Survey	Insurance Europe and Insurance CFO Forum	Association of financial institutions	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	We recognise efforts to reduce reporting burdens while maintaining transparency, alignment with the Green Deal, and interoperability with ISSB standards. With targeted improvements, the amendments could better balance relief and transparency. We welcome the "undue cost or effort" exemption, which eases burdens for complex data collection, and the flexibility for newly acquired subsidiaries, which reflects operational realities and clarifies consolidation timing. To ensure legal certainty and prevent divergent interpretations, it should be explicitly confirmed that applying these reliefs within the ESRS framework does not compromise the fair presentation of reported information. It is also essential that these reductions of reporting burdens are foreseen as permanent. We support removing the systematic preference for direct value chain data. Section 5.2 should clarify that upstream and downstream information only applies when performing materiality assessments, not to metrics disclosure. As drafted, §60–67 and AR28 could require collection across all metrics, imposing excessive burdens. The principle on direct data (§62) should be nuanced to avoid creating a hierarchy over estimates. For financial institutions, managed assets—particularly off-balance-sheet fiduciary assets—pose challenges because clients control investment decisions, risks, and sustainability choices. Reporting these assets could impose undue data collection costs. We suggest excluding these managed assets from the CSRD scope and making their impact reporting voluntary. For insurers and financial institutions, reliable Scope 3 data are difficult to obtain. Extending the partial data coverage relief (§91) to E1-8 would support practical implementation while maintaining the Green Deal's objectives. We also recommend extending the relief for excluding joint operations without control from environmental metrics beyond E2–E5 to E1, given similar data constraints, while clarifying that the choice of an operational control approach remains optional.			
Survey	Insurance Europe and Insurance CFO Forum	Association of financial institutions	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	We support the introduction of the 'undue cost or effort' relief and welcome its consistent application across all reporting areas, including the identification of material IROs and the calculation of metrics. Furthermore, we agree that flexibility without a fixed time limit provides companies with realistic pathways to improve data quality progressively, especially in complex or data-scarce contexts. We support the flexibility introduced by paragraph 91 but recommend clarifying that, in cases of limited data availability, value chain metrics may be entirely or partially estimated, rather than just "partially estimated." This would better reflect preparers' realities and align with other existing international frameworks. The relief in paragraph 91 of ESRS currently excludes GHG emissions, despite these being highly uncertain, costly, and often based on unreliable or unavailable data. As drafted, full coverage would be required regardless of feasibility or data quality, potentially incentivizing low-quality estimates rather than high-quality, verified data for management purposes such as target setting. Regulation should emphasise accuracy and reliability, limiting mandatory estimates to cases that enhance understanding of the company's activities. We fully support the relief concept in paragraph 91 and strongly call for including GHG emissions. In case an operational control is chosen, paragraph 92 is presented as a relief but appears to establish disclosure requirements for joint operations with operational control under ESRS E2–E5, contradicting the defined consolidation scope.			
Survey	Insurance Europe and Insurance CFO Forum	Association of financial institutions	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	We acknowledge and support the changes to anticipated financial effects but believe that Option 1 raises significant concerns, including estimation uncertainty, increased litigation risk, and the lack of standardised methodologies and comparable data to ensure consistent disclosures. Such forward-looking and sensitive information is particularly difficult to report at present and may give a false impression of certainty. We therefore recommend adopting Option 2, as it offers a more balanced and realistic approach. It recognises the practical challenges, legal risks, and audit impracticability of forward-looking disclosures and allows time for the development of reliable data and methodologies. We also note that Option 2 allows for the voluntary disclosure of quantitative information, so that ISSB interoperability is still achievable. Should Option 1 be adopted, it should be strictly limited to climate topics and made fully interoperable with ISSB Standards to avoid unnecessary additional burden. This means removing the specification that relief applies only when no reasonable and supportable information from business plans is available, as even minor wording differences create extra work, and including an explicit provision allowing undertakings to omit quantitative information where they lack the skills, capabilities, or resources to provide it. In addition, implementation should be phased in over the long term, and only as sufficient data and methodologies become available, to avoid imposing significant additional effort on companies. Judgement on the use of relief should remain at the undertaking's discretion. While larger undertakings may typically have the necessary capabilities, there will be cases where such preconditions are not met due to the complexity and immaturity of these disclosures.

Survey	Insurance Europe and Insurance CFO Forum	Association of financial institutions	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	We welcome and appreciate the effort to simplify the DR on Anticipated Financial Effects, particularly through the reduction in scope from the previous E1-9. However, further adjustments are needed. If Option 2 is adopted, the datapoints related to financial effects in the topical standards should be modified accordingly to reflect their different nature. Under Option 2, DR and AR E1-11 should be voluntary provisions and focus on qualitative rather than quantitative disclosures across all topics. Also under Option 2, disclosures should relate to assets as part of the company's own operations and not to assets in the value chain, such as financial and non-financial investments. Regarding paragraphs 40 and 41, if Option 1 is adopted, the requirements should be aligned with the DMA approach, deleting the phrase "before considering climate change mitigation actions." Paragraph 40(b) is challenging because 'key assets' and location details are ambiguous, potentially leading to inconsistent reporting. For 41(c), while narrowing the scope to "real estate used as loan collaterals" is positive, breaking down these assets by energy-efficiency class may not provide material information. The revised wording in 41(e) remains ambiguous regarding whether revenue figures should be reported gross or net of mitigation actions; a consistent approach would be to include the effect of mitigation actions already taken while excluding possible future actions. Without clarification, this could lead to inconsistent interpretations and reduced comparability.			
Survey	Insurance Europe and Insurance CFO Forum	Association of financial institutions	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We welcome reliefs, including the "undue cost or effort" provision, which offer flexibility without reducing transparency. Allowing qualitative disclosures or ranges where quantitative data is unavailable balances practicality with investor needs. Streamlined language, removal of redundant datapoints, and partial alignment with IFRS and the GHG Protocol reduce complexity and reporting burdens while maintaining quality. E1 AR 19 and AR 20 (para. 32) set the financial control boundary of the GHG Protocol. When this fails to convey a fair presentation, undertakings should also disclose scope 1 and 2 emissions using the operational control approach. Reporting both boundaries may create redundant metrics and complicate fair presentation, so flexibility is needed to align with EC objectives. Financial consolidation should not automatically define operational boundaries, as this could misrepresent control over leased or sub-leased assets. Requiring parallel disclosure under both financial and operational control would confuse stakeholders; allowing one method with clear justification is more practical. We suggest clarifying that all assets held for investment purposes—not just leased assets—should be treated as downstream value chain (scope 3) for GHG emissions, in line with ESRS 1 paragraph 70, rather than included in scope 1 or 2. Current wording risks auditors applying this only to leased assets. We also note remaining interoperability issues with the GHG protocol. Under IFRS S2 and the GHG Protocol, undertakings may choose either financial control or operational control to define GHG boundaries. By contrast, ESRS E1 AR 18-20 currently diverge and effectively push a financial-control approach. We therefore call for the same flexibility as IFRS S2 and the GHG Protocol. This is especially important for insurers, where financial control often exists without operational control due to business models and prudential rules; therefore, requirements should reflect actual control over investments – or align fully with IFRS S2.			
Survey	Insurance Europe and Insurance CFO Forum	Association of financial institutions	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree				
Survey	Insurance Europe and Insurance CFO Forum	Association of financial institutions	Belgium	22.ESRS2	Comments on deleted datapoints in ESRS 2	I disagree	We welcome the reduction in length of the revised ESRS, as well as EFRAG's efforts to clarify interactions between ESRS 2 and the topical standards – particularly on PAT. We also support the prioritisation of quantitative datapoints over lengthy narratives and the clearer distinction between mandatory and voluntary requirements. However, the Log of Amendments indicates that many DPs were moved, merged, or amended rather than deleted. In addition, a shorter standard does not necessarily equate to a lower reporting burden. It is essential that the proposed reduction is real and effective; therefore, burden should be assessed by the weight of datapoints, not merely by their count. Initial analysis suggests limited relief, with extensive rewording and restructuring creating interpretation and implementation challenges for wave-1 undertakings, potentially undermining the grandfathering objective. In addition, significant concerns remain regarding newly introduced concepts and methodologies, which may, in fact, increase the reporting effort. To consolidate the benefits of the revision, three adjustments are recommended. First, complete the removal of duplication by deleting overlapping DPs across ESRS 2 and the topical standards; while progress on PAT is welcome, the PAT DP should also be removed from the ARs. Second, DPs for which no robust, shared methodology or data exists should be deleted. Lastly, it should be ensured that reductions are substantive rather than nominal. Notably, we should avoid shifting complexity from standards to guidance, by simply relocating DPs to NMIG which should instead be deleted altogether.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Insurance Europe and Insurance CFO Forum	Association of financial institutions	Belgium	23.	Six datapoints exceptionally moved from “may” to “shall” In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, “may disclose” datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from “may” to “shall” subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	We don't support reclassifying 'may' datapoints into 'shall' datapoints or adding any new ones, we particularly oppose the introduction of new metrics in G1. These changes would represent a significant increase in reporting burden and contradict the Commission's simplification mandate. If these datapoints are retained, we note that: ESRS E4: While disclosure is only required if a plan has already been publicly released, this risks uneven reporting across sectors and implicit pressure, especially on high-impact entities, to publish plans prematurely, before robust methodologies or guidance are available. As expectations on biodiversity transition planning evolve, requirements should remain proportionate, clear, and aligned with frameworks like the TNFD. Moreover, plans published outside the financial statements are subject to a lesser level of control and audit, so EFRAG's claim that mandatory inclusion in the sustainability statement adds no burden is misleading. Making such disclosure mandatory may even discourage companies from publishing plans at all. ESRS G1 Training: While consolidating scattered datapoints into one provision is welcome, the current approach creates avoidable ambiguities. In particular, the term "depth of coverage" in the context of training remains unclear – e.g. does it refer to the type of training or the functions included. Training requirements should therefore be clearly defined and disclosures limited to what is material (see Part 3 under G1 for details). ESRS G1 confirmed incidents: While we support transparent reporting on corruption and bribery, we do not favour quantitative metrics over narrative disclosures. Narrative information provides context on nature, scale, and remediation, while simple counts risks misinterpretation – overstating issues in companies with strong controls or understating them in those with weaker ones. In addition, the proposed quantitative datapoints are insufficiently defined and overly sensitive. However, if a count is required, it should be limited to incidents confirmed by judicial or equivalent rulings.			
Survey	Insurance Europe and Insurance CFO Forum	Association of financial institutions	Belgium	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new “shall” datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	We oppose the introduction of new mandatory datapoints. The revised ESRS should prioritise simplification, and adding new mandatory requirements runs counter the European Commission's mandate. However, if these datapoints are retained, we recommend the following: Regarding ESRS 2 BP-1, we acknowledge the consolidation of multiple disclosure requirements into a single statement of compliance. While we appreciate the streamlined 'comply or explain' approach to only state deviations from the ESRS 1 General requirements provisions, we find it useful to provide that information in the relevant context and to not list all the details in the first section. However, we suggest amending BP-1 to provide clearer guidance on the definition of "own operation", by, for instance referring to paragraph 70 of ESRS 1 (regarding lessor and lessee). To further improve clarity and avoid redundancy, we suggest removing the datapoint on value chain coverage ESRS 2 (§4b), since Section 5.2 of ESRS 1 already adequately addresses value chain treatment within sustainability reporting, limiting it to the undertaking's scope of responsibility for PAT and generally excluding it for metrics. This datapoint overlaps with existing provisions (e.g., SBM 3, IRO 1, PAT GDR). Additionally, we advise against using lettered lists (a, b, c, etc.) for provisions, to prevent confusion or misinterpretation as separate datapoints or tagged disclosures. Furthermore, we propose deleting BP-2 on phasing in related material topics. Instead, disclosure of phased-in material topics (§6) should be relocated to IRO 2 where applicable, and the specification of phased-in provisions and minimum PAT content (§7) should be aligned with the General Disclosure Requirements (GDR) or ESRS 1 Chapter 10 on transitional provisions. This would better align the standard with CSRD requirements and help reduce complexity.			
Survey	Insurance Europe and Insurance CFO Forum	Association of financial institutions	Belgium	25.	Emphasis on ESRS being a “fair presentation” reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We support emphasising fair presentation (FP) in ESRS to reinforce materiality and improve decision-usefulness of information. However, the current wording risks reintroducing a compliance mindset, especially in the absence of auditing standards for sustainability reporting. Formalising "completeness", "comparability", "accuracy", and "verifiability" may lead preparers and auditors to adopt overly conservative interpretations. FP must be applicable to forward-looking or uncertain disclosures; those based on estimates, evolving methodologies, or scenario analysis. "Accuracy" and "verifiability" should not imply absolute precision. "Completeness" risks being read as exhaustiveness, conflicting with simplification and encouraging over-reporting and over-auditing; we recommend removing "complete" from the definition. FP should be defined as an overarching principle prioritising relevance and proportionality. We suggest integrating into ESRS1 the concept articulated in the Basis for Conclusions (para 169). Compliance with ESRS should be presumed to achieve fair presentation, and the framework should emphasise the reasonable, informed judgment of the undertaking. It should be clarified that FP enables both additions and omissions: decision-useful context may be added when necessary, and requirements may be omitted as an outcome of the DMA or the information-materiality filter. An explicit formulation could be included: "Where the strict application of an individual disclosure requirement would be disproportionate or not relevant to the undertaking's circumstances, the undertaking may adapt or omit such information, provided that the sustainability statement as a whole still achieves fair presentation of the undertaking's material impacts, risks, and opportunities." Additionally, the Commission should issue Q&As clarifying the application/intent of FP for auditors – avoiding burdensome interpretations–and make explicit that the sustainability notion of FP differs from financial reporting and should not be treated as identical to the ISSB's. Finally, there should be alignment with the limited-assurance context under CSRD: disclosures need not be "true" in an absolute sense, particularly for forward-looking, qualitative, or complex quantitative matters.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Insurance Europe and Insurance CFO Forum	Association of financial institutions	Belgium	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We support exempting only financial institutions from disclosing absolute GHG emissions values when intensity targets are set. This is particularly relevant for insurers, whose emissions are largely indirect. Calculating absolute values requires extensive assumptions and complex modelling, producing results with low reliability and limited value to stakeholders, which raises concerns regarding the qualitative characteristics of useful information and potential distortions due to business growth. We recommend amending the wording as follows: (a) GHG emission reduction targets for Scope 1, 2 and 3, either separately or combined, expressed as absolute or intensity-based values. The undertaking shall specify, in case of combined GHG emission reduction targets, which GHG emission Scopes (1, 2 and/or 3) are covered and, where relevant, the share related to each respective scope. The breakdown of Scope 1, 2, and 3 shall not be required if the undertaking has not set targets in this way, in line with its management approach. Furthermore, by using intensity targets, financial institutions can support sectoral transition, for example by financing companies gradually reducing fossil fuel dependence or investing in technological transformation (e.g., electrification of vehicles), without imposing artificial limits through absolute values. A key difficulty lies in interpreting portfolio intensity metrics, which can be affected by market volatility or portfolio allocation rather than actual investee emissions. Estimating future portfolio size can lower absolute financed emissions without affecting real-world emissions, risking misinterpretation. Requiring absolute emissions disclosures provides limited insight and may create unintended consequences.			
Survey	Insurance Europe and Insurance CFO Forum	Association of financial institutions	Belgium	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	We support efforts to improve the availability and comparability of country-level social data where it is relevant for users. However, we disagree with the new threshold for country-by-country disclosure in ESRS S1-5 and S1-7, as it significantly increases both the burden of global data collection and the number of data points to be disclosed. Metrics on employees are often collected primarily by operating entity rather than by country, as is the case in many companies for internal steering purposes. At the same time, an increased number of data points may reduce the readability and conciseness of the final Sustainability Statement. While the shift in threshold has the potential to improve transparency without fundamentally altering the scope of disclosures for most undertakings, it introduces methodological adjustments and additional disclosure requirements. Preparing consistent and assurance-ready disclosures—especially on collective bargaining coverage and social dialogue—may require considerable additional effort, particularly for companies with decentralised HR systems or operations across jurisdictions with varying labour regulations. We therefore encourage EFRAG to further evaluate the practical implications of this change and to consider reviewing and streamlining the wording of the standard, especially in §§5, 9, 11, 19, and 21, to eliminate redundancies and reduce the interpretative burden.			
Survey	Insurance Europe and Insurance CFO Forum	Association of financial institutions	Belgium	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	We support the objective of promoting fair and transparent wage practices and welcome the reference to international frameworks. The amended methodology for calculating non-EU adequate wages under ESRS S1 AR 22 introduces a more structured approach that recognises jurisdictional wage-setting mechanisms while aligning with global expectations on living wages. However, we partly disagree with the amended Adequate Wage benchmark outside the EU outlined in the new AR 22(b). We do not consider it the responsibility of individual undertakings to ensure that statutory minimum wages are "periodically reviewed/adjusted every two years and take into account the ILO wage-setting principles" (AR 22(b)(i)). Similarly, we disagree with the newly introduced last sentence of AR 22(b), which indicates that adequate wage benchmarks outside the EU "should take into account both the needs of workers and their families, as well as economic factors." Again, this is not a responsibility that individual undertakings can assume. Beyond these points, the proposed change does not simplify reporting and adds complexity.. Changes to permissible sources for living wage estimates require companies to reassess previously relied-upon data, while the lack of clarity on which methodology prong to apply may reduce comparability. Positioning living wage data as a fallback rather than a primary benchmark may also affect relevance in jurisdictions where statutory wages fall below adequacy thresholds. From a sectoral perspective, the disclosure requirement on adequate wages (ESRS S1 paragraph 32 and related AR) is of limited value for the insurance industry. Fair compensation is generally not a material concern in this sector, yet the proposed reporting obligation would impose significant effort and cost. Pending the outcome of the ongoing field test, we recommend that disclosure of non-EU adequate wages be made voluntary or phased in to ensure feasibility, promote consistency, and avoid misleading disclosures based solely on minimum wage data.			
Survey	Insurance Europe and Insurance CFO Forum	Association of financial institutions	Belgium	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	We support maintaining alignment between the ESRS and SFDR frameworks and welcome the careful review undertaken by EFRAG, which appropriately deleted or consolidated certain SFDR-related datapoints where information was duplicated, could be derived from other disclosures, or lacked material relevance. However, the materiality of certain SFDR PAIs remains variable in practice, and the final set of retained datapoints may still include indicators that are not relevant for all undertakings. In this context, we reiterate our broader position that alignment with SFDR should not bypass the materiality filter. Consequently, for product-level reporting, the mere presence of an SFDR PAI should not, by itself, result in a mandatory ESRS disclosure, except for an explicit indication of non-materiality where the indicator is not material to the undertaking. We also caution that several indicators, particularly in the environmental standards (E1–E5), may require complex methodologies or granular data that could challenge reporting entities, especially smaller or less mature companies. It is important to consider the forthcoming review of the SFDR, which may lead to the removal or amendment of certain PAI indicators. Any such changes should be promptly reflected in the corresponding ESRS datapoints to ensure consistency over time. This could be achieved by establishing an explicit dynamic link between the ESRS and the SFDR PAIs, allowing the standards to evolve with future regulatory developments. Certain remuneration-related datapoints (such as those in ESRS S1-16) already represent a significant reporting burden, and any amendments to the corresponding SFDR PAIs should be promptly reflected in the ESRS to avoid unnecessary complexity and duplication. Further, PAI reporting under SFDR at entity level should be removed when group-level aggregated disclosure is provided. That is, upon (group aggregate) PAI disclosure under CSRD, the Art. 4 SFDR requirement for entity-level disclosure should be deemed as complied with.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Insurance Europe and Insurance CFO Forum	Association of financial institutions	Belgium	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	We support the review of AR 26 in Amended ESRS E4, insofar as it contributes to the overall simplification of the standard and maintains a degree of methodological guidance that can assist undertakings in defining relevant biodiversity and ecosystem-related targets. However, the current target-setting guidance in AR 26 is primarily oriented towards the real economy, focusing on direct actions such as habitat restoration or number of projects/sites, which suit production sectors. For financial institutions, biodiversity targets are instead linked to portfolio alignment, sector inclusion, engagement targets, or impact reduction based on investee metrics, emphasizing the shift of capital rather than direct operational control. Given these differences, we suggest that ESRS avoid prescriptive target guidance, allowing each sector flexibility to define targets relevant to its role and impact. We also recommend EFRAG to refrain from integrating immature methodologies in the biodiversity reporting landscape in the ESRS, including science-based frameworks such as the SBTN. While we acknowledge the value of consistency with Set 1 and the simplification objectives, the fast-evolving methodological context means that more time is needed for those methodologies to mature before being integrated in the ESRS. We also note that the application requirements should retain flexibility and avoid turning into de facto mandatory expectations. AR 26 should remain illustrative and optional in nature, supporting undertakings in understanding what targets may cover without implying standardised metrics. We are concerned about excessive granularity in ESRS E4, particularly regarding site-specific disclosures, such as the location of material IROs (§20a). Such requirements can be disproportionately burdensome for companies operating across diverse jurisdictions or complex supply chains. In this context, guidance under AR 26 should promote proportionality and scalability in reporting practices.			
Survey	Insurance Europe and Insurance CFO Forum	Association of financial institutions	Belgium	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree	We acknowledge the rationale behind deleting the voluntary datapoint on the adjusted gender pay gap by employee category in ESRS S1, as part of EFRAG's effort to streamline and simplify the standards. However, while its voluntary status previously allowed flexibility, its full removal risks limiting undertakings' ability to provide meaningful and comparable information on gender pay equity. We therefore recommend clarifying in the Non-Mandatory Implementation Guidance (NMIG) that such flexibility remains available.			
Survey	Insurance Europe and Insurance CFO Forum	Association of financial institutions	Belgium	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree	We welcome the inclusion of paragraph 33(b) in the revised ESRS G1, which introduces a clear requirement to disclose standard payment terms by supplier category, including SMEs, and the percentage of payments aligned with those terms. However, requiring disclosure of the percentage of payments aligned with standard terms (in days) would be overly burdensome, as the necessary data is often unavailable at sufficient detail. We therefore propose removing this requirement or limiting it to cases where a material number of payments are late. Paragraph 79 permits alternative definitions for medium- and long-term horizons in certain cases. These cases are equally relevant to short-term horizons. We therefore propose extending paragraph 79 to allow different definitions for the short term as well.			
Survey	Insurance Europe and Insurance CFO Forum	Association of financial institutions	Belgium	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	Insurance Europe and Insurance CFO Forum	Association of financial institutions	Belgium	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Reporting across all ESRS should focus on relevant, decision useful information while avoiding unnecessary over-reporting. The materiality assessment must stay strategic and flexible, allowing each preparer to adapt it to its own strategy, business model, and specificities. We therefore call for further simplification across the framework—limiting requirements to the minimum and adopting a principles-based approach that better reflects business realities.			
Survey	CIMA	National supervisory authority & regulator	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Materiality and Relevance a.Overall, we support disclosures where sustainability matters have a material medium- or long-term impact on financial position. Investors consistently demand this information and so believe it is relevant to global capital allocation. b.We do not support disclosures where no discernible link exists to an entity's financial viability within a reasonable and proportionate business model. c.We are therefore supportive of the revised EFRAG standards' focus on disclosure of organizational business models. d.However, we would support a greater reduction in the need for a Double Materiality Assessment.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	CIMA	National supervisory authority & regulator	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I would like to skip this question and provide my feedback in Part 3				
Survey	CIMA	National supervisory authority & regulator	United Kingdom	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree				
Survey	CIMA	National supervisory authority & regulator	United Kingdom	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	Excessive Standards and Data Points Currently, there are too many standards and an overwhelming number of data points that businesses are required to report. We therefore fully support the 57% reduction in standards and urge that these reporting requirements remain commensurate with the risks identified by companies' own assessments. Additionally, we are supportive of the following technical amendments - a.The removal of all voluntary standards. b.The elimination of overlaps in climate reporting between ESRS 1 & 2. c.The alignment of climate transition plan wording with IFRS S2. d.Maintaining high-level alignment with global objectives e.Inclusion of resilience considerations, as highlighted in the CIMA report, on uncertainty and adaptive capacity. f.The removal of net zero terminology, which was unrealistic and confusing, in favour of broader and clearer concepts. g.Concentration on biodiversity through a single disclosure metric.			
Survey	CIMA	National supervisory authority & regulator	United Kingdom	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	Implementation a.Companies already prepared for old ESRS will be fully prepared for simplified reporting, as metrics remain consistent. b.We welcome the option of executive summaries and appendices but call for guidance on how presentation can avoid greenwashing. c.Clarification is needed on appendices versus main text content and how these elements remain subject to assurance and digitalization rules.			
Survey	CIMA	National supervisory authority & regulator	United Kingdom	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	Guidance We would suggest the following clarifications to the Exposure Draft : a.the development of guidance with illustrative examples on the Disclosure of Materiality Assessment (DMA). b.addressing sector-specific burdens through guidance rather than mandatory requirements.			
Survey	CIMA	National supervisory authority & regulator	United Kingdom	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	Thresholds for Compliance The increase in the turnover threshold from €150 million to €450 million for companies within the EU is a welcome step in reducing the burden on smaller businesses. However, we would note that those who have already started the journey on sustainability reporting may now feel unsure as to how to proceed and this uncertainty may act as a drag on investment.			
Survey	CIMA	National supervisory authority & regulator	United Kingdom	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I would like to skip this question and provide my feedback in Part 3

Survey	CIMA	National supervisory authority & regulator	United Kingdom	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	Alignment with ISSB Standards We urge EFRAG to minimise divergences and ensure full connectivity with financial statement disclosures. Specifically, we would suggest: a.reinstating mandatory cross-referencing between sustainability disclosures and financial statements (ESRS 1 pa114). In our view, the proposed wording on this impairs connectivity, undermines user understanding, and diverges from ISSB standards. b.harmonising materiality definitions c.addressing differences in evidence and relief concepts d.aligning Green House Gas emissions boundaries and simplifications e.clarifying treatment of leased assets and Scope 3 categories			
Survey	CIMA	National supervisory authority & regulator	United Kingdom	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	Fair Presentation and Understandability a.We believe disclosures should be fair, balanced, and understandable. b.We note that while certain clarifications may not reduce reporting burden directly, the simplifications in DMA and amendments do help achieve this.			
Survey	CIMA	National supervisory authority & regulator	United Kingdom	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		We are supportive of the move away from separate EU standards on assurance. The IAASB has developed a global assurance standard to be used for sustainability information, and we believe that the EU's approach should involve support for these. As many businesses still face difficulties in ensuring the accuracy of non-financial data assurance guidelines would be welcome.			
Survey	LBP AM	Asset manager/Investor	France	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	LBPAM supports efforts to clarify and simplify DMA requirements, iming to avoid overly detailed, resource-intensive "tick-the-box" approaches while preserving essential elements: consideration of own operations and value chain, alignment with sustainability due diligence, and stakeholder engagement. However, LBPAM identifies key risks : (i)excessive flexibility could lead to omission of critical information for users (ii)guidance remains too high-level for less advanced companies (iii)The continuous improvement approach is weak, as companies are not incentivized to integrate user feedback To mitigate these risks, we suggest : -Climate change: retain the ESRS 1 §32 requirement for companies deeming climate non-material to provide a detailed explanation, and extend this to workforce and business conduct. ESRS 2 §28(b) is too generic; the previous ESRS 1 §32 should be reinstated -Robust DMA: specify in Application Requirements that DMA should be science-based and aligned with recognized standards -Updating DMA (ESRS 1 §29) : require undertakings to disclose if and to what extent they considered feedback received from users on their previous sustainability reports. ESRS 2 SBM-2 should also require companies to disclose "whether and how the administrative, management and supervisory bodies are informed about remarks from users relating to pervious sustainability statements" could be added -Nature-related issues: emphasize that dependencies on ecosystem services must be considered, given ECB evidence of strong economic reliance on biodiversity and natural resources -Sector-specific Guidance : provide guidance or materiality matrixes tailored to sectoral specificities. Companies should provide clarifications when excluding topics flagged as material -Provide a list of external resources that companies should consider and notably : guidance on responsible business conduct published by OECD, guidance from the German Federal Office for Economic Affairs and Export Control on the identification, weighting and prioritization of risks (https://www.bafa.de/SharedDocs/Downloads/EN/Supply_Chain_Act/guidance_risk_analysis.html?nn=1469810). Multiple useful references p.19			
Survey	LBP AM	Asset manager/Investor	France	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	LBPAM welcomes the effort to provide additional guidance and strongly supports : -Differentiating 'actual' from 'potential' impacts and stressing that potential impacts should be duly considered in the double materiality assessment. -Opening the debate "not or gross". However, LBPAM does not support the proposed approach as : -Appendix C seems overly complex. For instance, internal discussions and discussions with peers and other stakeholders led to various and sometimes diverging interpretations. -The assessment of whether remediation is sufficient could vary across undertakings. For identical impacts and actions, some undertakings may conclude the impact no longer exists while others may deem further actions necessary. This decision should not rest solely with the undertaking, users must be able to make their own opinion and challenge the conclusion of the undertaking if necessary. Material impacts should therefore be reported on a gross basis. Should EFRAG stick to the current approach, proposed approach in appendix C regarding potential impact for which companies must maintain significant ongoing actions seems not in line with the intention described in the consultation document. More specifically, for potential impact for which the undertaking has to maintain significant ongoing mitigation, appendix C states that companies should "Report the potential impact after prevention or mitigation actions if it remains material, and report the significant ongoing action for as long as it is necessary to manage the residual material impact. Companies should instead "Report the potential impact before prevention or mitigation and report the ongoing actions as long as it is necessary to maintain the potential impact below the materiality threshold" in order to aline with the provision thereof : "For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported."

Survey	LBP AM	Asset manager/Investor	France	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	The key point that must be maintained is the removal of duplicate indicators (which we welcome) as well as simplification supported by guidelines to enable smoother discussions with auditors. Furthermore, we support the proposal from ANC to introduce a presentation rule requiring undertakings to directly reference the disclosure requirement (DR) numbers within their sustainability statement (e.g., in section headings or paragraph titles), without the need for a separate mapping table. This "visual tagging" approach is already used by many companies and facilitates comparability for users.			
Survey	LBP AM	Asset manager/Investor	France	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	LBPAM welcomes the efforts and proposal from EFRAG to strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other. However, LBPAM believes that EFRAG could provide more optional guidance that could be used by companies which do not have clear views and how they should present the information. In other words, EFRAG could suggest where undertaking "may" present the information, letting to companies decide whether they have more relevant approaches for presenting information. In this regard, EFRAG could provide further guidance on where to present information published in accordance with ESRS 2 in the structure impose by ESRS 1 § 105 (general information, environmental information, social information and governance information). LBPAM make the following suggestions : -GOV 1, 2, 3 and 4 : Comapnies may include the disclosures in the section "general information" or in section "governance" -SMB 1 and 2 : General information -SBM-3 : If the high-level approach is common to all topics, undertakings may present it in section "general information". If there is specificities depending on the nature of the topic (E, S and G), companies may provide the information in introductory parts of topical sections. Anticipated financial effects may be provided at topical or sub-topical level depending on the disaggregation approach of the company. -IRO 1 : General information -§35 relating to international standards : undertaking may present it in an introductory part of section "Social Information".			
Survey	LBP AM	Asset manager/Investor	France	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	LBP AM	Asset manager/Investor	France	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	Overall, LBPAM supports the necessity of non-mandatory guidance			
Survey	LBP AM	Asset manager/Investor	France	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	LBPAM generally agrees with EFRAG proposal in order to reach a balanced approach between relief for preparers and maintaining sufficient and comparable information for users. However, LBPAM fears that the relief on "undue cost or effort" may go too far at the expense of meaningfulness and comparability of information. LBPAM therefore suggests: -For climate disclosures, do not allow to use the relief except for scope 3 GHG emissions. -As for relief for lack of data quality, require undertakings to disclose whether and how the undertaking will try to collect the data in future period To enhance clarity, LBPAM would recommend to -Regarding the relief on "undue cost or effort", move the clarifications provided in §47 ("information that is used by the undertaking in preparing its financial statement, operating its business model, setting its strategy, conducting sustainability due diligence, and managing its impacts, risks and opportunities is considered available to the undertaking without undue cost or effort") to chapter 7.4 or make a reference to this paragraph -In ESRS 2 DGR-M (General Disclosure for Metrics), make reference to ESRS 1 chapter 7.4 (rules for using reliefs relating to "undue cost or effort" and "lack of data quality") To enhance transparency and ease the understanding from users, undertakings using the reliefs relating to "undue cost or effort" or "joint operations" (ESRS 1 §92) should disclose it in the information disclosed in accordance with ESRS 2 § 5 (BP-1).			
Survey	LBP AM	Asset manager/Investor	France	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	LBPAM understands the rationale for simplification but is against this proposal. There is a need for a clear phasing-in schedule. Without such a timeline, investors will face the same lack of comparability between companies as they do today. Implementing this proposal would represent a step backwards and would deepen the lack of comparability and data consistency across companies. We recommend, at the very least, clearly defining the scope to avoid misleading outcomes and to improve comparability. Furthermore, this would disadvantage companies that produce a "full" report, as the published data would be less "favourable." Regarding the proposal for companies to specify the actions taken to improve the coverage of their calculation in subsequent periods, we request that companies also be required to indicate the timeframe by which they expect to achieve full (100%) coverage of the scope. The following wording would therefore be more appropriate: "actions taken to cover 100% of their activities," with the aim of aligning sustainability reporting expectations with the company's financial reporting. Once a company considers an activity to be material, it should provide a precise timeframe for obtaining the relevant data. Estimates should therefore be framed within a clear consumption limit, with a deadline and details of the actions planned to address the gap. Finally, we request the deletion of the provision stating: "no time limit is included for the use of the relief."

Survey	LBP AM	Asset manager/Investor	France	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	Quantitative anticipated financial effects are one of the core pieces of information for investors and are essential for financial materiality. In the developments of the ESRS, is has been a priority to provide investors with this data, which is a fundamental requirement for managing the risks in their portfolios. While we acknowledge that there can be challenges connected to producing this information, the effort is worth the benefit for a company, its investors and the wider economy. Understanding these often existential risks is necessary for resilience both at the level of the enterprise, and the economy as a whole. Option 1 would be a workable compromise and the only solution (as opposed to option 2) to maintain the credibility of the ESRS – clearly establishing the expectation to provide quantitative data to users, while granting adequate reliefs for reporting companies when they encounter legitimate challenges to do so. To accommodate the difficulty that might arise in providing quantitative data in absence of common methodologies, we could support both a phase-in implementation starting with mature topics (e.g. climate) and continuing with less mature topics and specifying that companies are required to provide quantitative elements on a best effort basis.			
Survey	LBP AM	Asset manager/Investor	France	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	LBP AM	Asset manager/Investor	France	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	LBP AM	Asset manager/Investor	France	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	LBPAM is of the view that the proposal goes in the right direction as it achieves a very significant reduction in the overall framework reporting length, activates a number of operational user and producer led improvements, while safeguarding fundamental objectives of the original CSRD and enable the UE to remain both a driving force and a driving force that is well connected to international soft standards. However, to stick to the latter point, LBPAM believes that EFRAG's proposal corresponds to the maximum data-reduction achievable, below which the objective of the original CSRD would be endangered.			
Survey	LBP AM	Asset manager/Investor	France	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	Data relating to water withdrawal and discharge is of primary importance for understanding the efficiency of water resource use within a company and for benchmarking against peers. Water resources are getting increasingly critic in the context of global warming and higher frequence of droughts Publication of biodiversity transition plans should become a standard element in corporate disclosures to demonstrate the strategy for impact reduction and mitigation of biodiversity-related risks which macro analysis prove to be systemic. Moreover, biodiversity transition plans are essential for achieving Goal D and Target 14 of the Global Biodiversity Framework. Such plans should be based on standardized processes, notably with a dependency and impact assessment via thematic tools, helping corporates in recognizing the main risks they are facing. In that context, a strategy with clear objectives to reduce those risks should be implemented, with measurable KPIs to monitor progress over years. Current EFRAG proposal should in our view allow to reach this goal. To strengthen comparability and meaningfulness, we would suggest the following adjustments : -To ensure reliability and comparability, corporates should align with recognized frameworks for the assessment and analysis part (like the TNFD), and science-based targets compatible with Global Biodiversity Framework (like the SBTN). Moreover, companies could refer to all other sector guidance available on the market, to address material topics they face -As for climate transition plan, require companies to disclose whether the target set are science-based (e.g. SBTn) -If material, plans could include details on restauration or renaturation strategies on protected areas, disclosing methodologies of reference and progress updates -As for climate transition plan, if any biodiversity offsets in action plans, to not make it a major contributor of corporates transition plan Information on business conduct incident is key for investors stewardship and allow for peer comparison.			
Survey	LBP AM	Asset manager/Investor	France	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	As regards E2-4, LBPAM acknowledges that undertakings may have difficulties in the short term to measure the amount of secondary microplastics produced. However, this is a major source of pollution that needs to be properly addressed. Incentivizing companies to measure their production is a necessary first step for treating this serious issue.			
Survey	LBP AM	Asset manager/Investor	France	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We understand that the ability to provide an associated indicative absolute value to intensity-based GHG emissions reduction targets is highly variable depending on the nature of the financial player (bank or investment), its balance sheet and on the chosen intensity methodology. However, information on absolute values is key and should be reported. Given the heterogeneity in the sector previously mentioned we could support either limiting the exemption in time with a review clause or requiring absolute values from day 1 but in form of ranges to account for the uncertain nature of the info for some players and some methodologies.

Survey	LBP AM	Asset manager/Investor	France	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I would like to skip this question and provide my feedback in Part 3				
Survey	LBP AM	Asset manager/Investor	France	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	The definition of an adequate wage should be aligned with the ILO methodology for estimating a decent wage—namely, a weekly remuneration sufficient to meet the needs of the worker and their family, including food, water, housing, and education. The definition proposed by EFRAG risks creating confusion between the concepts of minimum wage and adequate wage, which are fundamentally distinct. Minimum wages generally do not represent the threshold for a decent wage. Furthermore, the ESRS should require disclosure of gaps between actual pay, decent wage, and minimum wage—at least at the country level of operation.			
Survey	LBP AM	Asset manager/Investor	France	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	In order to deepen comparability and meaningfulness of information, we would suggest the following adjustments : -The current focus seems too narrow—centered on land-use change—while ESRS E4 should link pressure reduction (e.g. climate, pollution, water use, waste) to improvements in the state of nature. Therefore, target set in biodiversity transition plan should go beyond land use. -To ensure reliability and comparability, corporates should align with recognized frameworks for the assessment and analysis part (like the TNFD), and science-based targets compatible with Global Biodiversity Framework (like the SBTN). Moreover, companies could refer to all other sector guidance available on the market, to address material topics they face. -As for climate transition plan, require companies to disclose whether the target set are science-based (e.g. SBTn) -If material, plans could include details on restauration or renaturation strategies on protected areas, disclosing methodologies of reference and progress updates. -"phasing out" indicators to avoid adverse biodiversity impacts should also be considered -As for climate transition plan, if any biodiversity offsets in action plans, to not make it a major contributor of corporates transition plan. Finally, to ensure improvement on the topic of biodiversity, we believe this issue should be revisited in the coming years such that a review clause would be welcome. The purpose of this clause would be to confirm that the topic is currently insufficiently mature to provide the necessary data, while ensuring that these thematic indicators will be revisited in a few years' time (3 to 5 years) once progress has been made. This would also encourage companies to adopt a long-term perspective on the issue			
Survey	LBP AM	Asset manager/Investor	France	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		LBPAM commends EFRAG's swift and comprehensive work to analyze initial reports and consult stakeholders. Revisions significantly streamline reporting requirements, introduce practical improvements while preserving core objectives of CSRD and ensuring EU remains a driving force on sustainability. Continuous improvement LBPAM recommends adding a provision in ESRS 2 SBM-2 requiring to disclose whether and how governance bodies are informed of user feedback, fostering iterative quality enhancement (see_q11) Historical Comparability Companies should maintain a dedicated section on their website hosting all CSRD sustainability statements. Climate risk We supports EFRAG's approach to climate risk transparency, notably: •Inclusion of own operations and upstream/downstream value chain. •Consideration of short-, medium-, and long-term horizons. •Clear distinction between physical and transition risks. •Use of climate scenarios and disclosure of mitigation/adaptation measures. However, comparability and robustness require: -Require Standardized baseline scenarios, with the possibility to use alternative scenarios if proved that the alternative scenario is more accurate. This is notably to avoid references to undisclosed /black box internal scenarios. For transition risks : IPCC SSP1 ("Sustainability"), for physical risks : IPCC SSP5 ("Fossil-fueled development") and SSP2 ("Middle of the road") for current trends •Mandatory quantitative disclosure of anticipated financial effects (supporting Option 1 in EFRAG's consultation) Climate transition plan : LBPAM welcomes requirements for : -Gross GHG reduction targets (Scopes 1, 2, 3) without offsets. -Science-based targets aligned with 1.5°C and EU objective by 2050. -Disclosure on governance, financial planning, follow-up, locked-in emissions, and fossil-fuel Capex. However, fossil-fuel Capex disclosure should be mandatory, not conditional on "significance" to avoid inconsistent interpretations. NetZero Targets LBPAM regrets the removal of "net zero" from ESRS. Its inclusion in Set 1 improved disclosure quality and mitigated greenwashing risks. LBP AM recommends reinstating the glossary definition and E1-7 §60, clarifying residual emissions and removals			
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	The proposed amendments have greatly simplified the DMA process. Clarification around flexibility of structure, the scope of required disclosures when a subtopic is material, value chain data limitations, and frequency of required DMA updates is all useful and will alleviate much of the confusion experienced in the first year of reporting. In relation to AR23 for para 52 – criteria for disaggregation, is there guidance provided to assurance providers on "shall consider"? It will remove a potential conflict if this is clearly defined for both practitioners and assurance providers. Is just considering it enough? What needs to be true for a company to consider and decide against further disaggregation?			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	The clarification of gross risk is helpful, although this will still likely require significant internal engagement efforts to ensure leadership understanding. Within new paragraph 35 the text "However, if the undertaking needs to maintain significant ongoing mitigation and/or prevention actions, to contain the severity and/or likelihood of occurrence of the potential impact below a materiality level, the impact shall be assessed without considering the mitigation and/or prevention actions." Would benefit from defining "significant ongoing mitigation". Are ongoing efforts to improve guarding and create a safety of culture significant? These will always be required, but does that mean they should be excluded from the assessment? Some mitigation efforts that have been in place for decades will still require ongoing investment and focus. The revised draft provides explicit guidance in the context of actual and potential impacts, but no equivalent guidance is provided for actual and potential risks and opportunities. Under certain circumstances, such as the ones described under the Amended ESRS 1, Section 3.3.1 (35), mitigation and prevention is considered in assessing the materiality of the impacts, which creates a divergence between the guidance around impacts, and risks and opportunities. This asymmetry may result in situations where an event is assessed as not material from an impact perspective (because mitigation is taken into account), while at the same time being deemed material from a financial risk perspective (because no such consideration is allowed). We advocate for explicit guidance on whether, and to what extent, mitigation, adaptation or strategic measures can influence the assessment of risks and opportunities under financial materiality. The provision of illustrative examples and alignment with other standards such as IFRS S1 and S2 will help streamline and simplify the reporting of companies operating under different jurisdictions.			
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	The simplification, additional flexibility and clarification around structure, incorporation by reference, and use of appendices is clear and will result in a more readable and concise report. Adhering to the specific order and structure previously required was one of the biggest challenges in gaining leadership support to implement ESRS. These changes will improve the outcome for readers and preparers.			
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	The amendments related to the interaction between ESRS 2 and the topical sections reduce confusion and duplication between the topical sections and ESRS 2. The increased flexibility of how to present policies related to material topics will help increase the readability of the report. Overall this section is a lot easier to understand and implement with the proposed amendments.			
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	Moving all the required datapoints into the main body disclosure requirements instead of being split between the disclosure requirements and application requirements makes the standards easier to navigate. It ensures no required datapoints are overlooked within the application requirements as readers would expect to find them all in the same place. Removal of the "may disclose" datapoints shortens the standard, makes it easier to navigate, allows practitioners to focus on crucial datapoints and will result in more comparable reports.			
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	Removing the "may" disclosures from the guidance helps to streamline and clarify the standards and allows practitioners to focus on what is most important and required. The non-mandatory illustrative guidance is helpful in that it provides useful examples and things to consider, however we are in agreement with EFRAG that it should not be included as part of the delegated act. It's inclusion into the delegated act would likely cause unnecessary confusion in determining what is required to disclose, defeating the point of its removal. Publishing the NMIG as a separate, optional reference online is a possibility, so long as it is clear it is optional guidance only, not part of the delegated act, and that neither assurers nor regulators should use it as anything more than optional reference information provided by EFRAG. If this cannot be made sufficiently clear, the NMIG should be eliminated completely.			
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We acknowledge EFRAG's efforts to balance preparers' need for simplification with the need to maintain transparency and interoperability. Alignment is achieved with IFRS S1 and S2 with the inclusion of an overarching principle related to "reasonable and supportable information available without undue cost or effort" concept. Nevertheless, the broader application under ED ESRS 1 (covering all value chain information and metrics) may reduce comparability and complicate interoperability. Conversely, IFRS reliefs not mirrored in ESRS (e.g. omission of commercially sensitive opportunities) and additional ESRS-specific reliefs (partial scope, acquisitions/disposals) create divergence. Reliefs need to be clearly mapped against IFRS equivalents, explaining differences and considering convergence where possible to ease multi-jurisdiction reporting. The absence of a time limit for partial scope reporting may reduce incentives for timely data quality improvements. Introducing a transitional period for the use of the relief could encourage progress while maintaining flexibility. Clear guidance on expected improvements and disclosures during this period would support transparency. Finally, the removal of mandatory cross-referencing to financial statements may hinder connectivity. We recommend, at minimum, mandating reconciliation disclosures for material metrics to support users in linking financial and sustainability data. Overall, while the reliefs offer meaningful simplification, targeted refinements could better balance preparer burden with the need for robust, interoperable, and decision-useful disclosures. The revised value chain cap set in July 2025 sets a cap to the information that can be requested from value chain undertakings outside of CSRS scope. This is likely to translate into greater reliance on estimates based on secondary data.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	Option 1 aligns more closely with IFRS S1 paragraph 37, preserving interoperability and encouraging entities to build internal capabilities over time. However, its effectiveness depends on clear articulation with other reliefs, particularly those related to partial scope metrics, qualitative disclosures, and the use of reasonable and supportable information. We recommend EFRAG provide additional guidance and illustrative examples to help undertakings interpret and apply these interconnected reliefs consistently.			
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	Most of the requirements previously set out in section E1-9 have been transferred to the new section E1-11 in the Amended ESRS. This transition appears reasonable, particularly in light of the reliefs introduced in ED ESRS 1, most notably the use of "reasonable and supportable information available without undue cost or effort." However, the requirement to disclose gross anticipated financial effects, excluding the impact of mitigation and adaptation actions, presents a disconnect with internal risk management practices, which typically focus on residual risk – the actual exposure after controls have been applied. This approach may result in disclosures that do not accurately reflect the entity's true risk profile. We encourage EFRAG to provide additional guidance, including illustrative examples and decision trees, to help preparers distinguish between implemented/actual and future mitigation and adaptation actions. Without such clarity, the concept of gross impact may remain theoretical and risk misrepresenting the actual business exposure. We also note that the new guidance on how to consider remediation, mitigation, and prevention actions in the assessment of the materiality of negative impacts is not aligned with the approach taken for financial risks and opportunities. This divergence introduces complexity and may lead to inconsistencies in how risks are assessed and reported across the ESRS.			
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	CCEP supports the objective of maintaining a high degree of interoperability between the ESRS and the IFRS Sustainability Disclosure Standards (ISSB S1 and S2). This is particularly important for large undertakings operating across multiple jurisdictions, such as CCEP, which are subject to both ESRS and ISSB requirements. We particularly recommend the inclusion of additional guidance on the application of the new overarching principle related to "reasonable and supportable information available without undue cost or effort", as full alignment between ESRS and IFRS S1 and S2 is not achieved due to differences in scope where this concept is applied. Clear guidance is essential to prevent inconsistent interpretations and applications by preparers and auditors. In the absence of such guidance, there is a significant risk of subjective and divergent assessments, which could undermine the reliability, comparability, and decision-usefulness of sustainability information across entities and jurisdictions.			
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	22.E2.	Comments on deleted datapoints in ESRS E2	I partially agree and partially disagree	The new draft standards are streamlined and many of the less useful and more difficult to understand and/or calculate "shall" datapoints have been removed. The biodiversity and pollution topics have been greatly improved through the elimination of datapoints unrelated to the most material and strategic topics, while still requiring information related to the biodiversity and pollution-related objectives of the EU Green Deal.			
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	22.E4.	Comments on deleted datapoints in ESRS E4	I partially agree and partially disagree	The new draft standards are streamlined and many of the less useful and more difficult to understand and/or calculate "shall" datapoints have been removed. The biodiversity and pollution topics have been greatly improved through the elimination of datapoints unrelated to the most material and strategic topics, while still requiring information related to the biodiversity and pollution-related objectives of the EU Green Deal.			
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Most of the 6 datapoints that have been switched from "may" to "shall" will not add any meaningful reporting burden as they are already part of disclosed datapoints (the water datapoints). Disclosure of a biodiversity transition plan is dependent upon having a public biodiversity transition plan already. While it is not yet common to have a transition plan, ESRS does not mandate the creation of one, only the disclosure of one if it exists and is already public. However, switching G1 business conduct confirmed incidents from "may" to "shall" does introduce new information that was not previously required. The current definitions of "corruption" and "substantiated" allow for a level of subjectivity and variation between entities that reduces the comparability of the information.			
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	ESRS 2- BP1, ES-4, and ES-5 clarify existing required disclosures and do not require the calculation or gathering of new information. However, E2-4 16 b ii asks organisations to disclose the quantity of microplastics connected to downstream value chain, resulting from larger plastics breaking down, but provides no guidance on how to calculate this information. Unlike GHG emissions, there is no generally accepted calculation methodology for microplastics generated in this manner. Until this is developed, this specific disclosure will likely result in information that is inconsistent and incomparable between organisations.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	We support the principle of "fair presentation" throughout the disclosure requirements. This principle will complement the materiality filter and will reduce unnecessary reporting and enhance interoperability with the ISSB standards.			
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	We agree that that change of threshold will result in more useful information and will not result in an increased reporting burden as this information should be readily available.			
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	As this topic was not material to us, we do not have direct experience attempting the required calculations. We will defer to those that participate in the field test on adequate wages.			
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	Since nature-related metrics are still relatively new and there are no widely used metrics to reference, it is particularly useful to give guidance related to what metrics entities should consider related to E4 impacts. TNFD and SBTN are the two most widely used that would be worth referencing in addition to those already included in the guidance.			
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	Coca-Cola Europacific Partners	Preparer (non-financial preparing a sustainability report)	United Kingdom	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree	The replacement of datapoints with PAT provisions is effective in reducing reporting burden while still requiring entities to be transparent about their payment practices with SMEs. The remaining requirement to report percentage of payments aligned with the standard terms provides useful information. The following data point, number of legal proceedings currently outstanding for late payments will be difficult to track and does not indicate the decision the courts made in relation to the cases, which makes the information provided less useful. We suggest making this requirement contingent on the previous one. Entities should only be required to report this information if they are reporting alignment below a certain defined percentage			
Survey	MSCI ESG Research	User (analyst, data provider, rating agency, etc.)	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We support the overall direction of the amendments, which provide greater clarity and flexibility in the application of the Double Materiality Assessment (DMA) while aiming to reduce unnecessary complexity. However, sector specific guidance is needed for preparers to determine which information is relevant. This is particularly important with respect to the value chain boundaries in the financial sector.			
Survey	MSCI ESG Research	User (analyst, data provider, rating agency, etc.)	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree

Survey	MSCI ESG Research	User (analyst, data provider, rating agency, etc.)	United Kingdom	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	We support the proposed amendments, which aim to improve readability, clarity, and coherence of sustainability reports. These changes can make reports more user-friendly by ensuring that key information is both accessible and better integrated with broader corporate disclosures. That said, further guidance on the order and structure of "executive summaries" and "appendices" would enhance clarity and comparability of reports. These additional sections should focus on the most important data. Currently, each preparer uses their own approach which makes it difficult for users to find the relevant information and compare it between reports.			
Survey	MSCI ESG Research	User (analyst, data provider, rating agency, etc.)	United Kingdom	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We welcome the restructuring of ESRS 2 and its interaction with topical standards. We acknowledge that a more principles-based approach can improve usability for preparers while supporting consistency of application. The simplification of General Disclosure Requirements and the reduction of prescriptive datapoints for policies, actions, and targets (PAT) can reduce administrative burden and enhance flexibility. However, it is important that these changes do not compromise the readability and comparability of disclosures. The disclosures should still be provided at a level which allows users to understand and assess material impacts, risks, and opportunities (IROs). While higher degrees of aggregation at the PAT level may be useful for preparers, this should not come at the expense of clear insights into how material IROs are being addressed.			
Survey	MSCI ESG Research	User (analyst, data provider, rating agency, etc.)	United Kingdom	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	The amendments will improve clarity and accessibility by eliminating "may disclose" datapoints and re-organising mandatory requirements. These steps will reduce ambiguity, improve comparability, and make disclosures more decision-useful for investors. Voluntary standards do not help to close existing data gaps. Instead, they risk widening disparities between SMEs and listed companies, leaving smaller firms underrepresented in sustainability data. This undermines comparability and limits investors' ability to access information across the full investment universe.			
Survey	MSCI ESG Research	User (analyst, data provider, rating agency, etc.)	United Kingdom	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We welcome the decision to allow undertakings to use estimates, rather than systematically requiring direct data from suppliers and customers. EFRAG should however require transparency as to which data are estimates and how they were derived.			
Survey	MSCI ESG Research	User (analyst, data provider, rating agency, etc.)	United Kingdom	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	We note the introduction of "undue cost or effort" relief. From our perspective, ensuring interoperability with ISSB standards is key. Against this backdrop, transparency on where data is partially disclosed and clear explanation of the rationale for partial disclosure should be required.			
Survey	MSCI ESG Research	User (analyst, data provider, rating agency, etc.)	United Kingdom	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	Enhancing interoperability between ESRS and IFRS S1 and S2 improves comparability for global investors and reduces duplication for preparers. We welcome the adoption of the fair presentation framework, alignment of materiality definitions, financial consolidation approach for GHG emissions, and permanent reference to ISSB IFRS S1 and S2 standards. These changes strengthen consistency and comparability across jurisdictions. However, we are concerned that some of the additional reliefs introduced in ESRS, which go beyond those in IFRS S1 and S2, risk weakening interoperability. In particular, wider use of estimates or partial-scope reporting could reduce data quality, comparability, and ultimately decision-usefulness for investors. Any such reliefs must be an exception and must be complemented with information on how coverage will be improved over time.			
Survey	MSCI ESG Research	User (analyst, data provider, rating agency, etc.)	United Kingdom	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	MSCI ESG Research	User (analyst, data provider, rating agency, etc.)	United Kingdom	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	The objective of reducing reporting burdens must be balanced with the need to safeguard quality and integrity of sustainability disclosures. Our internal mapping suggests that the revised datapoint set is largely consistent with this balance, with most decision-useful indicators retained. Additional guidance for the financial sector on value chain boundaries would support consistent application of DMA and disclosure requirements. Moreover, the inclusion of a limited set of basic financial datapoints (e.g., revenue and asset breakdown by operating segment) could further strengthen comparability and enhance the usefulness of disclosures for investors.			
Survey	MSCI ESG Research	User (analyst, data provider, rating agency, etc.)	United Kingdom	23.	Six datapoints exceptionally moved from “may” to “shall” In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, “may disclose” datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from “may” to “shall” subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	MSCI ESG Research	User (analyst, data provider, rating agency, etc.)	United Kingdom	25.	Emphasis on ESRS being a “fair presentation” reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	MSCI ESG Research	User (analyst, data provider, rating agency, etc.)	United Kingdom	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree				
Survey	MSCI ESG Research	User (analyst, data provider, rating agency, etc.)	United Kingdom	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG’s approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a “human rights policy” in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree				
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: “[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process”.Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in “Gross versus Net” as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We acknowledge the efforts made by EFRAG, including the work of the SRB and SR TEG, in developing the Exposure Drafts and refining the DMA. The proposed changes represent clear progress toward greater clarity and usability, and we welcome several important improvements. Recognition of existing processes and data: We appreciate that companies can rely on structured stakeholder engagement conducted as part of due diligence to inform the materiality assessment. This pragmatic approach avoids duplication of effort and reflects how sustainability processes are embedded in companies. Additional stakeholder input should only be sought when existing information is insufficient or outdated. Flexibility in methodology: We support the option to adopt either a top-down or bottom-up approach, enabling alignment with internal governance and decision-making processes. Proportionality and qualitative assessment: We welcome the recognition that quantitative scoring is not always required and that qualitative analysis can suffice, particularly where metrics are difficult to obtain or a qualitative understanding is more appropriate. Despite these improvements, some aspects of the DMA process continue to raise concerns regarding clarity, consistency, and implementation effort. The separation of practical guidance from normative provisions risks reducing usability in real-world application. Without clear documentation requirements and harmonized guiding criteria, assessments may be inconsistent, subjective, or poorly evidenced. Reliance on external guidelines also creates interpretative uncertainty for entities seeking consistent and verifiable compliance. To address these risks, we recommend integrating practical guidance into the core standard, specifying minimum documentation requirements, and including clearer normative references. Companies should transparently document how they carried out the materiality process, including information sources, criteria applied, and reasons for key decisions, especially when excluding potentially relevant topics. This approach would strengthen internal governance and provide auditors, investors, and regulators with the necessary information to evaluate reliability, ultimately improving consistency, comparability, and the overall usability of DMA.

Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	We acknowledge the efforts made by EFRAG, including the work of the SRB and SR TEG, in refining the DMA. The proposed changes show progress toward greater clarity and usability, and we welcome improvements such as the recognition of existing internal processes and structured stakeholder engagement, flexibility in methodology, and the possibility to rely on qualitative assessment. However, some aspects remain unclear or complex. While the guidelines recognize existing actions, without clearer rules, minimum documentation requirements, and integration of practical guidance into the core standard, the assessment process may still result in inconsistent, subjective, or poorly evidenced decisions. This can limit comparability and the effectiveness of DMA as a tool for planning and reporting.			
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	We acknowledge the efforts made by EFRAG, including the work of the SRB and SR TEG, in enhancing the ESRS framework. The proposed changes show progress toward greater clarity, usability, and flexibility, supporting more pertinent and concise reporting and improved connectivity with overall corporate reporting. Positive elements include recognition of existing internal processes, structured stakeholder engagement, flexibility in methodology, proportionality in assessment, and strengthened mandatory datapoints. However, certain aspects remain unclear or complex. The practical applicability of the DMA still raises concerns regarding clarity, consistency, and documentation requirements. The Fair Representation principle lacks precise definition and guidance, introducing subjectivity and potential inconsistencies. Reliance on non-mandatory illustrative guidance (NMIG) can also create interpretative uncertainty. Overall, while the amendments contribute to readability and connectivity, additional clarifications and stronger guidance are needed to ensure consistency, comparability, and practical usability across organizations.			
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We acknowledge the efforts made by EFRAG to enhance clarity, usability, and flexibility in the ESRS framework. The proposed modifications improve readability, support more pertinent reporting, and strengthen certain mandatory disclosures. However, the balance between prescriptiveness and preparers' effort versus the need for relevant and comparable information remains only partially achieved. Concerns persist regarding the complexity of the DMA, unclear guidance on Fair Representation, potential subjectivity in disclosures, and reliance on non-mandatory illustrative guidance. Without clearer rules, minimum documentation requirements, and detailed practical guidance, preparers may still face interpretative uncertainty, inconsistent application, and increased effort to achieve comparability and reliability across organizations.			
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	While we recognize that the Non-Mandatory Illustrative Guidance (NMIG) contains useful annexes, examples, and flowcharts that support the preparation of sustainability statements, some formulations remain overly generic or ambiguous. This can create interpretative uncertainty, increase preparers' effort to align with auditors, and risk inconsistent application. Therefore, while the NMIG contributes to clarity and accessibility, further refinement is needed to ensure that guidance is clear, practically applicable, and consistently interpreted across organizations.			
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We acknowledge that the proposed amendments aim to improve alignment with the SFDR and to reduce preparers' effort while maintaining transparency. Some measures provide useful relief and enhance practical applicability. However, certain aspects, such as the remaining complexity of the DMA, unclear guidance on Fair Representation, and interpretative uncertainties, limit the overall effectiveness. While the amendments partially balance reduced burden and transparency, further clarifications and more precise guidance are needed to fully achieve the intended objectives, safeguard transparency, and support consistent reporting in line with the EU Green Deal and interoperability with IFRS S1 and S2.			
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	We acknowledge that the proposed relief for the lack of high-quality data provides necessary flexibility for preparers, especially where metrics are difficult to obtain. However, without clearer guidance and minimum documentation requirements, there remains a risk of inconsistent, incomplete, or subjective reporting. While the measure partially balances flexibility and the need to avoid loss of information, further clarifications are needed to ensure reliable, comparable, and meaningful disclosures.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	We express a clear preference for Option 2, which prioritizes qualitative disclosure while providing companies with the voluntary possibility to quantify such effects if they consider it relevant and appropriate, We believe that this approach offers several significant advantages. First, it ensures a high degree of flexibility, which is particularly important given the current diversity in company maturity, and reporting capacity for whom mandatory quantitative disclosure of financial impacts could represent an excessive and disproportionate burden. Second, Option 2 enhances the practical applicability and inclusiveness of the ESRS framework across a broad range of organizations. Moreover, we recognize that achieving full comparability in quantitative financial impact disclosures is extremely challenging. Variations in methodologies, assumptions, and data availability make it unlikely that such figures will be directly comparable across entities in the short to medium term. As a result, imposing strict quantitative requirements risks generating information that is inconsistent, potentially misleading, or overly sensitive, especially where disclosure may touch upon confidential or commercially sensitive data. Option two effectively addresses preparers' concerns by allowing organizations to manage disclosure in a way that respects confidentiality and the limitations of current measurement capabilities, while still encouraging transparency through qualitative explanations. This reduces the risk of arbitrary or incomplete reporting, promoting more reliable and meaningful communication. For these reasons, we strongly recommend adopting Option 2 as the preferred approach for disclosing anticipated financial effects in the ESRS.			
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	We acknowledge that the amended paragraphs 40, 41, and 42 of ESRS E1 represent progress toward simplification and provide some flexibility for preparers. However, certain aspects remain complex, and without clearer guidance and minimum documentation requirements, there is still a risk of inconsistent application, interpretative uncertainty, and increased reporting effort. While the amendments partially balance preparers' efforts and users' information needs, further clarification is needed to ensure practical usability, comparability, and meaningful disclosure.			
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We acknowledge that the proposed amendments improve interoperability with other frameworks and represent progress toward simplification. However, some aspects remain complex, and interpretative uncertainty persists due to unclear guidance, reliance on non-mandatory illustrative materials, and remaining documentation requirements. While the amendments partially balance interoperability and simplification, further clarifications are needed to ensure consistent, practical, and usable reporting across organizations.			
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	We acknowledge that the proposed reduction of "to disclose" data, based on relevance, helps decrease preparers' burden while maintaining key information. However, some simplifications risk omitting important disclosures necessary for meaningful transparency and comparability. Without clearer guidance and documentation requirements, there remains a risk of inconsistent application and reduced usefulness of reported information. The amendments partially balance burden reduction and preservation of essential information, but further clarification is needed to ensure alignment with the objectives of the EU Green Deal.			
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	This change reflects a recognition of the transversal relevance of these datapoints across all types of organizations, regardless of size or sector. By making these disclosures mandatory, the standards promote greater consistency and comparability of sustainability information, which is essential to enable meaningful benchmarking and informed decision-making by stakeholders. We believe this enhancement will support the overarching goal of the ESRS framework—to drive real, measurable change in corporate sustainability performance. For these reasons, we fully support this amendment and encourage its prompt and effective implementation.			
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We acknowledge that explicitly requiring correct presentation in ESRS sustainability statements can support a more effective materiality filter, helping ensure relevant disclosures and reducing the risk of excessive information. However, without clearer guidance and minimum documentation requirements, there remains a risk of inconsistent application and interpretative uncertainty, which may limit the intended benefits of this requirement.

Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Even for financial institutions, reporting both intensity and absolute emissions targets is necessary to provide a complete understanding of climate progress. Intensity targets alone may mask increases in absolute emissions, while absolute targets capture total impact. A sector-specific exception could create inconsistencies and unfair treatment compared to other sectors. Although estimating absolute targets may require assumptions, such complexities exist across all sectors and do not justify omitting these disclosures, which remain relevant for investors and stakeholders evaluating climate-related performance.			
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I partially agree and partially disagree	We acknowledge that modifying the country-by-country disclosure threshold may reduce preparers' burden and improve practical applicability. However, depending on the specific level of the threshold, there could be a risk of omitting relevant information necessary for stakeholders to fully understand the company's geographic exposure, tax contributions, and operational impact. While the amendment partially balances reporting effort and transparency, further clarification is needed to ensure consistency, comparability, and meaningful disclosures across organizations.			
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	We acknowledge that the proposed modification to the methodology for calculating adequate remuneration outside the EU aims to improve clarity and consistency. However, depending on the approach, there may still be challenges in comparability and practical implementation across different jurisdictions. While the change partially enhances usability and alignment, further guidance may be needed to ensure reliable, consistent, and meaningful reporting of remuneration practices.			
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	We acknowledge that integrating the SFDR Principal Adverse Impacts (PAI) into the amended ESRS represents progress toward alignment with existing regulatory frameworks and can support more consistent reporting. However, some aspects remain complex, and the guidance could benefit from further simplification and clearer instructions to avoid interpretative uncertainty and reduce preparers' effort. Streamlining the mapping of SFDR PAI to ESRS disclosures, providing clearer examples, and minimizing reliance on external guidance would enhance usability while maintaining transparency and comparability.			
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	We acknowledge that the revision of AR 26 in the amended ESRS E4 improves clarity and provides more structured guidance. However, some aspects remain complex and could create interpretative uncertainty for preparers. While the changes partially enhance usability and alignment with other ESRS requirements, further clarification and practical examples would be beneficial to ensure consistent, comparable, and meaningful reporting.			
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	We acknowledge that removing the voluntary disclosure on adjusted gender pay gap may reduce preparers' burden and simplify reporting. However, such information can still be relevant for stakeholders seeking a comprehensive understanding of gender equality and pay practices. While the elimination partially balances flexibility and reporting effort, providing clear guidance on alternative ways to ensure transparency on gender pay disparities would help maintain meaningful disclosure.			
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree	While the effort to make the standards more flexible and applicable to SMEs is recognized, concerns remain regarding clarity, practicality, and proportionality, which could still impose a significant burden on smaller companies.			
Survey	Sustainability Makers	Business association (other than association of financial institution)	Italy	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree

This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree

Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We appreciate the effort that EFRAG has put into trying to simplify and clarify the ESRS requirements. While the DMA simplification proposals by EFRAG are a first step in the right direction, we would like to emphasis that the proposed changes however will not result in effort reduction for wave 1 companies who already report based on ESRS. We would also like to highlight the following points based on the listed changes: 1. Strengthening the top-down approach is a welcome change, especially for large multinational companies with diverse portfolios as it allows for a more practical implementation. 2. Giving more prominence to information materiality might help to reduce discussions with auditors. However, the definition of when information is material is very broad. Not only are primary users not further defined but point (b) „necessary for users of general purpose" opens the discussion on what constitutes material information even further (especially considering the new introduced "fair presentation" principle). The proposed wordings risk an expansion of the information provided by companies as also (non-material) sustainability information might be interesting/ necessary for a very broad group of users. "Decision-usefulness" should be key for sustainability information as well. Further specification and explanations are therefore needed. 5. While we support shifting sustainability reporting from a "compliance" to a more "principle-based" approach by referencing the fair presentation principles, further clarification on the intention and scope of the fair presentation principle is needed. The "fair presentation" concept in combination with the "materiality of information" (see also comment related to point 2) need precise definition to avoid subjectivity and discussions on materiality and to minimize audit burden.			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	We appreciate the intention of clarifying remediation, mitigation and prevention implemented action, however EFRAG's proposed approach on assessing potential and actual impacts raises several concerns regarding complexity and practical implementation. Disregarding mitigation actions when assessing impacts during the reporting period could lead to overreporting. As it is unclear how "significant ongoing mitigation actions" should be interpreted, companies may end up disclosing numerous potential negative impacts that, in reality, are not material given their low likelihood and limited severity once (significant) mitigation measures are taken into account. It should generally be possible to consider the effectiveness of actions and controls directly during the assessments as it is already common practice in the already conducted DMAs and published statements. Moreover, the framework outlined in Appendix C further adds to the complexity and fails to provide clear guidance on how to weigh mitigation and prevention actions when evaluating potential negative impacts. Appendix C also risks practical implementation difficulties for companies and auditors as it suggests a checklist approach rather than being principle-based requiring the need for additional documentation on how that guidance was followed. Given these challenges, we advocate for deleting Appendix C. There is also the need to still address gross / net in relation to the risk assessment as this has led to many discussions in preparing the DMA. The approach should be aligned with financial reporting practices, focusing on net assessments and reporting.			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	While we appreciate the proposed amendments and the increased flexibility, such as the encouraged use of appendices, these modifications merely clarify existing possibilities rather than deliver meaningful simplification. The changes, though positive for improving document structure and readability, do not contribute to substantially reducing implementation burdens or overall reporting complexity.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The revised architecture and clearer relationship between ESRS 2 and the topical standards improve the framework's overall accessibility and practical application. By simplifying GDRs, reducing mandatory PAT data points, and eliminating duplications, the amendments reduce complexity enabling preparers to better navigate the ESRS requirements. However, a "drastic reduction of 'shall datapoints PAT" is overstating the changes especially considering the type of datapoints deleted and the need for esp. wave-1 companies to rework their approaches to reflect on the new reformulations. Moreover, certain changes (e.g. significant resources related to key actions) might actually risk broadening the scope of information to be disclosed and related efforts, going against the simplification and reduction aim of EFRAG. For further details, please refer to the uploaded Excel Template.			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We agree that the proposed amendments enhance the clarity and accessibility of the ESRS. The changes make it easier for companies to identify mandatory content and increase the usability (especially for first-time reporters). By positioning mandatory Application Requirements directly below their corresponding Disclosure Requirements, the new layout creates a more cohesive and user-friendly document structure that reduces navigation complexity. However, the changes do not reduce the fundamental reporting requirements that companies must fulfill. Moreover, we strongly object to the introduction of new mandatory disclosures, as this contradicts the EU Commission's request and undermines the goal of reducing reporting requirements. Additional mandatory data points should be removed completely. We would recommend reviewing and streamlining the language across the standards again based on the following points: •Some amendments seem to indicate rather behavioral obligations than disclosure requirements (e.g. E1-2 AR 5 for para. 18, ESRS 1, Paragraph 84c) contradicting Paragraph 5 stating that "the ESRS do not mandate behavior but set Disclosure Requirements[...]". •Additionally, some previously changed datapoints were changed from may to shall due to the reformulation (S1-3 new para. 19 (b)) •Sometimes the terms "shall consider", sometimes "shall" and sometimes "may" are used in the application requirements creating confusion on whether it is mandatory or not.			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1; G1	NMIG can serve as an orientation tool—especially for preparers in the early stages of implementation—by illustrating how disclosures might be structured or interpreted. However, the effectiveness of the NIMG depends on universal recognition of its non-binding status. Its non-binding status should be explicitly stated and uniformly understood by preparers and auditors, with no implied obligation to follow the provided examples. To reinforce this position, NMIG should be explicitly excluded from audit procedures, kept separate from legislative text and be strictly aligned with the ESRS standards through robust due process. This approach will ensure NMIG serves as a helpful reference tool while preventing unintended reporting burdens and complexity. However, we do still see the need for sustainability assurance standards for auditors to harmonize audit practices and to minimize the audit burden. Audit firms across member states and within countries are currently inconsistent in the level of detail they require for (limited) assurance engagements (e.g. evidence request) and in the way they interpret regulatory requirements. To avoid divergences between audit firms and between member states, the EU Commission should provide timely assurance standards for sustainability reporting as it was originally foreseen in the CSRD (i.e. by 2026). On G1: The table on standard payment terms (G1-6) should be deleted. Disclosing information of the standard payment terms by "main category of suppliers, including SME's" is not feasible and does not provide any value. The standard payment terms generally do not make any differentiation between supplier types. Additionally, for multinational companies with thousands of suppliers globally, a categorization of suppliers into SMEs and Non-SMEs is not possible.			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	While welcoming the removal of the systematic preference for direct data in value chain metrics, we see the other proposed reliefs related to metric reporting (i.e. "undue cost or effort" principle and "partial scope" reporting) very critical. While we understand that it might reduce the effort for smaller companies (i.e. first-time reporters), we think that the proposed "undue cost or effort" principle and "partial scope" reporting significantly weaken data quality, availability and comparability, undermining sustainability reporting's role in the sustainability transformation and an even level playing field. We therefore propose eliminating these reliefs. Instead, we think that there are other measures to further facilitate implementation and reporting without weakening sustainability reporting in such an extreme sense. This includes: •Further simplify and reduce qualitative datapoints – focus should be on quantitative reporting •Fewer mandatory indicators but clearly defined by the ESRS •Removing current anticipated financial effects from the requirements Moreover, other measures to facilitate metric reporting that companies can make use of already include : •Using estimates where real and precise data is not yet available (incl. clearly describing assumptions and limitations) •Use of materiality thresholds as part of data reporting (as in financial reporting) •Reporting only topics that are material based on the results of the DMA (incl. materiality of information filter) •The availability of phase-ins for certain (more complex) requirements (e.g. disclosures on social dialogue and work-life balance; phase-ins for undertakings < 750 employees) We think that it is important to advance sustainability reporting by promoting greater accuracy, comparability, and reliability and to reach a situation in which sustainability has a status comparable to that of financial information. Designed and implemented the right way, the sustainability reporting regulations can be a strategic asset for the EU's sustainability transformation and competitiveness.

Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	While supporting the explicit mentioning of excluding (immaterial) activities from metric calculation that are not a significant driver of IROs, we see the other proposed reliefs related to metric reporting (i.e. "undue cost or effort" principle; "partial scope" reporting) very critical. While we understand that it might reduce the effort for smaller companies (i.e. first-time reporters), we think that the proposed "undue cost or effort" principle and "partial scope" reporting significantly weaken data quality, availability and comparability, undermining sustainability reporting's role in the sustainability transformation and an even level playing field. We therefore propose to eliminate these reliefs. We think that there are other measures to further facilitate sustainability reporting without weakening it in such an extreme sense. This includes: •Further simplify and reduce qualitative datapoints – focus should be on quantitative reporting •Fewer mandatory indicators but clearly defined by the ESRS •Removing current anticipated financial effects from the requirements Moreover, other measures to facilitate metric reporting that companies can make use of already today include: •Using estimates where real and precise data is not yet available (incl. clearly describing assumptions and limitations) •Use of materiality thresholds as part of data reporting (as in financial reporting) •Reporting only topics that are material based on the results of the DMA (incl. materiality of information filter) •The availability of phase-ins for certain (more complex) requirements (e.g. disclosures on social dialogue and work-life balance; phase-ins for undertakings < 750 employees) We think it is important to advance sustainability reporting by promoting greater accuracy, comparability, and reliability and to reach a situation in which sustainability has a status comparable to that of financial information. Designed and implemented the right way, the sustainability reporting regulations can be a strategic asset for the EU's sustainability transformation and competitiveness.			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	We strongly oppose mandatory disclosure of current and anticipated financial effects in sustainability reporting, as it goes beyond any comparable financial reporting requirements and creates unnecessary burden, while offering limited comparability across organizations. Fundamental challenges include data uncertainty, inability to isolate specific risks, and lack of mature assessment methodologies, while at the same time the definition of "current and anticipated financial effects" remain unclear. Also, ISSB and their examples lack in our opinion clear definition and do not provide clarity based on the following reasons: •it's uncertain whether anticipated financial effects refer to "monetary risk quantification" (if so, gross or net?) or something else entirely; •it is also not clear, what / where is the boundary compared to (significant) current / anticipated CapEx/OpEx related to actions managing the risk/opp. and which is also another disclosure requirement. Additionally, the requirements pose significant legal and practical risks due to potential misinterpretation of forward-looking statements). The requirements to disclose current and anticipated financial effects should therefore be removed.			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	Overarching: We strongly oppose mandatory disclosure of anticipated financial effects in sustainability reporting (also climate-related), as it goes beyond any comparable financial reporting requirements and creates unnecessary burden, while offering limited comparability across organizations. While also a requirement of the IFRS Sustainability Disclosure Standards, the lack of clear and harmonized guidance leads to inconsistent and unreliable information and the practical use of such granular data remains questionable and does not justify the significant effort required from companies. Additionally, the disclosure requirement can also reveal sensitive strategic information, leading to competitive disadvantages for European companies. See also our comments regarding question #19.			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I disagree	Generally, we don't think that the amendments have helped to enhance the interoperability with the ISSB Standards significantly (e.g. extended scope of "undue cost and effort principle" for ESRS compared to ISSB, failing to align GHG emission boundaries with GHG Protocol). However, we would also like to point to the fact that the ISSB Standards should not be considered as "gold standard". To streamline global reporting requirements, the focus should be on a constructive collaboration between standard setters such as EFRAG, ISSB and other government organizations. This is why we recommend, as soon as EFRAG finalizes its recommendation for simplified ESRS, that the standard setters work towards full convergence. Furthermore, in the long-term, they should develop a globally accepted sustainability reporting standard similar to financial reporting – this is even more essential from a level playing field perspective than trying to create interoperability.			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I disagree	Overarching: The removal of voluntary as well as duplicative datapoints do not automatically result in a correspondingly reduced reporting burden or scope. The 57% datapoint reduction that has been communicated is in our view misleading when it comes to effort reduction. Our estimates rather point at a (maximum) of 5-10% effort reduction for wave 1 companies (in the long-run). Many datapoints that were deleted are either redundant or not associated with major effort since other information still needs to be reported (e.g. water consumption and net revenue are reported anyways, making a calculation of intensity values not difficult). Also, some reformulations increase reporting efforts as esp. Wave-1 companies are now required to review their approach and interpretation with their auditors. Hence, we urge EFRAG to rectify their communication messages around 57% datapoint and to recalculate the actual reduced reporting volume under the amended ESRS by involving preparers. Clear communication of this distinction is crucial to prevent misunderstandings about the actual extent of simplification. We think that the qualitative datapoints can clearly be further reduced and simplified (e.g. further deletion of datapoints on policies and stakeholder engagement). The report can still be significantly condensed, as many data points are unnecessary and contribute to its length, deterring stakeholders from reading it. It's essential to focus on well-harmonized and clearly defined quantitative data points and provide clear explanations of developments for external reporting. Furthermore, the introduction of new mandatory disclosure requirements contradicts the revision's simplification objectives and should be removed.			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	We do not agree with moving datapoints from may to shall. The ESRS revision must strictly focus on the reduction of reporting requirements, with no introduction of new mandatory disclosures or conversion of voluntary datapoints to mandatory ones. We especially do not agree with the decision to make "the number and nature of the confirmed incidents of corruption or bribery" (G1 new para. 6) mandatory. Not only are the scope and definition of incidents subject to interpretation, but disclosing a simple numerical number on the nature & number without linking the often underlying complexities of the cases can lead to misunderstandings. Moreover, any severe cases should be already covered by financial and risk reporting requirements in the financial report. For G1- Training of procurement team: It is unclear whether the requirement "Training of procurement team" is intended to cover topics such as anti-corruption and anti-bribery, or if it is solely focused on improving suppliers' sustainability performance. A clear thematic separation between compliance-related topics (e.g. corruption, bribery) and broader sustainability aspects is necessary to avoid ambiguity. The scope of the requirement must be clearly defined.			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	We strongly disagree with the introduction of new mandatory datapoints. The ESRS revision must strictly focus on the reduction of reporting requirements, with no introduction of new mandatory disclosures or conversion of voluntary datapoints to mandatory ones. We especially disagree with the introduction of the new datapoints in E5 due to the following reasons: •The new metrics impose additional reporting burdens as resource inflow and outflow need to be reported on a more granular level, which increases the data requirement again and thus require extensive and costly IT development or resource-intensive manual reporting processes •The introduction of new terms such as "strategic" and "key" adds significant uncertainty due to their lack of clarity •Disclosing this information on purchased (critical/strategic) materials is sensitive information leading to competitive disadvantages for European companies			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	While we support shifting sustainability reporting from a "compliance" to a more "principle-based" approach by referencing the fair presentation framework, further clarification on the intention and scope of the fair presentation principle is needed (especially against the background of relevance of sustainability reporting for different stakeholder groups). The "fair presentation" concept in combination with the "materiality of information" (see also comments for question 11) need precise definition to avoid subjectivity and discussions on materiality and to minimize audit burden. We also see the risk that the concept of fair presentation might extend Board members' responsibility beyond compliance with standards to ensuring information is presented fairly to all stakeholders. While fair presentation is well-established in financial reporting, its boundaries in sustainability reporting are less defined, creating a grey area that could lead to litigation if stakeholders dispute the adequacy of the provided information.			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	We strongly disagree with the proposal to change the threshold for the disclosure as the European Commission's intention to reduce reporting burdens is not achieved by this change. While the intent to gather more granular data is understandable, this change will, in many cases, significantly increase both the reporting requirements and the audit scope. Changing the reporting requirement from "50 employees and 10% of total headcount" to the "top 10 largest countries by employee headcount (if >50 employees)" will force many multinational companies to report on more countries than before. Each new country added to the reporting list creates its own unique challenges for data collection, especially since there are often large differences between the established data infrastructure and IT systems (especially in relation to the disclosures for S1-7 Social Dialogue (former S1-8)).			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree				
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	We would advocate for the opposite approach: the adjusted gender pay gap should be the mandatory datapoint, while the unadjusted gap should either be made voluntary or eliminated. The overall aim is to provide transparency on whether a company pays an equal wage for the same type of work, no matter the gender (i.e. equal pay for equal work). While the adjusted gender pay gap compares gender pay gap based on the same job type, the unadjusted pay gap only compares men and women overall. Depending on the industry, this can lead to a distorted picture. Additionally, including benefits in the calculation further distorts the pay gap as they are managed individually by the respective countries independently of gender. For meaningful and comparable reporting, the adjusted pay gap is the more accurate metric.			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	We appreciate the deletion of former paragraph 33(a) as it provided limited insights and was difficult to interpret in a decision-useful way. However, we also question the relevance and practicality of the remaining datapoint on "standard payment terms". The percentage of payments made under "standard terms" is hard to interpret and doesn't yield useful conclusions regarding impacts on suppliers. Additionally, disclosing information of the standard payment terms by "main category of suppliers, including SME's" (as also suggested in the NMIG) is not feasible as our financial systems do not track suppliers by size, and implementing such a classification would require significant effort. Moreover, our standard payment terms generally do not make any differentiation between supplier types. Similarly, the requirement to report legal proceedings due to late payments (former ESRS G1-6 §33c) provides limited value without contextual information such as delay reasons or materiality thresholds. Since material cases are already covered in legal risk reporting, including this information in sustainability reports creates unnecessary duplication.			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The ESRS 1 cross-cutting standard continues to be especially important, as it lays the foundation for the sustainability statement. While certain changes introduce more clarity or strengthen pragmatic and focused sustainability reporting, others increase the complexity and risk limiting the comparability of sustainability information. We especially oppose the proposed "undue cost or effort" principle and "partial scope" reporting as they will significantly weaken data quality, availability and comparability, undermining sustainability reporting's role in the sustainability transformation and an even level playing field. We therefore propose to eliminate these reliefs. We think that there are other measures to facilitate implementation and reporting without weakening sustainability reporting in such an extreme sense.			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Reducing the number of datapoints (e.g. for MDR-P and GOV disclosure requirements) and streamlining the requirements between ESRS 2 and the topical standards are perceived positively. However, we would like to point out the following issues: •The requirements on disclosing current and anticipated financial effects should be removed (see also response to questions 19 and 20) •The scope of financial resources for actions has been widened, which increases complexity •A further reduction of qualitative datapoints should be possible (e.g. related to GDR-P, IRO-1, SBM-1)			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The proposed structural changes are received positively and are welcomed as it results in a clearer representation and reduced complexity compared to the original distribution of requirements. Also the removal of the operational control concept is considered a relief for many companies as it reduces the documentation effort. However, a number of key issues remain: •The proposed changes in reporting on financial resources related to the transition plan and actions increase the reporting burden. The proposed formulation seems to indicate that the complete financial and investment planning needs to be disclosed and the ranges of short-, medium and associated long-term CapEx/OpEx are an extension of reporting requirements, going against the aim of reducing the reporting requirements. Not only are future financial resources always anticipated, but the requirements go beyond anything that is required in financial reporting. •Changes in reporting on climate scenario analysis (i.e. application requirements for climate-related physical and transition risks) indicate rather behavioural obligation instead of being only reporting requirements •More clarity on how to treat leasing in GHG emission reporting would be appreciated. •As intensity values are frequently asked by external stakeholders, we would suggest keeping the KPI.			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	33.E_3.	ESRS E3:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The KPI "Water intensity" was removed without specific reason. As the "intensity KPIs" are frequently asked by external stakeholders, we would suggest keeping the KPI as there is anyway no real reduction in reporting effort associated with the disclosure of this KPI (water consumption and net revenue data is needed anyway).			
Survey	Siemens AG	Preparer (non-financial preparing a sustainability report)	Germany	33.E_4.	ESRS E4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	While we appreciate the streamlining of the requirements and removal of duplicative requirements, we would suggest on the one hand to consider keeping quantitative datapoints in the standard that are commonly asked also by external stakeholders (e.g. number of sites near or in protected areas). In addition, the impact (own operations) on the biodiversity can only hardly be evaluated without analyzing the sites near or within a protected area. On the other hand, the requirement to disclose financing effects of biodiversity offsets in monetary terms (direct and indirect costs) should be deleted. The cost of offsets does not reflect whether a company is effectively reducing its harm to ecosystems, as high spending does not always mean real ecological benefits. Offset prices vary and lack standardized valuation, potentially making financial reporting inconsistent and misleading. Transparency on risks and impacts showcase how operations affect biodiversity, rather than disclosing financial compensation to overshadow the need for real impact reduction.

In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	While we appreciate the structural changes, certain topics still need to be further revised and adapted (especially for the metric section). Please refer for details to the Excel sheet and to questions 23 and 32).			
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	While welcoming the simplification, we consider that ESRS should explicitly recognize European and international standards as means to to demonstrate compliance and ensure coherence with other EU frameworks. Using standards will help make the DMA workable, comparable and avoid duplication in many areas.			
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	The clarification is useful but the implementation should remain coherent across EU frameworks and proportionate for preparers.			
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	After removing most topical add-ons there is a comparability risk. Hence, to keep the balance, we suggest that EFRAG and the EC explicitly allow the use of recognized standards to implement policies, actions and targets. Where methods aren't developed consider the possibility for the European standards bodies to develop supporting standards with pre-standardization support.			
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	The NMIG should remain outside the delegated act with its non-binding character explicitly affirmed and include a neutral standards - signposting section indicating relevant European and international standards and their national adoptions, thereby providing low-burden implementation tools without creating de-facto obligations. Development of methodologies should be addressed through formal standardization requests under REG 1025/2012.			
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	As Romania's national standards body, ASRO does not take a substantive position on the sufficiency of the proposed horizontal burden-reliefs, which are a reporting policy calibration rather than a standardization matter. Accordingly, we refrain from responding to this question.			
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	As Romania's national standards body, ASRO does not take a substantive position on the sufficiency of the proposed horizontal burden-reliefs, which are a reporting policy calibration rather than a standardization matter. Accordingly, we refrain from responding to this question.			
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	We recommend that, to avoid duplication, a single standards-based management measurement (methods and controls) may be used across EU requirements and cross-referenced once without recalculation.			
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	Feasible in principle, but to control effort and keep comparability we recommend a clear rule to avoid duplication: allow a single standards-based calculation for anticipated financial effect under 40-42 para to be reused across EU requirements with a single cross-reference without calculation.

Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We acknowledge the interoperability gains but to avoid duplication and preserve EU coherence, clarify that where metrics / definition are implemented via standards developed by ESOs, the same measurement may be reused or cross-referenced within ERS and other EU requirements without recalculation.			
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	We support upgrading E3 withdrawals / dischargers and G1 confirmed incidents as they improve comparability with limited additional burden. The E4 transition plan is acceptable given it applies only where a plan is already public. For G1 procurement-team training require disclosure when supplier-risk is material, to preserve proportionality, especially for ESG. To avoid duplication allow reuse of CEN/CENELEC standards based measurements and control across EU requirements via cross-reference.			
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	We support ESRS2, BP-1, E5-4 and E5-5. For E 2-4 implementation should use standards developed by ESOs. Where no standards exist, the EC should issue a formal standardization request and SME guidance should signpost the EN, to one standard-based measurement which can be re-used across EU requirements without parallel methods.			
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	For coherence and comparability across sectors, absolute targets are complementary; a sector-specific exception would undermine a level-playing field and investor insight. Address estimation challenges via conditional relief using recognized methods rather than removing absolute targets for one sector.			
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree

Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	Maintaining the SFDR data flow is appropriate, but to avoid duplication and ensure consistency, EFRAG should publish a clear ESRS- SFDR mapping-table and clarify that where data points are implemented via standards developed by ESOs, the same measurements may be reused and cros-referenced across ESRS and SFDR without recalculation.			
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree				
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	Replacing quantitative "payment practices" with narrative provisions reduces observability of SME protection. Introduce a minimal decision useful metric - share of invoices to SME suppliers paid within agreed terms, with a complimentary past dues and allow cross-reference to processes based on European and international standards. This restores comparability while preserving proportionality through materiality.			
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The re-architecture improves readability and connected information. However, to avoid duplication across EU instruments and provide preparers with practical tools, ESRS 1 should explicitly acknowledge the role of European and international standards as acceptable methodological bases to evidence compliance. A short, front-section "standards signposting" (by topical area) would guide consistent application—especially for SMEs—while preserving the non-prescriptive nature of ESRS.			
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The principles-based approach reduces prescriptiveness, but comparability risks arise when topical add-ons are removed. We recommend an ESRS standards bridge indicating where CEN/CENELEC (and ISO/IEC) methods can operationalize policies, actions and targets. This keeps flexibility while anchoring practice in recognised methodologies.			
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The new datapoint on secondary microplastics is decision-useful, but methodologies remain immature. The Commission should issue a formal standardisation request to CEN/CENELEC to develop an EN method, referenced in SME guidance to keep burden proportionate.			
Survey	ASRO - National Standards Body in Romania	Standard setting initiative	Romania	33.E_3.	ESRS E3:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The focus on withdrawals/discharges supports water balance and comparability. It is recommended to add signposting to relevant EN/ISO water-related standards so companies can implement once and reuse measures across obligations.

Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	ANC acknowledges that EFRAG has introduced meaningful simplifications to the double materiality assessment process. In particular, ANC welcomes: •the possibility of adopting a top-down approach rather than a bottom-up one; •the shift in focus from the IRO-level to the topic-level; and •the simplification of AR 16 (Appendix A). However, ANC considers that further structural and editorial changes should be undertaken to ensure consistency with the top-down approach (detailed comments provided in Part 3 – Excel file): 1.Streamline references to materiality assessment in ESRS 2, in particular IRO-1 (§26), which currently requires eight data points to describe the DMA process, as this conflicts with the simplified approach proposed in ESRS 1; 2.Relocate methodological or illustrative elements specific to the bottom-up approach to the Application Requirements, including factors on severity, precedence of severity over likelihood, criteria for positive impacts, methodological elements on dependencies (§31-32, §41-44); 3.Address remaining ambiguity between top-down and bottom-up approaches, including the formulations overly focused on individual IROs and clarify terms such as "relevant information" (§22) and "appropriate level of aggregation" (ESRS 2 AR 23); 4.Clarify that thresholds serve to determine and prioritise material topics, without implying the need for separate scoring of each criterion or severity characteristic (§28, AR 5c, AR 7); and 5.Simplify update requirement by specifying that the DMA process and its conclusions shall be updated only in case of significant events or material changes in circumstances (§29). [See proposed wording in Part 3 – Excel file regarding IRO-1 (ESRS 2 §26), thresholds (ESRS 1 AR5c), update of the DMA (ESRS 1 §29), and ambiguous wordings (ESRS 1 §22, ESRS 2 AR23).]			
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	ANC does not support the new guidance on gross versus net approach, for the following reasons: •The proposed rules are overly complex and introduce significant judgement. •They would impose burden on companies by changing the methodology. •Information on gross impact is key to understand the context of mitigation measures. In particular, Annex C creates confusion by mixing reporting for the current and subsequent year, which is conceptually inconsistent. ANC therefore recommends deleting it. The ESRS should focus on a general principle: potential impacts shall be assessed before prevention or mitigation measures (i.e., expected effects of ongoing or future actions). The terms gross and net should be avoided, since they cause confusion, especially relative to logic of business risk assessment. A distinction could be made between: •Actual impacts: to be assessed at the reporting date. In practice, the occurrence of impacts at the reporting date reflects the situation as it stands. While past mitigation actions may have reduced their severity, once an impact has occurred, it is recognised as such. •Potential impacts: to be assessed before considering prevention or mitigation actions. This reflects that sustainability actions are typically implemented over a multi-year horizon (e.g., carbon trajectory) and that some impacts may never be fully eliminated (e.g., health and safety). At this stage, ANC has not extended its analysis to risks, as it should be conducted jointly with ISSB Proposed wording for gross versus net approach (ESRS 1 §34-36): •"For actual negative impacts, the undertaking shall assess the materiality (severity) of impacts as they have already materialised. •For potential negative impacts, the undertaking shall assess the materiality (severity and likelihood) prior to considering future prevention and remediation measures. Past mitigation actions can be disclosed to contextualise the result of the assessment. "			
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	ANC supports retaining the four required parts of the sustainability statement. In addition, ANC proposes introducing a presentation rule requiring undertakings to directly reference the disclosure requirement (DR) numbers within their sustainability statement (e.g., in section headings or paragraph titles), without the need for a separate mapping table. This "visual tagging" approach is already used by many companies, facilitates comparability for users and may enhance the efficiency of future AI data processing. The proposed changes in the exposure-draft appear to weaken the objective of enhancing connectivity between financial statements and the general-purpose sustainability statement, as certain provisions on connectivity have been downgraded from "shall" to "may." ANC recommends solving the inconsistency between §111 ("shall provide information that enables users of its sustainability statement to understand the connections") and §§114-115, which use "may." Preserving mandatory language is essential to safeguard the principle of connectivity. Proposed wording for DR referencing (ESRS 2 BP-1 §6): •[new]: "The undertaking shall indicate the disclosure requirement number in section headings or paragraph titles presenting the related information (e.g., "S1-1")."			
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	ANC supports the removal of the topical requirements from ESRS 2, as they create redundancies in sustainability statements in most cases. However, ANC encourages retaining a specific reference to biodiversity resilience analysis to provide transparency on the undertaking's ability to manage its risks and dependencies on ecosystem services and biodiversity. Such analysis is crucial for certain sectors to capture financial materiality, reflecting the complexity and uncertainty of biodiversity-related risks and dependencies affecting business models after remediation actions. While references to resilience and dependencies were removed from ESRS E4 on the grounds that these aspects are addressed in ESRS 2, their treatment in ESRS 2 is generic and lacks the specificity needed. We therefore recommend mentioning these elements in ESRS 2 §24. Proposed wording for resilience analysis (ESRS 2 §24): •"The undertaking shall disclose a qualitative analysis of its resilience to the material risks disclosed in accordance with paragraph 22, including how the analysis was conducted and the time horizons considered, which may be particularly relevant for climate and biodiversity topics in high impact sectors."

Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	ANC welcomes the improved presentation of the Standards, including: •the reduction of the length of the text, notably through the removal of paragraphs related to general principles and the simplification of narrative paragraphs deemed overly technical or detailed; •the positioning of AR directly after the disclosure requirements, focusing only on essential methodological elements and key presentation points. ANC encourages further improvements (detailed comments provided in Part 3 – Excel file): 1.Reduce overall length of ESRS 1, including by simplifying Chapter 3 (currently 34 pages, 25 excluding annexes, comparable to Set 1); 2.Avoid merging topics for ESRS S1 & S2 and regroup animal welfare subtopics under G1 "corporate culture" (listed in a simple footnote); consolidate social topics for value chain workers into one or two subtopics (e.g., working conditions and human rights), to better reflect that remediation actions are generally limited to responsible purchasing practices and due diligence activities; 3.Revise ESRS 2 wording to reflect a top-down approach by referring to "sustainability topics and their material IROs (or groups of them)," rather than framing it primarily through the lens of IROs; 4.Consolidate all deviations from ESRS 1 principles under a single datapoint (basis for preparation), to facilitate tagging; 5.Remove mandatory datapoints from AR such as direct biodiversity loss drivers in AR 6 of ESRS E4, relocating them to the main body of ESRS E4 in relation to IRO-2; 6.Improve drafting in ESRS S1 by addressing unclear wording and eliminating repetition (e.g., duplication of GDR content); 7.Reassess AR in ESRS S1 to distinguish glossary definitions, essential guidance, and explanatory content better placed in the NMIG; 8.Consolidate ESRS on value chain stakeholders to reduce redundancy, streamline requirements, and allow flexibility for preparers based on their specific circumstances.			
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	ANC notes a consensus among French stakeholders that the NMIG should remain outside of the standards. In addition, the usefulness of a significant number of NMIGs appears questionable, as many merely restate the standards or state the obvious. A thorough review and refocus is needed to ensure they provide real added value Preparers are genuinely concerned that, despite being explicitly issued by EFRAG for illustrative purposes, the NMIG could gradually be perceived as a de facto reference for implementation like previous Q&As and Implementation Guidance. Expectations were expressed by certain regulators and auditors to duly consider those materials in the application of the text. It is therefore important that both EFRAG and the Commission clearly reaffirm the non-authoritative nature of the illustrative NMIG. This clarification also raises a broader concern about supporting the application of the revised ESRS going forward. To avoid any ambiguity, we suggest adding an explicit statement clarifying that the NMIG are purely indicative and non-prescriptive, and consequently are not meant for audit or supervisory enforcement purposes. At the same time, ANC encourages EFRAG to clarify how the application of the ESRS will be supported and interpretation uncertainties addressed in the future – whether through Q&A, non-authoritative implementation guidance, or other means. Such prospective clarification is essential to facilitate implementation and reduce interpretative risks. ANC also wishes to clarify what will be the status of the existing Q&A and Implementation Guidance relating to Set 1. The following disclaimer should be added at the beginning of the NMIG: "These NMIG provide illustrative examples of how undertakings may disclose information required by ESRS disclosure requirements. They shall not be construed as an interpretation of the standards, nor as covering the full range of possible facts and circumstances, but only as one possible form of relevant disclosure among others."			
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree	ANC supports the introduction of burden reliefs while sustainability reporting is maturing. While companies support the relief "undue cost or effort" aligned with the approach of financial reporting, regulators, auditors and users have raised concerns regarding its scope and definition, and the risk of incomplete information. The dynamic nature of this relief is of importance, as the assessment must be conducted at each reporting date, recognising that facts, circumstances and the information available are expected to evolve. Proposed wording for the relief "undue cost or effort" (ESRS 1 §84): •"The assessment of what constitutes undue cost or effort depends on the undertaking's specific circumstances and requires a balanced consideration of the costs and efforts for the undertaking and the benefits of the resulting information for users. Applying a requirement would result in 'undue cost or effort' because of either excessive cost or excessive endeavours by employees in comparison to the benefits that the users of the undertaking's general purpose sustainability statements would receive from having the information. •When assessing whether the preparation of a disclosure would involve "undue cost or effort," the undertaking shall consider, individually or jointly, criteria such as (a) its size, resources, and technical readiness in relation to the scale and complexity of its value chain; (b) the availability of tools to access and share information, including digital tools balanced with the usefulness to the users of general-purpose sustainability statements. •That assessment can change over time as facts, circumstances and available information change. Assessing whether a requirement will result in 'undue cost or effort' should be based on information available at the reporting date."

Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	ANC proposes revising the drafting of the relief for metrics in §91 to clarify that it is about permitting partial reporting when data is unavailable without undue cost or effort. This relief should also apply to E1-8 GHG emissions (Scope 3 at least), recognising that subsets of the value chain may be excluded depending on the sectors where the beginning or the end of the life cycle is too far in the value chain to be reliably known. Proposed wording for the relief for lack of data quality on metrics (ESRS 1 §91): •"When the undertaking cannot provide (using reliable direct or estimated data) a metric related to a material IRO in its own operation or value chain without incurring undue cost or effort, the undertaking can disclose the metric on a partial reporting boundary or for a subset of the value chain. In this circumstance, the undertaking shall disclose the actions it has taken to increase the coverage and quality in future reporting periods, and the progress compared to the previous reporting period. [Deletion: The undertaking shall also assess at the subsequent reporting dates whether reliable data or input to be used in the estimate has become available, and if this is the case, adjust the estimates and the disclosure accordingly.]" ANC supports extending the relief on joint operations (i.e., their exclusion due to lack of operational control), currently applicable to pollution-, water- and biodiversity-related metrics, to all other ESG-related metrics for consistency. In addition, while §92 specifies the conditions under which joint operations may be excluded from the reporting boundaries, the Standards do not clarify how they should be accounted for in all other cases. This gap should be addressed. [See proposed wording in Part 3 – Excel file regarding joint operations (ESRS 1 §69).]			
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	We have different views in our jurisdiction. In that context, ANC supports a hybrid approach. Option 1 could apply only to anticipated financial effects of material climate risks, reflecting financial materiality and ensuring ISSB interoperability, given the maturity of climate reporting. Option 2 could apply to other environmental topics. Requirements in ESRS 2 and E1 should explicitly refer to ISSB reliefs. Commercial sensitivity should be addressed through a relief at Level 1. ANC recalls that AFE already benefit from phasing-in provisions. It should be clarified that they apply from the date of adoption of the Delegated Act at EU level, not from the transposition date at Member State level, to ensure level playing field. Support for Option 1: •Public authority, auditors, civil society highlight that quantitative information refine risk assessment, complements resilience analysis, provide forward-looking information, supporting financial materiality and ISSB interoperability. •Option 1 offers flexibility regarding estimates, scope, granularity. •Climate-related reporting has matured since the TCFD (2017). •Asset managers support Option 1, as they rely solely on public disclosures. Support for Option 2: •Companies point out risks of disclosing projections covering medium- and long-term horizons based on assumptions that change rapidly. •It would significantly increase companies' liability. •It is impossible to provide such quantitative information without disclosing sensitive financial information; in the field of financial reporting, companies are not required to disclose financial planning. Proposed wording: •ESRS 2 §23 (b): "the anticipated effects of its material climate risks on its financial position, financial performance and cash flows, including the time horizons for which those effects could reasonably be expected to occur;" •"The undertaking may comply with ESRS 2 SBM-3, by reporting only qualitative disclosures for the first three years, starting from the application date specified in a Commission Delegated Act"			
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree	Considerations developed in response to Q19 apply to AEF of climate risks: Option 1 should only be retained for anticipated financial effects of material climate risks, while Option 2 would apply to other environmental topics. In addition to adapting the datapoints in ESRS 2 to reflect this limitation, ANC proposes a reduction of datapoints in E1-11 under Option 1. Proposed wording (ESRS E1-11 §40-42): •"The undertaking shall disclose an estimation of anticipated financial effects from material physical risks, including: a)the estimated monetary amount and percentage of assets at material physical risk before considering climate adaptation actions; and b)the estimated monetary amount and percentage of net revenue from business activities at material physical risk before considering climate adaptation actions. The undertaking shall disclose an estimation of anticipated financial effects from material transition risks, including: a)the estimated monetary amount and percentage of assets at material transition risk before considering climate mitigation actions; b)a breakdown of the carrying amount of its real estate assets that have been used as loan collaterals by energy-efficiency classes c)the estimated monetary amount and percentage of net revenue from business activities at material transition risk; and d)the estimated potential liabilities from material transition risks that do not meet the accounting recognition criteria at the reporting date but that may have to be recognised in financial statements; and •The undertaking shall disclose an explanation of the results, including where relevant key locations at material physical risks, methodology used, and an indication of the relevant line items or notes in the financial statements to which significant financial amounts relate." Certain datapoints should be deleted (or made voluntary), in particular: •§40(b): location; •§40(c): adaptation actions; •§41(b): mitigation actions; •§40(f): potential stranded assets (redundant with §40a); •§42: climate opportunities.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	The integration of elements from the ISSB framework (e.g., fair presentation, reliefs) represents a positive step towards interoperability. However, several points should be underlined. •ANC does not consider the ESRS approach to GHG emissions reporting boundaries inconsistent with the options permitted by the ISSB. ESRS E1 selects one of the GHG Protocol methods (financial control) and, in limited cases, additionally requires operational control – an exception rather than the general rule. Interoperability on reporting boundaries, particularly on climate disclosures, should therefore be carefully assessed (detailed comments provided in Part 3 – Excel file). •Unlike the ESRS, the IFRS framework has not yet undergone a large-scale field test with broad jurisdictional implementation and external audit of sustainability statements. The first ESRS implementation exercise has already revealed practical challenges, which are critical for any simplification process. Convergence efforts undertaken jointly by EFRAG and the IFRS should be continued. Nevertheless, it is important to recognise that maintaining certain differences between the two frameworks remains acceptable, beyond the well-known divergence on materiality, particularly where the ESRS already incorporate lessons learned from implementation. To address interoperability in a pragmatic manner, ANC recommends that EFRAG and the ISSB update the interoperability mapping table. This would allow undertakings wishing to align more closely with IFRS S1 and S2 to disclose additional datapoints, without creating additional burden for other undertakings.			
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	General response: EFRAG has clearly engaged in a simplification effort, reflected in the reduced overall volume of the standards, improved readability, and a clearer distinction between may and shall provisions. Importantly, the key information required by investors to conduct ESG analyses remains available. The proposal aims at striking a reasonable balance between reducing the reporting burden and preserving the information necessary to meet the objectives of the EU Green Deal. Nevertheless, ANC considers that further simplifications could be proposed. Special scrutiny should be given to the one hundred datapoints EFRAG has kept in its exposure draft that were proposed as voluntary datapoints in ANC proposal (fossil energy breakdowns, details on removals and carbon credits, details on climate-related financial effects for instance). ANC urges EFRAG to review its counting methodology, particularly for narrative requirements, to avoid excessive granularity. According to ANC's calculation, the revised ESRS include 293 mandatory datapoints, compared to 376 in EFRAG's count. The current Excel count is unclear and should be revised—for example, "Basis for Preparation-1 §5" is counted as six datapoints (a–e), with two for §5b, whereas ANC proposes a single datapoint with one associated digital tag. Companies reviewing the revised standards have expressed concerns about potential costs (e.g., IT development for data collection and correction) arising from changes in retained datapoints. Companies and auditors therefore call on EFRAG to clearly distinguish between clarification of existing requirements and introduction of new requirements. This distinction should not be part of the delegated act but set out in the basis for conclusions. [See detailed comments in Part 3 – Excel file]

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	23.	Six datapoints exceptionally moved from “may” to “shall” In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, “may disclose” datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from “may” to “shall” subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	ANC supports mandatory datapoints on water withdrawal and discharges in ESRS E3, as they provide a more accurate reflection of the water cycle and reinforce impact materiality. ANC recommends retaining datapoints on the management of relationships with suppliers in ESRS G1 (previously in G1-2, now deleted) as a higher priority than training of procurement teams. ANC strongly rejects changing datapoints on confirmed incidents from "may" to "shall" in ESRS G1, as they are highly sensitive and of limited relevance. Such disclosure could conflict with the right against self-incrimination under the European Convention on Human Rights and expose companies to investigations by third-country authorities (e.g., US Department of Justice), giving non-EU competitors an advantage. Furthermore, confirmed incidents are not a reliable proxy for assessing anti-corruption policy effectiveness. ANC considers that safeguards around the disclosure of a biodiversity transition plan in ESRS E4 do not create an undue burden and improve reliability through audit. However, clarifications are required: •The plan should be made public by the company itself, not by a third party and the term "publicly available" should be clearly define. •A distinction should be made between a biodiversity action plan and a biodiversity transition plan. ANC supports adding a definition of "transition plan" in the ESRS glossary and enhancing consistency between ESRS E1-1 and E4-1. A transition plan should be understood, as in E1, as a transformative tool for the business model, requiring only key elements: integration into strategy, alignment of targets, actions, and resources, and governance approval. Finally, compatibility with the Kunming-Montreal Global Biodiversity Framework raises practical challenges. Companies should be allowed to present a plan even if not yet fully compatible, provided they disclose current compatibility and steps toward improvement. The contradiction between "alignment" (main body) and "compatibility" (application requirements) should be resolved by retaining "compatibility".			
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new “shall” datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	ANC partially supports the new BP-1 datapoint in ESRS 2. In principle, any sustainability statement under the ESRS should already comply with ESRS 1, making a blanket affirmation of full application of limited value and potentially boilerplate. ANC acknowledges simplification efforts on secondary microplastics in ESRS E2, as only qualitative information is required, which reflects the greater difficulty for undertakings and a proportionate approach. Companies have raised concerns about the absence of an official definition of secondary microplastics and the limited scientific knowledge of their impacts, stressing the need for guidance and public support. ANC does not support the introduction of datapoints in §15 (a), (b), (c) and (e) on critical and strategic materials in ESRS E5, as they would create burden and investment for preparers. There is no clear or stable definition of "key," "strategic," "critical" materials", "key biological sustainably sourced". And the data would be technically complex to obtain, since these materials are often mixed, transformed, or embedded in products, making it difficult to determine their exact weight without reverse engineering. French stakeholders propose requiring only a qualitative description of resource inflows. Proposed wording (ESRS E5 §15a-c): •"When 'Resource Inflows' is assessed as a material topic, the undertaking shall disclose: a)which materials used in manufacturing were put on the market or were part of the delivery of the undertaking's products and services can be considered as key for its business model, including, where appropriate, critical materials, and the major reasons behind; b)which of these materials are biological and sustainably sourced; c)the percentage of total weight of secondary resourced materials." ANC disagrees with the datapoint on the percentage or total weight of waste with unknown final destination in ESRS E5, because this information is not critical, and do not contribute to the reduction of datapoints.			
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	25.	Emphasis on ESRS being a “fair presentation” reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	ANC notes the introduction of the fair presentation objective in the ESRS, to be applied at management report's and sustainability statement's level. This objective also reflects the approach adopted by the ISSB in IFRS S1. French stakeholders share mixed views. ANC invites EFRAG and the European Commission to provide further clarification on the concept of fair presentation, to avoid divergent interpretations by preparers and auditors. Guidance is needed on how this principle will be applied by assurance providers and whether its inclusion may have implications for the simplification efforts. Specifically, ANC recommends clarifying: •The definition of fair presentation as a way of taking into consideration the strategic specificities of the business model and activities of the undertaking; •The hierarchy between the use of reliefs and the requirement of fair presentation: Confirm that applying a relief does not contradict the principle of fair presentation in general. In particular, the absence of quantified anticipated financial effects does not undermine fair presentation. For example, an undertaking should be able to use the relief on commercially sensitive information without being required by auditors to disclose them under the fair presentation clause. •The audit procedures expected to ensure compliance with this principle. Proposed wording for fair presentation (ESRS 1 §17): •ESRS 1 §17: "[…] This means in particular that providing non-standardised entity-specific information and omitting non material or sensitive information does not compromise fair presentation." •"The use of reliefs in accordance with the principles set out in the Standards is without prejudice to §17: their application does not compromise the achievement of a fair presentation. The same applies to the application of materiality of information (section 3.1), entity-specific disclosures (§10) or additional disclosures that do not relate to a topic to be reported following the materiality assessment (§108)."

Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	ANC proposes defining an exception in the AR for financial institutions' absolute climate reduction targets, allowing disclosure of intensity-based targets provided they disclose contextual information and the potential trend in absolute value (see proposal below). Furthermore, ANC recommends introducing targeted application requirements for the financial institutions in addition to the exception for absolute climate reduction targets. Such adjustments are necessary, as the current sector-agnostic ESRS present significant implementation challenges for undertakings in the banking, insurance, and asset management sectors. ANC proposes an alternative drafting approach, detailed in a separate annex, based on the following principles: •Adapt certain concepts not suited to financial institutions, so as to bring ESRS terminology in line with the financial sector's lexicon (see separate Annex); •Clarify the concept of the value chain and double materiality analysis for these industries; and •Further leverage existing and upcoming sectoral regulations (e.g., SFDR for asset management and insurance activities, Pillar 3 ESG for banking activities, SRD II, etc.) (see separate Annex) The proposed adjustments do not seek to establish a dedicated sector-specific standard but rather to provide immediate clarifications in the delegated act. Proposed wording on target setting (ESRS E1-6): •AR X for §E1-6 §26a or amendment to AR12 for §26: "Financial institutions may instead disclose targets in terms of physical intensity value for each invested or financed sector for which it has set a target, and, for sectors subject to a phase-out target, the related financial exposure (portfolio gross carrying amount, underwriting or asset under management)." Adaptation of concepts and lexicon, clarifications regarding (i) double materiality assessment and (ii) value chains considerations, links with sectorial regulations: see separate Annex.			
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I partially agree and partially disagree	While providing a better picture of the geographical location of employees, the new threshold will increase the number of information to be disclosed and the reporting work, in particular when this threshold is used to disaggregate other disclosure requirements such as collective bargaining and social dialogue. French stakeholders have different views on this new threshold definition (between preparers and trade unions). As a result, we recommend maintaining the requirement to disclose the 10 largest countries in terms of employee's number for S1-5 - Characteristics of the undertaking's employees, provided that the undertaking has 100 or more employees in these countries, 100 being 10% of the current proposed CSRD scope at 1000 employees. However, for S1-7 - Collective bargaining coverage and social dialogue, which requires a detailed screening of applicable laws across multiple jurisdictions, we suggest reverting to the previous threshold ('at least X employees representing at least 10% of the total workforce'), with X to be aligned with the final outcome of Level 1 discussions on the CSRD scope (e.g., if the scope is set at 1,000 FTE, then X = 100).			
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	While ANC had initially proposed to make this metric voluntary due to the lack of maturity, we acknowledge the importance of ensuring reliable disclosure on adequate wages. We see limitations in the current benchmark hierarchy proposed under ESRS S1 AR 22, particularly for countries outside the EEA. Reliance on statutory minimum wages may result in benchmarks that are socially inadequate. We therefore recommend placing recognised adequate wage estimates before statutory minimum wages. As regulation cannot mandate the use of proprietary tools, the most effective solution would be the development of an accessible, open-source standard. Comparability could be enhanced through collaboration between EFRAG and the ILO to develop a public, country-by-country benchmark. As a compromise, we propose a flexible model with mandatory transparency. Undertakings should be allowed to use either statutory wages or recognised adequate wage estimates, provided they disclose the methodology and country-level context. Given the novelty of this concept, companies should retain flexibility to select the most appropriate reference, while avoiding premature lock-in to a rigid framework. The ILO's work, although not yet fully comprehensive, could serve as a starting point. We also encourage EFRAG to clarify how materiality should be applied for adequate wages. Proposed wording: •[new]: "The undertaking shall disclose the reference and methodology used to determine the adequate wage benchmark and provide country-level context." •AR 22. "The adequate wage benchmark used for comparison with the lowest wage shall not be lower than: b)Outside the EU: i.Any recognised adequate wage estimate, which considers ILO principles on estimating an adequate wage; ii.If (i) is not available without undue cost or effort, the statutory minimum wage or the wage level established through collective bargaining, which is periodically reviewed or adjusted and considers ILO wage-setting principles. The benchmark used under points (i) or (ii) (…)."			
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	The French financial sector stresses the need for coherence between the ESRS, SFDR, and other EU regulations, as well as greater harmonisation. We call on the European Commission to ensure that simplifications are reflected in SFDR disclosure requirements, particularly with regard to PAI indicators and their calculation methodologies. ESRS should remain the primary source of corporate sustainability data, ensuring consistency and efficiency across the EU sustainable finance framework. On EFRAG's specific proposals: •We support merging policies on human rights, alignment with the UNGP, and OECD MNE Guidelines into a single "human rights policy" under ESRS 2 GDPR-P for the four stakeholder groups. •We support consolidating severe human rights incidents into one data point. Instead of requiring overly granular disclosures, companies should describe the stakeholders affected. •We support excluding fatalities from the scope of days lost. On reassessing PAI relevance: •Revised ESRS should guide the determination of PAI indicators, which in turn should meet transparency needs of financial market participants. The previous sequencing—where PAI preceded ESRS—has resulted in certain indicators of limited relevance. •Coverage should be balanced across ESG pillars, avoiding duplication. Where gaps exist, new PAI could address them (e.g., governance approval of climate transition plans, circular economy). •The distinction between mandatory (Table 1) and additional (Tables 2-3) indicators should be reconsidered. A streamlined set of 10–15 mandatory PAI would improve usability and comparability. Principles for simplification: •Merge indicators with overlapping objectives to reduce overall numbers; •Remove additional indicators that have effectively become mandatory in practice; •Clarify materiality at the investee level, in line with ESRS 2 IRO-2; and •Restrict the calculation of certain PAI indicators to clearly defined and relevant scopes to preserve their relevance and comparability.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	As regards biodiversity-related target setting, we support providing more guidance to reflect the latest methodological trends and ensure stronger alignment with science-based frameworks in the NMIG. Proposed wording on target setting (NMIG): •[New]: "Biodiversity-related targets should: orely on material impacts and dependencies, prioritising significant activities, high-risk watersheds, and high-impact commodities; ocontribute to alignment with ecological thresholds, policy objectives, and recognised frameworks, including SBTN and the Kunming-Montreal Global Biodiversity Framework; and ofocus on key impacts, such as land use change and ecosystem conversion (e.g., expanding from zero-deforestation to zero-conversion policies for all natural ecosystems), while considering the local ecological context. •When appropriate, the undertaking may refer to the following sources: oTNFD, which provides examples of quantifiable targets related to direct biodiversity pressures and nature state; oSBTN, which provides guidance for establishing targets and/or collecting associated data on pressures, impacts, and dependencies, as well as more detailed guidance for targets related to terrestrial ecosystem use (e.g., non-conversion of natural ecosystems, reducing land footprint, and landscape-level commitments)." Key considerations for implementation and open questions from French stakeholders to be addressed in the longer term by EFRAG: •How to reconcile local site-level targets with global science-based ambitions? •How to balance ambitious global targets, which may currently be unattainable, with practical and credible action plans? •How to define the appropriate scope/geography: site, watershed, country, or consolidated? •How to apply ecological thresholds locally in alignment with global commitments? •How should target-setting differ between physical economy actors and financial actors? Finally, we encourage a progressive implementation approach. Expanding coverage of activities and subsidiaries in phases allows for learning, internal acceptance, and capacity building. [See key additional considerations in Part 3 – Excel file regarding value chain (§9), direct biodiversity pressures (AR6), and standardised metrics (§21).]			
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	ANC recommends that the gender pay gap be reported on an adjusted basis, with a breakdown by employee category. Employee category is the main driver of the pay gap, and both preparers and users view this breakdown as critical to ensure the metric's relevance and decision-usefulness. By contrast, making only the unadjusted gap mandatory risks misinforming stakeholders and unfairly penalising companies based on their sectoral or organisational structure rather than actual pay practices. If reproduced without context, the unadjusted metric may also damage companies' reputation. For this reason, we do not support the deletion of the voluntary datapoint on adjusted pay gap. On the contrary, we recommend the opposite approach: the adjusted gender pay gap should be the mandatory datapoint, while the unadjusted gap should remain voluntary (or be deleted). The adjusted pay gap is the only metric that directly measures compliance with the principle of "equal pay for equal work or work of equal value." By controlling for factors such as role, seniority, location, or performance, it provides a precise and actionable measure of pay equity. For example, in a multinational company employing both office and production staff, the adjusted metric allows stakeholders to identify discrepancies within comparable roles, rather than conflating very different job categories. The unadjusted pay gap, in contrast, conflates pay equity with workforce composition. It is therefore less informative and may be misleading, particularly for global or multi-sector companies. Issues of representation can instead be addressed through complementary disclosures, such as the gender diversity of governance bodies. Proposed wording on pay gap (ESRS S1 §44a): •"The undertaking shall disclose: a)the gender pay gap, defined as the difference of average pay levels between female and male employees, expressed as a percentage of the average pay level of male employees by employee category; and (…)."			
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree	French large companies do not support the proposed requirement to describe standard payment terms in number of days by main supplier category, including SMEs, and to report the percentage of payments aligned with these terms, as they do not always distinguish between large suppliers and SMEs in their systems. Instead, they propose using the Average Days Payable Outstanding (DPO), accompanied by a narrative description of standard payment terms, with particular attention to SMEs. The DPO is the most feasible metric, as it is widely tracked internally and used for management purposes, whereas the proposed metric would be difficult to construct and require significant investment to modify data collection systems. This approach allows companies to qualitatively describe how they manage SME-related risks and impacts in a manner adapted to their specific facts and circumstances.			
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	[See detailed comments in Part 3 – Excel file]			
Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. Survey	Autorité des normes comptables (ANC)	(National) standard setter	France	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Net-zero targets: The reference to net zero was removed from the standard. This is regrettable, as standardising this notion has demonstrably improved the quality of disclosures on a topic particularly exposed to greenwashing risks. The concept, together with its definition, should therefore be retained in the standard. Proposed wording: •Add in glossary the previous "Net zero target" entry •Retain current Set 1 E1-7 §60 with clarifications regarding removals vs offsets: "where the undertaking discloses a net zero target […] and how the residual GHG emissions (after approximately 90-95% of GHG emission reduction with the possibility for justified sectoral variations in line with a recognised sectoral decarbonisation pathway) are intended to be neutralised by GHG removals." Taxonomy consistency: ANC calls for harmonisation between the Environmental Taxonomy and the ESRS. As the ESRS are simplified, the Taxonomy should also be streamlined to ensure coherence and complementary of sustainability information. We support applying the materiality principle in the Taxonomy, as in the ESRS and IFRS, relying on qualitative and, where appropriate, quantitative criteria consistent with current practice. Given that DNSH criteria and minimum safeguards are often complex and inconsistently interpreted, we recommend aligning them with information on ESG PAT, metrics, and due diligence already reported under the ESRS. The Taxonomy's main value lies in ratio calculations, which users can interpret alongside ESRS disclosures. Audit - the usefulness of a standard compared to guidelines: The audit has posed significant challenges in the first year of ESRS implementation. While clarifications in the ED help, further issues will arise as audit practice develops and new concepts (e.g., fair presentation) are introduced. To ensure a consistent and comparable level of audit diligence across all EU jurisdictions, a binding audit standard applicable to all auditors is needed, which would provide a more robust framework than guidelines.			
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I disagree	The proposed changes are worse both for preparers and users. Introducing more presentation choices for preparers and introducing fair presentation only creates more questions for preparers, and will create more questions from assurance providers for which the preparers will need to provide more justifications. Most changes proposed decrease the usability and comparability of the data for users. The comment included in the log of amendments that currently "reporting and presentation of disclosures could only be made within very strict limits" could not be further from reality. In this first wave of reports, we users have seen companies already taking liberties with their presentation to the point that the disclosures are not usable, as they are unclear and not comparable with any other issuers when the company chooses an entity-specific presentation. We already find that it is has been extremely difficult for us to find the values that were supposed to correspond to the ESRS metrics in published documents. It is impossible to find most of the metrics for SFDR in many statements, and for the rest, it is impossible to be confident about it. Companies are free to disclose a "gender pay gap" and stay vague about its definition. Companies are free to disclose "non-recycled waste" amounts using a different definition for "recycled" than the one in the ESRS. Information collection was already very difficult in practice, and the proposed changes seem like they encourage the practices that make information collection difficult, and that make the use of misleading presentations easier. Are the ESRS giving up on the idea of being a reliable framework for providing information to sustainable finance users? With this revision and data no longer eing comparable, companies will be sent questionnaires asking them to provide the metrics users actually need.

Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	I agree with the sentiment that impacts should be reported on when the company has to maintain significant actions to mitigate them. However, I think this phrasing may be a source of confusion and therefore additional preparer-assurance discussions and costs. In what cases is there an impact that would be material before mitigation actions, immaterial after mitigation action, but the mitigation action wouldn't be significant? Unless EFRAG provides clear examples of that, and guidelines to that notion of "significant", this will just be another additional point of debate and cost between preparers, assurance providers, and users.			
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I disagree	This is detrimental to users. Executive summaries are not useful to users, and I doubt they would actually meet the qualitative characteristics, but paragraph 109 would often justify the inclusion of such a summary, that would dilute the material information. Appendices are detrimental to users. Moving specific material information to remote places of the report can be used to attempt to change a user's overview of the company's situation. I don't find the amendment to be discouraging fragmentation, to the opposite. Paragraph 112 needs to require the reference to be in both parts. Currently, this paragraph allows a company to disclose information without mentioning that complements are available in appendices, given that the company may be allowed to only mention in the appendix that the appendix information is relevant to information from the main body. Additionally, wording the need to reference inside a 'may" clause if likely to be interpreted as meaning that referencing is optional, while it is essential for users.			
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The restriction of the consideration given to stakeholder interests to social topics has not been explained and is not justified in our opinion. The precisions regarding the capex/opex for allocated resources are appreciated. However, a lot of companies seemed to have considered this disclosure as completely optional past year (unless no company allocated significant resources to their action plans?), so a change to insist on the required character would seem necessary. Adding explanations about what consitutes an action is appreciated, but the clarifications do not match our expectations. This year, action sections were cluttered with so-called actions that were essentially 'we are working on our policy', i.e. not actually remediation actions. We would have expected the clarifications to explain that these are not remediation actions. Clarifications on entity-specific metrics and targets are appreciated overall. Many entity-specific metrics were disclosed without units this year. The deletion of the MDR-T requirement to disclose the current performance for the target metric is not appropriate. The justification is that it is "included in the objective", but objectives are generally vague and do not define the data the report must disclose.			
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	The NMIG being separated from the main body makes them more difficult to use than when they were in the main body. A preparer reading through the main body of the standard has no way to know that there is supporting guidance available in the NMIG. Generally speaking, we consider that removing guidance or making it more difficult to access is the opposite of simplification.			
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	For acquisitions: we recognize that there is a current practical challenge where companies subject to ESRS acquiring subsidiaries not subject to sustainability reporting often are not able to collect the data from the subsidiary. However, this is the wrong way to address the issue. At worst we should have disclosure that the company was unable to collect that information, together with some activity metrics to help users estimate the missing part. At best this should just be reasonable effort estimates included in the disclosed figures. With the proposed relief, users may end up with no hint at all to help them estimate the gap. Issues should be temporary, and companies should be pushed to fix this data collection issue instead of delaying it. The acquisition of a subsidiary is a lengthy process, and candidates to acquisition should be made aware that they will need to report sustainability metrics. Just as they currently know that they need to prepare for IFRS consolidation. With the proposed solution, many large groups that acquire or dispose of subsidiaries in most periods would probably have a permanent offset between their financial and sustainability reporting scopes, which is not compatible with the expectations and regulations on sustainable finance. On loss/disposal: when a company disposes of a subsidiary during the reporting period, that subsidiary is no longer part of the scope of reporting for the financial statement, so we have always been assuming that the sustainability statement also would exclude it. Loss of control is the same. This reads as if the exclusion from the scope becomes optional, so we may have yet another discrepancy between the scope for the financial statements and sustainability statements where a company may report figures corresponding to a subsidiary that was disposed of.

Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	It is essential that the information is not presented in a way that would mislead readers into thinking this is the full scope information. This year, many companies included partial information, and the disclosure of the partial measurement was hidden away from the actual value.			
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1				
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree				
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree				
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	22.ESRS2	Comments on deleted datapoints in ESRS 2	I disagree	All content that is necessary for sustainable finance disclosure, or generally to meet user needs when user have a legal need to collect that information from companies should not have been deleted or aggregated with other data points.			
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I disagree	Fair presentation is not compatible with the objective of the CSRD to provide comparable data, especially to answer user needs to specific data points required for sustainable finance reporting, or for governance from a statistical standpoint. Fair presentation would remove most of the usability from sustainability reports. As mentioned earlier, this year's reports were already taking a lot of liberty with their presentation, with a worrying amount of cases where companies were employing ESRS vocabulary with a different meaning. More strictness on the definition of metrics is required to make the ESRS meet the EU's objectives, definitely not less. I agree with the view that fair presentation is more complex in practice for preparers, as it requires more judgment and will be more costly, in additional to being much less useful to users. Consolidated financial reporting (IFRS) is moving away from fair presentation in practice in recent standard IFRS 18 from similar reasons.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets				
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	Many companies are not reporting any breakdown information this year, when they operate in many countries. They would under this requirement.			
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	I agree with the concern that the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, and therefore does not inform users on the payment of adequate wages.			
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I disagree	The general usefulness of the ESRS as a whole is questionable if it does not even ensure consistency with the rest of EU sustainability information requirements.			
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	Corporatings	User (analyst, data provider, rating agency, etc.)	France	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree

Survey	ACEA	Business association (other than association of financial institution)	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Agreement on DMA adding clarity. Howver, simplifications of the DMA process mainly reduce effort for wave 2 companies, not companies already reporting according to ESRS Some wordings in Ch. 3 are still not sufficiently clear and leave room for interpretation, E.G., 3.2(22): if the provided options refer to only the presentation of IROs this can lead to a lack of comparability between reports of different companies. Presentation in tables/overviews etc. should be preferred on IRO level and should be clearly stated, 3.3.1(34): a clear definition of how many previous periods need to be included in the identification of actual impacts is missing. S1-16 could be easily mapped to sub-topics such as discrimination/harassment or child/forced labour. Therefore 11.2 only makes sense if IRO mapping and information materiality can be really used. AR16 is now very confusing as there is no clear differentiation between sub-topic and former sub-sub-topic. This makes it hard to identify the material topics on a detailed level. Sub-topic level should be deleted and sub-sub-topics should become new sub-topics. No "mingling" of the two levels.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	Lack of clarity which can lead to additional burdens: For example, in which cases a mitigation or prevention action is considered "significant" and in which cases not remains unclear High burden: If all mitigation efforts that need to be maintained over time cannot be considered in the assessment of a potential negative impact, companies would have to report a high number of potential negative impact, even though the likelihood and severity of occurrence would be non-material in reality. Contradictory language in ESRS: It states that, while an undertaking cannot state a positive impact e.g., for implementing actions to prevent human rights violations along the value chain, it could at the same time report a positive impact, because with these actions, the companies helps to mitigate negative impacts of its upstream suppliers on these human rights topics. Overall, uncertainties exist that leave room for interpretation and unnecessary reporting burdens.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	In general, the increased flexibility introduced throug the proposed amendments are welcome. The possibility of including an executive summary and the emphasis on using appendices to seperate detailed info from key messages can be helpful steps toward increased readability and structure. However, we understand the changes primarily as clarifications of existing options, rather than substantial simplifications. They do not result in significant relief in terms of implementation effort or reporting complexity.

Survey	ACEA	Business association (other than association of financial institution)	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	Mainly the enhanced readability and usability of the standards under Level 3, reduction of complexity and duplication through simplification of GDRs and reducing mandatory PATs, and shifting towards more principle-based approach and the ability to report PATs at higher aggregation level. These changes reduce complexity and duplication, making it easier for preparers to navigate the requirements and focus on material information.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	Removal of "may disclose" datapoints, separation between mandatory and non-mandatory content, revision of the lay-out e.g., the relocation of mandatory Application Requirements under the relevant Disclosure Requirements are all welcomed. However, while structure and readability have improved, the overall reporting requirements remain largely unchanged. On top of that, new mandatory disclosures have been added, clearly against the request of the EU Commission and the aim of the revision to reduce reporting burdens. We also recommend eliminating all the unclear terms, such as "Shall reflect", "shall consider", "may present", "may implement", "may include",... to avoid misunderstandings with auditors.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	NMIG can serve as an orientation tool, however, the non-binding nature of NMIG should remain clearly communicated and consistently understood by preparers and auditors. There should be no implicit expectation that the examples provided must be followed or justified if not applied. The NMIG shall not be integrated in the Delegated Act, in order to minimize risks of auditors interpretating it as "the law" to follow, rather than the non-binding orientation tool it is. Therefore it should be kept separate from the delegated act and included in a separate Excel file with the list of mandatory data points published by EFRAG. This document should be seen as guidance on voluntary disclosures, if needed.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	Introduction of "undue cost or effort" relief and the removal of the systematic preference for direct data in value chain metrics and allowing the use of estimates. The offer flexibility and support a more proportionate and pragmatic implementation of ESRS, without compromising transparency or alignment with EU Green Deal objectives. However, there may be an increase in burden of proof if auditors challenge whether sufficient effort has been made to fulfil reporting requirements, especially under the "undue cost or effort" points. On 17.4 the question arises why joint operations can only be excluded for environmental metrics, and not also for social metrics if operational control is not fully given. On 17.6 regarding ESRS 2, AR16 paragraph 23(b): The amendments made to the anticipated financial effects do not solve the issue of data availability and reliability, as assumptions for this data point will vary so widely that any comparison between companies would be misleading. All datapoints on anticipated financial effects should be deleted On 17.7 on relief for acquisitions: We welcome the proposed relief for acquisitions, however the one-year timeframe for integrating a subsidiary for sustainability reporting purposes could be insufficient and unrealistic. More flexibility should be offered here.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	It is important to note that many Wave 1 undertakings will benefit only to a limited extent from this relief. In many cases, data collection approaches, often based on workarounds, have already been agreed upon with auditors and implemented. Continuing with these established methodologies may require less effort than reassessing and justifying the application of the new relief.

Survey	ACEA	Business association (other than association of financial institution)	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	We oppose the quantitive disclosures of anticipated financial effects. Underlying data is unclear, and risks cannot be isolated, making any disclosure legally risky and prone to misinterpretation. Such information lacks comparability and does not offer decision-useful insights for stakeholders. With qualitative disclosures, issues exist with disclosures going beyond other existing standards, harming a harmonized approach to this topic. We suggest to make the qualitative disclosures of anticipated financial effects voluntary for the first years after entry into force of the revised standards. Financial estimates involve uncertainty and there are no industry standards/methodologies to develop these. E.g., it remains unclear what the basis for the calculation of the financial effects should be: planning data or data from the last financial year. Other examples include unfeasibility e.g., reputational risks that cannot be quantified. Additionally, required disclosure of financial estimates leads to disclosure or reverse engineering of confidential product planning information, or lead to multiple sets of forecast information in the public space. Guidance on full year results are issued already, accompanied by significant caveats. Additional forecast estimates for future periods could be misconstructed by others. Mandatory disclosure of anticipated financial effects will negatively impact financial and non-financial ratings issued by specialized agencies and credit institutions, regardless of the amounts published. Banks don't favour such disclosure. Disclosures, especially on climate, can lead to a significant negative "financial reputation" for industries like automotive, especially vis-a-vis other regions such as the U.S. and China, who abide by different requirements. This negatively affects competitive positioning of EU companies, while the disclosures have little added value. Removal of the disclosure requirement is of significant importance. IFRS defines when future risks and related current and anticipated financial effects must be reflected in financial reporting. Sustainability reporting should not override/extend these through financial disclosure requirements in the sustainability statement.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	We highlight that the level of detail required often risks commercially sensitive information, particularly in the precise location of assets exposed to environmental or climate-related risks. We call for a deletion of the quantative disclosures on anticipated financial effects. The reduction in words written helps the reader focus on what is required, but the disclosures have not been reduced/meaningful simplified. There is no methodology to link specific climate-related risks or opportunities to financial metrics. A direct mapping of sustainability risks to financial metrics would entail disproportionate effort/complexity. Comparability across undertakings is hindered due to the absence of guidance on the required level of detail for qualitative disclosures. Market participants rely on standardized models and data sources, which are not meaningfully enhanced by inconsistent, company-specific disclosures. The use of granular data remains questionable and doesn't justify the effort required from companies. E1-40 (c): Often, adaptation measures cannot be directly linked to specific assets. Doing so requires enormous efforts/results in imprecise data that offers little. Therefore, a one-to-one attribution is not practical/feasible. E1-40 (d) : It is nearly impossible to calculate the amount/percentage of net revenue at risk from physical climate impacts before considering adaptation measures. Complexity arises from the high uncertainty of climate projections, the difficulty in quantifying future physical damages, and the challenge in modelling how risks will evolve. The lack of standardized methodologies/reliable data further complicates estimations. See comments on E1-41 and others in Part 3 of this consultation.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	1) It is recommended that the fair presentation framework not to be required, but is voluntary to use (see also our comments to 25)) Some relief is provided, but the wording in the context of disclosure following the operational control approach is very vague and hence might be part of discussions with auditors. This has to be clarified, in particular to emphasize that it is a "may" disclosure. Additionally concerns arise given the fact ISSB standards were never implemented. The question arises why the "Fair Presentation" framework would take into account ISSB standards given that fact. This would lead to additional complexities, especially if the vagueness in wording that is proposed remains. 2) IFRS allows for any GHG boundary to be used while the use of financial control is made mandatory by ESRS, failing to align to the GHG Protocol. The ensure alignment with IFRS, companies should be provided flexibility to choose the boundary line with the GHG Protocol. 3) The introduced relief clauses are welcome and needed by preparers, however the timeline for Level 1 remains unclear. 4) It is important to maintain the additional reliefs, since in the ESRS we go beyond climate aspects, where methodologies are less advanced, thus these clauses are needed. 5) Agree 6) We support the reference to SASB Standards and IFRS industry-based guidance as a source of possible disclosure to enhance transparency and interoperability with ISSB standards.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ACEA	Business association (other than association of financial institution)	Belgium	22.ESRS2	Comments on deleted datapoints in ESRS 2	I disagree	Changes are purely editoral or aimed at improving readability and comrehension, instead of an actual reduction in the number of disclosures. The overall scope and complexity of the disclosures remain largely unchanged. The deletion of datapoints primarily affects how requirements are presented, not what is required. Deletion of datapoints does not necessarily translate into a proportional reduction in the substantive reporting scope or effort. We do not expect a significantly reduced reporting volume under the amended ESRS. Instead, the changes may help reduce effort in documentation and coordination with auditors. For example, the introduced options for burden reliefs may simplify internal discussions and reduce the need to justify the omission of non-material items. It is important that this distinction is clearly communicated: while the number of datapoints has decreased, the underlying disclosure obligations remain intact. This will help manage expectations and avoid misinterpretations regarding the actual simplification impact of the amendments. Additionally, we have concerns with the addition of new mandatory disclosures, going against the purpose of the revision of the ESRS. Simplification should be focused on reduction of efforts in data collection, documentation, and coordination with auditors.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	22.E1.	Comments on deleted datapoints in ESRS E1	I disagree	Changes are purely editoral or aimed at improving readability and comrehension, instead of an actual reduction in the number of disclosures. Survey	ACEA	Business association (other than association of financial institution)	Belgium	22.E3.	Comments on deleted datapoints in ESRS E3	I disagree	Changes are purely editoral or aimed at improving readability and comrehension, instead of an actual reduction in the number of disclosures. The overall scope and complexity of the disclosures remain largely unchanged. The deletion of datapoints primarily affects how requirements are presented, not what is required. Deletion of datapoints does not necessarily translate into a proportional reduction in the substantive reporting scope or effort. We do not expect a significantly reduced reporting volume under the amended ESRS. Instead, the changes may help reduce effort in documentation and coordination with auditors. For example, the introduced options for burden reliefs may simplify internal discussions and reduce the need to justify the omission of non-material items. It is important that this distinction is clearly communicated: while the number of datapoints has decreased, the underlying disclosure obligations remain intact. This will help manage expectations and avoid misinterpretations regarding the actual simplification impact of the amendments. Additionally, we have concerns with the addition of new mandatory disclosures, going against the purpose of the revision of the ESRS. Simplification should be focused on reduction of efforts in data collection, documentation, and coordination with auditors.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	22.E4.	Comments on deleted datapoints in ESRS E4	I disagree	Changes are purely editoral or aimed at improving readability and comrehension, instead of an actual reduction in the number of disclosures. Survey	ACEA	Business association (other than association of financial institution)	Belgium	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	The affected datapoints do not appear to introduce fundamentally new reporting obligations, and the rationale for each is understandable. However, the principle of not increasing reporting requirements should be applied consistently. The change in status to mandatory for these datapoints will require additional interpretation, internal coordination, and alignment with auditors. For E4: E4-1, particularly paragraph 12, should not be mandatory. The obligation to prepare and disclose a biodiversity transition plan should only arise if biodiversity impacts and risks are deemed material through its DMA. There are practical challenges in disclosing "key features", such as proportionality of the level of detail required. Additionally, obtaining precise, site-specific biodiversity data from complex value chains is often unfeasible. G1: the 10(c) update, while clarifying low-risk roles, overlooks the dynamic nature of global corporation, making a precise percentage of at-risk functions unfeasible. Disclosure focus should be on robust mitigation policies, processes, and identification of at-risk roles, not percentages. Additionally, disclosure 14, requiring legal violation disclosure imposes a new, potentially serious obligation in Europe where no affirmative duty currently exists.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	E5-4 and E5-5: We recommend to remove these disclosures. In 15(c), the proposed datapont is impractical and potentially misleading. Weight-based critical material calculation can prioritize lgher weight materials that may be of lower risk. The CRMA's narrow strategic definition can miss broader industry specific vulnerabilities. Furthermore, tracking precise raw material weights across complex supply chains is an immense burden, yielding data of questionable value for circularity or true risk assessment. We strongly oppose the addition of any new datapoints as they typically result in significant additional effort for reporting entities, without a corresponding increase in useful information for decision-making. The cost-benefit ratio of expanding disclosure requirements must be carefully considered, and the current framework already places substantial demands on preparers. Addtionally, in the Commission task given to EFRAG there was a clear message not to introduce new datapoints. This should be respected.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I disagree	The Fair Presentation reproting framework cannot be implemented as is. Both companies and auditors need progressivity and more detailed guidance, with concrete intermediate milestones converging to the vision given by Appendix B in a reasonable and implementable timeline. Given the evolving state of the regulation and various stages of adoption by various industries, as well as various experience levels of assurance providers, maintaining the "Fair Presentation Framework" as voluntary would allow time for the industry to develop that capability in a more standardized way. Auditing procedures would possible have to be revised, therefore involving more work and greater uncertainty. A fair presentation opinion will drive scope beyond a limited assurance opinion. Fair presentation would also introduce further subjectivity in the ESG space, at a time when ESG reporting standards are still evolving. Assurance costs and lack of clarity would increase as a result of this requirement, given the vagueness of wording and lack of definition that could lead to subjectivity at the auditing stage. Additionally, increased accountability for Board Members would exist, given their obligation to ensure not only compliance with standards, but also that the information is presented fairly to all relevant stakeholders. At this stage, a voluntary approach is therefore appropriate. Additionally see our comments in question 21 with regards to the framework.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	General agreement that data is usually available when collecting the related data points. However, a top 10 of countries might be overdone as not all companies are active in so many countries and information might not lead to information-material insights. A top 5 for example would suffice.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	It is agreed to include the ILO framework in the adequate wages metric, with opportunity to participate in EFRAG's targeted field test to understand practical implication. The ILO living-wage framework has become the globally recognized standard for assessing adequate wages because of its rigorous methodology, international legitimacy, and broad stakeholder acceptance. For that reason, we agree EFRAG should base the adequate-wage metric on the ILO framework. The impact on companies remains uncertain, pending EFRAG field-test results and a new global renumeration review; current data suggests a reporting impact is unlikely but this must be confirmed.

Survey	ACEA	Business association (other than association of financial institution)	Belgium	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	The importance of feasibility and coherence in reporting according to different legislations should always be taken into account. Removing some of the SFDR datapoints is appropriate, the ESRS simplification will need to be coordinated with the review of the SFDR.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	Further simplification on AR 26 is needed. Specification of the, until now, optional examples of how targets can be set is not needed because companies are best placed to assess which targets are most appropriate for them. Flexible target setting options are essential. Additionally, detailed guidance undermines the DMA by creating a "checklist" effect. This pressures companies to report on a topic even if their own assessment deems it non-material. It is strongly recommended that AR 26 is reviewed and replaced with simpler, principles-based guidance. This would empower companies to set targets that are relevant to their specific material impacts, if any exist, rather than forcing compliance with a one-size-fits-all standard.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree	When it comes to alignment with the EU Payment Transparency Directive (EU PTD), we are still missing total alignment with the EU PTD, with regards to salary/wage components. This might lead to different calculation approaches, especially when the EU PTD is translated differently in the member states. Therefore we recommend to keep the datapoint regarding gender pay gap, but make it voluntary in nature.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree	This change should still ensure support for SMEs while streamlining processes. Support for the removal of the datapoint on "average time to pay an invoice", as it did not offer meaningful insights and was difficult to interpret in a decision-useful way. We do question the relevance and practicality of the remaining datapoint on "standard payment terms". This metric lacks clarity, especially in international contexts where no legal standard exists, and does not provide useful information for assessing supplier relationships. The percentage of payments made under "standard terms" is difficult to interpret and does not allow conclusions about actual impacts on suppliers. Disclosures on standard payment terms are already partially covered by existing financial reporting requirements. As such, there is a risk of duplication between ESRS and IFRS requirements. To avoid inconsistencies and unnecessary reporting burden, alignment and clarification on the scope and purpose of such disclosures is essential. Additionally, the categorization of suppliers (e.g., SMEs) remains problematic. Our financial systems do not track suppliers by size and implementing such a classification would require disproportionate effort. Similarly, the requirement to report the number of legal proceedings due to late payments, is not decision-useful in isolation. Without qualitative context, such as reason for delays or materiality thresholds, the raw number lacks relevance.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	ESRS 1 (partially agree): The exposure drafts reduce the volume of the S1 significantly, especially redundancies. However, the associated efforts are not being reduced proportionally. The change in nomenclature alone is now leading to high implementation efforts. The new structure could lead to confusion with view to the IRO mapping. The categorization into sub-topics is less consistent. They should be fully distinct and clear and not mixed between previous sub-topics and sub-sub topics. Also S1-16 should be a datapoint that can be mapped and should not be material of its own.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	ESRS 2: The revision of ESRS 2 is not sufficient to reduce the reporting volume and burden significantly. Many proposed changes to ESRS 2 DRs are only cosmetical and do not change the substance of the reporting. Furthermore, merging several datapoints is not a reduction. We object the introduction of new reporting requirements as well.			
Survey	ACEA	Business association (other than association of financial institution)	Belgium	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	ESRS E1: The ESRS revisions are not satisfactory overall. Although some areas have been shortened and disclosure obligations have been eased, some data points have been added or tightened further. We do not see any general simplification of the DRs. There is currently no balance.

I partially agree and partially disagree	ESRS G1 (partially agree): The reductions are reasonable. However, the new structure could lead to confusion with view to the IRO mapping The categorization into sub-sub-topics is less consistent, e.g., regarding the sub-topc "corruption and bribery" and the previously more clearly separated sub-sub-topics "prevention and incidents". It would be helpful for a granular and effective materiality assessment if the topics were subdivided more distinctly again.

Survey	ACEA	Business association (other than association of financial institution)	Belgium	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Particularly in the Environmental standards, the standards now increasingly refer to other EU Directives and laws. Unfortunately, we could not recognize any convergence in the Glossary. Definitions differ greatly from existing definitions from other Regulations. This complicates the collection and coordination effort enormously and sometimes leads to extra effort being incurred and the existing definitions cannot be used. It would be desirable to standardize the definitions in the Glossary with definitions existing in Regulations and laws E 1- 5/6 Reporting on actions and resources should be raised to the levers level for achieved and expected GHG emission reductions and quantitative short and medium-term CapEx and/or OpEx figures at the lever level should be made voluntary as this gets into competitive information like product plans			
Survey	Social and Labor Convergence Program (SLCP)	NGO	Netherlands	33.S_2.	ESRS S2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	Despite the reduction in number of data points, SLCP's perspective is that the most relevant disclosures have either been kept in this standard or moved to ESRS 2 (General Disclosures), without compromising overall impact. Additionally, most data points moved to the Non-Mandatory Illustrative Guidance (NMIG) were already voluntary in the previous standard. However, the removal of paragraph 28 from ESRS Set 1 (Delegated Act 2023) - partly moved to AR 4 and NMIG 8 - marks one of the few cases where a mandatory requirement has been downgraded to voluntary. This change should be reversed. It is critical that undertakings be required to disclose whether and how they assess value chain workers' awareness of and trust in grievance mechanisms, as well as whether policies are in place to protect individuals using them against retaliation. Such disclosures are essential and should remain mandatory. Except for this identified disclosure, the amended draft adequately addresses the potential impacts that business operations may have on workers in supply chains. In particular, the sub-topics identified in paragraph 4 are well aligned with those covered in SLCP's social assessment tool, the Converged Assessment Framework (CAF): working conditions (including working time, adequate wages, and social protection), freedom of association, health and safety, diversity and equal treatment, child labor, and forced labor. SLCP also welcomes the standard's increased clarity and readability, specifically: The clear articulation of the objective of this standard, supported by the reference in paragraph 2 to international and European human rights instruments and conventions, which provides important guidance for undertakings reporting on this standard, The inclusion of application requirements directly after each disclosure requirement, rather than grouping them all at the end of the document, The introduction of each disclosure requirement with a disclosure objective, making it clearer what undertakings should focus on when reporting.			
Survey	Arbeitskreis Externe Unternehmensberichterstattung (AKEU) of the Schmalen-bach-Gesellschaft für Betriebswirtschafte. V.	Other - please specify (required)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	The AKEU member organizations partially agree that the proposed amendments to the Double Materiality Assessment (DMA) simplify the process and reinforce the role of information materiality, but the practical impact remains limited. The majority of respondents (58%) expect no change in the set of material topics identified, while 23% foresee only a moderate decrease. This indicates that the revisions are perceived as easing the documentation and structuring of the DMA, rather than altering substantive outcomes. The revised wording of Chapter 3 is seen as clearer and more business-oriented, but companies stress that simplification will only reduce burden if external auditors accept the streamlined approach in practice. Several respondents welcome the stronger emphasis on linking the DMA to core business activities and strategy. For some, this may lead to a more focused set of material topics - particularly, a reduction in environmental issues that are material mainly upstream. Others note that certain topics, such as "G1 Business Conduct," are currently over-identified and could be reduced under the revised guidance. One respondent described using a top-down, risk-based approach with a defined materiality threshold (20–25%), which yielded relatively few material sub-topics; they see the amendments as supportive of this approach. At the same time, many firms already integrate DMA with strategy and thus expect only incremental changes rather than a significant shift in outcomes. They see the benefit of the amendments therefore as largely procedural: less documentation, greater clarity, and potentially stronger alignment with corporate strategy. In sum, AKEU members expect the revised DMA framework to improve readability and orientation and to modestly reduce the number of reported topics. However, the overall simplification is seen as partial, with much depending on auditor interpretation and the continued need for extensive internal analysis and documentation.

