Survey	Majesty Business Utvikling	Consultant (including software vendor)	Norway	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				
Survey	Majesty Business Utvikling	Consultant (including software vendor)	Norway	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree

Survey	Majesty Business Utvikling	Consultant (including software vendor)	Norway	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2				
Survey	Majesty Business Utvikling	Consultant (including software vendor)	Norway	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	Majesty Business Utvikling	Consultant (including software vendor)	Norway	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	Majesty Business Utvikling	Consultant (including software vendor)	Norway	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Majesty Business Utvikling	Consultant (including software vendor)	Norway	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Majesty Business Utvikling	Consultant (including software vendor)	Norway	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Majesty Business Utvikling	Consultant (including software vendor)	Norway	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	Majesty Business Utvikling	Consultant (including software vendor)	Norway	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets

Survey	Majesty Business Utvikling	Consultant (including software vendor)	Norway	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	Majesty Business Utvikling	Consultant (including software vendor)	Norway	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree				
Survey	Majesty Business Utvikling	Consultant (including software vendor)	Norway	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				
Survey	Majesty Business Utvikling	Consultant (including software vendor)	Norway	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	Majesty Business Utvikling	Consultant (including software vendor)	Norway	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	Majesty Business Utvikling	Consultant (including software vendor)	Norway	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	Majesty Business Utvikling	Consultant (including software vendor)	Norway	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree

Survey	Majesty Business Utvikling	Consultant (including software vendor)	Norway	33.E_2.	ESRS E2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree

Survey	Dunya Analytics	User (analyst, data provider, rating agency, etc.)	United States	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	The aggregation and streamlining of information and requirements simplifies the process. However, the DMA should not be done top-down. There are several aspects of DMA that cannot be completed top-down, such as assessing whether business locations are located near biodiversity sensitive areas, in proximity to affected communities, or within watersheds experiencing water stress. This is still a point that has not been clarified and that some companies may miss. Without clear guidance on the bottom-up approach, companies risk conducting superficial desktop assessments that fail to identify material nature-related impacts and dependencies, potentially leading to non-compliance and missed business risks.			
Survey	Dunya Analytics	User (analyst, data provider, rating agency, etc.)	United States	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	Comment: An Executive Summary makes it easier to understand the overall response, and potentially its connections with other corporate reporting. Clearly labeled Appendices can make it easier to find specific, detailed information.			
Survey	Dunya Analytics	User (analyst, data provider, rating agency, etc.)	United States	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	It is much easier to understand, as the "may" datapoints were confusing, and it was cumbersome to seek out and find the related AR and determine which were required and which were voluntary.			
Survey	Dunya Analytics	User (analyst, data provider, rating agency, etc.)	United States	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	E3; E4	For ESRS E4, NMIG 13 for para. 20, it provides a list of data sources for biodiversity-sensitive areas, and refers to the Annex II definition. While many of the datasets in both descriptions are the same, some differ. E.g., NMIG 13 for para. 20 mentions the STAR metric, but Annex II does not. Annex II mentions Ramsar, but NMIG 13 does not. It would be better to have these consistent. Additionally, much of the data required for biodiversity sensitive areas is only available through IBAT, which can be prohibitively expensive for smaller companies. If there is a way to make these datasets more accessible, or not to mandate certain private datasets, that would help relieve an undue burden for these companies. NMIG 14 for para. 20. This is helpful to keep in, to help companies understand that they can use results from their already completed EIAs for determining if the site may have negative impacts on biodiversity sensitive sites. NMIG 15 for para. 20: The example table is a helpful template for companies to present their information. NMIG- ESRS E3 NMIG 6 for para. 17: this provides a helpful list of tools that can be used to identify areas at water risk and areas of high water stress.			
Survey	Dunya Analytics	User (analyst, data provider, rating agency, etc.)	United States	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	In terms of identifying material IROs, there are datasets available and accessible to all companies, even those with small teams and limited resources. The ESRS say that when actual data isn't available, estimates can be used. ENCORE provides industry-level data on nature risks that can help companies prioritize materiality. Rather than say companies don't need to report what they don't have data for, companies should be encouraged to use estimated or industry-level data, and then have a time period in which they need to update with actual data. I agree that it is essential to include a time limit, as we are only 5 years away from 2030 and the 30 by 30 global goal that was set as part of the Kunming-Montreal Global Biodiversity Framework. I agree that if companies don't have information on upstream or downstream, that can be delayed, although ENCORE can be used for value chain as a starting point. If upstream and downstream are not included, a time limit should be put on that as well.			
Survey	Dunya Analytics	User (analyst, data provider, rating agency, etc.)	United States	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Dunya Analytics	User (analyst, data provider, rating agency, etc.)	United States	22.E4.	Comments on deleted datapoints in ESRS E4	I agree	The related datapoints were merged and the focus of the disclosure was maintained. The voluntary datapoints had been confusing.			
Survey	Dunya Analytics	User (analyst, data provider, rating agency, etc.)	United States	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	These datapoints do not appear to add an additional burden, and improve the clarity of reporting requirements.			
Survey	Dunya Analytics	User (analyst, data provider, rating agency, etc.)	United States	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	These datapoints do not add an additional burden, and are added for better alignment with recent EU regulatory developments, or to consolidate other data points.

Survey	Dunya Analytics	User (analyst, data provider, rating agency, etc.)	United States	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	I agree that this is outdated. Leveraging the SBTN framework which describes how to set targets would provide better guidance to companies. In addition, the Nature Positive Initiative's pilot of their State of Nature metrics, once complete, may also have guidance on target setting.			
Survey	Dunya Analytics	User (analyst, data provider, rating agency, etc.)	United States	33.E_4.	ESRS E4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				
Survey	Frontierra	Consultant (including software vendor)	United Kingdom	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We welcome TNFD's proposal1 to consolidate the current nature-related standards (E2-E5) into a single, integrated nature standard and to (i) ensure a structured materiality assessment for nature-related issues; (ii) elevate reference to 'dependencies' on nature; and (iii) streamline and prioritize the number of quantitative nature-related data points. We call on EFRAG to make note of it and apply as possible.			
Survey	Frontierra	Consultant (including software vendor)	United Kingdom	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	E4	We do not support the removal of the ESRS E4 biodiversity and ecosystems metrics metric specifications from the mandatory requirements. This is problematic because standardization is more limited at present than with other metrics. Specifying metrics (now in Non-Mandatory Illustrative Guidance (NMIG) 18-20) within the Standard would give companies the information they need to select and report practical, credible and comparable metrics and would support alignment with the TNFD disclosure metrics. If this does not occur, at the very least, it is important that (i) the NMIG stays attached to the Standard in some form and (i) a process is in place for ensuring updates are made on a timely basis, particularly for guidance on topics where data/tools for reporting are evolving rapidly.			
Survey	Frontierra	Consultant (including software vendor)	United Kingdom	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We welcome the ESRS being simplified in a way that maintains the double materiality approach of the Corporate Sustainability Reporting Directive (CSRD), covering environmental, social and governance topics. This principle of double materiality is vitally important for the reported information to be meaningful for users. It is also essential for the EU to respect its international engagement under the UN CBD Global Biodiversity Framework Target 15.			
Survey	Frontierra	Consultant (including software vendor)	United Kingdom	33.E_4.	ESRS E4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We welcome the simplification effort mainly targeting unclear or duplicative requirements, maintaining essential disclosures on environmental metrics and ask EFRAG to maintain that approach in the simplification process. We also welcome alignment with the draft global consensus metrics on the state of nature, convened by the Nature Positive Initiative. This is important for ensuring metrics are credible, practical and aligned for companies. We support the simplified standards aligning with core elements of TNFD and encourage EFRAG to continue striving to maintain alignment with other international standards and frameworks, including ISSB and GRI. Improving the interoperability between the requirements in ESRS and the ISSB Standards, to enable companies to use the ISSB Standards as a starting point and 'top up' with specific impact disclosures to achieve compliance with the CSRD/ESRS, is important.			
Survey	Frontierra	Consultant (including software vendor)	United Kingdom	35.E4-5.	Do you agree with the amendments of this chapter?	I disagree	The option to report metrics only for locations relevant to existing sustainability targets should be removed or made additional. In order to align with the double materiality concept in ESRS 1 and throughout the standards, metrics should be reported for locations that are material for biodiversity and ecosystems.	E4	Disclosure Requirement E4-5 - Metrics related to biodiversity and ecosystems change	
Survey	Temasek International Pte. Ltd.	Asset manager/Investor	Singapore	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Temasek International Pte. Ltd.	Asset manager/Investor	Singapore	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	IFRS S1 does not specifically prescribe whether or how an entity is required to consider risk mitigation activities when identifying sustainability-related risks that could reasonably be expected to affect an entity's prospects and judgement must be applied. It was noted that this (appropriately) includes the need to apply judgement about how risk mitigation activities that are planned or that are already in place inform the identification of sustainability-related risks. Taking this approach, in some cases the assessment would be net (that is, considering the effects of mitigation) and sometimes gross (that is, before the effects of mitigation). The proposed approach in the ESRS ED prescribes how to consider mitigation, prevention and remediation actions in each situation. This prescriptive approach gives rise to a new risk to interoperability that could affect the scope of sustainability-related matters the respective standards would require information to be provided about.			
Survey	Temasek International Pte. Ltd.	Asset manager/Investor	Singapore	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	Temasek International Pte. Ltd.	Asset manager/Investor	Singapore	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	Temasek International Pte. Ltd.	Asset manager/Investor	Singapore	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	Temasek International Pte. Ltd.	Asset manager/Investor	Singapore	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	Option 1 would enhance interoperability between ESRS and ISSB Standards and reduce the reporting burden for companies preparing information about anticipated financial effects applying ESRS. However, introducing the relief related to the skills, capabilities and resources available to the company and fully aligning the wordings of the other proportionality mechanisms with that in ISSB Standards (which is not the case in the current proposals) would benefit companies and significantly enhance interoperability between the two sets of standards. In addition, introducing a relief related to the commercial sensitivity of information about opportunities would further enhance interoperability and assist companies.			
Survey	Temasek International Pte. Ltd.	Asset manager/Investor	Singapore	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	While the content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced, we can enhance interoperability with the ISSB Standards and reduce the reporting burden for those applying ESRS by making the incremental quantitative information about a company's anticipated financial effects in paragraphs 40, 41 and 42 of the proposed changes to ESRS E1 (proposed Disclosure Requirement E1-11) optional.			
Survey	Temasek International Pte. Ltd.	Asset manager/Investor	Singapore	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	To further enhance interoperability with the ISSB Standards: (i) Allow measurement choices per the GHG Protocol and IFRS S2: The draft ESRS E1 has proposed the use of the financial control as the default organisational boundary in measuring GHG emissions. However, if such information fails to convey a fair presentation, ESRS E1 requires additional disclosure of Scope 1 and 2 GHG emissions based on operational control as defined in the GHG Protocol. This creates misalignment in classification and measurement approaches with current GHG Protocol and IFRS S2 (where companies are permitted to determine their organisation boundaries in accordance with options as prescribed by GHG Protocol – equity method, operational control and financial control). As such, we recommend EFRAG to align the measurement choices in ESRS E1 with GHG Protocol and IFRS S2, to reduce risks of differences between the frameworks / standards. (ii) Remove specific value chain information regarding leased assets: EFRAG has proposed to add a new section on the inclusion of value chain information regarding leased assets which adds a level of specificity that does not exist in the ISSB Standards. This proposal introduces the risk of new application differences between ESRS, ISSB Standards, and the GHG Protocol. (iii) Fully incorporate the IFRS reliefs: To allow omitting of commercially sensitive information about opportunities, Scope 3 GHG emissions when impracticable, and quantitative financial effects when the undertaking does not have the necessary skills or will be required to incur inordinate expenditure to acquire such skills or expertise.

Survey	Temasek International Pte. Ltd.	Asset manager/Investor	Singapore	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Temasek International Pte. Ltd.	Asset manager/Investor	Singapore	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	Temasek International Pte. Ltd.	Asset manager/Investor	Singapore	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		We are a global investor with portfolio spanning across geographies and industries. As a financial investor, we expect material decision useful information from our investees that is comparable. Many of our investees operate in jurisdictions that require the use of standards that are aligned with the ISSB Standards. The most effective way to ensure efficient reporting between the EU and international reporting regimes would be to enable companies to use the ISSB Standards as a starting point and 'top up' with specific impact disclosures to achieve compliance with the CSRD/ESRS. In the absence of equivalence or alternative compliance, a company will need to navigate between two sets of standards to comply with both the CSRD/ESRS and the ISSB Standards. To do so effectively the respective standards need to be interoperable. We believe closer alignment of ESRS with ISSB Standards will reduce duplicative reporting obligations for both EU and non-EU companies, and support the EU aims of high ESG standards while ensuring attractiveness of the EU as an investment destination. Furthermore, competing disclosure regimes will introduce difficulties to a global investor to compare information provided by investees that are subject to different regimes.			
Survey	Temasek International Pte. Ltd.	Asset manager/Investor	Singapore	35.ESRS1_1.	Do you agree with the amendments of this chapter?	I agree	Enabling companies reporting in compliance with ESRS to reference the IFRS Industry-based guidance facilitates efficiency for companies and provides decision-useful information for investors.	ESRS1	1. ESRS Standards, reporting areas and drafting conventions	
Survey	Temasek International Pte. Ltd.	Asset manager/Investor	Singapore	35.ESRS1_8.2.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Paragraph 107 and 108 of draft ESRS 1 describes the technical material issued by the ISSB as additional disclosures that need to be clearly identified and presented in a way that do not obscure material information. This appears to contradict paragraph 11 of draft ESRS 1 that allows company to use reporting standards such as IFRS industry-based guidance to provide entity-specific disclosures. To enhance clarity, paragraph 107 and 108 of draft ESRS 1 can be re-drafted to enable companies to use the ISSB Standards as a starting point and 'top up' with specific disclosures to achieve compliance with CSRD/ESRS. We believe such closer alignment of ESRS with ISSB Standards will reduce duplicative reporting obligations and administrative burden for both EU and non-EU companies.	ESRS1	8.2 Presentation of additional information included in the sustainability statement	
Survey	Temasek International Pte. Ltd.	Asset manager/Investor	Singapore	35.E1-8.	Do you agree with the amendments of this chapter?	I disagree	To further enhance interoperability and reduce the differences between the requirements of the GHG Protocol, ESRS and IFRS S2, EFRAG should allow the measurement choices per the GHG Protocol and IFRS S2.	E1	Disclosure Requirement E1-8 - Gross Scopes 1, 2, 3 emissions	
Survey	Ryanair	Preparer (non-financial preparing a sustainability report)	Ireland	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	ESRS para. 48(a) and AR 17 provide practical approach and AR 18 and AR 19 allows assessment of severity/magnitude and likelihood only for IROs whose materiality is not yet clear. This avoids unnecessary reassessment of elements already determined to be material or immaterial. However, necessary additional clarifications in the DMA updating process, where DMA should be proportionate to changes in circumstances, ensuring companies can leverage in previous assessment if conditions/IROs haven't changed. Also, need of illustrative examples of when AR 18–19 apply.			
Survey	Ryanair	Preparer (non-financial preparing a sustainability report)	Ireland	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	Disregarding existing mitigation measures when assessing the materiality of potential impacts will lead to disproportionate reporting obligations if implemented actions to control severity are in place. This conflicts with the core purpose of using materiality as a reporting filter, which is to focus on issues that truly matter to the company and its stakeholders. Forcing to report extensively on such cases would dilute the relevance of disclosures and significant impacts. Guidance must include examples illustrating when mitigated potential impacts no longer meet the materiality threshold. Misleading guidance on how to consider remediation/mitigation/prevention actions in assessing materiality of negative impacts between ESRS 1 para. 34 and appendix C. As result of the above, in agreement with Appendix C (report potential impacts after prevention or mitigation actions if it remains material, and report the significant ongoing action for as long as it is necessary to manage the residual material impact.).

Survey	Ryanair	Preparer (non-financial preparing a sustainability report)	Ireland	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	In agreement with the changes to improve readability, conciseness and connectivity, specifically allowing disclosures at a higher level of aggregation than individual material IROs, where this reflects how IROs are actually managed.			
Survey	Ryanair	Preparer (non-financial preparing a sustainability report)	Ireland	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	In disagreement with removing narrative disclosures while introducing new quantitative datapoints. Narrative disclosures generally build on existing management information, while quantitative datapoints often require entirely new systems, processes, and controls, creating significant additional costs and complexity.			
Survey	Ryanair	Preparer (non-financial preparing a sustainability report)	Ireland	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree	Further clarity regarding the "undue cost of effort relief" implications in terms of audit? How does this need to be evidenced?			
Survey	Ryanair	Preparer (non-financial preparing a sustainability report)	Ireland	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	In disagreement with the absense of time limit for reliefs, as this could create uneven competitive position. The aim should be to enhance methodologies and improve data availability over time. This can be achieved by setting a time limit on reliefs, thereby encouraging actions towards this direction.			
Survey	Ryanair	Preparer (non-financial preparing a sustainability report)	Ireland	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	Option 2 allows companies to disclose the anticipated financial effects without compromising their financial position, particularly in cases where calculations rely on long-term assumptions that may be unreliable and involve high uncertainty. Moreover, option 2 gives companies confidence that commercially sensitive information will not be disclosed.			
Survey	Ryanair	Preparer (non-financial preparing a sustainability report)	Ireland	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	Need for further guidance on the measurement of anticipated financial effects, particularly through specific examples illustrating the presentation of potential liabilities, such as those related to climate transition risks or stranded assets, in case quantification is required as methodologies are neither well-defined nor robust.			
Survey	Ryanair	Preparer (non-financial preparing a sustainability report)	Ireland	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Ryanair	Preparer (non-financial preparing a sustainability report)	Ireland	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	Agree with the decrease of mandatory DPs that allow companies to reduce reporting burden.

Survey	Ryanair	Preparer (non-financial preparing a sustainability report)	Ireland	22.ES.	Comments on deleted datapoints in ESRS ES	I agree	Agree with the decrease of mandatory DPs that allow companies to reduce reporting burden.			
Survey	Ryanair	Preparer (non-financial preparing a sustainability report)	Ireland	22.S1	Comments on deleted datapoints in ESRS S1	I agree	Agree with the decrease of mandatory DPs that allow companies to reduce reporting burden.			
Survey	Ryanair	Preparer (non-financial preparing a sustainability report)	Ireland	22.S4	Comments on deleted datapoints in ESRS S4	I agree	Agree with the decrease of mandatory DPs that allow companies to reduce reporting burden.			
Survey	Ryanair	Preparer (non-financial preparing a sustainability report)	Ireland	22.G1	Comments on deleted datapoints in ESRS G1	I agree	Agree with the decrease of mandatory DPs that allow companies to reduce reporting burden.			
Survey	Ryanair	Preparer (non-financial preparing a sustainability report)	Ireland	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	Need for further clarification on the consequences of the fair presentation approach. What is the relationship between materiality principle and fair representation approach?			
Survey	Ryanair	Preparer (non-financial preparing a sustainability report)	Ireland	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	This change is not supported.			
Survey	UAM	Academia	Spain	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree				
Survey	UAM	Academia	Spain	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	UAM	Academia	Spain	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	UAM	Academia	Spain	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	UAM	Academia	Spain	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	UAM	Academia	Spain	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				
Survey	UAM	Academia	Spain	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				
Survey	UAM	Academia	Spain	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1				
Survey	UAM	Academia	Spain	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	UAM	Academia	Spain	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	UAM	Academia	Spain	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	UAM	Academia	Spain	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	UAM	Academia	Spain	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	UAM	Academia	Spain	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	UAM	Academia	Spain	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	It seems financial institutions (including the Basel agreement) are key actors in the energetic transition needed to mitigate climate change			
Survey	UAM	Academia	Spain	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I partially agree and partially disagree	I am unsure if country level is the right scope for reporting metrics. It is better than company level but can also be tricky if does not take into account planetary scope			
Survey	UAM	Academia	Spain	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree				
Survey	UAM	Academia	Spain	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				
Survey	UAM	Academia	Spain	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	UAM	Academia	Spain	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree

Survey	UAM	Academia	Spain	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	UAM	Academia	Spain	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	UAM	Academia	Spain	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. Survey	MVV Energie AG	Preparer (non-financial preparing a sustainability report)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We partially agree but see room for improvement in the following areas: Greater clarity on how to evaluate the criteria based on the proposed structure (e.g., severity). More flexibility to apply self-selected criteria, provided these are transparently communicated to readers. An alternative, more unconventional approach could be to make DMA reporting entirely voluntary. It could still serve as a tool for determining the reporting scope but without requiring the results to be reported.

Survey	MVV Energie AG	Preparer (non-financial preparing a sustainability report)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	In its current form, the explanation does not provide sufficient clarity on how remediation actions are factored into the impact assessment, particularly when it comes to their placement on, for example, a 1-5 scale. Another challenge is the consideration of national regulations. For instance, E2 is subject to strict regulation in Germany, with clearly defined thresholds for aspects such as air pollutants. How is this to be incorporated into the impact assessment?			
Survey	MVV Energie AG	Preparer (non-financial preparing a sustainability report)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	In our opinion, it remains unclear whether an entity has the flexibility to report the standards within the ESG framework in an order of their choosing. This also applies to structuring the narrative along the order of the ESRS paragraphs/disclosure requirements. Furthermore, the option to link information to external documents could significantly enhance the conciseness and usability of the report. Lastly, a clarification on the use of graphs and the ability to tag information within graphs—particularly in the context of ESEF tagging—would be highly beneficial.			
Survey	MVV Energie AG	Preparer (non-financial preparing a sustainability report)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	MVV Energie AG	Preparer (non-financial preparing a sustainability report)	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	Fundamentally, the new structure presents us with the challenge of a significant one-time effort to re-tag existing reporting content and review it for its alignment with the new requirements. Therefore, it would be preferable to retain the current structure but convert many 'shall' data points into 'may' data points. If this is not feasible, we would welcome a transition phase during which entities could choose between the old and the new ESRS for a period of 1-2 years.			
Survey	MVV Energie AG	Preparer (non-financial preparing a sustainability report)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	There is a lack of clarification that the permanent use of estimates is allowed and that the extent of uncertainty in the estimation is not decisive for reporting or in the audit. Additionally, the current extensive requirement to individually document the data collection and calculation method for each metric is impractical. We wish it would be possible to shorten this.			
Survey	MVV Energie AG	Preparer (non-financial preparing a sustainability report)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	The new Paragraph 92 does not yet clearly specify whether a 'partial scope of calculation' can also apply to a shifted fiscal year. Due to other national and European regulations such as the IED or EPRTR, we are required to provide reports to local/national authorities on a calendar-year basis. It should be possible to use these calendar-year values even for a shifted fiscal year; otherwise, there would be significant conversion effort as well as confusion caused by contradictory reporting of the same datapoints for our stakeholders.			
Survey	MVV Energie AG	Preparer (non-financial preparing a sustainability report)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree

Survey	MVV Energie AG	Preparer (non-financial preparing a sustainability report)	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	MVV Energie AG	Preparer (non-financial preparing a sustainability report)	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	E5-5: In general, the final destination of waste is usually clear in Germany; however, this is not always the case at every stage of the process. When waste is managed by third-party waste operators, the entity often only receives an invoice indicating the quantity of waste handled, without any transparency regarding the final destination or the disposal method. Should waste falling into this category be included in this data point?			
Survey	MVV Energie AG	Preparer (non-financial preparing a sustainability report)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	MVV Energie AG	Preparer (non-financial preparing a sustainability report)	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	MVV Energie AG	Preparer (non-financial preparing a sustainability report)	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree				
Survey	MVV Energie AG	Preparer (non-financial preparing a sustainability report)	Germany	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		We would welcome a clarification that the report can be reviewed not only by auditors but also by independent third-party reviewers. Furthermore, we would like to emphasize once again the importance of addressing the uncertainty related to calendar-year-based data for entities with a shifted fiscal year. It is essential to ensure alignment between regulations requiring reporting to authorities for monitoring purposes and external reporting for transparency.			
Survey	Ecopreneur.eu - The European Sustainable Business Federation	Business association (other than association of financial institution)	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree				
Survey	Ecopreneur.eu - The European Sustainable Business Federation	Business association (other than association of financial institution)	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	Ecopreneur.eu - The European Sustainable Business Federation	Business association (other than association of financial institution)	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	Ecopreneur.eu - The European Sustainable Business Federation	Business association (other than association of financial institution)	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Ecopreneur.eu - The European Sustainable Business Federation	Business association (other than association of financial institution)	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	Ecopreneur.eu - The European Sustainable Business Federation	Business association (other than association of financial institution)	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	Ecopreneur.eu - The European Sustainable Business Federation	Business association (other than association of financial institution)	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Ecopreneur.eu - The European Sustainable Business Federation	Business association (other than association of financial institution)	Belgium	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	Ecopreneur.eu - The European Sustainable Business Federation	Business association (other than association of financial institution)	Belgium	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We welcome the ESRS being simplified in a way that maintains the double materiality approach of the Corporate Sustainability Reporting Directive (CSRD), covering environmental, social and governance topics. This principle of double materiality is vitally important for the reported information to be meaningful for users. It is also essential for the EU to respect its international engagement under the UN CBD Global Biodiversity Framework Target 15.			
Survey	Ecopreneur.eu - The European Sustainable Business Federation	Business association (other than association of financial institution)	Belgium	33.E_4.	ESRS E4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We welcome the simplification effort mainly targeting unclear or duplicative requirements, maintaining essential disclosures on environmental metrics and ask EFRAG to maintain that approach in the simplification process. We also welcome alignment with the draft global consensus metrics on the state of nature, convened by the Nature Positive Initiative. This is important for ensuring metrics are credible, practical and aligned for companies.			
Survey	Ecopreneur.eu - The European Sustainable Business Federation	Business association (other than association of financial institution)	Belgium	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		We support the simplified standards aligning with core elements of TNFD and encourage EFRAG to continue striving to maintain alignment with other international standards and frameworks, including ISSB and GRI. Improving the interoperability between the requirements in ESRS and the ISSB Standards, to enable companies to use the ISSB Standards as a starting point and 'top up' with specific impact disclosures to achieve compliance with the CSRD/ESRS, is important.			
Survey	Business for Nature	Business association (other than association of financial institution)	United States	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We welcome TNFD's proposal to consolidate the current nature-related standards (E2-E5) into a single, integrated nature standard and to (i) ensure a structured materiality assessment for nature-related issues; (ii) elevate reference to 'dependencies' on nature; and (iii) streamline and prioritize the number of quantitative nature-related data points. We call on EFRAG to make note of it and apply as possible.			
Survey	Business for Nature	Business association (other than association of financial institution)	United States	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	E4	We do not support the removal of the ESRS E4 biodiversity and ecosystems metrics metric specifications from the mandatory requirements. This is problematic because standardization is more limited at present than with other metrics. Specifying metrics (now in Non-Mandatory Illustrative Guidance (NMIG) 18-20) within the Standard would give companies the information they need to select and report practical, credible and comparable metrics and would support alignment with the TNFD disclosure metrics. If this does not occur, at the very least, it is important that (i) the NMIG stays attached to the Standard in some form and (i) a process is in place for ensuring updates are made on a timely basis, particularly for guidance on topics where data/tools for reporting are evolving rapidly.

