposes. •In the above context, we also recommend further clarification on how the content of the executive summary aligns with the principle of fair presentation, particularly in avoiding the omission of material matters. •With respect to connectivity, we note the replacement of ESRS 1 paragraph 125 with ESRS 1 ED paragraph 115. We believe this change weakens the emphasis on connectivity between the sustainability statements and financial reports. Given its relevance to primary users, we recommend reinstating or reinforcing the connectivity requirement, instead of making it optional.			
Survey	BDO	Auditor	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	•We support the decision to move the Minimum Disclosure Requirements (MDR) to the General Disclosure Requirements. This change encourages reporting on Impacts, Risks, and Opportunities (IROs) at the management level. It also discourages excessive detail and reinforces the principle of materiality. •To enhance clarity and usability, we recommend providing more explicit guidance on how undertakings should report Policies, Actions, and Targets (PATs) on IROs at the management level or for groups of IROs. Specifically, further explanation is needed on how a top-down approach should be applied—whether reporting should occur at the individual IRO level or whether grouping is acceptable. Examples or illustrations would be particularly helpful in supporting consistent implementation. •While we acknowledge efforts to improve interoperability with IFRS S1, we suggest a more thorough review of ESRS 2 to ensure full alignment with IFRS S1, including the use of fully consistent language and illustrative examples to improve consistency and interoperability between the two frameworks.			
Survey	BDO	Auditor	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	•We welcome the enhancements made. Specifically, reduction of 'may' disclosures and keeping the remaining 'may' as illustrative rather than as an additional disclosures, as well as moving of 'shall' disclosures to the main body of the standard.			
Survey	BDO	Auditor	Belgium	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	•We support the approach to reduce the number of mandatory Application Requirements in the main body of the standard and to move illustrative content to the NMIG. We note and acknowledge that while some Application Requirements are not designated as 'shall' requirements, including certain 'may' ARs can provide helpful application guidance for users. •Given the accelerated timeline of the revised ESRS development and on the assumption that the NMIG will not form part of the Delegated Act, we strongly recommend that EFRAG revisits the NMIG with full and appropriate due process to ensure it does not introduce guidance that exceeds the scope of mandatory requirements or inadvertently creates additional disclosure obligations. The NMIG should be positioned clearly as educational and supportive material, and its content should be made more concise and robust. •We also encourage EFRAG to establish a process for updating and improving the NMIG, including full and appropriate due process to ensure that its content does not contradict the revised ESRS content and its objectives.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	BDO	Auditor	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	•Overall, we welcome the introduction of additional reliefs, particularly the concept of 'undue cost or effort'. •We disagree with a new relief for acquisitions (disposals) of subsidiaries that has been introduced (ESRS 1, Chapter 5.4), which allows undertaking to include (exclude) subsidiaries starting from the subsequent (from the beginning of the) period. This provision introduces ambiguity and leaves room for interpretation. We believe that the existing concept of 'undue cost or effort' could sufficiently address such cases without the need for a separate relief.			
Survey	BDO	Auditor	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I would like to skip this question and provide my feedback in Part 3				
Survey	BDO	Auditor	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	•We strongly recommend retaining Option 1 as the mandatory approach for reporting anticipated financial effects. We understand that without encouraging companies to quantify future sustainability-related risks, the current disconnect between financial and sustainability reporting will persist, leading to incomplete information in the financial market. Moreover, failing to quantify long-term sustainability risks increases the likelihood of overlooking or underestimating systemic risks. •Given the high priority of interoperability between ESRS and IFRS S1 and S2, we suggest the option closest to IFRS SDS along with leveraging from the reliefs in IFRS SDS, with further alignment of the wording in order fully to align with IFRS S1 and S2. •We acknowledge that information about anticipated financial effects is highly relevant to users. While we acknowledge the high estimation uncertainty, we believe the concept of 'undue cost or effort relief' together with the exception for providing quantitative information if it is not useful are sufficient to address this concern. •Additionally, we suggest considering allowing a relief for commercially sensitive information in exceptional circumstances.			
Survey	BDO	Auditor	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	•We note that EFRAG took steps to further align the wording in ESRS with IFRS S1 and S2 to enhance interoperability. However, we note that the proposals in the ED in fact increase rather than reduce the differences. We urge further collaboration with the ISSB to help improve interoperability with IFRS SDS as with a global baseline while finalising the ESRS standards. We recommend that EFRAG takes steps to ensure further alignment with the ISSB standards, particularly in relation to the treatment of reliefs and the concept of 'undue cost or effort' as noted in the feedback provided in response to questions 17 and 19 of this survey. Also, as we have noted, while some alignment has been achieved, there remain areas where the language and approach diverge. •Regarding the GHG emission boundary, we agree with only allowing the financial control approach. This increases comparability which we find more important than interoperability with other frameworks. The ED suggests that the financial control approach should be supplemented with operational control if financial control fails to convey a fair presentation. We believe that it should be clarified that this is only expected to happen in rare circumstances and that examples of such circumstances should be given in the non-mandatory guidance. •Additionally, the GHG Protocol is expected to undergo significant revisions in the coming years, which should address some of the deviations found in ESRS. We encourage EFRAG to actively participate in this revision process to enhance alignment.			
Survey	BDO	Auditor	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	BDO	Auditor	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	•We support EFRAG's positioning of ESRS as a fair presentation framework, rather than a compliance framework. It is important that all qualitative characteristics of a fair presentation framework are incorporated into the final revised ESRS, fully aligned with IFRS SDS guidance to ensure interoperability. This includes linking disclosures to entity-specific information, which is important due to the reduction in mandatory datapoints and EFRAG's decision not to develop sector standards. •We recommend that the basis of preparation statement prepared by management is required explicitly to confirm that the sustainability statement has been prepared on a fair presentation basis and gives a fair presentation. This should be clearly articulated to avoid ambiguity and to anchor assurance expectations. •We propose that the revised ESRS include a definitive statement affirming that the preparation of a sustainability report in accordance with ESRS is presumed to result in a fair presentation of the sustainability statement as a whole. We suggest including educational language to help stakeholders understand the concept of fair presentation, how it differs from a compliance-only approach, and why it matters for the credibility and usability of sustainability disclosures.			
Survey	BDO	Auditor	Belgium	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	•We agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets. •We welcome the EFRAG's discussion of specific rules for the sustainability reporting of financial institutions. As EFRAG realizes, the nature of the information provided by the financial institutions is very different from the information published by non-financial undertakings. While non-financial undertakings mostly report on its own greenhouse gas emissions and the targets set, including to some extent emissions and targets of the actors in their value chain, financial undertakings report mostly on the emission values of its counterparties. The information provided by financial undertakings should be able to demonstrate how they comply with the general objective of financing transition to a carbon neutral economy. Given these different goals in the reporting of financial and non-financial undertakings, creating different rules for the financial undertakings does not create any room for the unlevel playing field. We strongly recommend aligning the reporting requirements for the financial institutions with financial services -specific requirements set out on the global level, such as IFRS SDS.			
Survey	BDO	Auditor	Belgium	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I partially agree and partially disagree	•We would recommend for entities to be allowed to use a threshold that aligns with their organizational structure (e.g., regions, segments) to facilitate seamless information gathering. This approach should be consistent with the objective of ESRS S1, ensuring that users of sustainability statements can understand the impacts on the workforce in different geographic contexts.			
Survey	BDO	Auditor	Belgium	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	•We welcome the simplification of the Sustainable Finance Disclosure Regulation (SFDR)-reporting and the reduction in the number of the data points required. It is important that the disclosure requirements of the revised ESRS are aligned with the requirements of the revised SFDR. This should include the possibility of removing any data points that are no longer required under the revised SFDR and are not considered necessary to meet the disclosure objectives of the CSRD/ESRS. In relation to application of the SFDR: oIn practice, the Principal Adverse Indicators (PAI) statement has proven to be confusing and overburdened with information, resulting in a lack of acceptance by users. oWe note that the changes proposed in the revised set of ESRS are unlikely to resolve all of the issues. This is because, while the proposed ESRS would require the disclosure of a number of the PAI indicators required by financial undertakings, the revised proposed CSRD scope would mean that many entities would not be within the scope of the CSRD/ESRS. Therefore, it would appear likely that there would not be enough information available for financial undertakings to create meaningful PAI statements.			
Survey	BDO	Auditor	Belgium	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		While we acknowledge and understand that EFRAG's work to revise the ESRS was carried out within the constraints of an externally imposed deadline, we note that high quality standards together with their credibility and acceptance need appropriate and robust due process. We are concerned at the speed with which the ESRS have been revised and the associated increased risk of inconsistencies and unintended consequences, which brings the associated risk of further changes being required in the relative short term. The Omnibus proposals extend across a number of different reporting requirements to include not only the ESRS but also others such as the SFDR and EU Taxonomy. We encourage EFRAG to work with the European Commission in order that a holistic approach is taken to the update of these various reporting requirements, to ensure that inconsistencies in requirements, definitions and terminology are minimised.			
Survey	Transparency International UK	NGO	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	We welcome the fact that the proposed amendments have retained the Double Materiality Assessment, and we believe that the amendments to the Double Materiality Assessment process have struck an acceptable balance between simplification and robustness.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Transparency International UK	NGO	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I would like to skip this question and provide my feedback in Part 3				
Survey	Transparency International UK	NGO	United Kingdom	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We see the merits of standardising General Disclosure Requirements (GDRs) for policies, actions and targets (GDR-PAT) across the topical standards. However, we believe this could lead to reporting companies not disclosing material information in three main instances: (1) deleting Disclosure Requirements (DRs) requiring certain specific datapoints risks companies omitting material information from their disclosures. For example, deleting DR 10c) requiring companies to provide "details on the establishment of internal whistleblower reporting channels, including whether the undertaking provides for information and training to its own workers and information about the designation and training of staff receiving reports". (2) deleting DRs on the company's timetable for implementing a policy where it does not have a policy in place. For example, DR 10 b) (amended) stated, "where the undertaking has no policies on anti-corruption or anti-bribery consistent with the United Nations Convention against Corruption, it shall state this and whether it has plans to implement them and the timetable for implementation". Amended DR 10b (now DR 8) now states, "In addition to the information required by ESRS 2 GDR-P, the undertaking shall disclose: a) the circumstance when it has no policies on anti- corruption or anti-bribery consistent with the United Nations Convention against Corruption". We find the wording "the circumstance when" to be unclear and recommend amending ESRS 2 paragraph 30 (62 amended) to include the wording "and the timetable for implementation" after "it shall disclose this fact". (3) lack of requirement for companies to disclose their plans and/or timeline for implementing policies or procedures where these are not in place.			
Survey	Transparency International UK	NGO	United Kingdom	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	While it is positive that voluntary disclosures have been retained, the legal status of the NMIG remains unclear. This uncertainty risks limiting its effectiveness within the ESRS, as stakeholders may question the authority of the guidance. Placing voluntary disclosures in a separate document, particularly one whose legal standing is not yet defined, creates a risk that key examples will be overlooked. For example, the guidance in NMIG 1 relating to paragraph 7 (Policies – anti-corruption and bribery) which, provides important information that enables stakeholders to hold companies accountable for their approach to anti-bribery and corruption.			
Survey	Transparency International UK	NGO	United Kingdom	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	G1	The lack of a clear legal status of the NMIG within the ESRS framework reduces its authority and risks weakening its role in guiding consistent sustainability reporting			
Survey	Transparency International UK	NGO	United Kingdom	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	We can only comment on ESRS G1, which we welcome the move to make new DR 10 (c) mandatory and the recognition of the importance of training for high-risk teams, such as procurement. Sales and business development teams are all higher risk Recommendation: Retain wording as included in the amended exposure draft in new DR 10 (c).			
Survey	Transparency International UK	NGO	United Kingdom	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		No DRs on "corporate culture" despite being a G1 Business Conduct sub-topic. A company may not be prompted to disclose material information on how it fosters its corporate culture, and related actions, targets and metrics, by ESRS GDR-P because companies do not tend to have a specific policy on their culture. Opportunity to reinsert DRs on beneficial ownership. The April 2022 exposure draft G2 Business Conduct at DR G2-8 stated: "43. The undertaking shall provide information about its beneficial owners (as defined in article 3(6) of Directive (EU) 2015/849) and control structure. 44. The principle to be followed under this disclosure requirement is to provide transparency on the individuals who ultimately own or control the undertaking's organisational and control structure, including beneficial owners. 45. The disclosure required by paragraph 43 shall include information on the identity of who the ultimate beneficial owners or those who control the undertaking are, together with their respective ownership or control percentages." This DR was removed from the November 2022 exposure draft because, "the EFRAG considered the information to be superfluous in the context of beneficial ownership registers in the EU and a tenuous link to bribery/corruption." As included in the due process note. However, a ruling of the Court of Justice of the European Union (CJEU) on 22 November 2022 annulled provisions in the 5th Anti-Money Laundering Directive requiring public access to beneficial ownership information. This means that DR G2-8 is no longer superfluous and is indeed critical for understanding corruption and bribery related IROs and performance. We would like to note that this submission is supported by Transparency International France and Transparency International UK.

Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree				
Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	I think the guidelines are excessively complex and unnecessary. Please consider that these guideline can create confussion since the undertaking have their own rules to manage the actions according the nature and the assessment of negative impacts.			
Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	I believe that this balance could be further simplified by specifying more clearly that a reference can be included in the ESRS 2 reporting requirements, given that a detailed description will be included in the relevant thematic ESRS. It should be noted that some companies will want to voluntarily adapt these standards to their reports and, if the effort involved in preparing the information and the report is significant, they may consider continuing as before, applying other standards that they have been using for years.			
Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	From the preparer's point of view, it would be clearer and simpler if the disclosure requirements (DR) and application requirements (AR) were not separated. After reading each of the DRs, you have to go to the corresponding AR to complete the information on what needs to be disclosed. The AR could be described after each DR, rather than having the DRs for each chapter in the first part and then the ARs for each section behind them.			
Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				
Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2				
Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	I would like to express my disagreement with including all this information on anticipated financial effects. I believe that including the monetary estimate of those effects is sufficient to understand the possible future impact on a company.			
Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	The GHG emissions estimation is complex to all sectors. Among other reasons, the exception to institutions would result in an unlevel playing position for the other sectors and could be understand as a lower intention to contribute to decarbonization

Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	If this change contributes to burdening non-European companies, the implications of this information should be examined. The field test will contribute to take decission.			
Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	The incorporation of the SFDR PAIs into the revised ESRS appears balanced and does not appear to compromise the ability to assess adverse impacts. This benefits companies by facilitating regulatory compliance and maintaining the relevance of information.			
Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	I align my opinion which those that think it could be further reviewed to better reflect latest trends in biodiversity and so, have a stronger alignment with relevant content from science-based frameworks such as SBTN.			
Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	UBE CORPORATION EUROPE	Preparer (non-financial preparing a sustainability report)	Spain	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree

Survey	CFDT - Confédération française démocratique du travail	Trade union	France	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Clearer instructions on materiality and DMA in ESRS 1 and 2 is welcome. However, double materiality is essential and must remain at the heart of the ESRS framework and European Union sustainability regime for corporate reporting to be credible and useful. The simplification of the process must not be at the cost of a fair and full consultation of the stakeholders at this stage. In particular, the principle of "materiality of information" is concerning since it introduces a further filter for companies to not report information. For example, it represents a step backwards from ID-177, which says that most S1 metrics must be reported if S1 Own Workforce is material. It is essential to maintain the principle of fair presentation in the reporting standards. It is positive that the revision of the AR 16 list of topics has maintained all of the sub-subtopics for S1 + S2. These are based on the list of social topics in the CSRD and should all be maintained. The emphasis on aggregation (as opposed to disaggregation) is concerning, as disaggregated information (both site-specific and country-specific) is key to understanding the distribution of IROs and identify remediation actions/opportunities.			
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	It is important that companies report not just their net impact – the gross impact should be reported, and the recommended text preserves this principle.			
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	Para 22 addresses the issue of appropriate aggregation or disaggregation of information on material impacts, risks and opportunities and their management. It should set rules regarding the location of such disclosures depending (or not) on the level of aggregation.			
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The Exposure Draft removes duplications between the cross-cutting and topical standards. The preservation of the 4-part architecture in the social standards is important to respect the distinctiveness of different affected stakeholder groups. However, we have two critical concerns ; First, the original DR in environmental standards concerning screening of sites in materiality assessment were replaced by an application requirement to ESRS 2 IRO-1. This in effect makes transparency on this aspect optional. Consideration of local context is a key element of an appropriate materiality assessment. This should be both recognised in Chapter 3 of ESRS 1, and in ESRS 2 IRO-1, which should include an explicit datapoint on how the undertaking screened its locations and value chains. We welcome that E standards provide a clearer reference on the importance of disaggregation of disclosures, but this can only be done well if locations are properly screened. Second, we strongly recommend adding an explicit reference to the disclosure of relevant, entity-specific metrics directly in S standards. The fact that S2, S3 and S4 do not include any metrics should not imply that entity-specific metrics for S topics should not be disclosed.