Survey	Arbeitskreis Externe Unternehmensberichterstattung (AKEU) of the Schmalen-bach-Gesellschaft für Betriebswirtschaft e. V.	Other - please specify (required)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	The AKEU member organizations partially agree that the new guidelines on considering remediation, mitigation, and prevention (RMP) actions in the DMA can contribute to more relevant and comparable reporting. Respondents acknowledge that the principle of assessing impacts on both a gross and net basis is important for avoiding overstating issues that are already well managed, and for better alignment with existing risk management practices. Some expect the guidance to help them narrow the set of material issues by recognizing the effect of management's RMP actions, thereby reducing non-material disclosures. At the same time, significant uncertainty remains. Many respondents call for clearer interpretation on when RMP actions may be taken into account, and how the guidance applies to risks as well as impacts. Without further clarification, these respondents worry about inconsistent application, additional documentation requirements, and audit challenges. Several anticipate that the requirement to evidence management processes for auditors could increase the reporting burden. Others noted that, whereas the new approach could reduce the number of identified IRO topics, those topics deemed material will still require the same depth of disclosure, limiting any real cost relief. Overall, 64% of survey AKEU member organizations expect no change, 9% a moderate decrease, but 27% a moderate or strong increase in reporting burden. Overall, the net effect is expected to be neutral , unless a clear net perspective is explicitly permitted and supported with practical guidance. In sum, while the new guidance has potential to improve relevance and comparability, AKEU members feel it requires sharper definitions and examples as well as more consistent guidance (e.g., related to IROs) to be effective, without which the balance between simplification and robustness will be only partially achieved.			
Survey	Arbeitskreis Externe Unternehmensberichterstattung (AKEU) of the Schmalen-bach-Gesellschaft für Betriebswirtschaft e. V.	Other - please specify (required)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	The AKEU member organizations partially agree that the proposed amendments will improve readability and may enhance connectivity between sustainability and financial reporting, but expect these gains to remain limited. Survey results show that 56% of respondents expect no change, 22% foresee moderate improvement, and 22% anticipate reduced connectivity. This reflects a mixed outlook: Whereas some steps forward are acknowledged, structural and scope-related barriers continue to constrain integration of corporate reporting. The most positively received change is the explicit confirmation of the financial control approach for defining the reporting boundary. This is expected to better harmonise ESRS scope with IFRS, reduce unnecessary "walkovers" and documentation, and allow exclusion of non-material subsidiaries. The amendments to the DMA and the fair presentation principle are also welcomed as conceptually supporting better alignment with corporate strategy and financial reporting. However, respondents highlight several persistent obstacles, including that the sustainability statement must remain a standalone, separate section of the management report. They also note that, in practice, sustainability and financial reporting still rely on different data sources and logics, often not aligned with legal-entity boundaries, which hinders deeper integration. A major unresolved issue is the mismatch in GHG reporting scope: The ESRS notion oflayered operational control differs from the GHG Protocol and ISSB/IFRS, raising concerns about interoperability and consistency for users. Respondents urge further alignment on this point. Other ESRS–ISSB differences were judged as less problematic for primary users. In sum, AKEU member organizations are of the view that the amendments modestly enhance clarity and readability, and that the alignment on financial control is a meaningful step. Yet the overall connectivity benefits are seen as incremental, with significant barriers and scope mismatches still limiting the integration of sustainability and financial reporting			
Survey	Arbeitskreis Externe Unternehmensberichterstattung (AKEU) of the Schmalen-bach-Gesellschaft für Betriebswirtschaft e. V.	Other - please specify (required)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The AKEU member organizations partially agree that the proposed amendments on burden reliefs strike a better balance between easing preparers' reporting challenges and preserving transparency in line with the EU Green Deal and global interoperability. Respondents generally welcome the horizontal burden reliefs as a meaningful step providing a legal basis for practices such as using estimates or partial-scope calculations, reducing the need for creating entirely new datapoints, and facilitating discussions with auditors. These clarifications can help companies focus on strategically relevant topics and reduce complexity in specific cases, such as acquisitions close to year-end or the exclusion of non-significant activities. AKEU members assess the expected overall impact on reporting costs as moderate rather than substantial. According to our member survey, 54% anticipate a moderate reduction, 31% no change, and 8% even a moderate increase. The ability to use estimates, partial-scope calculations, and reliefs for acquisitions are seen as the most practical provisions, but many companies already apply such approaches in practice, making incremental savings limited. Opinions on the "undue cost or effort" clause are mixed: while some value it as pragmatic, others view it as too vague to deliver consistent relief. The reliefs also affect preparers differently depending on their stage of implementation. Wave-1-companies have already built systems and auditor-aligned processes, so they consider the new reliefs as coming too late to reduce current effort; benefits may materialize later, particularly for value-chain-datapoints. By contrast, Wave-2 and less mature preparers are likely to benefit more from the flexibility, as the reliefs allow them to avoid strategically irrelevant disclosures and better align reporting with corporate strategy. Overall, AKEU members consider the reliefs a positive step but not as fundamentally reducing the reporting burden. They are most effective when targeted at new preparers (e.g., Wave-2-firms), while many Wave-1-preparers expect only incremental gains.

Survey	Arbeitskreis Externe Unternehmensberichterstattung (AKEU) of the Schmalen-bach-Gesellschaft für Betriebswirtschaft e. V.	Other - please specify (required)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	Preparers among the members mostly support Option-2, under which anticipated financial effects (AFE) are only disclosed qualitatively. This reflects the overwhelming majority view in the survey (83%), while only 8% favoured mandatory quantitative disclosure and 8% disagreed with both options. Our evidence from more than 700 first-wave-CSRD-reports also indicates that few firms have provided these disclosures to begin with, and even less provide quantitative inputs. Respondents indicate that reliable and comparable quantitative AFE-disclosures are currently infeasible. Respondents consistently highlighted that such figures are highly uncertain, methodologically immature, and extremely resource-intensive. Data collection would require substantial new modelling, with limited connectivity to existing risk- and financialreporting-systems, and little audit-ready evidence available. There is also a legal and reputational risk that forward-looking numbers could be misinterpreted, given the sensitivity of valuation-related assumptions. Several respondents stressed that IFRS already governs the recognition of future risks in financial statements and that sustainability disclosures should not override that framework. Qualitative disclosures are common practice in management reporting and can provide meaningful context at relatively low additional cost. Respondents noted that qualitative commentary is easier to align with IFRS risk discussions and better suited to stepwise integration with ISSB-ESRS-interoperability once methodologies mature. Some incremental work is expected (designing new KPIs, aligning narratives internally), but the longer-term-impact is considered neutral. 31% of the surveyed members expect no change, 23% a moderate reduction, and 38% a moderate increase linked to one-off implementation efforts. No strong changes were expected. Preparers among the members think that Option-2 strikes the right balance by ensuring transparency through qualitative reporting, avoiding premature quantitative disclosures of low reliability, and providing flexibility for more robust metrics to evolve over time. From an academic perspective, we note that making quantitative AFE-disclosure optional indefinitely may fail to incentivize companies to build their AFE-related management and reporting capabilities.			
Survey	Arbeitskreis Externe Unternehmensberichterstattung (AKEU) of the Schmalen-bach-Gesellschaft für Betriebswirtschaft e. V.	Other - please specify (required)	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	The AKEU member organizations partially agree that the proposed amendments contribute to interoperability while supporting simplification objectives, but the balance remains incomplete. On the positive side, respondents acknowledge that some changes, such as greater emphasis on materiality filtering and clarifications in the DMA, can make ESRS reporting more principle-based and closer in spirit to ISSB standards. In principle, aligning ESRS with global initiatives could reduce duplication and facilitate reporting for companies active in multiple jurisdictions. However, the survey evidence shows limited optimism about interoperability in practice. Among respondents, 73% expect no change in their likelihood of adopting or aligning with ISSB, 18% see the amendments as making alignment less likely, and only 9% more likely. None expect a strong positive effect. The main concerns relate to areas where ESRS and ISSB continue to diverge. The most frequently mentioned examples are: Anticipated financial effects (AFE): ESRS maintains mandatory expectations that go beyond the ISSB framework, creating inconsistency and additional reporting burdens. GHG boundaries and scopes: ESRS relies on layered operational control, whereas ISSB and the GHG Protocol are more widely applied globally, creating challenges for comparability and investor use. Changing requirements: Frequent amendments increase near-term reporting effort, reducing appetite for parallel adoption of ISSB. Furthermore, external demand drivers are weak: Respondents see little investor or peer pressure to adopt ISSB in addition to ESRS. Most plan to focus on ESRS compliance first, with only opportunistic or partial references to ISSB disclosures planned in the medium term. In sum, AKEU members think that, while the amendments offer incremental clarification and simplification, they do not yet deliver the level of interoperability needed to encourage meaningful ISSB adoption. The balance struck is therefore only partial, and stronger convergence on key technical areas would be required to unlock the intended benefits.			
Survey	Arbeitskreis Externe Unternehmensberichterstattung (AKEU) of the Schmalen-bach-Gesellschaft für Betriebswirtschaft e. V.	Other - please specify (required)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Arbeitskreis Externe Unternehmensberichterstattung (AKEU) of the Schmalen-bach-Gesellschaft für Betriebswirtschaft e. V.	Other - please specify (required)	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	The AKEU member organizations partially agree that the proposed reduction in mandatory datapoints represents a step toward balancing burden reduction with the objectives of the EU Green Deal. The revisions improve readability and structure, and in some areas the amendments reduce unnecessary scope. However, the impact on reporting costs is expected to remain modest at best. Respondents consistently emphasize that the datapoints removed are often qualitative and low-cost to maintain, while the most resource-intensive datapoints remain. Chief among these are quantitative metrics requiring internal operational or value chain data, such as Scope 3 emissions, which demand extensive coordination, validation, and methodological development. Similarly, anticipated financial effects impose high recurring costs due to uncertainty, lack of guidance, and sensitive forward-looking estimates. Social datapoints such as S1-9 (adequate wages, requiring checks against ~500 ILO benchmarks), S1-15 (remuneration medians), and health- or discrimination-related indicators are seen as disproportionate burdens, particularly given data protection issues and high manual effort. With respect to amendments, AKEU preparer members point to increased costs from S1-5 (broader employee country breakdown), E2-4 ("any material pollutant"), and E1 transition plan requirements (fossil CapEx, locked-in emissions, interim targets, financial planning). While some changes create simplifications, others add granularity or new concepts (e.g., gross vs. net reporting, fair presentation), resulting in a mixed net effect. Quantitatively, 69% of respondents expect very limited cost reductions and 23% none at all. 45% see some cost relief from amendments, while 27% report no change, and 27% expect some increases. 50% plan to stop reporting deleted datapoints, though 25% will continue selected disclosures for investor expectations, ratings, or internal KPIs; the remaining 25% are undecided. In sum, AKEU members think that the revisions modestly streamline ESRS but do not eliminate the costliest datapoints. The resulting practical cost relief is therefore limited.

Quantitatively, 69% of respondents expect very limited cost reductions and 23% none at all. 45% see some cost relief from amendments, while 27% report no change, and 27% expect some increases. 50% plan to stop reporting deleted datapoints, though 25% will continue selected disclosures for investor expectations, ratings, or internal KPIs; the remaining 25% are undecided. In sum, AKEU members think that the revisions modestly streamline ESRS but do not eliminate the costliest datapoints. The resulting practical cost relief is therefore limited.			
Survey	Arbeitskreis Externe Unternehmensberichterstattung (AKEU) of the Schmalen-bach-Gesellschaft für Betriebswirtschaft e. V.	Other - please specify (required)	Germany	22.S1	Comments on deleted datapoints in ESRS S1	I partially agree and partially disagree	The AKEU member organizations partially agree that the proposed reduction in mandatory datapoints represents a step toward balancing burden reduction with the objectives of the EU Green Deal. The revisions improve readability and structure, and in some areas the amendments reduce unnecessary scope. However, the impact on reporting costs is expected to remain modest at best. Respondents consistently emphasize that the datapoints removed are often qualitative and low-cost to maintain, while the most resource-intensive datapoints remain. Chief among these are quantitative metrics requiring internal operational or value chain data, such as Scope 3 emissions, which demand extensive coordination, validation, and methodological development. Similarly, anticipated financial effects impose high recurring costs due to uncertainty, lack of guidance, and sensitive forward-looking estimates. Social datapoints such as S1-9 (adequate wages, requiring checks against ~500 ILO benchmarks), S1-15 (remuneration medians), and health- or discrimination-related indicators are seen as disproportionate burdens, particularly given data protection issues and high manual effort. With respect to amendments, AKEU preparer members point to increased costs from S1-5 (broader employee country breakdown), E2-4 ("any material pollutant"), and E1 transition plan requirements (fossil CapEx, locked-in emissions, interim targets, financial planning). While some changes create simplifications, others add granularity or new concepts (e.g., gross vs. net reporting, fair presentation), resulting in a mixed net effect. Quantitatively, 69% of respondents expect very limited cost reductions and 23% none at all. 45% see some cost relief from amendments, while 27% report no change, and 27% expect some increases. 50% plan to stop reporting deleted datapoints, though 25% will continue selected disclosures for investor expectations, ratings, or internal KPIs; the remaining 25% are undecided. In sum, AKEU members think that the revisions modestly streamline ESRS but do not eliminate the costliest datapoints. The resulting practical cost relief is therefore limited.

Survey	Arbeitskreis Externe Unternehmensberichterstattung (AKEU) of the Schmalen-bach-Gesellschaft für Betriebswirtschaft e. V.	Other - please specify (required)	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	The AKEU member organizations partially agree that the six datapoints moved from "may" to "shall" are appropriate and justified. Respondents generally accept the rationale for strengthening certain disclosures, but consider the overall effect on reporting burden mixed. For some datapoints, the added effort is limited. Confirmed incidents of corruption and bribery (G1 para. 14) and procurement team training (G1 para. 10(c)) are already tracked by many firms and can be disclosed without major new processes. Likewise, water withdrawal and discharge metrics (E3) are already established in many reporting systems. For these items, moving from voluntary to mandatory appears reasonable. By contrast, other datapoints are perceived as costly and complex. E5 paragraph 15(c) (critical and strategic raw materials) and E2-4 (secondary microplastics) stand out as the most burdensome, given supply-chain transparency requirements, definitional uncertainty, and the need to develop new methodologies. These datapoints will require extensive data collection and supplier coordination, with significant recurring costs. E4 (biodiversity transition plan) is also seen as challenging due to uncertainty in scenario design and feasibility. Respondents also highlighted the need for transitional reliefs, phased implementation, and clearer guidance to reduce the costs of alignment and auditor discussions. Overall, AKEU members agree that some new datapoints are justified, but others impose disproportionate costs. Agreement is therefore only partial			
Survey	Arbeitskreis Externe Unternehmensberichterstattung (AKEU) of the Schmalen-bach-Gesellschaft für Betriebswirtschaft e. V.	Other - please specify (required)	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	The AKEU member organizations partially agree that the four new mandatory datapoints are appropriate and justified. While one of the datapoints codifies existing practice with little added burden, the others are seen as disproportionately costly. The new requirement under ESRS 2 BP 1—confirmation that ESRS 1 general requirements have been applied—is straightforward and reflects existing reporting practice. Its burden is negligible. In contrast, E5-4 (critical and strategic raw materials) and E2-4 (secondary microplastics) are widely regarded as highly burdensome. Both require substantial supply-chain transparency, new tracking processes, and the development of robust methodologies in areas where definitions remain unclear. Respondents highlighted the difficulty of obtaining consistent data across suppliers and the additional effort needed to align with auditors. These datapoints are expected to drive significant recurring costs once implemented. E5-5 (unknown final destination of materials) also adds to the burden, though to a lesser degree, by requiring companies to set up additional tracking and classification systems. Across all nine datapoints (five moved plus four new), 50% of respondents expect no change in burden, 42% foresee a moderate increase, and 8% a strong increase. This suggests that the new datapoints materially contribute to higher costs, especially during first-time implementation. Overall, while AKEU members acknowledge the intent behind these disclosures, they consider the balance between burden and benefit to be negative. Transitional measures, phased implementation, and clearer definitions would be necessary to ensure these datapoints are feasible and proportionate.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Arbeitskreis Externe Unternehmensberichterstattung (AKEU) of the Schmalen-bach-Gesellschaft für Betriebswirtschaft e. V.	Other - please specify (required)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	The AKEU member organizations partially agree that explicitly framing ESRS as a "fair presentation" reporting framework will support more relevant and decision-useful reporting. Respondents broadly view the requirement as a clarification of the principles-based DNA of ESRS rather than a fundamental change. Particularly for Wave 1 preparers already applying principle-based approaches, the effect is expected to be neutral. Anticipated benefits include softening a narrow compliance mindset, strengthening the materiality filter, reducing duplications, and helping Wave 2 preparers focus on those disclosures that matter most. At the same time, significant concerns were raised about auditability. Several respondents worry that auditors may interpret "fair presentation" as an additional compliance layer, broadening the scope of required evidence, elevating assurance effort, and introducing subjectivity into reporting judgments. Without clear guidance and boundaries, the concept risks producing more reporting artefacts rather than reducing irrelevant disclosures. Respondents stressed the need for a precise definition of fair presentation in relation to materiality and the DMA, so that the principle constrains rather than expands audit demands. Overall,13% of the surveyed AKEU member organizations foresee a moderate burden reduction, nearly half expect no change, and about a third anticipate increased burden due to greater internal discussion, documentation, and assurance requirements. On reporting practice, most companies currently rely on checklists aligned with auditors; some see fair presentation as an opportunity to shift toward a more principle-based, management-oriented approach, but others expect continuity. In sum, fair presentation has potential to improve the effectiveness of materiality filtering and move reporting beyond checklists. Without a clearer definition of what fair presentation means and related implementation guidance, AKEU members worry that the benefits are at risk of remaining partial and uneven.			
Survey	Decathlon	Preparer (non-financial preparing a sustainability report)	France	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Double materiality is a key concept of the CSRD. Nevertheless, the lack of implementation guidance and of clarity regarding the establishment of IROs (Impacts, Risks, and Opportunities) leads to the non-comparability of reports. It is important to clarify the determination process for IROs, taking into account sectoral specificities. The audits performed must also be standardized. The gross versus net position within double materiality must be clarified. A clear position must be established and made applicable to all in order to facilitate comparability among undertakings. In the event that the net basis is adopted,a common methodology for net assessment must be provided and applied uniformly for undertakings subject to the CSRD.			
Survey	Decathlon	Preparer (non-financial preparing a sustainability report)	France	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	Double materiality is a key concept of the CSRD. Nevertheless, the lack of implementation guidance and of clarity regarding the establishment of IROs (Impacts, Risks, and Opportunities) leads to the non-comparability of reports. It is important to clarify the determination process for IROs, taking into account sectoral specificities. The audits performed must also be standardized. The gross versus net position within double materiality must be clarified. A clear position must be established and made applicable to all in order to facilitate comparability among undertakings. In the event that the net basis is adopted,a common methodology for net assessment must be provided and applied uniformly for undertakings subject to the CSRD.			
Survey	Decathlon	Preparer (non-financial preparing a sustainability report)	France	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	Decathlon welcomes the evolutions introduced and the simplifications proposed. Nevertheless, it is essential to have a globally interoperable standard across the world to avoid reporting burden. In order for the regulatory evolutions related to non-financial reporting to be an argument to engage undertakings in their transitions, it is important that the obligations and methodologies are globally interoperable. Furthermore, it is necessary to simplify concepts, such as double materiality, both in its approach and to foster comparability among undertakings. It is also necessary to rely on the core principles of the CSRD by adopting a pragmatic and progressive approach. Clear implementation guides are necessary to ensure uniformity in the responses and in the published CSRDs.			
Survey	Decathlon	Preparer (non-financial preparing a sustainability report)	France	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	Decathlon welcomes the evolutions introduced and the simplifications proposed. Nevertheless, it is essential to have a globally interoperable standard across the world to avoid reporting burden. In order for the regulatory evolutions related to non-financial reporting to be an argument to engage undertakings in their transitions, it is important that the obligations and methodologies are globally interoperable. Furthermore, it is necessary to simplify concepts, such as double materiality, both in its approach and to foster comparability among undertakings. It is also necessary to rely on the core principles of the CSRD by adopting a pragmatic and progressive approach. Clear implementation guides are necessary to ensure uniformity in the responses and in the published CSRDs.

Survey	Decathlon	Preparer (non-financial preparing a sustainability report)	France	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	Decathlon welcomes the evolutions introduced and the simplifications proposed. Nevertheless, it is essential to have a globally interoperable standard across the world to avoid reporting burden. In order for the regulatory evolutions related to non-financial reporting to be an argument to engage undertakings in their transitions, it is important that the obligations and methodologies are globally interoperable. Furthermore, it is necessary to simplify concepts, such as double materiality, both in its approach and to foster comparability among undertakings. It is also necessary to rely on the core principles of the CSRD by adopting a pragmatic and progressive approach. Clear implementation guides are necessary to ensure uniformity in the responses and in the published CSRDs.			
Survey	Decathlon	Preparer (non-financial preparing a sustainability report)	France	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	The anticipated financial effects are complex to implement given the existing methodologies, a more significant phase-in must be implemented to permit a comparable implementation among undertakings.			
Survey	Decathlon	Preparer (non-financial preparing a sustainability report)	France	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	it is essential to have a globally interoperable standard across the world to avoid reporting burden. In order for the regulatory evolutions related to non-financial reporting to be an argument to engage undertakings in their transitions, it is important that the obligations and methodologies are globally interoperable.			
Survey	Decathlon	Preparer (non-financial preparing a sustainability report)	France	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	Fair presentation needs to be clearly defined and not considered only as a concept in order to avoid inconsistencies and foster comparability			
Survey	Decathlon	Preparer (non-financial preparing a sustainability report)	France	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	Decathlon	Preparer (non-financial preparing a sustainability report)	France	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	The Living wage is is the minimum salary needed to ensure that the employee and family can afford a decent standard of living. The minimum wage is the legal minimum cash salary fixed by the government (consultation with social and industrial) and can be below the living wage. In some countries, an employee does not live decently with a fixed wage (minimum wage). We believe that the objective is to pay our employees with a wage which ensures a decent standard of living even if the minimum wage is lower. Thus we want to highlight the following points : A statutory minimum wage or collective bargaining can be lower than a living wage calculated and defined by official data providers taking into account ILOs definitions. Then a fixed wage, is not the most relevant adequate wage and should not be the first criteria to take into account in the CSRD hierarchy but the last one. NB : a living wage is defined by non profitable official data providers but not by institution mandated by the public authorities. On the contrary, the hierarchy requires companies to only assess relevant living wage data sets as a last resort which should be the first one. Living wage should be the first criteria to take into account and then, if not managed by the company, take into account other "degraded" adequate wages such as minimum wage or wage established through collective bargaining. Indeed a company managing the most favourable living wage for employees should be able to report this data and not the "degraded" adequate wage. It will also influence companies to take into account the living wage, which makes sense with Green deal. Another option could be to propose alternatives without hierarchy. We should add Methodology disclosure which would facilitate the comparability.

Survey	Decathlon	Preparer (non-financial preparing a sustainability report)	France	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	An unadjusted gender pay gap is not relevant and does not allow comparability. The metric makes more sense with the disclosure of the adjusted gender pay gap (which is comparable), and should be kept as voluntary.			
Survey	Decathlon	Preparer (non-financial preparing a sustainability report)	France	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	> Human Rights disclosures centralised in ESRS 2 GDR-P rather than in each Social Standards (S1-S4) => (I agree) > Simplification and merger of ESRS S1-S4 DR2 & DR3 into one disclosure requirement => (I agree)			
Survey	Decathlon	Preparer (non-financial preparing a sustainability report)	France	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. I partially agree and partially disagree	To foster the reporting of comparable data and to promote interoperability with global frameworks such as the TNFD, we believe it would be beneficial to maintain a common set of specifications for biodiversity metrics. Can those metrics be based on already existing methodological references? ENCORE (UNEP tool), GRI Biodiversity, SBTN, or at a minimum within closely associated guidance, would provide undertakings with the necessary clarity to select and report practical, credible, and comparable information. It would also support alignment with the TNFD's disclosure metrics. In this context, ensuring that any illustrative guidance remains connected to the Standard and is subject to a timely update process is essential, particularly for topics where reporting tools and methodologies are evolving rapidly. Furthermore, to enhance the standard's comprehensiveness and internal consistency, consideration could be given to explicitly including aquatic ecosystems alongside terrestrial and marine ecosystems. Similarly, to strengthen the alignment with other thematic ESRSs, introducing a specific indicator for land use change could be considered, reflecting its significance as a key driver of biodiversity impacts.

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	Support: -We appreciate stronger emphasis on the materiality of disclosures, with only information truly relevant for users of the sustainability statement being reported. Clearer instructions on the presentation of DMA results would support more consistent and comparable reporting across undertakings. -Broad agreement among respondents that the DMA process has been streamlined and simplified in form. - Inclusion of the "fair presentation" principle provides flexibility but ensures material topics are not omitted. -Positive views on clarification that reporting on non-material topics is permitted. -Flexibility in using top-down and bottom-up approaches for materiality assessment. -Consolidation and clearer wording of materiality-related definitions and criteria. Areas of improvement: -The current framework does not provide clear criteria for determining when certain information becomes material for users. Instead of narrowing reporting requirements, the absence of clear boundaries could unintentionally broaden them. -While allowing the use of Top-Down vs. Bottom-Up Approaches is helpful, it may lead to inconsistent outcomes across companies. - Additional clarification is required regarding whether a full double materiality assessment must be conducted annually, even when there are no material changes to business model or strategy. -Uncertainty around the application of the materiality filter, as virtually any data point could potentially be classified as immaterial unless directly connected to an IRO. -The rationale behind permitting non-material information is unclear, including assurance requirements. This could result in overuse of omissions and reduce comparability. -For financial materiality, it is important that any requirements for the identification and assessment of material matters are fully aligned with IFRS. -Further clarification is required on what constitutes as "undue costs and efforts". -Explanation on how the concepts that make up 'severity' (scale, scope and irremediable character) should be considered in combination, to determine the severity of an IRO.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	Support: -We acknowledge the effort to clarify how remediation, mitigation, and prevention actions should be considered in the DMA. -The guidance is seen as a step forward in providing structure to a previously ambiguous area, for aligning disclosure with the fair presentation principle, and clarifying how remediation actions factor into actual impact reporting. Areas of improvement: -The current guidance does not sufficiently resolve the ambiguity between applying a gross versus a net perspective. It remains unclear when impacts should be assessed before actions (gross) and when after actions (net). This lack of clarity may lead to inconsistent interpretations, which undermines both the comparability and the relevance of the disclosures. -Provide more clarity on whether IROs should be assessed 'gross or net', as the current ESRS does not give guidance. How it is currently described in the revised ESRSs is still difficult to interpret and Appendix C is also difficult to grasp. It could benefit from an alternative, simpler presentation (e.g. flowchart). -Provide clear examples on how to assess mitigating and preventive actions, and when a risk or impact has been fully mitigated (below materiality threshold). -Including additional guidance is necessary to ensure a common approach across companies. -Language should be reviewed to ensure that 'risks' are not referred to in the case of impacts. -For both actual and potential impacts, clarification is required for the cases when impact occurred during the year or became material in the reporting year. -We agree that the new guidance provides clarification on how to factor remediation, mitigation and prevention actions into the DMA. However, the interaction between severity and likelihood could still be challenging in practice. -There is a lack of clarity as to how to consider human rights impacts.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	Support: -Amendments to Chapter 8 clarify the presentation requirements and structure of the sustainability state. -Regarding Chapter 9, cross referencing within the Sustainability Statement (para 112) helps to reduce duplication and was widely implemented by Wave 1 Reporters. -The amendments improve readability and promote better connectivity with corporate reporting. -The sustainability statements now allow for a more concise and coherent narrative that integrates well with financial reporting. -The executive summary improves accessibility for key stakeholders, while appendices allow for detailed information without overwhelming the main report. These options help tailor disclosures to diverse user needs, ensuring material topics remain central while still accommodating additional relevant data. Areas of improvement: -The specific reference that repeating information 'may obscure material information' could be taken out. Preparers should have certain freedom in how to structure their content. In some cases, it can be useful to duplicate information instead of cross-referencing, to support the standalone readability of a section.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	Support: -We support simplification of the minimum disclosure requirements and removal of duplication in the topical standards. -We agree with streamlining the DRs, which reduces redundant reporting and duplications. -The shift towards a more principles-based approach reduces the reporting burden and improves flexibility for preparers. -The ESRSs are much easier to read and have a more logical structure. Removing the ESRS 2 references within the topical standards makes a lot of sense and provides a -clearer structure to the topical ESRSs. Areas of improvement: -Whilst we acknowledge there has been a reduction in the total number of data points, many 'shall' data points have been consolidated into broader requirements. -The reduced granularity risks inconsistent interpretation and incomparable data from preparers. Therefore, the reporting effort is not expected to decrease significantly. -Retaining distinct PAT requirements per standard continues to hinder reporting efficiency and adds complexity. -Some respondents do not agree with the inclusion of human rights requirements under GDR when additional data points remain in the Social disclosures and recommend a specific new chapter is created in ESRS2 addressing all Human Rights requirements. -Disclosures relating to stakeholder engagement could be further streamlined as there is still significant duplication between ESRS2 and the Social standards.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	Support: -Relocation of AR directly below relevant Disclosure Requirements (DR) enhances readability and reduces navigation effort. -The clearer split between mandatory ("shall disclose") and non-mandatory ("may disclose") data points improve clarity and structure. -The drafting is generally clearer, more accessible, and less complex than earlier versions. Areas of improvement: -Some technical terms remain highly specialized and ambiguous, potentially causing inconsistent interpretation (e.g., terms like "shall consider," "may present," "may implement"). -Reduced granularity in disclosure requirements could still lead to varied interpretations across reporters, especially between Wave 1 and Wave 2/3. -Language is unclear in some places; inclusion of concrete examples is recommended to improve understanding. -The overall reporting requirements remain largely unchanged, so simplification mainly aids navigation rather than reducing burden. -New mandatory disclosures have been added despite requests to reduce reporting burden, potentially increasing the workload.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	Support: -The separation of non-mandatory guidance into the NMIG document has helped the overall readability and structure of the ESRS standards. It is important that EFRAG continue to update this guidance to ensure its relevance. -NMIG are helpful in terms of additional guidance and content to consider and potentially report. Areas of improvement: -We recommend replacing the NMIG with a more effective (not binding) FAQ (separate to the delegated act) aligned with the new standards. -Since most Wave 1 Reporters already exclude 'may' requirements from their Sustainability Statements, the purpose of retaining the NMIG is unclear. -Where robust, principles-based standards are developed with high standards of due process, we see limited need for the creation of or reference to additional guidance. -Many issues can arise when cross-referenced materials are used that are not developed using the same conceptual framework, leading to confusing and sometimes conflicting requirements. -NMIG do not address FAQs raised during ESRS adoption. NMIG doesn't provide much value or clarification but rather additional data points that no company may want to focus on it. -It is not always clear when information included in the AR is a requirement or voluntary. For example, AR 14 for para 25 in the E1 standard states "may" for the format of the disclosure. If it is voluntary, then it would make more sense for this to be included in the NMIG. -The NMIG for E5 should provide more guidance and practical examples on the methodologies for reporting on the E5 metrics. The current guidance is still too vague, which can result in a lack of comparability across companies.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	Support: -Reliefs related to data quality, scope, and acquisitions strike a good balance between stakeholder expectations and transparency. -Pragmatic reliefs (e.g., on undue cost/effort, partial scope reporting, acquisition alignment) support smoother implementation. -Removal of repetitive content and some data point reductions improve readability and structure. Areas of improvement: -The "undue cost and effort" provision is welcome but is subjective and may lead to companies overusing this exemption, potentially reducing transparency. More clarity is needed on how it should be applied. -Reporting burdens remain high as no metrics have been removed; some new metrics (e.g., E5) add to the workload. For a significant number of metrics the reporting burden increased, mainly due to increased scope of a metric or increased granularity of the data/disclosure needed. -The reliefs are often temporary or procedural rather than structural. -The burden of proof for justifying reliefs may increase audit complexity. -There should be clearer minimum disclosure thresholds that all companies or sectors must meet (e.g., mandatory disclosure of GHG Scope 1 & 2 emissions). -Stronger reporting principles are needed to disclose scope coverage and data quality for trust and comparability. -Thresholds for scope exclusions should be clearer to avoid gaps in impact understanding and mitigation planning. -The acquisition/disposal reliefs are supported but the one-year timeframe to integrate subsidiaries is often insufficient due to sustainability reporting complexity. -Guidance on joint ventures/associates remains unclear, complicating reporting. -The relationship between reliefs and the "fair presentation" principle is unclear; guidance is needed to ensure reliefs (and their non-mandatory nature) do not conflict with audit expectations. -Some definitions (e.g., 'manufacturer', 'importer', microplastics) diverge from existing frameworks like REACH, increasing burden - alignment is recommended.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	Support: -We recognize the need for flexibility when reliable data are not yet available, particularly in complex value chains, and we support the principle that disclosures should not be omitted altogether. -It recognises the challenges preparers face in collecting data across complex value chains. This pragmatic approach helps avoid undue cost and effort. -We consider this to be a useful addition to the guidance, to allow for instances when it's not (reasonably) possible to collect certain information. -Forcing unreliable or incomplete data collection can harm quality, comparability, and legal reliability of reports. Reliefs help bridge current methodological gaps and prevent distorted reporting. -Relief acknowledging challenges in collecting data across complex value chains is welcomed as pragmatic and cost-effective. Areas of improvement: -Some question why relief applies only to certain environmental metrics, suggesting it should be broader since all topical standards are material. -Partial scope reporting is recognized as pragmatic given complex value chains and data challenges. -Respondents shared different views on the time limit: some support no fixed time limits, believing market and peer benchmarking will naturally drive improvement and standardization. Others argue that time limits or clearer expectations are necessary to prevent permanent partial reporting and encourage progress. -We recommend maintaining the relief as a pragmatic tool but combining it with clearer guidance on expected progress over time.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	Most prepares opted for Option 2, as it balances transparency and feasibility while protecting sensitive information and recognizing current data limitations. Many of the FEA respondents abstained from the answer as they are of the opinion the best way forward is yet to be found. Option 1 was named by two preparers as they favoured alignment with IFRS and clearer phased approaches to eventual quantitative disclosure. Some preparers oppose any form of mandated anticipated financial effects disclosure due to inherent uncertainties and legal risks. Although FEA members support interoperability with IFRS SDS, critics state that quantitative disclosure is premature due to: -Lack of mature methodologies -High uncertainty and difficulty isolating sustainability-related financial effects. -Commercial sensitivity and competitive risks - Wide variation across industries undermines comparability. -Concern that detailed quantitative disclosures could lead to excessive scrutiny and legal risks. Option 2: Qualitative Disclosure (with voluntary quantitative info) -Favoured by many as more practical, flexible, and proportionate for current implementation stages. -Qualitative info allows users to understand nature and direction of impacts without unreliable or sensitive numeric data. -Voluntary quantitative disclosure allowed when reliable and meaningful. -Recognizes uncertainty and immaturity of financial effect assessment methods. -Avoids forced disclosure of sensitive or speculative figures, protecting competitive position. -Some argue no fixed time limits are needed, as market forces and peer benchmarking will naturally increase transparency over time.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	Areas of improvement: -We agree that the amended provisions in ESRS E1 strike a fair balance between simplification and the need to meet users' information needs. Nevertheless, some of the requirements, particularly around forward-looking scenario assumptions, may remain burdensome for smaller entities. -Additional proportionality measures would help ensure feasibility without compromising comparability. -Clear methodologies and guidance would help simplify qualitative and/or quantitative reporting of these disclosures. In addition, it would allow for increased comparability across companies. -For all anticipated financial effects disclosures in the E1 standard, more guidance and practical examples should be provided by EFRAG. -Forward-looking scenario assumptions may still be burdensome, especially for smaller entities. Additional proportionality measures recommended. -More practical examples and methodologies are needed to improve consistency, comparability, and ease of disclosure effort. -Disclosing exact asset locations or detailed environmental risk data may harm competitive position or security, especially in strategic industries. -Overly granular or sensitive disclosures that risk competitive harm or legal issues should be avoided. Specific par comments: 40. As currently drafted, it is not clear whether the disclosure objective (par 39) only requires us to consider the impact on revenue or also the impact on net profit and / or cash 40. (c) The purpose of the disclosure is and does not meet the granularity of requirements for banks. 41. There is a lack of clarity as to why scenario analysis applies only to stranded assets under this requirement and whether the results of the scenario analysis should be used in the quantification of anticipated financial effects. 42. Assets are now included, but the text is not necessarily clearer. Clear guidance should be provided to mitigate green-washing risk from disclosing potential revenues related to opportunities that have not yet been realised.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	Support: -Stakeholders support ongoing collaboration between EFRAG and the ISSB, viewing increased interoperability as beneficial for comparability, simplification, and global consistency. Areas of improvement: - Divergence Despite Claims of Alignment - Respondents note that fundamental differences remain - GHG Emissions Boundary – Operational vs Financial Control - EFRAG's requirement to use financial control by default is praised by some for aligning with IFRS S2. - However, others strongly object: · Many companies currently use the operational control boundary, in line with the GHG Protocol. - Dual reporting burdens may arise if companies must report on both financial and operational control. - This could cause confusion, especially where climate targets are based on one boundary. - The subjective trigger for requiring operational control data ("complex ownership structures") could cause inconsistent application and audit issues. - Transition Plan Requirements: -Some simplification proposals may increase complexity or introduce new divergence from ISSB standards (e.g., additional disclosures, methodology requirements). -Clearer guidance and methodologies are needed to ensure consistent application across companies, Auditability, reduced subjectivity and misinterpretation risk. -Recommendation is to fully align ESRS with ISSB standards to the greatest extent possible. -Avoid mandatory dual reporting (financial + operational boundaries) for GHG emissions. -Allow flexibility and proportionality, especially where methodologies are underdeveloped. - Introduce a single, harmonised reporting boundary across ESRS and IFRS to avoid duplication.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	General comment cross all standards: Support: -Stakeholders broadly welcome the improved structure, clarity, and consolidation of the ESRS standards. -Removal of certain prescriptive and qualitative disclosures, especially Process and Action Table (PAT) requirements, is seen as a positive development. -Streamlining of narrative disclosures, separation of mandatory vs. voluntary datapoints, and clearer grouping are seen as usability improvements. Areas of improvement: -The overall disclosure scope remains unchanged and true workload reduction will be minimal. -Reduction in Datapoints ≠ Reduction in Reporting Burden - The headline reduction in datapoints is viewed by many as misleading or overstated: Many "reduced" datapoints have been bundled into broader requirements or converted to Application Requirements, which does not meaningfully reduce workload. - Quantitative metrics (the most burdensome aspects) have mostly been preserved, so the core reporting effort remains unchanged. -Concerns that less granular disclosures may lead to greater interpretative variability between Wave 1 companies and later adopters. -EFRAG should publish a comprehensive updated list of datapoints, clearly showing which are narrative vs. metric, distinguishing clearly between deleted, merged, reclassified, and new requirements. -Introduce flexibility around data consolidation and provide guidance for phased-in integration to support assurance readiness. -Preparers call for clearer audit guidance to avoid unnecessary technical debates. Provide standardised audit methodologies and flexibility for phased-in disclosures. -Avoid introducing new mandatory datapoints during simplification efforts. -Ensure the net effect is an actual reduction in reporting burden, not just a reframing. -Prevent interpretation gaps by issuing detailed implementation guidance for all waves.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	23.	Six datapoints exceptionally moved from “may” to “shall” In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, “may disclose” datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from “may” to “shall” subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Some preparers support selective increases in mandatory datapoints where they enhance decision-usefulness or align with existing frameworks. However, many stakeholders express strong concerns that new requirements contradict the objective of simplification, increase the reporting burden, and lack testing, particularly for Wave 1 companies. Some stakeholders accept the limited shift of certain disclosures from "may" to "shall", noting they address inconsistencies and improve comparability. Areas of improvement: -New datapoints add complexity, particularly when they: Have not been tested by Wave 1 reporters, lack clear rationale or decision-usefulness and require new data systems or manual processes. -Many companies are not yet ready to provide mature disclosures on biodiversity. -Disclosure expectations may exceed current capabilities and maturity of strategies. -G1 – Procurement Training - Seen as too vague. Ambiguity in scope: Is training about internal awareness or improving supplier performance? Lack of clear value added. -Stakeholders caution that new or significantly revised requirements should undergo thorough impact assessments and testing, be proportionate and aligned with EU law and global framework, avoid creating substantive behavioural obligations (beyond transparency). Conclusion: Stakeholders broadly support clarity, consistency, and usefulness, but believe these should not come at the cost of increased burden or unworkable mandates. The ESRS revision process should remain focused on its core aim of simplification, and exceptions should only be permitted where there is clear, demonstrable value. Poorly defined or premature datapoints risk damaging the credibility and practicality of sustainability reporting under the CSRD.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new “shall” datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	1. E2-4 Secondary Microplastics Widespread objection to mandatory disclosure of secondary microplastics emissions: -Concept not well-defined or standardized; scientific understanding and measurement methods are immature, no reliable methodologies exist for estimation, in particular from products after use, creating audit and liability risks. -Secondary microplastics occur largely post-consumer and outside company control. Definitions and derogations are not aligned with other frameworks (e.g. REACH). -Reporting such data would be highly speculative, un-auditable, and reduce report credibility. 2. E5-4 Critical and Strategic Raw Materials Respondents disagree with mandatory disclosure of percentage weight of critical/strategic raw materials relative to key materials. -May be irrelevant for some industries (e.g., food sector). -Calculation could be misleading or less meaningful if definitions of "key materials" differ from critical/strategic materials. -Creates additional burden without clear benefits. -To be aligned with EU initiatives like the Critical Raw Materials Act. 3. E5-5 Unknown Waste Destinations -No need for a separate disclosure on unknown waste destinations. -Existing categories like "other recovery options" or "other disposal operations" already cover these cases. -Separate reporting is therefore unnecessary and increases administrative burden. Several respondents emphasize that untested new datapoints, especially quantitative ones, should not be introduced prematurely due to the risk of complexity, cost, and lack of practical feasibility. Conclusion: While stakeholders welcome simplification efforts and some clarifications, they strongly caution against introducing new mandatory datapoints due to: -Lack of methods for measuring secondary microplastics and critical raw materials accurately. -Without standardized methods, auditor assurance becomes difficult or impossible. -Need for IT developments and manual data collection increases costs and complexity. -Some metrics may be irrelevant or misleading in certain industries. -Data might not meaningfully inform stakeholders due to uncertainty or lack of maturity.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	Support: -Clarity on fair presentation is welcomed as it improves alignment between ESRS and IFRS S1 & S2. -Fair presentation is expected to: oStrengthen materiality assessments, oReduce checklist-driven compliance, oEncourage professional judgment and focus on truly material, decision-useful information, oAlign sustainability reporting better with financial reporting practices. Areas of improvement: - Overly broad application, risk of under-reporting, especially if companies apply it to disclosures like ESRS2 (detailed requirements) where materiality is less clear. - No clear guidance from EFRAG on minimum mandatory disclosures (e.g., GHG Scope 1 and 2 emissions). - Companies could omit critical disclosures, reducing comparability and compliance with EU Green Deal goals. - Insufficient clarity on how to manage trade-offs between financial and non-financial users when their information needs conflict. - Some requirements (e.g., site-specific disclosures) may increase reporting burden, cause clutter, obscuring material information, reduce overall decision-usefulness. - Fair presentation should be explicitly linked to the specific business model and activities of the company, acting as a filter for material disclosures. - Provide clearer guidance to avoid overly broad use; clarify scope for ESRS2 disclosures. - Define mandatory minimum disclosures (e.g., GHG Scope 1 and 2) to ensure consistency and compliance. - Clarify priorities and streamline reporting to balance financial and non-financial user demands. - Provide a precise, operational definition to reduce subjectivity and audit risk. - Clarify fair presentation boundaries to reduce legal risks. Conclusion: The explicit inclusion of fair presentation in ESRS is seen as a positive step to enhance reporting quality and relevance. However, for this principle to be effective and practical, further clarity is needed on its definition, application, interaction with materiality, and minimum reporting expectations. Without this, there is a risk of inconsistent implementation, increased audit challenges, and excessive reporting burdens.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I partially agree and partially disagree	Support: -Some respondents support for the revised threshold, which requires disclosing workforce metrics for the top 10 largest countries by employee headcount with at least 50 employees. -Seen as a fair balance between meaningful disclosure and avoiding excessive burden, especially for global companies. -Helps focus reporting on material jurisdictions where workforce impacts are most significant. -Impacting only presentation and not data collection. Areas of improvement: - This requirement, while not complex, adds to the reporting obligations for large companies, and the specific reasons or benefits for adjusting the threshold are not clearly identified. -Increased Reporting and Audit Burden -Data collection across many jurisdictions involves navigating different labour laws, diverse HR systems, data consistency challenges, country-specific compliance requirements. This information is not easily accessible and will raise complexity, costs, and time for both companies and auditors. -Unclear or Inconsistent Terminology. Ambiguity exists regarding the term "country of significant employment". -Potential Overreach and Practical Challenges: manual calculations, revising internal processes, possibly increasing data points without clear benefits. Companies operating in many smaller markets may find the threshold particularly burdensome. Conclusion While aiming for more granular and transparent reporting, the revised threshold for country-level workforce disaggregation may significantly increase reporting and assurance burdens without clear added value, conflicting with simplification goals. Clearer guidance and a balanced threshold approach would better support practicality, proportionality, and comparability in sustainability reporting.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	Support: -Agreement that the proposed methodology is more consistent and pragmatic for global entities. -Support for the field-testing exercise with EFRAG to refine approaches. -Call for further guidance on adapting wage calculations to local labour market conditions to improve accuracy and comparability globally. Areas of improvement: -The previous standard version allowed for a simpler approach, such as benchmarking against a fair or living wage - including using providers like the Fair Wage Network. Given global footprint on many reporters, the new proposed approach would introduce more complexity and leave room for subjective interpretation across countries. - No requirement for companies to disclose which part of the methodology they apply, risking poor comparability, reduced transparency, difficulty for stakeholders to assess what benchmarks are reflected. - The newer, more detailed approach introduces greater complexity compared to the previous simpler benchmarking options (e.g., Fair Wage Network). It requires complex assessments such as determining what counts as an "adequate" minimum wage, identifying authoritative public institutions, aligning with ILO wage-setting principles, which vary widely across countries, are hard to standardize globally and might be impractical for companies using more recent global datasets. - Without a single authoritative reference or common database for adequate wages companies may report using inconsistent or more convenient benchmarks. -Require companies to explicitly disclose which wage methodology they apply. -Elevate living wage data higher in the hierarchy, ideally as a preferred benchmark. -Provide clearer guidance or a standardized approach to assess adequate wages that accounts for local contexts. -Develop or endorse a centralized, authoritative database of adequate wages for non-EU countries. -Simplify reporting by applying the living wage definition uniformly across all jurisdictions. -A common database of adequate wages accessible to all companies would improve consistency and reduce preparers' burden.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	Support: -Recognition of the rationale behind the consolidation effort to better align ESRS with SFDR PAIs. -Support for removing some SFDR datapoints to reduce burden and enhance feasibility. -Emphasis on the need for feasibility and coherence when aligning reporting across different legislations. -Suggestion that the three-yearly SFDR review should be better coordinated with ESRS simplification efforts. Areas of improvement: -Fragmentation of Disclosure Requirements - It is unclear why some human rights disclosure requirements remain in topical standards, while others are under ESRS2 General Disclosures (GDR). -Visibility and Clarity of Reporting on Severe Human Rights Incidents. Moving these disclosures into the main body of standards would improve visibility for preparers. -It remains unclear whether SFDR data points are mandatory minimum disclosures or subject to the materiality principle under ESRS. This ambiguity complicates preparers' understanding of what must be reported versus what is optional based on materiality. -The list of datapoints stemming from various EU legislation (including SFDR) is still seen as overly complex and burdensome. Calls for further simplification and clarification to avoid duplication and reduce reporting fatigue. -Question whether all SFDR datapoints should be included in the sustainability statement at all, especially for companies outside SFDR scope or with limited EU Taxonomy impact. -Recommendation to simplify and coordinate the integration of SFDR datapoints with ESRS to reduce duplication and reporting burden. -Consider excluding certain SFDR datapoints from sustainability statements for companies outside the scope of SFDR or with minimal EU Taxonomy relevance. Conclusion Addressing fragmentation, improving visibility of key disclosures, clarifying materiality requirements, and better coordination with EU legislation reviews are essential to reduce complexity and enhance the quality and usefulness of sustainability reporting.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	Support: -Further guidance on setting biodiversity targets is needed due to current uncertainty in requirements. -However, guidance should only be provided once methodologies are robust, scientifically sound, and standardized. Areas of improvement: -Suggested alignment with established frameworks such as SBTN (Science Based Targets Network), ISSB standards, TNFD (Taskforce on Nature-related Financial Disclosures), admitting that current biodiversity target methodologies are still evolving. -The current AR26 text does not acknowledge: oDifficulty in setting standalone biodiversity targets. oThe interconnectedness of biodiversity with other environmental issues (climate, water, pollution). -EFRAG should review and revise AR26 to provide practical, effective, and clearer guidance. oThe revised guidance should explicitly allow cross-referencing to existing environmental targets in other ESRS topical standards, recognizing that biodiversity loss is intertwined with broader environmental challenges (e.g., climate change). Conclusion While further guidance on biodiversity targets is welcomed, it should wait until methodologies mature and be based on robust science and standards. Meanwhile, AR26 should be revised to support integrated, efficient reporting that reflects the complex, interconnected nature of biodiversity and environmental issues, avoids overburdening companies, and maintains comparability.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	Support: -The removal of the voluntary data point requirement is reasonable, as it ensures that efforts to address the gender pay gap remain aligned with the EU Pay Transparency Directive, which already mandates detailed breakdowns. Areas of improvement: -Including the adjusted pay gap, even on a voluntary basis, improves transparency, stakeholder relevance, alignment with gender equality commitments. -It is valuable for driving impactful pay equity actions, despite being more complex to calculate. -The adjusted pay gap is the only metric truly reflecting "equal pay for equal work or work of equal value." Conclusion The views on this step differ significantly. Many find the adjusted gender pay gap metric is critical for meaningful, fair, and actionable pay equity reporting and should be retained. Others refer to the upcoming EU Pay Transparency Directive, which will mandate detailed disclosures. Until a consensus on definition is reached it does not meet EFRAGs objective of simplified and comparable reporting.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree	Support: -Support for clarified reporting boundaries and value chain scope to reduce preparer uncertainty. -The amended provisions better balance ambition and feasibility, but challenges persist in collecting reliable data across complex global supply chains. Areas of improvement: -For a (large) preparer, it is practically very complex and labour/cost intense to identify SMEs within the global supplier base and maintain this classification in its master data. -Challenges with SME Identification and Reporting - Identifying and maintaining classification of SMEs within a global supplier base is complex, costly, and labour-intensive. It requires assessing supplier turnover, full-time equivalents (FTEs), and asset value, often needing financial statements from local registries. -No global or consistent definition of SMEs exists; definitions vary by country and legal entity vs. consolidated levels. -A pragmatic, simplified approach is recommended, ideally one that does not require external information to identify smaller suppliers. -Practical implementation guidance, including how to measure and report, is needed. -The "standard payment terms" datapoint is questioned for clarity and relevance, especially internationally where no legal standard exists. -The percentage of payments made under standard terms is hard to interpret and provides limited insight into supplier relationships or impacts. Conclusion The current G1 structure and SME payment disclosures require significant rethinking for clarity, practicality, and usefulness. Simplified SME definitions, focused and meaningful metrics, and clear guidance are needed to ensure the disclosures truly support investor decision-making without undue burden on preparers.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Support: -The amended ESRS 1 clarifies drafting conventions, strengthens the role of fair presentation, and refines guidance on value-chain scope, phasing-in and incorporation by reference, making the cross-cutting framework more usable in practice. -The explicit treatment of double materiality and entity-specific disclosures is helpful, while transitional provisions are pragmatic for first-time reporters. -The inclusion of guidance on how to deal with acquisitions and disposals is helpful and reflects the practical challenge preparers face with large acquisitions. -Readability of the ESRS 1 standard has significantly improved. The DRs are phrased clearer and simpler. Areas of improvement: -The materiality principle and undue cost and effort concept may result inconsistent / non-comparable reporting and recommend clearer guidance for their application. -To further support comparability, EFRAG could add a short set of non-prescriptive examples on disaggregation levels and on balancing qualitative and quantitative evidence in materiality determinations. -Some elements of the DMA remain complex. The value chain assessment and particularly how to include JVs and associates remains complex. This would much benefit from clear practical guidance. -EFRAG needs to provide a clearer position of the minimum data points companies or sectors should disclose to ensure the objectives of the European Green Deal are met. -Further work may be needed on reporting boundaries to enhance interoperability with ISSB and align with the GHG Protocol following the completion of ongoing updates. Conclusion There is broad agreement that the ESRS 1 amendments improve usability and clarity while balancing simplification and core Green Deal objectives. However, specific areas—especially materiality application, reporting boundaries, treatment of acquisitions/disposals, and value chain scope—need clearer, more detailed guidance to avoid inconsistency and ensure comparability across companies.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	Support: -In general, we support the simplifications and clarifications made under ESRS 2 Areas of improvement: -While we recognise the removal of duplicative data points between ESRS2 and the topical standards, we do not consider this measure sufficient to significantly reduce the volume of disclosures required in the Sustainability Statement. -Furthermore, although we are aligned that the 'Objective' chapters within the topical standards are necessary to set the context of each standard, we are concerned that the proposed amendments may result in inconsistent application of the ESRS2 GDRs. -There is insufficient clarity and updated guidance provided regarding current and future anticipated financial effects to be able to prepare a reliable and comparable disclosure. -Many respondents find that many of the proposed revisions will ultimately have minimal effect on reporting burden, and in some cases may be either more complicated, more burdensome, or both in their application. -The ESRS continue to maintain a de facto parallel sustainability-related financial reporting system, rather than leveraging existing financial reporting standards.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Support: -We acknowledge improvements to the structure and length of the standard. -Some simplifications are beneficial, such as removing revenue-based intensity metrics (although we would argue intensity metrics may be more useful in some cases than absolute measures), links to EU taxonomy and financial statement disclosures. -Clarifications on gross GHG targets (exclusion of removals), allowance for intensity targets with associated absolute values, and the requirement to reference a 1.5°C-aligned pathway materially improve target quality. -Energy consumption and mix disclosures are clearer and more actionable. -The proposed amendments to the E1 standard enhance conciseness by removing repetition. -In addition, the proposal maintains the metrics which are most relevant for stakeholders. Areas of improvement: -It is our view that this has not resulted in significant reduction in disclosures or reporting effort. -Uncertainties remain about scenario analysis requirements, the definition of 'compatibility with 1.5 degrees' for Transition Plans, and a sector-agnostic approach that overlooks industry differences relating to climate risks and impacts. Additionally, alignment issues persist with IFRS S2 on scenario analysis and changes to operational control for gross emissions reporting. -Further alignment of scope boundaries and estimation methods for GHG emissions would aid comparability across sectors. -The E1 standard includes several complex and detailed disclosures on anticipated financial effects. To achieve the right balance, EFRAG should release clear guidance and examples for quantitatively and qualitatively disclosing these requirements.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	33.E_3.	ESRS E3:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Areas of improvement: -We overall support the proposed amendments to the E3 standard. -Whilst we agree with proposed simplifications for water intensity and water stored metrics, some companies disagree with the proposed new water withdrawal metric. -We would recommend amendments focus on further guidance and basic clarifications for existing metrics such as specifying the measurement periods and providing clear definitions.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	33.E_4.	ESRS E4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Areas of improvement: -The proposed amendments to the E4 standard improve the link with biodiversity and other topical standard. -Biodiversity is a relatively new reporting topic for many companies; therefore, EFRAG should do the following: oUpdate NMIG to reflect alignment with the ISSB, TNFD, SBTN, and reduce misalignment risk. oClarity on the specific metrics linked with other topics.