Survey	Business for Nature	Business association (other than association of financial institution)	United States	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We support the simplified standards aligning with core elements of TNFD and encourage EFRAG to continue striving to maintain alignment with other international standards and frameworks, including ISSB and GRI. Improving the interoperability between the requirements in ESRS and the ISSB Standards, to enable companies to use the ISSB Standards as a starting point and 'top up' with specific impact disclosures to achieve compliance with the CSRD/ESRS, is important.			
Survey	Business for Nature	Business association (other than association of financial institution)	United States	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. I partially agree and partially disagree	We welcome the simplification effort mainly targeting unclear or duplicative requirements, maintaining essential disclosures on environmental metrics and ask EFRAG to maintain that approach in the simplification process. We also welcome alignment with the draft global consensus metrics on the state of nature, convened by the Nature Positive Initiative. This is important for ensuring metrics are credible, practical and aligned for companies.			
Survey	Business for Nature	Business association (other than association of financial institution)	United States	35.E4-5.	Do you agree with the amendments of this chapter?	I disagree	The option to report metrics only for locations relevant to existing sustainability targets should be removed or made additional. In order to align with the double materiality concept in ESRS 1 and throughout the standards, metrics should be reported for locations that are material for biodiversity and ecosystems.	E4	Disclosure Requirement E4-5 - Metrics related to biodiversity and ecosystems change	
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree				
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	The amendments support more relevant reporting, but there remain some areas where reporting requirements remain onerous and lack relevance, in particular ESRS 1.10; 1.11; 5.2; ESRS E1 AR2 For Para 14(a); E1-7 (38 amended); AR17 for para 28 AR 32 amended; ESRS E2 AR 5 for para.16 (b); ESRS E5 !18; ESES S1 -13 40C; ESRS S2 8 (b) and (d). See section 3 of questionnaire for details

Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	Refer to detailed responses in Part 3 of this survey			
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	Agee that NMIG should not be included in the delegated act to avoid triggering additional reporting burden			
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	Given the nature of anticipated financial effects, it is very difficult to provide an accurate quantitative assessment of financial effects, especially as this is often very dependent on the specific scenario analysis used. Making this a requirement raises a high risk of qualitative assessments simply being turned into quantitative assessments, with the resulting information not being useful			
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	The items highlighted represent a very onerous burden to quantitatively estimate with any accuracy and are very dependent on the climate scenario used. Without specific requirement on which scenarios shall be used, reporters will produce data based on significantly varying assumptions, and the value of information will be limited as it will not be possible to compare different reporters on a like-for-like basis

Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	ESRS E3 / E4 Whilst these items are generally applicable to onshore operations, the nature of marine operations means that the impact of direct water withdrawals from the ocean for potable water production and operational use is very limited, as is discharge. A note in the guidance should be made to explain this to data users, and the ESRS should allow operations that abstract and return water directly to the marine environment to explain the exact nature of this operation			
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Disagree with E2-4. The generation of secondary microplastics though equipment wear is extremely difficult to calculate, even qualitatively. Microplastic generation should be defined in terms of equipment manufacturer's plastic content and manufacturer's end of life treatment. Making this a general requirement for all organization's risks significant double counting, and the lack of a defined qualitative assessment standards or methodologies will cast doubt on the ability to compare results across companies. This requirement should be removed			
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	_Complex estimates are common to all sectors. Banks are no exception. Exception only for financial institutions would result in an unlevel playing field for other sectors. Intensity only targets should be permitted for all reporters following the same rationale given for this exemption by the finacial sector			
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	Collective bargaining agreements are country specific. Data should be readily available for enterprises working in multiple countries through core HR systems			
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	Agreement is contingent on the methodology, which must recognize the economic situation in LDCs outside the EEA, and not penalize companies providing adequate wages in the local context if they are not in line with minimum wages in the EU

Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	Whilst alignment with SBTN is welcome, the standards and guidance must reflect that that the sector standards for SBT in the oil and gas industry are paused. Unless this standard is released, the AR must state that this only applies where recognised sector SBTs exist			
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Refer to response in part 3			
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	33.ESRS2.	ESRS 2:33. I agree				
Survey	International Association of Drilling Contractors	Business association (other than association of financial institution)	United States	33.Glossary.	Glossary:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Annika Eliasson Academic E-learning	User (analyst, data provider, rating agency, etc.)	Sweden	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	I welcome TNFD's proposal to consolidate the current nature-related standards (E2- E5) into a single, integrated nature standard and to (i) ensure a structured materiality assessment for nature-related issues; (ii) elevate reference to 'dependencies' on nature; and (iii) streamline and prioritize the number of quantitative nature-related data points. I call on EFRAG to make note of it and apply as possible.			
Survey	Annika Eliasson Academic E-learning	User (analyst, data provider, rating agency, etc.)	Sweden	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	I welcome TNFD's proposal to consolidate the current nature-related standards (E2- E5) into a single, integrated nature standard and to (i) ensure a structured materiality assessment for nature-related issues; (ii) elevate reference to 'dependencies' on nature; and (iii) streamline and prioritize the number of quantitative nature-related data points. I call on EFRAG to make note of it and apply as possible.			
Survey	Annika Eliasson Academic E-learning	User (analyst, data provider, rating agency, etc.)	Sweden	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	E4	I do not support the removal of the ESRS E4 biodiversity and ecosystems metrics metric specifications from the mandatory requirements. This is problematic because standardization is more limited at present than with other metrics. Specifying metrics (now in Non-Mandatory Illustrative Guidance (NMIG) 18-20) within the Standard would give companies the information they need to select and report practical, credible and comparable metrics and would support alignment with the TNFD disclosure metrics. If this does not occur, at the very least, it is important that (i) the NMIG stays attached to the Standard in some form and (i) a process is in place for ensuring updates are made on a timely basis, particularly for guidance on topics where data/tools for reporting are evolving rapidly.			
Survey	Annika Eliasson Academic E-learning	User (analyst, data provider, rating agency, etc.)	Sweden	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	I welcome the ESRS being simplified in a way that maintains the double materiality approach of the Corporate Sustainability Reporting Directive (CSRD), covering environmental, social and governance topics. This principle of double materiality is vitally important for the reported information to be meaningful for users. It is also essential for the EU to respect its international engagement under the UN CBD Global Biodiversity Framework Target 15.			
Survey	Annika Eliasson Academic E-learning	User (analyst, data provider, rating agency, etc.)	Sweden	33.E_4.	ESRS E4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	I welcome the simplification effort mainly targeting unclear or duplicative requirements, maintaining essential disclosures on environmental metrics and ask EFRAG to maintain that approach in the simplification process. I also welcome alignment with the draft global consensus metrics on the state of nature, convened by the Nature Positive Initiative. This is important for ensuring metrics are credible, practical and aligned for companies.			
Survey	Annika Eliasson Academic E-learning	User (analyst, data provider, rating agency, etc.)	Sweden	35.E4-5.	Do you agree with the amendments of this chapter?	I disagree	The option to report metrics only for locations relevant to existing sustainability targets should be removed or made additional. In order to align with the double materiality concept in ESRS 1 and throughout the standards, metrics should be reported for locations that are material for biodiversity and ecosystems.	E4	Disclosure Requirement E4-5 - Metrics related to biodiversity and ecosystems change	
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I would like to skip this question and provide my feedback in Part 3				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	The simplified ESRS allow more conciseness but the AR 24 for para. 28(a) could be amended to avoid repetition of description of the material impacts, risks and opportunities. This mandatory datapoint should be suppressed: "If the undertaking exercises this option, it shall still present a concise description of its material impacts, risks and opportunities alongside its disclosures prepared in accordance with IRO-2."			
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1; S1	Some possibilities mentioned in the NMIG change the mandatory requirement mentioned in the draft ESRS. For example, NMIG 30 for paras.38 (a)(b) Calculation training hours and development data, the possibility to exclude inactive employees in the denominator should still be part of the ESRS. Indeed, this is not a voluntary additional datapoint but a possible change in a calculation that shall be done. If not included in the ESRS themselves, this might create issues with auditors if NMIG is not included in the CSRD.			
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2				
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I would like to skip this question and provide my feedback in Part 3				
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	22.S1	Comments on deleted datapoints in ESRS S1	I partially agree and partially disagree	some "shall" datapoints should still be suppressed			
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	ESRS E4 Transition plan: this should remain a voluntary datapoint G1 business conduct: this shall datapoint recreates an additional burden and this is sensitive information that should not be mandatory. The existing mandatory disclosures were sufficient			
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I disagree	Though we understand the intent, this additional wording might create a lot of discussions with the auditors. The objective of "reducing the unnecessary reported information and the documentation needed to show that omitted datapoints are not material" can be achieved by completing the double materiality chapter in ESRS 1 (as this is already done in the draft).			
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	For all sectors this is an issue to disclose absolute GHG emissions target as it leads to disclose long term forecast business growth, which is often confidential information. Companies should have the possibility to choose between intensity and absolute targets in their reports, from financial or from other sectors as well.			
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I would like to skip this question and provide my feedback in Part 3

Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	As it states, the datapoint will still trigger very different interpretations from one Company to the other. It would be more straightforward to have each year a list of adequat wages per country so that all companies have a common reference. If this is not possible to create a common reference, then the suppression of this datapoint seems more relevant.			
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree	Some more simplification should be brought to other datapoints that are part of the SFDR and this has blocked simplification - S1-15 unadjusted gender pay gap for example. SFDR reglementation should be also simplified / clarified if necessary.			
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	35.S1-5.	Do you agree with the amendments of this chapter?	I disagree	Same threshold should be maintained as previous disclosures: "countries in which the undertaking has 50 or more employees representing at least 10% of its total number of employees". Because the proposed change impose unnecessary administrative burden for many countries. If the fear is to miss some countries with a high number of employees, maybe there could be an additional requirement that all countries with more than 3000 headcounts should be reported for example.	S1	Disclosure Requirement S1-5 - Characteristics of the undertaking's employees	
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	35.S1-6.	Do you agree with the amendments of this chapter?	I disagree	This datapoint should be suppressed as this will create many discussions with definitions and auditors only to provide a number.	S1	Disclosure Requirement S1-6 - Characteristics of non-employees in the undertaking's own workforce	
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	35.S1-7.	Do you agree with the amendments of this chapter?	I disagree	This should be reported for countries with significant employment only as the burden of data gathering is huge for small countries. For a practical point of view, we should not have by country for EEA and by region for outside EEA as this makes things more complex. The reporting should be made for countries with significant employment for all geographies.	S1	Disclosure Requirement S1-7 - Collective bargaining coverage and social dialogue	
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	35.S1-10.	Do you agree with the amendments of this chapter?	I disagree	First, unemployment consideration should be excluded from this Disclosure Requirement as this is linked with public policies of each country and does not rely on the Company. Second, due to the reporting burden of this datapoint, the information should be gathered only for countries with significant employment. Third, the definitions should be clarified. Indeed, for sickness, what is the length that should be considered: starting from one day, is this a sufficient period? Same thing for maternity leave, some more precision should be brought to what could be considered as a protection.	S1	Disclosure Requirement S1-10 - Social protection	
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	35.S1-12.	Do you agree with the amendments of this chapter?	I disagree	For regular performance review, this is now specified that the denominator should be the number of employees reported in S1-5. This is not meaningful as employees hired recently are not eligible to performance review. This was better to let each group explain how they perform their calculation based on their internal standards / procedures.	S1	Disclosure Requirement S1-12 - Training and skills development metrics	
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	35.S1-14.	Do you agree with the amendments of this chapter?	I disagree	This Disclosure Requirement should remain mandatory only for countries with significant employment.	S1	Disclosure Requirement S1-14 - Work-life balance metrics	
Survey	Technip Energies	Preparer (non-financial preparing a sustainability report)	Netherlands	35.S1-15.	Do you agree with the amendments of this chapter?	I disagree	Even if required by SFDR, a worldwide calculated gender pay gap does not make any sense and does not provide useful information. Only a gender pay gap calculated and disclosed per country makes sense. So this should be requested per country for countries with significant employment.	S1	Disclosure Requirement S1-15 - Remuneration metrics	

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Brancheforeningen Cirkulær	Business association (other than association of financial institution)	Denmark	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I disagree				
Survey	Brancheforeningen Cirkulær	Business association (other than association of financial institution)	Denmark	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	The recovery definition proposed in Annex II p. 27 and its application to ESRS E5, paragraph 18 on waste, do not align with existing EU legislation. The Waste Framework Directive (2008/98/EC, Article 3(15) and Annex II), which is the cornerstone of EU waste management legislation, defines recovery as: "any operation the principal result of which is waste serving a useful purpose by replacing other materials which would otherwise have been used to fulfil a particular function, or waste being prepared to fulfil that function, in the plant or in the wider economy. Annex II sets out a non-exhaustive list of recovery operations." As currently drafted, the reporting framework would lead to inaccurate reporting, as it would be unclear where to report incineration with energy recovery (R1): it is explicitly excluded from the ESRS definition of "recovery", but is not a disposal operation and therefore should not be reported under "waste directed to disposal". This would misrepresent actual waste treatment performance, create inconsistencies in EU statistics and compliance reporting, and result in incorrect financial disclosures by companies, since waste treatment pathways directly affect cost allocations, liabilities, and sustainability performance indicators. The stated goal of the Amended ESRS consultation is simplification and greater usability without compromising EU objectives. Introducing a definition that conflicts with existing law instead increases reporting complexity, as companies would face two contradictory classifications. To ensure alignment with existing EU legislation and avoid unnecessary burdens, we propose that: •The definition of "recovery" in Annex II should be amended to replicate or explicitly reference the definition provided in Article 3(15) of the Waste Framework Directive. •ESRS E5 §18 should clearly reflect that incineration with energy recovery (R1) is a recovery operation, consistent with EU law. For example, "iii. other recovery operation, including incineration with energy recovery"			
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree				
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	Still not 100% clear how to assess severity of actual negative impacts in light of prevention/mitigation measures (not remediation, for which is clear that gross approach should be used). Paragraph 34 says: "When assessing the materiality of actual negative impacts, the severity of the impact shall be evaluated considering the outcomes of any mitigation or prevention measures implemented before the impact occurred". So, if the impact is x and prevention/mitigation actions outcome is y, the severity should be assessed as z=x-y if I'm not mistaken. But this wasn't clear enough the first time I read it, it seemed confusing especially when reading appendix C tables. For my understanding this is a net assessment of the severity of actual negative impacts in light of prevention/mitigation measures, but this point is not included in the Appendix C table since the table for actual negative impacts take into consideration only remediation actions and not prevention/mitigation. This should be clarified somehow, possibly by outlining the difference between what a remediation, mitigation, and prevention measure entail or by providing some explanatory examples for each type of actions in the DMA section of the Non-Mandatory Illustrative Guidance or in the Application Requirements of the relevant section.			
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	It is mentioned in the application requirements of SBM-3 that the interaction between material IROs and strategy and business model is also prescribed by IRO-2 par 28(a). In this case SBM-3 seems redundant also given the fact that the description of strategy and business model is prescribed in SBM-1. The few SBM-3 datapoints could then be incorporated into SBM-1 or be incorporated as application requirements of IRO-2.			
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	Data lacking in quality is indeed in contrast with the "fair representation" principle. In particular with verifiability and comparability. Thus there would be no relevant loss of information if omitted.			
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	I agree with option 1: leaving the possibility to report quantitative information on a voluntary basis would undermine the objective of the Green Deal considering that the CSRD proposed new scope would exclude from reporting the vast majority of EU businesses. Disclosing quantitative metrics on anticipated financial effects is crucial in allowing the most efficient capital allocation towards streams that are more sustainable instead on businesses that have a high environmental risk profile due to their lack of ambitions and actions against environmental issues (or that just present qualitative claims that are not substantiated with quantitative data, a case for which option 1 is better since it prescribes specific conditions under which quant. data can be omitted). In essence, giving companies too much room for deciding whether or not providing quantitative data by limiting the mandatory reporting of such information to qualitative assumptions on anticipated financial effects only would result not only in loss of information but also in loss of quality information, since there would be no hard data to back up qualitative claims (no consistent verifiability of data). Qualitative information that is not backed up by quantitative data can be misleading.			
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree	Some data points might be indeed burdensome but if option 1 from the previous question will be followed then it allows the right amount of flexibility in disclosing this type of information which is quite relevant for financial actors.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets: both metrics are needed to have a more comprehensive outlook on financial institutions emissions profile since GHG intensity metric can change depending on whether the numerator or denominator changes. Absolute emission values might serve as a validation of actual ghg reduction.			
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree

Survey	One Click ESG	Consultant (including software vendor)	Netherlands	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	For E1-5 par. 40 to 43 I understand the information can be found elsewhere or derived from other indicators but allowing an easier identification of the metric might be better especially for users of the sustainability statement. Same logic for E1-6 para 53 to 55: info can be derived from other metrics but having gross GHG emissions intensity might be a good validation of the metrics from which it can be derived. I agree with the rest of the reasoning especially for moving certain topical paragraphs to ESRS 2 to avoid repetitions or the deletion of certain paragraphs that indeed would have been redundant (especially for the PAT related paragraphs).			
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	AR 26 b) may be worded as: size and site of newly created habitats that didn't originally exist; AR26 c) may be worded as: number or percentage of projects / sites where the undertaking has contributed to improve an ecosystem's capacity in maintaining its essential functions, diversity, and environmental processes (known as "ecological integrity")			
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree				
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	How payment practices towards SMEs are handled should be included at least in the "G1-1 – policies related to business conduct". Otherwise, this issue would be easily overlooked since "payment practices" are only mentioned at the beginning of the amended G1 as being a sub-topic. Reiteration in this case can be helpful to pinpoint the relevance of the sub-topic. Especially since SMEs constitute the largest share of businesses in the EU.			
Survey	One Click ESG	Consultant (including software vendor)	Netherlands	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree

I agree				
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	It should include a simple methodology for classifying impacts, risks and opportunities and defining a scale so that double materiality assessments carried out by different companies can be compared. There is a need to create a more practical tool.			
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	Significant improvement			
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	E4	It would be interesting if NMIG 2 for. 15 were described in Amendments to ESRS E4.

Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	Quantitative information is often too important to omit and, as it is generally more engaging and visually effective in a report, it should be given priority.			
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	There should be more content and support for the probability of occurrence, as in certain cases it is difficult to identify.			
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	Some voluntary data points should be retained to provide companies with guidance on how to go the extra mile in their reporting.

Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Financial institutions can provide transparency and foresight to investors by disclosing detailed intensity-based targets, explaining the methodologies and assumptions underpinning them, aligning their pathways with recognised climate scenarios, and reporting regularly on sectoral exposures and transition strategies.			
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	The increase in the number of countries reporting for these two disclosures will encourage other countries outside the EU to also start collecting this type of information and looking at sustainability reporting.			
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree				
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	I do not agree with the removal of fatalities from the scope of SFDR PAI Indicator 3. Excluding such a critical measure undermines transparency and weakens the ability to assess the full impact of undertakings on workers' rights and wellbeing.			
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	Could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN.			
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	I do not agree with the deletion of the voluntary datapoint on the adjusted gender pay gap. While the unadjusted ratio provides a broad picture, the adjusted metric by employee category offers more meaningful insights into structural inequalities within organisations and should remain available to enhance transparency and comparability.

Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	The deletion of explicit datapoints on payment practices reduces transparency on how undertakings treat their suppliers, particularly SMEs, and weakens the ability to assess whether companies are supporting fair and sustainable business relationships in line with the CSRD's objectives.			
Survey	Aliados Consulting	Consultant (including software vendor)	Portugal	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree

Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree

Survey	BeeOdiversity	Consultant (including software vendor)	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree				
Survey	BeeOdiversity	Consultant (including software vendor)	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	BeeOdiversity	Consultant (including software vendor)	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	BeeOdiversity	Consultant (including software vendor)	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	BeeOdiversity	Consultant (including software vendor)	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	We welcome TNFD's proposal1 to consolidate the current nature-related standards (E2-E5) into a single, integrated nature standard and to (i) ensure a structured materiality assessment for nature-related issues; (ii) elevate reference to 'dependencies' on nature; and (iii) streamline and prioritize the number of quantitative nature-related data points. We call on EFRAG to make note of it and apply as possible.			
Survey	BeeOdiversity	Consultant (including software vendor)	Belgium	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	E4	We do not support the removal of the ESRS E4 biodiversity and ecosystems metrics metric specifications from the mandatory requirements. This is problematic because standardization is more limited at present than with other metrics. Specifying metrics (now in Non-Mandatory Illustrative Guidance (NMIG) 18-20) within the Standard would give companies the information they need to select and report practical, credible and comparable metrics and would support alignment with the TNFD disclosure metrics. If this does not occur, at the very least, it is important that (i) the NMIG stays attached to the Standard in some form and (i) a process is in place for ensuring updates are made on a timely basis, particularly for guidance on topics where data/tools for reporting are evolving rapidly.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	BeeOdiversity	Consultant (including software vendor)	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				
Survey	BeeOdiversity	Consultant (including software vendor)	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				
Survey	BeeOdiversity	Consultant (including software vendor)	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2				
Survey	BeeOdiversity	Consultant (including software vendor)	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	BeeOdiversity	Consultant (including software vendor)	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	BeeOdiversity	Consultant (including software vendor)	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	BeeOdiversity	Consultant (including software vendor)	Belgium	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	BeeOdiversity	Consultant (including software vendor)	Belgium	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	BeeOdiversity	Consultant (including software vendor)	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	BeeOdiversity	Consultant (including software vendor)	Belgium	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets				
Survey	BeeOdiversity	Consultant (including software vendor)	Belgium	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	BeeOdiversity	Consultant (including software vendor)	Belgium	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We welcome the ESRS being simplified in a way that maintains the double materiality approach of the Corporate Sustainability Reporting Directive (CSRD), covering environmental, social and governance topics. This principle of double materiality is vitally important for the reported information to be meaningful for users. It is also essential for the EU to respect its international engagement under the UN CBD Global Biodiversity Framework Target 15.			
Survey	BeeOdiversity	Consultant (including software vendor)	Belgium	33.E_4.	ESRS E4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We welcome the simplification effort mainly targeting unclear or duplicative requirements, maintaining essential disclosures on environmental metrics and ask EFRAG to maintain that approach in the simplification process. We also welcome alignment with the draft global consensus metrics on the state of nature, convened by the Nature Positive Initiative. This is important for ensuring metrics are credible, practical and aligned for companies.			
Survey	MATERIALITY	Consultant (including software vendor)	Poland	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	The overall simplification of Chapter 3 is welcome. We find the new chapter 3.5. with practical considerations particularly helpful, as it has a potential to relieve large portion of the burden undertakings faced performing their materiality assessments. However we have several comments to changes we don't agree with: (1) The materiality of information principle should not be applicable to ESRS 2, as it may result in omitting fundamental information required in sustainability statements, such as on the DMA process and its results, or the governance over sustainability matters, and details on the undertaking's business model and strategy. The principle of materiality of information is highly judgmental and should be applied with caution. (2) Undertaking should not be allowed to include non-material information in sustainability statements, as this will obscure material information. Companies have many other means to communicate to their stakeholders non-material sustainability related information and there is no need to include these information in official, regulated annual statements. (3) Summarizing the list of topics in current Appendix A to only two-level structure is not very helpful, it was more useful as a three-level structure. Maintaining a three-level structure would not add any burden, as the list illustrative only. We also propose to add for clarity some changes in the list: (a) In "Climate change": add "Loss and damage" (b) In "Circular economy and resource use": add "Product and service design related to circular economy principles" (c) In "Climate change" replace "Energy" with "Energy, including use of fuels and energy efficiency" (4) The wording in par. 46 should be amended to reduce the risk of some companies declaring certain topics immaterial without due assessment. We propose the following wording: "The undertaking (...) and opportunity, however any exclusions must be clearly justified with reasoning and may be documented."			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	MATERIALITY	Consultant (including software vendor)	Poland	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	Adding Annex C may provide much needed clarity for undertakings performing their DMAs. However, several elements of the Annex need to be amended. If the intention is to streamline reporting by allowing mitigated impacts to be excluded, the standard should state that such exclusion is only permitted if the impacts and the related mitigation actions were disclosed in a previous report – and that these impacts may be referenced rather than repeated. Under no circumstances should the standard include statements such as 'in principle, no need to report on impact.' Such wording would create major gaps and undermine the reliability and comparability of the materiality assessment. "If an impact occurred in the reporting period and no remediation action has been taken" The wording "If an impact occurred" suggests that to identify a topic as actual negative, "something" would need to happen. E.g. an accident. In practice, for a manufacturing company it is commonly understood that "employee health and safety" is an actual material topic regardless of whether any accidents occur. In reference to par. 36 If successfully remediated negative impacts e.g. On employee health and safety do not become positive impacts, then does the topic become non-material? The sentence in the table of the Appendix C suggests that the topic becomes immaterial: "If the potential impact was material within the reporting year, but prevention or mitigation action has been taken before the reporting date such that the impact no longer exists (...) in principle no need to report the impact, as it is not material." In practice, a manufacturing company that manages employee health and safety effectively, with no incidents or accidents occurring, might classify this topic as immaterial, despite the substantial resources required to maintain it. In a logical approach, this does not make sense.			
Survey	MATERIALITY	Consultant (including software vendor)	Poland	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	MATERIALITY	Consultant (including software vendor)	Poland	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We agree with most of the changes introduced in relation to interactions between ESRS 2 and topical standards. However the requirement to disclose whether the undertaking plans to implement policies, actions and targets for a material topic, and in which timeframe, should remain as a "shall". Sustainability statements don't only document the past, but are also future-oriented. Allowing laggards in sustainable transition to remain silent on their material topics that have not been managed gives them an unjustified competitive advantage in relation to companies that are more advanced in managing sustainability matters. It should be the other way round. Requiring companies to disclose this information (on plans regarding adoption of PATs) is not burdensome, as all the information is readily available in-house.			
Survey	MATERIALITY	Consultant (including software vendor)	Poland	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	MATERIALITY	Consultant (including software vendor)	Poland	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We don't have comments regarding the contents of particular elements of the NMIG, only comments regarding its status. We propose (at the Commission's discretion) choosing only one of the following two options: (A)Inclusion of the contents of the NMIG into the Delegated Act. In this case each element of the NMIG should be included in the main body of each standard, in a clearly separable way, right after the applicable DR and AR. In this way, the report preparer would read in one place the disclosure requirement, the corresponding application requirement (in case it exists) and the corresponding non-mandatory illustrative guidance (in case it exists) (B)Leaving the contents of the draft NMIG for EFRAG to implement it in a series of Implementation Guidance documents to be issued in the future. Both options result in an understandable structure of the standards and their accompanying documents. Development of NMIG as another layer of documents, besides the mandatory standards and the non-mandatory EFRAG IGs may lead to further confusion among report preparers, users and auditors.			
Survey	MATERIALITY	Consultant (including software vendor)	Poland	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	Simplification of ESRS, restructuring of the standards, elimination of two thirds of datapoints, including all "may" datapoints that created confusion is the main relief report preparers receive with the set of revised ESRS. Unfortunately, the inclusion of many additional "reliefs" will have a detrimental effect on the competitive position of many companies well advanced in sustainability transition, on comparability and reliability of the reports and on the transparency needed to achieve the objectives of the EU Green Deal. Any additional reliefs, if introduced, should be only temporary, i.e. for the first year, two years or three years of application of ESRS in a particular company. Introduction of permanent reliefs contradicts the very nature of mandatory reporting standards. If a provision is too difficult for undertakings to comply with at all times, it should be deleted from the standards. If a provision may be difficult for first time adopters, a temporary relief should be introduced. The relief "undue cost or effort" should be applicable only for the DMA process. The rationale is presented in our answer to the following question. Regarding difficulties related to collecting data from the value chain, the general 3-year relief for presenting information on metrics related to value chain is sufficient.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	MATERIALITY	Consultant (including software vendor)	Poland	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	This relief should not be applicable at all for metrics related to own operations. The current draft ESRS 1 provision allows companies to hide inconvenient information, for example on their gender pay gap or high number of accidents, only due to the reason that it was difficult to collect all information from own operations. That provision will not be used by the majority of companies that fairly present their situation, it will only be abused by a small portion of companies. As a result, the provision profits only companies that are trying to hide some information. Additionally, introduction of the undue cost or effort in relation to metrics related to own operations will have a detrimental effect on comparability of information disclosed in reports by all companies and by companies in particular sectors. Lack of comparability of reports will be detrimental to the goals of the EU Savings and Investments Union.			
Survey	MATERIALITY	Consultant (including software vendor)	Poland	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	We prefer Option 1, as it is more closely aligned with IFRS. We strongly oppose Option 2. If it was to be adopted, European undertakings would be in a disadvantaged position in relation to companies from other jurisdictions that adopt IFRS standards. Financial institutions will anyway need quantitative information on anticipated financial effects from non-financial companies to assess risk related to credits and investments. Even if these information is not mandated by ESRS, companies will have to provide them. At the same time we acknowledge that less experienced companies and first time adopters may face difficulties in quantifying anticipated financial effects. This should be addressed with two solutions: (1) A three-year transition period should be granted for mandatory disclosure of quantitative anticipated financial effects (according to SBM-3 and E1-11); in the transition period undertakings shall report qualitative anticipated financial effects. (2) EFRAG should develop, on it's own or as a response to a mandate from the European Commission, a uniform methodology to quantify anticipated financial effects. Development of this methodology should be prepared and field-tested in no more of 1.5-2 years, leaving companies another 1-1.5 years to apply it before the end of the transition period. The methodology should be accompanied by appropriate tools facilitating it's application.			
Survey	MATERIALITY	Consultant (including software vendor)	Poland	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I would like to skip this question and provide my feedback in Part 3				
Survey	MATERIALITY	Consultant (including software vendor)	Poland	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	MATERIALITY	Consultant (including software vendor)	Poland	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	MATERIALITY	Consultant (including software vendor)	Poland	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	MATERIALITY	Consultant (including software vendor)	Poland	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	MATERIALITY	Consultant (including software vendor)	Poland	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	MATERIALITY	Consultant (including software vendor)	Poland	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We see no rationale reason why financial institutions should be exempted from disclosing climate absolute GHG emission reduction targets. It is a purely sectoral issue and it should not be addressed in sector-agnostic standards. We are of the opinion that sector standards should be maintained in the ESRS infrastructure, as they would be helpful for undertakings preparing their sustainability statements. In case sector standards are not developed, sector guidance should be developed and it should address any difficulties financial institutions may face disclosing their absolute GHG emission reduction targets.			
Survey	MATERIALITY	Consultant (including software vendor)	Poland	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	MATERIALITY	Consultant (including software vendor)	Poland	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	The reference to the ILO Minimum Wage Fixing Convention No.131. is a great starting point and a leap forward in comparison to the original ESRS, however the market expectation is to be provided with the precise methodology. The convention incorporates the basic elements that should be included in the calculation. The regulator should further reference the methodology built upon the convention such as the Anker Methodology of the Global Living Wage Coalition. This would improve the comparability of the data published.			
Survey	MATERIALITY	Consultant (including software vendor)	Poland	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	The proposed changes may further align numerous disclosures on the due diligence process which would significantly declutter the reports. Furthermore closer alignment with SDR PAI and the OECD MNE Guidelines would improve structure of the disclosures which in turn would improve comparability of the published data.			
Survey	MATERIALITY	Consultant (including software vendor)	Poland	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	We disagree with deletion of the guidance related to setting targets on biodiversity and ecosystems. The guidance should be brought back to the AR and aligned with SBTN.			
Survey	MATERIALITY	Consultant (including software vendor)	Poland	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	Unadjusted gender pay gap is a metric that very rarely presents the actual situation in an undertaking in a fair way. The employment structure and the sector of the company often drive high level of unadjusted gender pay gap. We propose that the company is required to disclose, on a mandatory basis, unadjusted or adjusted gender pay gap; in case the company chooses adjusted gender pay gap, it should be required to disclose the methodology applied. This construction of the disclosure requirement would add no additional datapoints while allowing companies to explain the actual structure and reasons for differences in remuneration for men and women.			
Survey	MATERIALITY	Consultant (including software vendor)	Poland	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	MATERIALITY	Consultant (including software vendor)	Poland	33.Glossary.	Glossary:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	There are several inconsistencies in the Glossary regarding definitions of Circular Economy terms. Definition of "resource inflows" mentions "virgin and secondary raw materials", whereas "virgin materials" are not defined. Definition of "Key materials" states that they "can be sourced 'as is'", whereas it should be consistent with definition of "resource inflows". Therefore phrase "sourced 'as is'" should be replaced with phrase "raw materials". Definition of "Raw materials" should include "virgin and secondary raw materials", as this term is mentioned in "resource inflows" definition. It should be also explained whether "virgin materials" is the same as "primary materials". Definition of "Secondary resources" does not mention "recycling" neither explain directly, that "recycling materials" belong to that group of materials, whereas ESRS E5-5 par.17 d) requires to disclose the rate of "recycled materials used". Definition of "biological materials" does not explain whether materials of that kind are limited to virgin/primary resources/materials only, or does this group include processed materials (e.g. plywood or chipboard) Although "technical materials" are mentioned in ESRS E5-4 AR 2 for par. 15 a), they are not defined. Glossary defines "Circular material use rate" whereas this term does not exist in ESRS E5. Glossary defines "dismantling" whereas this term does not exist in ESRS E5.