Survey	CFDT - Confédération française démocratique du travail	Trade union	France	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	The "may" (voluntary) data points should not be eliminated. In many cases they are "shall" in GRI standards, so it is important to keep them to align with GRI standards. Also, many of them were originally proposed as mandatory by EFRAG to the EC. The first wave of reports show that many companies have reported some "may" data points. Retaining them would help ensure standardization/comparability between company reports. Almost all of the datapoints for non-employee workers are voluntary, thus most datapoints for this vulnerable group of workers has been lost. Also, important datapoints on full time versus part time workers has been eliminated.			
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	It is concerning that mandatory guidance in the Set 1 ESRS has been downgraded to "non-mandatory". Mandatory guidance is key to ensuring comparability and completeness of sustainability reporting. At a minimum, Non-mandatory Implementation Guidance (NMIG) should be included in the Delegated Act, and ideally called Mandatory Implementation Guidance. A major point of concern is that ID-177, which provided guidance that most S1 metrics should be reported if S1 Own Workforce is material, has now been downgraded into NMIG. Instead, EFRAG should preserve and promote the guidance that most S1 metrics shall be reported.			
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	As a whole the reliefs go too far, overshooting the balance between cost/effort and transparency. There is a danger of enabling green/social washing. The relief for "undue cost or effort" is too vague thus leaving too much room for interpretation. The relief for direct data for value chain reporting is too extensive, as direct data is key for transparency. The relief for reporting on operations which are not "significant drivers of IROs" also opens up too much leeway for interpretation.			
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	These combined reliefs overshoot the balance between transparency and cost/effort and risk enabling green/social washing. At a minimum, there should be a time limit introduced for these reliefs on value chain metrics.			
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	The ability to estimate financial effects is critical for the undertaking's ability to integrate sustainability into its business strategy considerations, planning and risk management. It is also key for the determination of financial materiality, including in terms of overreporting topics as financially material. Reporting on financial effects is crucial to achieving the objective of putting sustainability reporting on the same level as financial reporting and integrating both. The European Union has recognised the value of a double materiality approach to corporate reporting which requires disclosure of both material environmental and social impacts, risks and opportunities as well financially material data, It is important to keep the requirement on businesses to analyse and understand the financial effects of their business model. This will ensure investors have access to credible data as well as providing the underpinning for future business planning.			
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	ESRS reliefs should not go beyond those set in IFRS. The principle of fair presentation needs to be protected to provide transparency on all material IROs. As noted in the response to question 15, it is also important to consider interoperability with GRI when considering changes to the ESRS, rather than only considering ISSB's standards.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)				
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	22.S1	Comments on deleted datapoints in ESRS S1	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	The new threshold reporting metric is a real improvement of the reporting scope regarding employees. However, it does only make sense with the S datapoints. The reduction in the number of mandatory and voluntary datapoints goes far beyond striking an acceptable balance. An explicit quantitative goal of 50%+ reductions was never set by the European Commission for EFRAG A number of S1 datapoint metrics have been eliminated which should be reinstated: •S1-5 Employees: gender breakdown for zero-hour employees •S1-8 Diversity: age distribution; •S1-10 Social protection: reinstatement of retirement •S1-12: Training and development: gender breakdowns, •S1-13 Health and safety: fatalities from ill-health for non-employees and other workers on site; •S1-14 Work-life balance: employees that took family related leave; As mentioned above, the voluntary datapoints must be maintained to provide alignment with GRI, which is currently in the process of strengthening its labor standards, as well as guidance and standardization for companies reporting more than just the mandatory datapoints.. A number of S1 datapoint metrics have been eliminated which should be reinstated: •S1-5 Employees: gender breakdown for zero-hour employees •S1-8 Diversity: age distribution; •S1-10 Social protection: reinstatement of retirement •S1-12: Training and development: gender breakdowns, •S1-13 Health and safety: fatalities from ill-health for non-employees and other workers on site; •S1-14 Work-life balance: employees that took family related leave;			
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	The "fair presentation" principle is essential to reduce the risk of green/social washing, as it emphasizes the full disclosure of all material impacts, risks and opportunities and their management. It is not understandable why this principle is under attack, as it is included as one of the general principles of the Accounting Directive.			
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	It is essential that financial institutions disclose absolute targets to assess how their strategies align with the economy-wide transition to net zero. Absolute targets are relevant for users of sustainability statements and for understanding the real-world climate impact of financed activities. While intensity measures provide insights into efficiency, they can mask rising absolute emissions in growing portfolios or sectors. Granting an exemption would also undermine fairness in a sector-agnostic standard. Other industries could equally argue for exceptions based on their own difficulties, reducing comparability across sectors. Moreover, absolute financed emissions are already recognised in existing standards and regulations: the SBTi financial sector net-zero standard, the UNEP FI/NZBA recommendations, and EU SFDR all require or encourage absolute emissions disclosure. Exempting banks would risk misalignment and reduce the usefulness of reported data for stakeholders, including asset owners who depend on it for their own disclosures.			
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	The "top 10" threshold for reporting country-level data on employment, collective bargaining and social dialogue is a major improvement over the current 10% employment threshold. An analysis of the first sustainability statements from Wave 1 companies shows that the current 10% threshold results in country-level disclosures on as little as 21% of total employees. More country-level information is needed to understand the distribution of impacts across countries, as well as whether employment thresholds for specific labour rights have been exceeded. The new threshold does not require additional effort/cost by companies, since they must gather country-level data anyways to calculate the global figures. Furthermore, it does not result in extra datapoints, since the information currently is (and can be under the revised ESRS) reported as one table.

Survey	CFDT - Confédération française démocratique du travail	Trade union	France	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	An analysis of the first year ESRS reports shows that most companies are simply reporting that they pay minimum wages, whereas the intention (as outlined in the ESRS Basis for Conclusions) is that companies should be enabled to disclose commitments to paying a wage "sufficient to support themselves and their families in dignity" as well as the extent to which they do this. This shows that the methodology for non-EU countries needs to be changed. Furthermore, the new ILO agreement on a methodology for living wages needs to be taken into account. While the proposed new methodology takes a step forward in both regards, two key changes are needed: •The methodology for reporting on 'adequate wages' should measure actual wages against an adequate/living wage for all employees, not only those within the EU. In particular, for employees outside the EU, the methodology should allow employees' actual wages to be measured: oA) against the local legal minimum wage only when this is set in line with the ILO principles on estimating living wages; or oB) against living wage estimates that are set in line with ILO principles on estimating living wages. •Companies should be able to rely on local legal minimum wages or living wage estimates when the authorities or organisations that set them provide public evidence of their alignment with the ILO principles for estimating living wages. Furthermore, the transitional provision for the EU needs to be reinstated, as not all Member States have transposed the Adequate Minimum Wage Directive.			
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	The new, simplified framework makes it easier for companies to report on these SFDR-related matters in a way that corresponds to how their policies are set. For users, this consolidation makes it easier to locate the relevant information. However, the SFDR datapoints are very helpful and should only selectively be amended.			
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	The unadjusted gender pay gap should be kept as mandatory, since the methodology for calculating it is clear. The adjusted pay gap figure as voluntary. In practice many companies are reporting both figures, which is useful for improved transparency. However, since the methodology for calculating the adjusted figure is not standardized, the unadjusted should be kept mandatory.			
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	As detailed above, cumulative impact of the various reliefs is concerning			
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The proposed "top 10" threshold for the reporting of country-level information for employee headcount, collective bargaining and social dialogue is a significant improvement over the current 10% employment threshold. Country-level information needs to be reported in more detail, and on other metrics as well, in order to have more transparency on the distribution of impacts across countries. In the metrics, voluntary datapoints need to be reinstated as well as the datapoints on gender breakdowns, workforce age distribution, etc. detailed above need to be reinstated. The proposed new methodology for adequate wages outside of the EU also needs attention, and the transition language for EU member states needs to be reinstated, since the Adequate Minimum Wage Directive has not been implemented in some Member States. We would also like to reiterate our longstanding demand for including franchise workers in the S1 definition of own workers, as well as the need for sector-specific standards to supplement the Set 1 sector-agnostic standards.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	CFDT - Confédération française démocratique du travail	Trade union	France	33.S_2.	ESRS S2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. I partially agree and partially disagree	We are concerned that the loss of many specific datapoints related to workers in the value chain will mean that disclosures about material impacts, risks and opportunities become more generic and have less information about the specific stakeholder groups because specifications about the level of granularity have been deleted. Many of the points that are being deleted from ESRS S2 had originally been included because they reflected effective practice in relation to improving supply chain labour rights, for example, AR 6 awareness of the impacts on value chain workers from an undertaking's strategy or business model, AR 20 illustrating how the perspectives of value chain workers have informed specific decisions or activities of the undertaking and AR 25 which looks at retaliation and whether workers can use grievance mechanisms confidentially. An explicit reference needs to be added to GDR-M (metrics) in the Disclosure Requirements concerning targets, in S2, to clarify that metrics need to be reported in the case of entity-specific impacts.

Survey	CFDT - Confédération française démocratique du travail	Trade union	France	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		CFDT welcomed the adoption of CSRD as a major progress to accelerate the ambitions of the Green Deal for a just transition. CFDT is worried by current backlash and the whole Omnibus process. We support a limited review of ESRS, that should aim at only simplifying, not diminishing the principles of transparency, exhaustivity and comparability of sustainable Environment, Social and Governance reporting. We also support compulsory reporting for mid-caps, with meaningful and ambitious reporting standards, which participate in driving the sustainable transformation of enterprises.			
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We welcome the proposed amendments and recognise that they represent a significant step towards simplifying the DMA process. The proposed changes make it much easier to comply with reporting requirements within the group. Strengthening the materiality filter is particularly helpful as it increases clarity and helps prepar-ers focus on information that is relevant to decision-making. In this respect, the changes con-tribute to a more workable balance between simplification and robustness. The revised wording of Chapter 3 of ESRS 1 is also clearer and more understandable, which should facilitate com-prehension and consistent application. Furthermore, the top-down approach will help to im-plement the DMA in a more 'business-oriented' manner, as certain standards have now proven to be essential in the industry. Last but not least, implementation of the DMA as and when re-quired is much more practical. The DMA and the associated reporting requirements are therefore effective in terms of content and do not represent an unnecessary additional burden. At the same time, we remain cautious as to whether the simplifications are sufficient in practice. Although the general direction is positive, certain aspects of the DMA process may still leave room for interpretation and could therefore lead to inconsistent application in individual com-panies. For example, there is still no definition of positive impacts. We also see a risk that further simplification could compromise the robustness of disclosures in areas where stakeholders expect a high degree of transparency. Against this background, we recommend continuing to monitor practical implementation and providing additional guidance where necessary. This will help to ensure that the simplifications achieve the intended effect without compromising reliability or comparability. In addition, it would be helpful to clarify that companies that have performed the DMA in ac-cordance with the 'old' ESRS standard do not need to repeat or redocument the analysis.

Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	Overall, we see the guidelines as a positive development that strengthens the consistency of DMA outcomes. We agree that the new guidelines provide greater clarity on how remediation, mitigation, and prevention measures should be considered in the DMA. This clarification is an important step towards enhancing the relevance and comparability of sustainability reporting, as it helps preparers better understand how to integrate implemented actions into their materi-ality assessments and disclosures. Furthermore, we welcome the fact that early engagement with the CSRS requirements and implementation of measures are recognised. All at once, we note that practical applications may still present challenges. In particular, the distinction between remediation and mitigation, as well as the way in which prevention measures should be reflected, could benefit from further illustrative guidance or examples to avoid divergent interpretations across entities. Furthermore, the new approach may result in certain topics not being reported on, even though companies might wish to communicate them because they have implemented meaningful and effective measures. For leasing companies in particular, but also for supervised institutions monitored by banking regulators in general, cer-tain topics (such as corruption, bribery, whistleblowing, etc.) are already subject to specific reg-ulatory requirements. This raises the question of whether these topics will continue to be con-sidered material - as has been the case in practice so far - or whether they will be excluded going forward. While this strengthens the materiality filter, it also reduces flexibility for entities to pre-sent positive action in areas that stakeholders may find valuable. To maximise the effectiveness, we would encourage close monitoring of their implementation in practice and the provision of additional clarifications where recurring uncertainties arise, while also considering ways to al-low for voluntary disclosures of impactful measures beyond the strict DMA outcome.			
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	We agree that the proposed amendments provide an appropriate degree of flexibility to enable more relevant and concise reporting and promote a stronger link to overall corporate reporting. Reporting will become more flowing, understandable and structured, enabling it to be used effectively in the broader context of the company and by third parties. In particular, we welcome the explicit aim of avoiding unnecessary repetition, as this directly contributes to clearer and more focused disclosures. Equally, the possibility to move more de-tailed information to the appendix is sensible, as it improves the readability and usability of the main report while still ensuring that all relevant information remains accessible to stakeholders. Although the reference concept contradicts international and national accounting standards, it is sensible and effective in this context. Finally, we welcome the new option to summarise the content, as this makes the sustainability report clearer and easier to understand for users. It also makes sense not to present PATs multiple times, as this makes the report more concise.			
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	In general, we acknowledge that the proposed amendments move in the right direction and in many respects help strike a more appropriate balance between reducing preparation effort and ensuring the provision of relevant and comparable information. The proposed changes also mean that readers can process relevant information directly, rather than having to search labo-riously for it among various other irrelevant data. In particular, we consider the removal of the "may disclose" options to be reasonable, as it in-creases clarity regarding what is required and helps avoid unnecessary ambiguity. Likewise, the streamlining of narrative requirements is welcome, since the comparability of purely qualitative data points is inherently limited and often results in a high preparation burden without corre-sponding value for users. We also strongly support the initial possibility to use estimated data, as this is crucial - espe-cially for financed portfolios or for smaller foreign subsidiaries - where collecting precise figures can be highly resource-intensive. However, in the long term (in about five years), we believe that companies should submit vali-dated data at a specified point in time to ensure comparability and avoid competitive ad-vantages or disadvantages. Ideally, a standard for calculating such data will have been estab-lished to ensure that the transition from estimates to solid figures is both consistent and fair. Until then, an individual implementation concept could help, whereby, for example, if data quali-ty is insufficient, the age of the data and the underlying estimation parameters must be specified by the issuer. In addition, we support a cut-off date approach, i.e. changes in the scope of consolidation dur-ing the year are no longer included pro rata in the data collection.			
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	This proposed change will reduce misunderstandings, making it easier to compare results and significantly simplifying the preparation process. The new structure follows international regula-tions, which is more intuitive and easier for users to navigate. The 'jungle' of confusing sources that need to be taken into account is being streamlined. However, we still see further potential for improvement. It would be helpful if all regulations re-lating to an ESRS X.X could be found in one place, analogous to the structure 'Obligation – Ap-plication Requirements – Voluntary implementation advices – Examples'.			
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	this is useful and beneficial			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We believe that the proposed Amendments provide sufficient relief while maintaining the level of transparency required to support the objectives of the EU Green Deal and to ensure interopera-bility with the ISSB's IFRS S1 and S2. In addition, companies will not be subjected to unneces-sary time pressure during what are already time-critical work phases. The exclusion of non-material key performance indicators is appropriate, as it meaningfully re-duces the reporting burden without compromising the relevance or credibility of the disclosures. This targeted focus allows companies to concentrate their efforts on the most impactful topics and ensures that stakeholders receive decision-useful information rather than excessive detail. Moreover, we strongly welcome the initial acceptance of estimates, particularly for Scope 3 emissions. For many entities - especially in the early phases of data collection across complex value chains - reliable primary data is simply not yet available, and the ability to provide well-founded estimates is essential to enable timely reporting and to foster a gradual build-up of more precise data over time. The simplification can therefore lead to a noticeable reduction in costs, as certain data is difficult to collect or can only be collected at high cost.			
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	We agree that the proposed relief for situations where data quality is not yet fully established strikes an appropriate balance between offering the necessary flexibility for preparers and main-taining the integrity of sustainability reporting. As with the previous points, this is particularly helpful in the context of climate-related disclosures. However, this approach compromises comparability. We are critical of a permanent extension of the undue cost and effort methodology to all disclosure requirements. This provision could dis-courage companies from even attempting to collect data or improve data quality. The clause 'undue cost and effort' can also lead to different interpretations by reporting companies and auditors. Therefore, there should be a generous phase-in/transition period (approximately 5 years), but ultimately there should be a requirement to collect all key figures. Otherwise, com-panies might be tempted to argue for the permanent use of estimates on the basis of this sim-plification, which would lead to a dilution of reports. The 'comply or explain' approach already enshrined in the CSR-RUG/NFRD, which was intended to ensure greater transparency, would also be gradually watered down. In addition, we would like to point out that, in order to achieve true comparability, for example in the carbon footprint, it is absolutely necessary to use uniform data for emission factors. If com-panies use different data sources, very different emission values will result from the same con-sumption values. This leads to massive distortions and opens up opportunities for greenwash-ing by deliberately selecting one-sided data sources.			
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	The first option offers greater compatibility with ISSB standards, particularly for internationally active companies (which may in future constitute the main group of sustainability report prepar-ers under CSRD), thereby simplifying double reporting. The second option prevents the disclo-sure of sensitive company data and makes it easier for companies to comply with reporting re-quirements. As interoperability with ISSB standards is very important and companies can also opt for quali-tative disclosure under option 1, we consider option 1 to be a viable option even if they are not yet able to quantify the financial impact.			
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	ESRS E1 para. 40a-c: Leased assets represent a significant portion of a leasing company's as-sets and could therefore be classified as 'assets' or 'key assets'. Individual reporting of the loca-tions of key assets affected by physical risks, as required in paragraph 40b), would entail a high reporting burden for leasing companies in some circumstances. For leasing companies, it should therefore be clarified that climate risks do not have to be re-ported for individual leased assets. Instead, a general risk assessment of the leased asset could be made, possibly bundled by country, region, type of asset, etc. (in my opinion, this would also be analogous to our DNK rec-ommendation for the VSME on data point DNK 1, B1 para. 24).			
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	It is essential to ensure interoperability, to avoid that in the medium to long term European standards may be complemented or even superseded by international frameworks. Establishing a high degree of alignment now is therefore crucial to avoid imposing unnecessary additional work on companies should global standards (such as those of the ISSB) gain wider acceptance. At the same time, the amendments successfully simplify reporting requirements, reducing com-plexity without undermining the overall quality or completeness of sustainability information. This dual focus-greater interoperability combined with practical simplification-supports compa-nies in streamlining their processes and facilitates comparability across jurisdictions, which is valuable for both preparers and users of reports. Moreover, by harmonising key definitions and disclosure requirements, the amendments lower the risk of duplication or conflicting guidance, making it easier for entities to comply efficiently with both European and international standards. We view the adaptation to the financial consolidation approach positively, as it further harmo-nises financial and non-financial reporting. However, in this context, consideration should once again be given to the inclusion of a company solely on the basis of the so-called 'autopilot func-tion' (cf. SIC 22). Including financial special purpose entities in a consolidation group under CSRD is not expedient and does not provide any decision-relevant information for addressees. It is good that the location concept is thus no longer applicable.

Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	The proposed requirements not only ensure that the effort involved in preparing the report is proportionate to the report's outcome, but also that readers can directly process relevant infor-mation instead of having to laboriously search for it among various other irrelevant data. We therefore see a clear advantage in the simpler structure. We also consider the planned summary of all non-mandatory information in the Non-Mandatory Illustrative Guidance to be useful. In general, however, it should be noted that although user-friendliness is improved, this does not lead to a noticeable reduction in the effort required to collect the underlying data.			
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We consider mandatory disclosure of data points to be sensible. The materiality analysis ensures in advance that only preparers for whom these mandatory data points are material are required to report them.			
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	Microplastics are one of the main causes of global pollution and a threat to all life. In this re-spect, mandatory disclosure or the extension of disclosure requirements in this context is un-derstandable. Essentially, this mainly concerns waste products that arise during the production process or accumulate over time as by-products. The difficulty in this case lies in the collection of data. The amendment to ESRS 2 with regard to compliance with the requirements or disclosure in the event of deviating application of ESRS 1 serves to clarify the issue, is effective and constitutes a necessary qualitative disclosure.			
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	Yes, we consider this requirement to be necessary, as the sustainability report according to CSRD serves specific purposes and should not be misused as an advertising brochure for the company by including additional information. This also counteracts greenwashing. Furthermore, it simplifies the audit process.			
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	If financial institutions will be exempted from disclosing absolute GHG emission targets when they have only set intensity targets, this exemption should explicitly extend to leasing compa-nies so that they are treated on an equal footing with banks. For many financial institutions and leasing companies, the business model is primarily focused on financing or leasing activities rather than direct operational emissions. Their climate impact is therefore largely driven by financed or leased portfolios, where absolute emissions are often outside their direct control and depend heavily on client behaviour and sectoral developments. In such cases, intensity targets (e.g., emissions per unit of financing or per asset class) provide a more meaningful and actionable metric to track progress towards decarbonisation. To ensure transparency and foresight for investors, these institutions could rather disclose the methodology and key assumptions behind their intensity targets, including the sectors and as-set classes covered or provide scenario analyses or pathway descriptions, explaining how their intensity targets align with relevant climate scenarios (e.g., net-zero by 2050). And probably the most important one should be engagement strategies with clients and counterparties to influ-ence real-economy emissions reductions. This combination of detailed disclosures will give investors clear insight into the ambition, cred-ibility and trajectory of the institutions' climate strategies, even in the absence of absolute tar-gets.			
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	In principle, we can understand the adjustment of the threshold for country-specific disclosure, and in many cases the proposal will lead to simpler handling. However, in cases where a com-pany employs many low-paid workers abroad, it could fall under the disclosure requirements of ESRS S-1 and ESRS S-7. This will be particularly the case if the majority of turnover is generated domestically, but the work is carried out abroad in the low-wage sector there.			
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree

Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	A precise definition from EFRAG of what is meant by 'serious human rights violations' would be helpful.			
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	We agree with the deletion of the voluntary data point on the adjusted gender pay gap, as the current legal situation is already insufficiently aligned with other existing legal requirements. In many jurisdictions, national or EU-wide legislation – such as the EU Pay Transparency Directive – already sets out specific rules and methods for assessing and disclosing gender pay differences. The introduction of an additional voluntary data point with potentially different definitions or calculation methods risks confusion, duplication of effort and inconsistent reporting across different frameworks. By removing this voluntary data point, the ESRS avoids overlap or conflict-ing requirements and allows companies to focus on complying with the mandatory rules that will apply uniformly once they are transposed into national law. This increases clarity and com-parability while avoiding unnecessary administrative burdens. Furthermore, the overall gender pay gap provides little information and may not accurately re-flect the reality in companies, with the result that derived targets and measures may be less concrete. For some companies and their stakeholders, the specific pay differences by employee category are therefore of interest. Companies should therefore be allowed to publish these fig-ures on a voluntary basis.			
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree	We welcome the proposed revision. In our opinion, very few companies are likely to have an in-terest in disclosing payment practices.			
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	Bundesverband Deutscher Leasing-Unternehmen e. V..	Association of financial institutions	Germany	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. I agree				
Survey	InfraMobility	Preparer (non-financial preparing a sustainability report)	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Some clarifications are very welcome (e.g. the top-down approach). The concept of fair presentation is a welcome addition as well. However, both of these keep things vague and subjective. The same issue that existed in the previous version of the ESRS persists: When is a topic material? What is the threshold companies should compare their IROs to? You will still have companies making this a prioritization exercise rather than a materiality exercise as the context against which to determine materiality is still not there. A concrete example based on my experience: Our 2024 DMA led us to the conclusion that we only have 1 non-material topic. In comparison, DHL has 4 or 5 non-material topics, whereas their footprint on all topics (E, S & G) is many times higher than ours. This is a typical case of companies deeming topics to be non-material relative to other topics in their case, rather than relative to some more absolute threshold/context/parameter/...			
Survey	InfraMobility	Preparer (non-financial preparing a sustainability report)	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and hanv reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	InfraMobility	Preparer (non-financial preparing a sustainability report)	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree				
Survey	InfraMobility	Preparer (non-financial preparing a sustainability report)	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	InfraMobility	Preparer (non-financial preparing a sustainability report)	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	Great that all mandatory disclosures are now in the main body, and not in the AR anymore.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	InfraMobility	Preparer (non-financial preparing a sustainability report)	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	"Undue cost or effort" is vague, which opens the door to abusing the concept. How many € or man-hours is considered to be undue?			
Survey	InfraMobility	Preparer (non-financial preparing a sustainability report)	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	"Undue cost or effort" is vague, which opens the door to abusing the concept. How many € or man-hours is considered to be undue?			
Survey	InfraMobility	Preparer (non-financial preparing a sustainability report)	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	I agree with the stance of the EFRAG SRB members that this would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices			
Survey	InfraMobility	Preparer (non-financial preparing a sustainability report)	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	InfraMobility	Preparer (non-financial preparing a sustainability report)	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	InfraMobility	Preparer (non-financial preparing a sustainability report)	Belgium	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	InfraMobility	Preparer (non-financial preparing a sustainability report)	Belgium	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	InfraMobility	Preparer (non-financial preparing a sustainability report)	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	See my comment on the DMA process. I understand the risk this minority of the EFRAG SRB members sees, but think "fair presentation" is a necessary principle in any sustainability reporting set-up. Specific guidance to auditors how to deal with this should be produced, to avoid discussions on the topic.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	InfraMobility	Preparer (non-financial preparing a sustainability report)	Belgium	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets				
Survey	InfraMobility	Preparer (non-financial preparing a sustainability report)	Belgium	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	InfraMobility	Preparer (non-financial preparing a sustainability report)	Belgium	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	In my view adjusted gender pay gap gives a better view on the issue. An unadjusted gender pay gap misses a lot of necessary nuance.			
Survey	InfraMobility	Preparer (non-financial preparing a sustainability report)	Belgium	35.E1-6.	Do you agree with the amendments of this chapter?	I disagree	The removal of a mandatory target for 2030 is a mistake. This opens the door to vague non-committal ambitions towards 2040 and 2050. We're in the decade of action and substantial cuts to our GHG emissions need to be made between now and 2030. This is important information from an impact perspective as well as for investors to assess the strategy of the reporting company. We should make it very clear that short-and medium-term are necessary, with long-term targets being more optional (if we want to make anything optional).	E1	Disclosure Requirement E1-6 - Targets related to climate change	
Survey	InfraMobility	Preparer (non-financial preparing a sustainability report)	Belgium	35.S1-12.	Do you agree with the amendments of this chapter?	I disagree	Removing the gender breakdown risks losing a lot of relevant information regarding gender equality.	S1	Disclosure Requirement S1-12 - Training and skills development metrics	
Survey	UNEP-WCMC	NGO	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I would like to skip this question and provide my feedback in Part 3				
Survey	UNEP-WCMC	NGO	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I would like to skip this question and provide my feedback in Part 3				
Survey	UNEP-WCMC	NGO	United Kingdom	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	The exposure draft includes clarifications that enable companies to consolidate topics in their sustainability reports, thereby avoiding repetition of impacts, risks, and opportunities across multiple topics. This is useful but should be complemented with requirements around referencing the reported information to the relevant disclosure requirements, ideally in the same way as currently recommended by the GRI Standards to support alignment and make uptake easier for companies.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	UNEP-WCMC	NGO	United Kingdom	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	In the exposure drafts, several disclosures that were repeated under topical standards were merged into a combined disclosure requirement in ESRS 2, with the provision that the reporting company should report on these issues in relation to the different material topics. This improves the readability of the standards, which is helpful. This streamlining is, however, likely to confuse companies on the required scope of value chain coverage. ESRS 1 and 2 specify that companies should report on impacts, risks and opportunities beyond their own operations and also cover the upstream and downstream value chain. To simplify the wording of the topical standard, this is not repeated in the topical standard disclosure requirements, but companies are asked to refer to ESRS E2. To provide clearer guidance on this for report preparers, we recommend adding a note to each topical standard that the disclosure requirements included (unless specified otherwise) all apply to direct operations as well as the upstream and downstream value chain.			
Survey	UNEP-WCMC	NGO	United Kingdom	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	See more detailed comments in Part 3. The decision to move all the previous non-mandatory data points and guidance to the Non-Mandatory Illustrative Guidance (NMIG) makes the structure of the standard clearer. It is helpful when report preparers do not have to distinguish between "shall" and "may" disclosure requirements. However, the general and topical standards should make more explicit links to relevant points in the NMIG, directing companies to this additional voluntary guidance. We would also recommend amending the title from 'Non-Mandatory Illustrative Guidance' to 'Non-Mandatory Guidance to Support the Implementation of the Standard' to better reflect its purpose as additional guidance for report preparers.			
Survey	UNEP-WCMC	NGO	United Kingdom	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	S4	The recommended metrics in NMIG 18-21 should be based on the core and additional disclosure metrics from TNFD. We also recommend reviewing the NMIG for consistency in the use of terms: NMIG 3 for para. 13 refers to "protected areas or key biodiversity areas" as opposed to the term "biodiversity sensitive areas" used in the ESRS E4. NMIG 20 for para 21 point (b) refers to "landscape condition and site condition" but the text that follows refers to landscape condition only. This could be used as an opportunity to make minor updates to the NMIG wording, for example: NMIG 5 for para 13 could in addition to the Nagoya Protocol and the Convention for Biological Diversity refer to the Kunming-Montreal Global Biodiversity Framework (KMGBF) and National Biodiversity Strategies and Action Plans (NBSAPs) of the relevant countries. A reference to the Convention on Migratory Species (CMS) and UN Convention to Combat Desertification (UNCCD) could also be added. NBSAPs could also be mentioned under NMIG 10 for para 17 on biodiversity target-setting, where KMGBF is already highlighted.			
Survey	UNEP-WCMC	NGO	United Kingdom	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	The definition of the term "undue cost and effort" used within ESRS should remain aligned with the double materiality approach, which is critical for driving positive impact from the implementation of ESRS reporting. IFRS definition of "undue cost and effort" also acknowledges that new information obtained in ways where costs and efforts of the company are balanced out by the benefits of improved information, is still considered as obtained "without undue cost and effort". Given the ESRS double materiality approach, the benefit of obtaining new information should be considered as a benefit to the company as well as people and nature. This is well described in para 89 of ESRS 1, however it is not at all reflected in para 47. "Without undue cost and effort" should not be defined as "using already available information only". The purpose of the ESRS is to drive improvements in the availability of data on corporate impacts, risks and opportunities as well as improvements in the accuracy of these data points. For the large companies that remain subject to the Corporate Sustainability Reporting Directive (CSRD), the investments needed to improve assessment processes for their impacts, risks and opportunities, do not represent a significant portion of their budgets. Regarding the reliefs, it is understandable that companies might not be able to comply with all ESRS requirements from year 1. Most of the relief provisions, however, do not specify an end period, which may undermine the objectives of the ESRS and CSRD.			
Survey	UNEP-WCMC	NGO	United Kingdom	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I would like to skip this question and provide my feedback in Part 3				
Survey	UNEP-WCMC	NGO	United Kingdom	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I would like to skip this question and provide my feedback in Part 3

