Survey	Dutch Authority for the Financial Market (AFM	National supervisory authority & regulator	Netherlands	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	Dutch Authority for the Financial Market (AFM	National supervisory authority & regulator	Netherlands	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The AFM does not support the removal of mandatory datapoints in relation to transition plans, as we are of the view that transition plan reporting is crucial to sustainable investors. Par. 14 of ESRS E1 describes the required disclosures regarding a company's transition plan. This is one of the crucial elements of sustainability reports from the view of investors and most other stakeholders. It should be well fleshed out as the risk of greenwashing is very present in disclosures concerning a transition plan. Therefore, the AFM supports ESMA's suggestions regarding: a.clarifying in 14.a. that targets, decarbonisation levers or actions and resources are all necessary elements of the disclosed transition plan. b.broadening 14.c. to include all key assumptions underpinning the transition plan. This will also help to improve interoperability with IFRS S1.

I partially agree and partially disagree	Moving beyond location-centered disclosure: The AFM considers the topical standards E2 – E4 to be overly focused on location-specific disclosure. While identifying source locations of for example pollution provides key information, restricting the disclosures to areas near biodiversity sensitive areas (and many requirements restricted to own operations) or stressing the importance of site locations, does not sufficiently take into account that impacts can be far reaching (e.g. due to water flows) and often occur within the value chain rather than within the own operations.

I partially agree and partially disagree	The AFM would like to note that there is further room for simplification in the social topical standards. The AFM agrees with ESMA that certain reporting requirements within the topical standards can be further streamlined by eliminating duplications and requirements that are already covered by ESRS 2. We therefore would like to repeat verbatim ESMA's comments on this matter: "ESMA considers there is room for further simplification in S1-3 (Actions and resources related to own workforce), as ESRS 2, GDR-A seems sufficient to cover most information regarding a company's actions, and the associated resources, to manage the material IROs related to its workforce. As such, in S1-3 most of paragraph 19 could be removed to avoid adding narrative disclosures on top of those already envisioned by ESRS 2, GDR-A. However, ESMA suggests that the requirement to disclose how the company approaches situations where tensions arise between its actions to prevent, mitigate and remediate material negative impacts on its own workforce and other business pressures. The same consideration applies to S2-3 (Actions and resources related to value chain workers), paragraph 18, to S3-3 (Actions and resources related to affected communities), paragraph 16 and to S4-3 (Actions and resources related to consumers and end users), paragraph 15."

Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	Overall, we agree with the DMA simplifications albeit with key attention points. Given the high degree of judgement involved and potential audit difficulties, we recommend clarifying subjective terms such as "unless more investigation is necessary", "reasonable and supportable evidence", "unnecessary complexity", "limited" assessment may be "sufficient". We would also welcome further guidance in NMIG illustrating situations where a bottom-up complements top-down approach, helping to surface relevant issues that might otherwise be missed - especially in complex value chains or structures. While EFRAG's mandate does not concern assurance guidelines, they should align with revised standards and reflect process alleviations. We support placing materiality of information as a general filter. Nonetheless, we would welcome clarifications: -On the possibility to include non-material information when needed by "a specific user" (§108): how does this interact with the materiality filter and §21 (sustainability statement shall include material information), who qualifies as "specific user"? -on "general material information" (§49) and "general purpose sustainability statement". -On AR20 which introduces materiality presumption for ESRS 2 GDRs, conflicting with the principle that applies to the whole sustainability information. We suggest deleting AR 20. -On the application of §108, e.g. by encouraging listing within ESRS 2.IRO-2 table the non-material information and their location. Illustrations of "non-material disclosures that do not obscure material ones" could also be helpful. . The definition of positive impact (§ 37) fails to address actions on the undertaking's own negative impacts that go beyond legal compliance (e.g. offering attractive conditions to avoid staff shortages). We suggest clarifying that positive impact must be stakeholder-centric (e.g., remediation of third-party harm, community development with evidenced benefits on external parties, proactive initiatives such as subsidies, or impact-driven investments if material), rather than business-centric (internal improvements are risk mitigation).			
Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	We welcome EFRAG's effort to address the "gross versus net issue", an area where guidance is needed. However, Appendix C is complex. It contains inconsistencies, lacks clarity, opening varying interpretations. For example: -§34 excludes actions taken during the reporting period when assessing materiality of the impact, while Appendix C suggests otherwise. -Some people read that §35 appears to support a gross approach for potential negative impacts whereas Appendix C promoting a net approach. Others read the contrary. -The meaning of "significant ongoing actions" is unclear (eg. training people, equipment maintenance, compliance teams, etc.?). -The extent to which severity and likelihood of impacts should be reduced (for the actions to be considered) is not defined, and 'supportable evidence" requires high degree of judgement. -The interaction between (ongoing) actions and policies implemented through actions is vague. We recommend introducing a clear principle in the standard: the description of the impacts before taking into account remediation, prevention or mitigation actions is the basis for the materiality assessment and its related disclosures. This principle should apply to impact and financial materiality. We suggest being explicit on what constitutes mitigation vs prevention actions including whether time horizon (actions with long-term effects e.g. multi-year training programs, infrastructure upgrades) and value chain (actions beyond own operations) are considered in the remediation of negative impacts. The standard should clarify when a "net" approach would be appropriate, on exceptional basis, provided that such use is accompanied by transparency. Application requirements supporting this principle must be robust and field-test proof, and consistent with the core standard. Additionally, it should be clarified that indirect impacts from an actual should be considered even if the immediate negative impact is remediated. (e.g. an oil spill may be cleaned up, but ecosystems remain affected for years)).			
Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	Overall, we agree with the flexibility provided for companies when preparing their sustainability statement. While we agree with the possibility of including an executive summary, we ask EFRAG to clarify whether such a summary is expected to provide a balanced, true and fair overview of the sustainability statement, or to reflect a management approach telling the company's ESG story ? Does the latter could imply that the summary may present only those identified material IROs that are managed or embedded in strategy, while allowing other material IROs - still relevant but not currently monitored by management - to be omitted? We welcome the flexibility in §105 on the structure of the sustainability statement. We however ask EFRAG to clarify what "separate sub-parts" of the sustainability statement means (as opposed to "appendices"). Appendices are helpful but guardrails are needed to ensure their appropriate use. Information included in appendices shall still comply with the qualitative characteristics of information. The standard should specify what type of information is best suited for the body of the sustainability statement versus appendix (or illustrative guidance in NMIG). Regarding section 9.2 of ED ESRS 1, we support keeping cross-referencing to financial statements mandatory, rather than optional as proposed. Ensuring a high degree of connectivity between financial and sustainability information is paramount for the quality of information reported. Making such referencing voluntary would weaken the concept of "connected information" and reduce clarity and readability of sustainability statements.

Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	Regarding point 1, we generally agree with the simplification of narrative information – especially with the shift from MDRs to GDRs and the transformation of most topical DPs on PATs into NMIG. ESRS 2 and topical standards are also now better articulated without unnecessary redundancies. We agree with points 2, 3 and 4. We have reservations concerning point 5. We agree with the flexibility to aggregate IROs based on their nature and the level at which they are managed, for reporting on specific DRs, for example PATs, strategy and business model. To ensure consistency, we recommend clarifying in the standard the distinction between: -The description of IROs stemming from the DMA, which should appropriately reflect the underlying characteristics of the IROs as implied by §28(a) which refers to a "concise description of IROs". The IRO is the cornerstone of reporting, and any chosen level of aggregation should not obscure a clear understanding of the IRO itself. -The reporting of those IROs under specific DRs (e.g. PAT, SBM), which may be aggregated when appropriate (i.e their management through PAT and SBM can be disclosed with a management-level view: one PAT can cover several IROs).We also suggest that EFRAG provide illustrative examples of how IROs may be aggregated, based on management level or nature – and clarify how to report on material IROs that are not yet embedded in strategy or management. Moreover, considering aggregation of information other than those related to IROs, we suggest clarifying in the standard that any disaggregation of a KPI should not replace the required consolidated KPI (generic principle of ESRS 1 aligning sustainability statement with consolidated group). Instead, it should serve as complementary. This ensures users receive both a complete overview and relevant breakdowns, without compromising consistency or comparability across sustainability statements.			
Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	We welcome the reorganization of the standards which clarifies the distinction between mandatory and non-mandatory content and removes ambiguous "may disclose" provisions. This improves readability and simplifies the structure. We support the reduction of mandatory Application Requirements in the main body and the transfer of illustrative content to the NMIG. Refer to our comment below on NMIG.			
Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We overall agree with the illustrative content of NMIG, and its non-mandatory status. However, we seek clarification on the intended objective of the NMIG: is it meant to remain purely illustrative, or will it also address in the future implementation questions? Applying the standards in real-life scenarios will inevitably raise questions of interpretation and implementation. Existing guidance such as IG 1 on DMA and IG 2 on Value chain and EFRAG Q&As are widely relied upon in practice and regulators encourage their due consideration. Yet, their informal status creates uncertainty and limits enforceability. EFRAG should clarify both the NMIG's purpose and the due process for maintaining it. It is important to strike the right balance between clarity, responsiveness, and a clear and robust process to update the NMIG. We reaffirm that EFRAG is the legitimate body to provide interpretative guidance on the standards and this role should be formally entrusted to it. To ensure credibility and consistency, such interpretative guidance must also be developed through a clear and robust due process. The scope and legal status of such guidance - whether binding or not - must be explicitly clarified, as preparers and auditors need enforceable and reliable reference points. While most of the current NMIG content does not raise concern as it is illustrative, this may change should its scope evolves. Should future guidance include application or interpretative elements, its legal status will need to be reconsidered. Including such content in the Delegated Act would increase authority but reduce flexibility for updates. Finally, we recommend keeping definitions and methodologies within the core standard to ensure consistency and legal clarity.			
Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree	While it is up to preparers and users to indicate whether the proposed Amendments provide sufficient relief, we have concerns regarding the clarity and the consistency of the current proposals. EFRAG has indeed introduced several reliefs in ESRS 1 but how they will apply in practice and how they relate to each other raises many questions. First, we believe EFRAG should clarify how to apply the general "undue cost or effort" relief as the current proposal is conceptual and requires significant judgment from preparers, without auditors being able to assess its appropriate use. The boundaries of this concept are unclear, opening to varying interpretations. We recommend EFRAG list criteria to be considered to guide judgment, and clarify how they interact with those listed in FAQ 29 of the EC on the CSRD (2024) on what constitutes "reasonable effort" for reporting value chain estimates. We believe the undue costs or efforts should be also seen as a dynamic relief. While particularly relevant during the initial years of ESRS implementation, its use might be expected to gradually evolve over time as data-sharing practices improve and organizational maturity increases. Overall, the relief should be framed as a principle of last resort, supported by transparent documentation and subject to assurance. This will help maintain integrity of sustainability reporting while allowing for flexibility and progressivity. Besides, we recommend EFRAG explain the hierarchy, if any, between the different reliefs to clarify what corresponds to a practical application of the general "undue cost or effort" relief and what is an additional separate relief. This is necessary to understand under which specific circumstances each relief applies. It is also necessary to clearly state in ESRS 1 that using reliefs does not prevent the fair presentation of sustainability information. See also some further detailed comments in part 3.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	Consistently with the views expressed under question 17 above, we express concerns regarding the interaction of § 91 with the general relief relating to "undue cost or effort". In particular, it is unclear whether the relief for metrics presented under this paragraph and allowing to report only a partial scope is a practical application of the general relief presented under chapter 7.3 or not. It seems to refer more to "impracticability" which is a different concept from "undue cost or effort". It is therefore unclear under which circumstances such relief for metrics will be applicable. We suggest clarifying in the standard that the relief for partial scope disclosures is applicable when both direct and estimated data are not available without undue cost or efforts. It should not be used to justify the absence of information or to bypass the use of estimates. It is also unclear how this relief for metrics interacts with the relief on acquisitions granted under § 72 in ESRS 1. Does the relief allow deferral of the integration of acquired business even if the information is available without undue cost or efforts, or does it apply only if the information on acquisitions cannot be obtained without undue cost or effort? Besides, EFRAG should ensure that the relief, if any, applicable to the information on GHG emissions under DR E1-6, be presented in a clear and consistent way, which is currently not the case as the exception under § 91 contradicts § 87 (d). Under §87, the "undue cost or effort" relief seems to be, without further specifications, a general provision which would apply to all DRs, therefore including DR E1-6 GHG emissions. However, the relief in §91 on a partial scope explicitly states that this possibility is not available when reporting DR E1-6.			
Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	Our preference relies on the importance of preserving interoperability with IFRS SDS (cf. question 21) and promoting connectivity between financial and sustainability information (cf. question 13). In this context, we recommend: - ensuring full alignment with IFRS S1 and the related basis for conclusions, which allow to omit quantitative information when the undertaking does not have the skills, capabilities or resources to provide such information, which is, in our view, compatible in the European context. § AR 17 should also be redrafted to remove the illustration given under point (b) referring to business plans as it creates a difference with the wording under IFRS S1.38. Besides, the way this illustration is drafted refers primarily to the general "undue cost or effort" relief which is already recalled under AR 15 and which builds on the availability of reasonable and supportable information at the reporting date; - providing further examples in NMIG which could provide evidence on how to quantify anticipated financial effects. This would complement Option 1, helping to minimize complexity and enabling companies to better understand how to fulfill this requirement. We also suggest aligning this guidance with IFRS Foundation's educational material issued in August. We acknowledge the challenges for preparers of determining looking-forward (and thus uncertain) information and notably the difficulties in isolating the anticipated financial effects of a given material risk or opportunity. We therefore recommend making it clear that an undertaking has the possibility to report such effects at a higher level, consistently with the principles of ESRS 1 of aggregation/disaggregation, based on how the underlying material risk or opportunity is managed. Alternatively, it could be considered limiting Option 1 to climate-related anticipated financial effects for which the methodologies are the most mature, while applying Option 2 for other topics, at least for a limited period.			
Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We acknowledge the efforts made by EFRAG to align ESRS language and structure with IFRS SDS, including the systematic review of common provisions and the adjustment of the GHG emissions reporting boundary. However, we have identified areas where interoperability could be further enhanced (see below and other questions on fair presentation, anticipated financial effects, etc.). In particular, we note that the decision to adopt the financial control approach as presented under chapter 5 of ESRS 1 as the default organisational boundary, with some exceptions (leased assets, JVs), and an additional "fair presentation" layer based on operational control, may create practical inconsistencies with existing corporate targets or disclosures already aligned with the GHG Protocol or IFRS S2. Interoperability is a critical objective to reduce duplication of effort, ensure consistency for users, and facilitate assurance all the more for EU companies that have activities in countries outside EU where IFRS SDS have already been endorsed or are likely to be endorsed in the future. Divergences in fundamental parameters such as the GHG emissions boundary can undermine comparability across jurisdictions, limit the usefulness of joint interoperability guidance, and lead to double reporting burdens for companies. We therefore recommend that EFRAG further assess the interoperability impacts of the revised GHG emissions boundary choice. Undertakings should be permitted to select and consistently apply the GHG Protocol organizational boundary approach without mandatory double reporting, while maintaining transparency through clear disclosure of the approach selected. Furthermore, it is important to consider consistency across the E standards if changes are made to the organizational boundary, and to revise the approach in light of the ongoing revision of the GHG Protocol.			
Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	For all standards : Although the reduction in the number of datapoints such as the reported 68% decrease may seem substantial, it does not automatically result in a proportional decrease in the effort required from preparers or auditors. Many companies had not implemented all datapoints initially, and not all datapoints have the same level of complexity. More importantly, the core objective of sustainability reporting remains unchanged: to clearly articulate the company's sustainability strategy. Regardless of the number or granularity of datapoints, organizations must still undertake a deep exercise of translating their strategy into meaningful disclosures.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	Adopting fair presentation in preparing ESRS sustainability information may not necessarily enhance the effectiveness of the materiality filter. Fair presentation is sometimes confused with materiality, which highlights the need for a clear definition of fair presentation within the context of sustainability reporting. We do not believe that explicitly requiring to adopt fair presentation in preparing a sustainability statement would necessarily reduce the complexity of implementing ESRS as fair presentation comes in addition to compliance. A statement on ESRS being a fair presentation framework would first and foremost increase the entity's corporate responsibility. We recognize the difficulty of exercising judgement, especially for impact materiality where reporting practices are less established and because affected stakeholders could be fragmented. Besides, while the draft ESRS 1 and IFRS S1 are written in a fairly similar manner, in detail the description of what fair presentation requires for each reporting framework differs. Full alignment is indeed not achieved, particularly regarding IFRS S1.15 which implies the disclosure of additional information, where necessary, whereas the approach under ESRS 1 seems to be more restrictive, focusing – only indirectly – on entity-specific disclosures to complement the ESRS disclosure requirements. We therefore recommend strengthening the connection between fair presentation and the inclusion in the sustainability statement of entity-specific information by making an explicit link with § 10 of ESRS 1. EFRAG should also make it clear that such disclosures enhance – but not replace – the disclosure requirements in the ESRS, in order to achieve fair presentation. We also encourage EFRAG to develop illustrative guidance to further explain the concept of fair presentation, helping to avoid confusion with the materiality principle. Finally, we believe it is important to ensure consistency with the CSRD, which refers only to compliance at this stage.			
Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We would like to draw EFRAG's attention to the following points: Our response is based on the current state of the market and the methodologies used by financial institutions that would need more time to mature. As methodologies are developing and value chain information are expected to become more available and reliable overtime, such disclosure relief for financial institutions seems acceptable in the context of simplification of cost and effort dedicated to sustainability reporting and disclosure requirements. Meanwhile, specific guidance for financial institutions would be useful to promote comparability of the information. It is also worth noting that the EBA guidelines published in January 2025 are not prescriptive regarding the disclosure of GHG emission reduction targets in absolute value. Furthermore, the provisions of Pillar III disclosures on ESG risks (prudential reporting) allow for the disclosure of targets in intensity value only (which is also the practice currently observed in the European banking market).			
Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	Depending on the circumstances, this adjustment may either simplify or complicate reporting. We note that this change may result in some companies having to report information for additional countries. For example: depending on the geographical distribution of employees, this adjustment may either reduce or increase the number of countries for which detailed data must be disclosed. Illustration: A Group has 5,000 employees : 2,500 in country A, approximately 400 in each of countries B, C, D, and the remaining employees spread across many countries – each country having less than 50 total employees. Under the existing ESRS, the Group is only required to disclose country A resulting in very limited data by country. Under the amended ESRS S1, the Group would report for countries A, B, C, and D.			
Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	The objective of the DR remains (S1.32) to "enable an understanding of whether or not the undertaking's employees are paid an adequate wage." While we acknowledge that EFRAG has tried to simplify the process to determine the benchmark for an adequate wage outside of the EU, the proposed methodology allows for the use of a statutory minimum wage established by legislation or collective bargaining agreements which is reviewed and takes into account the ILO wage setting principles. We are concerned that the statutory minimum wage in some cases may be less than an adequate wage. As such, the information provided may not meet the objective of the disclosure requirement and may not result in achieving a fair presentation. More information may be needed to be disclosed to ensure transparency in the methodologies and data used. In cases where the statutory minimum wage is used, we believe it is essential to ensure full transparency. In addition, in our opinion, the hierarchy, methods of calculation and collection of data remain complicated. This may result in a heterogeneity in methodologies used and incomparable information across companies. In the short term, further clarification and guidance are needed to aid companies in implementing this hierarchy. Over the longer term, we recommend that EFRAG provides a list of tools or works with ILO to develop a tool which provides the living wage by country.			
Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	In general, we do not disagree with the way that the SFDR PAI have been incorporated into the amended ESRS. Regarding S1-13, the exclusion of other workers working on the entity's site from the count of fatalities due to ill-health may lead to an underrepresentation of the true impact of occupational health risks on these people. However, we understand that this information may be difficult to obtain and therefore do not disagree with the proposal to reduce the reporting burden.

Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree	The adjusted amounts for the gender pay gap metric is an important additional information for users to understand comparability across companies who operate in different countries but does not replace the official unadjusted metric. Amended ESRS 1.51 requires the undertaking to "aggregate or disaggregate the reported information to reflect the level at which significant variations of material impacts, risks or opportunities arise, such as by topic, sector, subsidiary, country, location, water basin, site, asset or other appropriate level of aggregation/disaggregation." As such, it is our understanding that the additional "may datapoint" is not necessary. The company would still need to provide this information to comply with the disaggregation requirement if significant variations of IROs arise by country, etc. We note this principle is also applicable for the total remuneration ratio in S1-15.			
Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	While we acknowledge the improvements brought to ESRS 1 regarding the reinforcement of the information materiality filter, the simplification of the DMA, the provision of several reliefs and the flexibility given to preparers in presenting sustainability information, we have identified several issues in the current draft which, if not solved before the delegated act enters into force, will limit the effectiveness of the proposed simplification measures and may create divergence in practice. We therefore urge EFRAG to amend its proposals notably on the so-called "gross vs net" approach as the current proposals bring more confusion than clarity. We also encourage EFRAG to provide additional application requirements especially regarding the general "undue cost or effort" relief to help preparers and auditors in exercising their judgment when implementing this critical simplification measure. Last but not least, as sustainability reporting under the ESRS is not as mature as financial reporting under GAAP, we encourage EFRAG to further explain what fair presentation means in practice. The coexistence of two sets of texts (ESRS and the EU Taxonomy) and two advisory bodies (EFRAG and the Platform on Sustainable Finance) complicates the application of simplifications for entities. Improved communication and coordination between these bodies are necessary to facilitate implementation and ensure regulatory consistency such as application of the same reliefs on acquisitions and disposals, and on partial metrics. Coordination and interoperability could also benefit other regulations and bodies, including on financial sector matters.			
Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	Overall, we welcome the simplification and restructuring work of ESRS 2 performed by EFRAG, in particular the emphasis put on relevant disclosures at an appropriate level of aggregation, the reduction of the overlaps between the different DPs as well as the revamping of the DRs and notably SBM-3, IRO-1 and IRO-2. In addition to (i) the restructuring of the architecture and interaction between ESRS 2 and topical standards (see question 14) and (ii) the relief for anticipated financial effects (see question 19), we have provided detailed suggestions and comments to further clarify the Standard in the Excel template.			
Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We welcome the simplification of the disclosure requirements but note that critical concepts such as the minimum features of a transition plan, the treatment of net-zero commitments, and the organizational boundary for GHG emissions require further clarification to ensure consistent application and interoperability. The inclusion of overall strategy compatibility with 1.5°C (beyond compatibility of targets) is conceptually valuable but introduces practical challenges in the absence of agreed methodologies. DR E1-1 - Transition plan for climate change mitigation: Since the decarbonization plans of the financial sector mainly rely on supporting their investments and financing, it is necessary to adapt the requirements for these plans to be qualified as transition plans by the ESRS. Specifically, the obligation to present a significant expense and investment plan is generally either non-material or non-relevant for this sector.