Survey	MATERIALITY	Consultant (including software vendor)	Poland	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		We support the overall simplification of ESRS, especially with regards to language, structure of the standards and reduction of the number of datapoints. Further facilitation of the use of standards is possible. We propose EFRAG develops an XBRL tagging tool for revised ESRS, similar to the one that was developed for the VSME. This tool would provide a significant cost reduction for report preparers. We also advise EFRAG to be very cautious in relation to any additional reliefs added to the standards. As a general rule, all reliefs should be temporary only. Permanent reliefs are systemically incorrect, as they undermine coherence of the standards. We would also kindly ask EFRAG to communicate to the Commission that the European system of sustainability reporting is missing one final element: an EU-wide, uniform sustainability reporting assurance standard. It is urgently needed, and it should be developed and issued at the same time as the revised ESRS in the Delegated Act. Lack of an assurance standard issued by the Commission contributes to increase in costs for companies and non-consistent assurance practice across Member States.			
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	E3	there needs to be more recognition of ESRS E1 and interaction with ESRS E3

Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	I do not think that this should apply to ESRS E4			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I partially agree and partially disagree				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree

Survey	GWF Ltd	Consultant (including software vendor)	Switzerland	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree				
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	We welcome the new structure without redundancies and the alignment with ISSB, which enhances comparability. In our view, these amendments, together with the other changes in the amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting and to promote better connectivity with corporate reporting as a whole."

Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree				
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1				
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree

Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	22.S1	Comments on deleted datapoints in ESRS S1	I agree	We do not agree with the significant reduction of S1 and S2 data points, as we believe insufficient importance is given to social matters.			
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	22.S2	Comments on deleted datapoints in ESRS S2	I agree	We do not agree with the significant reduction of S1 and S2 data points, as we believe insufficient importance is given to social matters.			
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We do not support an exception for financial institutions regarding the disclosure of absolute GHG emissions targets. While we acknowledge that estimating absolute emissions for banks, insurers, and asset managers involves complexity, such challenges are common across all sectors. Both intensity and absolute targets are necessary to provide a complete understanding of an undertaking's climate impact. Intensity targets capture efficiency but may mask rising total emissions, whereas absolute targets show the overall impact. Granting an exception only for financial institutions would also create an unlevel playing field compared to other sectors.			
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree

Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				
Survey	Fokus Zukunft GmbH & Co KG	Consultant (including software vendor)	Germany	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	We welcome the proposal that climate-related risks, scenario analysis, and climate resilience are addressed through two separate disclosure requirements, as this approach enhances clarity and ensures more comprehensive reporting on climate change transition and adaptation.

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	- Overall, we welcome and support the simplifications contained in the drafts, in particular the fact that materiality is used as a filter, the "undue cost or effort" approach, that the ESRS 1 App. A is a "non-binding guidance" and the clarification that sustainability reporting is based on the consolidated financial statements (financial control approach) - ESRS 1 para. 16 et seq. (fair presentation): It should be clarified here that the sustainability report is part of the management report and that the same principles apply as in the management report - ESRS 1 para. 21 b): The reporting should be geared exclusively to the decision-making usefulness of the "primary users". However, the current proposal in no. 21 b) will foreseeably lead to an expansion of the information provided, as this user group must also be pleased. Point 21 b) is therefore to be deleted (see also Bullet above). - ESRS 1 para. 59: last half-sentence is to be deleted in order to preserve equality of financial and non-financial statements, consequently only the first sub-sentence in para. 4a in ESRS 2 must be retained - ESRS 1 para. 118: requirements for the possibility of referencing are to be examined, as they are currently impracticable - ESRS 2 para. 7: para. is to be deleted			
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	- We welcome the concept of "big vs. net" in principle, this in the form of guidelines. However, industry-specific regulations must always take precedence (e.g. CRR and EBA-GL for banks or national regulations for smaller banks).			
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	- Executive summary is superfluous, unauditable, only causes more costs and is a foreign body in the annual financial statements and management report			
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	- In principle, the revision is to be welcomed. However, GOV, SBM and IRO should be simplified even further. - In addition, companies that have already reported under ESRS should be able to transition from the "old" disclosure requirements to the new ones.			
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	- see also Commentary on the "Value Chain" - ESRS 1 AR 6 at no. 30 b): this requirement is to be deleted, otherwise materiality will always be triggered			
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We support EFRAG's view that NMIG will not become part of the delegated act. However, the ESRS should once again explicitly clarify that the document is only an exemplary procedure and that preparers can also choose other approaches. It is not a requirement that a company or an auditor has to take into account or fear consequences if it is not observed.

Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We understand EFRAG's entry into account that the requirements of the SFDR must be taken into account in the ESRS. However, the SFDR is also in urgent need of revision in this context. Relying on requirements there cannot be the solution. The EU Commission should therefore be informed that the SFDR should also be critically examined and revised within the framework of Omnibus.			
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	The principle is to be welcomed. However, this must not lead to companies having to purchase data (see ESRS 1 para. 62), but this principle must be observed. There must be no obligation to buy data!			
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	The expected financial effects are likely to be difficult to quantify for many companies at this point in time. Therefore, companies should be given the freedom to start with a qualitative assessment. ESRS 1 AR 15 b) is to be adapted accordingly.			
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	In principle, it makes sense to provide information on the expected financial effects, but one should not make detailed requirements here, but could, for example, provide examples of topics to be reported via NMIG. The required information should therefore be made available in a stakeholder-oriented manner (e.g. according to the needs of the value chain partners, esp. banks and insurance companies, in the case of capital market-oriented companies in addition to the capital market).			
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	National commercial law must be treated on an equal footing with IFRS!			
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	We very much welcome the deletion of voluntary information and the reduction of the "shall disclose" datapoints. However, the conversion of previously voluntary data points into now mandatory data points must be rejected. It should not go beyond the "shall" information enshrined in the current ESRS. These should be the upper limit.

Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	see comment under no. 22)			
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	- ESRS 1 Appendix A should definitely be simplified. The resolution of the 3rd level (sub-subtopics) is to be welcomed. However, it does not help if the former sub-subtopics (in brackets) are then moved to the 2nd level (e.g. S1). There is still a need for further deletion here. - on "fair presentation" see comment under no. 11)			
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets				
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree	See comment under no. 17.) In addition, not all companies subject to reporting obligations are covered by the SFDR.

Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	A binding obligation must be rejected. Developments should be monitored further before a commitment is required.			
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	Point 33 a) in G 1-6 should be reinserted, as this is also explicitly required in the CSRD. This point is intended in particular to protect SMEs.			
Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree

Survey	DGRV – Deutscher Genossenschafts- und Raiffeisenverband e. V.	Business association (other than association of financial institution)	Germany	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		- explicit negative statements, e.g. if no strategies or measures have been taken, could be deleted, as this is already clear from the context - clarification that "entity specific topics" can only affect outstanding IROs - ESRS 1 para. 64: the value chain should be limited to Tier 1 for banks.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	The abovementioned 8 points have not really simplified things, save point 7 which removes a few sub-topics. The rest just seems clarifications on topics which weren't too vague in the first place. All in all, these amendments don't really make a difference.			
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	Yes, this makes it more clear. There have been many arguments how to deal with mitigating actions and these additions clear this up.			
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	Might give some clarity/new possibilities but not a whole lot.			
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	There are probably simplifications made but it still seems fairly complex when trying to read it.			
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	Seems to be an improvement given the changes listed. However, the division in DR and AR created a need to consider instructions from different sections in the standard for the same disclosure. Splitting AR in a "may" and a "shall" part below the DR run the risk of creating three sections to consider for the same disclosure. The most pragmatic and practical structure for preparers, would be to merge DR and AR completely so everything relevant for one disclosure was available in the same place with clear information on whether it is "shall", "should" or may".			
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	It is nice that this information is supplied separately. Makes the EFRAG itself clearer.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree	The problematic special reporting around joint operations/ventures for E1 is made voluntary and moved to NMIG. This is a decision we welcome.			
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	This gives us some flexibility in reporting when data is limited. With that relief we could still report using only the data we have, even if we don't have reliable data for some parts of the business or suppliers/customers. But we would need to explain what steps we take to get better data for the future.			
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	Regarding climate risks, it is challenging to provide quantitative figures on anticipated financial effects due to significant uncertainties, complexities, and data limitations. These risks may materialize in the future, and the analysis is based on various scenarios, each carrying substantial uncertainty. Moreover, methodologies for calculating anticipated financial effects vary between companies, depending on the approaches and assumptions applied. This variability makes disclosures difficult to compare and may result in misleading conclusions, limiting their usefulness to stakeholders. Option 2 offers a more balanced approach. It reduces the administrative burden while enhancing reporting quality. Companies would still have the flexibility to provide quantitative information where it is feasible and relevant, while also minimizing the risk of investors or stakeholders relying on non-robust data for decision-making			
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	Actions in the future for physical climate risks are hard to quantify and scope will depend on scenarios and developments. Given the longer timeframe compared to other IROs this becomes particularity problematic.			
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	Vattenfall is positive to alignment between key frameworks on definitions, requirements methodologies and language. The alignment of GHG boundaries, especially with the management of joint ventures under operational control, with GHG-protocol is positive and will improve comparability across markets			
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	We support the proposed reduction in mandatory and voluntary datapoints, as it meaningfully eases the reporting burden without compromising the quality of sustainability information. By removing less relevant and mainly narrative disclosures, the amendments ensure that only essential datapoints remain, striking a practical balance between efficiency and the objectives of the EU Green Deal.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	23.	Six datapoints exceptionally moved from “may” to “shall” In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, “may disclose” datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from “may” to “shall” subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Regarding amendement 10c "whether the procurement team is involved in training related to its engagement with suppliers for the improvement of their sustainability performance" is a bit unclear on which trainings should be reported, it is awide definition. Regarding questions 23 and para 14, the threshold for reporting is to unclear (when is case of bribery "confirmed"? etc)?, what is considered "anti-corruption" here, etc. I think reporting on convictions is enough and much clearer.			
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new “shall” datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	25.	Emphasis on ESRS being a “fair presentation” reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	To ensure transparency, accountability, and stakeholder trust, we encourage the inclusion of a fair representation clause in reporting practices, as it promotes balanced disclosure of both positive achievements and areas for improvement, ensures that material topics are addressed proportionally to their impact, and supports consistency, comparability, and credibility in data reporting—ultimately strengthening the integrity and usefulness of the information shared.			
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	26.	Exception for Financial Institutions’ Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 (“when only setting intensity targets”), to disclose also the associated absolute values” (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking’s progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	No clear opinion as we are not a financial institution.			
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking’s employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I partially agree and partially disagree	For reporting on pure volume of FTE & headcount it is more transparent to share all data. As long as the metrics used are aligned with the other metrics used for reporting this could be an improvement.			
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree				
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary (“may”) datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	It is unclear how this will align with requirements in the EU Pay transparency directive. Maybe that is why a simpler overall unadjusted pay gap is proposed. This will primarily indicate structural inequalities (e.g., underrepresentation of women in higher-paying roles), while a reporting per employee category and/or the adjusted pay gap would be more indicating any actual pay differences. But as the EU Pay transparency directive addresses more the latter, this could be a reasonable proposal.			
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of “compatibility with 1.5 degrees” for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	Only filled in what is applicable to us. Regarding G1: The threshold for reporting is to unclear (when is case of bribery "confirmed"? etc)?, what is considered "anti-corruption" here, etc. I think reporting on convictions is enough and much clearer.			
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	33.E_4.	ESRS E4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	35.E1-7.	Do you agree with the amendments of this chapter?	I disagree	Disclosure Requirement E1-7 - Energy consumption and mix : There should be an alignment between proposed paragraph 28 and 30, energy consumption and energy production. Important is to distinguish between fossil energy sources and fossil free energy sources. Therefore the bundling of nuclear and fossil into the category non-renewable linked to production should be broken up into "Nuclear" and "Fossil" e.g. following datapoints for consumption. We suggest that the disclosure requirement on energy production be disaggregated in the same manner as energy consumption—into renewable, fossil, and nuclear categories—to ensure consistency, enhance comparability, and provide a clearer picture of an organization's energy profile. This alignment would support more transparent reporting and better reflect the diversity of energy sources contributing to overall production.	E1	Disclosure Requirement E1-7 - Energy consumption and mix	
Survey	Vattenfall	Preparer (non-financial preparing a sustainability report)	Sweden	35.E1-8.	Do you agree with the amendments of this chapter?	I disagree	Disclosure Requirement E1-8 - Gross Scopes 1, 2, 3 emissions: On the new paragraph 33 (amended from AR 43 c, 45 e and 46 j : Due to the inherent complexity and limited availability of reliable data across the value chain, the disclosure of biogenic emissions under Scope 2 and Scope 3 should be voluntary. Mandating such reporting could lead to inconsistencies and undermine the comparability and credibility of climate disclosures.	E1	Disclosure Requirement E1-8 - Gross Scopes 1, 2, 3 emissions	
Survey	AKI	Asset manager/Investor	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	The chapter is better organised and understanable now. For further improvement it is recommended to differentiate clearer between IRO and topics in chapter 3.			
Survey	AKI	Asset manager/Investor	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	We support the idea that incident which have occured during the reportin period should be reported as well as remediation efforts.

Survey	AKI	Asset manager/Investor	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	AKI	Asset manager/Investor	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	I agree, however we would wellcome site specific information on biodiversity as well as mentioning metrics in ESRS 2 for social topoics. Companies alrady report usefull social metrics and these should be included here.			
Survey	AKI	Asset manager/Investor	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	Requireing examples in disclosures would be helpfull and illustrative			
Survey	AKI	Asset manager/Investor	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The combination of allowing to omit reporting because of "undue cost and effort and lack of data quality" is problematic and might lead to the a lack of crucial data for investors. We are also highly concerned about the reduction of data points for non employees. This is the most vulnerable group of workers and at the same time related to social risks which the investor needs to know. In particular we need to know about H&S risks of this group and about their contracts and wages. This group is also at risk of forced labour. So ommitting reporting on them might be in conflict with the foced labour disclosure requirement f. ex in the UK.			
Survey	AKI	Asset manager/Investor	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	These combined reliefs are going to far and endanger a level playing field for companies.			
Survey	AKI	Asset manager/Investor	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	It is important to estimate financial effects. This data is needed to integrate sustainability into the business strategy.			
Survey	AKI	Asset manager/Investor	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree

Survey	AKI	Asset manager/Investor	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	It must made sure that the coherence with IFRS is given. Reporting below IFRS should nt happen			
Survey	AKI	Asset manager/Investor	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	AKI	Asset manager/Investor	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	AKI	Asset manager/Investor	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	AKI	Asset manager/Investor	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	The change seems reasonable			
Survey	AKI	Asset manager/Investor	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	The new rule treats workeres in the EU differnt from workers outside of the EU as a wage below the living wage would become acceptabel for them. The ILO requirements for wage setting are not an adequate safeguards to prevent this.			
Survey	AKI	Asset manager/Investor	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	I very much wellcome this change. It makes it much easier for investors to understand PAI 10 and 11. I very much hope that present inconsistencies in the reporting on these PAI are solved by this change.			
Survey	AKI	Asset manager/Investor	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	It reamins to be seen how data on biodiversity evolves. This ist a good staring point.			
Survey	AKI	Asset manager/Investor	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree

Survey	AKI	Asset manager/Investor	Germany	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	Danish 92 Group	NGO	Denmark	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Positively, the Exposure Draft maintains key elements of the ESRS that are critical to ensure alignment with the international standards on responsible business conduct. Importantly, the draft maintains: 1. The double materiality approach and a definition of impact materiality and scope of reporting that covers impacts across own operations and the full value chain - as far as consumers are concerned. This is in alignment with international standards on responsible business conduct (UN and OECD). 2. Emphasis and synergy with the concept of sustainability due diligence by highlighting how such efforts should inform companies' double materiality assessments whilst drawing on its main features in cross-cutting and topical disclosure requirements around companies' sustainability policies, actions, metrics and targets. 3. Emphasis on engaging with stakeholders, including affected rightsholders and their representatives, to inform the double materiality assessment and in companies' sustainability impact management and related disclosures. 4. The sustainability structure of the affected stakeholder groups: workers, workers in the value chain, affected communities, indigenous peoples, and consumers/end-users underpinned by sustainability sub-topics that substantially capture topics commonly at risk for these groups. It is of utmost importance that these positive elements of the Draft exposure are maintained! Negatively, however, we are concerned that the simplification will jeopardize the robustness and original purpose of the DMA. The lack of detail, concrete information and comparable and usefull data that can be obtained is a problem for both NGOs and investors.			
Survey	Danish 92 Group	NGO	Denmark	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	It is usefull that chapter 3 addresses the question of how prevention, mitigation and remedy of impacts shall be considered in materiality assesment, but if the DMA lacks specificity, the result will also be insufficient.			
Survey	Danish 92 Group	NGO	Denmark	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	While acknowledging the need for flexibility, we are concerned that reporting will lack clarity, sufficient detail and deliver comparable data.			
Survey	Danish 92 Group	NGO	Denmark	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	While understanding the need for simplification, we are concerned that the (so far) 68% reduction of data points is problematic for the purpose of generating relevant and comparable information. It is of the utmost importance that the number of data points is not reduced further. Any further reduction of the standards or dilution of its key concepts would be highly problematic. In achieving this big a reduction many of the previous explanations, examples and guidance elements have been lost. We therefore highlight the importance of ensuring that guidance around implementation is given utmost priority in the next phases to avoid under-implementation and support companies in implementing the standard in its new form. In the follwing two specific points of critical concern, we agree with the response from Frank Bold, in: 1. The original Disclosure Requirement in environmental standards concerning screening of sites in materiality assessment were replaced by an application requirement to ESRS 2 IRO-1. This in effect makes transparency on this aspect optional. Consideration of local context is a key element of an appropriate materiality assessment. This should be both recognised in Chapter 3 of ESRS 1, and in ESRS 2 IRO-1, which should include an explicit datapoint on how the undertaking screened its locations and value chains. We welcome that E standards provide a clearer reference on the importance of disaggregation of disclosures, but this can only be done well if locations are properly screened. 2. We strongly recommend adding an explicit reference to the disclosure of relevant, entity-specific metrics directly in S standards. The fact that S2, S3 and S4 do not include any metrics and the anticipated sectoral standards which would have provided such metrics will not be adopted, shift the expectations for disclosure of metrics for S topics to entity-specific disclosures.			
Survey	Danish 92 Group	NGO	Denmark	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	In agreement with Frank Bold, we support the proposed changes. We agree with the removal of the confusing 'may disclose' elements. However, where they provide useful examples of disclosures, they could be included directly in the standards as "examples". This is particularly the case for the topics for which the reporting practice is evolving, such as Biodiversity and Ecosystems.

Survey	Danish 92 Group	NGO	Denmark	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The ESRS are not clear concerning the combined effects of the reliefs and how the reliefs should interact. Interpreting and applying these reliefs independently of each other makes it possible to abuse and omit important information, resulting in significant differences in reporting practice.			
Survey	Danish 92 Group	NGO	Denmark	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	We do not agree that the combined reliefs give an acceptable balance. They should clearly require the undertaking to improve the coverage and quality of the data needed to meet ESRS requirements.			
Survey	Danish 92 Group	NGO	Denmark	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	In general, we find it to be essential to focus on the integration of all elements of sustainability into companies' business strategy, considerations and risk management. Resigning on this ambition is counterproductive to the objective of putting sustainability reporting on the same level as financial reporting.			
Survey	Danish 92 Group	NGO	Denmark	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	While acknowledging the need for simplification, we remain concerned about the right balance between reporting effort and users' needs.			
Survey	Danish 92 Group	NGO	Denmark	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	Reliefs must be IFRS compliant. Any further rekiels will undermine the objective of setting a global baseline for ESG reporting..			
Survey	Danish 92 Group	NGO	Denmark	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Danish 92 Group	NGO	Denmark	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We generally agree with these changes.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Danish 92 Group	NGO	Denmark	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We generally agree with these changes.			
Survey	Danish 92 Group	NGO	Denmark	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	The global carbon budget is defined in absolute terms. For this reason, it remains essential and the financial institutions should definately not be exempted.			
Survey	Danish 92 Group	NGO	Denmark	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	In alignment with Shift and the DIHR, we find that it is critically important to maintain S1-9 on Adequate Wages. Workers have a human right to a living wage, meaning sufficient remuneration to support themselves and their families in a life of basic dignity. The methodology requires companies to compare actual wages to an "adequate wage" standard for their employees in the EU while directing them to compare with legal minimum wages for their employees outside the EU if those minimum wages are agreed in line with the ILO's wage-setting principles. 1. It undermines the objective: the methodology for reporting on whether all employees earn an adequate wage should not include an option that is tied to the generally much lower standard of the legal minimum wage 2. It is discriminatory. The legal minimum wage nearly everywhere remains substantially below a living wage threshold. The disclosure would have companies apply a lower standard to their employees outside of the EU than they apply to those inside the EU. 3. It undermines comparability of reports: Companies have very different proportions of their workforce inside and outside the EU. If they apply these different standards for reporting on adequate wages depending on the location of employees, the data is not comparable. This undermines the disclosure's utility for investors and other stakeholders that use sustainability reports.			
Survey	Danish 92 Group	NGO	Denmark	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	In line with Frank Bold, we agree that measurable targets related to biodiversity and ecosystems shall be set and disclosed according to the guidance and examples given by relevant global frameworks, such as SBTN (Step 3 - Measure, Set & Disclose Targets), TNFD (component P1 and P2 & Annex 5, sector guidance and guidance on Target Setting) & resources by World Economic Forum Nature-Positive Transitions.			
Survey	Danish 92 Group	NGO	Denmark	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	Gender pay gap should be seen as a general concern for all companies across sectors and should be addressed as such.			
Survey	Danish 92 Group	NGO	Denmark	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		In alignment with WWF, we emphasize that the 1.5°C alignment shall remain the central and non-negotiable reference for corporate climate targets. Allowing companies to refer alternatively to the EU Climate Law risks undermining scientific robustness and integrity, as it could open the door to selective interpretations and policy developments.			
Survey	NBIM	Asset manager/Investor	Norway	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We note that EFRAG has made progress in this area. The amended ESRS now apply a materiality filter to all reported information, aligning with ISSB's approach. The fair presentation framework advances this alignment further, particularly for the financial materiality component of ESRS double materiality assessment. We welcome these changes as they shift focus from strict compliance to disclosure of more decision-useful information for investors. We particularly value EFRAG's permanent reference to IFRS Industry Based Guidance (including IFRS S2 and SASB Standards) for entity-specific disclosures. To enhance interoperability further, we recommend explicitly incorporating SASB standards into the ESRS Double Materiality Assessment process. SASB standards are specifically designed to identify financially material sustainability topics by industry, which would provide structured guidance for companies as they determine which sustainability issues affect their financial performance.			
Survey	NBIM	Asset manager/Investor	Norway	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	NBIM	Asset manager/Investor	Norway	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	In our previous feedback, we identified how the original ESRS structure created reporting inefficiencies. EFRAG has now streamlined this approach by allowing companies to report core information once rather than repeating similar details across multiple sections. We welcome this change, as it improves clarity, reduces repetition, and results in more effective application of the standards by companies.			
Survey	NBIM	Asset manager/Investor	Norway	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We note that EFRAG has made progress in this area. We support the reorganization that clearly separates mandatory from non-mandatory requirements, and eliminates "may disclose" provisions, as it makes the application of the standards more effective. However, we do believe terminology, metrics and reliefs of ESRS can be further aligned with ISSB which will make it easier for companies to comply with multiple reporting frameworks. For example, further terminology alignment opportunities include scenario analysis disclosures in ESRS E1 (Climate Change) and resilience assessment disclosures in ESRS 2 Strategy, Business Model and Management (SBM-3). Additionally, with the removal of specific biodiversity metrics from the mandatory text of ESRS E4 (Biodiversity and Ecosystems), we recommend incorporating an explicit reference to the TNFD core global disclosure metrics in the mandatory text itself. While the Non-Mandatory Implementation Guidance mentions TNFD as a framework companies "might consider", reference in the mandatory text would establish a clear measurement standard, ensure comparable reporting, and align with emerging global standards.			
Survey	NBIM	Asset manager/Investor	Norway	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	EFRAG has proposed several new relief provisions that diverge from ISSB standards. These create interoperability challenges. When combined with the enhanced materiality filter introduced in the amended ESRS, these reliefs also increase the risk of material information gaps in sustainability reporting. For example, the extension of "undue cost or effort" relief to all metrics, even those for a company's own operations, is concerning. Companies can use this relief to omit important sustainability metrics. Similarly, the "relief for acquisitions and disposals" creates differences in reporting boundaries compared to financial statements, undermining the connectivity between sustainability and financial reporting. What requires careful consideration is the lack of clarity on how these reliefs can be used or how they might interact with each other. This can potentially create a patchwork of inconsistent disclosures across companies and sectors. They further increase the complexity of the application of standards. We recommend aligning relief provisions with ISSB standards to ensure consistent application regardless of reporting framework. Furthermore, EFRAG should review which relief provisions should be transitional and which should be permanent, based on the final scope of Corporate Sustainability Reporting Directive (CSRD) and as sustainability reporting practices mature.			
Survey	NBIM	Asset manager/Investor	Norway	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	As investors, we require financial effects disclosures to evaluate how sustainability factors impact financial position and performance. Quantitative data enables precise assessment of financial implications and facilitates meaningful comparison across companies. While qualitative explanations provide valuable context, they simply cannot replace the numerical information that forms the foundation of valuation methodologies and investment decisions. However, we recommend adopting this option with all ISSB relief mechanisms to achieve full interoperability. This would include incorporating ISSB's skills and capabilities limitation provision, which would help companies during the implementation phase. Furthermore, mandating Option 1 aligns with the global direction of sustainability reporting, as ISSB standards are now being implemented worldwide. Making quantitative disclosure optional would not only create gaps in the reporting landscape but would also hamper our ability to conduct consistent cross-border portfolio analysis. We acknowledge the methodological challenges companies face when calculating these financial effects. However, reporting capabilities and methodologies will mature as ISSB and ESRS standards become more widely adopted. Rather than reducing requirements, we recommend that EFRAG references ISSB's educational guidance to support companies through this transition. For these reasons, we have reservations about Option 2, which would make quantitative disclosure permanently voluntary. If adopted, it would substantially diminish the transparency, comparability, and overall usefulness of sustainability reporting for investment decision-making.