Survey	UNEP-WCMC	NGO	United Kingdom	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I would like to skip this question and provide my feedback in Part 3				
Survey	UNEP-WCMC	NGO	United Kingdom	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	The alignments with the IFRS S1 and S2 that have been made are useful to align reporting requirements for companies that report against both ESRS and ISSB Standards. We strongly recommend a similar effort for alignment with GRI Standards, which would allow achieving interoperability between ESRS and established frameworks and standards on the issues related to impact materiality, which are not covered in IFRS S1 and S2.			
Survey	UNEP-WCMC	NGO	United Kingdom	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	UNEP-WCMC	NGO	United Kingdom	22.E4.	Comments on deleted datapoints in ESRS E4	I partially agree and partially disagree	See detailed comments in Part 3.			
Survey	UNEP-WCMC	NGO	United Kingdom	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Regarding ESRS E4 Disclosure of transition plan, it is good that disclosing a transition plan is made mandatory. However, this does not likely apply to many companies, because 'Disclosing information on a transition plan (TP) is conditional to have one that is publicly released.' We recommend removing this condition. The data points should be applied to all companies that have in their materiality assessment identified high risks and dependencies on nature.			
Survey	UNEP-WCMC	NGO	United Kingdom	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	UNEP-WCMC	NGO	United Kingdom	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	An explicit requirement for a "fair representation" approach in ESRS reporting is useful. We note that in Annex B of ESRS 1 "fair representation" is referred to as "faithful representation" and recommend aligning the terminology throughout the ESRS standards. The definition of fair representation in Annex B of ESRS 1 should be updated to better cover impact materiality considerations. For example, point QC6 emphasizes that fair representation means that the reporting company should report not only the impact, risk or opportunity in question but also how it has adapted its strategy, risk management and governance in response. Applying a double materiality lens, it would be equally important for the company to report its impact management measures or the affected stakeholders that were negatively impacted by a given impact.			
Survey	UNEP-WCMC	NGO	United Kingdom	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	We recommend formulating the revised AR in a way that encourages biodiversity and ecosystem target setting using other recognized methodologies besides SBTN, for example many companies set targets in line with the mitigation hierarchy or in line with no net loss or net positive approaches. See recent brief on corporate target setting from our team at UNEP-WCMC: https://resources.unep-wcmc.org/products/WCMC_RT678 A pragmatic approach could be to outline in the AR what the disclosing company should specify for any target set. For example, that they should indicate the baseline and the expected target achievement and any milestones, how the target aligns with international and national policy objectives on biodiversity (e.g. KMGBF and NBSAPs), actions through which the company expects to achieve the target and whether any safeguards have been adopted to avoid unintended negative impacts from making progress on these actions. UNEP-WCMC remains available to review an updated version of this AR.			
Survey	UNEP-WCMC	NGO	United Kingdom	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Appendix A: Sub-topic "Communities' economic, social and cultural rights (land-related impacts, security-related impacts, adequate housing and food, water and sanitation)" should include health rights as well. We recommend keeping the sub-topics 'State of species' and 'The extent and condition of terrestrial and marine ecosystems' separate (as they are now). They are inherently interlinked, and assessing biodiversity requires taking both levels into account. Merging them could indicate that you are encouraged to assess one or the other.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	UNEP-WCMC	NGO	United Kingdom	33.E_4.	ESRS E4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We strongly recommend maintaining the E4 standard, as removing it would result in the ESRS inadequately covering corporate impacts, risks and opportunities on biodiversity and ecosystem services. Information on these impacts, risks and opportunities from large companies is critical for users of sustainability reports and for achieving the EU Biodiversity Strategy 2030. This is also in line with Target 15 of the Kunming-Montreal Global Biodiversity Framework.			
Survey	UNEP-WCMC	NGO	United Kingdom	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Annex II: Glossary. We recommend aligning the definition of "threatened species" with the IUCN Red List of Species and replacing the term "endangered species" with "threatened species" throughout. In the IUCN Red List of Species, the term "threatened species" is used to describe species in the Vulnerable (VU), Endangered (EN) and Critically Endangered (CR) risk categories (see the question "What are the IUCN Red List Categories and Criteria?" in the IUCN Red List FAQ for more info). This is a long-standing scientific consensus. The interpretation would also be in line with other disclosure frameworks and standards, such as TNFD and SBTN.			
Survey	Koan Group	Consultant (including software vendor)	Netherlands	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I disagree	While the introduction of the bottom-up/top-down approach provides welcome clarity on methodology, numerous ambiguities remain, making the overall DMA process appear more complicated than before. Firstly, the introduction of systemic risk significantly complicates matters for preparers, who now face new concepts without adequate practical guidance. A critical gap remains in Paragraph 29, which fails to provide sufficient clarity on when the DMA should be updated. This lack of a clear timeline complicates compliance processes and resource planning for all undertakings. Although Appendix A has been streamlined by eliminating the most detailed sub-sub-topic level and given an illustrative status, the result is not sufficiently shortened. Further guidance on its non-mandatory use is required. Specifically, for the Biodiversity sub-topics in Appendix A, the reporting requirement for the "state of species" appears duplicated across other sub-topics, which confuses the actual scope of disclosure required. The guidance in Appendix A, paragraph 48 (concerning the assessment of materiality) does not adequately consider the audit process. How an auditor will verify the distinction between material and non-material information remains a significant concern. Furthermore, Paragraph 51 concerning the bottom level of reporting is unclear on the necessary level of aggregation and disaggregation. The requirements regarding stakeholder involvement remain insufficiently defined. Similarly, for the Social sub-topics in Appendix A, there is no clear instruction on whether preparers must report across all social themes included in the sub-topic or are expected to 'pick and choose' based on the materiality outcome, creating significant compliance uncertainty.			
Survey	Koan Group	Consultant (including software vendor)	Netherlands	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	While the aim to clarify the "gross versus net" issue is necessary, the proposed solution introduces significant complexity and potential for divergent interpretations in practice. The new guidance, particularly the differentiation between the current reporting period and future reporting periods for assessing impacts, adds unnecessary complexity. This time-based distinction does not simplify the process but rather leads to different interpretations regarding whether an impact should be reported based on the severity before or after the action taken. The proposed solution for potential negative impacts where significant ongoing actions are taken, may prove impractical for the audit process. The "gross approach" of assessing the impact before prevention/mitigation actions will result in excessive reporting and high documentation demands, complicating assurance efforts. For the guidance to be effective in practice, there is an urgent need for clearer, more precise definitions regarding the types of impacts and remediation actions. Specifically, a clearer definition is needed for what constitutes past, present, and future remediation actions, along with explicit guidance on how to classify and report different types of impacts that occurred in past years but are still relevant in the current period.			
Survey	Koan Group	Consultant (including software vendor)	Netherlands	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	The allowance for the inclusion of an executive summary at the beginning of the sustainability statement is very welcomed. This will allow preparers to articulate the most critical sustainability findings and link them directly to the company's financial strategy and risks, which fundamentally enhances connectivity with corporate reporting. By summarising the main conclusions of the DMA and the most material disclosures in one place, the executive summary dramatically improves the statement's readability and conciseness for stakeholders.			
Survey	Koan Group	Consultant (including software vendor)	Netherlands	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	While some changes are useful, others undermine accountability and introduce new complexities, contradicting the simplification objective. Specifically, we disagree with the deletion of the point on "key actions related to providing and cooperating in remedy for those harmed by actual material impacts', as it removes information essential for users. The requirement to disclose whether and how environmental targets consider ecological thresholds is premature. While scientifically sound, this concept is highly advanced and complex for most preparers to comprehend and apply reliably, going directly against the simplification principle and risking non-comparable reporting. Moreover, the elimination of the requirement to disclose planned PATs and associated timelines for all material topics creates a critical deficit in transparency and accountability. Materiality demands a corresponding management intention to plan policies and actions and deleting this requirement essentially renders the materiality assessment less action-oriented. We also view the renaming of Minimum Disclosure Requirements (MDR) to General Disclosure Requirements (GDR) as an unnecessary change that adds no substantive clarification or simplification to the standards. The deletion of topical specifications for GOV, SBM, and IRO is very useful. It successfully streamlines the architecture and reduces complexity by avoiding the forced duplication of information across different standards. Lastly, the drastic reduction of mandatory datapoints supports the goal of reducing preparation effort, even if it sacrifices some detail.

Survey	Koan Group	Consultant (including software vendor)	Netherlands	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	While the restructuring is a significant step toward simplification, the language still requires refinement. We strongly agree with the complete elimination of all voluntary datapoints. These provisions created significant confusion, so their removal provides essential clarity. The relocation of all mandatory datapoints into the main body of the standard and the corresponding placement of mandatory Application Requirements below their respective Disclosure Requirements is very useful, creating a much more logical and accessible document architecture. We believe that some editorial changes were unnecessary, and in certain cases, the language is still not sufficiently clear or concise. Certain editorial amendments to the wording of specific Disclosure Requirements appear to be minor or stylistic, adding little value to clarity and instead requiring preparers to review every sentence for non-substantive changes.			
Survey	Koan Group	Consultant (including software vendor)	Netherlands	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree	The introduction of several targeted reliefs demonstrates a practical understanding of the challenges faced by preparers during the first application of the ESRS, particularly regarding value chain data collection. The changes introduced, such as the new relief for acquisitions/disposals and the clarification on disclosing financial effects (limiting information to already announced investments and plans), are necessary to align reporting with common corporate practices. The most critical area of relief is the systematic removal of the preference for direct data in value chain metrics. This change is crucial, as the initial reliance on direct data was a major point of burden. Allowing undertakings to use reliable estimates substantially reduces reporting effort and acknowledges the practical limitations of primary data collection. Similarly, introducing a relief for lack of data quality (allowing partial scope reporting with an action plan to improve future coverage) makes sense, as it avoids penalising companies for first-time data gaps while committing them to continuous improvement. However, the new "undue cost or effort" relief may complicate matters regarding audit consistency. There is currently a lack of clarity on who validates whether the data collection was causing undue cost and how auditors will ensure the same criteria are applied across different companies to prevent arbitrary reporting boundaries. The relief concerning the systematic preference for direct data introduces a significant risk that data quality will be diminished. There is a concern that companies may not actively pressure suppliers to collect relevant data, which is essential for accountability. This aspect requires close monitoring to ensure the transparency of actual impacts is not compromised.			
Survey	Koan Group	Consultant (including software vendor)	Netherlands	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	While we support providing flexibility to first-time preparers, the relief introduces a significant risk of losing too much critical information, potentially resulting in disclosures that are both misleading and non-comparable. The risk stems from the lack of a defined endpoint or enforcement mechanism for achieving full data coverage. Allowing an undertaking to report metrics with a perpetual "partial scope" of calculation creates a situation where reports may appear compliant but fail to provide a true and complete picture of the undertaking's material impacts. This is particularly problematic for metrics related to the value chain, where the most significant impacts often lie. The decision to not include a time limit for the use of the relief is a critical oversight. Without a mandatory deadline for achieving a full scope, it is highly likely that some undertakings will continue to rely on the partial scope provision indefinitely, claiming that cost reduction is not feasible in the short term. A time limit is essential to 'police' the improvement process and provide an external incentive for investment in data quality. Lastly, the relief encourages preparers to set their own standards for improvement and disclosure, which fundamentally undermines the comparability of the reported metrics across different entities.			
Survey	Koan Group	Consultant (including software vendor)	Netherlands	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	Quantitative information is particularly important for investors and analysts to accurately price climate and sustainability-related risks into valuations. Option 1 strikes a necessary balance between meeting user needs and acknowledging the current immaturity of reporting methodologies. Particularly, Option 1 provides the necessary flexibility by allowing the omission of quantitative information only under specific, justifiable conditions. These conditions, such as the inability to measure financial effects separately or high levels of uncertainty, are valid reasons for temporary omission. To prevent the conditional omission from becoming an indefinite loophole, we recommend the inclusion of a mandatory time limit for the use of the quantitative omission relief within Option 1. A deadline would provide a strong incentive for undertakings to invest in the necessary methodologies, skills, and data systems required to mature their quantitative reporting. It would also guarantee that all reporting entities will transition to providing quantitative data within a foreseeable timeframe.			
Survey	Koan Group	Consultant (including software vendor)	Netherlands	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree	We agree that the amended paragraphs on Anticipated Financial Effects have been sufficiently simplified and generally strike the right balance between the reporting effort required and the users' need for essential financial information. However, the language within the remaining paragraphs could be streamlined further. We recommend a final editorial pass to ensure the wording is more direct and concise, which would reduce the risk of ambiguity and divergent interpretation among preparers.

Survey	Koan Group	Consultant (including software vendor)	Netherlands	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	The amendments successfully advance interoperability by aligning the GHG emission boundary and adopting many IFRS S1/S2 reliefs, which is a significant positive step. However, a lack of clarity in certain key areas risks introducing new implementation burdens and undermining the perceived simplification. Specifically, the guidance in ESRS E1, AR 20 (concerning complex ownership structures and the separate disclosure based on operational control) is highly ambiguous and needs further simplification. The current wording is prone to varied interpretation, which will burden companies with complex ownership structures and potentially lead to non-comparable disclosures. The implementation of the "undue cost or effort" relief, while necessary, needs clearer definition. Currently, there is insufficient clarity on when a company can legitimately invoke this principle. To maintain integrity and prevent misuse, explicit guidance should be provided on how this principle should be interpreted and, crucially, how the auditor will police its application across different entities. Without this, the relief risks becoming a loophole that undermines the transparency it aims to achieve.			
Survey	Koan Group	Consultant (including software vendor)	Netherlands	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Koan Group	Consultant (including software vendor)	Netherlands	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Koan Group	Consultant (including software vendor)	Netherlands	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	While we support the underlying intent to clarify existing disclosure objectives, two of the added datapoints risk introducing unnecessary reporting complexity without providing proportional value to the user. Specifically, E5-4 is likely too specific and complex when it comes to practical data collection and reporting. This level of granular detail seems to be a case where the reporting effort outweighs the utility of the resulting information.			
Survey	Koan Group	Consultant (including software vendor)	Netherlands	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We agree that the concept of fair presentation is important and its explicit inclusion is beneficial, as leaving it out may encourage a checklist mentality. Adopting the concept aligns the ESRS with IFRS S1 and S2, which is critical for achieving global interoperability and reinforcing the notion that sustainability reporting requires judgment, not just compliance. This high-level statement is a necessary philosophical foundation for relevant reporting. However, we disagree that the amendments immediately translate into an effective functioning of the materiality filter or a reduction of documentation and this is due to a lack of clarity in the implementation guidance. Specifically, Section 2 of ESRS 1 does not sufficiently clarify how companies can operationalise the principle of fair presentation. t is very difficult to legislate a subjective concept like "fairness." This ambiguity may lead to increased legal risks and audit costs as assurance providers struggle to validate the required judgment, particularly where established reporting practices are lacking. Additionally, the explicit inclusion of fair presentation does not inherently solve the issue of a "checklist" mentality because the standards remain inherently rules-based. Preparers will still focus on documenting the omission of every non-material datapoint to mitigate legal liability. The simple inclusion of the term, without stronger enforcement guidance, is unlikely to override this compliance-driven behaviour.			
Survey	Koan Group	Consultant (including software vendor)	Netherlands	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	The rationale for exemption, while acknowledging implementation difficulties, fundamentally conflicts with the goal of driving real-world decarbonisation and maintaining market transparency. Particularly, intensity targets can mask rising absolute emissions that result from business growth. An FI could meet an intensity target while simultaneously increasing the total volume of emissions it finances. Absolute targets counter this risk by capturing the true, total impact on the climate. Since banks and insurers are driving decarbonisation, it is crucial that they disclose their ambition to reduce total, real-world emissions. By publishing this information, FIs create both an internal commitment and an external signal of their role in the low-carbon transition.			
Survey	Koan Group	Consultant (including software vendor)	Netherlands	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	The new threshold, requiring disaggregation for the top 10 largest countries by employee headcount, is a vast improvement because ensures that the social disclosures reflect the countries where the undertaking has its most significant workforce presence. This information is typically easily accessible by country, as companies already track employee headcount and location for payroll and human resources management. Therefore, the incremental burden of disaggregating this specific data for the top 10 countries is estimated to be limited for most companies. Lastly, by standardising the disclosure to the top 10 countries, the amendments establish a consistent benchmark across similar multinational undertakings, significantly improving the comparability of social metrics.