In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Areas of improvement: -Resource use and circularity is still a very new topic for many reporters and that we see many different approaches taken by companies for the disclosure of the KPIs, resulting in comparability challenge. -The consolidation around resource inflows, outflows and waste supports the circular-economy focus while reducing duplication. Transitional reliefs for complex value-chain data remain important for feasibility. -The proposed scope amendments are unclear and contain overlapping definitions for resource inflows (everything), marine resources biological and non-biological), and biotic marine resources (living or previously living organisms), making them difficult to understand. -Whilst we generally support more focussed metrics, the proposal to report "key" materials introduces an additional materiality level within a sub-topic, which may undermine the DMA and could create ambiguity regarding the understanding of materiality. The introduction of new terms such as "strategic" and "key" adds significant uncertainty due to their lack of clarity. -A general concern is the difficulty of obtaining statistic on the market about waste destination and treatment (globally). -More guidance and examples for reporting on E5 metrics should be included within the standard or the non-mandatory illustrative guidance.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	33.S_1.	ESRS S1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Areas of improvement: -The proposed amendments to ESRS S1 bring useful simplification to reporting obligations and clearer structure and may ease the burden on companies. -The revised S1 improves clarity on incident reporting, training and grievance mechanisms, and the proportional thresholds for country-level metric disaggregation are reasonable. The approach to calculating adequate wages outside the EU is more consistent, though additional guidance on local adaptation would improve reliability. -However, several respondents expressed that is no significant simplification in reporting from our perspective. -Whilst marginal simplification is achieved through a proposed reduction in data points, this standard remains metric "heavy", with a high reporting burden. -It also retains metrics which are not decision useful for users of the Sustainability statement and are poorly defined, such as training and skills development. Inconsistent definition and data collection challenges for the disability metric could result in incorrect misinterpretation by readers. -Some datapoints, we are given the possibility to choose between narrative and table to disclose the data, which is welcomed by respondents. -Collective bargaining agreements datapoints require a big effort and are not sufficiently clear.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	33.S_2.	ESRS S2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Areas of improvement: -We agree that streamlining disclosures related to the engagement of value chain workers, the existence of communication channels, and remediation strategies is necessary to eliminate redundancy. -However, we believe that EFRAG's proposals do not sufficiently simplify these disclosures considering disclosures within ESRS2, and it remains unclear why certain elements, such as Global Framework Agreements and outcomes, have been retained. -The standard rightly concentrates on salient risks in the value chain and strengthens expectations on supplier management, grievance mechanisms and escalation. However, consistent data collection remains challenging across geographies; proportionality, reliance on recognised certifications and clear phasing will be important. -We recommend that the topical standard be clarified to provide companies with a definitive understanding of whether disclosure requirements pertain solely to actions addressing negative impacts or extend to all IROs, including positive impacts, risks, and opportunities. -We recommend that all human rights disclosures be consolidated into a new chapter within ESRS2, rather than being dispersed across various social disclosures.			
Survey	The Financial Executives Association (FEA)	Other - please specify (required)	Netherlands	33.G_1.	ESRS G1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Areas of improvement: -The consolidation of business conduct into clear DRs on policies, actions, targets and metrics improves usability and accountability. The added focus on training coverage for at-risk functions and boards is useful. -The proposed amendments to ESRS G1 bring useful simplification, clarification and improved structure. -Some datapoints however have been introduced or made mandatory, which is contrary to the general principle of simplifying the ESRSs. This includes the number and nature of confirmed incidents of corruption or bribery. -In the area of payment practices, we would welcome a pragmatic approach to identify SMEs as for a (large) preparer, this is practically very complex and labour/cost intense within a global supplier base.			
Survey	University of Warwick	Academia	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	University of Warwick	Academia	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	University of Warwick	Academia	United Kingdom	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	University of Warwick	Academia	United Kingdom	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	University of Warwick	Academia	United Kingdom	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	Removing all 'may disclose' elements is not helpful because it does not give companies an idea of what they could disclose. Especially for first-time preparers and those seeking to improve their disclosures, it would be helpful to have the 'may elements' in the standard as examples.			
Survey	University of Warwick	Academia	United Kingdom	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	The proposed changes are likely to lead to incomplete and low quality data, which will make it harder for external stakeholders, such as academics, to use the data for research and analysis purposes. This means that research will become more time-consuming, possibly meaning that the research won't be carried out at all. Especially the partial scope of metrics is problematic if there is no clear and detailed description of what has been excluded. There, if there is partial disclosure, at least it should be explained what was left out. Similarly, removing the preference for direct data is problematic as it incentivises companies with below-average performance to rely on estimates rather than direct data. It should be a clear expectation that companies work towards direct information, rather than estimates. Finally, 17.7: there is a danger that this means a subsidiary is not reported on at all. This can lead to research results that are not representative of the actual sample.			
Survey	University of Warwick	Academia	United Kingdom	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	The relief means that the inconsistencies in reporting will increase rather than decrease. It also incentivises companies to focus on those part of the disclosures that are more positive, opening the door to greenwashing. Ideally the relief is removed completely. If the relief is retained, at least there should be a time limit as to how long there can be a relief and the reporting entity should disclosure in detail was is left out of the disclosure

Survey	University of Warwick	Academia	United Kingdom	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1				
Survey	University of Warwick	Academia	United Kingdom	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	University of Warwick	Academia	United Kingdom	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	University of Warwick	Academia	United Kingdom	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	University of Warwick	Academia	United Kingdom	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	These additional data points are particularly welcome, as they provide information that is crucial for assessing a firms sustainability performance and they do not impose any unnecessary burden, as highlighted.			
Survey	University of Warwick	Academia	United Kingdom	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	University of Warwick	Academia	United Kingdom	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	University of Warwick	Academia	United Kingdom	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Exempting financial institutions from disclosing absolute GHG emission values would result in making it impossible to compare the financial sector to other sectors, preventing cross-sector comparison. In addition, intensity metrics and targets are influenced so much by other factors, such as inflation and market volatility, that it makes it hard to assess to what extent financial institutions make a meaningful contribution to the transition. Lastly, having both intensity and absolute emissions metrics provides a full comprehensive picture, so having both is very useful

Survey	University of Warwick	Academia	United Kingdom	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	University of Warwick	Academia	United Kingdom	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				
Survey	University of Warwick	Academia	United Kingdom	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	Clear and up-to-date guidance on biodiversity (targets) disclosure would be helpful to avoid that companies use only aggregate data or black-boxed model data, where it is difficult to assess the assumptions that were used to produce the data. At a minimum, metrics and targets related to biodiversity and ecosystems should include explicit mentioning of time and space			
Survey	University of Warwick	Academia	United Kingdom	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Greatest concerns around partial relief as outlined above.			
Survey	University of Warwick	Academia	United Kingdom	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. Survey	University of Warwick	Academia	United Kingdom	33.S_1.	ESRS S1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree

Survey	Afep	Business association (other than association of financial institution)	France	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I disagree	Companies welcome the following simplifications to the double materiality assessment process: -the possibility of adopting a top-down approach in addition to a bottom-up one, -the shift in focus from the IRO level to the topic level, -the clearer identification of internal and external sources to be used at the beginning of the section, -the enhanced prominence given to the materiality of information, -the simplification of AR 16. However, companies are concerned by the definition of impact materiality laid down in paragraph 21 (b) of ESRS 1. In particular, the definition of 'general purpose' according to AR3 is too vague and could result in multiple requests from a variety of stakeholders. They call for a simplification of the update requirement by specifying that the DMA process and its conclusions shall be updated only in case of significant events or material changes in circumstances (§29). Furthermore, additional structural and editorial changes are still needed to ensure that the drafting consistently reflects the intended simplification: -The requirement to describe the DMA process in IRO 1 §26 are too detailed. -The purpose of the top-down approach is sometimes weakened by elements carried over from Set 1, which do not make it sufficiently clear that an IRO-level assessment is not systematically required during the DMA. -Some methodological or illustrative elements should be moved into the AR (severity-related factors (§31), criteria for assessing positive impacts (§32), details on risks and opportunities (§41), dependencies (§42)); -Nuance the requirement to use thresholds (§28 and AR5c): when ranking material issues, severity may be assessed through comparison without the need to score each sub-criterion separately or define strict thresholds. -Certain terms remain imprecise and risk creating contentious discussions with auditors, such as "relevant information" in §22 and "appropriate level of aggregation" in AR 23 of ESRS 2.			
Survey	Afep	Business association (other than association of financial institution)	France	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	The use of the terms "gross" and "net" can be confusing for preparers. It would be clearer to specify when mitigation and remediation measures can and cannot be taken into account. Furthermore, Appendix C is not clear and creates confusion because: -It is different from the principles. -It adds the theoretical case of information to be produced in the next reporting period (year N+1). In practice, when producing a sustainability report, companies are always focusing on the reported period. Impacts cannot be artificially divided into different periods. Therefore, companies consider that Appendix C should be removed to avoid difficulties related to diverging interpretations. If the "gross versus net" approach is maintained and to enable consistency between impacts, risks and opportunities, a gross assessment should remain the main principle, while a net approach should be possible in some circumstances according to the company's judgement. This more flexible approach seems to preserve interoperability with ISSB, which does not prescribe whether or how an entity is required to consider risk mitigation activities. Regarding the time horizon, a distinction should be made between: - Actual impacts: to be assessed, taking into account actions already implemented at the date of the materiality assessment. -Potential impacts: to be assessed before considering future mitigation actions ; past actions can be taken into account.			
Survey	Afep	Business association (other than association of financial institution)	France	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	Companies are supportive of the changes (possibility to better organize the report in a meaningful way, to put some granular datapoints in appendix...) as they deem very important to have a concise report, focused on important subjects, enabling the reader to better understand their strategy, politic and actions.			
Survey	Afep	Business association (other than association of financial institution)	France	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	Afep	Business association (other than association of financial institution)	France	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	Companies welcome the improved presentation of the standards, including: -the reduction of the length of the text, the simplification of narrative paragraphs deemed overly technical or detailed; -the positioning of AR directly after the disclosure requirements, focusing only on essential methodological elements and key presentation points, which significantly improves readability and understanding of the standards. Nevertheless, the overall length of ESRS 1 could be further reduced, including by simplifying Chapter 3 on double materiality assessment (similar length as in Set 1 and simplified ESRS, 34 pages, 25 without annexes). Regarding the datapoints which are kept from the set 1, EFRAG should confirm that the wording changes brought to improve conciseness of the standards shouldn't lead to additional burden for the first application due to a "fresh interpretation" by the auditors or regulator.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Afep	Business association (other than association of financial institution)	France	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	The NMIG should remain outside of the standards. The first wave companies' experience shows that EFRAG Q&As and Implementation Guidance have been used by auditors as a binding reference, with preparers expected to comply. Despite being issued by EFRAG for illustrative purposes only, the NMIG could be considered by stakeholders as having the same authority than the reporting standards. It is therefore essential that the NMIG remain outside the delegated act adopting the ESRS and is drafted in a way that cannot, under any circumstances, be used for audit purpose. The NMIG should remain a document published by EFRAG only and not by the European Commission. Furthermore, the treatment of previous lengthy and numerous Q&A and non-authoritative implementation guidance issued by EFRAG on Set 1 needs to be clarified by EFRAG. Companies shouldn't be required to read layers and layers of text to draft their sustainability reports, a reduction of the number and length of documents to consider and an improvement of their readability being particularly crucial for wave 2 companies. The basis for conclusion are very useful and should integrate the precise list of clarifications brought on the existing datapoints without requiring a modification of the standards. Indeed, it would enable preparers and auditors to already take them into account for the 2025 reporting. Some disclosures currently proposed by EFRAG in the environmental field should be transferred to the NMIG as mentioned in Questions 24 and 30 (see also EXCEL file on environmental standards).			
Survey	Afep	Business association (other than association of financial institution)	France	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	Companies welcome the proposed reliefs which should lead to a more cost-effective reporting without compromising quality: -clarification that the starting point for reporting is the scope of consolidated financial statements; -reduced emphasis on direct data collection from value chain partners, with possibility to use estimates; -the concept of "undue cost or effort" consistent with financial reporting practice; -clarification that non-material activities may be excluded from the calculation of certain metrics. Companies ask that the relief regarding skills and resources be included in the ESRS. Even if some reliefs go beyond the ISSB provisions, being "optional," companies do not believe this will hinder interoperability. However, clarifications are necessary regarding how these reliefs fit into the fair presentation framework, if it is adopted. Concerning joint operations, ESRS §92 seems to increase the burden, implying that undertakings must include data from joint operations over which they have operational control, whereas preparers interpretation of the current standards (E1 apart) was that only own operations were concerned (except in the specific case of entity-specific indicators if this scope was deemed relevant by the company). In any case, ESRS S1 should also be targeted as it may be very delicate to obtain data on joint operations' workforce. Companies also wonder how this extension to operationally controlled joint operations fits in with the relief regarding data quality. For the setting of climate objectives (E1-8) : the relief mentioned in ESRS1 §91 on "undue costs and efforts" should also be applicable for setting scope 3 objectives. They are most of the time very hard to quantify as they address actors across the whole value chain, without certainty for applying effectively the expected action plans. In any case, this relief should also apply to E1-8 on GHG emissions if estimates are subject to too much uncertainty.			
Survey	Afep	Business association (other than association of financial institution)	France	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	Companies are very supportive of this proposal because it is often very difficult to obtain even estimates on assets operated by third-party companies, for example. Even if companies implement improvement processes, it is not always certain that reliable data can be obtained at a later date, particularly when third parties operate in jurisdictions that are not subject to ESRS. Companies also agree that no time limit should be imposed since as mentioned in the basis for conclusion, transparency about such limitation would provide sufficient incentive for the undertaking to improve the data quality and achieve a more complete scope in the calculation of the metrics. However, as this paragraph currently stands, companies would be obliged to calculate and publish GHG emissions across their entire value chain regardless of data availability and quality. This would not be compatible with the ESRS's qualitative characteristics of information and fair presentation requisites. The relief should also apply to GHG emissions, at least to scope 3 emissions. Regarding joint operations, the lack of data can also occurred for social datapoints.			
Survey	Afep	Business association (other than association of financial institution)	France	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	Companies consider that information on anticipated financial effects is problematic because it can reveal confidential and strategic information and raise issues in terms of liability considering the uncertainties attached to any projections or forecasts. In the field of financial reporting, companies are not required to disclose their financial planning. Although disclosure of sensitive information will be dealt with ongoing developments on level 1, companies consider that anticipated financial information deserves specific relief in the ESRS. Companies point out the risks of disclosing projections covering medium and long-term horizons based on assumptions that change rapidly and dramatically. Such disclosures would significantly increase companies' liability without providing useful information to users. Furthermore, it is impossible to provide quantitative information without disclosing the underlying assumptions which could contain highly sensitive financial information. Companies understand the expectations of some stakeholders for forward-looking financial information but highlight that they are useful only when they are reliable without exposing confidential information. High-quality qualitative information is thus preferable to forcing companies to present unreliable and sometimes misleading quantitative data. The reliefs included in Option 1 are not sufficient as many stakeholders see these exemptions as temporary.			
Survey	Afep	Business association (other than association of financial institution)	France	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	Quantitative reporting on anticipated financial effects is still premature given the immaturity of methodologies. Mandatory qualitative disclosure should be the baseline, with quantitative elements allowed on a voluntary basis (see option 2 for relief ESRS2 §23 a). Therefore, §40, §41 and §42 must be subject to this option 2.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Afep	Business association (other than association of financial institution)	France	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	Companies operate globally and have investors outside of the EU who may be asking for ISSB compliance or operating in jurisdictions planning to make ISSB standards compulsory. Any reporting duplication or discrepancy of principle should therefore be avoided. Nevertheless, the international standards should not necessarily be the absolute global baseline and some datapoints may remain specific to this framework without being always embedded in the ESRS. Indeed, to allow a real simplification of the ESRS without hampering the interoperability, any DP and DR which can be considered as less of a priority or too complex should be withdrawn from the standards and flagged in an appendix as necessary for the interoperability. It would enable any company needing to be interoperable an easy identification of what is needed without imposing an unnecessary burden on others.			
Survey	Afep	Business association (other than association of financial institution)	France	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Afep	Business association (other than association of financial institution)	France	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	Companies support EFRAG's proposal, as planned in the Commission's mandate, to reduce the number of DPs by deleting the voluntary DPs, reducing overlap and increasing the focus on quantitative DPs with a reduction of the numerous narratives. Beyond the quantitative diminution of the number of DPs, companies highlight the difficulty to evaluate the concrete effect of that reduction on the reporting burden. Indeed, the quantitative DPs represent an important burden for companies considering the data collection in all the subsidiaries based in different countries with different legislations. Companies note that some alleviations listed in the French proposals for a simplification have not been considered by EFRAG - notably the deletion of some difficult DPs - which, cumulatively, could enable a more significant decrease in the reporting burden. Therefore companies believe that further alleviation is feasible and necessary.			
Survey	Afep	Business association (other than association of financial institution)	France	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	Companies reject any additional requirements as the main goal is to simplify the ESRS reporting. E3: Companies do not have water meters installed at each point. They calculate their water consumption through estimations and modelling (no use of water balance approach). Consequently, these new datapoints contradict the principle of simplification create greater complexity, and increase the audit costs. E4: The notion of "transition plan" is not yet clearly defined. Companies explore the best ways to develop action plans, whether through national or international initiatives, but no official certification of such analyses and plans exists to date. Making this datapoint mandatory would discourage companies from taking initiatives, as it would trigger compulsory verification by auditors without existing auditing standards. Such a compulsory publication should be removed from the standard. G1-2 : Percentage of functions most at risk in respect with corruption and bribery should be included in G1-4 (sub topics). G1-4 : Companies strongly reject the number of confirmed incidents. -It is irrelevant : it is not a reliable indicator to assess the effectiveness of the anti-corruption policies (a low number could mean a good policy to prevent the risks, a high number could mean a reliable reporting mechanism). -It is dangerous for EU competitiveness as it contradicts the right not to incriminate oneself guaranteed by the European Convention on Human Rights. Third countries authorities, such as the US Department of Justice, would investigate against EU companies to the benefit of their major strategic non-EU competitors who are not subject to similar reporting obligations. Finally, the specific point on CS3D and CSRD made in the recent joint statement on a US/UE framework on an agreement on reciprocal, fair and balanced trade, will lead to alleviate US companies from the main constraints of CSRD and create an unlevel playing field.			
Survey	Afep	Business association (other than association of financial institution)	France	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	Any simplification of the already highly complex framework should be achieved without introducing new requirements or by moving "may" datapoints to "shall" datapoint, that also exceed the Commission's mandate given to EFRAG. E2-4: Neither the definition of secondary microplastics nor the associated risk assessment along the value chain are officially established. Their impacts are not yet clearly addressed by science. Given the lack of robust and consistent methodologies to date, this item must be suppressed. E5-4: At present, the notion of critical and strategic raw materials may evolve over time with the development of the Critical Raw Materials Act, and as the delegated acts deriving from the Eco-design for Sustainable Products Regulation are not yet approved. Companies consider this information hard to access and publish, particularly since these materials are often mixed with others. In this evolving context, this datapoint shall be inserted in the NMIG.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Afep	Business association (other than association of financial institution)	France	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I disagree	Fair presentation is a new concept not used in the Accounting Directive which only refers to "true and fair view" regarding financial statements. Fair presentation is not clearly defined to prevent any ambiguity, ensure consistent application, mitigate audit risk and preserve the intended simplifications. Therefore companies do not support introduction of "fair presentation" in the ESRS. Since the mandate given by the Commission is to reduce and streamline, new concept should not be introduced in the ESRS, especially when not clear. Given the existing concepts, notably in ISSB or IAASB sustainability auditing standard ISSA 5000, French and European stakeholders have diverging interpretations of potential impacts and consequences : for some key stakeholders, it means the addition of supplementary datapoints in the report and it increases liability for both preparers and auditors to reach completeness, thus not reducing the reporting burden. French auditors consider that they will have to perform more due diligences and that the audit burden will be increased. Regarding liability, companies highlight that consequences of fair presentation in a double materiality reporting framework are different to those in a financial one given the number of affected stakeholders, the importance of narrative and forward-looking information required by the ESRS. EFRAG is trying to frame the double materiality assessment, stating that undertakings are not required to assess every possible IROs but this provision is not sufficient in case of litigation. As regards interoperability with the IFRS, the ISSB claims a level of interoperability of 95% regarding climate reporting. The remaining 5% are rather technical and clearly identified; they can be addressed directly without introducing fair presentation.			
Survey	Afep	Business association (other than association of financial institution)	France	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Financial institutions' GHG emissions typically stem from financing activities (Scope 3, Category 15), which means that their GHG emissions depend on companies and households that they finance. Therefore, too many hypotheses are needed to calculate targets in absolute value, and the results are neither reliable nor comparable, because they ultimately depend on clients. Moreover, absolute value targets are appropriate only for sectors where financing may be phased out due to lack of transition. While for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. Estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. For this reason, financial institutions should be exempted from disclosing GHG emission reduction targets in absolute terms. Intensity targets alone should be sufficient.			
Survey	Afep	Business association (other than association of financial institution)	France	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	Companies have analysed the new definition of the threshold above which it is necessary to break down indicators relating to the characteristics of company employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of the amended version of ESRS S1). They are not in favour of this change in the definition of significant company workforce because they consider that: -the information is difficult to gather, -it involves a significant burden in terms of preparing information for companies that sometimes have a small workforce in these countries, -when a company employs a small number of employees, the information will not be relevant for assessing the social or HR policies implemented. A top 10 desagregation would lead companies to disclose non-material information (less than 10% of the workforce) which contradicts the objective of simplification. They therefore wish to return to the previously proposed definition, both for DR S1-5 and S1-7, but also for the majority of DRs, in particular S1-9 and S1-15.			
Survey	Afep	Business association (other than association of financial institution)	France	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	Companies still consider it irrelevant and very complicated to publish information outside the EU on this datapoint ; however, companies are satisfied with the amendment made to AR 22. Outside the EEE, it is entirely appropriate to compare the lowest wages in the company with the statutory minimum wage established by legislation or collective bargaining. However, in countries where an adequate minimum wage does not exist, which is the most critical issue met by preparers in 2024, the ILO principles are too vague and will necessarily make information difficult to audit and compare. To overcome the absence of a clear database of adequate wages, quantitative information should be limited to employees for whom a minimum wage is defined by regulation or by collective bargaining. For those operating in contexts where no adequate wage is clearly defined, qualitative information should be disclosed explaining how the preparer ensures alignment with the ILO's principles.			
Survey	Afep	Business association (other than association of financial institution)	France	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	Simplifications brought in the ESRS must trigger changes in other regulations of the sustainable finance framework to ensure consistency between the different pieces of legislation. In particular, the upcoming review of SFDR should lead to deleting some PAI that are not particularly relevant and introduce a materiality principle. PAI should be strictly based on the information required by the ESRS and not impose additional disclosure requirements to investee companies. Prudential obligations need to be reviewed accordingly.			
Survey	Afep	Business association (other than association of financial institution)	France	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	Companies welcome the intention to provide guidance for preparers in setting biodiversity targets, provided that the future application guidance remains voluntary and is integrated into the NMIG.

Survey	Afep	Business association (other than association of financial institution)	France	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	With regard to remuneration, be it the pay gap or the ratio (S1-15), companies question the value of unadjusted indicators that do not provide any useful information and which, if reproduced without contextual explanation, may contribute to damaging their reputation. The adjusted pay gap is the only metric that directly measures compliance with the principle of "equal pay for equal work or work of equal value."			
Survey	Afep	Business association (other than association of financial institution)	France	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	Companies are in favour of deleting paragraph 14, which poses a feasibility problem for undertakings with tens of thousands of direct suppliers. This disclosure requirement raises the question of how to identify SMEs around the world: what definition should be applied in non-EU jurisdictions ? It is therefore impossible to calculate and provide useful information (payment terms can differ between economic sectors rather than based on the size of companies). Companies consider that paragraph 14 should be deleted. In addition, this requirement is not aligned with Directive 2011/7 of 16 February 2011 on combating late payments in commercial transactions which does not make any distinction based on the size of companies.			
Survey	Afep	Business association (other than association of financial institution)	France	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		ESRS E1: -E1-1/E1-6: Companies also remind that the European Commission committed to define by end of 2025 the meaning of "compatibility between companies' target and 1.5°C targets". Until such a definition is published, no obligations are legitimate on this issue. They stress that the Paris Agreement also refers to "well below 2°C objective" which should be reinserted in the amended CSRD. -Companies consider, in the case where disclosing an absolute emissions target would provide to competitors key sensitive information (i.e.: production forecasts) which are very sensitive, that they should be entitled to publish only a target expressed in intensity. In this regard, a clarification that the "relief" mentioned in ESRS 1 §98 is effectively applicable for section E1-6 appears essential. -E1-3: The notion of resilience used in this section is very much unclear (see glossary); if the concept refers to adaptation, then it should be replaced by climate adaptation (without any reference to transition). -E1-6/E1-8: The distinction between financial control and operational control remains insufficiently clear, and it is uncertain whether the current drafting produces a positive outcome for preparers. This lack of clarity risks confusion in the interpretation of scope 1 and 2 emissions. -E1-5/E1-9 : some obligations have been added (§24 a ; §24c ; § 34) and should be suppressed. ESRS E2: Requiring undertakings to disclose information on substances of concern goes beyond the obligations set by REACH and creates a significant additional burden. The same remark applies to the 0.1% threshold mentioned for disclosures relating to the quantities of SVHC which are part of procured/sold components or articles. Indeed, REACH only requires companies to share the name of those substances. Therefore, reporting on substances of concern should be suppressed, as proposed by the French Accounting Standards Authority, and datapoints 20(a) and 20(b) amended accordingly.			
Survey	Institute of International Finance	Association of financial institutions	United States	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We generally agree that Chapter 3 of ESRS 1 is clearer and better organized. Nevertheless, some further targeted amendments are still needed. •We still see a significant issue with the concept of information materiality. The concept of information materiality in its renewed form is still not sufficient to allow for a more principles-based view and application of the ESRS and creates interoperability issues with the ISSB standards. Particularly, paragraph 21 (b) creates practical challenges. First, it is almost impossible to prove what kind of information is "necessary" for users, as necessity generally is a subjective criterion. •It is important to ensure there is a homogeneous definition of materiality assessment across EU legislation. Close alignment between the EBA's concept of materiality, the definitions applied to insurers (e.g., under Solvency II) and the new draft ESRS should be ensured to avoid discrepancies between outcomes of financial companies' materiality assessments for different exercises (i.e., ICAAP vs CSRD). •In ESRS 2 IRO-1, it should be clarified that a credit institution may refer to existing methodologies in describing its DMA process. •We recommend that ESRS 1 Chapter 3 and the Application Requirements (ARs) make explicit that financial sector firms may refer to Pillar 3 disclosures or omit information relevant only to supervisory authorities. •ESRS E1's ARs should explicitly permit disaggregation by asset class, sector and client type for financial sector firms. •While financial institutions do consider low-probability, high-impact outcomes, mandating firms to disclose such information in every case could lead to misstatements or overstatements. We recommend removing this expectation from ESRS 1 (and any related AR) to protect the reliability of disclosures.			
Survey	Institute of International Finance	Association of financial institutions	United States	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	IIF members do not agree that the new, detailed guidance on how to consider remediation, mitigation and prevention actions within the DMA will make reporting more relevant and comparable. We consider the new guidelines to be excessively complex, and that they risk being overly prescriptive, which could restrict firms from implementing a DMA process that accounts for firm-specific circumstances. For example, supportable evidence requirements introduce definitional ambiguity and increase reporting disclosures. We would welcome a more principle-based approach focused on whether impacts, after considering management's response, remain material to stakeholder decision-making. Preparers should be able to use reasonable judgement in determining whether a gross, net or hybrid approach is most appropriate. This would better align with the fundamental materiality principle while reducing implementation complexity and avoiding perverse incentives for effective risk management. It also echoes ISSB staff's view on risk mitigation, "It is the staff's view that whether and how an entity considers risk mitigation activities in the identification of sustainability-related risks depends on an entity's specific facts and circumstances. (IFRS Staff Paper, November; paragraph 17). IIF members would recommend the complete removal of the new guidelines on gross vs. net, i.e. paragraphs 34/35 and Appendix C of ESRS 1, and that time is permitted for the market practice to evolve. Any future guidance on this topic might be better placed in the NMIG. Future work could revisit the concepts of "gross" vs. "net" for financial institutions, including allowing a preparer to reflect prevention measures and the possibility of adapting the balance sheet. Finally, we note that the proposal is currently limited to impact materiality, while risks and impacts should be treated consistently. We believe it should equally apply to risk so that the approach is consistent and synchronized across both dimensions.

Survey	Institute of International Finance	Association of financial institutions	United States	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	IIF members agree that the proposed changes – notwithstanding amendments to respond to the challenges raised in this letter – would generally contribute to improve the overall readability and conciseness of the ESRS. IIF members consider the explicit flexibility provided in relation to the organization of the disclosures, the inclusion of an 'executive summary' and the emphasis on non-duplicative reporting, to be of particular benefit. However, we recommend that EFRAG considers incorporating further flexibility in some cases, such as permitting cross-referencing to other relevant sustainability reports by embedding links within the Sustainability Statement to further improve the overall readability of the report for stakeholders.			
Survey	Institute of International Finance	Association of financial institutions	United States	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The revised architecture is a clear improvement – the standards are more readable and better structured. Nevertheless, some additional revisions should be considered. Going forward, we recommend: -Clarifying the hierarchy from topic, to sub-topic, to datapoint, and ensuring every "shall disclose" requirement sits beneath the relevant topic/sub-topic. This would make it more intuitive to progress from DMA conclusions to the applicable disclosures. -Providing a navigable HTML edition of the final standards in which every reference to a defined term, another section or paragraph in the standards is a live link to the referenced paragraph or Application Requirement. This would materially improve accessibility and ease the implementation of the standards. Additionally, concerns remain regarding the General Disclosure Requirements for Metrics (GDR-M) paragraph 41. -First, Paragraph 41(a) requires, for each metric, information on data types and sources used as input to the calculation. While subject to information materiality, this is not relevant for most metrics and does not add value for users. We suggest deleting "data types and sources used as input to the calculation" from the provision. -Second, paragraph 41(b) introduces requirements for all environmental metrics regarding specific environmental conditions and characteristics of the area where the impact is occurring. This information is often unavailable, highly judgmental, and subject to significant uncertainties. We suggest deleting subparagraph 41(b) entirely.			
Survey	Institute of International Finance	Association of financial institutions	United States	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We welcome the relocation of all mandatory disclosure requirements into the main body of the standards, along with the placement of application requirements directly below each relevant Disclosure Requirement and Chapter in ESRS 1. However, some concerns remain: -Some "may disclose" datapoints remain (e.g., ESRS 1.114, 1.115) and should be reconsidered to ensure consistency in mandatory reporting. -Changes to established terminology should be approached with caution, given that many undertakings are already preparing or reporting under the original ESRS. The consistent use of "material IROs" should be ensured across the standards, avoiding references to "material topics," and wording should not alternate between "adverse" and "negative" impacts. -Members remain concerned by the wording of certain Application Requirements. Expressions such as "shall consider" create ambiguity, as it is unclear how "consideration" can be measured or audited. More generally, IIF members believe that merely reducing the total number of mandatory data points may not necessarily result in a reduction in reporting burden. For example, in ESRS E1, companies are still required to disclose GHG emissions broken down by scope 1, 2 and 3. Previously, disclosure of the overall total (as the sum of scopes 1, 2 and 3) was also required, however the burden arises from the need for firms to source scopes 1, 2 and 3 emissions, not from calculating a simple sum. Additionally, the merging of requirements should be considered a consolidation and not an elimination of requirements. It would also be helpful if EFRAG provided a clearly defined list of updated data points.			
Survey	Institute of International Finance	Association of financial institutions	United States	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	IIF members recognize that that some voluntary disclosure items have been relocated to non-mandatory illustrative guidance rather than being removed entirely. Some members would prefer that such data points are removed entirely from the requirements and the NMIG. More broadly, it should be made extremely clear that the NMIG is indeed voluntary for firms to refer to and is not an extension of the core requirements. For example, an explicit statement could be included clarifying that the NMIG cannot be used for audit purposes and are intended solely to facilitate implementation by preparers.			
Survey	Institute of International Finance	Association of financial institutions	United States	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	IIF members support the horizontal reliefs (including "undue cost or effort" and "reasonable and supportable information") and the permission to use proxies/estimates for Scope 3 where appropriate, for example where an appropriate and accepted methodology exists. However, members have some comments and concerns related to the following: •The undue cost and effort relief is worded differently to the same principle in the International Sustainability Standards Board (ISSB) disclosure standards, which creates confusion about interpretation and interoperability between the proposed revised ESRS and ISSB. EFRAG should also clarify that it is the firm's management that determines what constitutes "undue cost and effort" with respect to each entity in scope. •The drafting of ESRS 1, Section 7.4, Paragraph 91 is currently unclear and generating some confusion for firms as well as concerns that it would require low-quality disclosures of GHG emissions. Some read the text as explicitly excluding GHG emissions from the relief for undue cost and effort, however we believe it instead applies to the scope-related relief. Under either interpretation, it is not clear why GHG emissions would be excluded from the relief as it would likely lead to the required disclosure of poor quality GHG emissions data that would fail to meet the ESRS's own fair presentation and qualitative characteristics of information. •The relief for acquisition should be extended, considering that acquisitions are inherently complex, and require a longer period for transitions (at least two years) given complications with system integration and the typical period allowed under accounting rules for the acquiring company to finalize the measurement of assets and liabilities. •We think further guidance will be required for auditors to ensure that these reliefs are used as EFRAG intends.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Institute of International Finance	Association of financial institutions	United States	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	The proposed relief for lack of data quality is welcomed. IIF members support the overall objective of reducing unnecessary and low-quality data points to simplify the ESRS and make them more decision useful. However, although these reliefs help reduce the reporting burden, EFRAG should consider greater alignment with ISSB/IFRS reliefs for long-term alignment between the two standards. The proposed ESRS changes incorporate ISSB/IFRS provisions related to "reasonable and supportable information available without undue cost or effort" when reporting metrics; however, full alignment is not achieved due to differences in the scope of application. EFRAG should further address financial services firms' concerns regarding value chain assessment reporting obligation challenges.			
Survey	Institute of International Finance	Association of financial institutions	United States	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	As financial institution disclosure preparers, IIF members have concerns about the interoperability and practicality of the two options presented for disclosing anticipated financial effects in the amended ESRS. IIF members have different views on whether Option 1 or 2 is preferred, or if a different 'third way' ought to be developed that better reflects how anticipated financial effects can already be reflected by financial institutions within their risk frameworks. However, at this time, more members would prefer Option 2 as it is better aligned with the simplification objective and offers a more pragmatic and flexible approach, allowing for meaningful qualitative disclosures while avoiding the risks associated with premature quantification. Option 1 for the proposed "Relief for Anticipated Financial Effects" would be closer in alignment with ISSB principles – although not fully aligned – and would therefore support greater interoperability than Option 2. Members who prefer Option 1 believe that it should be fully aligned with ISSB if it were adopted. However, it entails challenges for preparers due to the absence of harmonized methodologies and comparable data to determine anticipated financial effects, high levels of uncertainty and lack of comparability. Option 2 does represent a deviation from the ISSB standards, but reflects the practical challenges, legal risks and audit impracticality of disclosing forward-looking financial information; it therefore better aligns with a simplification objective. This option still leaves room and provides encouragement for the industry to continue to improve on quantification approaches, however some firms question whether there would be sufficient incentive to do so under this option. Further guidance on qualitative disclosure requirements would be helpful to ensure clarity and consistency in implementation. As disclosure users, most IIF member banks and insurers do not consider that Option 2 would impair their access to necessary information for risk management purposes.			
Survey	Institute of International Finance	Association of financial institutions	United States	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	IIF members consider that the E1-11 disclosures continue to be complex and problematic, and that they should be amended and reduced. For many of the required data points, there are often no established standards and they extend far beyond what is required under financial reporting, often asking for potentially sensitive information with little relevance for stakeholders. Some of the datapoints could inadvertently create other adverse impacts for preparers, e.g., providing a misleading impression to investors, introducing legal risks for preparers. For example, see Paragraph 41(d) on "potential liabilities related to climate transition that do not meet the accounting recognition criteria at the reporting date but that may have to be recognised in financial statements" and Paragraph 42 on the "amount and percentage of assets or revenue derived from business activities aligned with climate-related opportunities, including the associated time horizons". If an opportunity is only material in the long term this will be impossible to quantify as the revenue is not likely to have been earned yet and this may lead to the wrong outcome (e.g., arbitrarily making up numbers that are not decision-useful information for end-users). It could also reveal sensitive strategic information in public disclosures. Some disclosures in E1-11 could be retained to allow banks to assess their physical and transition risk while other datapoints should be removed as they are not required for effective climate risk management. The requirements should be better aligned to those under the ISSB framework (e.g., 41 and 42 are incremental to ISSB). In addition, EFRAG could consider aligning the E1-11 requirements with the future revised EBA Pillar 3 ESG disclosures for banks. For example, since the majority of a financial institution's assets would be financial in nature, exposure to climate risk related to owned assets could be an optional disclosure.			
Survey	Institute of International Finance	Association of financial institutions	United States	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	While acknowledging that full alignment of ESRS and ISSB may be difficult to achieve, IIF members call for further efforts in this regard. Many legal entities listed on an EU regulated market within the scope of ESRS will also be caught within the future mandatory scope of ISSB in jurisdictions such as the UK. In such cases, producing ESG disclosures that can address both frameworks will reduce reporting burden and should improve clarity for disclosures users. In addition to the changes already made, EFRAG should consider aligning the fair presentation framework between the two standards. Differences in wording, such as in describing the fair presentation principle, necessitates further review to ensure consistent language across the ESRS and ISSB frameworks. Other areas of divergence that should be addressed include: -The requirements concerning financial and operational control (E1 AR 18. For para. 32/ E1 AR 19 for para. 32/ E1 AR 20 for para 32) diverge significantly from IFRS S2, where undertakings have the flexibility to choose their preferred approach. This dual approach may result in inconsistencies in reporting and interpretation, requiring the need for a careful review to ensure clarity and uniformity. -The deviations related to the detailed data points requirements around anticipated financial effects continue to be a concern (see response to Q20). -The inclusion of anticipated financial effects considerations to perform the resilience analysis (E1 AR 8 for par. 20) is another critical area that does not align with IFRS S2. This new consideration, not included in the original ESRS, introduces complexity and additional burdens for undertakings. -ESRS requires companies to report on energy consumption and mix metrics, while IFRS S2 does not.			
Survey	Institute of International Finance	Association of financial institutions	United States	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Institute of International Finance	Association of financial institutions	United States	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	We acknowledge that the proposed draft reflects some stakeholder feedback, however IIF members are concerned that proposed changes may not lead to a meaningful reduction in reporting burden in practice. Much of the reduction of data points comes from redrafting existing data points or removing voluntary ones, while the majority of mandatory data points remain, some even reappear in the NMIG or are newly introduced. The actual realization of a simplified framework, or not, will hinge on how new concepts are interpreted (such as undue cost and burden, fair representation, materiality filter etc.). We understand that the intention is to shift the focus toward meaningful disclosures rather than process-heavy reporting. However, as currently drafted, the standards still require significant effort to explain the process behind disclosures, justify omissions, and address assurance requirements. The remaining mandatory reporting requirements should be further assessed for decision-usefulness. For example, disclosures related to anticipated financial effects should be analyzed further (see response to Q20). Where such information may be produced, it is highly speculative, lacks reliability for current-period estimation, introduces auditing challenges, and is unlikely to be comparable between entities.			
Survey	Institute of International Finance	Association of financial institutions	United States	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	E4-1 AR1 para 12: The amended ESRS E4 introduces a mandatory requirement for undertakings to disclose biodiversity transition plan features when such plans exist and are made public. While framed as conditional ("if the undertaking has in place"), this requirement may increase pressure on institutions to develop biodiversity transition plans aligned with the Kunming-Montreal Global Biodiversity Framework. However, many IIF members would disagree that biodiversity transition plans are mainstream or becoming mainstreamed yet; indeed the concept presents a number of challenges. This new requirement and EFRAG's rationalization fails to acknowledge significant jurisdictional limitations, particularly in certain jurisdictions such as the United States, where financial institutions face restrictive legislation that may prohibit or limit the implementation of biodiversity transition plans. Re: ESRS G-1 paragraph 14: We strongly oppose this additional mandatory datapoint. Members have previously raised concerns about the application of the definition of "confirmed" incidents and the challenges with applying the Glossary definitions on a global scale. The new ARs 4-6 do not provide the flexibility required for reporters operating globally. The proposed mandatory disclosure of the number and nature of "confirmed" incidents of corruption and bribery would potentially impair an undertaking's and its parent company's legal strategy, defense, and risk mitigation. Determinations as to whether or not a legal violation has occurred, and the appropriate enforcement response are generally discretionary decisions by competent authorities. The proposed disclosure may be interpreted by authorities and other actors as an admission of violation by the undertaking/its parent company, regardless of specific facts and circumstances, which may bias an investigation, enforcement response, and reputational fallout. Consequently, the disclosure requirement can result in undue harm to the undertaking and its parent company. In fact, there is already a similar relief in this regard in the financial reporting framework for this reason.			
Survey	Institute of International Finance	Association of financial institutions	United States	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	We believe that no additional data points should be added. This runs contrary to the Commission's mandate for EFRAG to streamline and reduce reporting burdens. Re: ESRS 2 BP-1 - Basis for preparation of the sustainability statement: We do not agree with the new provisions introduced by paragraph 5, as they create duplicated information throughout the Sustainability Statement. For example, if the reporting undertaking makes use of the relief for metrics with a partial scope (ESRS 1 paragraph 91), or changes sustainability information due to a restatement need or error correction (ESRS 1 paragraphs 95-97), sufficient transparency would be provided for the metrics concerned, i.e. by providing contextual information, disclosing the partial scope, and correcting/restating the previous reporting period figures. Following the new paragraph 5 and stating that the reporting undertaking has applied these "provisions" just creates duplicates and redundant information not helpful for readers and users. We therefore suggest limiting the disclosures required by paragraph 5 to those that do not create duplicated/redundant information with already existent disclosure requirements in the revised standards.			
Survey	Institute of International Finance	Association of financial institutions	United States	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	IIF members recognize the intention behind introducing the fair presentation principle and consider it a step in the right direction, as it creates a disclosure environment which is more aligned with ISSB and improves the relevance of disclosures. This inclusion not only ensures interoperability with the ISSB but also incorporates the concept of fair presentation that is already embedded in financial reporting and further aligns the reporting frameworks. Some members think that it could ultimately lead to a move away from a checklist-style compliance approach to a more coherent and meaningful disclosure framework. However, members see open questions about how the fair presentation principle would be applied in practice. Given these open questions, the potential net-benefits of the principle are unclear. Unlike financial reporting, there is no established and standardized benchmark regarding the fair presentation of sustainability information. This missing benchmark creates the risk of incurring inappropriate auditor requirements, demanding broader or more granular information that goes far beyond the intention of the disclosure requirements embedded in the standards. Nonetheless, if this requirement were adopted, a proper definition and explanation of the fair presentation principle in the ESRS context should be provided, with explicit anchor points for auditors. This should be aligned with the ISSB Standards to ensure consistency and interoperability across reporting regimes. There also needs to be clarification regarding the audit procedures expected to ensure compliance with this principle. A clear explanation (e.g., recitals and basis for conclusions) would also be required regarding the interaction between use of reliefs and the requirement of fair presentation.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Institute of International Finance	Association of financial institutions	United States	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	IIF members agree that financial institutions should be exempted from the requirement to accompany intensity-based targets with absolute values where only intensity targets are set. IIF members, as already noted in the IIF input paper to EFRAG in advance of this consultation, strongly believe that financial institutions at least should not be required to translate intensity targets (if they have set them) into absolute targets for disclosure purposes. Financial institutions should only be required to disclose absolute emissions reduction targets where they have made such targets. At a fundamental level, disclosures should mirror the firm's strategic decisions and regulatory disclosures should be understandable vis-à-vis other disclosures a firm makes. Requiring a firm to disclose a target in a substantively different format to what the firm has set and communicated elsewhere is likely to generate unnecessary confusion for disclosure users. In many cases, financial institutions consider intensity-based targets to be more appropriate than absolute emissions-based targets, hence their strategic decision to set targets in that way. Intensity-based metrics can provide a more nuanced and actionable understanding of a company's or sector's environmental performance. The complexity and required assumptions to transpose intensity targets into absolute targets undermine their usefulness, reliability, auditability and comparability. The process involves numerous assumptions, such as future portfolio composition, client production and sales mix, volumes, and enterprise value etc. This is especially true for financial institutions. Since financed emissions footprints are an aggregate of corporate emissions footprints, translating a portfolio intensity target to an absolute target requires significant assumptions including growth trajectories for all portfolio companies. This type of calculation will not provide the accuracy or transparency desired. A tailored approach to target disclosure—recognizing the specific role and structure of financial institutions—is therefore recommended.			
Survey	Institute of International Finance	Association of financial institutions	United States	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	Regarding ESRS S1-5 and S1-7: IIF members believe that the proposed changes dilute the focus on material information by removing the relative 10% threshold. The updated definition expands the data gathering efforts for the disclosure with minimal value added: countries with low headcounts above 50 employees were formerly excluded if they were low percentages of the total workforce of the undertaking. However, countries with higher headcounts above 50 employees but with a low relative number of employees will now need to be disclosed. IIF members recommend EFRAG to reinstate the previous threshold.			
Survey	Institute of International Finance	Association of financial institutions	United States	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadequwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	The revised ESRS S1 introduces a reference to non-EU living wage methodology based on International Labor Organization (ILO) principles. However, it lacks clarity regarding what this entails. The distinction between EU and non-EU countries adds more complexity. The revisions also introduce new requirements for firms that seem to go beyond a reporting institution's responsibility. For example, within AR 22 it is indicated that firms in establishing adequate wage benchmarks outside the EU "should take into account both needs of workers and their families, as well as economic factors, as stated in the ILO Minimum Wage Fixing Convention No.131."			
Survey	Institute of International Finance	Association of financial institutions	United States	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I disagree	The ESRS 2 Appendix provides a specific example of the issue of duplicative reporting requirements, which may lead to disclosures being developed purely for the sake of compliance and highlighting the need to simplify requirements across the EU legislative framework. The revision of the ESRS presents an opportunity to reduce reliance on Appendix datapoints driven only by regulation rather than by the meaningfulness and usability of information. IIF members consider that the current approach of including datapoints that overlap with both mandatory and voluntary datapoints from the SFDR creates unnecessary burdens for all reporting entities, especially when the datapoints tend to be sector specific (i.e. S1-13 metric on number of days lost to injuries, accidents, fatalities or illness), and the usage by financial institutions in their respective entity/product reporting remain low. Preparation of disclosures regardless of materiality constitutes a disproportionate burden and runs against what we understand to be the principles of the revised ESRS. One approach would be to explicitly state in the ESRS Appendix that only material information need be reported.			
Survey	Institute of International Finance	Association of financial institutions	United States	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	IIF members believe that EFRAG should not review AR26 for the Amended ESRS E4. The existing ESRS 2 GDR-T provides comprehensive guidance for target-setting disclosures, and additional prescriptive application requirement could create implementation complexity without proportional benefits. However, EFRAG should consider removing AR 5 (engagement with indigenous peoples) associated with paragraph 17 as this undermines EFRAG's stated simplification goals. If the objective is to reduce prescriptive guidance and rely on ESRS 2 GDR-T frameworks, then AR5 represents an arbitrary exception. Moreover, AR5 introduces problematic scope creep by embedding social governance mechanisms within an environmental disclosure requirement. ESRS S3 (Affected Communities) already addresses indigenous people.			
Survey	Institute of International Finance	Association of financial institutions	United States	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree	IIF members agree that removing voluntary DPs generally aligns with the overall objective of the simplification mandate.			
Survey	Institute of International Finance	Association of financial institutions	United States	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree	IIF members are generally supportive of the proposed formulation. However, we would note the following points. We note that the Log of Amendments published on the EFRAG website introduces an additional sentence to AR 4 paragraph 13 stating that "final decisions include all the decisions in the reporting year while awaiting the outcome of a possible appeal." However, under the European Criminal Records Information System (ECRIS), only final decisions not subject to appeals enter the criminal record. We recommend deleting that sentence to align AR 4 with the legal definition of "conviction" under ECRIS. Additionally, regarding AR 5 for paragraph 13, in order to keep coherence with the definition of "conviction", fines to be reported should be limited to those that are definitive (i.e., not subject to appeal judicially). This would be also consistent with the concept of "fair presentation" pursued in the new ESRS.