Survey	NBIM	Asset manager/Investor	Norway	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We welcome interoperability improvements with ISSB standards, but remain concerned about several amendments that reduce alignment between frameworks. These changes compromise comparability and diminish the quality of information available to investors. The proposal to make quantitative disclosure of anticipated financial effects optional diverges from ISSB's approach (as detailed in our response to question 19). Further, limiting financial effects disclosure to "already announced" investments and plans departs from ISSB's comprehensive framework and undermines the essential connectivity between sustainability impacts and financial statements. Investors require a complete picture of how sustainability issues affect business performance and prospects. It's notable that none of the 35+ jurisdictions adopting ISSB standards are moving away from this disclosure requirement. Instead of reducing requirements, implementing capacity building initiatives and adopting ISSB-aligned relief mechanisms would better address preparers' challenges. The hybrid approach to GHG emissions boundaries also introduces inconsistencies. By requiring financial control as default while mandating operational control reporting in certain circumstances, EFRAG creates a system where identical operations could show different emissions profiles under ESRS versus ISSB frameworks. This approach would require companies to maintain dual calculation methodologies and would invite inconsistent implementation as preparers make varying judgments about when financial control fails to provide "fair presentation." Additionally, the introduction of other relief provisions that diverge from ISSB standards (detailed in our response to question 17) further weakens interoperability. The European Commission explicitly mandates maximizing interoperability with global standards. In this context, EFRAG's threshold for creating further divergence should be high. We believe EFRAG can achieve simplification and burden reduction without compromising alignment with ISSB. Full alignment would ultimately reduce reporting complexity while advancing a unified global sustainability reporting infrastructure that benefits both preparers and users.			
Survey	NBIM	Asset manager/Investor	Norway	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)				
Survey	NBIM	Asset manager/Investor	Norway	22.ESRS2	Comments on deleted datapoints in ESRS 2	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	We are concerned that EFRAG has proposed deletion of seven ISSB-aligned disclosure requirements. This contradicts the European Commission's direction to enhance interoperability with global standards. While datapoint reduction is important for simplification, the threshold for removing globally aligned datapoints should be high. Preserving these datapoints would better serve both European companies seeking reporting efficiency and international investors requiring consistent information. These include: •ESRS 2 General disclosures GOV-1: Information about management's role in governance processes for monitoring and overseeing impacts, risks and opportunities (aligned with IFRS S1, para. 8 (22 c)) •ESRS 2 General disclosures - MDR for actions and resources in relation to material topics: Disclosure on monitoring progress made against previously disclosed actions, including quantitative and qualitative information (aligned with IFRS S1 para 38) • •ESRS 2 General disclosures- IRO-1, paragraph 53(e): Disclosure on the extent to which and how the process to assess and manage material sustainability impacts, risks and opportunities is integrated into the undertaking's overall risk management process (aligned with IFRS S1 paragraph 25(b)) •ESRS E1 Climate change (53 amended): Disclosure of gross GHG emissions intensity per unit of products and/or services (aligned with IFRS S2 paragraph 33) •ESRS 2 General disclosures GOV-2: Description of whether and how climate-related considerations are factored into executive remuneration (aligned with IFRS S1 par. 10 (29 c)) •ESRS 2 General disclosures GOV-2: Disclosure of the percentage of executive management remuneration recognized in the current period that is linked to climate-related considerations (aligned with IFRS S1 par. 10 (29 c))			
Survey	NBIM	Asset manager/Investor	Norway	22.E1.	Comments on deleted datapoints in ESRS E1	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	These deleted points also include: •ESRS E1 Climate change (53 amended): Disclosure of gross GHG emissions intensity per unit of products and/or services (aligned with IFRS S2 paragraph 33) •ESRS E1 Climate change AR 46(g) amended: Information on the extent to which Scope 3 greenhouse gas emissions are measured using inputs from specific activities within the entity's value chain (primary data), secondary data or a combination of both (aligned with IFRS S2 paragraph B32)			
Survey	NBIM	Asset manager/Investor	Norway	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	The new requirement to disaggregate metrics for the top 10 largest countries by employee headcount (with more than 50 employees) provides better geographic visibility. This change should enhance transparency regarding workforce conditions across different jurisdictions, and support more effective assessment of risks and opportunities.			
Survey	NBIM	Asset manager/Investor	Norway	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	We support the provision of guidance on what biodiversity and ecosystems-related targets can cover. This should refer to Taskforce on Nature-related Financial Disclosures (TNFD) where possible.			
Survey	NBIM	Asset manager/Investor	Norway	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	The deletion of the voluntary datapoint on adjusted gender pay gap by employee category removes important contextual information for investors. While the unadjusted global pay gap provides an overall indicator, it alone does not provide sufficient insight into whether pay differences stem from legitimate factors (such as role distribution, experience levels, and qualification differences) or from potential discrimination. The adjusted metric, which accounts for these factors, offers complementary information that helps us evaluate whether companies are addressing structural inequalities in addition to direct pay discrimination.

Survey	The Danish Ministry of Industry, Business and Financial Affairs	National supervisory authority & regulator	Denmark	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	The Danish Government welcomes the simplified approach to the DMA especially regarding part 3,5 about practical considerations. It's important that the DMA remains dual. Yet the process itself has not been simplified or reduced in scope. We are therefore concerned that these changes may not achieve a sufficient alleviation of reporting burdens. The DMA should be more sector-oriented. Also, further improvements and clarifications are needed: It should be clarified, that although it's expected that the top-down and the bottom-up approaches have the same results, this should not be understood as a compliance tool to assess whether the DMA results are correct. ESRS-1 para-29 states that the undertaking shall update the conclusions of its DMA from previous years to exclude information that's no longer material or include information that has become material. It's unclear how an undertaking is expected to assess this without conducting the full DMA process again as described in Basis for Conclusion paragraph-172. Further clarification is needed. Although not part of the DMA chapter itself we find that, the amendment to Chapter 2 of ESRS-1 and Appendix B about the core principles underlying 'fair presentation', that the explicit application clarifies the use of this concept. It's however paramount that this concept and its correlation to similar concepts in other legislative frameworks and standards is explained in detail, especially considering the introduction of the possibility of including non-material information. We refer to our answer to question 25. We also encourage EFRAG to clarify how much entity-specific information to include in the context of the requirements related to the DMA and the concept of "fair presentation" Regarding ESRS-1, para-107, point (ii) allowing the inclusion of non-material information, we encourage EFRAG to further clarify and emphasize the conditions that needs to be met specified in para-107 a and b.			
Survey	The Danish Ministry of Industry, Business and Financial Affairs	National supervisory authority & regulator	Denmark	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	We welcome the additional guidance on how to consider remediation, mitigation and prevention which was much needed. However, we find that the right balance has not been reached completely. The examples in Appendix C to ESRS 1 are difficult to read and understand and we find that reading through the examples only in very few cases the net-approach are used. We acknowledge the point on health and safety impacts specifically but fear a general emphasis on gross risks that are not material in practice. We appreciate EFRAG's further consideration in this balance in a field test. In Appendix C, the example where an impact occurred in the reporting period and a remediation action has been taken, is fully completed and the impact is remediated seems to be in conflict with ESRS 1 para 36 that states that the undertakings positive impacts should be considered in their own right and shall not be netted off against its negative impacts. Also, sector guidance is especially called for in the market. Therefore, the Danish government believes that sector-specific guidance can support and limit the double materiality assessment in such a way, that the reporting is focused and useful, especially for the financial sector. In this way, it is possible both to reduce the burden on reporting companies, as their double materiality assessment becomes less extensive and more sector-oriented, and to make the reporting more decision-useful.			
Survey	The Danish Ministry of Industry, Business and Financial Affairs	National supervisory authority & regulator	Denmark	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	The added flexibility is welcomed, especially the possibility to use appendices. Clarification as to whether an appendix to the sustainability statement should be placed in conclusion of the sustainability statement or if it could be placed at the end of the annual report or elsewhere (e.g. with incorporation by reference) would be appreciated As we understand ESRS 2 para 31 it allows the undertaking to arrange its disclosures in a way that reflects its management priorities and business model. We support and recommend further flexibility by changing the requirement in ESRS 1 para 105 that states that the sustainability statement shall be structured in four parts in the order: general, environmental, social and governance-information. The order of the main chapters in the statement should be up to the reporting entity, so that they can structure the chapters in order of relevance. See also our answer to question 33.			
Survey	The Danish Ministry of Industry, Business and Financial Affairs	National supervisory authority & regulator	Denmark	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We agree with the proposed amendments and welcome the simplification of the minimum disclosure requirements, which were both difficult to understand and to navigate. The reduction in 'shall'-datapoints for PAT's is appreciated and will lead to more relevant disclosures and be less prescriptive, which will enhance comparability. That said, The Danish Government would be supportive should further feasible reductions in data points be identified and taken into consideration. We find that moving description of IRO's to IRO-2 is an improvement on the previous setup. Several Danish "wave-1" companies have argued that the previous IRO-2 disclosure requirement had little to no value.			
Survey	The Danish Ministry of Industry, Business and Financial Affairs	National supervisory authority & regulator	Denmark	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	We welcome the amendments to achieve clarity and accessibility, especially the decision by EFRAG to completely remove the 'may disclose' datapoints and the positioning of ARs in immediate conjunction with relevant DRs which eases readability of the standards.

Survey	The Danish Ministry of Industry, Business and Financial Affairs	National supervisory authority & regulator	Denmark	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We welcome the proposed reliefs and the increased interoperability with ISSB especially regarding the introduction of the relief from undue cost and effort. However, we find that the terminology introduced in ESRS-1, para-45 a and para-47 regarding reasonable and supportable information vs. evidence needs clarification and we encourage EFRAG to explicitly point to the reasoning behind the terminology and connection with ISSB. Also, we find that ESRS-1 para-67 and AR 28 for para-67 are difficult to understand due to the fact that para-67 on the one hand states that it's not needed for undertakings to collect data from their value chain in relation to metrics, and explicitly gives scope-3 emissions as an example of this and on the other hand in AR 28 for para-67 states that - with the exception of scope-3 - metrics in topical ESRS do not require the inclusion of upstream and downstream data. To complicate it further, ESRS-1 para-91 states, that scope-3 emissions are excluded from the relief introduced in the paragraph to comply with disclosure requirements when only having reliable data for part of the scope or value chain. This can in our understanding imply, that if an undertaking only can collect reliable data for parts of the value chain for its scope-3 emissions, it's not allowed to disclose solely on this part of the value chain and disclose the actions taken to increase coverage and quality, but the undertaking is allowed to disclose its scope-3 emissions based on estimates alone. Please also refer to our answer to question 18 below. We therefore ask EFRAG to clarify these disclosure requirements and their interaction. Furthermore, we bring to the attention of EFRAG that the reference in ESRS-1 para-91 to ESRS E1-6 GHG-Emissions should be updated to ESRS E1-8 GHG-Emissions.			
Survey	The Danish Ministry of Industry, Business and Financial Affairs	National supervisory authority & regulator	Denmark	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	We welcome the intended relief in ESRS 1 para 91 that allows an undertaking to report metrics with a partial scope of calculation, however there are several aspects that we do not find sufficiently described and thus hard to interpret, for instance how ESRS 1 para 91 should be understood in conjunction with ESRS 1 para 67 and AR 28 for Para 67 – see our answer to question 17 above. In addition to the concerns described in question 17 above, we believe that it is not sufficiently clear if this relief for metrics is only applicable to impact-metrics or if this is also applicable to metrics for risks and opportunities. We would also like to raise a concern that when requiring the undertaking to disclose the actions taken to improve future quality and coverage and at subsequent reporting dates whether reliable data has become available, this could indicate that the relief is only temporary until the actions taken has resulted in the availability of data in high quality and coverage. The paragraph does not take into account the situation, where the undertaking does not have the ability to take any actions (e.g. because it does not have any buying power over its supplier) and where there is no prospect that reliable data will become available in the future.			
Survey	The Danish Ministry of Industry, Business and Financial Affairs	National supervisory authority & regulator	Denmark	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	We find that option 1 is the best solution as this allows for the highest level of interoperability to IFRS. Interoperability with IFRS is particularly important, as the reduced scope of the CSRD means that the majority of companies covered by the CSRD will also be subject to IFRS.			
Survey	The Danish Ministry of Industry, Business and Financial Affairs	National supervisory authority & regulator	Denmark	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	The Danish Government supports the amendments to ESRS 1, requiring companies to apply key qualitative characteristics when preparing sustainability statements, making the concept of 'fair presentation' more explicit. This enhances consistency and understanding across different standards. However, differences in interpretation between preparers and auditors already exist. EFRAG must therefore clearly explain how 'fair presentation' in IFRS and similar concepts in the Accounting Directive relate, to ensure consistent understanding and reduce disagreements. We find that interoperability across various legislative frameworks and standards are essential, we therefore welcome EFRAGs work to further streamline the ESRS standards in this regard. The amendment to the disclosures in ESRS E1 GHG emissions and the implementation of IFRS reliefs on undue cost and effort is especially welcomed as well as the streamlining of the language used in ESRS and IFRS. Where differences in meaning or terminology remain, these should be explicitly explained in the ESRS.			
Survey	The Danish Ministry of Industry, Business and Financial Affairs	National supervisory authority & regulator	Denmark	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree

Survey	The Danish Ministry of Industry, Business and Financial Affairs	National supervisory authority & regulator	Denmark	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	The Danish Government welcomes the amendment to Chapter 2 of ESRS 1 and Appendix B, which require undertakings to apply the fundamental and enhancing qualitative characteristics of information when preparing their sustainability statements. These characteristics are the core principles underlying 'fair presentation', and their explicit application clarifies the use of this concept. Making the concept of 'fair presentation' more explicit within the ESRS is valuable, as re-using established principles across multiple legislative frameworks and standards enhances interoperability and better facilitate understanding. Clarifying its application helps address potential inconsistencies that may arise when similar concepts are defined or interpreted differently. 'Fair presentation' is a well-recognized and longstanding concept that preparers, auditors, and users have applied for years in financial reporting. However, we have already experienced differences in understanding between preparers and auditors regarding how these concepts should be interpreted. It is therefore essential that EFRAG clearly explains the coherence between 'fair presentation' in the IFRS Conceptual Framework for Financial Reporting, 'fair presentation' in IFRS S1, and the concepts of 'true and fair view' and 'fair review' as defined in the Accounting Directive. All these concepts are rooted in the same fundamental and enhancing qualitative characteristics. Ensuring clarity on these connections will foster better understanding among all parties, resulting in more relevant reporting and a shared interpretation of key concepts, ultimately reducing disagreements between preparers and auditors.			
Survey	The Danish Ministry of Industry, Business and Financial Affairs	National supervisory authority & regulator	Denmark	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	The Danish Financial Supervisory Authority (DFSA) does not agree that financial institutions should be exempted from disclosing values for absolute GHG emissions. DFSA considers it important to disclose this value, as both intensity-based and absolute targets are necessary to provide a realistic and nuanced picture of an institution's progress in the area of climate action. Intensity targets alone may potentially obscure any increase in GHG emissions. Furthermore, information on an institution's total GHG emissions is one of the most central values to disclose in order to reach the objectives of the CSRD. Intensity-based and absolute targets, together with other descriptions of the institution's sustainability strategy, provide the best overall picture of the institution's climate impact as well as its efforts and contributions to the green transition. However, DFSA would like to add that it is important to establish a definition of the value chains of financial institutions in order to strengthen the application and user quality of the disclosed values for absolute GHG emissions. The values disclosed across financial institutions should be clearly delineated, well-defined, and comparable.			
Survey	The Danish Ministry of Industry, Business and Financial Affairs	National supervisory authority & regulator	Denmark	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	We partially agree with the way the SFDR PAI have been incorporated. The datapoints removed are either rarely used, irrelevant, provided for in other reporting, and as such we see their removal as an efficient way to reduce burdens. We are, however, unsure of the reference to ESRS E4, AR 13 regarding PAI 12, as we have been unable to find this point. We assume that the reference was meant to be AR3 – if this is the case, we can also agree with this amendment. Concerning the datapoint on GHG intensity of a company E1-6, para 53-55 we still think that this datapoint is highly relevant for FMP when assessing whether an investee company can be perceived as a sustainable investment pursuant to article 2(17) and the requirement of doing no significant harm. In addition, we would like some clarity on whether a company is still obliged to report on GHG intensity but instead of being obliged to calculate this by use of the company's revenue, it is up to the company how to calculate the GHG intensity pursuant to the NMIG.			
Survey	The Danish Ministry of Industry, Business and Financial Affairs	National supervisory authority & regulator	Denmark	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree

You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	In ESRS 2 para 28 (b), it is stipulated that if the undertaking concludes that climate change is not material and omits all disclosure requirements in ESRS E1 climate change, the undertaking shall disclose the basis for this conclusion. However, due to the fact that ESRS 2 is no longer mandatory, it is difficult to understand how this disclosure requirement should be understood. The same issue arises for ESRS 2 para 30 that states that if the undertaking has not adopted policies, actions and targets, it shall disclose this fact. Due to the fact that ESRS 2 is no longer mandatory, it is difficult to understand how this disclosure requirement should be understood. This also applies to ESRS 2 para 44. We therefore encourage EFRAG to clarify this. ESRS 2 para 22 requires undertakings to disclose, amongst other things, how the undertaking addresses or plans to address its IROs. In AR 14 for para 22 it is further clarified that this includes a clear reference to the specific policies, actions and targets implemented during the reporting period. It is unclear if this implies that policies implemented in previous years or targets set in previous years are not to be included? As we understand ESRS 2 para 31 it allows the undertaking to arrange its disclosures in a way that reflects its management priorities and business model. We support and recommend further flexibility by changing the requirement in ESRS 1 para 105 that states that the sustainability statement shall be structured in four parts in the order: general, environmental, social and governance-information. The order of the main chapters in the statement should be up to the reporting entity, so that they can structure the chapters in order of relevans.			
Survey	The Danish Ministry of Industry, Business and Financial Affairs	National supervisory authority & regulator	Denmark	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Interoperability: For improved understandability and interoperability with the voluntary standard for SME's (VSME) as well as with the proposed value chain cap, it is important that ESRS clearly explains how the disclosures are able to inform about aspects in the value chain in regard to: -GHG removals (E1-9) -Microplastics (E2-4) -Substances of very high concern (E2-5) -Waste (E5-5) This is on the one hand to give clear guidance to undertakings in-scope of the CSRD as to how this should be done in line with VSME and on the other hand to protect SMEs from data requests beyond the value chain cap. The reasoning for this is, that the VSME does not contain information about these topics and thus the undertaking in scope of CSRD could be required to request data from its value chain partners that goes beyond the value chain cap. The Danish Government would be supportive should further feasible reductions in data points be identified and taken into consideration.			
Survey	NABU	NGO	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	Chapter 3 is presented in a clearer and more structured way. Section 3.1 improves the definition of materiality of information by replacing the criterion of "significance" with the "understandability" of impacts, offering stronger guidance and ensuring consistency with the CSRD as well as international sustainability due diligence standards. The section also explains how materiality of information connects to the (fundamental) qualitative characteristics of information described in Chapter 2, and to the requirements for aggregation and disaggregation of information (for example, paragraph 52 on avoiding "obscuring"). Chapter 3.3.2, paragraph 37 overlooks the fact that financial materiality assessment is intended not only to identify material information but also to determine material risks and opportunities, as mandated by the CSRD. These risks and opportunities appear only midway through paragraph 38, which disrupts the coherence of the text.			
Survey	NABU	NGO	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	It is helpful that Chapter 3 discusses how prevention, mitigation, and remedy of impacts should be addressed in materiality assessment; however, the rules could be stated in a simpler and more accessible manner. Paragraph 34, for instance, uses unnecessarily complex language to convey the straightforward point that actual impacts must be considered as they occurred during the reporting period, and that any remediation after the fact is irrelevant. We particularly welcome the clarification that potential impacts requiring substantial and ongoing prevention or mitigation efforts should be assessed on a gross basis. This clarification is essential, since without it companies would, in theory, be unable to report on how they manage such issues. To strengthen this guidance, it would also be valuable to link it to the materiality of information filters, which could help companies differentiate between significant efforts and routine compliance measures or standard practices.			
Survey	NABU	NGO	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	NABU	NGO	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We welcome the elimination of duplications between the cross-cutting and topical standards and support the stronger focus on general disclosure requirements. Similarly, many PAT provisions within the topical standards functioned more as illustrative examples or guidance than as concrete datapoints, which we consider appropriate. That said, the original disclosure requirements in the environmental standards regarding site screening in materiality assessments have been replaced with an application requirement under ESRS 2 IRO-1. This change effectively makes transparency on this issue optional. Given that consideration of local context is a fundamental component of sound materiality assessment, it should be explicitly recognised in Chapter 3 of ESRS 1. Moreover, ESRS 2 IRO-1 should include a clear datapoint requiring undertakings to report how they screened their locations and value chains. We also appreciate the improved emphasis within the environmental standards on the importance of disaggregating disclosures. However, meaningful disaggregation can only be achieved if the screening of locations is carried out thoroughly.			
Survey	NABU	NGO	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We support the proposed changes and agree with the removal of the "may disclose" elements, as their status has often caused confusion. However, it is not necessary to remove all of them from NMIG. When these elements serve as useful examples of disclosures, they could be incorporated directly into the standards as illustrative "examples." This approach is particularly valuable for topics where reporting practices are still evolving, such as biodiversity and ecosystems. Including such examples within the standards would help first-time preparers understand the types of information likely to be relevant and provide a foundation for standardizing metrics. Requiring consultation of a separate document like NMIG creates an unnecessary hurdle.			
Survey	NABU	NGO	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The standards lack clarity regarding the combined effect of the reliefs and how they are intended to interact. Applying these reliefs independently risks abuse, omission of material information, and significant inconsistencies in reporting practices. The reporting of metrics is affected by the interplay of undue cost and effort, and lack of data quality reliefs. However, the standards do not properly contextualize these reliefs, nor do they set explicit requirements or timelines for companies to improve data coverage and quality. This issue is compounded by the relief that unconditionally allows the exclusion of joint operations. If environmental metrics related to these operations are material, the standards should encourage their eventual disclosure. The existing undue cost and effort, and lack of data quality reliefs already provide sufficient flexibility for this purpose. There is also a lack of coherence in reliefs related to financial effects, i.e., information essential for understanding risks and the company's capacity to address them. For example, the limitation tied to announced investment plans focuses disclosure on effects that are easier to assess and quantify, while other reliefs allow companies to omit quantitative disclosures altogether. We broadly support the relief in ESRS 1, paragraph 90, which permits exclusion of activities that are not significant drivers of the IROs when calculating metrics. However, the application of this option needs clarification for specific environmental and social metrics that are standardized in the ESRS.			
Survey	NABU	NGO	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	The combined reliefs should explicitly require undertakings to enhance both the coverage and quality of the data needed to comply with ESRS requirements. For metrics related to the company's own operations or those directly standardized in the ESRS, this obligation should include a clear time frame. For other metrics, gradual improvements over time should also be explicitly mandated, while still allowing flexibility under the undue cost and effort relief.			
Survey	NABU	NGO	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	The ability to estimate financial effects is essential for an undertaking to integrate sustainability into its business strategy, planning, and risk management. It is also crucial for determining financial materiality, including avoiding the overreporting of topics as financially material. Abandoning this objective would conflict with the goal of placing sustainability reporting on the same level as financial reporting, integrating both, and ultimately addressing the "tragedy of horizons." We consider Option 1 to be unnecessarily extensive and lacking a defined time frame, but broadly acceptable. We disagree with the statement that "[d]ifferent from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources." The proposed ESRS already include the undue cost and effort relief, which appears to cover such situations. Regarding Option 2, we do not find it justifiable to go beyond the IFRS relief. One of the strongest arguments from stakeholders advocating simplification of the ESRS was that, as a principle, the standards should align with IFRS unless the CSRD or other EU legislation explicitly require otherwise. Deviating from this principle risks undermining the development of a global baseline supported by both the EU and the ISSB, which is critical for establishing a level playing field for EU companies.			
Survey	NABU	NGO	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	NABU	NGO	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	Reliefs should not exceed those provided under IFRS, as going beyond would undermine the goal of establishing a global baseline for ESG reporting—an essential element for ensuring a level playing field for EU companies in a global context. The undue cost and effort relief described in ESRS 1, paragraphs 87–89, is a comprehensive measure that addresses nearly all situations in which an undertaking might face practical challenges. The explicit emphasis on fair presentation, combined with the strengthened focus on applying the materiality of information filter, gives companies greater flexibility in determining the meaningful content of their sustainability statements. This represents a further shift from a compliance-based to a principle-based approach. However, these changes also entail increased responsibility for the undertaking. Introducing additional reliefs would weaken this responsibility and create opportunities for misuse.			
Survey	NABU	NGO	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	NABU	NGO	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	The number of datapoints in each standard represents the minimum necessary to ensure cohesive disclosure requirements, and, as a result, to maintain basic comparability and quality of disclosures. We have not found any instance in which the ESRS impose excessive requirements beyond what is considered common practice or what is set out in internationally recognized reporting standards and frameworks, such as IFRS, GRI, or TNFD. In fact, the ESRS are generally more concise and less demanding. Further reductions—while still covering all ESG factors as required by the CSRD—would risk creating significant gaps in quality between ESRS disclosures and those based on other recognized standards.			
Survey	NABU	NGO	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We support these changes, noting that they do not introduce any new burden. This is particularly relevant for water-related metrics. To report on water consumption, undertakings are already required to calculate withdrawals and discharges, with these calculations—and the underlying data—subject to assurance. By elevating these implicit datapoints to explicit ones, the disclosure requirements become clearer compared with the previous ESRS, where some of these datapoints were presented as "may disclosures." Whether these individual datapoints are ultimately disclosed remains appropriately subject to the undertaking's application of the materiality of information filter.			
Survey	NABU	NGO	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We support these changes, noting that they do not introduce any new burden. E2-4 on secondary microplastics is not a new datapoint, as correctly explained in the Rationale above. It is unclear why this item has been included in the question in its current form.			
Survey	NABU	NGO	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	The ESRS, grounded in the materiality principle, the CSRD requirement to disclose impacts, risks, and opportunities along with their management, and the general principles of the Accounting Directive, are already subject to a fair presentation regime. Making this explicit serves to clarify the expectation. It provides companies with clear guidance on the discretion and judgment they are expected to exercise when applying the standards, as well as the associated safeguards.			
Survey	NABU	NGO	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We acknowledge the challenges of recalculating absolute values and recognize that financial institutions often manage GHG performance using intensity-based approaches. However, the global carbon budget is defined in absolute terms. Therefore, it remains essential that financial institutions disclose absolute targets to demonstrate how their strategies align with the economy-wide transition to net zero. Absolute targets are critical for users of sustainability statements and for understanding the real-world climate impact of financed activities. While intensity measures provide insights into efficiency, they can obscure rising absolute emissions in expanding portfolios or sectors. In contrast, absolute values clearly indicate whether institutions are contributing to the necessary 90–95% global reduction in emissions by 2050, with steep cuts by 2030. Both intensity and absolute approaches rely on similar underlying data, and estimation challenges are not unique to the financial sector. Allowing an exemption would undermine fairness in a sector-agnostic standard. Other industries could similarly argue for exceptions based on their own challenges, which would reduce comparability across sectors. Moreover, absolute financed emissions are already recognized in existing standards and regulations, including the SBTi Financial Sector Net-Zero Standard, the UNEP FI/NZBA recommendations, and the EU SFDR, all of which require or encourage absolute emissions disclosure. Exempting banks would risk misalignment and diminish the usefulness of reported data for stakeholders, including asset owners who rely on it for their own disclosures.