Survey	Koan Group	Consultant (including software vendor)	Netherlands	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				
Survey	Koan Group	Consultant (including software vendor)	Netherlands	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	The existing guidance, though useful, should be clarified and rewritten to provide preparers with the most current and effective examples of biodiversity-related targets. This proactive step helps companies avoid setting targets that quickly become obsolete. It is crucial that ESRS maintains a strong alignment with relevant content from science-based frameworks, such as the Science Based Targets Network (SBTN). These frameworks represent the evolving methodological best practices for measuring and managing nature-related impacts.			
Survey	Koan Group	Consultant (including software vendor)	Netherlands	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree				
Survey	Koan Group	Consultant (including software vendor)	Netherlands	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	Koan Group	Consultant (including software vendor)	Netherlands	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree				
Survey	Koan Group	Consultant (including software vendor)	Netherlands	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. Survey	E3G - Third Generation Environmentalism	NGO	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I would like to skip this question and provide my feedback in Part 3				
Survey	E3G - Third Generation Environmentalism	NGO	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I would like to skip this question and provide my feedback in Part 3				
Survey	E3G - Third Generation Environmentalism	NGO	United Kingdom	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	E3G - Third Generation Environmentalism	NGO	United Kingdom	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	E3G welcomes EFRAG's proposed changes to simplify the ESRS by reducing the number of datapoints, introducing specific reliefs, and shortening the length of the ESRS format. We believe the removal of all 'may disclose' elements is helpful to streamline the standards. Nonetheless, not all such elements need to be transposed in the Non-mandatory Illustrative Guidance (NMIG). In doing so, corporate entities would need to review additional guiding documents on top of existing implementation guidelines. This would be difficult to incentivise systematically and would go against the principle of simplifying the reporting process. If needed, E3G believes that it would be more effective to have the most relevant 'may disclose' elements within the ESRS framework, in the format of examples and references to existing disclosure requirements.			
Survey	E3G - Third Generation Environmentalism	NGO	United Kingdom	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We partially agree with the introduction of the new reliefs. In principle, the introduction of reliefs in the ESRS format should be exceptional and accompanied by a time limit, as other reliefs and phased-in provisions are. Although we acknowledge their introduction was aimed at simplifying the ESRS compliance, we believe that the combined use of all the additional reliefs would systematically lower the quality and comparability of sustainability-related information. EFRAG and the European Commission should consider additional options to limit the risks for misuse and abuse of such reliefs. Undue cost or effort; We are supportive of the introduction of this relief but suggest introducing a specific time limit for its use. Such relief is helpful to establish a favourable regulatory environment for companies approaching sustainability reporting for their first time. Plus, the integration of such relief aligns closely with the 'undue cost or effort' relief present in the IFRS standards, benefitting the interoperability between the two. Nonetheless, we stand firm about the potential misuse or abuse of the relief. If not limited, preparers would be free to avoid reporting on material information because they consider the process too costly or complex, regardless of the materiality assessment. Over time, the relief seriously risks diminishing the quality of information reported and the comparability of ESG data. We ask EFRAG to introduce a time-limit for the relief. Anticipated financial effects; E3G provides information on this relief in Question 19 of this consultation.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	E3G - Third Generation Environmentalism	NGO	United Kingdom	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	E3G firmly disagrees with Option 2, which limits the disclosure of anticipated financial risks and opportunities to only qualitative information. Quantitative information on future financial effects arising from ESG risks and opportunities is central to business planning. Furthermore, it is the basis of the financial materiality perspective, central to the global standards of the ISSB and fully integrated in the CSRD. The calculation of anticipated financial effects allows preparers to integrate a long-term risk-management approach to sustainability issues into its business strategy. Investors and other users of sustainability information are dependent on the availability of such information to assess the effects of risks and opportunities on companies' financial performance, financial position and cash flow. Additionally, Option 2 would create a significant risk to the ESRS's interoperability with the IFRS standards. Considering that the IFRS standards constitute the global baseline for sustainability reporting, there is no viable argument to create additional inconsistencies. Moreover, non-EU and EU corporate voices have regularly advocated for maintaining the high degree of interoperability between ESRS and IFRS. Such interoperability would ensure better comparability of sustainability information and less reporting costs. Creating incongruences now means putting additional costs to companies operating in multiple jurisdictions. We believe Option 1 is acceptable. We disagree however on the mention that "different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources". In this case, the new undue cost and effort relief would account for such a situation.			
Survey	E3G - Third Generation Environmentalism	NGO	United Kingdom	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We believe that the reliefs introduced in the new iteration of the ESRS satisfy the European Commission and EFRAG's objective of maintaining a high degree of interoperability with the IFRS standards. Nonetheless, we need to acknowledge that the pursuit of this objective could lead to lower availability and quality of ESG data. As detailed in Question 17 and 19 of this consultation, we advise EFRAG to cautiously recommend the introduction of these reliefs, as their unconditional and compound use can severely hinder the usefulness of sustainability information. We welcome the permanent reference to IFRS industry-based guidance and SASB standards as a source of possible disclosure when reporting entity-specific sector information. However, we recommend explicitly referring that SASB sector-specific guidelines take a financial-materiality-only approach. We welcome companies incorporating such guidelines in their own disclosure exercise, especially for the assessment of financial-related risks and opportunities in a given sector. On ESRS E1, E3G welcomes the addition of a disclosure requirements on 'dependencies' in the transition plan criteria. This provides additionally a closer alignment with IFRS S2 wording on dependencies. As mentioned in E3G's previous consultation response, we believe adaptation should be further integrated by adding adaptation-related policies and actions within the ESRS E1-1 format. Adaptation and mitigation in transition planning remain crucially interlinked. Merging the two separate disclosures would allow companies to better manage climate-related risks and opportunities, and avoid double-reporting. Doing so would make the ESRS even more consistent with the IFRS S2 language and the TPT framework. Recently, also the Australian Treasury's draft guidance on transition planning integrated adaptation fully within the transition planning format.			
Survey	E3G - Third Generation Environmentalism	NGO	United Kingdom	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	E3G - Third Generation Environmentalism	NGO	United Kingdom	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	We believe EFRAG's reduction of datapoints represents a good effort of reducing corporates' compliance costs and reporting efforts without excessive loss of data quality and comparability. We advise the European Commission not to pursue further reduction of the ESRS datapoints beyond the EFRAG's proposal, once the finalised version of the new ESRS format will have to be transposed into a Delegated Act. Further lowering the number of datapoints would excessively tilt the balance of the simplification effort towards deregulation. An even lower amount of datapoints would make the reporting process more costly than beneficial for long-term investments. Companies and investors have already set up data collection systems, and the policy uncertainty stemming from the Omnibus process is seriously hindering integration of sustainability information into decision-making processes. Reducing again the amount of ESRS datapoints is particularly dangerous for the interactions between banks and financed companies. As mentioned in the ECB's legal opinion, the sustainability information disclosed is fundamental for the risk assessment and monetary policy of European banks. E3G would like to add that if such information were not to be disclosed, due to the lower amount of datapoints, EU banks would pursue bilateral operations to receive the specific information from the companies they finance, relying on a much costlier and complex system of data gathering.			
Survey	E3G - Third Generation Environmentalism	NGO	United Kingdom	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	E3G acknowledges that financial institutions often disclose GHG emissions reductions using intensity-based values. However, the disclosure of intensity targets coupled with absolute figures, better enables stakeholders to assess the progress of lowering financed emissions over time and to understand financial institutions' exposure to transition risks. For this reason, E3G recommends that financial institutions continue disclosing their climate targets also in absolute values.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	E3G - Third Generation Environmentalism	NGO	United Kingdom	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	E3G welcomes that the duplication of SFDR-related datapoints was addressed and resolved. EFRAG's proposed changes provide an easier compliance approach for companies reporting on SFDR-related matters. For users of sustainability reports, the new ESRS framework provides easier accessibility to the information they need.			
Survey	E3G - Third Generation Environmentalism	NGO	United Kingdom	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We agree with EFRAG's proposal to achieve a balance between simplification and efficiency of the ESRS standards. The only section of the new ESRS format in which we do not totally agree with EFRAG's options, is the ESRS 1. As already mentioned, we are seriously concerned about the combined effect of the additional reliefs. For this reason, E3G has left a few recommendations to address such concerns at Question 17 and 19 of this consultation.			
Survey	E3G - Third Generation Environmentalism	NGO	United Kingdom	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. I agree	We welcome that the EFRAG's proposal does not propose any radical changes to the transition plan criteria under E1-1. In particular, we acknowledge that the new format of E1-1 paragraph 14 covers fully the transition plan criteria under CSDDD Art.22. This level of technical alignment across EU regulation is exactly what the Omnibus I should achieve with its process.			
Survey	Disability:IN	NGO	United States	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree				
Survey	Disability:IN	NGO	United States	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree

Survey	Disability:IN	NGO	United States	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	Disability:IN	NGO	United States	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	Disability:IN	NGO	United States	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	Disability:IN	NGO	United States	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				
Survey	Disability:IN	NGO	United States	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				
Survey	Disability:IN	NGO	United States	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I would like to skip this question and provide my feedback in Part 3				
Survey	Disability:IN	NGO	United States	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I would like to skip this question and provide my feedback in Part 3

Survey	Disability:IN	NGO	United States	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	Disability:IN	NGO	United States	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Disability:IN	NGO	United States	22.S2	Comments on deleted datapoints in ESRS S2	I agree	Grateful that you maintained so many of the disability data points originally listed in S2			
Survey	Disability:IN	NGO	United States	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Disability:IN	NGO	United States	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	Disability:IN	NGO	United States	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree				
Survey	Disability:IN	NGO	United States	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				
Survey	Disability:IN	NGO	United States	33.E_2.	ESRS E2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree

Survey	Disability:IN	NGO	United States	33.S_2.	ESRS S2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	The business disability community is delighted that EFRAG has opted to maintain standards for disability inclusion, including the self identification of disability status, in the revised standards. This is of tremendous import to the business disability community, and we commend EFRAG for maintaining its commitment to sustainable, inclusive workforces that include and prioritize people with disabilities.			
Survey	Disability:IN	NGO	United States	35.S1-2.	Do you agree with the amendments of this chapter?	I agree		S1	Disclosure Requirement S1-2 - Engagement with own workforce and workers' representatives, existence of channels for own workers to raise concerns or needs and approaches to remedy	
Survey	Disability:IN	NGO	United States	35.S1-10.	Do you agree with the amendments of this chapter?	I agree		S1	Disclosure Requirement S1-10 - Social protection	
Survey	Disability:IN	NGO	United States	35.S1-11.	Do you agree with the amendments of this chapter?	I agree	Disability:IN is delighted that EFRAG has elected to maintain this important disclosure in its standards. Over 100 jurisdictions around the world have disability employment mandates that require companies to measure disability in the workforce. Repeated research on disability in the workforce has shown that disability employment drives business value, so this is a critical dimension of impact and financial performance. Thank you for including this measure and modernizing it to allow voluntary self-identification of disability status to stand as a source of data for the reporting requirement.	S1	Disclosure Requirement S1-11 - Persons with disabilities

Survey	Disability:IN	NGO	United States	35.S1-14.	Do you agree with the amendments of this chapter?	I agree		S1	Disclosure Requirement S1-14 - Work-life balance metrics	
Survey	Disability:IN	NGO	United States	35.S1-16.	Do you agree with the amendments of this chapter?	I agree		S1	Disclosure Requirement S1-16 - Incidents of discrimination and other human rights incidents	
Survey	Disability:IN	NGO	United States	35.S2-2.	Do you agree with the amendments of this chapter?	I agree		S2	Disclosure Requirement S2-2 - Engagement with value chain workers, existence of channels for value chain workers to raise concerns or needs and approaches to remedy.	
Survey	Disability:IN	NGO	United States	35.S3-2.	Do you agree with the amendments of this chapter?	I agree	This section provides space for companies to consider the impacts of the accessibility of their products and services on consumers and affected communities. We commend this disclosure.	S3	Disclosure Requirement S3-2 - Engagement with affected communities, existence of channels for affected communities to raise concerns or needs and approaches to remedy	
Survey	Disability:IN	NGO	United States	35.S4-3.	Do you agree with the amendments of this chapter?	I agree	This is an exemplary standard for documenting targets to remediate consumer/end-user problems related to accessibility/disability in company products.	S4	Disclosure Requirement S4-3 - Actions and resources related to consumers and end-users	
Survey	UNICEF	NGO	United States	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	UNICEF welcomes the simplified DMA process, which will enable companies to focus their efforts on the most material topics. The more extensive guidance on impact materiality is beneficial for companies, given the greater familiarity that exists for financial materiality. UNICEF seeks decision-useful material disclosures on the impacts companies have on children, and these are often specific to a particular company or sector and therefore not included in the ESRS. For this reason—and given that EFRAG will no longer create sector-specific standards—we encourage emphasis on the importance of entity-specific material disclosures in EFRAG's communications. We recommend EFRAG highlight that DMAs will establish entity-specific material topics and that companies should not rely solely on the ESRS as an exhaustive checklist. See our response to ESRS 1 in the Excel document for Part 3 of this consultation. Furthermore, UNICEF welcomes the emphasis on alignment between the double materiality assessment and due diligence undertaken in accordance with international standards of responsible business conduct. This "joined-up" strategic approach is essential, given the importance of companies undertaking due diligence relating to the impact of products, services, and technologies on children and the associated need to disclose these impacts for informed decision-making and policy-making by stakeholders. The coherent step-by-step logic that requires (1) identifying and prioritizing impacts on children, (2) determining material impacts ("impact materiality"), and (3) understanding material risks and opportunities ("financial materiality") should be maintained. Alignment between the double materiality assessment and risk-based due diligence under the international standards will ensure that these are not separate processes, but a single, strategic approach to both the management and reporting of sustainability impacts. See our response to ESRS 1-4 (Due Diligence) in the Excel document for Part 3 for specific suggestions that will enhance the clarity of the ESRS.