Survey	Institute of International Finance	Association of financial institutions	United States	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	ESRS 1 – Chapter 5.2 "Inclusion of upstream and downstream value chain information", Paragraph 63. Partially agree/ partially disagree The newly added paragraph 63 advances regulatory coherence. This provision explicitly adds the "value chain cap" principle, which recognizes the limitations on data collection by larger firms under relevant EU law and regulation and establishes clear boundaries: "the information required by the ESRS to be obtained from undertakings in the upstream and/or downstream value chain shall not exceed the limit set by the relevant EU law and regulation." Recommended Global Jurisdictional Expansion: To achieve optimal international applicability and reduce regulatory fragmentation, this framework (paragraph 63) should be broadened to also encompass global law and regulations. This measured approach would balance stakeholder information needs with practical implementation realities, ensuring that sustainability reporting remains both comprehensive and operationally viable across diverse regulatory landscapes. Such expansion would reduce conflicting obligations that may arise from overlapping international frameworks, enhance cross-border compliance efficiency by recognizing diverse regulatory environments, and better support multinational enterprise reporting.			
Survey	Institute of International Finance	Association of financial institutions	United States	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	•E1-1: The requirement to disclose how the plan is compatible with 1.5°C pathway is challenging given that the global economy itself and most jurisdictions are not yet aligned to this pathway. •E1-1: Further guidance is needed on how financial institutions would measure "locked in emissions" and assess their impact on the plan. •E1-1: Guidance is needed on whether financed emissions should be disaggregated by scope, country, segment, activity, GHG type, and source type. •E1-3: Paragraph 21(a) – IIF members recommend EFRAG to clarify that this disclosure is conditional on the undertaking having adopted a transition plan, and suggest the following wording: "and, where a transition plan has been adopted in accordance with DR E1-1, how that plan supports…" •E1-5: Disclosing Capex & Opex figures related to actions taken may be commercially sensitive. •E1-8 – para. 32 and AR 18-19: This should be aligned with the GHG Protocol and allow companies to select a boundary approach. •E1-18 – E1-19: We would suggest using more general language in 18(b) since transition risk scenarios may not be event based and may be more narrative driven. AR5 for paragraph 18(b) – For a global financial institution with highly diversified exposures to geographies, industries and products, a granular geospatial assessment at the level suggested is aspirational; it is especially challenging for a financial institution's supply chains. This creates unrealistic and overly burdensome requirements. We suggest adding at the end of AR5(c): "on a best-efforts basis, where reasonably obtainable, and using appropriate proxies where necessary." AR6 for paragraph 18(b) (formerly linked to paragraph 19b) – IIF members recommend EFRAG to delete the clause "taking into account the likelihood, magnitude and duration of the transition events," or qualify it as "high-level, qualitative judgements on a best-efforts basis."			
Survey	Institute of International Finance	Association of financial institutions	United States	33.S_1.	ESRS S1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	•S1-5 and S1-7 – IIF members recommend EFRAG to reinstate the previous threshold approach. •S1-15 – IIF members recommend EFRAG to edit paragraph 43: "to allow an understanding of any gap in pay between women and men among the undertaking's employees, and to provide insight into remuneration inequality." The calculation text should be kept unchanged optional contextual disaggregation (e.g., by category or country) should be located in the NMIG. •S1-11 – The amendment that limits reporting to data that can be "lawfully collected" is sensible and addresses privacy constraints across jurisdictions. However, legal regimes often restrict not only collection but also the disclosure of sensitive data. IIF members recommend EFRAG to amend AR 23 to: "This DR requires the undertaking to report only data that can be lawfully collected and lawfully disclosed." •S1-13 – IIF members recommend EFRAG to revise AR 30 to require scheduled working days as the basis and require the inclusion of weekends/holidays only if they form part of the individual's contracted schedule. These disclosures should also be subject to an explicit materiality assessment. •S1-14 – IIF members recommend EFRAG to ensure the mapping of sub-topics to disclosure requirements and their titles do not lead to misleading disclosures or metrics not representative of the matter purported to be reported. In this case, rename the Disclosure Requirement to "Employees entitled to family-related leave". •S1-16 (AR 37–AR 41) - IIF members recommend EFRAG to move AR 37–AR 41 to the NMIG. The DR in the Standard should remain narrowly focused on reporting the number of substantiated incidents of discrimination and other human rights incidents and any related material fines, sanctions or compensation (with the 'substantiated' filter preserved).			
Survey	Institute of International Finance	Association of financial institutions	United States	33.S_2.	ESRS S2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. I partially agree and partially disagree	•A potential concern is that the reduction in narrative disclosure could reduce the quality and effectiveness of due diligence processes – especially in sensitive areas within human rights. This would then misalign with efforts to improve the robustness of human rights risk management across the industry and through other regulatory expectations. •Across sustainability, and especially in human rights, there is a heavy weighting of qualitative indicators that can be used to evidence metrics, actions etc. However, further guidance is still needed on how to use these as effectiveness measures. •S2-3: While paragraph 19 represents improvement, it remains challenging to implement. An undertaking would need to define what constitutes an incident being "reported" and establish thresholds to stop spurious "incidents" being "reported". •S2-3: Further guidance is needed on how the undertaking might confirm if an incident that is reported is genuine or not if it relates to undertakings in its value chain.			
Survey	Institute of International Finance	Association of financial institutions	United States	33.S_3.	ESRS S3:33. Overall feedback per standard The 12 ESRS Standards have been simplified. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	ESRS S4 requires disclosures related to consumers/end-users where sustainability impacts arise (e.g., health/safety, access, discrimination). Privacy/data protection risks are managed as part of enterprise operational risk, compliance and ICT/cybersecurity, with established controls, metrics and incident reporting. Treating them as "sustainability" topics blurs scopes and dilutes the focus of the ESRS. Adding "privacy" to S4 triggers duplicate narratives and assurance across two regimes (operational risk reporting and ESRS), without improving decision-useful sustainability information. Recommendation: Delete all remaining references to "privacy" from ESRS S4 and the cross-cutting list in ESRS 1, because privacy and data protection are already governed and reported as operational/ICT risks under existing legal and risk frameworks. ESRS should not present these matters as sustainability-related.			
Survey	Institute of International Finance	Association of financial institutions	United States	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Compatibility with 1.5 degrees: While we note that the meaning of "compatibility with 1.5 degrees" in the Transition Plans disclosure (ESRS E1) was not clarified or changed in the amended ESRS given it is subject to ongoing developments at Level 1 regulation, we would like to highlight the need for EFRAG to consider flexibility for firms operating outside of the EU on this matter. Specifically, entities should be allowed to account for the transition trajectories of the different jurisdictions in which they operate, rather than being held strictly to EU targets. Overarching messages: IIF members welcome EFRAG's efforts to revise and simplify the European Sustainability Reporting Standards (ESRS), and commend EFRAG on taking swift action to make sustainability reporting under the Corporate Sustainability Reporting Directive (CSRD) more proportionate and decision useful. This is aligned with the EU's broader goal of implementing a more effective, efficient and coherent sustainability reporting framework. Overall, IIF members consider that the proposed revisions to the ESRS represent an important and positive step forward. However, IIF members have concerns that some of the proposed changes may not deliver a significant degree of simplification or a meaningful reduction in reporting burden in practice. Key concerns include: - Number of data points - Simplification outcomes and interpretation of new concepts - DMA simplification - Appropriateness for financial institutions - Interoperability with ISSB. About the Institute of International Finance (IIF): The IIF is the global association of the financial industry, with around 400 members from more than 60 countries, including commercial and investment banks, asset managers, insurance companies, rating agencies, market infrastructure providers, and professional services firms. The positions in this letter have been informed by engagement with a global working group of policy, regulatory, and disclosure experts from IIF member financial institutions, predominantly banks and insurers.			
Survey	FSR – Danish Auditors	Auditor	Denmark	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	In general, we welcome the objective to clarify and simplify the double materiality assessment (DMA), and we support the application of the materiality of information filter for all disclosures. However, we do believe that there are some provisions that should be revised to provide clarity on the requirements and consistency in the application of the materiality of information. In particular, we suggest clarifying who the users are (in particular other users) and what types of decisions they make. In particular clarification on material information for users of sustainability statements in ESRS 1, pa. 21(b) needs revision to clarify what information is necessary for them to "understand" material IROs, and how the entity identifies and manages them.			
Survey	FSR – Danish Auditors	Auditor	Denmark	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	We welcome the proposed changes to clarify how to consider remediation, mitigation and prevention implemented actions in the DMA. However, we suggest -clarifying the approach for potential impacts in ESRS 1 para 34 and 35 -revising the guidance in appendix C, in particular to ensure consistency with ESRS 1 para 34 and 35, and provide clarity whether it applies also to value chain or only for own operations -providing further clarification for "maintaining significant ongoing actions" as this is very judgmental. Appendix C stands as highly rule based leaving little flexibility in determining when netting is appropriate. It can, however, be useful to prevent lengthy discussions on a complex part of the DMA, provided that lacks and ambiguity raised in the consultation and the field test are resolved. Finally we suggest developing guidance for assessing risks.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	FSR – Danish Auditors	Auditor	Denmark	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	In general, we find that the understandability, clarity and accessibility is improved. However, we still find a need to further clarity and accessibility in relation to: 1)Paragraphs are widespread on expected sources of information, e.g. ESRS1, pa27, 47, 62, the expectation to use reasonable and supportable evidence, pa45, the principles on undue cost or effort and various paragraphs mentioning this relief. A gathering of these paragraphs may avoid different interpretations as to what applies when, supplemented with explanation of 'evidence' and whether data available inhouse shall be used in pa65. 2)ESRS1, pa58-59, attempts to explain concepts from financial reporting on consolidation. These paragraphs are neither accurate nor sufficient as accounting legislation on consolidation is complex. We encourage to ensure consistency to legal provisions for financial reporting and provide more elaborated guidance on how to present consolidated sustainability statements within the remit of level 1 regulation. 3)Sub-chapter 5.2 in ESRS 1 include to a large degree provisions covered else were in the ESRS, e.g. undue cost or effort, use of estimates, examples of data sources. Paragraphs clearly being AR should be separated, e.g. pa63-65. Furthermore, AR28 is difficult to understand. Is it a relief option ('do not require') or a requirement to exclude ('limited to own operations') up-/downstream data from mentioned DRs? This should be clarified. 4)Clarification is needed in sub-chapter 7.6 and 7.7 on what disclosures entities should make when revising an estimate or restating prior period errors, and further whether and when restatement of baseline data is required. Further, ESRS 1 pa94 need clarification whether an entity is only required to revise estimates when this is a material change (similar to "material errors"). 5)It creates confusion that pa86 and AR32 are not aligned with the relief for quantifying anticipated financial effects.			
Survey	FSR – Danish Auditors	Auditor	Denmark	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We acknowledge that the NMIG can be useful as non-authoritative guidance, but in the current form the role of the content is unclear. We recommend, that EFRAG's intentions with the different content in NMIG are thoroughly reconsidered. If it is to be truly non-mandatory, terminology shall be revised in large parts. In addition, the guidance shall more clearly express that this is one way to do or understand things, not the only way. Further, to underline the NMIGs character as non-mandatory, it should not be adopted as a Commission Notice. The Basis for Conclusions very useful for interpretation and should be considered elaborated and eventually updated with any changes made by the Commission.			
Survey	FSR – Danish Auditors	Auditor	Denmark	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I would like to skip this question and provide my feedback in Part 3				
Survey	FSR – Danish Auditors	Auditor	Denmark	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I disagree	We prefer alignment of language between ISSB Standards and ESRS as far as possible to achieve simplification, which should be possible given the high degree of interoperability already achieved. Even though alignment have been accomplished to some degree, we encourage further amendments made to enhance interoperability, especially on fair presentation, "undue cost or effort" . For example for "undue cost or effort", D24 of IFRS S1 should be considered, and for fair presentation, the language in ESRS Chapter 2 should be cosidered. Also, on other areas there remain differences in language, and there is lack of alignment in areas, where, in some cases, the ED introduces additional differences in requirements/application.			
Survey	FSR – Danish Auditors	Auditor	Denmark	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We welcome the clarification that ESRS is a fair presentation framework, which should support a more effective application of materiality and more relevant, concise reporting. Fair presentation, along with qualitative characteristics of information, is at the heart of the IASB's standards including the ISSB Standards. Clarity that ESRS is a fair presentation framework brings certainty on a concept that is widely used by preparers (e.g. for financial reporting) and is therefore familiar in application. However, while clearly derived from the IASB and the ISSB Standards, the words and their order in ESRS 1 are different allowing for adaptation necessary for ESRS, such as reference to 'material IROs'. It is important that it is considered in ESRS to use the same words as the IASB/ISSB subject to necessary deviations such as reference to IROs and to clarify the relationship between the fair presentation concept and the entity specific information requirements.

Survey	Ellen MacArthur Foundation	NGO	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	We appreciate the clarification that companies are not required to conduct excessively complex or overly formal materiality assessments. The updated changes should help organizations generate insights that better reflect their specific business models and value chains. In particular, Section 3.5 provides practical guidance for organisations and helps prevent unnecessary complexity in materiality assessments. This enhances double materiality as a core principle for identifying key priorities. In turn, it supports the adoption of more focused and effective sustainability practices and facilitates clearer, more aligned reporting under the CSRD.			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	No opinion offered			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We welcome the removal of duplications between cross-cutting and topical standards, and the stronger emphasis on removing general disclosure requirements. Many of the PAT provisions in the topical standards appeared to be illustrative rather than mandatory datapoints. However, we have one key concern: The original disclosure requirement on site screening in the environmental standards has been replaced by a general application requirement under ESRS 2 IRO-1, making transparency on this point optional. Local context is critical to an effective materiality assessment on environmental topics and IRO's. This should be clearly addressed in Chapter 3 of ESRS 1 and reflected in ESRS 2 IRO-1 through a specific datapoint on how locations and value chains are screened. We also welcome the improved reference to disaggregation in the E standards, but note this depends on robust location screening to be meaningful.			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We support removing the 'may disclose' elements, as their unclear status has caused confusion. However, some of the elements that provided useful examples of actions and disclosures have been lost through the simplification. This is especially true for topics where reporting practices are still developing, such as biodiversity and ecosystems, as well as circular economy related activities. For example, ESRS E1 has removed examples of removal and storage approaches from land-use change, previously covered under AR 57 (e.g., afforestaloon, reforestaloon, forest restoraloon, urban tree planing, agroforestry, building soil carbon, etc.), technological (e.g., direct air capture), or hybrid (e.g., bioenergy with CO2 capture and storage), and technological details about the removal. These types of examples and guidance make it easier for first-time preparers to understand what kind of information is likely to be relevant and provide a basis for the standardization of metrics. In addition, they can incentivize companies to adopt practices that reduce emissions, such as regenerative production practices in agriculture. Regenerative food production can significantly reduce greenhouse gas emissions from food production by reducing reliance on synthetic inputs and by building healthy soils with high levels of organic matter and richer microbial biodiversity. https://www.ellenmacarthurfoundation.org/regenerative-food-production			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	The guidance plays a valuable role in offering businesses guidance on supplementary content they may consider publishing or are already creating. Although it may not be necessary to reference the guidance more than once per disclosure requirement, providing brief statements on its intended purpose—particularly where it adds significant value—could be helpful. This would make the disclosure requirements easier for preparers to understand and apply.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The standards lack clarity on how reliefs interact and their combined impact. Applying them independently risks misuse, omission of material information, and inconsistent reporting. Metric disclosures are subject to both "undue cost or effort" and "data quality" reliefs, but the standards neither explain their use nor require improvements over time—weakening accountability. This is worsened by the blanket relief for excluding joint operations. If metrics from such operations are material, then the standards should incentivise their eventual disclosure. The undue cost and effort and lack of data quality reliefs already provide sufficient flexibility. Reliefs related to financial effects are also inconsistent. For example, the limitation tied to announced investment plans aims to focus disclosures on effects that are easier to assess and quantify, yet the standards also allow reliefs that permit omitting quantitative information. We support the ESRS 1 paragraph 90 relief for excluding activities that are not significant drivers of the IROs, but its application to standardised environmental metrics needs clarification. The GHG Protocol cautions against using materiality to inappropriately exclude emissions data.			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	As noted in our response above, metric reporting is subject to both undue cost and effort and data quality reliefs, but the standards do not contextualise their use or require companies to improve data coverage and quality over time. This weakens accountability. For metrics related to organisations own operations or those standardised in the ESRS, a clear time limit should apply. For other metrics, gradual improvement over time should be explicitly required, subject to the undue cost and effort relief. To incentivise accountability and encourage companies to improve data coverage over time, ESRS could align with updates being considered to the GHG Protocol scope 1-3 standards. For example, the scope 3 technical working group have discussed requirements and recommendations for companies to grade data quality and improve data quality over time. We recommend engaging with the GHG Protocol to align with data quality requirements and developments.			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	Estimating financial effects is vital for integrating sustainability into strategy, planning, and risk management, and for accurately determining financial materiality. Dropping this ambition undermines the goal of aligning sustainability and financial reporting, and addressing long-term risks and opportunities. Option 1 is broad and lacks a time limit but is generally acceptable. We disagree with the claim that ESRS offers less flexibility than IFRS; the undue cost and effort relief already covers resource limitations. Option 2 goes beyond the IFRS relief without justification. Aligning ESRS with IFRS—unless EU law requires otherwise—is essential for building a global baseline and ensuring a level playing field for EU companies.			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	Reliefs should not exceed those set under IFRS. Doing so would weaken efforts to establish a global baseline for ESG reporting—essential for ensuring a level playing field for EU companies in the global market.			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	While the number of datapoints has been significantly reduced, this standard still preserve the core integrity needed to meet CSRD requirements and support key EU objectives, including climate neutrality by 2050 and the Clean Industrial Deal. However, further legislative rollbacks (e.g. through the Omnibus process) would undermine the EU's credibility and jeopardise these essential goals.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	22.E1.	Comments on deleted datapoints in ESRS E1	I partially agree and partially disagree	We are concerned about the cumulative impact of multiple relief measures. Additionally, the explanation of the relationship between impacts, risks, and opportunities, and sustainability topics lacks clarity and may lead to unintended confusion.			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	22.E2.	Comments on deleted datapoints in ESRS E2	I partially agree and partially disagree	While the number of datapoints has been significantly reduced, this standard still preserve the core integrity needed to meet CSRD requirements and support key EU objectives, including climate neutrality by 2050 and the Clean Industrial Deal. However, further legislative rollbacks (e.g. through the Omnibus process) would undermine the EU's credibility and jeopardise these essential goals.			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	22.E3.	Comments on deleted datapoints in ESRS E3	I partially agree and partially disagree	While the number of datapoints has been significantly reduced, this standard still preserve the core integrity needed to meet CSRD requirements and support key EU objectives, including climate neutrality by 2050 and the Clean Industrial Deal. However, further legislative rollbacks (e.g. through the Omnibus process) would undermine the EU's credibility and jeopardise these essential goals.			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	22.E4.	Comments on deleted datapoints in ESRS E4	I partially agree and partially disagree	While the number of datapoints has been significantly reduced, this standard still preserve the core integrity needed to meet CSRD requirements and support key EU objectives, including climate neutrality by 2050 and the Clean Industrial Deal. However, further legislative rollbacks (e.g. through the Omnibus process) would undermine the EU's credibility and jeopardise these essential goals.			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	22.E5.	Comments on deleted datapoints in ESRS E5	I partially agree and partially disagree	The amendments to the disclosure requirements (DRs) for resource outflows do not align with the objective of the DRs. Paragraph 16 of the [Draft] Amended ESRS E5 states that "The objective of this DR is to provide an understanding of how the undertaking implements circular economy by designing, manufacturing and providing goods and services in accordance with circular economy principles." However the data points required under Paragraph 17 (a-d) are focused on products and not services. We recommend to either Adapt / reinstate the deleted disclosure requirement under paragraph 35 [ESRS E5 - July 2023] that requires undertakings to "...provide a description of the key products and materials [related to] the undertaking's production process, including .... circular business models"; or Add a new DR in [Draft] ESRS E5 to require organisations to provide information about their E5-related service activities. For example, the requirement could ask for details of circular economy business models adopted by organisations e.g. rental, product as a service (PAAS) based models etc.

Survey	Ellen MacArthur Foundation	NGO	United Kingdom	22.G1	Comments on deleted datapoints in ESRS G1	I partially agree and partially disagree	No opinion offered.			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We support the proposed changes, noting they do not introduce additional reporting burdens—particularly for water metrics. Calculating withdrawals and discharges is already required and subject to assurance. Making these implicit data points explicit enhances clarity compared to the previous ESRS, where they were optional ("may" disclosures). Disclosure should remain subject to the undertaking's materiality assessment. We propose that disclosure of a biodiversity and ecosystems transition plan be triggered by the identification of material impacts, dependencies, risks, or opportunities—rather than the prior existence of a plan. Otherwise, shifting from "may" to "shall" would have little practical effect, as most companies currently do not have a biodiversity transition plan and would thus have nothing to report. We also recommend clarifying that, when a biodiversity transition plan is disclosed, it should naturally reflect and reference the links to material topics addressed under other environmental and social standards. Biodiversity loss and recovery are often driven by local issues such as pollution (E2), water use and marine resource exploitation (E3), and resource extraction (E5). In particular, organisations that implement circular economy strategies, such as regenerative agriculture, benefit both nature and people. For example, by enhancing soil's ability to store carbon, regenerative agricultural practices mitigate climate change and increases farming's resilience to weather events and improves food security. https://www.ellenmacarthurfoundation.org/articles/regenerative-agriculture#:~:text=Regenerative%20agriculture%20describes%20a%20broad,to%20establishing%20cycles%20of%20regeneration. Making these interconnections explicit would not impose additional reporting obligations but would improve coherence, foster a more holistic view of environmental impacts and responses, and help avoid a siloed or overly narrow interpretation of what a biodiversity transition plan should include.			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We welcome these changes, and agree that the suggested changes do not add new burdens.			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	The ESRS has already operated under a fair presentation regime, given its basis in materiality through the CSRD, and the Accounting Directive. Making this explicit clarifies the discretion, judgment, and safeguards companies are expected to apply.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We acknowledge the challenges financial institutions face in calculating absolute emissions, but since the global carbon budget is absolute, such targets are essential for assessing alignment with net-zero goals. Intensity metrics alone can obscure rising emissions in growing portfolios, while absolute targets offer a clearer picture of real-world impact. Both metrics use similar data, and estimation challenges aren't unique to finance. Exempting financial institutions would undermine comparability and fairness, and contradict existing standards like SBTi, UNEP FI/NZBA, and the EU SFDR. It would also reduce the usefulness of disclosures for stakeholders, including asset owners.			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	Wording should align with and/or reference guidance and examples given by relevant global frameworks, such as SBTN, TNFD, World Economic Forum Nature-Positive Transitions and Nature Positive Initiative . We also note that the basis for conclusions document says that further guidance on sustainable sourced of biological materials is complex and will be issued over time. We would be grateful if EFRAG or the European Commission can provide any more information on this/ timelines on when further guidance will be issued.			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	In general, we agree with the overall balance that has been achieved. However, we still have concerns regarding certain specific issues within individual standards. Our most significant concerns relate to ESRS 1 and ESRS E5, which are the only standards where we only partially agree with the balance achieved. ESRS 1: We are concerned about the cumulative impact of multiple relief measures. Additionally, the explanation of the relationship between impacts, risks, and opportunities, and sustainability topics lacks clarity and may lead to unintended confusion.			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	Maintaining alignment with the 1.5°C target must remain the non-negotiable standard for climate commitments. Allowing companies to instead rely on the EU Climate Law risks undermining scientific integrity and opens the door to interpretation. In addition [Draft] ESRS E1 does not recognise that the sub-topics climate mitigation and adaptation are closely linked to [Draft] ESRS E5 topics: E5 links to climate mitigation: To reach net zero and tackle the approximately half of global emissions associated with material extraction and processing, we need to rethink the way we make, use, and dispose of products and materials. This is where the transition to a circular economy has a critical role to play. https://www.ellenmacarthurfoundation.org/topics/climate/overview Adopting circularity is also recognised as core to the EU's decarbonisation strategy in the EU Clean Industrial deal. E5 links to climate adaptation: Applying circular economy principles can also enable adaptation benefits. For example, switching to regenerative production practices can help food and textiles farmers (e.g. cotton) to adapt to hotter, wetter, more extreme growing conditions, at the same time as sequestering carbon in the ground. https://www.ellenmacarthurfoundation.org/articles/bridging-the-adaptation-gap-can-the-circular-economy-help It follows ESRS E1 should, as a minimum, ensure a true and fair representation of the mitigation and adaptation potential associated with circular activities through the following revisions (as a minimum): Amend para. 12 b to recognise the sub-topics climate change mitigation and adaptation also closely relate to topics addressed in [Draft] Amended ESRS E5. Reinstate the examples on emissions removal and storage that are biogenic or from land-use previously included in AR 57 (e.g., afforestation.. building soil carbon, etc.) into AR 28 for para. 35, or as a minimum the NMIG. Revise the definition for decarbonisation levers included in Annex II to add circular economy solutions that reduce emissions. For inspiration, see page 11 of the following paper https://www.ellenmacarthurfoundation.org/ghg-emissions-accounting

I agree	Additional guidance on setting metrics and using frameworks like the TNFD and Nature Positive Initiative would be valuable. Disclosure should also cover all sites in or near biodiversity-sensitive areas, not just those linked to material impacts. See our response to question 30 for more information.			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	33.E_5.	ESRS E5:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Resource outflows The amendments to the DRs for resource outflows do not align with the objective of this DRs. Paragraph 16 of the [Draft] ESRS E5 states DR's relate to "...goods and services." However the DRs do not relate to services. We recommend to either Adapt / reinstate the deleted disclosure requirement under paragraph 35 [ESRS E5 - July 2023] that requires undertakings to "...provide a description of the key products and materials [related to] the undertaking's production process, including .... circular business models"; or Add a new DR in [Draft] ESRS E5 to require organisations to provide information about their E5-related service activities. For example, the requirement could ask for details of circular economy business models adopted by organisations e.g. rental, product as a service (PAAS) based models etc. interaction with other ESRS We recommend the following revisions are made to the 'interaction with other ESRS' section to strengthen connectivity with other ESRS sub-topics. Paragraph 9a: Strengthen connectivity between circular activities and climate mitigation and climate adaptation sub-topics similar to our comments on ESRS E1. In addition, clarify the following sentence "Collecting energy efficiency .... can lead to reduction in carbon footprint", as circular activities go beyond energy efficiency in operations. Paragraph 9b. We recommend not only linking resource activities to pollution-related impacts but also including examples of E5-related activities that help mitigate these impacts — for example, designing products using safe, biodegradable materials. Paragraph 9d. We recommend the paragraph also recognise that applying circular principles can go beyond alleviating pressures on nature to help to regenerate nature (similar to our comments questions 15 and 23). Links to ESRS S2: We recommend adding in ESRS E5 interactions with ESRS S2 topics, as E5 related activities can increase resilience and job security beyond companies operations to their supply chain.			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	33.Glossary.	Glossary:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. I partially agree and partially disagree	See specific comments related to definitions and terms related to resource inflows in section 3 of this survey			
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Definitions The following terms and definitions should be revised to align with the core principles of the circular economy - The term 'waste hierarchy' is included in the [Draft] Non Mandatory Implementation Guidance (NMIG), but the definition has been removed from the [Draft] Amended Annex II. We recommend that the definition is reinstated to provide clarity for data preparers and users. - We welcome the addition of the terms 'key products' and 'key materials' to the [Draft] Amended ESRS E5, the [Draft] Annex II and [Draft] NMIG. The definitions will improve clarity to organisations on what should be disclosed under ESRS E5. However, the flexible approach for organisations to determine which materials to disclose based on either volume, cost, criticality for the operations, or strategic importance could lead to significant differences in disclosures between organisations within the same industry. This could in turn hinder comparability of sustainability information for data users. We recommend that the Commission develop separate sector specific guidance on how to determine key products/ materials to address this issue. Additional comments In the future, it would be helpful for the Global Circularity Protocol for Business (GCP) and EFRAG to publish an interoperability index to help entities understand the commonalities between the two frameworks, once the GCP has been published. https://www.wbcsd.org/actions/global-circularity-protocol/			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Ellen MacArthur Foundation	NGO	United Kingdom	35.ESS-4.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The following terms and definitions should be revised to align with circular economy principles: Dematerialisation: focuses on reducing the material intensity of products or services only, and not decoupling economic activity from the absolute consumption of finite resources and does not distinguish between primary and secondary materials. We recommend the definition is revised to provide clarity on these areas. For example, the definition could make it explicit whether dematerialization relates to Relative Dematerilization or Absolute Dematerialization. 'Biological materials': does not require materials to be safely returned to the biosphere as part of the biological cycle. In addition, the basis for conclusions document and [Draft] E5 states that a definition for technical materials has been added to Annex II. However, we are unable to locate this. In addition, the [Draft]E5, [Draft] Annex II and [Draft] NMIG do not describe how the technical and biological cycles relate to each other. Although these two cycles are conceptually separate, they often intersect in practice. Successfully applying circular economy principles requires organisations to recognise and account for the roles of both technical and biological cycles, optimizing material flows within each cycle, and designing products with circularity in mind from the beginning. For example, in the Fashion sector, products with a mixture of technical and biological materials can be designed for disassembly so that biological materials (e.g. natural rubber, cotton) and technical (e.g. nylon) materials can be separated appropriately. We recommend the definition for biological materials is revised in Annex II, and a definition for technical materials is included in Annex II, with both definitions recognising how each other are related. This will provide clarity to data providers and users, and align with circular economy principles. For inspiration, see the following sources https://www.ellenmacarthurfoundation.org/resources/circulytics/resources https://www.ellenmacarthurfoundation.org/material-selection https://www.ellenmacarthurfoundation.org/topics/circular-economy-introduction/glossary	ES	Disclosure Requirement ES-4 - Resource Inflows	
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	EuropeanIssuers acknowledges the important progress in the effort to simplify the DMA, particularly through the introduction of a top-down approach, allowing undertakings to limit themselves to information that is available without undue cost or effort, thereby allowing for a pragmatic approach. These steps represent a meaningful advancement towards ensuring the clarity of the Standards. Nevertheless, European companies have raised significant concerns regarding the definition of impact materiality as outlined in paragraph 21(b) of ESRS 1. Specifically, the description of "general purpose" in AR 3 is seen as too vague, creating the risk of divergent interpretations and potentially leading to a high volume of requests for information from multiple stakeholders. Therefore, EuropeanIssuers would ask for the deletion of paragraph 21(b) in ESRS 1. Alternatively, a deletion of AR 3 alongside a reference to stakeholder engagement in paragraph 21(b) would also be welcome. A further point requiring clarification is whether the DMA must be reviewed on an annual basis. From the perspective of EuropeanIssuers, requiring a complete reassessment each year would create unnecessary administrative burden, particularly in cases where circumstances have not materially changed. To address this, EuropeanIssuers suggests the following rewording of ESRS 1 paragraph 29: "The undertaking shall update the conclusions of the materiality assessments only where material changes in circumstances and/or assumptions have occurred. Because of changes in its individual circumstances or in the external environment, some types of information included in its ESRS sustainability statement for prior periods might no longer be material; conversely, some types of information not previously disclosed might become material."			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	EuropeanIssuers is concerned that ESRS 1 Appendix C, rather than providing clarity, introduces additional uncertainty into the application of the DMA. The drafting of Appendix C remains not clear and open to multiple interpretations, which could lead to inconsistent practices among preparers and divergent views by auditors. For this reason, in order to avoid difficulties related to diverging interpretations, EuropeanIssuers proposes for Appendix C to be removed. To ensure proportionality and flexibility in reporting, EuropeanIssuers believes that companies should be allowed to decide whether to disclose impacts on a gross or net basis. This is particularly important given that the previous set of standards did not include such guidance. Introducing new requirements would effectively penalise wave 1 companies, many of which have already undertaken a comprehensive materiality assessment process, established methodologies and governance, and submitted these to review of their auditors. EuropeanIssuers therefore believes that the choice should remain with the reporting entity, allowing it to reflect its own specific circumstances and judgment, rather than being constrained by a single prescriptive principle. This approach would better ensure consistency and comparability of the data, similarly to the current direction taken by the ISSB's IFRS S1 and S2 standards.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	EuropeanIssuers is supportive of the proposed changes, as they improve readability of the sustainability statement. However we would like to acknowledge that while this is an improvement, it does not substantially reduce reporting burdens or costs for companies.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	EuropeanIssuers is supportive of the restructuring of architecture and interaction between ESRS 2 and topical Standards as it improves readability and usability.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	EuropeanIssuers welcomes the decision to place the ARs directly after the Disclosure Requirements (DRs). This structure makes the standards significantly easier to read and apply in practice. We also welcome the deletion of voluntary datapoints, which contributes to greater clarity. However, we note that certain inconsistencies remain within the text of the topical standards. Specifically, we believe it is necessary to align the language across the standards. Terms such as "shall consider," "may present," "may implement," "may include," and other similar formulations should be streamlined. EuropeanIssuers calls on EFRAG to adopt harmonised terminology throughout the standards, ensuring that preparers can apply them consistently and without uncertainty.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	EuropeanIssuers considers that NMIG can be acceptable, provided it remains strictly non-binding. Guidance cannot create indirect obligations for companies. It is therefore important for EFRAG to clarify that undertakings should not be required to justify to their auditors why they haven't disclosed NMIG content. As non-binding material, it should be made clear that it must remain optional, and its use should be at the discretion of the reporting entity. Preparers' experience from other regulatory frameworks, such as the EU Taxonomy, demonstrates the risks of relying too heavily on guidance. While intended to clarify, guidance often arises in response to problems that should have been resolved in the standards themselves. The result is a growing volume of FAQs and supplementary documents, which make it difficult for preparers to keep up and can sometimes conflict with the content of the standards. For this reason, EuropeanIssuers strongly prefers that NMIG be published by EFRAG on its website, rather than adopted by the European Commission through a delegated act. We believe this approach would preserve the objective of simplification and avoid the risk of creating additional reporting burdens or disputes with auditors.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	EuropeanIssuers welcomes the introduction of reliefs, recognising them as an important step towards reducing unnecessary reporting burdens. In particular, the "undue cost and effort" relief represents a practical and essential safeguard, which provides preparers a sound basis for justifying omissions or limitations, especially in discussions with auditors. However, EuropeanIssuers would like to express the following concerns: •On the relief for acquisitions and disposals, we believe that the current timeframe provided is too short. Integrating newly acquired entities or reflecting disposals often requires a longer period to ensure accurate and consistent reporting. EuropeanIssuers therefore proposes that EFRAG adopt a more flexible timeframe that better reflects practical realities. •When establishing climate objectives (E1-8), the relief provided under ESRS 1 §91 for "undue cost and effort" should equally extend to scope 3 targets. These objectives are often extremely difficult to quantify, as they involve actors throughout the entire value chain and lack certainty regarding the effective implementation of action plans. •Lastly, the relationship between these reliefs and the fair presentation principle remains unclear. EuropeanIssuers is concerned that, without further clarification, there is a risk that auditors may interpret the fair presentation principle in a way that limits the practical application of the reliefs. We therefore encourage EFRAG to provide clearer drafting to ensure that reliefs can be applied consistently and without conflict.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	EuropeanIssuers supports the proposed relief as it addresses real challenges in collecting reliable data, avoids weak or misleading reporting, and provides flexibility until stronger methodologies are available. Transparency alone ensures continued progress without the need for time limits. In addition, it would be valuable to permit greenhouse gas emissions to be reported using any threshold defined in the Greenhouse Gas Protocol. This would ensure alignment with the most widely recognised international framework and strengthen consistency with the ISSB's IFRS S1 and S2 Standards.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	EuropeanIssuers disagrees with both of the proposed options and believes the disclosure requirement on anticipated financial effects should be removed or left voluntary. The concept is not standardised, ESRS 2 provides no methodology or guidance, and remains unclear on what data or level of granularity should be applied. European companies stress that disclosing anticipated financial effects is highly problematic, as it risks exposing confidential strategy, increases liability due to the uncertainty of projections, and often requires revealing sensitive financial planning not otherwise disclosed in reporting. Since IFRS Standards already govern when future risks must be reflected in financial reporting, sustainability reporting should not extend these principles. Companies should, however, remain free to disclose such information voluntarily.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	EuropeanIssuers is concerned with the requirement in ESRS E1 paragraph 41(f). Assessing anticipated financial effects - particularly in relation to stranded assets - inevitably involves a high degree of uncertainty, as the methodologies available produce accurate quantitative figures remain undeveloped and uncertain at this stage. For these reasons, we believe paragraph 41(f) should be removed.

Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	EuropeanIssuers believes that stronger interoperability with ISSB standards is essential and therefore warmly welcomes the efforts made to better align ESRS with the ISSB's IFRS S1 and S2. Such alignment is a crucial step in reducing complexity for companies that are required to report under several frameworks. Many European companies operate globally and are subject to demands from international investors for ISSB-compliant information, while a growing number of jurisdictions are preparing to make the ISSB's IFRS S1 and S2 standards mandatory. In this context, it is important that duplication of reporting requirements or discrepancies in principles are avoided. At the same time, EuropeanIssuers stresses that interoperability must not come at the expense of simplification. The purpose of alignment should be to make reporting more coherent and efficient, not to add further layers of mandatory complexity for European preparers.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	22.E2.	Comments on deleted datapoints in ESRS E2	I partially agree and partially disagree	EuropeanIssuers welcomes the reduction of mandatory datapoints, which is a positive step towards streamlining reporting obligations and easing the burden on preparers. At the same time, EuropeanIssuers is strongly concerned by the introduction of new mandatory "shall" datapoints, such as those relating to microplastics (E2-4). Adding additional requirements risks offsetting the benefits of simplification and could create new complexities for companies. EuropeanIssuers therefore encourages EFRAG to reconsider this approach.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	EuropeanIssuers would like to reject the move of the following datapoints from 'may' to 'shall': •ESRS E4: EuropeanIssuers has concerns about the obligation to disclose biodiversity and ecosystem transition plans. This area is highly complex and still evolving, with many companies only beginning to build the necessary capacity. While several initiatives exist (SBTN, TNFD, Act4Nautre), metrics are not sufficiently defined and cannot they be regarded as a single, authoritative reference. •ESRS G1-4: EuropeanIssuers believes this datapoint not to be a reliable measure of the effectiveness of a company's anti-corruption policy, as a low number of confirmed incidents may simply indicate under-reporting, while a higher number could reflect the existence of an effective and trusted reporting system. In addition, requiring disclosure of this datapoint poses significant risks for European companies, as it could contradict the fundamental right not to self-incriminate and may expose EU undertakings to investigations by third-country authorities. Such requirements would place European companies at a competitive disadvantage and would be inconsistent with the EU's own commitments under the EU-US joint statement on balanced trade.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	EuropeanIssuers does not consider the introduction of the following datapoints as appropriate and justified: •ESRS E5-4: We believe for the requirement to disclose the percentage of critical raw materials to be premature. The definition of these materials is still evolving under the Critical Raw Materials Act, and the Eco-Design Regulation has been adopted but its delegated acts are not yet in place. Until these delegated acts are finalised, companies cannot rely on a stable framework for disclosure. We therefore believe for the disclosure to be transferred into the NMIG and only reintroduced once the regulatory definitions are complete. •ESRS E2-4 The concept of "secondary microplastics" is not yet scientifically defined, and the impacts are not sufficiently understood. EuropeanIssuers believes including this concept in the ESRS to be premature and lead to confusion, hence, it should not be integrated into ESRS until definitions and methodologies are stabilised.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I disagree	EuropeanIssuers acknowledges the intention behind introducing the principle of fair presentation, but has significant reservations about its inclusion in the ESRS at this stage. Explicitly requiring fair presentation does not necessarily support simplification. On the contrary, it may reduce comparability, increase the evidentiary burden on preparers, and create additional challenges in discussions with auditors. In financial reporting, fair presentation is clearly directed to a primary user, the investor. In sustainability reporting, however, no such primary user has been identified. Addressing "all relevant stakeholders" makes the application of fair presentation far more complex and could increase responsibility for both auditors and preparers, thereby increasing legal risks. This concern is heightened in the absence of an EU-wide limited assurance standard for sustainability information. Without such a standard, there is a real risk that the principle will undermine the very reliefs that were designed to reduce burdens. EuropeanIssuers has observed diverging views on what fair presentation actually means in the context of double materiality, and what its consequences would be. These diverging interpretations make it extremely difficult to assess the practical impact of the requirement. In this respect, many companies believe it is premature to introduce the principle of fair presentation into ESRS. Before doing so, the priority should be to establish clear reliefs, adopt an EU-wide audit standard, define the primary user, and agree on a common understanding of what fair presentation entails in a sustainability context. EuropeanIssuers therefore believes that, while fair presentation could eventually serve as a useful principle for both simplification and to further support alignment with ISSB on this aspect, however in practice the current ecosystem is not ready for its implementation. Without clarity, a defined primary user, and harmonised EU audit standards, the concept risks becoming a source of burden rather than simplification.

Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	EuropeanIssuers notes that for financial institutions, the vast majority of emissions stem from financed activities. Setting absolute targets in this context is unreliable and potentially misleading, as it depends on numerous assumptions outside the control of the reporting entity. Absolute targets should therefore not be applied broadly to financial institutions. Instead, intensity targets provide a more meaningful and comparable basis for disclosure, reflecting the actual nature of financial sector activities.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	EuropeanIssuers considers that the previous threshold (≥50 employees representing ≥10% of workforce) was a more workable and proportionate approach. By contrast, the new requirement (≥50 employees in each of the 10 largest countries) significantly expands the scope. This would oblige companies to report on very small groups of employees across numerous jurisdictions, creating substantial additional effort for preparers while adding little value for users. EuropeanIssuers therefore encourages EFRAG to reconsider this threshold in order to maintain proportionality and avoid unnecessary complexity.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree	EuropeanIssuers welcomes the reference to ILO standards, which provides a clear and authoritative baseline compared to reliance on private benchmarks. However, we would like to note that should preparers wish to adopt higher benchmarks, they should remain free to do so on a voluntary basis, but these should not be imposed at the ESRS level.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	EuropeanIssuers stresses that coherence across legislations is essential. In light of its upcoming review, SFDR should be simplified and aligned with the ESRS.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	EuropeanIssuers welcomes EFRAG's intention to provide additional guidance for undertaking to set biodiversity targets, however under the only circumstance that they remain voluntary and under the NMIG.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	EuropeanIssuers cautions that relying solely on global, unadjusted figures makes the datapoint misleading. A single average pay gap can distort the realities of a diverse workforce and risk harming companies' reputations without providing decision-useful insights. Adjusted indicators, by contrast, offer a more accurate and meaningful measure of pay equity. For this reason, EuropeanIssuers believes that adjusted indicators should be retained.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	EuropeanIssuers remains firmly opposed to the disclosure of this datapoint due to issues on: •Feasibility: Large companies often have tens of thousands of suppliers worldwide, and they do not have, in particular, information regarding the size of their suppliers in their IT systems, thus, collecting and consolidating payment practice data across this volume is not operationally realistic. •Definition issues: The concept of "SME" is not harmonised globally, making the indicator unworkable outside the EU. •Regulatory misalignment: The 2011 EU Directive on Late Payments does not distinguish based on company size, yet the (draft) revised ESRS introduce such a distinction that could lead to inconsistency, thus, legal uncertainty.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	E1-13 - Resilience: The notion of "resilience" in relation to climate change is not clearly defined in the standard. As drafted, it is used both for adaptation and for transition, which creates confusion. Resilience should refer only to adaptation , meaning how a company reacts to physical impacts such as rising temperatures, and what adaptive measures it puts in place (e.g. building techniques). It should not be used to cover transition-related aspects. The current lack of precision risks inconsistent reporting and misunderstanding of what companies are expected to disclose.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	33.E_2.	ESRS E2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	•E2 - Substances of Concern: The requirement to report on "substances of concern" should be deleted or moved to NMIG, specially because there is no stable definition of these substances beyond what is already covered by the REACH Regulation. Thus, introducing a separate obligation in ESRS risks creating legal uncertainty and reporting burdens. •E2 - Substances of Very High Concern: The current draft requires undertakings to disclosure of quantities of substances of very high concern above the 0.1% threshold. Under REACH Regulation (Article 33), companies are only obliged to name these substances, not to provide quantities. Hence, the ESRS requirement therefore goes beyond existing EU legislation and therefore should be aligned strictly with REACH. •E2 - Pollution of Air, Water and Soil (E2-4): The current drafting is being interpreted by auditors as requiring disclosure of all emissions, regardless of materiality. This imposes disproportionate reporting obligations, potentially forcing companies to report on hundreds of substances. Companies should only be required to disclose emissions that have a material impact.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	33.E_3.	ESRS E3:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	E3 - Water Withdrawals and Discharges (§17): The requirement to disclose detailed data on water withdrawals and discharges is impractical for many companies, as they do not have water metering technologies in place. This obligation should be downgraded to guidance (NMIG) until reliable measurement systems are more widely available.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	33.S_1.	ESRS S1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	S1 - Non-Employees: The datapoint requiring disclosure of non-employee workforce numbers by country is not feasible. These data are not collected by HR but by procurement or contracting, and companies do not have systems to track them in a consolidated way. Making this datapoint mandatory would create disproportionate burdens for limited added value.			
Survey	EuropeanIssuers	Business association (other than association of financial institution)	Belgium	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		•EuropeanIssuers believes the revised ESRS do not fully deliver on the simplification objectives set out in the European Commission's mandate. The materiality assessment process remains overly complex, and the volume of mandatory data is still excessive and disproportionate for effective communication with stakeholders. •With respect to the value chain, it would be more practical for companies to disclose relevant information when significant impacts are identified, rather than being required to provide detailed quantitative assessments.			
Survey	Frank Bold	NGO	Czechia	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	Chapter 3 is clearer and better organised. The improved definition of materiality of information in Section 3.1, namely the replacement of criterion of "significance" with "understanding of impacts" provides better guidance and is aligned with CSRD and international due diligence. This adjustment appropriately narrows the scope of the materiality filter to aspects most relevant from the perspective of public accountability. It also clarifies how the materiality of information interacts with (fundamental) qualitative characteristics of information criteria from Chapter 2, and with the rules concerning aggregation and disaggregation of information (e.g. para 52 on "not obscuring"). Section 3.5. Practical considerations are particularly helpful to avoid unnecessary complexity in materiality assessment. However, Chapter 3 frequently conflates 'topics' with 'impacts, risks and opportunities' ('IROs'). Para 22 is confusing when it says that information may be presented "either at the topical level or at [IRO] level". Such a dichotomy is incorrect. While topics refer to broad thematic areas, IROs are entity specific. The CSRD, as well as IFRS, TCFD, and TNFD consistently focus on the latter. Overemphasising 'topics' risks leading to boilerplate disclosures. Chapter 3 would be clearer if it keeps focus on IROs and explain that depending on nature and context such IROs may be defined at a general level - corresponding to topics - and/or that information on their management may be similarly aggregated. This should be clarified in provisions on entity-specific disclosures in paragraph 23 (and in paragraph 10 in Chapter 1) In Chapter 3.3.2, para 37 fails to mention that the purpose of financial material assessment is to not just to identify materiality information but also determine the material risks and opportunities, as required by the CSRD. In this regard, the risks and opportunities are only mentioned in the middle of para 38, making the text incoherent.			
Survey	Frank Bold	NGO	Czechia	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	It is useful that Chapter 3 addresses the question of how prevention, mitigation and remedy of impacts shall be considered in materiality assessment, but the rules could be expressed in a more simple and understandable way. Para 34 uses a very complicated language to express a simple idea that actual impacts shall be considered as they occurred during the reporting period, and that their ex-post remediation is not relevant. We welcome and stress the importance of the clarification that the potential impacts which require significant ongoing preventative or mitigation efforts shall be considered gross. In this regard, it would be helpful to refer to the materiality of information filters to provide companies with further guidance on how to distinguish such significant efforts from common practice and compliance measures. The table provided in Appendix C provides more detailed information, which it would be helpful to integrate directly into the main body to ensure clarity and consistency.