Survey	NABU	NGO	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	We welcome the removal of duplicated datapoints. The new, simplified framework allows companies to report on SFDR-related matters in a manner that aligns with the way their policies are structured. For users, this consolidation improves the ease of locating the relevant information.			
Survey	NABU	NGO	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	Measurable targets for biodiversity and ecosystems should be established and disclosed following the guidance and examples provided by relevant global frameworks. These include SBTN (Step 3 – Measure, Set & Disclose Targets), TNFD (components P1 and P2, Annex 5, sector guidance, and Target Setting guidance), as well as resources from the World Economic Forum on the Nature-Positive Transition.			
Survey	NABU	NGO	Germany	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		We note that the standard has been significantly streamlined, which improves readability and reduces the overwhelming level of detail. The shift of certain detailed questions to the ARs is generally understandable and beneficial. However, no further reductions are acceptable. As the standards develop and areapplied in practice, the level of ambition must increase to ensure meaningful disclosures. The results of the materiality analysis in the different EDs should mandatory to report. This "bare-bones" version, esp. with the reduced E standards, should now also be easily applicable to smaller companies, which means that raising the thresholds is no longer necessary. On a positive note, the accompanying guidance document is a valuable resource and could be further expanded to support implementation. Overall, while the standard is more readable, it currently lacks the "big picture" perspective necessary for comprehensive sustainability assessment.			
Survey	NABU	NGO	Germany	35.E4-1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Transition Plan Incentive – The standard should include at least an incentive or ambition for companies to develop a transition plan, rather than only requiring disclosure if a plan already exists. This would encourage proactive planning and support meaningful progress.	E4	Disclosure Requirement E4-1 - Transition plan for biodiversity and ecosystems	
Survey	NABU	NGO	Germany	35.E4-2.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	- Dependencies and Planetary Boundaries – Dependencies are now mentioned only once, and the concept of Planetary Boundaries, which provides essential guidance, has been removed. Understanding dependencies is particularly important for assessing ecosystem services, as they are critical to evaluating the interconnections and impacts within ecological systems	E4	Disclosure Requirement E4-2 - Policies related to biodiversity and ecosystems	
Survey	NABU	NGO	Germany	35.E4-3.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The definition of what biodiversity offsetts can be made clearer: Is the purchase / retiring of a voluntary biodiversity credit an offsett? Is giving NGOs money to do restoration work offsetting? Or is it meant in a strict mandartory offsetting scheme way?	E4	Disclosure Requirement E4-3 - Actions and resources related to biodiversity and ecosystems	
Survey	NABU	NGO	Germany	35.E4-5.	Do you agree with the amendments of this chapter?	I disagree	- Upstream and downstream supply chains are barely addressed, raising questions about how overall company performance can be adequately assessed. -The standard should clearly require disclosure of sites in or near biodiversity-sensitive areas, rather than limiting reporting only to sites determined to be connected to negative impacts. - The Land Use Metric based on an LCA, former ESRS E4 DR 36., which was a strong starting point, is no longer included. - ESRS E4 AR7 (amended): The use "and/or" could allow undertakings to interpret as para. 20 does not apply if a site does not meet all 3 criteria. Instead, any of the 3 criteria (and in particular (a) or (c)) and Ecosystems change should be enough to trigger the disclosure. Use "or" instead of "and/or".	E4	Disclosure Requirement E4-5 - Metrics related to biodiversity and ecosystems change	
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Double materiality is crucial and must remain at the center of the ESRS framework and European Union sustainability regime for corporate reporting to be credible and useful. The principle of "materiality of information" is concerning since it introduces a further filter for companies to not report information. For example, it represents a step backwards from ID-177, which says that most S1 metrics must be reported if S1 Own Workforce is material. It is essential to maintain the principle of fair presentation in the reporting standards. It is positive that the revision of the AR 16 list of topics has maintained all of the sub-subtopics for S1 + S2. These are based on the list of social topics in the CSRD and should all be maintained. The emphasis on aggregation (as opposed to disaggregation) is concerning, as disaggregated information (both site-specific and country-specific) is key to understanding the distribution of IROs.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	It is important that companies report not just their net impact but also the gross impact should be reported. The recommended text preserves this principle.			
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	The proposed changes are helpful. However, para 113 is difficult to understand: "113. If the description of the material impacts, risks and opportunities prepared in accordance with [Draft] Amended ESRS 2 IRO-2 is not presented alongside the respective policies, actions and targets, the undertaking shall make explicit which policies, actions and targets relate to which material impacts, risks, or opportunities, in accordance with paragraph 22." Para 22 addresses the issue of appropriate aggregation or disaggregation of information on material impacts, risks and opportunities and their management, without setting any rules regarding the location of such disclosures depending (or not) on the level of aggregation.			
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The Exposure Draft removes duplications between the cross-cutting and topical standards. The preservation of the 4-part architecture in the social standards is important to respect the distinctiveness of different affected stakeholder groups. However, we have two critical concerns. Firstly, the original DR in environmental standards concerning screening of sites in materiality assessment were replaced by an application requirement to ESRS 2 IRO-1. This in effect makes transparency on this aspect optional. Consideration of local context is a key element of an appropriate materiality assessment. This should be both recognised in Chapter 3 of ESRS 1, and in ESRS 2 IRO-1, which should include an explicit datapoint on how the undertaking screened its locations and value chains. We welcome that E standards provide a clearer reference on the importance of disaggregation of disclosures, but this can only be done well if locations are properly screened. Secondly, we strongly recommend adding an explicit reference to the disclosure of relevant, entity-specific metrics directly in S standards. The fact that S2, S3 and S4 do not include any metrics should not imply that entity-specific metrics for S topics should not be disclosed.			
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	The "may" (voluntary) data points should not be eliminated. In many cases they are "shall" in GRI standards, so it is important to keep them to align with GRI standards. Also, many of them were originally proposed as mandatory by EFRAG to the EC. The first wave of reports show that many companies have reported some "may" data points. Retaining them would help ensure standardization/comparability between company reports. Almost all of the datapoints for non-employee workers are voluntary, thus most datapoints for this vulnerable group of workers has been lost. Also, important datapoints on full time versus part time workers has been eliminated.			
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	It is worrying that mandatory guidance in the Set 1 ESRS has been downgraded to "non-mandatory". Mandatory guidance is key to ensuring comparability and completeness of sustainability reporting. At a minimum, Non-mandatory Implementation Guidance (NMIG) should be included in the Delegated Act, and ideally called Mandatory Implementation Guidance. A major point of concern is that ID-177, which provided guidance that most S1 metrics should be reported if S1 Own Workforce is material, has now been downgraded into NMIG. Instead, EFRAG should preserve and promote the guidance that most S1 metrics shall be reported.			
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	As a whole the reliefs go too far, overshooting the balance between cost/effort and transparency. There is a danger of enabling green/social washing. The relief for "undue cost or effort" is too vague thus leaving too much room for interpretation. The relief for direct data for value chain reporting is too extensive, as direct data is key for transparency. The relief for reporting on operations which are not "significant drivers of IROs" also opens up too much leeway for interpretation.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	These combined reliefs overshoot the balance between transparency and cost/effort and risk enabling green/social washing. At a minimum, there should be a time limit introduced for these reliefs on value chain metrics.			
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	The ability to estimate financial effects is critical for the undertaking's ability to integrate sustainability into its business strategy considerations, planning and risk management. It is also key for the determination of financial materiality, including in terms of overreporting topics as financially material. Reporting on financial effects is crucial to achieving the objective of putting sustainability reporting on the same level as financial reporting and integrating both. The European Union has recognised the value of a double materiality approach to corporate reporting which requires disclosure of both material environmental and social impacts, risks and opportunities as well financially material data, It is important to keep the requirement on businesses to analyse and understand the financial effects of their business model. This will ensure investors have access to credible data as well as providing the underpinning for future business planning.			
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	ESRS reliefs should not go beyond those set in IFRS. The principle of fair presentation needs to be protected to provide transparency on all material IROs. As noted in the response to question 15, it is also important to consider interoperability with GRI when considering changes to the ESRS, rather than only considering ISSB's standards.			
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)				
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	22.S1	Comments on deleted datapoints in ESRS S1	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	The reduction in the number of mandatory and voluntary datapoints goes far beyond striking an acceptable balance. As mentioned above, the voluntary datapoints should be maintained to provide alignment with GRI, which is currently in the process of strengthening its labor standards, as well as guidance and standardization for companies reporting more than just the mandatory datapoints. An explicit quantitative goal of 50%+ reductions was never set by the European Commission for EFRAG. A number of S1 datapoint metrics have been eliminated which should be reinstated: •S1-5 Employees: gender breakdown for zero-hour employees •S1-8 Diversity: age distribution; •S1-10 Social protection: reinstatement of retirement •S1-12: Training and development: gender breakdowns, •S1-13 Health and safety: fatalities from ill-health for non-employees and other workers on site; •S1-14 Work-life balance: employees that took family related leave;			
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Adding a datapoint on training of the procurement team is needed to support the implementation of human rights in the supply chain. The addition of a datapoint on confirmed incidents of bribery is needed to improve transparency on the effectiveness of bribery/corruption policies and measures.			
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Agree that the following mandatory datapoint should be added: ESRS 2 General disclosures – BP 1 the undertaking shall state that the general requirements of ESRS 1 have been applied for the preparation of its sustainability statement.			
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	The "fair presentation" principle is essential to reduce the risk of green/social washing, as it emphasizes the full disclosure of all material impacts, risks and opportunities and their management. It is not understandable why this principle is under attack, as it is included as one of the general principles of the Accounting Directive.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	It is essential that financial institutions disclose absolute targets to assess how their strategies align with the economy-wide transition to net zero. Absolute targets are relevant for users of sustainability statements and for understanding the real-world climate impact of financed activities. While intensity measures provide insights into efficiency, they can mask rising absolute emissions in growing portfolios or sectors. Granting an exemption would also undermine fairness in a sector-agnostic standard. Other industries could equally argue for exceptions based on their own difficulties, reducing comparability across sectors. Moreover, absolute financed emissions are already recognised in existing standards and regulations: the SBTi financial sector net-zero standard, the UNEP FI/NZBA recommendations, and EU SFDR all require or encourage absolute emissions disclosure. Exempting banks would risk misalignment and reduce the usefulness of reported data for stakeholders, including asset owners who depend on it for their own disclosures.			
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	The "top 10" threshold for reporting country-level data on employment, collective bargaining and social dialogue is a major improvement over the current 10% employment threshold. An analysis of the first sustainability statements from Wave 1 companies shows that the current 10% threshold results in country-level disclosures on as little as 21% of total employees. More country-level information is needed to understand the distribution of impacts across countries, as well as whether employment thresholds for specific labour rights have been exceeded. The new threshold does not require additional effort/cost by companies, since they must gather country-level data anyways to calculate the global figures. Furthermore, it does not result in extra datapoints, since the information currently is (and can be under the revised ESRS) reported as one table.			
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	An analysis of the first year ESRS reports shows that most companies are simply reporting that they pay minimum wages, whereas the intention (as outlined in the ESRS Basis for Conclusions) is that companies should be enabled to disclose commitments to paying a wage "sufficient to support themselves and their families in dignity" as well as the extent to which they do this. This shows that the methodology for non-EU countries needs to be changed. Furthermore, the new ILO agreement on a methodology for living wages needs to be taken into account. While the proposed new methodology takes a step forward in both regards, two key changes are needed: •The methodology for reporting on 'adequate wages' should measure actual wages against an adequate/living wage for all employees, not only those within the EU. In particular, for employees outside the EU, the methodology should allow employees' actual wages to be measured: oA) against the local legal minimum wage only when this is set in line with the ILO principles on estimating living wages; or oB) against living wage estimates that are set in line with ILO principles on estimating living wages. •Companies should be able to rely on local legal minimum wages or living wage estimates when the authorities or organisations that set them provide public evidence of their alignment with the ILO principles for estimating living wages. Furthermore, the transitional provision for the EU needs to be reinstated, as not all Member States have transposed the Adequate Minimum Wage Directive.			
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	The new, simplified framework makes it easier for companies to report on these SFDR-related matters in a way that corresponds to how their policies are set. For users, this consolidation makes it easier to locate the relevant information. However, the SFDR datapoints are very helpful and should only selectively be amended.			
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	The unadjusted gender pay gap should be kept as mandatory, since the methodology for calculating it is clear. The adjusted pay gap figure as voluntary. In practice many companies are reporting both figures, which is useful for improved transparency. However, since the methodology for calculating the adjusted figure is not standardized, the unadjusted should be kept mandatory.			
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	As detailed above, cumulative impact of the various reliefs is concerning.			
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The improved language on DMA is welcomed, including on the engagement with workers' representatives.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	33.S_1.	ESRS S1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The proposed "top 10" threshold for the reporting of country-level information for employee headcount, collective bargaining and social dialogue is a significant improvement over the current 10% employment threshold. Country-level information needs to be reported in more detail, and on other metrics as well, in order to have more transparency on the distribution of impacts across countries. In the metrics, voluntary datapoints need to be reinstated as well as the datapoints on gender breakdowns, workforce age distribution, etc. detailed above need to be reinstated. The proposed new methodology for adequate wages outside of the EU also needs attention, and the transition language for EU member states needs to be reinstated, since the Adequate Minimum Wage Directive has not been implemented in some Member States. We would also like to reiterate our longstanding demand for including franchise workers in the S1 definition of own workers, as well as the need for sector-specific standards to supplement the Set 1 sector-agnostic standards.			
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	33.S_2.	ESRS S2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We are concerned that the loss of many specific datapoints related to workers in the value chain will mean that disclosures about material impacts, risks and opportunities become more generic and have less information about the specific stakeholder groups because specifications about the level of granularity have been deleted. Many of the points that are being deleted from ESRS S2 had originally been included because they reflected effective practice in relation to improving supply chain labour rights, for example, AR 6 awareness of the impacts on value chain workers from an undertaking's strategy or business model, AR 20 illustrating how the perspectives of value chain workers have informed specific decisions or activities of the undertaking and AR 25 which looks at retaliation and whether workers can use grievance mechanisms confidentially.			
Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	33.S_3.	ESRS S3:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Survey	European Transport Workers' Federation (ETF)	Trade union	Belgium	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		The definition of own workforce should be expanded to include franchise workers. The term "non-employees" should be supplemented with the phrase "non-employee workers" or "non-employee workers in own workforce".			
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	The proposed amendment simplified the DMA process and keep an acceptable balance between simplification and robustness of the DMA. The elements that make the report relevant are still present. The very in-depth topics certainly force organizations to go further in the process, but the most important topics are still present. Do you believe the removal of "sub-sub-topic" granularity could lead to underreporting of relevant issues? The removal of "sub-sub-topic" granularity could lead to underreporting, but it is up to the undertaking. It has the responsibility to be transparent with their stakeholders. If the undertaking report with the will to be transparent, it should not lead to an underreporting. On the other hand, the report will be less detailed but more accessible for the stakeholders. Is the distinction between gross vs. net assessment of IROs sufficiently clear for practical implementation? The distinction is not enough clear. It should be more well explained in a paragraph dedicated to the subject. In the revised ESRS1 text, the term gross and net are only found in a few paragraphs without any real explanation. You have to do external research to get a real explanation of gross vs net. Would you support relocating static disclosures (e.g., EU Taxonomy tables) to appendices to improve readability? The static disclosures are a necessity to obtain a complete report. They should be kept on the main part, but the detailed information like tables could be in the appendix. Do you feel the guidance provides enough clarity for first-year reporting under the Omnibus? The guidance provides enough clarity for fist-year reporting under the omnibus. The guidance is well structured but could include some visualization of certain concepts like the DMA.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	The Appendix C clarify well how to consider remediation, mitigation and prevention implemented. But it could be interesting to let the company create a part in the report where, they present their old material impacts and how they success to remediate/mitigate/prevent them. The CSRD have for main goal to enable the comparison between companies. With it, companies can compare themselves on their strategy to remediate/mitigate/prevent their material impacts. This also reassures other stakeholders that the company is implementing actions that really work, and this gives the company credibility. Do you consider the "gross vs. net" approach practical for assessing impacts across complex value chains? It is practical, it gives a good idea of the efficiency of the action the company implemented. And as said before it enables comparability and give credibility to the company in the front of stakeholders. Some issues can be met like the distinction can be difficult if actions are implemented since a longtime ago. It could be helpful to give some case studies to have a better understanding. How do you see this guidance affecting data collection efforts, especially where your company has limited control over upstream/downstream actors? The data collection should be difficult because some upstream/downstream actors are not in Europe and they do not feel concerned by European initiatives and consider, especially from the point of view of upstream actors, that the repercussions will be minimal compared to the investment they would have to put in place to meet European expectations. Unfortunately, this will not change unless European regulations are applied internationally and all countries commit to it, which is a utopia.			
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	In theory, it seems to be more user-friendly and more flexible. Include an executive summary and a more well-structured appendix to let only the main messages should be helpful to have a more accessible CSRD report. Yes, clearer guidance on how to structure appendices would be helpful, like an study case or practical examples. Do you find the concept of "connected information" sufficiently actionable in practice? The concept of "connected information" should be detailed in the ESRS 1. It is partially actionable in practice. In some case, in large organisations, to justify well, we should contextualise again so repeat some subject already explained before.			
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The PAT are a necessity to encourage the companies to implement solution to remediate/mitigate/prevent their impact. They should be mandatory but not the first years, the time for companies to find their bearings with the CSRD report. To resume I agree that the proposed amendments strike an appropriate balance but after few years the elements like PAT should not be a simple requirement but mandatory to encourage companies. If they are mandatory at a certain point, some companies will be "lazy" to implement solutions and will not progress.			
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	I agree, the "may disclose" brought a lot of confusion, it is a good thing to have them directly classified in the AR and located them directly under their related Disclosure Requirements. Would a side-by-side comparison tool of old vs. new datapoints (e.g., Excel format) help your team navigate the changes more effectively? Yes, it could be helpful because the documents "Log_of_Amendments_of_the_ESRS_Exposure_Draft_July_2025" are really confusing with too much information. It's really messy to read.			
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	I believe during the assurance procedures the NMIG should be kept separate to avoid confusion. NMIG should be just used if the person does not understand a concept. Would mapping tools between ESRS and IFRS/GHG Protocol improve the usefulness of NMIG for preparers and auditors? This could facilitate consistency between different types of reporting (financial, climate, etc.). But we must be careful that it does not become more confusing. Perhaps a separate file could be more accessible. Do you see NMIG as a practical tool for internal training and onboarding of sustainability teams? NMIG is not famous, many people working in sustainability teams don't know what it is. There is a big lack of communication about this tool. This tool is well structured, but not really user friendly. I don't see it at all as a practical tool for internal training. It is not enough visual and accessible. You really have to dive into it to understand what it's about.			
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	Excluding activities that are not significant drivers of IROs and joint operations without operational control when calculating non-climate environmental metrics, is a relevant tool but how to measure if the company does not interpret it too large. The general "undue cost or effort", In which conditions we should consider than a requirement demands too many resources. Precise criteria are needed. Proposed Amendments provide sufficient relief and strike an acceptable balance, if some clear simple conditions are implemented. Do you believe the reliefs sufficiently address concerns around operational control and joint ventures? The activities from operational controls and joint ventures would be considered, in majority, as unsignificant drivers of IROs according to the reliefs. For the first years of CSRD reports, this simplification is interesting, but for the future it must be re-included in order to encourage companies to act up to operational controls and joint venture activities, such as in five years. Would clearer guidance on how to apply "undue cost or effort" across different metrics improve consistency? Yes please, company need more conditions to avoid risk interpretation of this concept. Do you see challenges in estimating value chain metrics where data access is limited or unreliable? Yes, this is the case for actors who are outside the European Union, such as suppliers or customers, but also parent companies. Very important internal data within the company is difficult to obtain because the parent company, not wanting European regulations as a priority, can limit access to certain fundamental data in order to be transparent.

Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	I agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance, if a frame is well defined, such as some conditions and clear justifications. Would a time-bound limitation on this relief improve comparability across reporting entities? Yes a time-bound limitation should be needed to improve comparability at condition it is staying flexible and feasible. If they are not limitation, companies can abuse this relief. This relief is relevant during the first years, giving time to companies to take ownership of the CSRD report and then to implement time limits. Do you foresee difficulties in explaining improvement actions where data gaps are persistent or systemic? Data gaps can be persistent or systemic, especially from external actors, but if these actors find themselves with all their European stakeholders, some of whom are major, with the same requests concerning data, they will have to accept to provide them. The time-bound limitation could be a good solution.			
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	For the first few years, let's imagine 5 years, option 2 is preferable. Companies have time to take ownership of the CSRD reports, as well as all the stakeholders who support them in the process. After this period, the conditions must be tightened. This is where option 1 should be implemented, and why not make quantitative information completely mandatory in 10 years. Clearer criteria are needed in this case to help reduce auditor interpretation risks such as clarify the acceptable level of uncertainty, what is meant by "no separable data", the minimum conditions for considering a business plan not reasonably available, etc.			
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree	They have been sufficiently simplified. It is more relevant to disclose the financial effect of material topics. It keep the main topics and clarify the report to be more accessible for the stakeholders. Do you find the remaining datapoints feasible to report on given current data availability and internal processes? The amendments give more flexibility, the remaining datapoints are generally feasible, especially for companies with mature sustainability data systems. However, for smaller entities or those early in their sustainability journey, challenges may persist due to limited internal processes or data granularity. Would sector-specific guidance help improve consistency in reporting anticipated financial effects? Yes, sector-specific guidance would significantly improve consistency and comparability in reporting anticipated financial effects. Each sector has is own specificity, and risks.			
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	The proposed Amendments achieve an appropriate balance thanks to the relief adoption, the alignment and references of the frames SASB, IFRS and ISSB. Do you support the alignment of GHG boundaries with financial consolidation, or would operational control be more appropriate for your reporting structure? Aligning GHG boundaries with financial consolidation is consistent with IFRS S2 and the GHG Protocol, and supports integration with financial reporting. However, for organizations with complex ownership structures or joint ventures, operational control may offer a more accurate reflection of emissions responsibility. A dual approach should be considered. It means financial consolidation as the default, with optional operational control disclosure. It give more flexibility. Would additional guidance on Scope 3 treatment improve alignment with GHG Protocol and reduce ambiguity? Yes, additional guidance on Scope 3 treatments are needed. It is the most challenging scope to identify and measure. We need clear examples and guidance especially when a main actor is out of European Union.			
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	The proposed reduction strikes an acceptable balance, but over the years the "shall disclose" datapoints should increase progressively to still encourage companies to progress in a sustainable and transparent way. Do you believe the prioritisation of quantitative over narrative datapoints improves usability and comparability? Yes, quantitative data improves usability and comparability between companies. They are needed. Would a crosswalk between old and new datapoints help your team manage the transition more effectively? Yes, a crosswalk between the old and new datapoints would be extremely helpful for managing the transition, especially to identify which disclosures have been removed, merged, or reworded.			
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	Yes, these exceptions are appropriate and justified. The selected datapoints reflect core sustainability concerns, such as water usage, biodiversity transition planning, and business conduct. In most of the case, there are material. Do you foresee any implementation challenges with the transition plan for biodiversity or procurement training disclosures? Biodiversity transition plans need a clear frame for each sector because, they don't have the same impacts like agriculture or a service company. I see less implementations challenge for the procurement training disclosures apart from a budget. Would sector-specific examples help clarify expectations for these newly mandatory datapoints? Yes because not all sectors have the same level of impact on these newly mandatory datapoints.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new “shall” datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	They are justified but some of them are difficult to measure like E2-4 and E5-5. Companies need guidance and standard to understand how measure them and to be comparable. Do you foresee any challenges in collecting reliable data for E5-5, especially regarding unknown destinations? Yes many challenges are predictable from E5, like a clear definition to understand, what exactly is taken into account in this term, what are the expected measurement standards in order to be relevant and comparable and finally what to do if the information is not accessible, for example with an external actor who does not wish to communicate on this subject. Would further guidance on defining "critical and strategic raw materials" improve consistency across sectors? Yes			
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	25.	Emphasis on ESRS being a “fair presentation” reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 (“when only setting intensity targets”), to disclose also the associated absolute values” (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking’s progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets				
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking’s employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	Yes, the new threshold simplifies reporting while maintaining relevance by focusing on the top 10 countries. Do you believe the new threshold improves relevance or could exclude key geographies with material social risks? This could exclude material elements but would be rather rare. Material topics tend to come from companies' major geographic areas. However, after a few years, the top countries by headcount should expand to cover more and more areas. Or, conditions should be implemented to include areas that have a material impact even if they are not in the top 10. Would additional flexibility for regional aggregation help reduce reporting burden while maintaining transparency? Yes, allowing regional aggregation could reduce complexity while preserving transparency, especially for companies with fragmented operations.			
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree	This methodology offers standardisation and comparability and encourage company with guidance on wage-setting and living wages Would clearer guidance on wage estimation methods improve comparability across jurisdictions? Yes please, to standardize wage estimation. Do you support alignment with ILO principles, even in countries with weak wage enforcement mechanisms? I support; companies must go beyond local obligations to ensure decent working conditions.			
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG’s approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a “human rights policy” in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	Yes, the incorporation of SFDR PAI into the amended ESRS is well-balanced. The removal of overlapping or non-relevant datapoints improves clarity and reduces reporting burden, while maintaining alignment with SFDR objectives. Do you believe the consolidation of social datapoints improves clarity or risks losing granularity? It improves clarity by avoiding redundancies. It could lost granularity, if we don't have sector-specific guidance where needed. Would clearer mapping between SFDR and ESRS disclosures help streamline dual reporting obligations? Yes please			
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	It is unfortunate that Disclosure specifications and guidance for biodiversity/ecosystem targets have mostly been removed and leaving only one suggestion (AR 26). For things to change, you have to be demanding. Perhaps we should add disclosures as we go along. Would referencing science-based frameworks like SBTN improve the relevance and credibility of biodiversity disclosures? Yes, this will strengthen the credibility of the objectives, improve comparability between companies, and align efforts with the latest scientific advances. Do you believe more detailed guidance is needed to support target-setting for ecosystem restoration? In the future yes			
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary (“may”) datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	The adjusted pay gap gives the opportunity to see where the women are underrepresented in certain positions such as management. It should be reintroduce for at least large organizations which have the resources to do it. Would country-level breakdowns of the unadjusted pay gap improve the usefulness of the disclosure? Yes, the country-level breakdowns of the unadjusted pay gap improve the usefulness of the disclosure. Do you believe adjusted pay gap data should be reintroduced as mandatory for large organizations? Yes			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree	Partially. While the new provisions (PAT disclosures and SME-specific elements) offer some coverage, they lack the direct visibility previously provided. To fully meet CSRD objectives, more explicit disclosures on payment terms and practices toward SMEs would be beneficial. Do you believe the removal of direct payment practice disclosures weakens transparency on supplier relationships? Yes, removing direct disclosures reduces transparency on how companies treat their suppliers, especially SMEs. Payment practices are a key indicator of responsible business conduct, and their absence may obscure unfair treatment. Would clearer guidance on SME identification and engagement improve reporting consistency? Absolutely. Clearer guidance on how to identify SMEs and report engagement practices would enhance consistency across companies and sectors and strengthen the relevance of disclosures for stakeholders.			
Survey	FANUC	Preparer (non-financial preparing a sustainability report)	Japan	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Indeed, it was necessary to simplify certain CSRD disclosures, but it's important to keep in mind that companies are more likely to implement sustainable actions when they are strongly encouraged by regulations or influential stakeholders. That's why, after a few years of CSRD reporting, the level of ambition for disclosures should gradually increase. Of course, it's essential to listen to companies when they face challenges due to lack of data or resources, but we must also set progressively higher expectations. To support them, guidance should be simple and user-friendly, with clear visuals and practical tools.			
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	These changes should improve and standardise implementation of the materiality assessment by companies, while retaining key elements of the process – including those aligned with international frameworks like ISSB, GRI and the UNGPs. This should lead to more comparable and relevant reporting for investors. However, we do not support deleting the following disclosure requirements: a)How likelihood, magnitude, and nature of effects of risks and opportunities have been assessed. b)Extent to which and how process to identify, assess and manage risks, opportunities and impacts is integrated into overall management processes. c)How process to identify, assess and manage impacts, risks and opportunities has changed compared to prior reporting period. Investors need this information to understand how companies identify, assess and manage their sustainability matters – particularly for issues where processes and methodologies are still evolving. Further, such removals would compromise interoperability with international frameworks by removing requirements included within the ISSB standards (b-d) and GRI standards (a), risking comparability across investors' global portfolios. To support the effective implementation of the materiality assessment, it will be important to develop sector-specific guidance once the ESRS Set 1 revision is finalised. This should help preparers to identify the likely material indicators for their industries – enabling more relevant information for investors – and build on international sector standards to improve global comparability. Such guidance should also clarify how – and to what extent – financial institutions should consider their value chain (i.e. financial assets) in the materiality assessment, given data gaps from portfolio companies and current lack of guidance in this area. It should build on the UNGPs, OECD guidelines and other international reference points. For instance, clarification that financial institutions should focus on financial assets that are likely to give rise to material sustainability risks, opportunities and impacts would be helpful.			
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	The PRI supports this guidance, because it is likely to improve and standardise implementation of the impact materiality assessment by companies. This should lead to more comparable and relevant reporting for investors.			
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	The PRI supports these changes, as they are likely to improve the understandability of disclosures for investors without compromising the relevance or quality of information – while preserving information quality requirements which are important to ensure decision-useful data for investors.			
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The PRI supports most of the above changes, as well as the removal of duplications between cross-cutting and topical standards. This should clarify the requirements for preparers and improve implementation, enhancing the quality and understandability of disclosures, while also preserving many of the disclosures investors need on policies, targets and action plans. However, we do not support the proposed deletion of requirements to disclose: •Whether and when an entity plans to implement policies, action plans and targets for material topics. •Information on the progress of actions or actions plans disclosed in previous periods. •Key actions taken (and the results) to provide for and cooperate in or support the provision of remedy for those harmed by actual material impacts. Investors need this information to assess how and when companies' risks, opportunities and impacts are likely to evolve over time, and to inform their engagement with investees.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	The PRI supports the above structural changes, because they are likely to improve implementation by companies and lead to better-quality and more understandable disclosures for investors. However, we do not support the deletion of all "may disclose" datapoints and have made comments on specific datapoints in response to Part 3 of this consultation.			
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We recommend the NMIG is included within the Delegated Act. This would encourage preparers to consider it, thereby improving the relevance and quality of disclosures for investors, without increasing reporting burden given the voluntary nature of this guidance.			
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We support reliefs to facilitate implementation, provided that companies using these reliefs must still disclose efforts to meet relevant requirements (ESRS 1, Section 7.4), e.g. actions to address data availability concerns. This information can support investor engagement and would encourage improvements in reporting. Further, we support preserving requirements to disclose metric calculation methodologies, to improve verifiability of reporting for investors. We note that the reduced scope of the CSRD, as well as the Commission's proposed "value chain cap" limiting the information that companies subject to CSRD can request from value chain partners with fewer than 1,000 employees, will substantially reduce the availability and quality of sustainability reporting for larger companies and investors. For investors, this can complicate decision making, increase the risk they are accused of greenwashing and heighten their dependency on service provider data. While we recognise this is beyond EFRAG's remit, ensuring in the CSRD text that companies can ask suppliers for reasonable and proportionate information would reduce the need for companies to rely on this provision. To improve implementation by preparers (and by extension data availability and quality for investors), we recommend that EFRAG provides guidance on when and how companies should use these reliefs. For example, the proposed relief allowing companies to exclude activities that are not significant drivers of risks, opportunities and impacts when calculating metrics should be explicit about specific environmental and social metrics - such as GHG emissions under ESRS E1 and characteristics of employees and non-employees under ESRS S1 – that are relevant for all companies and whereby such exclusions are therefore not appropriate. Finally, we oppose the introduction of reliefs relating to acquisitions and disposals acquired during the reporting period, which will reduce alignment with ISSB standards and cause differences in the reporting boundary compared to the financial statements – risking connectivity.			
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	We support this relief, provided that EFRAG maintains the requirement for companies to disclose actions undertaken to improve the coverage of calculations in subsequent reporting periods – given this can support investors' engagement with companies. Similar to our Question 17 response, to improve implementation by preparers (and by extension data availability and quality for investors), we recommend that EFRAG provides guidance on when and how companies should use this relief. However, we recommend the "undue cost and effort" relief related to the disclosure of all metrics associated with an entity's own operations (as opposed to a smaller subset under the ISSB standards) is removed. In addition to compromising alignment with ISSB standards, this increases the risk that investors receive fewer datapoints needed for decision-making and stewardship.			
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	The ESRS should only permit Option 1, and require companies to justify only providing qualitative information should they choose to do so. All investors, regardless of investment strategy, need disclosures on financial effects to understand the existing and future financial implications of exposure to sustainability-related risks and opportunities. These disclosures are especially useful to investors when quantitative information is disclosed – clearly illustrating the connections between sustainability risks and opportunities and specific financial statement line items – with qualitative information to provide additional context and explain methodological choices. Further, mandating Option 1 is needed to ensure interoperability with the ISSB standards, which nearly 40 countries have adopted or are in the process of adopting – and by extension to ensure comparability of reporting across investors' global portfolios. Not requiring quantitative information about anticipated financial effects would result in the omission of information included in the global baseline. We recognise that calculating financial effects of sustainability matters may present implementation challenges for preparers, particularly given methodological uncertainty. However, the availability and quality of such disclosures will continue to increase across industries as the ISSB standards are adopted, and there is a growing set of guidance (including from the ISSB) on how to report this information. By leveraging existing practice and providing clear guidance within the ESRS Non-Mandatory Implementation Guidance (NMIG), EFRAG can help to ensure effective implementation by preparers, thereby providing investors with the information they need.			
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree	The PRI supports these requirements, as they will provide investors with the information they need on financial effects of climate-related risks and opportunities. We also welcome efforts to align them with equivalent requirements in the ISSB standards, as this will help to improve comparability for investors.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We welcome efforts to improve interoperability with the ISSB standards. Given nearly 40 jurisdictions have now adopted the ISSB standards or are taking steps to do so, better interoperability will improve comparability of reporting for investors. However, there are several amendments within the simplified ESRS that risk compromising the high level of interoperability achieved between the current ESRS and the ISSB standards. As set out in Part 3 and our response to Question 19, this includes several removed and amended datapoints, which we would recommend are added back in and harmonised with the ISSB standards. Further, we would suggest realigning the below structural features with the ISSB standards, to achieve further interoperability: •The proposed reliefs beyond those included within the ISSB standards risk creating data gaps This is because investors may not receive information that other companies reporting pursuant to ISSB standards provide. Therefore, these reliefs – relating to acquisitions and disposals acquired during the reporting period, and the "undue cost and effort" relief specifically related to the disclosure of metrics associated with an entity's own operations – should be removed. •The requirement on ensuring that relevant information is not obscured should be harmonised with that of the ISSB standards, to improve both comparability and understandability for investors. These changes would help to ensure that investors receive comparable reporting across their global portfolios.			
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	The PRI supports EFRAG's attempt to simplify the ESRS by reducing the number of datapoints, to ensure that requirements are both clear and manageable for businesses and sufficiently detailed and comparable for investors' decision-making. We welcome attempts to preserve datapoints across issue-agnostic and issue-specific ESRS that are aligned with international standards, or necessary for financial institutions to meet their own regulatory reporting obligations. Further, we acknowledge and commend that EFRAG was able to remove datapoints while preserving a significant amount of the information for investors, through editorial changes, merging requirements and consolidating certain indicators across standards. However, we do not support all of EFRAG's proposed deletions. Our recommendations on which specific datapoints should be retained – informed by the need for interoperability with international frameworks (including the ISSB standards, GRI standards and TNFD Framework) and datapoints prioritised in investor feedback we have received – can be found in Part 3 of our response. Of the datapoints EFRAG is proposing to delete, our response recommends that 53 of these are added back into the standards – approximately 5% of the 1,000+ datapoints that were in the ESRS prior to EFRAG's simplification proposal.			
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	The PRI supports these additions. The inclusion of total discharges from own operations strengthens alignment with the TNFD core disclosure metrics, which include total volume of water discharged. Disclosure of total water withdrawal is also valuable addition given that investors are particularly aware of water scarcity as a material risk. For instance, in 2022, 69% of listed equities reporting to CDP stated they had water-related risks, putting USD 225 billion of value at risk: https://planet-tracker.org/high-and-dry-how-water-issues-are-stranding-assets/. Water-related risks are also among the most recognised nature-related risks by financial institutions, with references to drought in annual reports and US mandatory financial statements increasing from 682 in 2019 to 1,739 in 2024 across Bloomberg World Large and Mid-Cap companies. Finally, we support the requirement to disclose nature-related transition plans. Feedback from signatories and organisations such as the Nature Positive Initiative (NPI) indicates this is relevant information, and that an integrated approach to transition planning that considers multiple systemic risks has the potential to maximise synergies, avoid unintended consequences and build resilience. We recommend that guidance is provided on such transition plans to promote effective implementation of this disclosure requirement by the market.			
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	The PRI supports these additions and EFRAG's rationale to include them. Reporting on whether the general requirements of ESRS 1 have been applied will provide investors with information about the quality of disclosures. We also welcome the improved alignment with recent EU regulatory developments mentioned for E5-4. Investors support policy consistency and coherence, and this would also improve reporting burden. Finally, waste for which the final destination is unknown is relevant information for investors, as this can indicate poor management (or mismanagement) of waste, and allow investors to track progress over time.			
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	The PRI supports this proposal. Explicitly requiring faithful representation by companies will help to ensure that disclosures are decision-useful for investors, by providing companies with clarity on the discretion and judgment they are expected to exercise when applying the standards. However, we note that companies should still be prepared to justify materiality judgments to investors if requested. We recommend that this is clearly stated in the requirements. In addition, we recommend that additional guidance is provided on application of the "fair presentation" principle, particularly as it relates to impact materiality given this is beyond the scope of the ISSB standards.			
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We acknowledge that transition-supporting activities may improve intensity performance but still lead to short-term increases in absolute emissions, making longer-term absolute metrics useful. On the other hand, emissions intensity metrics show decarbonisation progress independent of business volume changes, while medium and longer-term absolute figures remain essential for calculating financed emissions and portfolio-level climate risk assessment. Therefore, rather than a full exemption, we recommend financial institutions are required to disclose both metrics with relevant context, explaining how transition activities may impact each measure differently.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	The PRI does not support this change, which would require companies to assess whether wages established by national law or collective agreements align with ILO wage-setting principles. As noted by the abovementioned Board members, a nominal compliance with these principles does not ensure that wages are adequate or fair. Further, the proposed disclosure directs companies to prioritise the use of local legal minimum wages when calculating the gap between lowest wages and (often much lower) "adequate" wages for employees outside the EU – allowing companies to report minimum wages without an adequate wage guarantee. Therefore, the ESRS should require "adequate wages" to be measured: (i) against the legal minimum wage only where this is set in line with the definition of an adequate minimum wage under EU law, or the ILO principles on estimating living wages; and (ii) against living wage estimates that are set in line with ILO principles on estimating living wages. They should also be clear that companies should apply only option (i) if the authorities that set the minimum wage provide public evidence that it is in line with the EU definition of an adequate minimum wage or the ILO principles on estimating living wages. Finally, companies reporting on adequate wages should be required to disclose calculation methodologies, to improve verifiability for investors.			
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	The PRI supports overall efforts to simplify the standards while maintaining datapoints investors need to calculate SFDR Principal Adverse Impact (PAI) indicators. While we support EFRAG's consolidation of disclosures on policies related to human rights and alignment with the UN Guiding Principles and OECD Guidelines for Multinational Enterprises, we recommend this datapoint is reworded to more closely align with investors' information needs under SFDR, focusing on processes and compliance mechanisms rather than whether a relevant policy is in place. In addition, looking ahead, it will be important to ensure alignment between the ESRS and the future SFDR, given this regulation is likely to be subject to revision.			
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	We support the provision of guidance on what biodiversity and ecosystems-related targets can cover. This should reference industry-led guidance (including from TNFD, the Science Based Targets Network (SBTN) and the Food and Agriculture Organisation (FAO)) where possible. However, we do not support the deletion of the following disclosure requirement within ESRS E4, as it is needed for investors to understand the credibility of targets disclosed. •Whether the targets are informed by, and/or aligned with the Kunming-Montreal Global Biodiversity Framework, relevant aspects of the EU Biodiversity Strategy for 2030 and other biodiversity and ecosystem-related national policies and legislation.			
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	35.ESRS2_BP-2.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirements: •Description of planned actions to improve accuracy in future of metrics that include value chain data estimated using indirect sources •Explanation of changes in preparation and presentation of sustainability information and reasons for them. This information can help investors to understand past and future changes to sustainability reporting, and engage on this basis. Further, given it is included in the ISSB standards, removing it would compromise global interoperability, and by extension comparability of reporting for investors.	ESRS2	BP-2 - Specific information if the undertaking uses phasing-in options	