Survey	UNICEF	NGO	United States	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	UNICEF	NGO	United States	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	UNICEF welcomes the option for companies to "use appendices or separate sub-parts in its sustainability statement." Decision-useful disclosures about impacts on child rights may require the inclusion of detailed, nuanced, and complex information, especially for experts, and this might be facilitated by the option to refer to appendices with more information.			
Survey	UNICEF	NGO	United States	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	UNICEF welcomes the revised relationship between ESRS 2 and the Topical Standards, which we believe will reduce duplication and enable companies and report users to focus on the most decision-useful disclosures. However, while we welcome references to the UNGPs, OECD Guidelines, and ILO Declaration on Fundamental Principles and Rights at Work in ESRS 2, we believe that ESRS 2 can be strengthened through reference to other relevant international human rights instruments, such as the UN Convention on the Rights of the Child (CRC). We note that the CRC is referenced in Recital 49 of the CSRD as a core international human rights instrument against which companies should disclose, but the CRC is not referenced anywhere in the ESRS. Since the CRC is relevant to multiple ESRS topics, we believe that referencing the CRC in ESRS 2 will help ensure that companies appropriately consider the relevance of child rights across all topics, not simply where the term "child" is used in the ESRS. This addition will fill a gap in the original ESRS, while also being consistent with the emphasis on a principles-based approach. Please see our more extensive response on ESRS 2 in the Excel document for Part 3 of this consultation. While the emphasis on ESRS 2 helps with simplification and reduces duplication, UNICEF believes that the distinction between the four ESRS social standards should be maintained. Each standard addresses a distinctly different set of topics, including impacts, risks, and opportunities that exist in various parts of the company value chain and affect distinct stakeholders. Retaining the four well-defined ESRS social standards will be necessary for conceptual clarity within companies and facilitate the improved identification of entity-specific disclosures.			
Survey	UNICEF	NGO	United States	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	UNICEF	NGO	United States	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	UNICEF	NGO	United States	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	UNICEF welcomes the emphasis on a "fair presentation framework," which we believe will enable companies to focus their efforts on the most material topics and no longer view the ESRS as a checklist of requirements. However, the "fair presentation" approach will require companies to undertake an authentic DMA that successfully identifies entity-specific and sector-specific material topics. To help ensure that material impacts on child rights are appropriately considered in DMAs and the resulting disclosure, we encourage EFRAG to reference, as part of the ESRS, (1) the Convention on the Rights of the Child and (2) reporting guidance and disclosure recommendations that have been published by UNICEF. Please refer to our comments on ESRS 1 in Part 3 of this consultation for further details.			
Survey	UNICEF	NGO	United States	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	The topic of adequate/living wages is significant for UNICEF given its importance for ensuring that families have enough income to cover the basic needs of children, reducing the likelihood of child labor, and improving the health, education, and well-being of children. For this reason, we believe that ESRS S1-9 should be revised to remove the discrimination between workers inside and outside the EU. Specifically, the proposed methodology requires companies to compare wages to an "adequate wage" standard for their employees in the EU but only legal minimum wages for their employees outside the EU, so long as those minimum wages are agreed in line with the ILO's wage-setting principles. This approach is discriminatory against people living outside the EU, undermines the objective of adequate wages by including a lower standard (i.e., a legal minimum wage), is complex for companies (e.g., having to assess whether each country aligns with ILO wage-setting principles), and undermines the global comparability of reports. UNICEF believes that the methodology for reporting on "adequate wages" should measure actual wages against an "adequate wage" for all employees, where "adequate wages" are estimated in line with ILO principles on estimating living wages.

Survey	European Works Council	Trade union	Austria	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Double materiality is essential and must remain at the heart of the ESRS framework and European Union sustainability regime for corporate reporting to be credible and useful. The principle of "materiality of information" is concerning since it introduces a further filter for companies to not report information. For example, it represents a step backwards from ID-177, which says that most S1 metrics must be reported if S1 Own Workforce is material. It is essential to maintain the principle of fair presentation in the reporting standards. It is positive that the revision of the AR 16 list of topics has maintained all of the sub-subtopics for S1 + S2. These are based on the list of social topics in the CSRD and should all be maintained. The emphasis on aggregation (as opposed to disaggregation) is concerning, as disaggregated information (both site-specific and country-specific) is key to understanding the distribution of IROs.			
Survey	European Works Council	Trade union	Austria	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	It is important that companies report not just their net impact – the gross impact should be reported, and the recommended text preserves this principle.			
Survey	European Works Council	Trade union	Austria	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	The proposed changes are helpful. However, para 113 is difficult to understand: If the description of the material impacts, risks and opportunities prepared in accordance with [Draft] Amended ESRS 2 IRO-2 is not presented alongside the respective policies, actions and targets, the undertaking shall make explicit which policies, actions and targets relate to which material impacts, risks, or opportunities, in accordance with paragraph 22." Para 22 addresses the issue of appropriate aggregation or disaggregation of information on material impacts, risks and opportunities and their management, without setting any rules regarding the location of such disclosures depending (or not) on the level of aggregation.			
Survey	European Works Council	Trade union	Austria	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The Exposure Draft removes duplications between the cross-cutting and topical standards. The preservation of the 4-part architecture in the social standards is important to respect the distinctiveness of different affected stakeholder groups. However, we have two critical concerns. First, the original DR in environmental standards concerning screening of sites in materiality assessment were replaced by an application requirement to ESRS 2 IRO-1. This in effect makes transparency on this aspect optional. Consideration of local context is a key element of an appropriate materiality assessment. This should be both recognised in Chapter 3 of ESRS 1, and in ESRS 2 IRO-1, which should include an explicit datapoint on how the undertaking screened its locations and value chains. We welcome that E standards provide a clearer reference on the importance of disaggregation of disclosures, but this can only be done well if locations are properly screened. Second, we strongly recommend adding an explicit reference to the disclosure of relevant, entity-specific metrics directly in S standards. The fact that S2, S3 and S4 do not include any metrics should not imply that entity-specific metrics for S topics should not be disclosed.			
Survey	European Works Council	Trade union	Austria	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	The "may" (voluntary) data points should not be eliminated. In many cases they are "shall" in GRI standards, so it is important to keep them to align with GRI standards. Also, many of them were originally proposed as mandatory by EFRAG to the EC. The first wave of reports show that many companies have reported some "may" data points. Retaining them would help ensure standardization/comparability between company reports. Almost all of the datapoints for non-employee workers are voluntary, thus most datapoints for this vulnerable group of workers has been lost. Also, important datapoints on full time versus part time workers has been eliminated.			
Survey	European Works Council	Trade union	Austria	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	It is concerning that mandatory guidance in the Set 1 ESRS has been downgraded to "non-mandatory". Mandatory guidance is key to ensuring comparability and completeness of sustainability reporting. At a minimum, Non-mandatory Implementation Guidance (NMIG) should be included in the Delegated Act, and ideally called Mandatory Implementation Guidance. A major point of concern is that ID-177, which provided guidance that most S1 metrics should be reported if S1 Own Workforce is material, has now been downgraded into NMIG. Instead, EFRAG should preserve and promote the guidance that most S1 metrics shall be reported.

Survey	European Works Council	Trade union	Austria	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	As a whole the reliefs go too far, overshooting the balance between cost/effort and transparency. There is a danger of enabling green/social washing. The relief for "undue cost or effort" is too vague thus leaving too much room for interpretation. The relief for direct data for value chain reporting is too extensive, as direct data is key for transparency. The relief for reporting on operations which are not "significant drivers of IROs" also opens up too much leeway for interpretation.			
Survey	European Works Council	Trade union	Austria	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	These combined reliefs overshoot the balance between transparency and cost/effort and risk enabling green/social washing. At a minimum, there should be a time limit introduced for these reliefs on value chain metrics.			
Survey	European Works Council	Trade union	Austria	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	The ability to estimate financial effects is critical for the undertaking's ability to integrate sustainability into its business strategy considerations, planning and risk management. It is also key for the determination of financial materiality, including in terms of overreporting topics as financially material. Reporting on financial effects is crucial to achieving the objective of putting sustainability reporting on the same level as financial reporting and integrating both. The European Union has recognised the value of a double materiality approach to corporate reporting which requires disclosure of both material environmental and social impacts, risks and opportunities as well financially material data, It is important to keep the requirement on businesses to analyse and understand the financial effects of their business model. This will ensure investors have access to credible data as well as providing the underpinning for future business planning.			
Survey	European Works Council	Trade union	Austria	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	ESRS reliefs should not go beyond those set in IFRS. The principle of fair presentation needs to be protected to provide transparency on all material IROs. As noted in the response to question 15, it is also important to consider interoperability with GRI when considering changes to the ESRS, rather than only considering ISSB's standards.			
Survey	European Works Council	Trade union	Austria	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)				
Survey	European Works Council	Trade union	Austria	22.S1	Comments on deleted datapoints in ESRS S1	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	The reduction in the number of mandatory and voluntary datapoints goes far beyond striking an acceptable balance. As mentioned above, the voluntary datapoints should be maintained to provide alignment with GRI, which is currently in the process of strengthening its labor standards, as well as guidance and standardization for companies reporting more than just the mandatory datapoints. An explicit quantitative goal of 50%+ reductions was never set by the European Commission for EFRAG. A number of S1 datapoint metrics have been eliminated which should be reinstated: •S1-5 Employees: gender breakdown for zero-hour employees •S1-8 Diversity: age distribution; •S1-10 Social protection: reinstatement of retirement •S1-12: Training and development: gender breakdowns, •S1-13 Health and safety: fatalities from ill-health for non-employees and other workers on site; •S1-14 Work-life balance: employees that took family related leave;			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	European Works Council	Trade union	Austria	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Adding a datapoint on training of the procurement team is needed to support the implementation of human rights in the supply chain. The addition of a datapoint on confirmed incidents of bribery is needed to improve transparency on the effectiveness of bribery/corruption policies and measures.			
Survey	European Works Council	Trade union	Austria	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Agree that the following mandatory datapoint should be added: ESRS 2 General disclosures – BP 1 the undertaking shall state that the general requirements of ESRS 1 have been applied for the preparation of its sustainability statement			
Survey	European Works Council	Trade union	Austria	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	The "fair presentation" principle is essential to reduce the risk of green/social washing, as it emphasizes the full disclosure of all material impacts, risks and opportunities and their management. It is not understandable why this principle is under attack, as it is included as one of the general principles of the Accounting Directive.			
Survey	European Works Council	Trade union	Austria	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	It is essential that financial institutions disclose absolute targets to assess how their strategies align with the economy-wide transition to net zero. Absolute targets are relevant for users of sustainability statements and for understanding the real-world climate impact of financed activities. While intensity measures provide insights into efficiency, they can mask rising absolute emissions in growing portfolios or sectors. Granting an exemption would also undermine fairness in a sector-agnostic standard. Other industries could equally argue for exceptions based on their own difficulties, reducing comparability across sectors. Moreover, absolute financed emissions are already recognised in existing standards and regulations: the SBTi financial sector net-zero standard, the UNEP FI/NZBA recommendations, and EU SFDR all require or encourage absolute emissions disclosure. Exempting banks would risk misalignment and reduce the usefulness of reported data for stakeholders, including asset owners who depend on it for their own disclosures.			
Survey	European Works Council	Trade union	Austria	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	The "top 10" threshold for reporting country-level data on employment, collective bargaining and social dialogue is a major improvement over the current 10% employment threshold. An analysis of the first sustainability statements from Wave 1 companies shows that the current 10% threshold results in country-level disclosures on as little as 21% of total employees. More country-level information is needed to understand the distribution of impacts across countries, as well as whether employment thresholds for specific labour rights have been exceeded. The new threshold does not require additional effort/cost by companies, since they must gather country-level data anyways to calculate the global figures. Furthermore, it does not result in extra datapoints, since the information currently is (and can be under the revised ESRS) reported as one table.			
Survey	European Works Council	Trade union	Austria	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	An analysis of the first year ESRS reports shows that most companies are simply reporting that they pay minimum wages, whereas the intention (as outlined in the ESRS Basis for Conclusions) is that companies should be enabled to disclose commitments to paying a wage "sufficient to support themselves and their families in dignity" as well as the extent to which they do this. This shows that the methodology for non-EU countries needs to be changed. Furthermore, the new ILO agreement on a methodology for living wages needs to be taken into account. While the proposed new methodology takes a step forward in both regards, two key changes are needed: •The methodology for reporting on 'adequate wages' should measure actual wages against an adequate/living wage for all employees, not only those within the EU. In particular, for employees outside the EU, the methodology should allow employees' actual wages to be measured: oA) against the local legal minimum wage only when this is set in line with the ILO principles on estimating living wages; or oB) against living wage estimates that are set in line with ILO principles on estimating living wages. •Companies should be able to rely on local legal minimum wages or living wage estimates when the authorities or organisations that set them provide public evidence of their alignment with the ILO principles for estimating living wages. Furthermore, the transitional provision for the EU needs to be reinstated, as not all Member States have transposed the Adequate Minimum Wage Directive.			
Survey	European Works Council	Trade union	Austria	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	The new, simplified framework makes it easier for companies to report on these SFDR-related matters in a way that corresponds to how their policies are set. For users, this consolidation makes it easier to locate the relevant information. However, the SFDR datapoints are very helpful and should only selectively be amended.			
Survey	European Works Council	Trade union	Austria	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	The unadjusted gender pay gap should be kept as mandatory, since the methodology for calculating it is clear. The adjusted pay gap figure as voluntary. In practice many companies are reporting both figures, which is useful for improved transparency. However, since the methodology for calculating the adjusted figure is not standardized, the unadjusted should be kept mandatory.

Survey	European Works Council	Trade union	Austria	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	As detailed above, cumulative impact of the various reliefs is concerning			
Survey	European Works Council	Trade union	Austria	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The proposed "top 10" threshold for the reporting of country-level information for employee headcount, collective bargaining and social dialogue is a significant improvement over the current 10% employment threshold. Country-level information needs to be reported in more detail, and on other metrics as well, in order to have more transparency on the distribution of impacts across countries. In the metrics, voluntary datapoints need to be reinstated as well as the datapoints on gender breakdowns, workforce age distribution, etc. detailed above need to be reinstated. The proposed new methodology for adequate wages outside of the EU also needs attention, and the transition language for EU member states needs to be reinstated, since the Adequate Minimum Wage Directive has not been implemented in some Member States. We would also like to reiterate our longstanding demand for including franchise workers in the S1 definition of own workers, as well as the need for sector-specific standards to supplement the Set 1 sector-agnostic standards.			
Survey	European Works Council	Trade union	Austria	33.S_2.	ESRS S2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We are concerned that the loss of many specific datapoints related to workers in the value chain will mean that disclosures about material impacts, risks and opportunities become more generic and have less information about the specific stakeholder groups because specifications about the level of granularity have been deleted. Many of the points that are being deleted from ESRS S2 had originally been included because they reflected effective practice in relation to improving supply chain labour rights, for example, AR 6 awareness of the impacts on value chain workers from an undertaking's strategy or business model, AR 20 illustrating how the perspectives of value chain workers have informed specific decisions or activities of the undertaking and AR 25 which looks at retaliation and whether workers can use grievance mechanisms confidentially.			
Survey	European Works Council	Trade union	Austria	33.S_3.	ESRS S3:33. Overall feedback per standard The 12 ESRS Standards have been simplified. Survey	European Works Council	Trade union	Austria	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		The definition of own workforce should be expanded to include franchise workers. The term "non-employees" should be supplemented with the phrase "non-employee workers" or "non-employee workers in own workforce".			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	.			
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	.			
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	.			
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	.			
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	.			
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree	.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	.			
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	.			
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree	.			
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	.			
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)

Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	22.S1	Comments on deleted datapoints in ESRS S1	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	1. Former paragraph 93b, which requires to report the "percentage of entitled employees that took family-related leave, and a breakdown by gender" has been moved to NMIG 34. However, this information is essential: without it, the disclosure required by paragraph 42 (formerly 93a)—which only requires the "percentage of employees eligible for family leave" — does not provide users of the sustainability statement with meaningful information about the company's measures and metrics related to work-life balance. In fact, without the information referred to in paragraph 93b above, the sustainability statement will only provide users with information on the number of employees who had a child or cared for a relative during the reporting year. It will not provide any indication of the measures implemented by the company to facilitate the balance between employees' personal needs and their professional duties. The breakdown by gender is also significant because, in many circumstances, these burdens fall disproportionately on women. It is useful to understand how companies intend to give men the opportunity to contribute to family needs as well. 2. In paragraph 38a (formerly 83a), the breakdown by gender of regular performance and career reviews has been removed in order to reduce granularity. However, as such reviews are often linked to career advancement, it would be ethical to assess how they affect men and women differently in order to evaluate the company's fairness in such processes.

Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	.			
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	.

Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	.			
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Every sector, including finance, requires complex estimates to gain a full picture of a company's climate progress. New digital and analog technologies can help accurately quantify greenhouse gas emissions. Although intensity targets reflect efficiency, they can also mask increases in emission levels. Consequently, given the intention to promote sustainable investment (Regulation (EU) 2020/852), it is necessary for banks and other actors to make an effort to account for their activities, including through the formulation of absolute targets.			
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	.			
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree	.			
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	.			
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	.			
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree	.			
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree	.			
Survey	Punto 3 S.r.l. S.B.	Consultant (including software vendor)	Italy	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	.