Survey	Frank Bold	NGO	Czechia	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	The proposed changes are meaningful. We would like to bring the attention to para 113, which we find hard to understand: "113. If the description of the material impacts, risks and opportunities prepared in accordance with [Draft] Amended ESRS 2 IRO-2 is not presented alongside the respective policies, actions and targets, the undertaking shall make explicit which policies, actions and targets relate to which material impacts, risks, or opportunities, in accordance with paragraph 22." It is not clear to us what the reference to para 22 is meant to imply. Para 22 addresses the issue of appropriate aggregation or disaggregation of information on material impacts, risks and opportunities and their management. But it doesn't set any rules regarding the location of such disclosures depending (or not) on the level of aggregation.			
Survey	Frank Bold	NGO	Czechia	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We welcome the removal of the duplications between the cross-cutting and topical standards. We support the emphasis on general disclosure requirements. Likewise, many PAT provisions in the topical standards had a character of examples or guidances rather than datapoints. Additionally, the preservation of the 5-part and 4-part architecture of the environmental and social standards respectively, as well as topical metrics, is welcome as it provides a structure and language for preparers to navigate the issues and organise their disclosures. However, we disagree with the replacement of the original DR in environmental standards concerning screening of sites in materiality assessment by an application requirement to ESRS 2 IRO-1. The fact thatlocal focus is essential should be recognised in Chapter 3 of ESRS 1 and in ESRS 2 IRO-1, which should retain an explicit datapoint on how the undertaking screened its sites and value chains. We welcome that E standards provide a clearer reference to disaggregation of disclosures, but this can only be done properly if sites are screened. Furthermore, we strongly recommend adding a reference to the disclosure of relevant, entity-specific metrics directly in S standards. The fact that S2, S3 and S4 do not include any metrics, and sectoral standards will not be adopted, shift the expectations for disclosure of metrics for S topics to entity-specific disclosures. As highlighted by the Danish Institute for Human Rights, adding the reference to metrics to disclosure requirements SX-4 on targets would improve consistency between the topical and the cross-cutting standards and acknowledge the common use and disclosure of relevant metrics by preparers.This addition would ensure that preparers better understand the ESRS expectations in this regard, whilst not adding any new obligations or datapoints.			
Survey	Frank Bold	NGO	Czechia	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We support the proposed changes. We agree with the removal of 'may disclose' elements, because their status has been causing confusion. However, they do not need to be all removed to NMIG. Where they provide useful examples of disclosures, they could be included directly in the standards as "examples". This is particularly the case for the topics for which the reporting practice is evolving, such as Biodiversity and ecosystems. This would make it easier for first-time preparers to understand what kind of information is likely to be relevant and provide a basis for the standardization of metrics. Having to consult another document, such as NMIG, is adding an unnecessary hurdle. The language and therefore understandability of the standards have been considerably improved, however in ESRS 1 especially there is still much to be done in this regard.			
Survey	Frank Bold	NGO	Czechia	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The standards lack clarity regarding the combined effect of the reliefs and how they are intended to interact. Interpreting and applying these reliefs in isolation risks misuse, omission of material information, and significant inconsistencies in reporting practices This is exacerbated by the relief which unconditionally allows exclusion of joint operations (para 92). We do not support this relief. If the environmental metrics concerning such operations are material, then the standards should incentivise their eventual disclosure. The undue cost and effort and lack of data quality reliefs already provide sufficient flexibility in this regard. Similarly, there is a lack of coherence among the directions of the reliefs related to financial effects, i.e., information which is essential for understanding of the risks and company's ability to overcome them. The limitation related to the announced investment plans focuses the disclosures on effects which are easier to assess and therefore quantify, yet the standards also propose reliefs that enable omitting quantitative disclosures. Application of exclusion of activities from metrics relief (para 90) must be clarified with respect to key ESRS metrics otherwise it will be misapplied. For example, preparers may misunderstand it as to enable removing entities (e.g. smaller industrial facilities) – rather than activities (non-industrial activities) – from calculations. Furthermore, it is not made clear how this relief interacts with the completeness principle in the GHG protocol, which warns explicitly against misapplication of materiality filter. Similarly, for general S1 workforce metrics, such as characteristics of the employees and non-employees, such exclusions are not appropriate.			
Survey	Frank Bold	NGO	Czechia	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	Reporting of metrics is subject to a combination of undue cost and effort and lack of data quality (para 91) reliefs. But the standards do not put these two reliefs in proper context and do not include any explicit requirement and timeframe for companies to improve the coverage and quality of data. Application of lack of data quality relief should be removed as redundant or limited to specific, well-defined situations to preserve comparability. Being formulated in rather generic terms, it can be abused and lead to omission of material data disclosures. If it is retained, the interaction of this relief with other reliefs needs to be clarified, and the ESRS should clearly require the undertaking to improve the coverage and quality of the data. For the metrics concerning own operations and/or metrics standardised directly in the ESRS, this should be subject to clear time limitation. For other metrics, improvements over the years should be also explicitly required, subject to undue cost and effort relief.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Frank Bold	NGO	Czechia	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	The ability to estimate financial effects is critical for the undertaking's ability to integrate sustainability into its business strategy considerations, planning and risk management. It is also key for the determination of financial materiality, including in terms of overreporting topics as financially material. Resigning on this ambition is at odds with the objective of putting sustainability reporting on the same level as financial reporting, the integration of both, and ultimately overcoming the tragedy of horizons. We find Option 1 unnecessarily extensive, and lacking time limitation, but broadly acceptable. We disagree with the assertion made in the question that it "[d]ifferent from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources ". In this regard, the new proposed ESRS include the undue cost and effort relief which seems to account for such a situation. With respect to Option 2, we don't find it justifiable to go beyond the IFRS relief. One of the most strongly voiced arguments from stakeholders who called for simplification of ESRS was that, as a matter of principle, ESRS must be aligned with the IFRS except where CSRD or other EU legislation require otherwise. Abandonment of this principle seriously undermines prospects of building a global baseline which both the EU and the ISSB support, and which is an important part of building a level playing field for the EU companies.			
Survey	Frank Bold	NGO	Czechia	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	Frank Bold	NGO	Czechia	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	Reliefs should not go beyond those set in IFRS. Going further would undermine the objective of setting a global baseline for ESG reporting, which is important for achieving a level playing field for EU companies in a global context. The undue cost and effort relief outlined in ESRS 1, para 87-89, is a powerful relief, which addresses virtually all situations where the undertaking may encounter practical obstacles. Explicit emphasis on fair presentation, combined with the strengthened focus on the use of materiality of information filter, provide companies with an increased flexibility in determining meaningful content of their sustainability statements. It marks a further move away from compliance-based to principle-based approach. However, such changes imply increased responsibility for the undertaking. Implementing further reliefs would undermine this responsibility and open the doors to abuse.			
Survey	Frank Bold	NGO	Czechia	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Frank Bold	NGO	Czechia	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	General comment/unrelated to ESRS 2 only: The number of datapoints in each standard represent the minimum necessary to ensure cohesive disclosure requirements, and consequently basic comparability and quality of the actual disclosures. We have not identified any instance where ESRS would include exorbitant requirements, considered common practice and internationally recognised reporting standards and frameworks such as IFRS, GRI, or TNFD. ESRS are generally more concise and less demanding. Introducing further reductions (while keeping the coverage of all ESG factors as required by the CSRD) would create serious quality gaps between the ESRS disclosures and those based on the standards.			
Survey	Frank Bold	NGO	Czechia	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We agree with these changes, noting that the suggested changes do not add a new burden. This is particularly the case for the water-related metrics. In order to disclose the water consumption, the undertaking already has to calculate withdrawals and discharges, and such calculation and therefore the underlying data is subject to the assurance. Moving these implicit datapoints to the forefront as explicit data points makes the disclosure requirement clearer, compared to the previous ESRS where some of these datapoints were framed as "may disclosures". Whether or not these individual datapoints are to be disclosed is correctly subject to materiality of the information filter applied by the undertaking.			
Survey	Frank Bold	NGO	Czechia	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We agree with these changes, noting that the suggested changes do not add a new burden. E2-4 on secondary microplastics is not a new datapoint, as correctly pointed out in the Rationale above. We do not understand why it is included in this question, as such.			
Survey	Frank Bold	NGO	Czechia	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	ESRS, being based on the materiality principle, the CSRD requirement to disclose impacts, risks and opportunities and their management, and the general principles of the Accounting Directive, has already been subject to a fair presentation regime. Making it explicit helps to clarify it. It provides companies with clarity on the discretion and judgement, as well as related safeguard, they are expected to exercise when applying the standards.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Frank Bold	NGO	Czechia	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We recognise the complexity of recalculating absolute values and acknowledge that financial institutions often manage GHG performance using intensity-based approaches. However, the global carbon budget is defined in absolute terms. For this reason, it remains essential that even financial institutions disclose absolute targets to assess how their strategies align with the economy-wide transition to net zero. Absolute targets are relevant for users of sustainability statements and for understanding the real-world climate impact of financed activities. While intensity measures provide insights into efficiency, they can mask rising absolute emissions in growing portfolios or sectors. Absolute values, by contrast, give a clear signal of whether institutions are contributing to the necessary 90–95% global reduction in emissions by 2050, with steep cuts by 2030. Both approaches rely on similar underlying data, and estimation challenges are not unique to the financial sector. Granting an exemption would also undermine fairness in a sector-agnostic standard. Other industries could equally argue for exceptions based on their own difficulties, reducing comparability across sectors. Moreover, absolute financed emissions are already recognised in existing standards and regulations: the SBTi financial sector net-zero standard, the UNEP FI/NZBA recommendations, and EU SFDR all require or encourage absolute emissions disclosure. Exempting banks would risk misalignment and reduce the usefulness of reported data for stakeholders, including asset owners who depend on it for their own disclosures.			
Survey	Frank Bold	NGO	Czechia	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	The new threshold is simpler and clearer, and therefore easier to apply. It also sets a clear cap. Any potential increase of breakdowns of the disclosed information is negligent in terms of added burden.			
Survey	Frank Bold	NGO	Czechia	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	The proposed change is discriminatory, adds unnecessary burden and should be corrected through revisions to paragraph AR 22. Workers have a human right to a living wage - sufficient remuneration to support themselves and their families with basic dignity. EU policy and EU law reflect this definition. ILO offers two sets of principles (i) ILO principles for estimating living wages (the level needed for a decent life; https://www.ilo.org/ilo-principles-estimating-living-wage) and (ii) ILO wage setting principles (how today's legal minimum wages are negotiated; https://www.ilo.org/ilo-wage-setting-principles). Particularly outside the EU, legal minimum wages fall well below living wages. Under S1-9, the methodology requires companies to compare actual wages to "adequate wage" for EU employees but to legal minimum wages for employees outside the EU (if these minimum wages follow ILO wage-setting principles). Only where no minimum wage exists outside the EU may a living-wage benchmark be applied. This creates four problems: a) It undermines the objective by tying non-EU disclosure to the generally much lower legal minimum wage. b) It is discriminatory because it applies a lower standard to employees outside the EU. c) It imposes complexity, forcing companies to assess for each country whether minimum wages or benchmarks align with ILO principles, which most lack capacity to do. d) It undermines comparability because differing workforce distributions, in and outside EU, yield non-comparable disclosures. Two key changes are needed: 1. Methodology for reporting on 'adequate wages' should measure actual wages against an adequate/living wage for all employees. For employees outside the EU, allow comparison only to legal minimum wages or living-wage benchmarks demonstrably set in line with ILO principles for estimating living wages (i.e. not with wage-setting principles). 2. Permit companies to rely on official evidence from authorities or organisations showing alignment with ILO principles for estimating living wages, avoiding company-level assessments.			
Survey	Frank Bold	NGO	Czechia	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	We welcome the fact that multiplication of datapoints was removed. The new, simplified framework makes it easier for companies to report on these SFDR-related matters in a way that corresponds to how their policies are set. For users, this consolidation makes it easier to locate the relevant information.			
Survey	Frank Bold	NGO	Czechia	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	Measurable targets related to biodiversity and ecosystems shall be set and disclosed according to the guidance and examples given by relevant global frameworks, such as SBTN (Step 3 - Measure, Set & Disclose Targets), TNFD (component P1 and P2 & Annex 5, sector guidance and guidance on Target Setting) & resources by World Economic Forum Nature-Positive Transitions.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Frank Bold	NGO	Czechia	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	We propose to not include such datapoint, but instead provide a paragraph in the application requirements, explaining that the adjusted pay gap is an important entity-specific information, which is often necessary to contextualise and enable understanding of the information provided by the unadjusted pay gap. Further this AR could remind the undertakings that the unadjusted pay gap needs to be appropriately disaggregated. Unadjusted and adjusted perspectives on pay gap have different purposes. The unadjusted pay gap - appropriately broken down by countries or areas of operations in line with ESRS 1 - provides general context and the information on how the undertaking is affected by systemic drivers of gender inequality. The adjusted pay gap is primarily an entity-specific disclosure. It is particularly relevant for complex companies to better understand where and how the pay gap manifests, and what are the specific drivers of it. There is no one 'standardizable' way to adjust the pay gap calculation. Such adjustments must consider the undertaking's specific context and circumstances and avoid 'overadjusting'. If the calculation controls for every source of difference between males and females in the workforce, then it would obscure the pay gap and its causes. Therefore, including a datapoint - whether mandatory or voluntary - on adjusted pay gap in the standards is problematic, because it is impossible to provide a standardised methodology. On the other hand, for many companies' information on adjusted pay gap is likely to be material, and therefore such information should be provided.			
Survey	Frank Bold	NGO	Czechia	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	The removal of paragraph 14 can be easily compensated by adding a reference to SMEs in the description of the topics in ESRS 1, Appendix A, and in ESRS G1, paragraph 4. The removal of datapoint originally located in para 33(a) concerning average days it takes to pay an invoice, does not seem to be necessary for the reduction of burden. The undertaking would still need to collect this data to be able to meet the other requirements, in particular the calculation of the % of its payment aligned with its standard payment terms (in para 20(a)).			
Survey	Frank Bold	NGO	Czechia	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	In principle we agree with the achieved balance. However, we remain concerned about the following specific issues in individual standards. Our concerns are greatest for ESRS 1, which is the only standard for which we agree with the achieved balance only partially. We are concerned about the concurrent effect of various reliefs. We are also concerned about the unintended confusion caused by a rather confusing explanation of the relationship between impacts, risks and opportunities on one hand, and sustainability topics on the other.			
Survey	Frank Bold	NGO	Czechia	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	We disagree with the downgrading of the transparency on site/assets/activities screening from the level of datapoints in the E standards to an Application Requirement in ESRS 2.			
Survey	Frank Bold	NGO	Czechia	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	We do not think that streamlining of E1-1 Transition Plan for Climate Change Mitigation added much value. If anything, more rather than less details and clarifications are needed in the standard. In addition, the main body of the standard and the glossary should retain the definition of net-zero targets and related criteria, as use and reporting of such targets is a common practice. Removing it will lead to increase of disclosures of various carbon neutrality claims and hamper comparability between companies, or downright lead to greenwashing.			
Survey	Frank Bold	NGO	Czechia	33.E_2.	ESRS E2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. I agree	Given the current state of art in this area, it would be helpful to include more guidance on how to set metrics and how to utilise other reporting frameworks and standards such as TNFD and SBTN. The standard should also clearly require the disclosure of sites in/near biodiversity sensitive areas, rather than limiting it to those determined to be connected to material impacts only.

Survey	CEAOB	European supervisory authority	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I would like to skip this question and provide my feedback in Part 3				
Survey	CEAOB	European supervisory authority	Belgium	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	(RefCEAOBletter par20 to 22) The CEAOB underlines that the split in provisions between, on the one hand, requirements set by the revised ESRS, and, on the other hand, non-mandatory implementation guidance (NMIG) will result in preparers not being obliged to implement the NMIG, and likewise assurance providers not being required to assess whether NMIG have been implemented or not, in the case those are outside the requirements of the ESRS. Introducing a "non-mandatory" status will put outside of the scope of scrutiny by assurance providers the implementation of provisions which fall under this status. The CEAOB notes in this regard that the status of NMIG should be reconsidered by EFRAG and the Commission, in case the policy objectives are higher in terms of disclosures and assurance on the implementation on NMIG.			
Survey	CEAOB	European supervisory authority	Belgium	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		(Ref CEAOB letter par1 to 3) The CEAOB welcomes EFRAG's exposure draft published on 31 July 2025 and the revisions proposed by EFRAG to simplify the ESRS following the European Commission's (EC) request. In its letter dated 29 September 2025, which content has been pasted in the relevant sections of this EFRAG questionnaire, the CEAOB provides several comments on various revisions included in the exposure draft which may induce impacts for assurance engagements. The CEAOB shares the comments with EFRAG for consideration before the finalisation of its advice to the EC. The content of the CEAOB response to this consultation has been prepared by the CEAOB sustainability reporting support team and has been adopted by the CEAOB. The comments raised in this response reflect matters agreed within the CEAOB. The response is not intended, however, to include all comments that might be provided by the individual regulators that are members of the CEAOB and their respective jurisdictions.			
Survey	CEAOB	European supervisory authority	Belgium	35.ESRS1_1.1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	(RefCEAOBletter par18 and 19) To align with the Omnibus proposals, the ED has anticipated the perspective that no sector ESRS will be developed, and consequently, that undertakings will need to prepare entity specific information when the ESRS general or topical disclosure requirements will not allow to reach the objectives aimed at. The CEAOB flags in this regard that the consequential increase in the use of entity specific disclosures will lead to (1) sustainability statements that are less comparable between preparers, and (2) a different approach, for assurance providers, since they will need to assess whether the (general) characteristics of information are met, rather than assess whether the disclosure requirements have been complied with. ESRS1 paragraph 11 mentions that preparers "may use" available best practices, frameworks or standards such as IFRS industry-based guidance or GRI sector standards, which will thus not be for mandatory use. Therefore, should the Omnibus proposals be adopted, the CEAOB advises that sector specific guidance be developed (at a later stage) by EFRAG to prevent individual approaches by preparers and to allow undertakings with the same sectorial challenges to benefit from a collective approach. In particular, this will be useful for undertakings in the financial sector.	ESRS1	1.1 ESRS standards, reporting areas and entity-specific disclosures	
Survey	CEAOB	European supervisory authority	Belgium	35.ESRS1_2.	Do you agree with the amendments of this chapter?	I agree	(RefCEAOBletter par23) The CEAOB welcomes the inclusion regarding "fair presentation" in the ED, which is relevant to avoid inconsistencies in interpretations amongst stakeholders. It will also facilitate the connection with the provisions of the international assurance standards and it will avoid misunderstanding around the categorization of the sustainability reporting framework originated by the ESRS. It will facilitate further consistency in assurance engagements performance and reports issued by assurance providers.	ESRS1	2. Fair presentation and qualitative characteristics of information	
Survey	CEAOB	European supervisory authority	Belgium	35.ESRS1_3.1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	(RefCEAOBletter par4 to 6) The CEAOB stresses that the overall filter of materiality for the provision of information related to Impacts Risks and Opportunities identified under the double materiality lens, with a view to reducing the length of sustainability statements, as it is drafted in the ED, will create some challenges for consistent implementation, and thus for assurance providers. The materiality as defined by the ED will be very judgmental for preparers and assurance providers, in the absence of practical experience and thus, the absence of benchmarks that may be available. The CEAOB stresses that different notions are used (in ESRS1 paragraph 21) to establish this filter and questions the differences between the notions used in (a) and (b). It may be difficult in particular to assess expectations created by this paragraph 21 and, for the preparers and for the assurance providers, to determine what is needed to fulfil the appropriate level of "understanding" for users of general purpose sustainability statements. The CEAOB would thus welcome a reconsideration of the way the filter is established in this paragraph of the ED.	ESRS1	3.1 Materiality of information as a general filter for reported information	

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	CEAOB	European supervisory authority	Belgium	35.ESRS1_3.5.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	(RefCEAOBletter par7 to 8) The CEAOB welcomes simplifications on the DMA process requirements, but stresses that the introduction of a less prescriptive approach will create a further challenge for assurance providers regarding the DMA process. This will mean that a more outcomes-oriented approach will become relevant for the assurance engagement, with step back and consideration of the business model of the entity, with more value for users. In addition, the revisions in the ED sometimes lack clarity regarding the status (compulsory or not) of the new provision in ESRS1 paragraph 45. EFRAG should use consistent wording like "the undertaking shall ..." or "the undertaking may ..." instead of "the undertaking is expected to ..." to clarify the status of this ESRS provision (i.e. whether it is compulsory or not).	ESRS1	3.5 Practical considerations in determining the material impacts, risks and opportunities and their associated topics to be reported	
Survey	CEAOB	European supervisory authority	Belgium	35.ESRS1_8.1.	Do you agree with the amendments of this chapter?	I disagree	(RefCEAOB letter par9 and 10) The CEAOB does not concur with the editorial change in ESRS1 paragraph 103. The wording used creates confusion about the scope of information which belongs to the sustainability statement, under the scope of the independent external assurance engagement mandated by the CSRD. EFRAG should avoid any doubt and make clear that even disclosures located outside the dedicated section of the management report are an integral part of the sustainability statement. Paragraph 103 could e.g. be amended as follows to avoid confusion on the status of information incorporated by reference: "The undertaking shall present all the disclosures required by the ESRS within a dedicated section of the management report identified as the undertaking's sustainability statement. By exception, information incorporated by reference according to the conditions prescribed in Chapter 9.3, may be located outside that dedicated section, provided that the conditions of Chapter 9.3 are met. Information incorporated by reference remains an integral part of the sustainability statement."	ESRS1	8.1 General presentation requirement, structure and content of the sustainability statement	
Survey	CEAOB	European supervisory authority	Belgium	35.ESRS1_8.2.	Do you agree with the amendments of this chapter?	I disagree	(RefCEAOBletter par13 to 16) The CEAOB identifies a conceptual challenge with the introduction of ESRS1 paragraph 108, that allows for the provision of information that would not fall under materiality conditions, in the absence of any other reporting framework requirement It will be difficult to determine in which conditions non-material information will not "obscure" other (i.e. material) information. Furthermore, assurance providers will have no reference in the ESRS framework to assess the information in the absence of any provisions for the disclosures except for faithful representation. Finally, and more importantly, misunderstanding will increase about whether the non-material information will fall into the scope of the assurance engagement, the status and assurance over the information. In contrast, the benefits of locating this type of information in the "sustainability statements" rather than under other documents sent to a specific user or other sections of the management report remains unclear. If this type of information remains allowed by the final ESRS, then the preparers should make clear (1) that this information is outside the scope of ESRS reporting requirements and (2) thus it was not reviewed nor scrutinized in the course of an assurance engagement required by law. The use of a special appendix to locate this information would best allow this clarification	ESRS1	8.2 Presentation of additional information included in the sustainability statement	
Survey	CEAOB	European supervisory authority	Belgium	35.ESRS1_8.3.	Do you agree with the amendments of this chapter?	I disagree	(RefCEAOBletter par17) The CEAOB underlines that the executive summary will be a very challenging part for the assurance engagement, in the absence of indications of what should be considered as "key messages" apart from "material information" about "material IROs". The notion creates another layer of complexity and judgement. Discussions are likely to occur regarding which messages are "key", as this judgement will depend on the users of the information. More indications are needed in the ESRS to allow for a proper understanding of this notion of summary of "key messages", so as to allow an assurance provider to form an opinion on whether this summary complies with the ESRS requirements. (RefCEAOBletter par11) In ESRS1 paragraph 109 the terms "outside its sustainability statement" should be replaced by "outside the dedicated section identified as the undertaking's sustainability statement" to avoid confusion and to remain consistent with other provisions on incorporation by reference in the ESRS.	ESRS1	8.3 Options in presenting information across parts of the sustainability statement	
Survey	CEAOB	European supervisory authority	Belgium	35.ESRS1_9.3.	Do you agree with the amendments of this chapter?	I disagree	(RefCEAOBletter par12) The wording introduced as revision of letter (d) in ESRS1 paragraph 118 remains unclear and confusing. To achieve the objective of allowing incorporation by reference without undermining the quality of the reporting and creating doubts about the scope assurance engagement, the provision should e.g. read: "the information incorporated by reference: ...is subject to the same assurance engagement as the other information that is part of the sustainability statement (i.e. the information incorporated by reference is treated as all other information presented in the sustainability statement with regards to assurance)".	ESRS1	9.3 Incorporation by reference	
Survey	CFA Institute	User Association	United States	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We support the proposals to clarify and simplify the double materiality assessment process. By taking a top-down approach, companies can focus on what is relevant to their business and their industry. This more closely aligns with how investors consider the risks and opportunities (and related impacts, where applicable) of a company.

Survey	CFA Institute	User Association	United States	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	The additional information provided on how to conduct an impact materiality assessment, in particular with respect to whether and when to include the effects of mitigating actions, is helpful. However, the additional guidance on "gross versus net" relates only to impact materiality assessments and the issue is also relevant to (and a subject of debate for) financial materiality (risk) assessments. Companies and investors typically consider the effectiveness of risk mitigation activities when understanding a company's areas of risk exposure. It is likely that companies will use the guidance on impacts by analogy to risks. Clarity on whether this is appropriate, or explaining why it would be different, will be necessary to avoid differences in interpretation and application. We note that the ISSB's standards don't provide such guidance but use the principle of whether the risk "could reasonably be expected to affect the entity's prospects". There is similar wording in the ESRS standards. We suggest that EFRAG and the ISSB work together to ensure that the concept of financial materiality is understood to mean the same thing – we are concerned that there is a very high likelihood that, without doing so, a company applying the ESRS standards will have a different list of sustainability matters that are financially material than a company applying the ISSB's standards, even though the concepts are meant to be the same. This will have significant implications for global comparability by giving a very different picture of risk exposures (and opportunities) across companies, impeding capital allocation decisions.			
Survey	CFA Institute	User Association	United States	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	The sustainability statements published so far mix financially material sustainability issues with information about impacts, making it difficult for different users to identify what is most relevant to them. We believe many of the problems with "interoperability" arising from debates about materiality can be addressed through clearer presentation, allowing each audience to find the information most important and targeted to their needs. Clarity in presentation also benefits investors who want information about impacts, such as those that have the potential to influence future customer or employee behaviour. It also helps other stakeholders who focus on risks and opportunities, for example how an entity monitors and manages exposures or seeks to capitalise on opportunities. Organising information in a way that makes these distinctions explicit is essential for making disclosures easy-to-navigate and decision useful. Decision usefulness is the standard by which information becomes relevant to investors or other stakeholders and drives capital formation or other actions. Without clear structuring, mixing financial materiality and impact materiality undermines the usability of sustainability statements. By improving how disclosures are presented, interoperability concerns tied to materiality can be reduced, as users can more readily locate the data aligned to their specific interests and decision-making needs.			
Survey	CFA Institute	User Association	United States	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	In principle we support the simplification of the ESRS requirements. Reporting standards, regardless of topic, need to be straightforward to implement and easy to navigate so that the preparer understands all the requirements, the assurance provider understands what they are assessing, and the user of the resulting reporting understands what they are reading. The speed with which the original ESRS standards were developed led to challenges and disagreements in interpretation of some of the requirements, resulting in differences in approach and limiting investors' ability to compare information about material topics across companies. The onslaught of implementation guidance on fundamental issues that EFRAG provided after the original ESRS standards were published, along with various FAQs, is further evidence that the "user experience" in applying the standards was inadequate. This naturally has implications for the quality of the information that's then made available to users of sustainability statements. So, while we agree in principle with the simplification objective, we are concerned that the approach taken focuses on eliminating the burden to companies without thinking about what investors need.			
Survey	CFA Institute	User Association	United States	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	While the Consultation acknowledges the importance of clarity for those applying the standards, equal emphasis must be placed on the clarity and accessibility of the information produced for end-users. Therefore, in determining which data points to retain, we believe that greater emphasis should be placed on financial materiality. At a minimum, it is critical that disclosures clearly distinguish between items that are financially material and those that are not. Without this clarity, investors are less easily able to analyse and integrate sustainability-related information into financial decision-making because it is difficult to see what really matters for assessing risk exposure and future investment performance. Perhaps more importantly, companies find such information difficult to integrate into their business processes.			
Survey	CFA Institute	User Association	United States	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	We support Option 1, which requires both quantitative and qualitative disclosure of anticipated financial effects. We do not support Option 2, which provides relief from quantitative disclosure. Current and forward-looking financial effects are essential to investors' understanding of how sustainability matters affect a business today and in the future. This information demonstrates the relevance of sustainability disclosures to assessments of financial performance and risk exposure. Because of its importance, and given that companies should already consider these implications in business planning and forecasting, the exemption in Paragraph 23(c) should be noted as rare. Companies are best placed to assess and report on anticipated financial effects relevant to their business. However, quantitative disclosure alone is insufficient. In addition to the amounts required in Paragraph 23(b), investors need explanation and disclosure of assumptions underlying those amounts. This enables them to understand the implications of the amounts and make adjustments if they hold different views about what's driving the effects. Option 2 would reduce the information available to investors in European companies applying ESRS standards, limiting their ability to understand financial implications of sustainability matters. This creates an uneven playing field: investors in companies applying ISSB standards will receive more complete data and may prefer those companies. European firms could face higher costs if peers elsewhere disclose this information. Leaving investors to estimate figures is risky and burdensome, as companies may later need to respond to or correct such assessments. We recommend EFRAG and the ISSB work together to align requirements for quantitative disclosure of anticipated financial effects, ensuring that companies applying either set of standards achieve the same outcome.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	CFA Institute	User Association	United States	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	The term "interoperability" is often cited regarding links between the ISSB and the ESRS standards. Yet it is unclear what the term means, as it is used to imply being identical, complementary, or compatible. We have raised concerns about this lack of clarity (see page 15 of our letter to the ISSB's Agenda Consultation https://rpc.cfainstitute.org/sites/default/files/-/media/documents/comment-letter/2020-2024/ISSB-Agenda-Consultation-Comment-Letter_10-18-23.pdf). Many stakeholders assume "interoperability" requires identical disclosure requirements. In our experience, when the words in standards differ, the disclosures are not the same. If the goal is consistent disclosures regardless of whether a company applies ISSB or ESRS standards, then requirements must be phrased identically. Otherwise, interoperability will not serve investors in global markets. Identical requirements would reduce complexity for preparers and users, but we do not believe "interoperability" in this context should mean "identical." Rather, ISSB and ESRS standards should be compatible and complementary. This aligns with ISSB's vision of a "global baseline" and the EU's goal of providing information for civil society beyond investors. Interoperability cannot be determined by one body alone; both must agree which elements form the baseline and which are jurisdiction-specific additions. Currently, neither ISSB nor ESRS standards clearly separate these, complicating comparability for investors. The single vs. double materiality debate adds confusion. We see it as philosophical, not practical. Financially material elements should be identical across both sets of standards, forming the baseline for investors. Impact materiality has value in revealing externalities, but unless these become financially material through penalties, litigation, or costs, they are not relevant to investors. Materiality principles already allow sustainability issues to shift between categories as circumstances evolve. "Interoperability" in practice should therefore allow financial materiality to guide investor-focused disclosures, with impact materiality addressing broader societal concerns. Yet, identical wording remains necessary when requirements use the same label or appear to cover the same point.			
Survey	CFA Institute	User Association	United States	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	CFA Institute	User Association	United States	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	This applies to all the ESRS not just ESRS 2.... There is growing focus on reducing the length of sustainability standards, disclosures, and data points. A shorter report may seem appealing, but brevity is only useful when it results from clear, relevant, and well-structured explanations. If conciseness leaves users needing extra research to interpret what is meant, then the benefit is lost. Length itself is not the problem; poor clarity and navigation are. The original ESRS standards suffered from both, so efforts to streamline them are welcome. However, relevance matters far more than length. Investors consistently say they prefer a limited number of highly material, high-quality data points. Yet, in principle, they are not concerned by volume. Investors are skilled at quickly processing large quantities of information and using technology to support this analysis. The real challenge lies in determining which data points are relevant to decision making. Compounding this issue is the uneven quality of underlying data, which undermines the reliability of sustainability metrics. Without stronger assurance of data accuracy, investors' confidence in reported information will remain limited, regardless of volume. For this reason, reducing data points simply to shrink disclosures is misguided. The key objective should not be cutting length but improving quality, relevance, and meaning. The information provided must allow users to understand which sustainability issues truly matter for a company, how the company is addressing them, and how effective those actions are over time.			
Survey	CFA Institute	User Association	United States	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We agree that ESRS should be a "fair presentation" framework and believe this is an important clarification (not a change in requirements) in the Consultation. This follows the framework used in the IFRS accounting standards (which are used by European companies) and, given the need for connectivity between financial reporting and sustainability reporting, we believe they should be consistent. Anecdotally, the initial feedback we've received from investors about how they have found the first set of sustainability statements is that the data is highly qualitative and the information is not linked to financial results or financial reporting. The statements are also long and it's difficult to identify the information that's relevant for their investment decision making purposes. The result is that the information so far is not necessarily decision useful. Investors advise us they want, or are willing to accept, fewer, but highly financially value-relevant, metrics; they need those metrics to be easy to find; and the metrics need to clearly show their relevance to the business (also see our comments above about presentation more generally). Making ESRS standards explicit that they follow a fair presentation framework centred around the materiality principle, rather than being a compliance exercise, will help this. However, and particularly given the range of sensitive topics covered in the ESRS topical standards, it is important that companies don't use the "fair presentation" framework as an opportunity to omit important detail. Like with financial reporting, it will be important that preparers understand the need to "stand back" and make sure that the information they report about sustainability matters makes sense as a whole. In our view, the materiality principle already covers this and therefore it should not result in additional preparation costs.

Survey	BT4Europe - European Network of Business Travel Associations	Business association (other than association of financial institution)	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	BT4Europe represents the collective voice of companies engaged in business travel across Europe. While reporting companies have actively reshaped market demand by prioritizing sustainable services and transparent data reporting, the concept of double materiality has introduced complexity that has slowed the broader development of sustainable travel solutions. This includes the adoption of Sustainable Aviation Fuel (SAF), cross-border rail travel, and environmentally responsible hospitality options. A significant milestone has been achieved: companies now have access to comprehensive travel-related emissions data, regardless of whether they are formally required to report CO_2 emissions under double materiality assessments. This accessibility empowers organizations to make informed decisions and proactively align their travel practices with sustainability goals. Given the substantial climate impact of business travel, its materiality holds the potential to act as a powerful catalyst. By recognizing travel as a material issue, companies can accelerate demand for sustainable services, thereby fostering innovation and resilience within the travel sector. BT4Europe continues to advocate for harmonized standards, transparent reporting, and scalable solutions that enable businesses to travel responsibly while contributing to Europe's climate objectives.			
Survey	BT4Europe - European Network of Business Travel Associations	Business association (other than association of financial institution)	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	BT4Europe - European Network of Business Travel Associations	Business association (other than association of financial institution)	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	BT4Europe - European Network of Business Travel Associations	Business association (other than association of financial institution)	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	BT4Europe - European Network of Business Travel Associations	Business association (other than association of financial institution)	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	BT4Europe - European Network of Business Travel Associations	Business association (other than association of financial institution)	Belgium	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	BT4Europe represents the collective voice of companies engaged in business travel across Europe. While reporting companies have actively reshaped market demand by prioritizing sustainable services and transparent data reporting, the concept of double materiality has introduced complexity that has slowed the broader development of sustainable travel solutions. This includes the adoption of Sustainable Aviation Fuel (SAF), cross-border rail travel, and environmentally responsible hospitality options. A significant milestone has been achieved: companies now have access to comprehensive travel-related emissions data, regardless of whether they are formally required to report CO_2 emissions under double materiality assessments. Survey	BT4Europe - European Network of Business Travel Associations	Business association (other than association of financial institution)	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				
Survey	BT4Europe - European Network of Business Travel Associations	Business association (other than association of financial institution)	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				
Survey	BT4Europe - European Network of Business Travel Associations	Business association (other than association of financial institution)	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1				
Survey	BT4Europe - European Network of Business Travel Associations	Business association (other than association of financial institution)	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	BT4Europe - European Network of Business Travel Associations	Business association (other than association of financial institution)	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	BT4Europe welcomes EFRAG's efforts to enhance interoperability between ESRS and the ISSB's IFRS S1 and S2 standards. As outlined in our 2025 Sustainability Position Paper, harmonized and comparable CO_2 emissions data is essential for enabling effective climate action in the business travel sector. Link: https://bt4europe.com/wp-content/uploads/2025/07/BT4Europe-Sustainability-Position-Paper-2025.pdf We support the alignment of ESRS with IFRS S1's fair presentation framework and the use of materiality as a general filter, which ensures Scope 3 emissions—such as those from business travel—are appropriately considered. The adoption of the financial control boundary for GHG reporting (ESRS E1 AR19) and the permanent reference to SASB and IFRS industry-based guidance are important steps toward global consistency. BT4Europe emphasizes the need for sector-specific standards to support meaningful disclosures. In this context, we highlight the work of the Energy and Environment Alliance (EEA) Taskforce on Hotels & Lodging Sustainability Standards, developed in collaboration with IFRS. The Taskforce is translating IFRS S1 and S2 into hospitality-specific terminology, creating templates for Scope 1–3 reporting and transition plans, embedding metrics such as emissions per occupied room, and conducting global consultations. This initiative will culminate in the launch of a Global Industry Consultation in Q3 2025 and should inform future ESRS sector standards. Link: https://www.eea.international/about-us/taskforce-on-hotels-lodging-sustainability-standards/ While we acknowledge the simplification benefits of certain reliefs, BT4Europe cautions against exemptions that allow omission of Scope 3 emissions or quantitative financial effects. Business travel emissions must be treated as material and measurable, even if estimated. In conclusion, BT4Europe encourages EFRAG to maintain strong alignment with IFRS while ensuring that business travel and hospitality emissions are fully integrated into sustainability reporting. This will support transparency, comparability, and the transition to low-carbon travel across Europe.			
Survey	BT4Europe - European Network of Business Travel Associations	Business association (other than association of financial institution)	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	BT4Europe - European Network of Business Travel Associations	Business association (other than association of financial institution)	Belgium	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	BT4Europe - European Network of Business Travel Associations	Business association (other than association of financial institution)	Belgium	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	BT4Europe - European Network of Business Travel Associations	Business association (other than association of financial institution)	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	BT4Europe - European Network of Business Travel Associations	Business association (other than association of financial institution)	Belgium	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets				
Survey	BT4Europe - European Network of Business Travel Associations	Business association (other than association of financial institution)	Belgium	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	BT4Europe - European Network of Business Travel Associations	Business association (other than association of financial institution)	Belgium	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree				
Survey	BT4Europe - European Network of Business Travel Associations	Business association (other than association of financial institution)	Belgium	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree

Survey	Witten/Herdecke University	Academia	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	Chapter 3 is now clearer organised. The improved definition of materiality of information in Section 3.1, especially the replacement of criterion of "significance" with "understandability" of impacts provides better guidance and is aligned with the CSRD and international sustainability due diligence instruments. It also clarifies how the materiality of information interacts with (fundamental) qualitative characteristics of information criteria from Chapter 2, and with the rules concerning aggregation and disaggregation of information (e.g. para 52 on "not obscuring"). Section 3.5. Practical considerations are particularly helpful to avoid unnecessary complexity in materiality assessment. However, Chapter 3 frequently conflates 'topics' with 'impacts, risks and opportunities' ('IROs'). Para 22 is confusing when it says that information may be presented "either at the topical level or at [IRO] level". Such a dichotomy is confusing and incorrect. While topics refer to broad thematic areas, IROs are entity specific. The CSRD, as well as IFRS, TCFD, and TNFD consistently focus on the latter. Overemphasising 'topics' risks leading to generic, boilerplate disclosures that lack relevance and specificity. Chapter 3 would be clearer if it keeps the focus on IROs and plainly explain that depending on their nature and context such IROs may be defined at a general level - often corresponding to topics - and/or that information on their management may be similarly aggregated. This should be clarified also in provisions on entity-specific disclosures in paragraph 23 (and in paragraph 10 in Chapter 1) In Chapter 3.3.2, para 37 fails to mention that the purpose of financial material assessment is to not just to identify materiality information but also determine the material risks and opportunities, as required by the CSRD. In this regard, the risks and opportunities are only mentioned in the middle of para 38, making the text incoherent.			
Survey	Witten/Herdecke University	Academia	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	While it is certainly useful that Chapter 3 addresses the question of how prevention, mitigation and remedy of impacts shall be considered in materiality assessment, the rules could nevertheless be expressed in a more simple and understandable way. Para 34 uses a very complicated language to express a simple idea that actual impacts shall be considered as they occurred during the reporting period, and that their ex-post remediation is not relevant. I welcome and stress the importance of the clarification that the potential impacts which require significant ongoing preventative or mitigation efforts shall be considered gross. Without such clarification, it would be in theory be impossible for companies to report on how they manage such issues. In this regard, it would be helpful to refer to the materiality of information filters to provide companies with further guidance on how to distinguish such significant efforts from common practice and compliance measures. The table provided in Appendix C provides more detailed information, which it would be helpful to integrate directly into the main body to ensure clarity and consistency.			
Survey	Witten/Herdecke University	Academia	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	The proposed changes are substantial. However, I would like to bring the attention to para 113, which I find hard to understand: "113. If the description of the material impacts, risks and opportunities prepared in accordance with [Draft] Amended ESRS 2 IRO-2 is not presented alongside the respective policies, actions and targets, the undertaking shall make explicit which policies, actions and targets relate to which material impacts, risks, or opportunities, in accordance with paragraph 22." It is not clear to me what the reference to para 22 is meant to imply. Para 22 addresses the issue of appropriate aggregation or disaggregation of information on material impacts, risks and opportunities and their management. But it doesn't set any rules regarding the location of such disclosures depending (or not) on the level of aggregation.

Survey	Witten/Herdecke University	Academia	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	I welcome the removal of the duplications between the cross-cutting and topical standards and support the emphasis on general disclosure requirements. However, I have two critical concerns. First, the original DR in environmental standards concerning screening of sites in materiality assessment were replaced by an application requirement to ESRS 2 IRO-1. This in effect makes transparency on this aspect optional. Consideration of local context is a key element of an appropriate materiality assessment. This should be both recognised in Chapter 3 of ESRS 1, and in ESRS 2 IRO-1, which should include an explicit datapoint on how the undertaking screened its locations and value chains. I welcome that E standards provide a clearer reference on the importance of disaggregation of disclosures, but this can only be done well if locations are properly screened. Second, I strongly recommend adding an explicit reference to the disclosure of relevant, entity-specific metrics directly in S standards. The fact that S2, S3 and S4 do not include any metrics and the anticipated sectoral standards which would have provided such metrics will not be adopted, shift the expectations for disclosure of metrics for S topics to entity-specific disclosures. As highlighted by the Danish Institute for Human Rights, a leading National Human Rights Institute on business and human rights and reporting, adding the reference to metrics to disclosure requirements SX-4 on targets would improve consistency between the topical and the cross-cutting standards and acknowledge the common use and disclosure by companies of metrics relevant to their social sustainability impact management and progress. This addition would ensure that preparers better understand the ESRS expectations in this regard, whilst not adding any new obligations or datapoints			
Survey	Witten/Herdecke University	Academia	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	I support the proposed changes and agree with the removal of 'may disclose' elements, because their status has been causing confusion. However, they do not need to be all removed to NMIG. Where they provide useful examples of disclosures, they could be included directly in the standards as "examples". This is particularly the case for the topics for which the reporting practice is evolving, such as Biodiversity and ecosystems. This would make it easier for first-time preparers to understand what kind of information is likely to be relevant and provide a basis for the standardization of metrics. Having to consult another document, such as NMIG, is adding an unnecessary hurdle. The language and therefore understandability of the standards have been considerably improved, however in ESRS 1 especially there is still much to be done in this regard.			
Survey	Witten/Herdecke University	Academia	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	To me, the standards are not clear in terms of what the combined effect of the reliefs is and how the reliefs are meant to interact. Interpreting and applying these reliefs independently of each other open doors to abuse and omitting material information, significant differences in reporting practice. Reporting of metrics is subject to a combination of undue cost and effort and lack of data quality reliefs. But the standards do not put these two reliefs in proper context and do not include any explicit requirement and timeframe for companies to improve the coverage and quality of data. This is exacerbated by the relief which unconditionally allows exclusion of joint operations. If the environmental metrics concerning such operations are material, then the standards should incentivise their eventual disclosure. The undue cost and effort and lack of data quality reliefs already provide sufficient flexibility in this regard. Similarly, there is a lack of coherence among the directions of the reliefs related to financial effects, i.e., information which is essential for understanding of the risks and company's ability to overcome them. The limitation related to the announced investment plans focuses the disclosures on effects which are easier to assess and therefore quantify, yet the standards also propose reliefs that enable omitting quantitative disclosures. We broadly agree with the relief provided in ESRS 1, para 90, which allows for calculation of metrics exclusion of activities that are not significant drivers of the IROs. However, the application of this option must be clarified for specific environmental and social metrics which are standardised in the ESRS. For instance, the GHG Protocol's completeness principle explicitly warns against misapplication of materiality criteria in this regard. Similarly, for S1 workforce metrics, such as characteristics of the employees and non-employees, such exclusions are not appropriate.			
Survey	Witten/Herdecke University	Academia	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	I strongly disagree with this proposition! These combined reliefs should clearly require the undertaking to improve the coverage and quality of the data needed to meet ESRS requirements. For the metrics concerning own operations and/or metrics standardised directly in the ESRS, this should be subject to clear time limitation. For other metrics, improvements over the years should be also explicitly required, subject to undue cost and effort relief.			
Survey	Witten/Herdecke University	Academia	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	The ability to estimate financial effects is critical for the undertaking's ability to integrate sustainability into its business strategy considerations, planning and risk management. It is also key for the determination of financial materiality, including in terms of overreporting topics as financially material. Resigning on this ambition is at odds with the objective of putting sustainability reporting on the same level as financial reporting, the integration of both, and ultimately overcoming the tragedy of horizons. We find Option 1 unnecessarily extensive, and lacking time limitation, but broadly acceptable. We disagree with the assertion made in the question that it "[d]ifferent from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources ". In this regard, the new proposed ESRS include the undue cost and effort relief which seems to account for such a situation. With respect to Option 2, we don't find it justifiable to go beyond the IFRS relief. One of the most strongly voiced arguments from stakeholders who called for simplification of ESRS was that, as a matter of principle, ESRS must be aligned with the IFRS except where CSRD or other EU legislation require otherwise. Abandonment of this principle seriously undermines prospects of building a global baseline which both the EU and the ISSB support, and which is an important part of building a level playing field for the EU companies.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Witten/Herdecke University	Academia	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	Witten/Herdecke University	Academia	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	Reliefs should not go beyond those set in IFRS. Going further would undermine the objective of setting a global baseline for ESG reporting, which is important for achieving a level playing field for EU companies in a global context. The undue cost and effort relief outlined in ESRS 1, para 87-89, is a powerful relief, which addresses virtually all situations where the undertaking may encounter practical obstacles. Explicit emphasis on fair presentation, combined with the strengthened focus on the use of materiality of information filter, provide companies with an increased flexibility in determining meaningful content of their sustainability statements. It marks a further move away from compliance-based to principle-based approach. However, such changes imply increased responsibility for the undertaking. Implementing further reliefs would undermine this responsibility and open the doors to abuse.			
Survey	Witten/Herdecke University	Academia	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Witten/Herdecke University	Academia	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	The number of datapoints in each standard represent the minimum necessary to ensure cohesive disclosure requirements, and consequently basic comparability and quality of the actual disclosures. We have not identified any instance where ESRS would include exorbitant requirements, considered common practice and internationally recognised reporting standards and frameworks such as IFRS, GRI, or TNFD. ESRS are generally more concise and less demanding. Introducing further reductions (while keeping the coverage of all ESG factors as required by the CSRD) would create serious quality gaps between the ESRS disclosures and those based on the standards.			
Survey	Witten/Herdecke University	Academia	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	I agree with these changes, agreeing that the suggested changes do not add a new burden. This is particularly the case for the water-related metrics. In order to disclose the water consumption, the undertaking already has to calculate withdrawals and discharges, and such calculation and therefore the underlying data is subject to the assurance. Moving these implicit datapoints to the forefront as explicit data points makes the disclosure requirement clearer, compared to the previous ESRS where some of these datapoints were framed as "may disclosures". Whether or not these individual datapoints are to be disclosed is correctly subject to materiality of the information filter applied by the undertaking.			
Survey	Witten/Herdecke University	Academia	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	I agree with these changes, noting that the suggested changes do not add a new burden. E2-4 on secondary microplastics is not a new datapoint, as correctly pointed out in the Rationale above. We do not understand why it is included in this question, as such.			
Survey	Witten/Herdecke University	Academia	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	ESRS, being based on the materiality principle, the CSRD requirement to disclose impacts, risks and opportunities and their management, and the general principles of the Accounting Directive, has already been subject to a fair presentation regime. Making it explicit helps to clarify it. It provides companies with clarity on the discretion and judgement, as well as related safeguard, they are expected to exercise when applying the standards.			
Survey	Witten/Herdecke University	Academia	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	I do recognise the complexity of recalculating absolute values and acknowledge that financial institutions often manage GHG performance using intensity-based approaches. However, the global carbon budget is defined in absolute terms. For this reason, it remains essential that even financial institutions disclose absolute targets to assess how their strategies align with the economy-wide transition to net zero. Absolute targets are relevant for users of sustainability statements and for understanding the real-world climate impact of financed activities. While intensity measures provide insights into efficiency, they can mask rising absolute emissions in growing portfolios or sectors. Absolute values, by contrast, give a clear signal of whether institutions are contributing to the necessary 90–95% global reduction in emissions by 2050, with steep cuts by 2030. Both approaches rely on similar underlying data, and estimation challenges are not unique to the financial sector. Granting an exemption would also undermine fairness in a sector-agnostic standard. Other industries could equally argue for exceptions based on their own difficulties, reducing comparability across sectors. Moreover, absolute financed emissions are already recognised in existing standards and regulations: the SBTi financial sector net-zero standard, the UNEP FI/NZBA recommendations, and EU SFDR all require or encourage absolute emissions disclosure. Exempting banks would risk misalignment and reduce the usefulness of reported data for stakeholders, including asset owners who depend on it for their own disclosures.