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	35.ESRS2_GOV-1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirements: •Number of executive members •Number of non-executive members •Description of management's role in governance processes, controls and procedures used to monitor, manage and oversee impacts, risks and opportunities •Description of how oversight is exercised over management-level position or committee to which management's role is delegated •Information about reporting lines to administrative, management and supervisory bodies. •Disclosure of how dedicated controls and procedures are integrated with other internal functions •Disclosure of how administrative, management and supervisory bodies and senior executive management oversee setting of targets related to material impacts, risks and opportunities and how progress towards them is monitored Investor input has indicated these datapoints are decision-useful. This information would help investors to understand the internal controls that are in place for management to monitor, manage and thereby react to sustainability matters. Further, given these datapoints are included in the ISSB and/or GRI standards, removing them would compromise global interoperability, and by extension comparability of reporting for investors. In addition, the PRI does not support the proposed removal of the following requirement: •Disclosure of whether, by whom and how frequently administrative, management and supervisory bodies are informed about material impacts, risks and opportunities, implementation of due diligence, and results and effectiveness of policies, actions, metrics and targets adopted to address them. This information would help investors to understand the internal controls that are in place for management to monitor, manage and thereby react to sustainability matters. Further, given it is included in the ISSB and GRI standards, removing this datapoint would compromise global interoperability, and by extension comparability of reporting for investors.	ESRS2	GOV-1 - The role of the administrative, management and supervisory bodies in relation to sustainability	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	35.ESRS2_GOV-2.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirement: •Whether and how and sustainability-related performance metrics are considered as performance benchmarks or included in remuneration policies. This information would help investors to understand management's incentives to address material sustainability matters, and by extension how well these are managed and how they are likely to change in the future. Further, given it is included in the ISSB standards, removing this datapoint would compromise global interoperability, and by extension comparability of reporting for investors.	ESRS2	GOV-2 - Integration of sustainability-related performance in incentive schemes	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	35.ESRS2_SBM-2.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirements: •Description of key stakeholders. •Description of categories of stakeholders for which engagement occurs. •Description of how stakeholder engagement is organised. •Description of purpose of stakeholder engagement. This information would help investors to understand the materiality assessment process, upon which disclosures are based. Further, given it is included in the GRI standards and TNFD Framework, removing this datapoint would compromise global interoperability, and by extension comparability of reporting for investors.	ESRS2	SBM-2 - Interests and views of stakeholders	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	35.ESRS2_SBM-3.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirements: •Disclosure of reasonably expected time horizons of material impacts. This information is crucial to investors' understanding of a company's material impacts. Further, given it is included in the GRI standards, removing this datapoint would compromise global interoperability, and by extension comparability of reporting for investors.	ESRS2	SBM-3 - Interaction of material impacts risks and opportunities with strategy and business model, and financial effects	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	35.ESRS2_IRO-1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirements: •Description of how likelihood, magnitude, and nature of effects of identified risks and opportunities have been assessed. •Description of extent to which and how process to identify, assess and manage impacts and risks is integrated into overall risk management process and used to evaluate overall risk profile and risk management processes. •Description of extent to which and how process to identify, assess and manage opportunities is integrated into overall management process. •Description of how process to identify, assess and manage impacts, risks and opportunities has changed compared to prior reporting period. This information would help investors to understand the materiality assessment process, upon which disclosures are based, and the degree to which this is incorporated into companies' wider policies and procedures. Further, given these datapoints are included in the ISSB standards, removing them would compromise global interoperability, and by extension comparability of reporting for investors. Finally, we recommend clarification within paragraph AR22 that TNFD LEAP is relevant for the materiality assessment of environmental impacts. The current wording may falsely suggest it is only useful for the purpose of screening site locations.	ESRS2	IRO-1 - Description of the process to identify and assess material impacts, risks and opportunities and material information to be reported	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	35.E1-1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirements: •How targets are compatible with the limiting of global warming to 1.5°C in line with the Paris Agreement. •Taxonomy-aligned revenue and capital expenditure (CapEx) supporting transition plans and, if applicable, planned CapEx. •Information on whether the company is excluded from EU Paris-aligned Benchmarks. Information on compatibility with 1.5°C through aligned pathways and scenarios is relevant for investors assessing alignment of their overall portfolios with climate objectives. Without this information, investors will need to assess companies' alignment themselves or rely on third parties. Reporting on Taxonomy alignment is also relevant to investors, particularly as a key indicator of transition plan credibility and effective implementation. Finally, investors need disclosures on exclusion from EU Paris-aligned Benchmarks to fulfil their own reporting of Principle Adverse Impacts (PAIs) under SFDR and assess compliance with ESMA fund name guidance. On the other hand, we support the proposal to preserve qualitative reporting on carbon lock-in as part of companies' overall dependencies, given this information is helpful for investors to understand the nature and feasibility of transition plans. The more explicit reference to dependencies will also help to improve alignment with the Transition Plan Taskforce (TPT) Disclosure Framework (which is now ISSB guidance on transition planning). Further, we welcome the addition of reporting on the role of management in transition planning, given this indicates the importance placed on such plans and how likely they are to be achieved.	E1	Disclosure Requirement E1-1 - Transition plan for climate change mitigation	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	35.E1-2.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	We note that several changes have been made in this section which create further differentiation with ISSB requirements. We recommend that scenario analysis requirements are aligned with the ISSB standards, to ensure that investors receive adequate information about how this is conducted – to enable them to understand and assess the results – and to ensure comparability of reporting across portfolios.	E1	Disclosure Requirement E1-2 - Climate-related risks and scenario analysis	

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	3S.E1-8.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirements: •Quantitative and qualitative information regarding the progress of actions or action plans disclosed in prior periods. •The extent to which the undertaking's Scope 3 greenhouse gas emissions are measured using inputs from specific activities within the entity's upstream and downstream value chain. This first requirement would help investors to understand how companies are addressing their materiality sustainability matters, and by extension how these are likely to change in the future. Further, given this datapoint is included in the ISSB standards, removing it would compromise global interoperability, and by extension comparability of reporting for investors. The second requirement, in turn, would help investors to understand how Scope 3 GHG emissions are calculated, compared to other portfolio companies, and improve verifiability of reporting.. And similarly, given this datapoint is included in the ISSB standards, removing it would compromise global interoperability, and by extension comparability of reporting for investors. Finally, under EFRAG's proposed requirements, entities may need to measure their emissions using both the financial control organisational boundary and operational control method, whereas the ISSB standards (in alignment with the GHG Protocol) require the use of a single approach to measure emissions. To ensure comparable emissions reporting for investors, the ESRS should adopt the same requirements as the ISSB standards.	E1	Disclosure Requirement E1-8 - Gross Scopes 1, 2, 3 emissions	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	3S.E2-1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirement: •Disclosure of whether and how policy addresses substituting and minimising use of substances of concern and phasing out substances of very high concern. Investor input has identified this datapoint as decision-useful. Further, we recommend that the reference to "dependencies when relevant" is amended to remove the words "when relevant", to encourage companies to report on these and align with the TNFD Framework.	E2	Disclosure Requirement E2-1 - Policies related to pollution	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	3S.E2-4.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirement: •Description of changes over time (pollution of air, water and soil). Given it is included in the TNFD Framework, removing it would compromise global interoperability, and by extension comparability of reporting for investors.	E2	Disclosure Requirement E2-4 - Pollution of air, water and soil	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	3S.E4-2.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirement: •Explanation of whether and how biodiversity and ecosystems-related policy addresses social consequences of biodiversity and ecosystems-related impacts. This datapoint should be maintained to encourage consideration and disclosure of interconnected issues and their synergies and trade-offs. Further, given it is included in the TNFD Framework and GRI standards, removing this datapoint would compromise global interoperability, and by extension comparability of reporting for investors.	E4	Disclosure Requirement E4-2 - Policies related to biodiversity and ecosystems	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	3S.E4-5.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	To mitigate risks to consistency and relevance of reporting from removing biodiversity metrics from ESRS E4, we recommend that the TNFD core global disclosure metrics are referenced (when related to topics relevant to biodiversity and ecosystems). This should include the following metrics: •Total spatial footprint (km2) •Extent of ecosystem use changed, restored, and sustainably managed •Quantity of high-risk natural commodities sourced, including under a sustainable management plan or certification programme (tonnes) •Proportion of high-risk activities operated under appropriate measures to prevent unintentional introduction of invasive alien species This approach would ensure relevant disclosures and international alignment – particularly given ISSB's commitment to leverage TNFD's work in its own nature work – and build on existing market practice. In addition, we do not support the option to report only metrics for locations relevant to existing sustainability objectives (AR7(b)). Such metrics should be reported in addition to (rather than instead of) those related to locations where the undertaking has identified material impacts, risks and opportunities arising from its direct operations – or locations that are significant drivers of material impacts, risks and opportunities. Otherwise, there is a risk that companies will significantly narrow the scope of locations disclosed, despite material risks to operations. We also recommend that this requirement is included within ESRS E2, 3 and 5, given this reporting is relevant for these issue areas. Finally, we do not support the proposed removal of the following requirement: •Disclosure of how pathways of introduction and spread of invasive alien species and risks posed by invasive alien species are managed This datapoint (also present in TNFD and GRI) should be maintained to encourage consideration and disclosure of information on invasive species, given this is a key driver of biodiversity loss and otherwise infrequently mentioned in ESRS E4.	E4	Disclosure Requirement E4-5 - Metrics related to biodiversity and ecosystems change	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	3S.E5-4.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirement: •Description of methodologies used to calculate data and key assumptions used. Transparency on calculation methodologies is critical for verifiability of the information. Further, given it is included in the TNFD Framework, removing this datapoint would compromise global interoperability, and by extension comparability of reporting for investors.	E5	Disclosure Requirement E5-4 - Resource Inflows	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	3S.E5-5.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirements: •Non-recycled waste •Disclosure of materials that are present in waste. While non-recycled waste can be derived given the requirements to disclose total amount of waste and total amount recycled, this datapoint would support transparency and facilitate investor understanding and reporting – especially as this is a data point required under SFDR – with limited additional effort for preparers. The second datapoint should also be added back in, as the new requirement to simply disclose "key materials" leaves room for reporting entities to only report some types of waste materials, and obscure other materials with potential cumulative impacts. Further, given this requirement is included in the TNFD Framework and GRI standards, removing it would compromise global interoperability, and by extension comparability of reporting for investors.	E5	Disclosure Requirement E5-5 - Resource outflows	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	3S.S1-1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirement: •Disclosure of whether and how policies are implemented through specific procedures to ensure discrimination is prevented, mitigated and acted upon once detected, as well as to advance diversity and inclusion. This datapoint is needed to ensure that relevant information is disclosed. Investors recognise discrimination policies as key policies that companies should have in place, and that general anti-discrimination commitments are often not specific enough unless they are backed up by specific processes and actions. Further, given this datapoint is included in the GRI standards, removing them would compromise global interoperability, and by extension comparability of reporting for investors.	S1	Disclosure Requirement S1-1 - Policies related to Own workforce	

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	35.S1-3.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirement: •Description of additional initiatives or actions with primary purpose of delivering positive impacts for own workforce. Given it is included in the GRI standards, removing this datapoint would compromise global interoperability, and by extension comparability of reporting for investors.	S1	Disclosure Requirement S1-3 - Actions and Resources related to Own workforce	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	35.S1-6.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirements: •Characteristics of undertaking's employees - information on employees by region [table] •Number of employee who have left undertaking •Percentage of employee turnover •Disclosure of contextual information necessary to understand data (employees) •Number of full-time employees by head count or full time equivalent •Number of part-time employees by head count or full time equivalent •Description of methodologies and assumptions used to compile data (non-employees) •Non-employees numbers are reported at end of reporting period/average/other methodology •Disclosure of contextual information necessary to understand data (non-employee workers) Investor input has identified these datapoints as decision-useful, for the following reasons: •Investors can use information on regional makeup of the workforce when conducting a human rights risk assessment. •Employee turnover is a key indicator of a company's general health, as well as its treatment of its employees. •Contextual information, together with information on the number of full-time and part-time employees, is key to understanding a company's approach to its workforce, given that part-time contracts may be used to circumvent legislative requirements. * Information on methodology and assumptions is important to ensure verifiability of data for investors, while contextual information is needed to enhance understandability of disclosures and ensure that all relevant information is provided. Further, given these datapoints are included in the GRI standards, removing them would compromise global interoperability, and by extension comparability of reporting for investors.	S1	Disclosure Requirement S1-6 - Characteristics of non-employees in the undertaking's own workforce	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	35.S1-10.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirements: •Whether all employees in own workforce are covered by social protection, through public programs or through benefits offered, against loss of income due to retirement. This information is relevant to investors adopting wider and long-term horizons in an age of increasing demographic changes, and stress on public social security systems. Further, given this datapoint is included in the GRI standards, removing it would compromise global interoperability, and by extension comparability of reporting for investors.	S1	Disclosure Requirement S1-10 - Social protection	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	35.S1-13.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirements: •Number of cases of recordable work-related ill health of non-employees •Number of days lost to work-related injuries and fatalities from work-related accidents, work-related ill health and fatalities from ill health related to non-employees •Percentage of own workforce who are covered by health and safety management system based on legal requirements and (or) recognised standards or guidelines and which has been internally audited and (or) audited or certified by external party. Investor input has identified these datapoints as decision-useful. This information is key to understand working conditions, including of the non-contracted workforce. Further, given they are included in the GRI standards, removing these datapoints would compromise global interoperability, and by extension comparability of reporting for investors.	S1	Disclosure Requirement S1-13 - Health and Safety metrics	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	35.S1-16.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirement: •Disclosure of the status of incidents and/or complaints and actions taken. This datapoint is relevant as investors need this information to understand the time it takes for companies to respond to issues. Further, given this datapoint is included in the GRI standards, removing it would compromise global interoperability, and by extension comparability of reporting for investors.	S1	Disclosure Requirement S1-16 - Incidents of discrimination and other human rights incidents	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	35.S2-3.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirement: •Description of initiatives or processes whose primary aim is to deliver positive impacts for value chain workers and are designed also to support achievement of one or more of Sustainable Development Goals This datapoint is useful for investors assessing their contribution to (or alignment with) the SDGs. Further, given it is included in the GRI standards, removing this datapoint would compromise global interoperability, and by extension comparability of reporting for investors.	S2	Disclosure Requirement S2-3 - Actions and resources related to value chain workers	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	35.S3-1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirements: •Description of types of affected communities subject to material impacts •Type of communities subject to material impacts by own operations or through value chain •Description of activities that result in positive impacts and types of affected communities that are positively affected or could be positively affected Removing these datapoints would limit understanding of a company's impacts, and of whether proper stakeholder mapping (and therefore engagement) has been carried out. Further, given they are included in the GRI standards and TNFD Framework, removing these datapoints would compromise global interoperability, and by extension comparability of reporting for investors. In addition, we note the requirement to disclose the occurrence of material negative impacts on affected communities is phrased in a way that may prompt companies to limit disclosure to impacts from the green transition, and in particular the effects of mines. While this is relevant information, we recommend clarifying that these should not be the only types of impacts disclosed.	S3	Disclosure Requirement S3-1 - Policies related to affected communities	
Survey	Principles for Responsible Investment (PRI)	Association of financial institutions	United Kingdom	35.S3-2.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The PRI does not support the proposed removal of the following requirement: •Disclosure of how the undertaking assesses the effectiveness of its engagement with affected communities •If applicable, that a company has not adopted channels for raising concerns or does not support the availability of such a channel, and (if applicable) a timeframe in which they aim to have such channels or processes in place Regarding the first requirement, given that assessment of engagement can be carried out in a number of ways, investors would benefit from clarity about how this is achieved – so they can assess whether engagement has been carried out properly. The second requirement should be restored as investors would benefit from knowing whether this: (i) does not exist; or (ii) exists and is not being reported on – and whether this will be established in the future.	S3	Disclosure Requirement S3-2 - Engagement with affected communities, existence of channels for affected communities to raise concerns or needs and approaches to remedy

Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	Materiality will still be difficult to assess and we suggest greater use of illustrative examples and Practical guidance. This is a whole new realm fro preparers and the more guidance afforded the easier the implementation			
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	Actual negative impacts should be considered on an impact-consequence matrix and thus materiality determined			
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	Connected information, discouraging fragmentation and/or repetition of information has been largely achieved. Simplicity of report preparations and presentation of such reports in a concise understandable form is the balance that needs to be struck			
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	Only the relevant and applicable shall data points should be retained and proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other			
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	The 3 changes should achieve the intended objective			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree	We agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2			
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	non			
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	Both options are amenable.			
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree	non			
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	non

Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	non			
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	The compliance approach is generally a hybrid approach, that is check list and tailored.			
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Their rationale for seeking such exemptions are reasonable and could include other sectors			
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I partially agree and partially disagree	Country by country disclosure should be replaced by uniform disclosure across countries. This is more so since the burden to prepare the information per the new requirement is estimated to be limited.			
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to ii)) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	A simple universal method of calculation of minimum wages across jurisdictions should be availed in line with ILO standards. The ILO standard is a minimum baseline expectation. cost of living standards differ across the world and also between and within different regions of the same country so this will in effect be a complex measure and may give results that may be construed wrongly.			
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	non			
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	non			
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree	The maintenance of the global unadjusted pay gap and removal of the adjusted gender pay gap would ease application.			
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree	Yes, the objectives of the CSRD in respect to the protection of SME's			
Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree

Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	33.S_2.	ESRS S2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree

Survey	Mo Chartered Accountants (Zimbabwe)	Auditor	Zimbabwe	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		These will be subject to continual change and amendment once practical implementations takes effect. Not all considerations could have been foreseen and changes will be necessary over time. Due to its infancy, there are rightly very many exemptions and reliefs and this may have an impact on comparability and consistency. These may be removed in future once the standards become more commonplace.			
Survey	AP2	Asset manager/Investor	Sweden	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	AP2 believes it is important to preserve the essential alignment of double materiality with risk-based due diligence (including steps for identifying, assessing, and prioritizing impacts based on their severity and likelihood) under the international standards of the UNGPs and OECD Guidelines. AP2 also welcomes the current specificity of the impact materiality assessment process. It provides much-needed clarity for companies that are new to risk-based due diligence or are undertaking an impact materiality assessment for the first time. This clarity helps ensure that expectations remain consistent with international standards already being followed by many companies. Removing them would lead to diverging and incompatible approaches to impact materiality, reduce comparability between companies' materiality assessment results, and reduce compatibility with international standards.