Survey	Austrian Federal Economic Chamber, Division Bank and Insurance	Association of financial institutions	Austria	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Setting absolute GHG emission reduction targets for financed portfolios requires long-term projections — spanning 5 to 25 years — regarding the size and composition of financial assets. However, financial institutions face inherent limitations in making such forecasts, as asset and liability structures, including sectoral exposures, are subject to fluctuations driven by interest rates, macroeconomic developments, and other external factors. Given these uncertainties, we believe financial institutions should be exempt from the obligation to report absolute GHG emission reduction targets under the CSRD. We noted that an option to disclose intensity targets instead of absolute targets for financial institutions was included in initial version (v.0) of ESRS E1 (EFRAG SRB Meeting 19 June 2025) but was removed in version 1.5 (1./2. July) without any indication or explanation of the deletion.			
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	The amended DMA process is clearer and more user-friendly for preparers. The inclusion of practical considerations supports them in identifying material topics aligned with their business models, enabling them to focus on disclosing relevant issues rather than having to justify to assurance providers why certain topics were deemed not material. In addition to clarifying the DMA process, which enables a top-down approach – the clarification of AR16 as a reference point, along with the delineation of the relationship between IROs and associated disclosures, makes it clearer that prepares can conduct DMA from a group consolidation perspective. This reduces the interpretive burden and facilitates more robust alignment with ISSB and SSBJ requirements, enabling a more focused assessment of material sustainability-related risks and opportunities.

Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	We welcome the clarification regarding the consideration of remediation, mitigation, and prevention actions in the assessment of the materiality of negative impacts. However, we find the approach remains practically complex, and it is difficult to understand how to apply the logics outlined in ESRS 1 paragraph 34 to 36, as well as in Appendix C. While the assessment of actual and potential impacts reflects due diligence risk assessment methodologies defined by international standards, in practice, it often takes time to fully assess actual negative impacts. As a result, remediation actions may begin before the full extent of that impact is understood. Consequently, actual and potential negative impacts are frequently interrelated. The current guidance appears to suggest that prevention and remediation activities undertaken during the reporting period should be excluded when assessing severity of impacts, while their consideration is allowed for potential negative impacts. This raises practical concerns, particularly regarding how to determine when mitigation or prevention measures are considered 'in place' before, during or after the impact and what constitutes 'significant ongoing mitigation/prevention.' We respectfully suggest that mitigation/prevention/remediation actions should also be taken into account at any stage of the assessment of actual negative impacts to better reflect practical circumstances.			
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	Although the revision provides greater clarity for undertakings established in the EU, it does not address the case where non-EU parent companies of in-scope EU subsidiaries prepare a stand-alone, ESRS-aligned consolidated sustainability statement in order to apply Article 29a (8) of Directive 2013/34/EU (CSRD). In such cases, the consolidated sustainability statement may not necessarily be embedded within a consolidated management report of the non-EU parent company. The current wording of paragraph 104 of ESRS assumes that the reporting entity is an EU undertaking, which does not reflect the situation of non-EU parent groups applying Article 29a(8). We therefore propose the following revision to paragraph 104: Paragraph 104: Sustainability information shall be presented: (a) in a way that allows for clear identification of the information required by the ESRS and, where applicable, other information included in the management report, other accompanying reports, or a stand-alone consolidated sustainability report prepared in accordance with Article 29a(8) of Directive 2013/34/EU; and (b) under a structure that facilitates access to and understanding of the sustainability statement, in a format that is both human-readable and machine-readable, regardless of whether it is presented within a management report or as a stand-alone consolidated sustainability report under Article 29a(8) of Directive 2013/34/EU.			
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	Removing duplicative requirements from topical standards streamlines reporting, enabling preparers to focus more effectively on material topics.			
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	We welcome EFRAG's efforts to address our previous concerns regarding the spread and duplication of Data Points (DPs) and Disclosure Requirements (DRs) across the ESRS framework. The initiative to minimise such duplications and to place greater emphasis on mandatory ("shall") disclosure requirements is a positive step forward. Furthermore, we welcome the elimination of "may" disclosure points, which contributes to greater clarity and consistency in reporting obligations. These changes are important to streamline preparers' efforts and enhance the usability of reported information for stakeholders.			
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We support EFRAG's view that the Non-Mandatory Illustrative Guidance (NMIG) should remain outside the scope of the Delegated Act and continue to serve as a supporting document. Maintaining this status helps avoid confusion regarding its legal enforceability and allows NMIG to serve its intended role as a practical aid for implementation.			
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree	We welcome EFRAG's efforts to address the practical concerns of preparers. The introduction of burden relief measures is an important step that will support the effective and realistic implementation of the CSRD. In particular, these reliefs acknowledge the current challenges around data quality and availability—especially in relation to value chain information—which will require time to develop and mature. Just as it took many years for financial reporting to reach its current level of robustness and comparability, sustainability reporting should similarly be allowed to evolve along a learning curve. The introduction of these reliefs not only supports preparers during this transition period but also provides stakeholders with greater transparency regarding existing data limitations and the areas where further maturity is needed.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	We welcome this approach, as previous requirements caused disruptions within the value chain. Allowing metrics to be calculated with a partial scope supports preparers in conducting reporting while simultaneously enabling realistic improvements in data collection from the value chain. This approach helps avoid the difficult position of being caught between compliance obligations—including audits—and legal risks arising from disclosures. Given that value chains often extend beyond the EU, it is important to recognize the limited sphere of influence preparers have over data collection throughout the value chain. Therefore, we support EFRAG's decision not to impose a time limit on the use of this relief, as it appropriately reflects the practical realities faced by undertakings.			
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	While the primary focus of this question is on anticipated financial effects, it is important to recognize that the proposed Options 1 and 2 also introduce differing approaches to the treatment of current financial effects. The reported financial effects—both current and anticipated—can vary significantly depending on the underlying assumptions and estimation methodologies used. On the condition that a qualitative assessment is allowed for both current and anticipated financial effects, we support option 2. Should qualitative disclosure of the current financial impact not be permitted, we would not agree with either options. Therefore, we urge EFRAG to secure that a certain degree of flexibility should be allowed, whether the information is presented in quantitative or qualitative form. This flexibility ensures that preparers can effectively reflect the reliability and availability of data, as well as the specific circumstances surrounding the material risks and opportunities, without altering the underlying scope of what is considered material.			
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	As for the new disclosure on confirmed incidents of corruption and bribery, we support its inclusion under G1, as it aligns with business conduct and governance. However, we caution against interpreting the number of incidents as a straightforward performance indicator. The figure may reflect an entity's internal detection and reporting capability rather than the actual prevalence of misconduct. Therefore, newly added quantitative metrics should not be requested as mandatory datapoints. It is recommended to replace quantitative metrics with narrative disclosure such as training scope and frequency, reporting systems, and corrective actions taken—to support meaningful interpretation and avoid unintended disincentives for transparency.			
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree				
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We believe the principle of fair presentation is important in sustainability reporting. However, there are concerns about its practical application, especially regarding impact information. Such information frequently depends on estimates or assumptions, which can vary significantly depending on the methodologies and data sources employed. This inherent variability can affect both comparability and neutrality—core elements of the fair presentation principle. Furthermore, sustainability statements frequently include future-oriented targets, which by their nature involve uncertainties and risks, making faithful representation inherently challenging. While we acknowledge and support the importance of fair presentation, its practical implementation faces several obstacles. Overcoming these will require robust frameworks, clearer methodologies for diverse data points, and stronger assurance practices. Without these, we share the concerns expressed by EFRAG SRB members that this could lead to increased auditing costs.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	The current application requirements offer a structured methodology by comparing the undertaking's lowest wage with relevant benchmarks. However, we suggest several improvements to enhance clarity, comparability, and practical implementation. First, while the benchmark hierarchy is helpful, the current approach relies heavily on minimum wage levels, which may not always reflect the actual needs of workers and their families. We recommend that EFRAG explicitly emphasise living wage benchmarks—aligned with ILO principles—as the preferred standard where available. Without this, there is a risk of inconsistent data quality. Secondly, AR 22 para.32 outlines a methodology for determining the lowest wage outside the EU, prioritizing the statutory minimum wage where applicable. However, in many jurisdictions, statutory minimum wages are significantly lower than living wages. As a result, we question whether this hierarchy provides an appropriate basis for assessing wage adequacy outside the EU. Reconsider the proposed hierarchy and provide greater flexibility for undertakings to assess wage adequacy based on locally relevant benchmarks, including ILO principles on estimating a living wage and living wage estimates where available.			
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				
Survey	Panasonic Holdings Corporation	Preparer (non-financial preparing a sustainability report)	Japan	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree

Survey	Japan Foreign Trade Council, Inc.	Business association (other than association of financial institution)	Japan	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree				
Survey	Japan Foreign Trade Council, Inc.	Business association (other than association of financial institution)	Japan	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree				
Survey	Japan Foreign Trade Council, Inc.	Business association (other than association of financial institution)	Japan	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	Japan Foreign Trade Council, Inc.	Business association (other than association of financial institution)	Japan	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Japan Foreign Trade Council, Inc.	Business association (other than association of financial institution)	Japan	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree				
Survey	Japan Foreign Trade Council, Inc.	Business association (other than association of financial institution)	Japan	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	We are opposed to amendments that would harm the comparability of global sustainability reporting—that is, amendments that would cause additional differences from the ISSB standards (or, for Japan, the Sustainability Standards Board of Japan [SSBJ] standards) . For example, regarding reporting on greenhouse gas emissions, the Exposure Drafts stipulate that, even if the financial control approach is selected, an additional disclosure following the operational control approach be required in certain circumstances. （E1 AR19 for para 32） However, there are no such requirements in the ISSB standards. Because there are concerns that such differences among standards would not only create a duplicate burden on the non-EU companies subject to the extraterritorial application of the ESRS but also harm the global comparability of sustainability reporting, we request further elimination of differences among standards. Additionally, whereas the Amended ESRS 2 Exposure Draft proposes two disclosure methods to reduce the burden of disclosing quantitative information about anticipated financial effects, we request that the option mandating qualitative information only be adopted for the purpose of reducing the burden of preparers. The problem, however, is that this option would result in differences from the ISSB standards that require disclosure of quantitative information. Accordingly, to maintain consistency with the ISSB standards, we would like the European Financial Reporting Advisory Group (EFRAG) to urge the IFRS Foundation to implement amendments similar to the ESRS. If the amendment of the ISSB standards is difficult, then we request retaining the current ESRS provision (exemption from quantitative information disclosure only in cases where certain conditions are met) that is similar to the ISSB standards, as we believe that priority should be given to reducing the differences among standards.			
Survey	Japan Foreign Trade Council, Inc.	Business association (other than association of financial institution)	Japan	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	We are opposed to amendments that would harm the comparability of global sustainability reporting—that is, amendments that would cause additional differences from the ISSB standards (or, for Japan, the Sustainability Standards Board of Japan [SSBJ] standards) . For example, regarding reporting on greenhouse gas emissions, the Exposure Drafts stipulate that, even if the financial control approach is selected, an additional disclosure following the operational control approach be required in certain circumstances. （E1 AR19 for para 32） However, there are no such requirements in the ISSB standards. Survey	Japan Foreign Trade Council, Inc.	Business association (other than association of financial institution)	Japan	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	Comments on ESRS 2 or E1: We are opposed to amendments that would harm the comparability of global sustainability reporting—that is, amendments that would cause additional differences from the ISSB standards (or, for Japan, the Sustainability Standards Board of Japan [SSBJ] standards) . For example, regarding reporting on greenhouse gas emissions, the Exposure Drafts stipulate that, even if the financial control approach is selected, an additional disclosure following the operational control approach be required in certain circumstances. （E1 AR19 for para 32） However, there are no such requirements in the ISSB standards. Because there are concerns that such differences among standards would not only create a duplicate burden on the non-EU companies subject to the extraterritorial application of the ESRS but also harm the global comparability of sustainability reporting, we request further elimination of differences among standards. Additionally, whereas the Amended ESRS 2 Exposure Draft proposes two disclosure methods to reduce the burden of disclosing quantitative information about anticipated financial effects, we request that the option mandating qualitative information only be adopted for the purpose of reducing the burden of preparers. The problem, however, is that this option would result in differences from the ISSB standards that require disclosure of quantitative information. Accordingly, to maintain consistency with the ISSB standards, we would like the European Financial Reporting Advisory Group (EFRAG) to urge the IFRS Foundation to implement amendments similar to the ESRS. If the amendment of the ISSB standards is difficult, then we request retaining the current ESRS provision (exemption from quantitative information disclosure only in cases where certain conditions are met) that is similar to the ISSB standards, as we believe that priority should be given to reducing the differences among standards.			
Survey	Japan Foreign Trade Council, Inc.	Business association (other than association of financial institution)	Japan	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		We are generally in agreement with the Exposure Drafts. We have no objections to the reduction of datapoints and the simplification of the materiality assessment process for the purpose of simplifying the European Sustainability Reporting Standards (ESRS) based on the Omnibus package published in February 2025, or to other amendments that would contribute to reducing the burden of preparers. Furthermore, in addition to the amendments proposed in the Exposure Drafts, we request that amendments aimed at simplification be similarly made to the extraterritorial application of the ESRS to non-EU companies, which is expected to begin from financial year 2028 . As disclosure pursuant to the ISSB standards has become mandatory in an increasing number of jurisdictions, entities in various countries are disclosing information in accordance with those standards. In this environment, separately implementing additional disclosure in compliance with the ESRS would place a large burden on preparers. In light also of the current situation where differences among standards remain even under the amendments this time, we believe that EFRAG should, in addition to developing the ESRS for Non-EU Groups (NESRS), allow non-EU companies subject to the extraterritorial application of the ESRS to choose the application of the ISSB standards, in order to realize globally consistent sustainability reporting. On top of mandatory disclosure pursuant to the SSBJ standards from financial year 2026, our members will be subject to the extraterritorial application of the ESRS. In view of this, we have strong concerns about an increase in the burden of preparing reports due to having to comply with two different standards. Finally, we request that EFRAG provide clear guidance soon regarding the timing of the formulation of the system for extraterritorial application to non-EU companies.			
Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We welcome the clearer wording of ESRS 1 Chapter 3, which makes the Double Materiality Assessment (DMA) more usable by: (i) elevating a single materiality filter for information; (ii) clarifying the link between material IROs and "topics to be reported"; (iii) consolidating practical guidance on aggregation/disaggregation and group reporting; and (iv) relocating "may" disclosures into AR/NMIG to reduce noise after the DMA. We also value the explicit reference to reasonable and supportable information available without undue cost or effort, which eases execution without altering the DMA's purpose. However, we encourage EFRAG to include safeguards so that simplification does not dilute coverage or comparability—especially for issues underpinning the Ten UN Global Compact Principles (human rights, labour rights, environment and anti-corruption), and, secondarily, the SDGs. Clear sector-agnostic examples and decision trees would help apply the materiality filter consistently across value chains and reduce assurance frictions.			
Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	We welcome the added clarity on "gross vs net" for negative impacts: (i) actual impacts in the reporting period are assessed gross (before remediation in that same period) and, if fully remedied, are not carried forward; (ii) potential impacts may be assessed net only where mitigation/prevention is already implemented, demonstrably effective, and does not require significant, ongoing effort; otherwise they are assessed gross; (iii) future/planned actions cannot reduce potential impacts; and (iv) positive impacts do not offset negatives. Nevertheless, we believe that the explanations are complex and difficult to interpret, and therefore their level of detail and clarification should be increased. It is also important to consider their inclusion not as an appendix but as part of the main body of the standard, in order to provide deeper insight into the concept, as expressed by some EFRAG members. As the Spanish Network of the United Nations Global Compact, we urge EFRAG to incorporate this guide explicitly, in coherence with the Ten Principles of the United Nations Global Compact. Concretely: (a) adopt gross as the default for potential impacts linked to Principles 1–10 (human rights, labour, environment, anti-corruption) unless the undertaking evidences stable, effective controls that do not require significant ongoing effort; (b) when "net" is used, require a comply-or-explain disclosure of the controls, evidence of effectiveness, frequency of testing, and assurance-readiness; (c) require disclosure of grievance mechanisms, remedy provided and systemic fixes for material actual impacts; and (d) make clear that value-chain risks subject to continuous prevention must be assessed gross. These safeguards protect the Ten Principles (and, secondarily, the SDGs) while keeping the guidance clear, comparable and auditable.

Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	We support the changes aimed at improving the clarity, legibility, and comparability of sustainability reports, especially the clear structuring of information and the harmonization of terminology. These changes will enhance the usability of disclosures for a wide range of stakeholders, including investors, regulators, and others. The introduction of flexible reporting options, such as appendices and subsections, is a welcome move towards reducing reporting redundancy and making the content more efficient. However, to ensure this simplification doesn't sacrifice transparency, we urge that materiality remains central. The focus on reducing duplication is critical, but we recommend the inclusion of clear, sector-agnostic decision trees and practical examples to support companies in identifying what truly matter. Moreover, we emphasize the importance of maintaining alignment with the Ten UN Global Compact Principles throughout the simplification process. This will ensure that the information disclosed is both decision-useful and comparable, without reducing the coverage of critical environmental, social, and governance issues.			
Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We welcome the amendments under Lever 3, which aim to simplify the structure of the ESRS and improve the interaction between ESRS 2 and topical standards. The reduction in prescriptiveness, especially for PAT and the simplification of disclosure requirements, will help streamline the reporting process. We appreciate the improved connectivity between PAT and IROs, which enhances the transparency of how companies manage material risks and opportunities. However, we have concerns regarding the elimination of the requirement to disclose whether a company plans to implement a PAT for material topics and the timeline. While we understand the goal of simplification, removing this requirement could reduce transparency, limit accountability, and make it more difficult for stakeholders to assess companies' ongoing efforts and progress over time. We recommend that companies still be required to disclose their plans for implementing PATs for material topics. Additionally, while we support the simplification, it is crucial to ensure that the core datapoints related to the Ten UN Global Compact Principles (e.g., human rights, decent work, environment, anti-corruption) remain consistent and comparable across all companies. Proportionality should be maintained, but not at the expense of ensuring comprehensive, decision-useful information for all stakeholders.			
Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We support the amendments aimed at improving the clarity, accessibility, and structure of the ESRS. The elimination of "may disclose" datapoints ensures that the information to be disclosed is clearly mandatory, which simplifies the process and enhances transparency across companies. The reorganization of mandatory disclosure points into the main body of the standards and the improved language for understandability are also important steps towards making the standards more user-friendly and consistent. However, while the simplification is positive, we believe it is important that the core material information remains comparable and relevant. For us, simplification should not lead to the removal of key disclosures related to the Ten UN Global Compact Principles (e.g., human rights, decent work, environmental protection, anti-corruption). In particular, clear guidance should be provided to ensure that material risks and opportunities are still disclosed in a manner that is comparable and useful for stakeholders. Additionally, while these changes improve the structure, it is crucial that the information remains consistent and comparable across different sectors and company sizes.			
Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We appreciate the Non-Mandatory Illustrative Guidance (NMIG) provided as a useful tool for companies to better understand how to report on mandatory datapoints, particularly for narrative PAT disclosures. The inclusion of guidance on what should be covered helps companies, especially those with limited sustainability reporting experience, to ensure that their disclosures are consistent and comparable. This guidance is a valuable support resource, offering examples and methodologies on how to report in accordance with mandatory datapoints. However, we have concerns regarding the legal status of the NMIG. While it is designed to be non-binding, if included in the Delegated Act in the future, it could create confusion and an additional reporting burden for companies. We agree with EFRAG's recommendation that the NMIG should not be included in the Delegated Act as its non-mandatory nature is crucial in preventing unnecessary complexity for companies, especially smaller ones. *We also believe that the **NMIG should remain a purely supportive tool to help companies implement their sustainability disclosures effectively, without creating any ambiguity or imposing additional reporting obligations. For this to be truly helpful, its non-binding nature must be clearly emphasized.			
Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We appreciate the proposed amendments, particularly the burden reliefs introduced to simplify the reporting process. The "undue cost or effort" relief is a key improvement, as it allows companies to avoid disclosing data when obtaining it would be excessively costly or difficult. This flexibility will help reduce the reporting burden while ensuring that companies focus on material disclosures. Additionally, the relief for lack of data quality is a welcome change, enabling companies to report partial data and outline actions to improve coverage in future periods. This is a practical solution, especially for companies that are still developing their sustainability data systems. Similarly, the flexibility in using estimates or direct data for value chain metrics will ease the burden on companies that may not have access to precise figures. However, while these reliefs provide useful support, it is important that the transparency of the disclosed information is maintained. Companies must continue to provide comparable, consistent, and relevant information that enables stakeholders to assess their sustainability performance effectively. The simplification of disclosures should not compromise the quality of the material issues being reported, particularly those aligned with the Ten UN Global Compact Principles. In conclusion, while the reliefs are beneficial, it is essential to strike a balance between reducing the reporting burden and ensuring that key sustainability issues remain adequately disclosed and transparent.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	We welcome the introduction of the "undue cost or effort" relief in ESRS 1, as it allows companies to disclose partial metrics when they lack reliable data. The flexibility to report partial data while continuing to work towards better data quality is an important step in reducing the reporting burden without compromising the overall transparency of the sustainability reports. However, we believe that while this relief is necessary, it is important to ensure that companies do not use this relief indefinitely. The disclosure of actions to improve the scope of the metrics in future periods is crucial, as it provides transparency and incentivizes companies to make efforts to improve data quality over time. Without a time limit for the use of this relief, there is a risk that some companies may continue to rely on it without taking sufficient steps to enhance their data systems. We agree with the general direction of the amendment but recommend that a time limit for the use of this relief be introduced. This would ensure that companies remain accountable for their data quality improvement and do not use the relief as an excuse for ongoing lack of data reliability. This time limit should be extended if there is a significant change in the company, such as a restructuring, merger, or takeover.			
Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	We support Option 1 as it strikes the right balance between responding to stakeholders' demands for burden relief and maintaining the transparency and relevance of disclosed financial data. The flexibility to omit quantitative information when it cannot be reliably measured or when the level of uncertainty is too high is a reasonable relief, especially for companies in the early stages of sustainability reporting or those facing significant data gaps. However, we believe it is essential to maintain the requirement to disclose quantitative information as it ensures companies still provide useful insights into the financial implications of material impacts, even if the exact figures cannot be reported. The guidance to disclose actions being taken to improve data coverage in future periods is also an important step towards improving data quality over time. On the other hand, we have concerns about Option 2, which limits the disclosure to qualitative information only. While this might reduce the burden on companies, it could result in incomplete disclosures that fail to provide investors and other stakeholders with a clear picture of the financial implications of sustainability risks and opportunities.			
Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	We appreciate the reduction in the disclosure requirements related to anticipated financial effects of both physical and transition risks in ESRS E1. This simplification should help reduce the reporting burden, by focusing on the most relevant data for investors and lenders. The removal of certain datapoints considered redundant helps streamline the reporting process, making it easier for companies to comply with the requirements. However, while the simplification is beneficial, we are concerned that the reduction in scope might result in the loss of valuable information for stakeholders. For example, the disclosure of stranded assets and financial opportunities related to climate change could provide essential insights into how companies are managing long-term financial risks and transitioning towards a *low-carbon economy. These disclosures are especially important for investors looking to assess the company's exposure to both physical and transition risks. In conclusion, while we support the overall direction of these changes, we recommend retaining certain disclosures that provide a more complete and comparable view of the financial effects of climate risks, particularly for investors and lenders. This information has a very high strategic value for investors.			
Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We appreciate the efforts made to improve the interoperability between ESRS and IFRS S1/S2 standards. The alignment of GHG emissions boundaries with the financial consolidation approach and the implementation of IFRS reliefs (e.g., undue cost or effort, disclosure of quantitative financial effects) represent positive steps towards reducing the reporting burden and ensuring global comparability for companies. These changes help to facilitate the compatibility of ESRS with global standards, which is essential for multinational companies and those reporting in multiple jurisdictions. The simplification of certain datapoints, such as the reduction of seven mandatory datapoints, also contributes to making the reporting process more streamlined and manageable. The alignment of language between ESRS and IFRS in key areas further strengthens the clarity and coherence of the requirements, ensuring that the core disclosures remain consistent across both frameworks. While we understand the intention to simplify, it is essential to maintain transparency and ensure that the reduction in datapoints does not compromise the quality of the disclosures.			
Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	The removal of less relevant datapoints, particularly in the narrative PAT disclosures, aligns with the objective of simplifying the reporting process while still ensuring that companies provide material and relevant information to investors and stakeholders. However, we have concerns about the potential loss of critical information that could be valuable for investors, especially regarding the financial effects of material climate risks, stranded assets, and transition opportunities. These types of data are essential for investors to assess a company's long-term sustainability performance, and their omission could limit transparency. While we agree with the general direction of simplifying the reporting framework, it is important to ensure that the reduced datapoints still allow for comprehensive disclosures that align with the EU Green Deal objectives. The Ten Principles of the UN Global Compact, including those related to human rights, decent work, and environmental responsibility, must remain central to any sustainability reporting framework. Maintaining the relevance and comparability of the disclosed information is crucial for investors and lenders to make informed decisions about sustainability risks and opportunities.

Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	The six datapoints that have been moved from "may" to "shall" are an important step to ensure that companies disclose relevant and material information. For example, the mandatory disclosure of water usage and discharges is crucial for investors to assess the impact of companies on local water resources, which is a key component of sustainability performance. The six mandatory datapoints should be seen as a way to ensure that companies share material, comparable, and reliable data that are critical for stakeholders to assess long-term sustainability. We stress that transparency must be preserved, and the reduced burden of reporting should not compromise the quality of the disclosed information. Balancing simplification with comprehensive reporting is key for achieving the objectives of the EU Green Deal while maintaining transparency and trust in corporate reporting. The UN Global Compact Principles, including human rights, labor rights, and anti-corruption standards, should continue to be integrated in the reporting process to ensure that businesses meet their responsibilities to society.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	We support the introduction of the new mandatory datapoints, as they help clarify existing disclosure objectives and enhance the focus on material information. These datapoints, such as water usage, microplastics, and critical raw materials, are important for improving the clarity and relevance of sustainability reporting. They also contribute to increased transparency for stakeholders, especially in industries that impact water resources and material supply chains. However, while we welcome these changes, it is essential that these new mandatory datapoints do not add unnecessary burdens on businesses. The new requirements should remain proportional to what is material for each company, to ensure that they do not overcomplicate the reporting process. Additionally, while the simplification is welcomed, it is crucial that companies continue to align their reporting with broader sustainability principles, including those found in the Ten Principles of the UN Global Compact. These principles, particularly those related to human rights, labor standards, and anti-corruption, should continue to be integrated into the disclosure process. This ensures that companies do not just focus on environmental sustainability, but also uphold their social and ethical responsibilities, which are essential for building trust with investors and other stakeholders.			
Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We support the requirement for fair presentation in the preparation of ESRS sustainability statements, as it can help to improve the effectiveness of the materiality filter and ensure that only relevant and actionable information is reported. This approach aligns with global reporting standards such as IFRS S1 and S2, which enhances the comparability and clarity of sustainability disclosures across industries and regions. However, while the adoption of fair presentation is beneficial for ensuring that disclosures are more relevant, we recognize the challenges companies may face in determining what is truly material, particularly in areas where reporting practices are less established. We agree that this approach will ultimately lead to more relevant reporting and help reduce the risk of excessive information, but we recommend that additional guidance and support be provided to ensure that companies can comply with these requirements effectively, without facing disproportionate challenges, particularly in the early stages of implementation.			
Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Absolute targets are necessary for assessing the total climate impact of a company's activities, providing a clearer picture of its contribution to climate change mitigation. Without absolute targets, investors and stakeholders may miss key information about the company's overall emissions trajectory, especially in high-emission sectors. While estimating absolute targets may introduce complexity, it is important that all sectors, including financial institutions, provide consistent and comparable data on their climate performance. The exception for financial institutions would undermine the consistency of reporting across industries and could result in a lack of transparency in evaluating the climate-related risks and opportunities that financial institutions are managing. Thus, we believe it is essential for financial institutions to be required to disclose both intensity and absolute emission targets. This will ensure that their disclosures are comprehensive, transparent, and aligned with global standards.			
Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	We support the proposed change in the threshold for reporting metrics disaggregated at the country level. The previous threshold, which required reporting for countries where employees represented at least 10% of the total workforce, led to limited information being disclosed for key markets. This new approach focusing on the top 10 countries by employee headcount will enhance transparency and comparability of information, ensuring that data for the largest markets is consistently reported. We recognize that this change might require more effort in some cases, as it could lead to the reporting of additional countries where the company has significant operations. The increased reporting is expected to provide stakeholders with more relevant data for assessing labor and social issues in key jurisdictions.			
Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	The Application Requirements for disclosure requirement S1-9 set out the methodology for reporting on employees' wages in relation to an adequate wage. The methodology references one norm for 'adequate wages' with regard to employees within the EU (namely, the adequate wage as defined in EU Directive (EU) 2022/2041) and a different norm for employees outside the EU (namely the legal minimum wage). This creates a number of problems: •The reference to legal minimum wages is not reflective of the title or purpose of the disclosure requirement. •It is discriminatory since the legal minimum wage is typically lower than an adequate or living wage estimate, and it therefore implies that the EU expects lower wage standards for employees outside the EU. •It creates confusion for companies, for which it is simpler and more appropriate to apply one reference norm across all their employees. •It makes the information reported by companies incomparable, since some have used the minimum wage and others have selected to apply the living wage estimate they use elsewhere.			
Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	We partially agree with the proposed changes in the Amended ESRS, particularly with the simplification of reporting requirements. The consolidation of data points related to human rights policies and severe human rights incidents streamlines the reporting process, but we are concerned that simplifying the indicators too much could result in losing important details regarding specific human rights incidents, which could affect the transparency necessary for assessing companies' adherence to human rights standards. For example, the simplification of PAI 14 (severe human rights incidents) may omit context on affected groups or locations, which is critical for assessing companies' adherence to human rights standards. The new methodology should uphold the UN Global Compact's Principles, especially Principle 1 on respecting and supporting human rights, Principle 2 on avoiding complicity in human rights abuses, and Principles 3 to 6, which cover issues like freedom of association, forced and child labor, and discrimination in employment. These principles are essential for ensuring companies contribute to decent work and human rights protection (aligned with SDG 8). Furthermore, we believe it is important that these changes are in line with the guiding principles of human rights and business. We support the simplification, but emphasize that companies must continue to disclose clear and detailed information on human rights and labor conditions to ensure transparency and accountability.

Survey	UN Global Compact Country Network Spain	Standard setting initiative	Spain	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	We partially agree with the proposed amendments regarding the simplification of the disclosure requirements for biodiversity and ecosystems-related targets in ESRS E4. While the reduction of complexity is appreciated, particularly by streamlining the specific application requirements, we believe that the guidance for setting biodiversity and ecosystems-related targets should be further refined to ensure clarity and relevance for companies. The methodological guidance provided in E4 AR 26, such as the focus on protected areas or the number of sites with approved ecological integrity, is a positive step towards aligning with the evolving trends in biodiversity management. However, we encourage further alignment with the latest developments in science-based frameworks, such as the Science-Based Targets Network (SBTN), which are increasingly recognized as leading approaches for addressing biodiversity goals and ecosystem restoration. We suggest keeping the guidance flexible enough to accommodate the specific needs of different sectors, while still ensuring that it provides clear, actionable targets for companies to follow. This will enable them to contribute more effectively to global biodiversity preservation and ecosystem restoration, aligned with international frameworks and the UN Global Compact's Ten Principles related to environmental responsibility (Principle 7) and sustainability.