Survey	Witten/Herdecke University	Academia	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	The new threshold is simpler and clearer, more straightforward and therefore easier to apply. It also sets a clear cap. Any potential increase of breakdowns of the disclosed information is negligent in terms of added burden.			
Survey	Witten/Herdecke University	Academia	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	The proposed change is discriminatory and adds unnecessary burden onto companies. This should be addressed through revisions to § AR 22. Workers have a human right to a living wage, meaning sufficient remuneration to support themselves and their families in a life of basic dignity. In its position on living wages, the ILO (2024) reflects this same definition, as do EU policy and law. The ILO position distinguishes between principles for estimating living wages, which determine the level of wages necessary for any worker to have a decent life, and principles for wage-setting processes, which determine the processes through which today's legal minimum wages are negotiated, and which can support progress towards the level of a living wage. In practice, legal minimum wages today fall below a living wage in most countries of the world, and particularly outside of the EU. Under S1-9, the methodology requires companies to compare actual wages to an "adequate wage" standard for their employees in the EU. Two key changes are therefore needed: •The methodology for reporting on 'adequate wages' should measure actual wages against an adequate/living wage for all employees, not only those within the EU. In particular, for employees outside the EU, the methodology should allow employees' actual wages to be measured: oA) against the local legal minimum wage only when this is set in line with the ILO principles on estimating living wages; or oB) against living wage estimates that are set in line with ILO principles on estimating living wages. •Companies should be able to rely on local legal minimum wages or living wage estimates when the authorities or organisations that set them provide public evidence of their alignment with the ILO principles for estimating living wages. This will avoid companies' having to make this assessment themselves.			
Survey	Witten/Herdecke University	Academia	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	I welcome the fact that multiplication of datapoints was removed. The new, simplified framework makes it easier for companies to report on these SFDR-related matters in a way that corresponds to how their policies are set. For users, this consolidation makes it easier to locate the relevant information.			
Survey	Witten/Herdecke University	Academia	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	Measurable targets related to biodiversity and ecosystems shall be set and disclosed according to the guidance and examples given by relevant global frameworks, such as SBTN (Step 3 - Measure, Set & Disclose Targets), TNFD (component P1 and P2 & Annex 5, sector guidance and guidance on Target Setting) & resources by World Economic Forum Nature-Positive Transitions.			
Survey	Witten/Herdecke University	Academia	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	My proposal would be to not include such datapoint. Instead, there should be a paragraph in the application requirements, explaining that the adjusted pay gap is an important entity-specific information, which is often necessary to contextualise and enable understanding of the information provided by the unadjusted pay gap. Further this AR could remind the undertakings that the unadjusted pay gap needs to be appropriately disaggregated. Unadjusted and adjusted perspectives on pay gap have different purposes. The unadjusted pay gap - appropriately broken down by countries or areas of operations in line with ESRS 1 - provides general context and the information on how the undertaking is affected by systemic drivers of gender inequality. The adjusted pay gap is primarily an entity-specific disclosure. It is particularly relevant for complex companies to better understand where and how the pay gap manifests, and what are the specific drivers of it. There is no one 'standardizable' way to adjust the pay gap calculation. Such adjustments must consider the undertaking's specific context and circumstances and avoid 'overadjusting'. If the calculation controls for every source of difference between males and females in the workforce, then it would obscure the pay gap and its causes. Therefore, including a datapoint - whether mandatory or voluntary - on adjusted pay gap in the standards is problematic, because it is impossible to provide a standardised methodology. On the other hand, for many companies' information on adjusted pay gap is likely to be material, and therefore such information should be provided.			
Survey	Witten/Herdecke University	Academia	Germany	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	The removal of § 14 can be compensated without major efforts by adding a reference to SMEs in the description of the topics in ESRS 1, Appendix A, and in ESRS G1, paragraph 4. The removal of datapoint originally located in para 33(a) concerning average days it takes to pay an invoice, does not seem to be necessary for the reduction of burden. The undertaking would still need to collect this data to be able to meet the other requirements, in particular the calculation of the % of its payment aligned with its standard payment terms (in § 20(a)).

In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				
Survey	Witten/Herdecke University	Academia	Germany	33.S_1.	ESRS S1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I disagree	It is worth noting that despite welcome simplifications for the double materiality assessment, at least in the short term the reduction of the reporting burden faced by undertakings already reporting based on ESRS will not change significantly in the short term. This is due to implementing any changes at company level and additional coordination efforts with the auditor. Comment 2 (information materiality): Especially requirement to always report on S1-16 if S1 in general is material is counter intuitive to this. S1-16 could be easily mapped to sub-topics such as discrimination/harassment or child/forced labour. Using materiality of information as general filter makes sense if IRO mapping and information materiality can be really used. Comment 7 (list of sub-topics): AR 16 is now very confusing as no clear differentiation between sub-topic and former sub-sub-topic. This makes it hard for companies to really identify the material topics on a detailed level. The sub-topic level should be deleted, and sub-sub-topics should become new sub-topics. No mingling of the two levels.

Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	The official introduction of the net approach is highly welcome. However, excluding all mitigation actions in the reporting period from the assessment of impacts could result in companies reporting many potential negative impacts that are, in reality, non-material due to low likelihood and severity. Information overload, comparability difficult. Instead, we recommend that mitigating and remediating actions always be factored in to provide useful information to users. Remediation and mitigation actions there were decided and implemented during the reporting period to address actual negative impacts, could already have a mitigating effect on the underlying negative impact. If the company can prove that these actions have already an effect in the reporting year, company should be allowed to consider the actions. Similar to financial reporting, a provision has also to be evaluated including counter measures that influence the provision value at the end of a reporting period. We also disagree with the proposal that significant ongoing mitigation and/or prevention actions needed to contain the severity and/or likelihood of occurrence of a potential impact below a materiality level, should not be taken into account when assessing the impact. This could lead to over-reporting, as many impacts may appear material, when in fact they are under control. If mitigation measure can be taken into account for impacts, they should also be considered for risks.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	We generally welcome the increased flexibility introduced through the proposed amendments to the ESRS Sustainability Statements. The possibility of including an executive summary and the emphasis on using appendices to separate detailed information from key messages are helpful to improve readability and structure. However, we understand these changes primarily as clarifications rather than substantial simplifications. From our perspective, they do not result in significant relief in terms of implementation effort or reporting complexity.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	The restructuring of the architecture and the clarified interaction between ESRS 2 and the topical standards enhance the overall readability and usability of the standards. The simplification of the General Disclosure Requirements (GDRs), the reduction of mandatory datapoints for policies, actions, and targets (PATs), and the removal of overlapping topical specifications contribute to a clearer and more accessible framework. In particular, the shift towards a more principles-based approach and the ability to report PATs at a higher aggregation level reflect a pragmatic and proportionate response to the challenges identified during the first-time application. This supports more effective and relevant sustainability reporting while maintaining the necessary level of comparability and transparency. These changes reduce complexity and duplication, making it easier for preparers to navigate the requirements and focus on material information.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We broadly agree that the proposed amendments will improve the clarity and accessibility of the ESRS. The removal of "may disclose" datapoints and the clearer separation between mandatory and non-mandatory content contribute to a more structured and comprehensible standard. These should be avoided in order not to create confusion and avoid misunderstandings with the auditors. The revised layout – particularly the relocation of mandatory Application Requirements, directly under the relevant Disclosure Requirements – makes the legal text easier to follow and reduces the need to navigate back and forth within the document. However, while the structure and readability have improved, the overall reporting requirements remain largely unchanged. As such, the simplification primarily supports better orientation within the standards rather than reducing the reporting burden itself. Moreover, we would like to flag that new mandatory disclosures have been added – clearly against the request of the EU Commission and the aim of the revision to reduce reporting burden. Additional mandatory data points should be avoided.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We consider the introduction of the Non-Mandatory Illustrative Guidance (NMIG) and its exclusion from the main body of the standards a useful structural change to the ESRS framework. The separation of mandatory and non-mandatory content improves the structure and readability of the standards. NMIG can serve as an orientation tool by illustrating how disclosures might be structured or interpreted in practice. However, it needs to be ensured that the non-binding nature of NMIG is clearly communicated and consistently understood by both preparers and auditors. There should be no implicit expectation that the examples provided must be followed or a justification be given if the examples are not applied. An explicit statement saying that the NMIG cannot be used for audit purposes and the separation of the NMIG from the legislative text would support this. In particular, this affects the mapping proposal between sub-topics and disclosure requirements in the NMIG. So far, a mapping concept under ESRS 1 is still missing leading to different interpretations on preparer and auditor side.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We generally welcome the proposed burden reliefs as a meaningful step toward reducing the complexity and effort in ESRS reporting. To No. 1: The introduction of the "undue cost or effort" relief is particularly valuable offering preparers a practical way to justify omissions or limitations when data collection would require disproportionate resources. However, it may increase the burden of proof if auditors challenge whether sufficient effort has been made to fulfill reporting requirements. To No. 4: We support the option to exclude activities from the calculation of metrics that are not a significant driver of IROs. This could potentially reduce the burden to collect data for small activities that do not influence IROs. Comment on 17.4: Why can joint operations only be excluded for environmental metrics and not also for social metrics if operational control is not fully given? To No. 6: The amendments made to the anticipated financial effects do not solve the issue of data availability and reliability, as assumptions for this data point will vary so widely that any comparison between companies would be misleading. All datapoints on anticipated financial effects should be deleted. To No. 7: We welcome the proposed relief for acquisitions. However, the one-year timeframe for integrating a subsidiary for sustainability reporting purposes could be insufficient and unrealistic. Greater flexibility should be offered to disclose metrics once the subsidiary is fully integrated.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	We consider the proposed relief to be a practical and necessary addition. It acknowledges the real-world limitations many preparers face, especially in complex areas such as value chain reporting. The relief ensures that data collected for reporting is robust and reliable. Forcing the collection of weak data does not contribute to 1) high quality reporting, 2) comparability, 3) avoiding legal risks linked to the disclosure of unreliable metrics and 4) might lead to distorted or misleading representation of the actual information. The relief also helps companies to tackle the current lack of methodologies for calculating some indicators and bridge preparers to the time when methodologies will be available. It is also important to note that many Wave 1 undertakings will benefit only to a limited extent from this relief. In many cases, data collection approaches – often based on workarounds – have already been agreed upon with auditors and implemented. Continuing with these established methodologies may require less effort than reassessing and justifying the application of the new relief.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	We disagree with both proposed options. The disclosure requirements on anticipated financial effects should be deleted completely. 1. There exists no accepted and generally used method to calculate anticipated financial effects. ESRS 2 does not give any guidance on how to calculate the financial effects. It remains unclear what the basis for the calculation of the financial effects should be (planning data or the data from the last financial year) or which granularity is required regarding the effects on financial position, financial performance and cash flows. There is currently no reliable method to link specific sustainability-related risks or opportunities to financial metrics like assets, liabilities, or revenue. Without this linkage, even qualitative disclosures carry significant legal uncertainty and risk of misinterpretation. 2. Some material risks and opportunities cannot be quantified, for example reputational risks. 3. In many cases the effects of material risks and opportunities cannot be identified separately. E.g. the financial effect of higher competition in a specific market cannot be separated from general economic influences, or the effect of changes in the portfolio or pricing. This results in a very high level of measurement uncertainty, potentially giving users a wrong picture about the issue. 4. Mid-term and long-term financial effects of risks are usually mitigated (completely or at least to some extent) by measures decided and implemented by the preparer during a later point in time and not necessarily during the reporting year. This leads to a situation where the anticipated financial effects must be reported without highlighting measures the preparer would implement to mitigate them. This will give users of the reports a wrong impression regarding the financial effects. 5. Comparability is limited due to unclear guidance on the methods to be used for calculating the effects and the level of detail for such disclosures.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	Disclosing the monetary and percentage exposure to physical risks without considering adaptation measures is problematic. It involves high uncertainty, may overestimate risks, and could discourage proactive resilience efforts. Disclosures should account for adaptation actions to reflect a more accurate risk picture and encourage companies to invest in climate resilience. Adaptation measures often cannot reliably be directly linked to specific assets. Doing so would require enormous effort or result in imprecise data that offers little value. Therefore, a one-to-one attribution is neither practical nor feasible. It is nearly impossible to reliably calculate the monetary amount and percentage of net revenue at risk from physical climate impacts before considering adaptation measures. The complexity arises from the high uncertainty of climate projections, the difficulty in quantifying future physical damages, and the challenge in accurately modeling how risks will evolve over time. Additionally, the lack of standardized methodologies and reliable data further complicates such estimations. Estimating the monetary and percentage impact on net revenue from transitional risks before considering mitigation and adaptation measures is highly challenging. Given the high uncertainty surrounding future policy changes, technological developments, and market shifts, it is more meaningful to incorporate measures into the assessment. Disclosing risks without accounting for planned actions may be misleading and fail to provide an accurate picture of the true risk exposure. Providing a detailed breakdown of the carrying amount of real estate assets used as loan collateral by energy-efficiency classes is challenging and not practical. Detailed classification requires extensive data collection and consistent assessment methods, which are resource-intensive and result in inconsistent/unreliable information. Identifying potential liabilities from climate transition risks that do not meet current recognition criteria is challenging due to inherent uncertainties. Such liabilities depend on future developments and may not be reliably quantifiable or recognizable in the financial statements at this stage.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	Some relief provided, but the wording in the context of disclosure following the operational control approach is very vague and hence might be part of discussions with auditors (e.g., when is it needed for "fair representation"; what is the definition of that in this context etc). We would like to ask EFRAG to clarify this and in particular to emphasize that it is a "may"-disclosure. We support referencing SASB Standards and IFRS Industry-based Guidance as sources of disclosure to enhance transparency and interoperability with ISSB. Provide an interoperability mapping showing, datapoint by datapoint, how ESRS requirements correspond to IFRS S1/S2.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I disagree	We acknowledge and welcome the improved structuring and consolidation of the ESRS requirements. The clearer separation and grouping of datapoints, especially the removal of voluntary datapoints and the streamlining of narrative PAT disclosures, enhances the usability of the standards. However, we would like to emphasize that the reduction in the number of datapoints does not necessarily translate into a proportional reduction in the substantive reporting scope or effort. In our view, the overall scope and complexity of the disclosures remain largely unchanged. Many changes seem to be cosmetic without changing the underlying substance of the disclosure requirements. The deletion of datapoints primarily affects how requirements are presented, not what is required. This means that preparers will still need to collect and disclose a substantial amount of data, and the core reporting obligations are largely preserved. We do not expect a significantly reduced reporting volume under the amended ESRS. Instead, the changes may help reduce effort in documentation and coordination with auditors. For example, the introduced options for burden reliefs may simplify internal discussions and reduce the need to justify the omission of non-material items. It is important that this distinction is clearly communicated: while the number of datapoints has decreased, the underlying disclosure obligations remain intact. This will help manage expectations and avoid misinterpretations regarding the actual simplification impact of the amendments. Moreover, we do have concerns regarding the new mandatory disclosure requirements that have been introduced and would suggest deleting them all to fulfill the purpose of the revision of the ESRS.

Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	We strongly disagree with the introduction of new mandatory datapoints as this will result in a significant burden increase. In detail regarding ESRS G1 Business conduct–Training of procurement team (Amended ESRS G1 paragraph 10 (c)): The new wording could be challenging with view to the IRO mapping process, as it fails to clearly indicate which sub-topic G1-2 Paragraph 2 (c) relates to. Therefore, a more distinct division into the sub-topics is necessary. Especially, the disclosure requirement regarding the procurement team should be separated as it refers to the topic management of relationships with suppliers.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	We strongly disagree with the introduction of new mandatory datapoints as this will result in a significant burden increase. In particular: E5-4: Information on the percentage of total weight that are critical and strategic raw material is considered highly sensitive information which should not be part of sustainability reporting disclosure. Further, there are other new (or significantly amended) mandatory datapoints in the context of E5-4 which are not mentioned by EFRAG in this question (E5-4-31a and b) which may cause additional efforts especially since there is no clarification whether a net-approach may be followed here (e.g. omit disclosure on clippings/scraps for manufacturing companies).			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We welcome the explicit inclusion of the fair presentation principle within the ESRS, as it reinforces the standards' purpose of supporting relevant, decision-useful sustainability reporting rather than checklist-driven compliance. This principle should ensure that only material information is reported. By emphasising fair presentation, the ESRS framework encourages preparers to exercise professional judgment, prioritizing disclosures that truly enhance transparency and accountability. This reduces unnecessary reporting efforts, especially when justifying the omission of non-material datapoints. This will also help the auditors to implement a pragmatic approach regarding the assurance of the sustainability statement. However, the "fair presentation" concept needs a precise definition to avoid subjectivity and minimize audit burden. Clearer definition is needed to avoid unnecessary discussions with the auditors.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I partially agree and partially disagree	Agreement: Data is usually available when collecting the related data points. Disagreement: Top 10 countries are overdone as not all companies are active in so many countries and information might not lead to information-material insights. Top 5 countries should be sufficient. In general, a 10% threshold is the usual way to approach such reporting. Not mandatory to change this, but possible.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree	Alignment with existing ILO declaration does make sense.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	We should always consider the importance of feasibility and coherence in reporting according to different legislations. Removing some of the SFDR datapoints is clearly appropriate, the ESRS simplification will need to be coordinated with the review of the SFDR.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	Yes, AR 26 could be reviewed. But please make clear that the examples in AR 26 should only be seen as such.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	Agreement: We think it is correct to delete the voluntary datapoint and to align with the EU Pay Transparency Directive. Disagreement: We are still missing total alignment with the EU PTD with regards to the salary/wage components. This might lead to different calculation approaches, especially when the EU PTD is translated differently in the member states.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree	We agree: The current replacement/formulation is sufficient to meet the objectives of the CSRD in respect to the protection of SMEs.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	The willingness for practical considerations related to DMA is well perceived, however due to the unclear, adjusted DMA approach (e.g. mixed sub-topic/sub-sub-topic level, impracticable solution for the net evaluation of IROs) and due to the high level of disaggregation required, the resulting reporting would probably not contributing to the core objectives of the European Green Deal.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	The revision of the ESRS 2 is not sufficient to reduce the reporting volume and the reporting burden significantly. Many proposed changes to ESRS 2 disclosure requirements are only cosmetical and do not change the substance of the reporting. Furthermore, merging several datapoints is not a reduction. We object the introduction of new reporting requirements in comparison to the current ESRS Set 1.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The ESRS revisions are not satisfactory overall. Although some areas have been shortened and disclosure obligations have been eased, some data points have been added or tightened further. We do not see any general simplification of the disclosure requirements. There is currently no balance. The European Green Deal can be better pursued with fewer but more precise requirements.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	33.S_1.	ESRS S1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. I partially agree and partially disagree	The exposure drafts reduce the volume of the S1 significantly, especially redundancies. Unfortunately, the associated efforts are not being reduced proportionally. The change in nomenclature alone is now leading to high implementation efforts. The new structure could lead to confusion with view to the IRO mapping. The categorization into sub-topics is less consistent. They should be fully distinct and clear and not mixed between previous sub-topics and sub-sub-topics. Also S1-16 should be a data point that can be mapped and should not be material of its own. Further comments can be found in the Excel spreadsheet.

I partially agree and partially disagree	The reductions in ESRS G1 are reasonable. However, the new structure could lead to confusion with view to the IRO mapping. The categorization into sub-sub-topics is less consistent, for example, regarding the sub-topic 'corruption and bribery' and the previously more clearly separated sub-sub-topics 'prevention' and 'incidents'. It would be helpful for a granular and effective materiality assessment if the topics were subdivided more distinctly again. Further comments on specific disclosure requirements of ESRS G1 are included in the attached Excel template.			
Survey	BMW AG	Preparer (non-financial preparing a sustainability report)	Germany	33.Glossary.	Glossary:33. Overall feedback per standard The 12 ESRS Standards have been simplified. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	Particularly in the Environmental standards, the standards now increasingly refer to other EU directives and laws. Unfortunately, we could not recognize any convergence in the glossary. Definitions differ greatly from existing definitions from other regulations. This complicates the collection and coordination effort enormously and sometimes leads to extra effort being incurred and the existing definitions cannot be used. It would be desirable to standardize the definitions in the glossary with definitions in existing regulations and laws. E.g., the definition on sustainable sourcing in the glossary should be revised again with a focus on more clarity and auditability of the required information.			
Survey	Schwanhäußer Industrie Holding GmbH & Co KGGroup	Preparer (non-financial preparing a sustainability report)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Wave 2 preparers are still in the midst of gaining experience with the ESRS – both regarding the metrics themselves, the related data collection processes, and the interactions with auditors. Many entities are currently managing the first-time implementation of the initial ESRS set, leaving only limited capacity to simultaneously engage with the proposed revisions. This situation should not be seen as a disadvantage, but rather as an indication that the perspective of these practitioners is essential for ensuring the standards remain practicable and proportionate. We therefore strongly advocate for a continued focus on practical feasibility and for a strong inclusion of practitioner insights in the ongoing standard-setting process. The reinforced role of materiality as a general filter (para. 21(a)) could inadvertently increase compliance burdens and trigger extensive auditor discussions, particularly regarding what information is deemed "necessary for users to understand." We anticipate this may broaden the required disclosures. To preserve relevance and proportionality, the principle of decision usefulness should remain the key reference point, rather than an overly broad interpretation that may lead to extensive listings of information without real relevance for business decisions.			
Survey	Schwanhäußer Industrie Holding GmbH & Co KGGroup	Preparer (non-financial preparing a sustainability report)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	We note that the new guidance on how to consider remediation, mitigation and prevention actions ("gross versus net") risks expanding the reporting workload and triggering additional audit debates unless it is made highly operational. The treatment of potential impacts remains a particularly contentious area that may lead to oversteering. It should be recognised that many companies — especially in the Mittelstand — operate in highly regulated environments in the national markets they serve. Therefore, it is important to avoid creating "gross" scenarios and apparent "red flags" where risks are in fact effectively managed through established controls. Stakeholders from mid-sized companies generally favour a simple, proportionate and pragmatic approach that reflects the actual business reality rather than hypothetical extremes.			
Survey	Schwanhäußer Industrie Holding GmbH & Co KGGroup	Preparer (non-financial preparing a sustainability report)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	We genenerally welcome flexibility to achieve more relevant and concise reporting and to improve connectivity with corporate reporting. In particular, providing illustrative templates would reduce audit debates, especially for mid-sized companies with limited resources.			
Survey	Schwanhäußer Industrie Holding GmbH & Co KGGroup	Preparer (non-financial preparing a sustainability report)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	The significant reduction of mandatory PAT datapoints and the removal of detailed cross-references are helpful steps that will make reporting more manageable for mid-sized groups. However, to ensure that simplification is achieved in practice, we encourage EFRAG to provide illustrative examples of how principles-based PAT disclosures can meet assurance requirements, particularly for companies with decentralised structures and limited central resources. It is essential that the shift away from detailed prescriptions does not result in new uncertainty or re-interpretation through assurance processes. We therefore strongly welcome this direction but ask for continued emphasis on clarity, proportionality, and practical feasibility in the application of PAT disclosures.			
Survey	Schwanhäußer Industrie Holding GmbH & Co KGGroup	Preparer (non-financial preparing a sustainability report)	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We generally welcome the clearer separation of mandatory and non-mandatory disclosure requirements. This structural streamlining will help Wave-2 preparers with limited resources to understand and apply the ESRS more efficiently and to align internal documentation and audit preparation accordingly. Application Requirements should remain concise and strictly limited to "how to disclose" guidance, avoiding a re-introduction of prescriptive elements through interpretive wording.

Survey	Schwanhäußer Industrie Holding GmbH & Co KGGroup	Preparer (non-financial preparing a sustainability report)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We welcome the introduction of the "undue cost or effort" relief as an important step toward proportional and practicable reporting. For many mid-sized groups, the main challenge lies not in willingness but in data availability. The relief enables companies to provide transparent, good-faith disclosures without overstretching limited resources. To ensure consistency and avoid uncertainty in assurance, we encourage EFRAG to provide clear interpretive guidance and illustrative examples on how this relief can be applied in practice. It should be emphasised that using partial data is fully compliant when justified by undue cost or effort, and that progress expectations remain reasonable rather than time-bound. We therefore regard this provision as a cornerstone of proportionality for Wave-2 preparers and a prerequisite for meaningful, sustainable implementation of the ESRS. However, financial effects disclosures remain problematic due to the fact that they are not necessarily integrated in business systems. All data points related to the quantification of anticipated financial effects should be deleted to ensure the amendments deliver effective relief.			
Survey	Schwanhäußer Industrie Holding GmbH & Co KGGroup	Preparer (non-financial preparing a sustainability report)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	Yes, we agree. The undue cost or effort relief and the ability to disclose metrics on a partial scope strike the right balance for mid-sized preparers—provided assurance practices explicitly recognise such disclosures as fully compliant. We recommend adding lean safe-harbour guidance (sectoral examples, acceptable proxies) and requiring concise progress updates rather than fixed time limits, to avoid excessive justification effort while ensuring continuous improvement.			
Survey	Schwanhäußer Industrie Holding GmbH & Co KGGroup	Preparer (non-financial preparing a sustainability report)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	We support Option 2, as it provides an appropriate and proportionate approach for mid-sized preparers that are not subject to IFRS reporting. For many such companies, methodologies to quantify the financial effects of sustainability topics are not yet mature, and a forced quantification would risk producing speculative or misleading data.			
Survey	Schwanhäußer Industrie Holding GmbH & Co KGGroup	Preparer (non-financial preparing a sustainability report)	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	Companies might already habe a CatNat analysis of their assets for insurance purposes. On that basis, we consider the quantitative modelling foreseen in ESRS E1 paragraphs 40 (a)–(d) as redundant and not decision-useful. Deriving global estimates for asset damages or revenue at risk would involve multiple layers of assumptions and high uncertainty, without improving risk management or stakeholder insight. We therefore recommend that companies be allowed to rely on existing, insurance-based or equivalent analyses to meet the disclosure objective, and that qualitative descriptions of exposure and resilience be deemed fully compliant for preparers of our size and structure.			
Survey	Schwanhäußer Industrie Holding GmbH & Co KGGroup	Preparer (non-financial preparing a sustainability report)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Schwanhäußer Industrie Holding GmbH & Co KGGroup	Preparer (non-financial preparing a sustainability report)	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	Yes, with conditions. We welcome the substantial reduction in mandatory datapoints, which meaningfully lowers effort for Wave-2 preparers while preserving core objectives. To ensure the intended simplification materialises in practice, we ask EFRAG to: (i) confirm that qualitative, decision-useful disclosures are acceptable where robust quantification is not feasible; (ii) prevent re-prescription via Application Requirements or assurance expectations; (iii) publish a clear mapping from deleted to retained datapoints to avoid "shadow" re-introductions; and (iv) most importantly clearly reaffirm and make it absolutely clear that information materiality is the decisive filter.

Survey	ITALIAN FOUNDATION FOR BUSINESS REPORTING (O.I.B.R.)	NGO	Italy	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Despite many commendable specifications and the effort to make the sustainability statements closer to financial statements ("fair presentation principle"), there are still points for consideration. An important general orientation should be that of diminishing the possible friction points between companies and auditors. Another "polar star" should be the consistency with the indicators used by hard scientists to determine the planetary boundaries and their possible trespassing. A further important general element to take into account is the consistency with other indicators and onformation required in other parts of the EU legislation, such as EcoLabel, EcoDesign, and Waste and Circularity. The impression is that sometimes these diverse legislations do not speak to each other, and require disclosures to companies that are not always aligned. Looking more at detailed provisions linked to DMA, the definition of information materiality should be better explained. In particular, the points a) and b) can be more adequately amalgamated to avoid possible confusion. The introduction of decision usefulness is fine (point a), but its relationship with the "understanding" (point b) should be given a better thought. The choice left between top-down or bottom-up approach can be easily a source of disagreement between companies and auditors. If technically both approaches produce the same results (as stated in AR 17/ESRS 1), probably it is worth considering to give prevalence to one of the two. In interoperability terms, we would like to note that, while the concept of non-obscuring is aligned in principle with the ISSB Standards, the ESRS draft introduces additional requirements and ambiguities that may: -Reduce clarity for investors (ESRS draft does not explicitly require that investor-relevant information be distinguished from broader stakeholder disclosures, potentially reducing interoperability), -Increase reporting complexity, and -Create potential conflicts with IFRS Industry-Based Guidance, which is EFRAG recommended for entity-specific disclosures.			
Survey	ITALIAN FOUNDATION FOR BUSINESS REPORTING (O.I.B.R.)	NGO	Italy	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	We think that the new Gros vs. Net provision introduces a new layer of complexity which we are not so sure contributes to lower down complexity. Assuming that Gros could be the basic level, companies could be allowed/encouraged to show the amount of the reduction of the various impacts in the different situations.			
Survey	ITALIAN FOUNDATION FOR BUSINESS REPORTING (O.I.B.R.)	NGO	Italy	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	ITALIAN FOUNDATION FOR BUSINESS REPORTING (O.I.B.R.)	NGO	Italy	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	Even though we agree in general terms with the work carried out, we point out that there are still some exceptions which can create confusion and potential conflicts between companies and auditors. These are: - ESRS 1, para. 48, and related application requirements which introduce measures through which "the undertaking may avoid unnecessary complexity"; - AR 17 states that "The undertaking may adopt a top-down or a bottom-up approach to perform its materiality assessment". Also AR 18 provides room for ambiguity "Unless more investigation is necessary...". We would recommend EFRAG a further effort of elaboration to reduce these possible points of ambiguity and conflict.			
Survey	ITALIAN FOUNDATION FOR BUSINESS REPORTING (O.I.B.R.)	NGO	Italy	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ITALIAN FOUNDATION FOR BUSINESS REPORTING (O.I.B.R.)	NGO	Italy	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	Despite we believe that has been done a good work in these field, we note that in interoperability terms the simplified ESRS propose introducing additional reliefs beyond those currently available under the ISSB Standards. For example, a new relief is proposed for acquisitions and disposals occurring within the reporting period. The draft also extends existing reliefs, such as the allowance to use "undue cost and effort" for the disclosure of metrics related to an entity's own operations. We observe that, while these measures aim to reduce reporting burden, any additional or extended reliefs create potential complexity for entities that report under both ESRS and ISSB Standards. In particular, the proposed relief for acquisitions and disposals introduces differences in the organisational reporting boundary compared with the financial statements. This divergence may make it more challenging for entities to maintain consistency and connectivity between sustainability disclosures and financial statements when applying ESRS alongside ISSB Standards. Overall, the introduction of new or expanded reliefs in ESRS, while beneficial in reducing immediate reporting burden, increases the risk of misalignment with ISSB Standards and could imply dual reporting efforts for companies.			
Survey	ITALIAN FOUNDATION FOR BUSINESS REPORTING (O.I.B.R.)	NGO	Italy	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				
Survey	ITALIAN FOUNDATION FOR BUSINESS REPORTING (O.I.B.R.)	NGO	Italy	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	Even if we agree with Option 1, we can't avoid to observe that in interoperability terms both Options presents some issues. Indeed, in both options there are aspects that could hinder interoperability with IFRS Sustainability Standards. Option 1: unlike IFRS S2, the exemption relating to the availability of skills, resources, and capabilities is not included. In addition, the relief available under the ISSB Standards allowing entities to omit information on anticipated financial opportunities considered commercially sensitive (as set out in IFRS S1) has not been carried forward in the draft simplified ESRS. Option 2: Companies would not be required to provide quantitative information on anticipated financial effects. This would significantly weaken interoperability with the ISSB Standards and would make information important to investors non-mandatory. It would also create an additional burden for companies needing to comply with both ESRS and ISSB Standards, as the absence of quantitative disclosures in the ESRS would result in omissions relative to the global baseline established by the ISSB. The suggestion is here to take Option 1 and make an effort to preserve interoperability with IFRS S2 by further changing the ESRS.			
Survey	ITALIAN FOUNDATION FOR BUSINESS REPORTING (O.I.B.R.)	NGO	Italy	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	In the previous responses, we have already provided detailed examples of potential lack of interoperability with IFRS SUstainability standards, and namely in responses # 11, 17, and 19. We would like to point out another technical issue in interoperability terms which should be considered. As to GHG emissions, the draft simplified ESRS goes further by mandating the financial control boundary for GHG measurement. In addition, it introduces a secondary requirement: if the financial control approach does not provide a fair presentation, Scope 1 and 2 emissions should also be disclosed on an operational control basis, as defined in the GHG Protocol. This dual requirement does not align with the GHG Protocol (required by IFRS S2), which stipulates that entities should adopt a single approach (equity share, operational control, or financial control). As a result, entities applying both ISSB Standards and ESRS may face unnecessary complexity and duplicative work, having to reconcile different approaches to emissions measurement. Aligning ESRS with the IFRS S2 approach - by simply referencing the GHG Protocol and allowing entities to choose among the established methods - would reduce the risk of inconsistency across the GHG Protocol, ESRS, and IFRS S2, while also easing the compliance burden for companies.			
Survey	ITALIAN FOUNDATION FOR BUSINESS REPORTING (O.I.B.R.)	NGO	Italy	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	ITALIAN FOUNDATION FOR BUSINESS REPORTING (O.I.B.R.)	NGO	Italy	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	ITALIAN FOUNDATION FOR BUSINESS REPORTING (O.I.B.R.)	NGO	Italy	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	The "fair presentation", which is in our view identical to the "true and fair view", is a principle that usefully helps connect the logic of financial and sustainability reporting. However, being a general criterion, it is unlikely that it can support a more effective concrete functioning of the materiality filter. It can help if it is clearly stated that companies have the unique responsibility in judging on the following aspects: a) Value chain areas where material IROs are likely to arise. b) The number of IROs identified and assessed. c) What constitutes "reasonable and supportable information available without undue cost or effort" In any case, the last concept under c) should be better substantiated with guidance and examples.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ITALIAN FOUNDATION FOR BUSINESS REPORTING (O.I.B.R.)	NGO	Italy	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We believe that similar types of arguments, once admitted, can be easily extended to other sectors. In this respect, the prospected financial institutions' privilege would be difficult to sustain vis-à-vis other industries.			
Survey	ITALIAN FOUNDATION FOR BUSINESS REPORTING (O.I.B.R.)	NGO	Italy	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	ITALIAN FOUNDATION FOR BUSINESS REPORTING (O.I.B.R.)	NGO	Italy	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		A comment on the Executive Summary proposed by EFRAG. Indeed, companies shall include an executive summary within their management report. To ensure comparability across entities and in the contents of the Summaries, we would like to strongly recommend that the Integrated Reporting Framework be referenced as primary guidance for preparing these summaries, providing a consistent approach to content and presentation. It is well known that the IR Framework is already used by +3,000 organisations around the world to provide this type of integrated summary information, and then it would represent a useful and handy reference point for EU companies (>500 groups already adopts voluntarily this Framework)			
Survey	CCOO	Trade union	Spain	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Double materiality is essential and must remain at the heart of the ESRS framework and European Union sustainability regime for corporate reporting to be credible and useful. The principle of "materiality of information" is concerning since it introduces a further filter for companies to not report information. For example, it represents a step backwards from ID-177, which says that most S1 metrics must be reported if S1 Own Workforce is material. It is essential to maintain the principle of fair presentation in the reporting standards. It is positive that the revision of the AR 16 list of topics has maintained all of the sub-subtopics for S1 + S2. These are based on the list of social topics in the CSRD and should all be maintained. The emphasis on aggregation (as opposed to disaggregation) is concerning, as disaggregated information (both site-specific and country-specific) is key to understanding the distribution of IROs.			
Survey	CCOO	Trade union	Spain	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	It is important that companies report not just their net impact – the gross impact should be reported, and the recommended text preserves this principle.			
Survey	CCOO	Trade union	Spain	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	The proposed changes are helpful. However, para 113 is difficult to understand: "113. If the description of the material impacts, risks and opportunities prepared in accordance with [Draft] Amended ESRS 2 IRO-2 is not presented alongside the respective policies, actions and targets, the undertaking shall make explicit which policies, actions and targets relate to which material impacts, risks, or opportunities, in accordance with paragraph 22." Para 22 addresses the issue of appropriate aggregation or disaggregation of information on material impacts, risks and opportunities and their management, without setting any rules regarding the location of such disclosures depending (or not) on the level of aggregation.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	CCOO	Trade union	Spain	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The Exposure Draft removes duplications between the cross-cutting and topical standards. The preservation of the 4-part architecture in the social standards is important to respect the distinctiveness of different affected stakeholder groups. However, we have two critical concerns. First, the original DR in environmental standards concerning screening of sites in materiality assessment were replaced by an application requirement to ESRS 2 IRO-1. This in effect makes transparency on this aspect optional. Consideration of local context is a key element of an appropriate materiality assessment. This should be both recognised in Chapter 3 of ESRS 1, and in ESRS 2 IRO-1, which should include an explicit datapoint on how the undertaking screened its locations and value chains. We welcome that E standards provide a clearer reference on the importance of disaggregation of disclosures, but this can only be done well if locations are properly screened. Second, we strongly recommend adding an explicit reference to the disclosure of relevant, entity-specific metrics directly in S standards. The fact that S2, S3 and S4 do not include any metrics should not imply that entity-specific metrics for S topics should not be disclosed.			
Survey	CCOO	Trade union	Spain	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	The "may" (voluntary) data points should not be eliminated. In many cases they are "shall" in GRI standards, so it is important to keep them to align with GRI standards. Also, many of them were originally proposed as mandatory by EFRAG to the EC. The first wave of reports show that many companies have reported some "may" data points. Retaining them would help ensure standardization/comparability between company reports. Almost all of the datapoints for non-employee workers are voluntary, thus most datapoints for this vulnerable group of workers has been lost. Also, important datapoints on full time versus part time workers has been eliminated.			
Survey	CCOO	Trade union	Spain	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	It is concerning that mandatory guidance in the Set 1 ESRS has been downgraded to "non-mandatory". Mandatory guidance is key to ensuring comparability and completeness of sustainability reporting. At a minimum, Non-mandatory Implementation Guidance (NMIG) should be included in the Delegated Act, and ideally called Mandatory Implementation Guidance. A major point of concern is that ID-177, which provided guidance that most S1 metrics should be reported if S1 Own Workforce is material, has now been downgraded into NMIG. Instead, EFRAG should preserve and promote the guidance that most S1 metrics shall be reported.			
Survey	CCOO	Trade union	Spain	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	As a whole the reliefs go too far, overshooting the balance between cost/effort and transparency. There is a danger of enabling green/social washing. The relief for "undue cost or effort" is too vague thus leaving too much room for interpretation. The relief for direct data for value chain reporting is too extensive, as direct data is key for transparency. The relief for reporting on operations which are not "significant drivers of IROs" also opens up too much leeway for interpretation.			
Survey	CCOO	Trade union	Spain	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	These combined reliefs overshoot the balance between transparency and cost/effort and risk enabling green/social washing. At a minimum, there should be a time limit introduced for these reliefs on value chain metrics			
Survey	CCOO	Trade union	Spain	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	The ability to estimate financial effects is critical for the undertaking's ability to integrate sustainability into its business strategy considerations, planning and risk management. It is also key for the determination of financial materiality, including in terms of overreporting topics as financially material. Reporting on financial effects is crucial to achieving the objective of putting sustainability reporting on the same level as financial reporting and integrating both. The European Union has recognised the value of a double materiality approach to corporate reporting which requires disclosure of both material environmental and social impacts, risks and opportunities as well financially material data, It is important to keep the requirement on businesses to analyse and understand the financial effects of their business model. This will ensure investors have access to credible data as well as providing the underpinning for future business planning.

Survey	CCOO	Trade union	Spain	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	ESRS reliefs should not go beyond those set in IFRS. The principle of fair presentation needs to be protected to provide transparency on all material IROs. As noted in the response to question 15, it is also important to consider interoperability with GRI when considering changes to the ESRS, rather than only considering ISSB's standards.			
Survey	CCOO	Trade union	Spain	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)				
Survey	CCOO	Trade union	Spain	22.ESRS2	Comments on deleted datapoints in ESRS 2	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	The reduction in the number of mandatory and voluntary datapoints goes far beyond striking an acceptable balance. As mentioned above, the voluntary datapoints should be maintained to provide alignment with GRI, which is currently in the process of strengthening its labor standards, as well as guidance and standardization for companies reporting more than just the mandatory datapoints. An explicit quantitative goal of 50%+ reductions was never set by the European Commission for EFRAG. A number of S1 datapoint metrics have been eliminated which should be reinstated: S1-5 Employees: gender breakdown for zero-hour employees S1-8 Diversity: age distribution; S1-10 Social protection: reinstatement of retirement S1-12: Training and development: gender breakdowns, S1-13 Health and safety: fatalities from ill-health for non-employees and other workers on site; S1-14 Work-life balance: employees that took family related leave;			
Survey	CCOO	Trade union	Spain	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Adding a datapoint on training of the procurement team is needed to support the implementation of human rights in the supply chain. The addition of a datapoint on confirmed incidents of bribery is needed to improve transparency on the effectiveness of bribery/corruption policies and measures.			
Survey	CCOO	Trade union	Spain	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Agree that the following mandatory datapoint should be added: ESRS 2 General disclosures – BP 1 the undertaking shall state that the general requirements of ESRS 1 have been applied for the preparation of its sustainability statement			
Survey	CCOO	Trade union	Spain	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	The "fair presentation" principle is essential to reduce the risk of green/social washing, as it emphasizes the full disclosure of all material impacts, risks and opportunities and their management. It is not understandable why this principle is under attack, as it is included as one of the general principles of the Accounting Directive.			
Survey	CCOO	Trade union	Spain	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	It is essential that financial institutions disclose absolute targets to assess how their strategies align with the economy-wide transition to net zero. Absolute targets are relevant for users of sustainability statements and for understanding the real-world climate impact of financed activities. While intensity measures provide insights into efficiency, they can mask rising absolute emissions in growing portfolios or sectors. Granting an exemption would also undermine fairness in a sector-agnostic standard. Other industries could equally argue for exceptions based on their own difficulties, reducing comparability across sectors. Moreover, absolute financed emissions are already recognised in existing standards and regulations: the SBTi financial sector net-zero standard, the UNEP FI/NZBA recommendations, and EU SFDR all require or encourage absolute emissions disclosure. Exempting banks would risk misalignment and reduce the usefulness of reported data for stakeholders, including asset owners who depend on it for their own disclosures.			
Survey	CCOO	Trade union	Spain	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	The "top 10" threshold for reporting country-level data on employment, collective bargaining and social dialogue is a major improvement over the current 10% employment threshold. An analysis of the first sustainability statements from Wave 1 companies shows that the current 10% threshold results in country-level disclosures on as little as 21% of total employees. More country-level information is needed to understand the distribution of impacts across countries, as well as whether employment thresholds for specific labour rights have been exceeded. The new threshold does not require additional effort/cost by companies, since they must gather country-level data anyways to calculate the global figures. Furthermore, it does not result in extra datapoints, since the information currently is (and can be under the revised ESRS) reported as one table.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	CCOO	Trade union	Spain	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	An analysis of the first year ESRS reports shows that most companies are simply reporting that they pay minimum wages, whereas the intention (as outlined in the ESRS Basis for Conclusions) is that companies should be enabled to disclose commitments to paying a wage "sufficient to support themselves and their families in dignity" as well as the extent to which they do this. This shows that the methodology for non-EU countries needs to be changed. Furthermore, the new ILO agreement on a methodology for living wages needs to be taken into account. While the proposed new methodology takes a step forward in both regards, two key changes are needed: The methodology for reporting on 'adequate wages' should measure actual wages against an adequate/living wage for all employees, not only those within the EU. In particular, for employees outside the EU, the methodology should allow employees' actual wages to be measured: A) against the local legal minimum wage only when this is set in line with the ILO principles on estimating living wages; or B) against living wage estimates that are set in line with ILO principles on estimating living wages. Companies should be able to rely on local legal minimum wages or living wage estimates when the authorities or organisations that set them provide public evidence of their alignment with the ILO principles for estimating living wages. Furthermore, the transitional provision for the EU needs to be reinstated, as not all Member States have transposed the Adequate Minimum Wage Directive.			
Survey	CCOO	Trade union	Spain	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	The new, simplified framework makes it easier for companies to report on these SFDR-related matters in a way that corresponds to how their policies are set. For users, this consolidation makes it easier to locate the relevant information. However, the SFDR datapoints are very helpful and should only selectively be amended.			
Survey	CCOO	Trade union	Spain	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	The unadjusted gender pay gap should be kept as mandatory, since the methodology for calculating it is clear. The adjusted pay gap figure as voluntary. In practice many companies are reporting both figures, which is useful for improved transparency. However, since the methodology for calculating the adjusted figure is not standardized, the unadjusted should be kept mandatory.			
Survey	CCOO	Trade union	Spain	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	From a trade union perspective, the deletion of former ESRS G1 provisions on "payment practices" represents a setback. Fair and timely payment to suppliers – particularly SMEs – is a core aspect of responsible business conduct and of the social dimension of sustainability. Replacing these datapoints only with general PAT provisions and a SME specification is not sufficient to ensure visibility and accountability. Delayed or unfair payment practices have a direct impact on SMEs' financial sustainability, their ability to maintain decent jobs, and the stability of working conditions across value chains. This issue is particularly relevant in Spain and other EU Member States where late payment remains widespread and has been repeatedly highlighted by social partners as a major obstacle for SMEs. The CSRD objective of protecting SMEs requires robust and specific disclosure on payment practices, including average payment times, compliance with national and EU payment deadlines, and measures to ensure fair treatment of suppliers. Without this, companies may obscure poor practices under aggregated disclosures, undermining comparability and accountability.			
Survey	CCOO	Trade union	Spain	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Impact of the various reliefs is concerning.			
Survey	CCOO	Trade union	Spain	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. I partially agree and partially disagree	The proposed "top 10" threshold for the reporting of country-level information for employee headcount, collective bargaining and social dialogue is a significant improvement over the current 10% employment threshold. Country-level information needs to be reported in more detail, and on other metrics as well, in order to have more transparency on the distribution of impacts across countries. In the metrics, voluntary datapoints need to be reinstated as well as the datapoints on gender breakdowns, workforce age distribution, etc. detailed above need to be reinstated. The proposed new methodology for adequate wages outside of the EU also needs attention, and the transition language for EU member states needs to be reinstated, since the Adequate Minimum Wage Directive has not been implemented in some Member States. We would also like to reiterate our longstanding demand for including franchise workers in the S1 definition of own workers, as well as the need for sector-specific standards to supplement the Set 1 sector-agnostic standards.

I partially agree and partially disagree	We are concerned that the loss of many specific datapoints related to workers in the value chain will mean that disclosures about material impacts, risks and opportunities become more generic and have less information about the specific stakeholder groups because specifications about the level of granularity have been deleted. Many of the points that are being deleted from ESRS S2 had originally been included because they reflected effective practice in relation to improving supply chain labour rights, for example, AR 6 awareness of the impacts on value chain workers from an undertaking's strategy or business model, AR 20 illustrating how the perspectives of value chain workers have informed specific decisions or activities of the undertaking and AR 25 which looks at retaliation and whether workers can use grievance mechanisms confidentially.