Survey	AP2	Asset manager/Investor	Sweden	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	AP2 support efforts to improve transparency and accountability regarding wage practices in corporate reporting. We welcome the progress in ESRS, particularly the inclusion of collective bargaining and periodic review of minimum wages, but further refinement is necessary to ensure fair remuneration for all workers. The current draft could be discriminating to non-EU workers. 1. Defining "adequate" wages The draft lacks a clear definition of "adequate wage". Since the ILO provides a globally recognized definition and methodology for living wage, we recommend aligning ESRS with this standard. To ensure meaningful assessment, companies must disclose which prong of the methodology is applied; otherwise, investors cannot evaluate the robustness or comparability of reported figures. 2. Non-EU workers and hierarchy The methodology discriminates against workers outside the EU, as their wages are measured against the statutory minimum wage, compared to the EU Adequate Minimum Wage Directive for EU employees. The standard for non-EU employees is with that significantly lower as minimum wages in these countries often are substantially below what is required to meet basic needs. This creates a misleading picture and undermines the objective of fair remuneration. Furthermore, the current hierarchy prioritizes the use of minimum wages over living wage estimates, which can lead to distorted reporting outcomes. To avoid such misrepresentation and address the issue of discrimination, the hierarchy for all employees should be as follows: • Use the legal minimum wage only where it is demonstrably aligned with the definition of an adequate minimum wage under EU law or with the ILO principles on estimating living wages; • Otherwise, apply living wage estimates that are aligned with the ILO principles on estimating living wages.			
Survey	AP2	Asset manager/Investor	Sweden	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Commentary to question 14: AP2 encourage EFRAG to preserve the core four-part architecture of the social standards (covering own workforce, value chain workers, affected communities, and consumers/end-users). This structure provides companies with a clear and practical framework for navigating, assessing, and reporting on social issues. It helps ensure that materiality assessments are comprehensive, avoids blind spots, and fosters a common language for internal communication across functions. Reducing the social standards to a single category would risk oversimplifying complex realities and undermine the effectiveness and comparability of social disclosures. Maintaining this architecture is essential for meaningful and consistent sustainability reporting.			
Survey	GKK Partners	Consultant (including software vendor)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I would like to skip this question and provide my feedback in Part 3				
Survey	GKK Partners	Consultant (including software vendor)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I would like to skip this question and provide my feedback in Part 3				
Survey	GKK Partners	Consultant (including software vendor)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	The inclusion of the "executive summary" as a structural element is welcomed.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	GKK Partners	Consultant (including software vendor)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	Agreement: - Reduction of "shall" datapoints - Improvement/clarity of connectivity "PAT to-IROs" Disagreement: - Elimination of "plans to implement a PAT" (incl. timeline) delutes transparency and might lower incentives for undertakings			
Survey	GKK Partners	Consultant (including software vendor)	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	300 words for all NMIGs too short. Therefore only most relevant here: Integration of some NMIGs as ARs for clarity and examples. "NMIG 11" should be an AR. Moreover, it should be added that: "Such restriction to metrics (activity/location/asset system boundaries) must be transparently disclo-sed, e.g. via footnotes, in the specific disclosure." Also connected to "NMIG 9": if this is applied high transparency needed to protect comparability of information. "Mapping of sub-topics" why is this not an Appendix - similar to ESRS 1 Appendix A - or even merged with Appendix A? "Flowchart": 1) Should be added as Appendix to ESRS 1. 2) Why is ESRS 2, 30 ("disclose fact not adopted") not added to the decision tree after the second "No"? "Example of structure" should be added to ESRS 1 as Appendix, similar to existing ESRS 1 Appendix D. "Example of incorporation" should be added to ESRS 1 as Appendix (cf. ESRS 1 Appendix F). ESRS2: "NMIG 1" proposed to delete or add (a) into relevant ESRS 2, GOV-1, 9 - preferably deleted. Need for (b) not directly obvious, value of explicitly stating "experience" for users not tangible - proposed deletion. "NMIG 3" since it can be perceived, that some uncertainty is around the "due diligence": add as AR to ESRS 1 chapter 4 as Core Elements (a to e). Maybe shorten subpoints by only referencing to specific DRs. "NMIG 4" (a) seen as not critically benefical to proposed amended ESRS 2 GOV-4. If (b) "findings" is seen as critical, add as AR in ESRS 2 GOV-4. "NMIG 3 for para. 22" if fact "or in the upstream and downstream value chain" is deemed to be essential, must be added to ESRS 2, GDR-P as AR. "NMIG 6 for para. 28" should be AR in corresponding E1.			
Survey	GKK Partners	Consultant (including software vendor)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	Partial scope for the underlying calculations might delute comparability and transparency. It should therefore be mandatory to transparently highlight if and where this has been applied. E.g. in form of footnote directly placed at the metric disclosure and within the explanations of ESRS 2.			
Survey	GKK Partners	Consultant (including software vendor)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	Quantification is paramount for capturing, measuring and managing. Chasing the goal to improve contemplation and reporting on specific ESG-topics, it would be negligent to limit the ESRS only to qualitative information. The given conditions in "Option 1" (connection to topic/material IRO, level of uncertainty, derivation, skills/capabilities, resources) appear sufficient to expect reporting.			
Survey	GKK Partners	Consultant (including software vendor)	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	Complete agreement of necessity to have this DR. Concerning 40. (e): unclear connection to "leverage" out of ANNEX II. Might be changed by removing bold. Concerning 41. (f): similar to 40.(e) unclear connection to "leverage" (ANNEX II), proposal to remove bold. Concerning 42: change "assets or revenue", proposal to change "or" in "and" to foster contemplation and reporting.			
Survey	GKK Partners	Consultant (including software vendor)	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I disagree	Point 3 ("undue cost or effort") goes further than IFRS one. If generally applied it could lower standardisation and comparability of sustainability statements. If kept, clearer guidances and ARs on how untertakings should transparently disclosed are advised.

Survey	GKK Partners	Consultant (including software vendor)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	GKK Partners	Consultant (including software vendor)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	GKK Partners	Consultant (including software vendor)	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets				
Survey	GKK Partners	Consultant (including software vendor)	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				
Survey	GKK Partners	Consultant (including software vendor)	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	Previous AR 26 states "may expressed as", it is therefore not exhaustive. Agreement that AR 26 should be kept. Need for further revision, of dynamic landscape/latest trends, not seen as compulsory.			
Survey	GKK Partners	Consultant (including software vendor)	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	University of Gothenburg	Academia	Sweden	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Overall, there is a clear linguistic improvement in the ESRS. The text is shorter, more focused and easier to read. There is an attempt in the revised ESRS to simplify the process of determining impact materiality. However, this cannot get around the basic question that impact materiality is related to users that are not well defined and unspecific decisions to be taken by such users. To simplify the process, the revised ESRS appear to define impact materiality in terms of innate characteristics of phenomena. It is unclear how such a focus is logically consistent with the concept of materiality, which has to do with the interaction between information and users. A reason for the limited simplification in ESRS 1 is that the standard is still based on the unchanged CSRD. This relates to an additional question which the EFRAG cannot do much about at present but that could create difficulties for preparers. A simplified CSRD is likely to result in a new revision to ESRS. While this would potentially allow for a true simplification of, e.g., ESRS 1, it would mean that preparers must adopt a third version of ESRS, all issued within a limited timeframe.			
Survey	University of Gothenburg	Academia	Sweden	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I disagree	The introduction of "fair presentation" might be difficult to implement in a newly regulated field such as ESRS. The concept has a long history in financial accounting. There, however, the meaning of the concept has gradually developed in practice over time. It will take some time before practice defines the meaning of fair presentation based on ESRS. Therefore, the concept is unlikely to be helpful in the early implementation of ESRS.

Survey	University of Gothenburg	Academia	Sweden	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	European Biogas Association	Other - please specify (required)	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	In ESRS E1, under Disclosure Requirement E1-8 and Application Requirements 19 to 25: The proposed amendments to ESRS E1-8 and AR 19–25 reflect progress in simplifying GHG emissions reporting, in line with EFRAG's simplification objectives. Notably: •The alternative possibility to use ISO 14064-1:2018 (instead of only the GHG Protocol standard) is made more explicit for each Scope of emissions. •Removal of the confusing unspecified reference to "principles of the GHGP". However, the standard still lacks sufficient clarity and practical applicability. 1) Use of market instruments in Scopes 1 and 3. While AR 21 and 25 refers to the GHG Protocol Standard and to ISO 14064-1:2018, they fail to recognise regulated market-based instruments such as RED-compliant Proofs of Sustainability for biomethane purchases. These instruments are legally required under EU law and widely used to account for emissions performance. Consistent with the simplification rationale under Lever 2 , AR 21 should explicitly accept RED-compliant Proofs of Sustainability under Scopes 1, 2 and 3. 2) Related to "better connectivity with corporate reporting", EBA highlights the lack of consistency of Application Requirement 21 paragraph e) with existing climate reporting standards and practices. In AR 21, all "biogenic emissions from the combustion or biodegradation of biomass (in particular, CH4 and N2O)" should be reported under Scope 1, while climate reporting practices (including the GHG Protocol) report those biogenic emissions off-scope (with the possible exception of CH4 and N2O). To ensure interoperability and reduce inconsistencies, AR 21 e) should be aligned with this and with Disclosure Requirement E1-8 paragraph 33. Contrary to what Paragraph 264 of the Basis for Conclusions states, under GHG Protocol Scope 2 Guidance, "Companies should separately report the biogenic CO2 emissions from electricity use (e.g. from biomass combustion in the electricity value chain) separately from the scopes".			
Survey	European Biogas Association	Other - please specify (required)	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	In ESRS E1, under Disclosure Requirement E1-8, Application Requirements 21 (all Scopes) and 25 (specifically for Scope 3) should be clarified as regards to consistency with other pieces of EU legislation, notably the Renewable Energy Directive (RED). Specifically, AR 21 and AR 25 should recognize explicitly the use of RED-compliant proofs of sustainability (PoS) as valid instruments for emissions accounting from renewable fuel purchase under Scopes 1 and 3. As highlighted in the European Commission's Explanatory Memorandum accompanying the Simplification Omnibus proposal (February 2025), the ESRS revision must aim to "clarify provisions that are deemed unclear" and "improve consistency with other pieces of EU legislation". In the European Union, PoS are legally rooted in the RED and are issued within regulated mass-balance systems. The certification framework is supported by national or voluntary schemes recognised by the European Commission, requiring third-party audits, standardised GHG emission accounting, and traceability from feedstock to end-use. Production plants are certified. On this basis, producers can issue PoS that accompany biomethane consignments through the gas infrastructure, where the EU gas grid is legally treated as a single logistical facility. This robust architecture enables companies purchasing certified biomethane (with PoS) to demonstrate measurable and verifiable emissions reductions—even if the physical gas is delivered via shared infrastructure. Explicitly recognising RED-compliant PoS in AR 21 and 25 would: •Enhance legal clarity for preparers and auditors; •Avoid duplication and conflicting requirements across EU instruments; •Uphold the EU's ambition to streamline rules and reduce administrative burden; •Support traceable, verifiable decarbonisation pathways for renewable gases.			
Survey	European Biogas Association	Other - please specify (required)	Belgium	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The European Biogas Association (EBA) welcomes the simplification efforts undertaken by EFRAG in the revision of ESRS E1 and recognises progress made, particularly under Disclosure Requirement E1-8 and related Application Requirements (ARs). Further improvement is necessary under Lever 2 (clarification and consistency with other legislation). In particular, within ESRS E1 Climate Change, Application Requirements 21 and 25 should be revised to explicitly recognise RED-compliant Proofs of Sustainability (PoS) as valid instruments for GHG accounting of renewable gas purchases under Scopes 1 and 3. These instruments are central to the EU's legally binding sustainability framework under the Renewable Energy Directive (RED) and are widely used to demonstrate measurable, auditable GHG reductions within regulated mass-balance systems. Failure to explicitly recognise these instruments leads to unnecessary confusion. Aligning the ESRS with the RED would uphold the objective of reducing administrative burden, increase coherence within EU sustainable finance law. These targeted clarifications would support the practical application of the standard, reduce audit ambiguity, and promote interoperability, while aligning fully with the Commission's mandate to "clarify provisions that are deemed unclear" and "improve consistency with other pieces of EU legislation," as stated in the Explanatory Memorandum to the Simplification Omnibus.			
Survey	European Biogas Association	Other - please specify (required)	Belgium	35.E1-8.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	•AR 21 (Applicable to Scopes 1, 2, and 3): RED-compliant Proofs of Sustainability (PoS) should be explicitly recognised as valid instruments for emissions accounting of biomethane purchases across all scopes. This would ensure consistency with EU legislation, particularly the Renewable Energy Directive (Lever 2). Biogenic emissions: Paragraph (e) of AR 21 requires reporting all biogenic emissions, including CO2, under Scope 1. This is inconsistent with Disclosure Requirement E1-8, paragraph 33 and the GHG Protocol, which treat biogenic CO2 as outside the scopes. This provision should be revised to support interoperability and consistency (Lever 2). •AR 25 (Scope 3): Recommendation: Like AR 21, AR 25 should explicitly recognise RED-compliant PoS for Scope 3 emissions accounting. These instruments are legally grounded and based on EU-regulated certification schemes and mass-balance systems. Clear inclusion would reduce ambiguity (Levers 2 and 4).	E1	Disclosure Requirement E1-8 - Gross Scopes 1, 2, 3 emissions

Survey	Global Reporting Initiative	Standard setting initiative	Netherlands	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Amended ESRS 1 lacks a clear definition of impact materiality, comparable to the one included for financial materiality in paragraph 39. To eliminate ambiguity for companies and stakeholders, the definition in the Glossary needs to be clearly incorporated into the body of ESRS 1. To avoid confusion, this definition should be aligned verbatim with the GRI Standards, which define material topics as those that represent an organization's 'most significant impacts'. This is crucial to ensure clear and consistent application of impact materiality globally. In addition, since the steps for assessing impact materiality are not elaborated on within the ESRS, pointing to GRI 3: Material Topics can provide additional valuable guidance for reporters. Amended ESRS 1 presumes that investors are the only users of the sustainability statements for decision-making. This is not the case. Other stakeholder groups – such as civil society and policy makers – need to be included, rather than being relegated to being considered as only using this data to achieve an "understanding". Otherwise, the principle of double materiality is undermined by the prioritization of financial materiality only. Paragraph 21 (b) must be revised so that information is material when it is necessary for users, including civil society actors, to make informed assessments and decisions about an undertaking's most significant impacts and how it identifies and manages them.			
Survey	Global Reporting Initiative	Standard setting initiative	Netherlands	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	The new guidance on how to consider remediation, mitigation, and prevention actions in assessing the materiality of negative impacts is now based on a net-impact assessment. This is overly complex, inconsistent with financial materiality (where risks are assessed on a gross basis) and, more importantly, risks excluding severe potential negative impacts from reporting. Net-impact assessments can also vary widely depending on how organizations account for mitigation measures, leading to inconsistent and less comparable reporting. Assessing impacts on a gross basis means organizations cannot obscure or minimize potential harm simply by pointing to mitigation efforts. Particularly in cases where an impact is highly significant in a specific industry or location, disclosing these impacts and the effective implementation of prevention and mitigation measures provides valuable information to stakeholders. GRI 3: Material Topics provides relevant guidance on how to assess and prioritize impacts for reporting.			
Survey	Global Reporting Initiative	Standard setting initiative	Netherlands	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	It is important that the NMIG is updated and made available again for public feedback once the Amended ESRS have been finalized. Please refer to pages 29-30 of this Annex for our feedback on the NMIG: https://www.globalreporting.org/media/uo5a3wg0/annex-gri-response-to-public-consultation-on-the-amended-esrs-exposure-drafts.pdf			
Survey	Global Reporting Initiative	Standard setting initiative	Netherlands	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)				
Survey	Global Reporting Initiative	Standard setting initiative	Netherlands	22.ESRS2	Comments on deleted datapoints in ESRS 2	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	We have observed a considerable reduction of GRI-aligned data points, both in the cross cutting and in the topical standards. The proposed amendments should not diminish interoperability with global sustainability reporting standards but rather strengthen it. Considering interoperability with the GRI Standards when deciding which mandatory data points to retain would ensure that any reductions are based on decision-useful impact information, validated through extensive multi-stakeholder consultation. For example, ESRS 2 no longer includes standalone data points on how a company identifies impacts, the involvement with negative impacts, and the provision of remedy, which provided crucial and easily identifiable information about an organization's approach to impacts. Here, reference could be made to GRI 3: Material Topics where this critical information is covered. In the excel template provided we indicate which of the deleted content we believe should be maintained. In addition, while we acknowledge the need to simplify reporting by reducing mandatory data points, this cannot come at the expense of meaningful, standardized information on impacts for investors, civil society, and other stakeholders. Although mandatory data points have been significantly reduced, the ESRS continue to require undertakings to report material information on material impacts. However, given that less information under the ESRS will be standardized, there is a risk of reduced reporting quality and comparability. We recommend that paragraph 11 of ESRS 1 includes an explicit reference to the GRI Topic Standards (in addition to GRI Sector Standards), as a reliable source of entity-specific disclosures and likely material topics. This will help ensure that organizations can report standardized information on significant sector-agnostic impacts and topics not covered by the amended ESRS.

Survey	Global Reporting Initiative	Standard setting initiative	Netherlands	23.	Six datapoints exceptionally moved from “may” to “shall” In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, “may disclose” datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from “may” to “shall” subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We welcome moving data points on total water withdrawals, total water discharges, and the number and nature of the confirmed incidents of corruption from 'may' to 'shall'. This is in line with GRI 303-3-a, GRI 303-4-a and GRI 205-3-a respectively.

Survey	Global Reporting Initiative	Standard setting initiative	Netherlands	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	We disagree with the new threshold to report the breakdown of the number of employees by country for the countries in which the undertaking has 50 or more employees and that are the ten largest countries in terms of employee numbers. Similar to the previous threshold, it can obscure material information on where a significant number of employees are located and for understanding the potential impacts of undertakings. We recommend aligning with GRI 2-7-a and require a breakdown of the number of employees by region. In GRI 2-7, a region can refer to a country or other geographic locations, such as a city or a world region. This can provide flexibility to undertakings to report information at country level or by world region or other appropriate level, according to the specific circumstances of each undertaking, but on a complete basis.			
Survey	Global Reporting Initiative	Standard setting initiative	Netherlands	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	Former E4 AR 26 has been deleted as it was considered potentially outdated. We support retaining guidance on what biodiversity and ecosystems-related targets can cover. However, AR 26 in its former form is narrow and focused primarily on quantitative measures of areas or sites. Drawing on the GRI Standards, including GRI 101: Biodiversity 2024 (Disclosure 101-1-c and its guidance), we recommend that the Application Requirements more clearly reflect that biodiversity-related targets should be measurable, time-bound, and linked to the most significant impacts of the undertaking; specify baselines used; indicate how the targets are informed by the Kunming-Montreal Global Biodiversity Framework and science-based approaches such as SBTN; and cover an organization's most significant impacts in direct operations and upstream and downstream the value chain.			
Survey	Global Reporting Initiative	Standard setting initiative	Netherlands	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	The gender pay gap should be reported by employee category and by significant location of operation, to assess whether there is equal remuneration for work of equal value. GRI recommends replacing S1 44(a) with the adjusted pay gap, disaggregated by employee category for each significant location of operation, in line with GRI 405-1.			
Survey	Chamber of Labour, Austria	Trade union	Austria	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	In principle, the BAK welcomes the newly introduced practical regulations for carrying out the materiality analysis. From the BAK's point of view, however, the planned reduction in the granularity of a number of reporting obligations via the materiality analysis will result in a significant loss of transparency and information for the relevant stakeholders. Furthermore, it is provided that the involvement of stakeholders is required, but no further steps are necessary (AR 10 for para 33). It must be ensured that stakeholders can articulate their demands and that management can derive goals, measures, etc. from them. Only then can the effects on employees, suppliers in the value chain, consumers and the environment be recorded in reporting. This process should be reflected in the report so that stakeholders can understand how the company developed its topics. It is also unclear whether the proposed guidance provides sufficient clarity and transparency as to what level of adequate and proportionate evidence is needed to support the conclusions of the materiality analysis.			
Survey	Chamber of Labour, Austria	Trade union	Austria	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I would like to skip this question and provide my feedback in Part 3				
Survey	Chamber of Labour, Austria	Trade union	Austria	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	The BAK welcomes the proposal for an "executive summary" at the beginning of the Sustainability Report. However, it must be ensured that it is indeed only "a summary" and not the actual report. The concept of connected information offers a good way to avoid repetition. This leads to better readability and comprehensibility of the report. However, it is essential to provide an overall overview of all references in the report so that stakeholders can look up or be informed. In addition, if there are too many references, there is a risk that the clarity, transparency and comprehensibility of the reporting will suffer or be restricted. The BAK is of the opinion that all relevant information should be provided directly in the sustainability report in the management report. If information or information is moved in annexes, the BAK believes that it is essential to ensure that all annexes must also be disclosed and that they can be found clearly and easily in the report. Furthermore, the question arises for the BAK as to whether these simplifications will not make connectivity to financial reporting more difficult. The BAK therefore requests that appropriate consideration be taken into account so that the sustainability and financial reporting remains coherent in itself. This has always been a goal of the EU Commission and should therefore continue to be observed.

Survey	Chamber of Labour, Austria	Trade union	Austria	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I disagree	From the BAK's point of view, the following points are critically assessed or rejected: - Less mandatory disclosures: The BAK opposes the planned deterioration of the disclosure requirements for ESRS 1 and 2. - Planned changes to mandatory reporting content on voluntary disclosures or the general deletion of the "may" regulations: These reductions lead to a significant loss of information for stakeholders and cannot guarantee comprehensible, transparent and understandable reporting. Simplifications should only be carried out if this does not lead to a qualitative impairment of reporting. The BAK therefore advocates a revision of the ESRS 1 and 2 regulations in accordance with ESRS Set 1. - No metrics are specified in the ESRS S 2-4. Therefore, the BAK proposes that the regulation to disclose relevant, company-specific information should be included directly in these standards. Otherwise, there is the impression that no company-specific information is required for these social standards. - The BAK is against an extension of the "phasing-in" regulations.			
Survey	Chamber of Labour, Austria	Trade union	Austria	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	Unfortunately, the present draft provides for the mandatory guidelines to be downgraded to "no longer mandatory". From the BAK's point of view, this is associated with a significant deterioration in sustainability reporting. In addition, it is questionable what effect EFRAG's interpretative guidelines, which are declared non-binding, will have in practice. It can be assumed that they will have a certain binding effect. However, in such important areas of the European economy, this is viewed critically. Direct publications by the European institutions, specifically by the Commission, would be preferable. These would also better support companies in reporting.			
Survey	Chamber of Labour, Austria	Trade union	Austria	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	In European sustainability reporting, the ESRS must always be in the foreground. A pure orientation towards the ISSB standards is not advocated. EFRAG has already taken the GRI standards into account very much during the development of ESRS Set 1. This should also be taken into account in the new revision. The newly introduced principle of "fair presentation" must ensure in all cases that sufficient transparency and reliability of all essential regulations in reporting is given.			
Survey	Chamber of Labour, Austria	Trade union	Austria	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)				
Survey	Chamber of Labour, Austria	Trade union	Austria	22.S1	Comments on deleted datapoints in ESRS S1	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	The exposure drafts (April 2022) and the EFRAG draft of Set 1 (November 2022) have already seen a significant reduction in disclosure requirements for companies. The BAK therefore considers it urgently necessary that the draft standards now available are not further shortened or watered down in the further legislative process. This would result in a significant deterioration in the new sustainability reporting. In its statement of January 2023 on EFRAG's Set 1 published in November 2022, the Federal Chamber of Labour has already critically stated that the scope of the disclosure requirements has been significantly reduced compared to the exposure drafts from the consultation in summer 2022. It is precisely through the standards that it must be ensured that the information needs of stakeholders who are significantly affected by the entrepreneurial activities and their effects are met. These include, in particular, the requirements of trade unions, works councils and employees for a transparent, comparable mapping of working conditions in the sustainability indicators to be reported and the associated sustainability goals and risks. From the BAK's point of view, the following points are critically assessed or rejected: - Less mandatory disclosures or shift from mandatory reporting content to voluntary disclosures: The BAK is clearly opposed to the planned deterioration of the mandatory disclosure requirements, especially for ESRS E1 and ESRS S 1. In the CSRD Article 29b, all social information is listed in detail. Therefore, these social aspects in particular should be reflected in the ESRS. - From the BAK's point of view, the planned reduction in the granularity of a number of reporting obligations (e.g. no age groups for S1-8 diversity, no breakdown by gender for S 1-12 training) will result in a significant loss of transparency and information for the relevant stakeholders. - The BAK therefore advocates a resumption of the regulations (for the topic standards) in accordance with the currently applicable Delegated Act on the ESRS.			
Survey	Chamber of Labour, Austria	Trade union	Austria	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	The BAK welcomes the mandatory information: - on the Biodiversity Transition Plan E4, - for training of procurement teams (procurement teams are of great importance, especially in connection with the value chain) and - for incidents of corruption/bribery.			
Survey	Chamber of Labour, Austria	Trade union	Austria	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	These exceptions provide important information and are therefore justified and appropriate.

Survey	Chamber of Labour, Austria	Trade union	Austria	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	This new principle of "fair presentation" is generally welcomed. However, it must not lead to the omission of important topics that are necessary for complete, meaningful, comparable and auditable sustainability reporting under this guise.			
Survey	Chamber of Labour, Austria	Trade union	Austria	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	The change in the thresholds for reporting the number of persons employed is welcomed, as it provides more information on the number of employees, especially from companies operating in several countries, and this data is also necessary for other social indicators. In addition, there are no additional data points associated with it for the companies obliged to report.			
Survey	Chamber of Labour, Austria	Trade union	Austria	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree				
Survey	Chamber of Labour, Austria	Trade union	Austria	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree	These proposed simplifications support companies in reporting on SFDR-related topics. For users, this consolidation makes it easier to find the relevant information. However, the SFDR data points are very helpful and should only be changed selectively.			
Survey	Chamber of Labour, Austria	Trade union	Austria	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?		-			
Survey	Chamber of Labour, Austria	Trade union	Austria	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree				
Survey	Chamber of Labour, Austria	Trade union	Austria	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Please refer to the Excel template for comments on the standards			
Survey	Chamber of Labour, Austria	Trade union	Austria	33.S_1.	ESRS S1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Survey	Chamber of Labour, Austria	Trade union	Austria	33.S_3.	ESRS S3:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	Chamber of Labour, Austria	Trade union	Austria	33.S_4.	ESRS S4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. I partially agree and partially disagree				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree

Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				
Survey	3A Advisory SARL-S	Consultant (including software vendor)	Luxembourg	33.Glossary.	Glossary:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree

Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We welcome the proposed amendments to the ESRS which represent a positive step forward. However, we suggest to consider a more flexible approach as regards the double materiality assessment by clarifying that companies should only carry out a full DMA periodically or when there are significant changes in their strategy or business model, and not necessarily on a yearly basis. Companies could instead review internally their DMA every year to determine whether such a reassessment is necessary. The DMA should therefore only be audited when updated periodically. It would also be beneficial to clearly define what constitutes a reassessment to avoid divergent interpretations of this concept by preparers and auditors. We also support the use of reasonable and supportable information available without undue cost or effort (ESRS 2 paragraph 47 & chapter 7.3), as well as ESRS 1 paragraph 48 on materiality based on the business model and AR 17 on the top-down approach. It is important to grant undertakings discretion to define the appropriate level of disaggregation whether by topic, business or another relevant area. We recommend deleting references to sub-sub-topics such as in Appendix A E4 ("Drivers of biodiversity and ecosystem change (terrestrial and marine habitat change, invasive species)"). We would like to avoid unnecessary burden and audit pressure.			
Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	We agree with adopting a net approach to assessing potential negative impacts within the Double Materiality Assessment (DMA). This reflects real business practices, where impacts are evaluated after accounting for credible, systematic, and effective prevention and mitigation measures. Industrial companies already invest heavily in regulatory compliance, site-level controls, advanced monitoring systems, and global frameworks (e.g., ISO, OGMP 2.0). These measures are audited, budgeted and continuously improved to reduce risk exposure. A gross-only assessment would inflate disclosures with hypothetical risks that are already effectively managed, creating excessive burden and misrepresenting actual exposure. A net approach ensures disclosures remain decision-useful, rewarding companies for proactive and data-backed mitigation efforts. However, on the other hand, we caution against the rigidity introduced by the gross vs. net approach in Appendix C. Framing materiality around gross impacts risks turning the exercise into a theoretical checklist, disconnected from sustainability reporting's purpose of accountability, comparability, and faithful representation. Safety topics, for instance, would be reported regardless, as they are business priorities even without annual incidents. By treating all impacts as material, the gross approach risks over-reporting and obscuring meaningful disclosures.			
Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We support the changes proposed since they provide more clarity on how to report the disclosure requirements related to Policies, Actions and Targets. However, we reiterate that EFRAG should explore the possibility of merging disclosure requirements on PATs in the topical standards as these are often implemented together.			
Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	We fully support the changes introduced as regards the distinction between mandatory from voluntary datapoints, as it was flagged as one of the main sources of confusion during the preparation of the sustainability statements, also presenting challenges with auditors. However, further simplification and precision are needed to improve usability and avoid confusion, particularly with auditors. - Unclear and contradictory terminology should be eliminated. For instance, terms such as "shall consider" create ambiguity: "shall" implies mandatory action, while "consider" suggests discretion. This phrasing leaves room for interpretation and could result in inconsistent application or auditor disputes. - Application requirements (ARs) that use "may" should be removed, as "may" implies voluntary action, which contradicts the stated objective of eliminating voluntary disclosures. Clear, mandatory language is essential to ensure consistency and enforceability across undertakings.			
Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We strongly support excluding the NMIG from the Delegated Act to ensure it is clearly interpreted as non-mandatory, in order to prevent an unintended increase in reporting burden. The NMIG should remain a helpful reference tool for preparers, not a regulatory requirement. This connects with the need of moving all voluntary and non-mandatory data points into a separate document to improve the clarity of the standards.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We strongly support that disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). What is more, we fully support other relief measures introduced by EFRAG: - included in [DRAFT] ESRS 1 section 5.4 as regards acquisitions and disposal - included in [DRAFT] ESRS 1 paragraph 92 allowing reporting undertakings to exclude joint operations over which they don't have operational control for the calculation of certain environmental metrics. However, additional alignment with financial reporting (i.e. IFRS 11-Joint arrangements) could be achieved. Following the financial consolidation method would improve the consistency of the information reported by companies. We would also like to draw attention to confusions and unclarities when reporting confidential information, especially justifying its omission to auditors.			
Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	We fully support the relief measures as regards the use of reasonable and supportable information that is available without undue cost or effort as it will significantly reduce the administrative burden on reporting undertakings. We believe this provision should be permanent and not subject to a time limit as proposed by some EFRAG SRB members (as mentioned in paragraph 76 of the [DRAFT] Basis for Conclusions. In the case of large Capital Groups, some information may not be available for a long time, not just a year or two, because it requires a complete remodeling of the current method of data collection. We particularly support ESRS 1, paragraph 92, which acknowledges the practical limitations of data availability in joint operations where the undertaking lacks operational control. Allowing the exclusion of such operations from environmental metrics is a pragmatic solution that enhances reporting feasibility and avoids duplicative or misleading disclosures. Similarly, we endorse ESRS 1, paragraph 91, which permits the use of metrics based on a partial scope of calculation. This flexibility is vital in the early years of reporting, when data systems are still evolving. Importantly, the requirement for companies to disclose the scope limitations and outline plans to improve data coverage ensures transparency and demonstrates continuous progress.			
Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	We would like to recommend the wording included in OPTION 2, since it better addresses our concerns on the sensitivity of the information disclosed and on the excessive burden in calculating quantitative disclosures. The issue of anticipated financial impacts is extremely difficult. Advisors themselves don't yet know how to approach the topic, and preparing for the disclosure of such data can take years for large capital groups. What is more, such flexibility is necessary given the significant legal risks which are particularly acute where disclosures include financial data not reported in official financial statements and not reliably estimable. Such disclosures should fall under the remit of financial boards to ensure consistency with financial reporting requirements. If disclosure requirements are maintained, they should focus on qualitative information only, providing general indications of the time horizon and type of effects (e.g., financial position, performance, cash flows). Anticipated effects must be consistent with those considered for current financial effects. Crucially, inherent effects should not be required, as these are theoretical, not grounded in reasonable and supportable information, and risk misleading external users.			
Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	It is crucial not to require disclosure 'before considering adaptation/mitigation actions', as this does not reflect how business strategy is defined and adds little value for users. Mitigation measures are typically embedded within corporate strategy, structural in nature, and linked to multiple risks. Attempting to calculate hypothetical monetary amounts before mitigation is both overly complex and unreliable, producing figures that are neither estimable nor dependable. For less technical readers, such disclosures could be misleading, especially since they are not recognized in the financial statements. We therefore strongly recommend limiting anticipated financial effect disclosures to qualitative information only. As a suggestion, the IFRS S1 reliefs in § 38 and § 39 should be integrated in the ESRS: 38. An entity need not provide quantitative information about the current or anticipated financial effects of a sustainability-related risk or opportunity if the entity determines that: (a) those effects are not separately identifiable; or (b) the level of measurement uncertainty involved in estimating those effects is so high that the resulting quantitative information would not be useful (see paragraphs 77–82). 39. In addition, an entity need not provide quantitative information about the anticipated financial effects of a sustainability-related risk or opportunity if the entity does not have the skills, capabilities or resources to provide that quantitative information.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	We fully support the change that the datapoint reduction resulted in the elimination of 7 "shall" datapoints described in Basis for Conclusions (BfC) (Chapter 4, Lever 6). Also, we support the changes introduced to enhance interoperability with the ISSB standards, especially the harmonization of the reporting boundary for GHG emissions.			
Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	We support the deletion of mandatory datapoints as proposed by EFRAG as it will reduce the administrative burden on reporting undertakings and will enhance the effectiveness of sustainability reporting under the ESRS.

Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	We do not agree on adding new datapoints, especially when these datapoints were assessed as voluntary after a thorough drafting process of the ESRS and should remain as such since their content, and therefore their relevance, have not changed.			
Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	The introduction of new mandatory datapoints contradicts the stated objective of simplifying the standards. Organizations are already facing significant challenges in collecting and reporting the extensive information required under ESRS. Adding further datapoints - such as on microplastics, critical raw materials, or waste - will increase the complexity of the process and burden companies, many of which are still in the early stages of building robust reporting systems. This challenge is particularly acute in the downstream value chain, where companies have very limited visibility and control over how products are used after leaving their facilities. Obtaining reliable data from customers, distributors, or end-users is in practice extremely complex, and in many cases simply not feasible. Instead of introducing these requirements as mandatory at this stage, we strongly recommend that such topics are first developed and tested within non-mandatory guidance (NMIG). This would allow companies to experiment and progressively prepare their reporting systems. Imposing new obligations undermines the principle of burden relief and seriously threatens the feasibility of the entire reporting framework, especially for sectors with complex and fragmented value chains.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I disagree				
Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	We are concerned that the revised workforce disclosures introduce a level of detail that is not necessarily relevant or decision-useful, particularly for multinational companies. The requirement to disclose employee numbers per country with more than 50 employees may add little value, as in practice these employees may be concentrated in a single region (e.g., Europe) without enhancing the reader's understanding of global workforce distribution. A more representative and meaningful approach would be to return to the previous version of the disclosure, which required companies to report on countries where there are more than 50 employees representing at least 10% of the total workforce. This ensures focus on material geographies while avoiding unnecessary granularity. We also recommend removing the requirement to disaggregate employees by contract type (permanent, temporary, non-guaranteed). While well-intentioned, this requirement offers limited value to users and creates disproportionate complexity for preparers. Contract categories are defined differently across jurisdictions, leading to inconsistencies and undermining comparability. Moreover, workforce composition often fluctuates throughout the year, particularly in industries with seasonal demand or project-based work, which reduces the reliability of such disclosures.			
Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree				
Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	We agree with the deletion of that voluntary datapoint. However, [DRAFT] DR S1-15 still requires the undertaking to disclose the percentage gap in pay between its female and male employees and the ratio between the remuneration of its highest paid individual and the median remuneration for its employees. The undertaking must also disclose the annual total remuneration ratio of the highest paid individual to the median annual total remuneration for all employees (excluding the highest-paid individual). It is still problematic because a significant amount of the top management's remuneration relies on variable income, which in turn relies on the financial results and statements; this indicator cannot therefore be calculated accurately before the certification of the financial statement, which puts its publication in jeopardy every year. Also, the preparation of these disclosures is significantly challenging for large capital groups with numerous subsidiaries. This would require having data on the annual salary of each employee of the group, which would have to be collected outside the HR and payroll system. Obtaining such data would be also difficult in the context of the EU data protection law, as it is only available to the employer at subsidiary level.			
Survey	ORLEN S.A.	Preparer (non-financial preparing a sustainability report)	Poland	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		On value chain reporting, we respectfully request that EFRAG consider limiting the scope of the impact materiality assessment to entities with which an undertaking has a direct contractual relationship. For large multinational organizations, value chains are highly complex and global in scope. Tracking and assessing impacts beyond direct contractual partners presents substantial practical, operational, and methodological challenges, particularly given the absence of consistent data availability and supplier transparency. In many cases, undertakings lack the leverage to influence or collect reliable information from actors further down the chain, resulting in disclosures that are burdensome to produce yet incomplete or inaccurate in practice. Also, it is important that the ESRS are properly translated into other languages by ESG experts in order to minimise errors and interpretational confusion.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	11. DMA simplification → Partially agree Good on clarity/top-down option; risk of under-reporting unless expectations for documentation and stakeholder input are explicit.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	12. "Gross vs net" guidance → Agree Assessing potential impacts gross prevents "we manage it well, so it's immaterial" logic; keep, but add examples by sector.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	13. Readability & connectivity → Agree Exec summary + appendices help users; insist cross-references to financials and capex pathways.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	14. ESRS2 & topical standards restructure (PAT) → Partially agree Less prescriptive is fine, but don't weaken Policies-Actions-Targets linkage to material IROs; require traceability from IRO → PAT → metrics.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	15. Clarity/accessibility → Agree Clear split mand./non-mand. reduces checklist behaviour.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	16. NMIG role → Agree Keep outside Delegated Act; warn auditors not to treat NMIG as de-facto mandatory.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	17. Burden reliefs overall → Partially agree Useful, but risk of data gaps; tie reliefs to improvement plans and auditable timelines.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	18. Data-quality relief (partial scope) → Partially agree Allow partials with a time-bound ramp-up (e.g., scope ↑ annually) and quantified coverage %; no open-ended use.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	19. Anticipated financial effects → Option 1 Keep quantitative info with guardrails; otherwise investors can't price transition/physical risks.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	20. E1 financial-effects paras 40–42 → Partially agree Simpler, but ensure scenario, time-horizon and balance-sheet/cash-flow channels remain explicit.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	21. Interoperability with IFRS S1/S2 → Agree Financial-control boundary is a big win; avoid extra reliefs that break alignment.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	22. Datapoint reduction → Partially agree OK if critical GHG, transition plan, and value-chain metrics remain intact; watch loss of decision-useful PAT details.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	23. Six "may" → "shall" → Agree Targeted upgrades improve clarity.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	24. Four new mandatory DPs → Agree If they close genuine decision-useful gaps.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	25. Fair-presentation emphasis → Agree Supports materiality and reduces boilerplate; provide examples to reduce litigation fear.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	26. FI absolute targets exception → Disagree Need intensity + absolute; intensity alone can mask rising financed emissions.

Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	27. S1 country thresholds → Agree Top-10 approach is more decision-useful; burden is manageable.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadequwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	28. Non-EU adequate wages → Partially agree Align with ILO is good; require which prong used and encourage reputable living-wage datasets earlier in the hierarchy.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	29. SFDR PAI incorporation → Partially agree Avoid duplication; ensure remaining PAIs are fully covered and traceable.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	30. E4 AR26 biodiversity targets → Partially agree Update with SBTN-aligned metrics (pressures, state, response) and area/condition quality.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	31. S1 adjusted gender pay gap deletion → Disagree Keep adjusted gap (by category/country) for management action; unadjusted % alone misleads.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree	32. G1 payment practices → Partially agree PAT is fine, but add a simple KPI (e.g., % invoices paid ≤30/60 days) to protect SMEs.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Simplification helps; ensure guardrails on reliefs, time-bound data-quality improvements, and strong ISSB interoperability.			
Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Simplification helps; ensure guardrails on reliefs, time-bound data-quality improvements, and strong ISSB interoperability.

Survey	Birkenstock Group B.V. & Co. KG	Preparer (non-financial preparing a sustainability report)	Germany	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Why this helps CO_2 in practice: Better interoperability (ESRS→ISSB) → lower cost to report once, freeing capacity for actual abatement. Clear IRO→PAT→Metrics chain → capital shifts to low-carbon options. Risks: unlimited reliefs or weaker PAT detail → less pressure to decarbonise. Hence the guardrails above.			
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	Chapter 3 is clearer and better organised. The improved definition of materiality of information in Section 3.1, namely the replacement of criterion of "significance" with "understandability" of impacts provides better guidance and is aligned with the CSRD and international sustainability due diligence instruments. It also clarifies how the materiality of information interacts with (fundamental) qualitative characteristics of information criteria from Chapter 2, and with the rules concerning aggregation and disaggregation of information (e.g. para 52 on "not obscuring"). Section 3.5. Practical considerations are particularly helpful to avoid unnecessary complexity in materiality assessment. However, Chapter 3 frequently conflates 'topics' with 'impacts, risks and opportunities' ('IROs'). Para 22 is confusing when it says that information may be presented "either at the topical level or at [IRO] level". Such a dichotomy is confusing and incorrect. While topics refer to broad thematic areas, IROs are entity specific. The CSRD, as well as IFRS, TCFD, and TNFD consistently focus on the latter. Overemphasising 'topics' risks leading to generic, boilerplate disclosures that lack relevance and specificity. Chapter 3 would be clearer if it keeps the focus on IROs and plainly explain that depending on their nature and context such IROs may be defined at a general level - often corresponding to topics - and/or that information on their management may be similarly aggregated. This should be clarified also in provisions on entity-specific disclosures in paragraph 23 (and in paragraph 10 in Chapter 1) In Chapter 3.3.2, para 37 fails to mention that the purpose of financial material assessment is to not just to identify materiality information but also determine the material risks and opportunities, as required by the CSRD. In this regard, the risks and opportunities are only mentioned in the middle of para 38, making the text incoherent.			
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	It is useful that Chapter 3 addresses the question of how prevention, mitigation and remedy of impacts shall be considered in materiality assessment, but the rules could be expressed in a more simple and understandable way. Para 34 uses a very complicated language to express a simple idea that actual impacts shall be considered as they occurred during the reporting period, and that their ex-post remediation is not relevant. We welcome and stress the importance of the clarification that the potential impacts which require significant ongoing preventative or mitigation efforts shall be considered gross. Without such clarification, it would be in theory be impossible for companies to report on how they manage such issues. In this regard, it would be helpful to refer to the materiality of information filters to provide companies with further guidance on how to distinguish such significant efforts from common practice and compliance measures. The table provided in Appendix C provides more detailed information, which it would be helpful to integrate directly into the main body to ensure clarity and consistency.			
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	The proposed changes are meaningful. We would like to bring the attention to para 113, which we find hard to understand: "113. If the description of the material impacts, risks and opportunities prepared in accordance with [Draft] Amended ESRS 2 IRO-2 is not presented alongside the respective policies, actions and targets, the undertaking shall make explicit which policies, actions and targets relate to which material impacts, risks, or opportunities, in accordance with paragraph 22." It is not clear to us what the reference to para 22 is meant to imply. Para 22 addresses the issue of appropriate aggregation or disaggregation of information on material impacts, risks and opportunities and their management. But it doesn't set any rules regarding the location of such disclosures depending (or not) on the level of aggregation.

Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We welcome the removal of the duplications between the cross-cutting and topical standards. We support the emphasis on general disclosure requirements. Likewise, many PAT provisions in the topical standards had a character of examples or guidances rather than datapoints. Additionally, the preservation of the 5-part and 4-part architecture of the environmental and social standards respectively is welcome and important in providing a structure and language for preparers to navigate the issues, communicate internally with colleagues and organise their disclosures with regard to social issues. The environmental standards similarly provide an architecture that supports this kind of navigation, and which are retained, including with the specific metrics under each of standards E1 to E5. The architecture should be complete and equivalent across the standards However, we have two critical concerns. First, the original DR in environmental standards concerning screening of sites in materiality assessment were replaced by an application requirement to ESRS 2 IRO-1. This in effect makes transparency on this aspect optional. Consideration of local context is a key element of an appropriate materiality assessment. This should be both recognised in Chapter 3 of ESRS 1, and in ESRS 2 IRO-1, which should include an explicit datapoint on how the undertaking screened its locations and value chains. We welcome that E standards provide a clearer reference on the importance of disaggregation of disclosures, but this can only be done well if locations are properly screened. Second, we strongly recommend adding an explicit reference to the disclosure of relevant, entity specific metrics directly in S standards. The fact that S2, S3 and S4 do not include any metrics and the anticipated sectoral standards which would have provided such metrics will not be adopted, shift the expectations for disclosure of metrics for S topics to entity-specific disclosures.			
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We support the proposed changes. We agree with the removal of 'may disclose' elements, because their status has been causing confusion. However, they do not need to be all removed to NMIG. Where they provide useful examples of disclosures, they could be included directly in the standards as "examples". This is particularly the case for the topics for which the reporting practice is evolving, such as Biodiversity and ecosystems. This would make it easier for first-time preparers to understand what kind of information is likely to be relevant and provide a basis for the standardization of metrics. Having to consult another document, such as NMIG, is adding an unnecessary hurdle. The language and therefore understandability of the standards have been considerably improved, however in ESRS 1 especially there is still much to be done in this regard.			
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The standards are not clear in terms of what the combined effect of the reliefs is and how the reliefs are meant to interact. Interpreting and applying these reliefs independently of each other open doors to abuse and omitting material information, significant differences in reporting practice. Reporting of metrics is subject to a combination of undue cost and effort and lack of data quality reliefs. But the standards do not put these two reliefs in proper context and do not include any explicit requirement and timeframe for companies to improve the coverage and quality of data. This is exacerbated by the relief which unconditionally allows exclusion of joint operations. If the environmental metrics concerning such operations are material, then the standards should incentivise their eventual disclosure. The undue cost and effort and lack of data quality reliefs already provide sufficient flexibility in this regard. Similarly, there is a lack of coherence among the directions of the reliefs related to financial effects, i.e., information which is essential for understanding of the risks and company's ability to overcome them. The limitation related to the announced investment plans focuses the disclosures on effects which are easier to assess and therefore quantify, yet the standards also propose reliefs that enable omitting quantitative disclosures. We broadly agree with the relief provided in ESRS 1, para 90, which allows for calculation of metrics exclusion of activities that are not significant drivers of the IROs. However, the application of this option must be clarified for specific environmental and social metrics which are standardised in the ESRS. For instance, the GHG Protocol's completeness principle explicitly warns against misapplication of materiality criteria in this regard. Similarly, for S1 workforce metrics, such as characteristics of the employees and non-employees, such exclusions are not appropriate.			
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	These combined reliefs should clearly require the undertaking to improve the coverage and quality of the data needed to meet ESRS requirements. For the metrics concerning own operations and/or metrics standardised directly in the ESRS, this should be subject to clear time limitation. For other metrics, improvements over the years should be also explicitly required, subject to undue cost and effort relief.			
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	The ability to estimate financial effects is critical for the undertaking's ability to integrate sustainability into its business strategy considerations, planning and risk management. It is also key for the determination of financial materiality, including in terms of overreporting topics as financially material. Resigning on this ambition is at odds with the objective of putting sustainability reporting on the same level as financial reporting, the integration of both, and ultimately overcoming the tragedy of horizons. We find Option 1 unnecessarily extensive, and lacking time limitation, but broadly acceptable. We disagree with the assertion made in the question that it "[d]ifferent from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources ". In this regard, the new proposed ESRS include the undue cost and effort relief which seems to account for such a situation. With respect to Option 2, we don't find it justifiable to go beyond the IFRS relief. One of the most strongly voiced arguments from stakeholders who called for simplification of ESRS was that, as a matter of principle, ESRS must be aligned with the IFRS except where CSRD or other EU legislation require otherwise. Abandonment of this principle seriously undermines prospects of building a global baseline which both the EU and the ISSB support, and which is an important part of building a level playing field for the EU companies.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	Reliefs should not go beyond those set in IFRS. Going further would undermine the objective of setting a global baseline for ESG reporting, which is important for achieving a level playing field for EU companies in a global context. The undue cost and effort relief outlined in ESRS 1, para 87-89, is a powerful relief, which addresses virtually all situations where the undertaking may encounter practical obstacles. Explicit emphasis on fair presentation, combined with the strengthened focus on the use of materiality of information filter, provide companies with an increased flexibility in determining meaningful content of their sustainability statements. It marks a further move away from compliance-based to principle-based approach. However, such changes imply increased responsibility for the undertaking. Implementing further reliefs would undermine this responsibility and open the doors to abuse.			
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	The number of datapoints in each standard represent the minimum necessary to ensure cohesive disclosure requirements, and consequently basic comparability and quality of the actual disclosures. We have not identified any instance where ESRS would include exorbitant requirements, considered common practice and internationally recognised reporting standards and frameworks such as IFRS, GRI, or TNFD. ESRS are generally more concise and less demanding. Introducing further reductions (while keeping the coverage of all ESG factors as required by the CSRD) would create serious quality gaps between the ESRS disclosures and those based on the standards.			
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We agree with these changes, noting that the suggested changes do not add a new burden. This is particularly the case for the water-related metrics. In order to disclose the water consumption, the undertaking already has to calculate withdrawals and discharges, and such calculation and therefore the underlying data is subject to the assurance. Moving these implicit datapoints to the forefront as explicit data points makes the disclosure requirement clearer, compared to the previous ESRS where some of these datapoints were framed as "may disclosures". Whether or not these individual datapoints are to be disclosed is correctly subject to materiality of the information filter applied by the undertaking.			
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We agree with these changes, noting that the suggested changes do not add a new burden. E2-4 on secondary microplastics is not a new datapoint, as correctly pointed out in the Rationale above. We do not understand why it is included in this question, as such.			
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	ESRS, being based on the materiality principle, the CSRD requirement to disclose impacts, risks and opportunities and their management, and the general principles of the Accounting Directive, has already been subject to a fair presentation regime. Making it explicit helps to clarify it. It provides companies with clarity on the discretion and judgement, as well as related safeguard, they are expected to exercise when applying the standards.			
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We recognise the complexity of recalculating absolute values and acknowledge that financial institutions often manage GHG performance using intensity-based approaches. However, the global carbon budget is defined in absolute terms. For this reason, it remains essential that even financial institutions disclose absolute targets to assess how their strategies align with the economy-wide transition to net zero. Absolute targets are relevant for users of sustainability statements and for understanding the real-world climate impact of financed activities. While intensity measures provide insights into efficiency, they can mask rising absolute emissions in growing portfolios or sectors. Absolute values, by contrast, give a clear signal of whether institutions are contributing to the necessary 90–95% global reduction in emissions by 2050, with steep cuts by 2030. Both approaches rely on similar underlying data, and estimation challenges are not unique to the financial sector. Granting an exemption would also undermine fairness in a sector-agnostic standard. Other industries could equally argue for exceptions based on their own difficulties, reducing comparability across sectors. Moreover, absolute financed emissions are already recognised in existing standards and regulations: the SBTi financial sector net-zero standard, the UNEP FI/NZBA recommendations, and EU SFDR all require or encourage absolute emissions disclosure. Exempting banks would risk misalignment and reduce the usefulness of reported data for stakeholders, including asset owners who depend on it for their own disclosures.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	The new threshold is simpler and clearer, and therefore easier to apply. It also sets a clear cap. Any potential increase of breakdowns of the disclosed information is negligent in terms of added burden.			
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	This should be addressed through revisions to para AR 22. The methodology presents four key problems: 1.It undermines the objective: the methodology for reporting on whether all employees earn an adequate wage should not include an option that is tied to the generally much lower standard of the legal minimum wage 2.It is discriminatory. The disclosure would have companies apply a lower standard to their employees outside of the EU than they apply to those inside the EU. 3.It is complex for companies: The methodology would require companies themselves to assess whether minimum wages in each country align with the ILO's wage-setting principles, and whether living wage benchmarks align with the ILO's principles for estimating living wages. 4.It undermines comparability of reports: If they apply these different standards for reporting on adequate wages depending on the location of employees, the data is not comparable. Two key changes are therefore needed: •The methodology for reporting on adequate wages should measure actual wages against an adequate/living wage for all employees not only those within the EU. In particular, for employees outside the EU, the methodology should allow employees' actual wages to be measured: oagainst the local legal minimum wage only when this is set in line with the ILO principles on estimating living wages; or oagainst living wage estimates that are set in line with ILO principles on estimating living wages. •Companies should be able to rely on local legal minimum wages or living wage estimates when the authorities or organisations that set them provide public evidence of their alignment with the ILO principles for estimating living wages. This will avoid companies' having to make this assessment themselves.			
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	We welcome the fact that multiplication of datapoints was removed. The new, simplified framework makes it easier for companies to report on these SFDR-related matters in a way that corresponds to how their policies are set. For users, this consolidation makes it easier to locate the relevant information.			
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	Measurable targets related to biodiversity and ecosystems shall be set and disclosed according to the guidance and examples given by relevant global frameworks, such as SBTN (Step 3 - Measure, Set & Disclose Targets), TNFD (component P1 and P2 & Annex 5, sector guidance and guidance on Target Setting) & resources by World Economic Forum Nature-Positive Transitions.			
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	Our proposal is to not include such datapoint, but instead provide a paragraph in the application requirements, explaining that the adjusted pay gap is an important entity-specific information, which is often necessary to contextualise and enable understanding of the information provided by the unadjusted pay gap. Further this AR could remind the undertakings that the unadjusted pay gap needs to be appropriately disaggregated. Unadjusted and adjusted perspectives on pay gap have different purposes. The unadjusted pay gap - appropriately broken down by countries or areas of operations in line with ESRS 1 - provides general context and the information on how the undertaking is affected by systemic drivers of gender inequality. The adjusted pay gap is primarily an entity-specific disclosure. It is particularly relevant for complex companies to better understand where and how the pay gap manifests, and what are the specific drivers of it. There is no one 'standardizable' way to adjust the pay gap calculation. Such adjustments must consider the undertaking's specific context and circumstances and avoid 'overadjusting'. If the calculation controls for every source of difference between males and females in the workforce, then it would obscure the pay gap and its causes. Therefore, including a datapoint - whether mandatory or voluntary - on adjusted pay gap in the standards is problematic, because it is impossible to provide a standardised methodology. On the other hand, for many companies' information on adjusted pay gap is likely to be material, and therefore such information should be provided.			
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	The removal of paragraph 14 can be easily compensated by adding a reference to SMEs in the description of the topics in ESRS 1, Appendix A, and in ESRS G1, paragraph 4. The removal of datapoint originally located in para 33(a) concerning average days it takes to pay an invoice, does not seem to be necessary for the reduction of burden. The undertaking would still need to collect this data to be able to meet the other requirements, in particular the calculation of the % of its payment aligned with its standard payment terms (in para 20(a)).

Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	ESRS 1: We are concerned about the concurrent effect of various reliefs. We are also concerned about the unintended confusion caused by a rather confusing explanation of the relationship between impacts, risks and opportunities on one hand, and sustainability topics on the other.			
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	ESRS S1, S2, S3, S4: We would recommend adding an explicit reference to GDR-M (metrics) in the Disclosure Requirements concerning targets, in S2, S3 and S4, that is the standards that lack any metrics. In S1, we have strong reservations about the newly suggested methodology for adequate wages outside of the EEA. It would lead to misleading disclosures and add burden for companies.			
Survey	Jaekel Consulting	Consultant (including software vendor)	Sweden	33.S_4.	ESRS S4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. I agree				
Survey	NomoGaia	NGO	United States	35.S1-1.	Do you agree with the amendments of this chapter?	I agree		S1	Disclosure Requirement S1-1 - Policies related to Own workforce	
Survey	NomoGaia	NGO	United States	35.S1-2.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	See specific comment on Excel Spreadsheet.	S1	Disclosure Requirement S1-2 - Engagement with own workforce and workers' representatives, existence of channels for own workers to raise concerns or needs and approaches to remedy	
Survey	NomoGaia	NGO	United States	35.S1-3.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	This is one instance where lumping together material risks, implacts and opportunies is not helpful. Disclosure of impact key actions should be specific and detailed. Human rights risk reporting is universally general and vague.	S1	Disclosure Requirement S1-3 - Actions and Resources related to Own workforce	
Survey	NomoGaia	NGO	United States	35.S2-1.	Do you agree with the amendments of this chapter?	I agree		S2	Disclosure Requirement S2-1 - Policies related to value chain workers	
Survey	NomoGaia	NGO	United States	35.S2-2.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	There should be required disclosure on how the undertaking communicates the existance of, and access method to, its human rights grievance mechanisms. Many companies and institution have such mechanisms but they do not sufficiently publicize them to make them know and so used. Also, the UNGP 31 Effectiveness Criteria are good general principles but they do not state criteria that can be used to ensure that a grievance mechanism is effective or porvides effective remedy.	S2	Disclosure Requirement S2-2 - Engagement with value chain workers, existence of channels for value chain workers to raise concerns or needs and approaches to remedy.	
Survey	NomoGaia	NGO	United States	35.S2-3.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	This is another instance where lumping together risk, impacts and opportunies is counter productive. Key actions taken in respose to negative human rights impacts need to be specifically disclosed as do remedies.	S2	Disclosure Requirement S2-3 - Actions and resources related to value chain workers	
Survey	NomoGaia	NGO	United States	35.S2-4.	Do you agree with the amendments of this chapter?	I agree		S2	Disclosure Requirement S2-4 - Targets related to value chain workers	

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	NomoGaia	NGO	United States	35.S3-1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	There should be a required disclosure on how the undertaking makes its human rigths grievance mechanisms know to potential claimants.	S3	Disclosure Requirement S3-1 - Policies related to affected communities	
Survey	NomoGaia	NGO	United States	35.S3-2.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	If an undertaking takes the position that it has recieved FPIC from an indigenous people it should disclosure that contention and describe the project or actions consented to. This is abolutely key to allow FPIC claims to be publicly addressed.	S3	Disclosure Requirement S3-2 - Engagement with affected communities, existence of channels for affected communities to raise concerns or needs and approaches to remedy	
Survey	NomoGaia	NGO	United States	35.S3-3.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Key actions for human rights impacts need to be specifically describd.	S3	Disclosure Requirement S3-3 - Actions and resources related to affected communities