I agree	We acknowledge the improvements made, particularly through consolidation and clarification of pollutant and microplastic disclosures. However, despite improvements, reporting on substances of concern and substances of very high concern remains insufficiently defined. The new requirements introduce ambiguities that could lead to inconsistent application and limit comparability.

Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	33.S_4.	ESRS S4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				
Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	33.G_1.	ESRS G1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. I agree	We overall welcome the simplification and reorganization work of ESRS G1 performed by EFRAG, in particular the alignment of the structure with other topical Standards, which significantly enhances the readability and understandability of the Standard. Further clarifications could, however, be brought with respect to a targeted list of DPs in order to further reduce the complexity of implementing ESRS G1 and to ensure comparability in reporting. Detailed comments are included to that end in the Excel template.

Survey	Compagnie Nationale des Commissaires aux Comptes	Auditor	France	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Given that the consultation period on the ESRS revision overlaps with the preparation of sustainability information for FY 2025, we ask EFRAG to urgently specify in the basis for conclusions which amendments represent clarifications of existing requirements and could reasonably be applied when implementing Set 1, and which amendments introduce new or different requirements relative to Set 1. Besides, since there will be no adoption of sector-specific standards, we urge EFRAG to consider some "quick fix" measures to address specificities of financial institutions: -The concept of "value chain" is fundamentally different, with downstream VC encompassing business relationships with clients, investees, and portfolio-related matters, whereas most material IROs arise from this. We draw EFRAG's attention to the need for further clarification regarding the scope of financial institutions' VC. -The notion of "net revenue" was clarified in Q&A 482, we recommend including it in the simplified ESRS in order to have a harmonized definition. -Since the decarbonization plans of the financial sector mainly rely on supporting their investments and financing, it is necessary to adapt the requirements for these plans to be qualified as transition plans by the ESRS. Specifically, the obligation to present a significant expense and investment plan is generally either non-material or non-relevant for this sector. -See detailed comment in 33) Overall feedback for ESRS E1. -The references to GHG Protocol and PCAF raise questions because the two texts contradict each other particularly on the scope to be covered in the calculation of financed emissions. We therefore reiterate the need to clarify the link between these texts. Besides, we reiterate the importance to clarify the "minimum" / mandatory scope for calculating financed and insured emissions, considering the fact that there is no mature methodology for certain types of assets and underwriting activities (e.g. guarantees).			
Survey	FNADE - French waste management association	Business association (other than association of financial institution)	France	33.Glossary.	Glossary:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	The new definition of "recovery" proposed under the European Sustainability Reporting Standards (ESRS) excludes energy recovery from waste, limiting recovery strictly to material loops such as reuse, repair, and recycling. This exclusion represents a major conceptual break and fundamentally downgrades waste incineration with energy recovery (Waste-to-Energy – WtE) in the waste hierarchy. Currently, WtE qualifies as a recovery operation (R1) under the EU Waste Framework Directive if efficiency thresholds are met. This status, recognized for over 15 years across EU Member States, allows WtE facilities to report themselves as recovery in sustainability disclosures. The ESRS definition would force their reclassification as disposal, contradicting EU law and undermining the established hierarchy that ranks energy recovery above landfill. The consequences of this exclusion are significant: - It disregards WtE's role in the circular economy, undermining EU and national targets for landfill reduction and waste recovery. - It creates regulatory inconsistency with the Waste Framework Directive, which explicitly includes energy recovery as a form of recovery. - It removes incentives for technological innovation in decarbonisation, hydrogen production, and carbon capture. - It sends a negative signal to investors, despite the urgent need for modernisation and efficiency upgrades in aging facilities. Maintaining WtE as recovery is essential. These facilities complement recycling by treating non-recyclable waste and sorting rejects, while producing renewable energy that replaces fossil fuels and strengthens energy security. They also recover valuable materials such as metals and bottom ash for reuse, contribute to public health by destroying pathogens, and align with circular economy principles that include both material and energy recovery. Excluding energy recovery from ESRS recovery would create legal contradictions, weaken environmental goals, and harm investment. Recognising WtE as recovery ensures consistency with EU law, supports the circular economy, and contributes to climate and energy objectives.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We support the proposed updates to the ESRS and the increased flexibility in the DMA. We also welcome the optionality to conduct the DMA at a more detailed level. This is particularly relevant for companies also subject to the CSDDD, given the strong similarities between its impact assessment and the DMA. In the same vein, the two frameworks should be further aligned, especially on key concepts such as "value chain" and "chain of activities". This would enable companies to conduct a single assessment process, thus improving consistency and reducing duplication and administrative burden. We also call for clear guidance for auditors and assurance providers on how to assess streamlined reporting requirements, to ensure consistency and predictability. For example, there has been unclarity on efforts required to justify the materiality assessment, and more specifically the non-materiality of certain IROs. In our view, each undertaking should, based on its unique understanding of its strategy, business model and stakeholders' interests and views, determine which IRO is material and which is not. If well justified, this should be straightforwardly acknowledged by auditors. We are concerned by point 4, on the option to disclose non-material topics (ESRS 1, paragraph 108). If not properly designed, such flexibility may hinder data comparability and cause extra requests to companies. Hence, we recommend that additional nonmaterial disclosures be (i) limited in scope, (ii) relegated to annexes and (iii) evidently labelled as nonmaterial. This is to preserve the key benefit of a standardized main body of the report, which effectively supports the foundational CSRD objective of providing comprehensive and comparable information to stakeholders.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	We consider the proposed guidelines overly complex and detailed, which risks making the materiality assessment unnecessarily burdensome. A more general, principle-based approach would be more appropriate and effective. We recommend that impacts (and risks) be reported before mitigation or corrective actions (i.e. a gross approach), with a subsequent explanation of how these will be addressed. This would provide greater clarity and ensure alignment with established enterprise risk management practices. Moreover, clearer guidance is needed to distinguish between actual and potential impacts, as the current proposal does not sufficiently clarify this important distinction.

Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	We support the proposals to improve the readability, conciseness and connectivity of ESRS Sustainability Statements. The option to include an executive summary is particularly welcome, as well as the possibility to use appendices to separate more detailed information from key messages. The flexibility to choose the most suitable format for disclosures, rather than mandatory reporting table format, supports more relevant and concise reporting while reducing unnecessary burden and strengthening the connectivity with corporate reporting as a whole.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We find it very important that the overlaps between the ESRS 2 and the topical standards have been addressed. Even if there still are some additional disclosure requirements in the topical standards, we find the proposed changes mainly beneficial. The current Minimum Disclosure Requirements (MDRs) have been too burdensome and detailed, leading to duplication and difficulties for preparers when applied under each topical disclosure. A simplified and more streamlined structure will make the standards more user-friendly and reduce the need to cross-check requirements across multiple locations. The complete removal of MDRs could also be considered as they do not provide substantial additional value. We also support the reduction of "shall" datapoints and the clearer articulation of PAT requirements. Importantly, the amendments allow narrative information to be disclosed at an aggregated level, rather than strictly at the IRO level, better reflecting how companies manage their impacts, risks and opportunities in practice.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	We support the proposed changes and welcome the clearer distinction of mandatory datapoints.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	In theory, the principles of reducing mandatory requirements, providing greater flexibility and clarifying "how to report" with methodological guidelines and examples would be welcome. However, in the communication concerning the changes, it was emphasized that there are no voluntary disclosures, whereas some of the disclosures have been transferred to the NMIG document: it is unclear whether it contains only voluntary or mandatory disclosures. For example, some mandatory disclosures have comments in the "Log of Amendments": NMIG contains related guidance for the paragraph: how to treat this optional document since it refers to mandatory disclosures (Example: Log of Amendments E1 page 24, line 1)? If an organization decides to disclose the issues in the NMIG, how will it be audited and should the continuity of disclosure of the issues contained in the NMIG be maintained in the following years, if they have been shown once? More generally, we have strong concerns regarding the introduction of NMIG. The unclear legal status of such a document would create risk of inconsistent application and unnecessary challenges in discussions with auditors. To address any legal uncertainties regarding the NMIG, it should be explicitly stated that its use is entirely optional for preparers and that it has no legal binding nature. For this reason, we do not support the development of NMIG as part of the standards/delegated act.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We overall welcome the proposed burden reliefs. It is important that the amendments emphasize prioritisation and materiality, which will help focus reporting efforts where they are most relevant. We also recognise that some of the reliefs may create challenges for data collection, especially for companies within the mandatory reporting scope. There should be contractual and practical arrangements to make these challenges manageable. We note, however, that such definitions as "undue cost or effort" or "lack of data quality", while potentially beneficial, remain open to interpretation and should therefore be clarified to ensure consistent application across companies.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	Overall, we find the proposed amendments beneficial as they tackle the overcomplexity of current rules for defining and reporting information from a company's value chain. Especially in case the Omnibus I on CSRD will limit the ability of larger companies to request information from their value chain, it will be particularly burdensome for these companies to report all the currently required value-chain information. We also stress the importance of simplifying and better aligning value-chain definitions with financial reporting, to ensure consistency and reduce unnecessary reporting obligations. For example, the number of datapoints for which companies need to report value-chain information should be limited to only essential information, such as scope-3 emissions. However, we are concerned with the statement stipulating that "the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods": this statement assumes that, for all metrics, it is possible to improve the coverage and to reach a complete scope within a timeframe to be disclosed. This seems to contradict the notion of "undue costs or effort" that could apply to certain metrics for which complete coverage is out of reach. We suggest adding to this statement "if compatible with the undue costs or effort principle".

Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	Although option 1 would be more aligned with IFRS, we disagree with this option since it would imply an excessive burden. We instead prefer Option 2 as it can relieve companies from the challenge of disclosing quantitative and commercially sensitive information. However, not being aligned with IFRS standards, Option 2 might also pose challenges of inconsistency and of duplication burden for companies that report under both frameworks. Hence, we call for a version of Option 2 that (i) mitigates inconsistency, (ii) avoids duplicate reporting of the same information, (iii) provides clear guidance on what constitutes an acceptable qualitative disclosure (examples, minimum elements, etc), (iv) encourages voluntary quantitative figures if material and reliable.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	The disclosure requirements remain largely unchanged. Hence, we call for a further simplification, for example by removing the need to split of assets before and after actions. ESRS should also be structured so that companies applying them can also fulfil the IFRS reporting requirements.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We appreciate EFRAG's clear effort to consider in detail the interoperability between the ESRS and IFRS standards. However, while numerous adjustments have been made to enhance alignment, notable differences still remain. It would be beneficial for all stakeholders if these remaining gaps were addressed. At least, even if full interoperability would not be reached, the ESRS should be designed in such a way that companies adhering to them would not need to consider additional data points when also reporting under IFRS. This recommendation of ours is also consistent with our response to Q25, on the risk of potential uncertainty associated with the fair representation concept (also in conjunction with the unclear legal status of the NMIG): we support it, provided it leads to an effective departure from the check-list mentality of the compliance approach, reducing the unnecessary reported information and the documentation needed to show that omitted datapoints are not material.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	We call on EFRAG to simplify the ESRS without adding new requirements or shifting "may" data points to "shall". In general, we believe no new mandatory disclosures should be introduced since it would increase the burden for companies with very limited benefits.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	In general, we call on EFRAG not to introduce new mandatory datapoints, for compatibility with the simplification agenda and with the Commission's mandate. ES-4 might be especially challenging. Furthermore, we would like to point out that not all new terms introduced in the drafts have been defined, e.g., the term "thermal-based disposal" in ES-5 appears as a new concept without a clear definition: we call for allowing companies flexibility in interpreting "thermal-based disposal".			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We support the fair-presentation concept, but acknowledge that it may lead to some uncertainty. It is therefore important to understand, as stated in the question, that confirming the fair presentation concept should reduce the check-list mentality associated to the adoption of a compliance approach, and support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets

Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	This proposal would significantly increase the reporting burden. For nonglobal companies, it would trigger the new reporting of countries below the 10% threshold. For global companies, it would increase the number of countries for which to report detailed information.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	Although it is a meaningful approach to refer to international references such as ILO principles, the proposed methodologies create remarkable concerns: (1) it is not clarified if wages defined by collective bargaining should prevail over those defined by legislation, or if any alignment with any of the two would be considered satisfactory; (2) we anticipate that an extensive workload could emerge from the following phrase "periodically reviewed/adjusted every two years and takes into account the ILO wage setting principles." Indeed, as the indicator covers the entire workforce, an assessment would have to be conducted in all countries of operation to check the fulfilment of these two new criteria. Furthermore, should a company operate in different sectors of activity, it might have several collective agreements to check within a single country. Ultimately, this could lead to hundreds of checks to be performed. Finally, for countries where an adequate minimum wage does not exist, which is the most critical issue met by issuers in 2024, the approach is too vague and will necessarily make information hardly auditable and comparable.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	We agree with the proposed approach.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	We agree with the proposal and support flexibility in the wording, as we do not endorse fixed metrics dictating what targets must include. We would like to emphasize that targets should focus on addressing material impacts rather than adhering to predetermined attributes or metrics, such as the size of areas restored. We would also welcome further review towards a more methodology- and framework-based approach to target setting.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree	We welcome that requirements are aligned with the Pay Transparency Directive, as long as companies are allowed flexibility in interpreting the calculation methods.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree	While qualitative information on payment practices is relevant to indicate how the protection of SME's is tackled within the company, the calculation of G1-6 metrics is overly complex for international groups operating with a great variety of payment standards. We therefore support simplification by deletion of the quantitative datapoints G1-6 paragraph 20 (a)(b).			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We welcome the simplification by removal of the sub-subtopics. However, we also call for allowing companies the flexibility to choose and motivate to which subtopics to limit the reporting. As a purely illustrative example, while we find it a logical simplification that Appendix A proposes the same subtopics for S1 and S2, companies should have the flexibility to assess that some subtopics may not be relevant for S2. It should be clarified that Appendix C is voluntary. While it is intended to help with definitions, in practice it can significantly hinder the "classification" of individual issues for explanations and formulations used in the list. We support the possibility to refer to other parts of the Statement when, for example, a single policy concerns multiple areas (to avoid the repetition experienced with the Code of Ethics and Code of Conduct for PB). We welcome that 3.2.22 enables presenting the information "either at the topic level or at the level of IROs, depending on what provides the most relevant information": we call for allowing companies a flexible interpretation of "relevant information".

Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We find that, for example, the distinction between SBM and IRO topics and the changes related to BPT and GOV enhance the clarity of reporting requirements. However, we have some observations regarding specific points: (i) BP1/ 5(e): it should be specified that this refers to events occurred after the end of the reporting period but before the publication of the report, avoiding amendments to a published report; (ii) SBM-1, 17(a) and (b), ARs 7, 8, and 10: the new requirement concerning significant sectors is introduced: we call for allowing companies to a flexible interpretation of "significant sectors"; (iii) SBM-2, 20(c): we call for allowing companies to a flexible interpretation of "key stakeholders"; (iv) SBM-3: a new descriptive element has been added, which largely overlaps with and may result in duplication of SBM-1; (v) SBM-3, 23(b): without a methodology that ensures comparability without adding overburden and conflicts with the company's commercial interest, we support the possibility to assess impacts in qualitative terms; (vi) IRO-1/26(b): The description includes information on the scope of activities and value chain, indicating whether it focuses on specific activities, business relationships, geographical areas or other factors that cause an increased risk of negative impact. This may be a repetition of information from SBM-1; (vii) IRO-2/28(a): Once again requires the disclosure of information that has already been included in SBM-1, IRO-1, in particular regarding the links between the topics and the business model and value chain. we call for allowing companies to a flexible interpretation of the required content of the disclosure.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We welcome the clarification provided regarding the GHG calculation methodology, as aligning it with the GHG Protocol improves transparency and consistency. The enhanced connection with other standards, particularly the harmonisation of GHG calculations across different reporting requirements, is a positive development. However, we note that certain requirements under RED II/III – for example, the biofuel distribution obligations – are not fully reflected in ESRS E1 GHG methodology. It will be important to ensure that double reporting is avoided and that the ESRS E1 requirements are consistent with other relevant regulatory obligations to minimise unnecessary duplication and administrative burden for companies. We also have comments on some specific points below. E1-8 – Gross Scopes 1, 2, 3 and Total GHG emissions; 44 now 32: disclosure is mandatory, but the explanation in the comments section [NMIG contains related guidance for paragraph 32] might cause confusion that the explanations in the document that are supposed to refer to non-mandatory disclosures are mandatory disclosures E1-8 – Gross Scopes 1, 2, 3 and Total GHG emissions; "c) Scope 3 GHG emissions from significant Scope 3 categories as a total and per category": we call for allowing companies flexibility in interpreting "significant categories".			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	33.E_2.	ESRS E2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	As a general comment to reduced pollution data points to only relevant air, water and soil pollutants: we call for allowing companies flexibility in interpreting "relevant". E2-4 – Pollution of air, water and soil 16 (a): we note unclarity between point 16(a), referring to "amounts of any material pollutant emissions" and AR 2, indicating pollutants "from Annex II of Regulation (EU) 2024/1244 (Industrial Emissions Portal Regulation)"; we call for allowing companies flexibility in assessing which pollutants are relevant to its operations.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	33.E_3.	ESRS E3:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	We welcome the changes introduced in ESRS E4. The removal of topic-specific Disclosure Requirements (DRs) helps to streamline the reporting process and reduces unnecessary repetition and overlaps within the standard. This simplification makes it easier for preparers to navigate the requirements and ensures that the focus remains on material information. In addition, the consolidation of site-level information under E4 SMB-3 with other site-related data in section E4-5 is a positive development. This integration not only reduces duplication but also provides a more coherent and structured presentation of site-level disclosures. Companies will benefit from a clearer and more consolidated framework for reporting site information, which supports consistency and comparability across the reporting entity. E4-5 – Metrics related to biodiversity and ecosystems change, AR8: we call for allowing companies flexibility in interpreting "near".			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	33.E_5.	ESRS E5:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We welcome the significant reduction of overlaps within ESRS S1. Removing redundancies improves the clarity and usability of the standard, making it easier for companies to prepare sustainability reports and for users to navigate and interpret the disclosed information. This simplification supports a more efficient reporting process and enhances the overall coherence of the sustainability statement. Moreover, we have the following comments on specific data points. DP 55a (now 25) Characteristics of non-employees in the undertaking's own workforce: it should be specified that contractors are not own workforce DP 97b (now 44b) Remuneration metrics: we call for allowing companies flexibility in interpreting the specific calculation of the median and which group of workers to include. DP 97a (now 44a); DP 98 (now moved to [NMIG 35]) Gender Equality and Diversity: we welcome that requirements are aligned with the Pay Transparency Directive, as long as companies are allowed flexibility in interpreting the calculation methods. DPs 93a, 93b Work-Life Balance: we call for allowing companies flexibility in interpreting the group representing the 100% base and the type of leaves included.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	33.S_2.	ESRS S2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	We welcome the explicit reference to ESRS 2 within ESRS S2, as it reinforces the connection between general disclosure requirements and topical standards, contributing to a more coherent reporting framework. We also note the improved clarity regarding vulnerable stakeholders. This enhancement helps companies better identify and disclose impacts on stakeholders who may be most affected by their activities, supporting more targeted and meaningful reporting.			
Survey	Eurelectric	Business association (other than association of financial institution)	Belgium	33.G_1.	ESRS G1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We note that a significant number of disclosure requirements in ESRS G1 have been made non-mandatory and moved to the Non-Mandatory Illustrative Guidance (NMIG). We support the reduction of mandatory disclosure requirements as it provides companies with greater flexibility in how they present governance-related information, allowing them to focus on material issues while maintaining transparency. While this approach can help reduce reporting burden and improve usability, we have strong concerns regarding the introduction of a "Non-Mandatory Illustrative Guidance" (NMIG). The unclear legal status of such a document would create risk of inconsistent application and unnecessary challenges in discussions with auditors.			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	The amendments sufficiently simplify the DMA, reinforce the materiality filter, and strike an acceptable balance. The wording of Chapter 3 of ESRS 1 is clearer and easier to apply. The simplification reduces administrative complexity and should limit unnecessary disclosures while still meeting user needs. Details provided in Part 3.			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	The new guidelines provide useful clarification, but it is important that considering remediation, mitigation, and prevention should not require extensive new evidence gathering. Furthermore, the question of gross vs net impact remains variable dependent on the individual company. Details provided in Part 3.			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	The amendments provide flexibility that supports more concise reporting and better integration with other corporate reporting. This reduces duplication, granularity, and unnecessary disclosures, thereby limiting the reporting burden. Details provided in Part 3.

Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The amendments strike an appropriate balance. The reduced prescriptiveness is welcome, as it lowers preparation effort. Changes to PAT are welcome. This should not be counteracted by future interpretative guidance that reintroduces complexity. Details provided in Part 3.			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	The amendments improve clarity and accessibility. Clearer and less prescriptive requirements may reduce the need for costly interpretation and specialist resources, thereby limiting reporting obligations			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	NMIG is useful when applied voluntarily, but it should remain clearly outside the mandatory framework. This ensures examples are available for reference without adding de facto reporting obligations.			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The burden reliefs are a positive step and the balance struck is acceptable. The changes may reduce costs for preparers while still allowing stakeholders to receive core sustainability information.			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	Allowing proxies and estimates where data quality is lacking is essential. This provides necessary flexibility, avoids costly data collection exercises, and reduces the risk of delay or excessive effort.			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	Qualitative disclosures on anticipated financial effects significantly reduce the burden compared to mandatory quantitative assessments, which are highly resource-intensive and speculative. The relief should remain in place and quantification left voluntary, especially in the context of lack of common standard of valuation of such metrics.			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	The amended paragraphs 40–42 strike a workable balance. This simplification avoids excessive effort , but it may be difficult to provide meaningful information as the methodology can still be vague. Details provided in Part 3.

Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	The amendments improve interoperability with IFRS S1/S2 while also supporting simplification. This reduces duplication of effort for companies reporting under multiple frameworks, which is critical for lowering the reporting burden.			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	The reduction in mandatory datapoints is a major improvement, cutting unnecessary effort while preserving key disclosures. The balance is appropriate, though further reductions could be considered in the future if uptake shows immaterial information is still reported.			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	The six datapoints moved from "may" to "shall" may be important, but each new mandatory requirement increases reporting obligations. Their inclusion should be reviewed carefully, and implementation timelines should allow sufficient flexibility. In particular, mandating biodiversity transition plans, even if conditional, can add a layer of complexity and ambiguity due to a lack of well defined procedures.			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	The four new mandatory datapoints address relevant issues, but they add to reporting burden. In particular, information on materials with unknown final destinations may be impractical to collect. These should either be phased in gradually or left as voluntary disclosures.			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	While fair presentation is an important principle, explicitly requiring it could create expectations for additional information beyond what is already mandated, increasing reporting effort. Any obligation should be narrowly defined to prevent excessive disclosures.			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Complex estimates are common to all sectors, and there is not a plausible rationale to explicitly exclude financial institutions from disclosing climate absolute GHG emissions values targets when they have only set intensity targets. Both information types are needed for a proper understanding of the undertaking's progress as well.			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I partially agree and partially disagree	Any threshold change that could trigger an increase in the number of countries to report on should be approached with caution. However, it remains unclear to what extent this change could impact reporting burdens.			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree	The revised methodology for non-EU adequate wages is more practical and reduces reliance on unavailable or unreliable local data sources. This improves feasibility and lowers the effort required for compliance. Removal of reference to the transposition period is also welcome.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	While consolidating SFDR datapoints in ESRS 2 improves traceability, it still imposes additional requirements linked to other EU frameworks. Simplification should focus on limiting duplication and only requiring datapoints that are material, to avoid unnecessary reporting.			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	AR 26 should be reviewed to avoid overly prescriptive disclosures on biodiversity targets. Suggested wording: "Undertakings may, where relevant, describe biodiversity and ecosystem targets, including scope, baseline, and timeframe." It would also be preferable to make the relevant methodology more concrete as biodiversity is still a relatively vague topic to report on.			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	Deleting the voluntary adjusted gender pay gap datapoint is appropriate. It removes unnecessary burden while still requiring the unadjusted metric, which ensures comparability across entities without additional calculations. Still, we believe that issuers should be allowed to report on adjusted pay gay, as this metric provides more insight into actual situation of the issuer, taking into account local and industry specificity.			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree	The replacement formulation is sufficient to protect SMEs. It reduces cascading data requests and avoids imposing disproportionate obligations on smaller companies in the value chain, supporting proportionality and lowering reporting costs overall. On the other hand, issuers do not differentiate between suppliers based on their size, which makes it difficult to extract data specific to SME only. Detailed comments in Part 3.			
Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree

Survey	The Polish Chamber of Information Technology and Telecommunications	Business association (other than association of financial institution)	Poland	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		PIIT welcomes the proposed simplifications in approach towards the DMA process, focused on usability and possibility to include this process in business and strategic planning. We appreciate the clarifications included regarding focusing on material topics only, a more quality-based approach towards the analysis, and more flexibility in terms of defining material matters – the ability to apply both, top-down and bottom-up approach. We support the need for sub SEBN's exclusion from the consolidated sustainability reporting obligation and as such, EFRAG's ESRS I Exposure Draft (page 15) call for coherent financial & sustainability reporting scopes thereby agreeing with the EFRAG proposal that if a subsidiary is not in a group-level financial statement, it should respectively not be included in its sustainability report (unless there is specific evidence mandating otherwise).

Survey	ShareAction	NGO	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	As a general comment, we feel this approach has been over simplified and is a retreat from the previously agreed impactful approach. However, we do see that Chapter 3 is clearer and better organised. The improved definition of materiality of information in Section 3.1, namely the replacement of criterion of "significance" with "understandability" of impacts provides better guidance and is aligned with the CSRD and international sustainability due diligence instruments. It also clarifies how the materiality of information interacts with (fundamental) qualitative characteristics of information criteria from Chapter 2, and with the rules concerning aggregation and disaggregation of information (e.g. para 52 on "not obscuring"). However, Chapter 3 frequently conflates 'topics' with 'impacts, risks and opportunities' ('IROs'). Para 22 is confusing when it says that information may be presented "either at the topical level or at [IRO] level". This is confusing and incorrect. While topics refer to broad thematic areas, IROs are entity specific. The CSRD, as well as IFRS, TCFD, and TNFD consistently focus on the latter. Overemphasising 'topics' risks leading to generic disclosures that lack relevance and specificity. Chapter 3 would be clearer if it keeps the focus on IROs and plainly explain that depending on their nature and context such IROs may be defined at a general level and/or that information on their management may be similarly aggregated. This should be clarified also in provisions on entity-specific disclosures in paragraph 23 (and in paragraph 10 in Chapter 1) In Chapter 3.3.2, para 37 fails to mention that the purpose of financial material assessment is to not just to identify materiality information but also determine the material risks and opportunities, as required by the CSRD. In this regard, the risks and opportunities are only mentioned in the middle of para 38, making the text incoherent.			
Survey	ShareAction	NGO	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	We are concerned by the ESRS proposal to distinguish between potential negative impacts mitigated by past, completed actions (assessed on a net basis) and those requiring ongoing management (assessed on a gross basis). It is not clear why past actions or investments should automatically be considered more effective than ongoing management, particularly as many impacts require continuous oversight and mitigation to remain under control. For consistency and comparability, either both categories should be assessed on a net basis, or both on a gross basis. Introducing different treatments risks creating arbitrary distinctions that do not reflect the reality of impact management. Moreover, quantification in a double materiality assessment is already highly challenging. Expecting companies to calculate a "net" basis in an unbiased and verifiable manner adds further complexity and subjectivity. We therefore recommend a uniform approach across all potential impacts, with clear guidance to avoid inconsistent or biased reporting.			
Survey	ShareAction	NGO	United Kingdom	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	The proposed changes are meaningful. We would like to bring the attention to para 113, which we find hard to understand: "113. If the description of the material impacts, risks and opportunities prepared in accordance with [Draft] Amended ESRS 2 IRO-2 is not presented alongside the respective policies, actions and targets, the undertaking shall make explicit which policies, actions and targets relate to which material impacts, risks, or opportunities, in accordance with paragraph 22." It is not clear to us what the reference to para 22 is meant to imply. Para 22 addresses the issue of appropriate aggregation or disaggregation of information on material impacts, risks and opportunities and their management. But it doesn't set any rules regarding the location of such disclosures depending (or not) on the level of aggregation.			
Survey	ShareAction	NGO	United Kingdom	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We welcome the removal of duplications between the cross-cutting and topical standards and support the strengthened focus on general disclosure requirements. Many PAT provisions in the topical standards served more as examples or guidance than datapoints, so streamlining is helpful. We also value the preservation of the five-part environmental and four-part social architecture, which provides a clear structure for preparers to navigate issues, engage colleagues internally, and organise disclosures. Retaining the architecture of standards E1–E5, with their specific metrics, is important; the framework should remain complete and equivalent across all standards. However, we have two critical concerns. First, the original disclosure requirement in the environmental standards on screening of sites during materiality assessment has been replaced with an application requirement to ESRS 2 IRO-1. This effectively makes transparency on this element optional. Considering local context is central to a robust materiality assessment. Chapter 3 of ESRS 1 and ESRS 2 IRO-1 should explicitly require disclosure of how an undertaking screens its locations and value chains. While we welcome clearer references in the environmental standards to the importance of disaggregated disclosures, meaningful disaggregation depends on proper site screening. Second, we strongly recommend explicitly referencing the disclosure of relevant, entity-specific metrics within the social standards. Currently, S2, S3 and S4 contain no metrics, and the sectoral standards that were expected to provide them will not be adopted. This shifts expectations for social metrics to entity-specific disclosures but without clear guidance. As highlighted by the Danish Institute for Human Rights, adding a reference to metrics in disclosure requirement SX-4 on targets would improve consistency between topical and cross-cutting standards, reflect existing company practice, and clarify ESRS expectations without adding new datapoints. These changes would strengthen transparency, ensure comparability, and make the standards more usable while maintaining their streamlined and practical intent.			
Survey	ShareAction	NGO	United Kingdom	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We support the proposed changes. We agree with the removal of 'may disclose' elements, because their status has been causing confusion. However, they do not need to be all removed to NMIG. Where they provide useful examples of disclosures, they could be included directly in the standards as "examples". This is particularly the case for the topics for which the reporting practice is evolving, such as Biodiversity and ecosystems. This would make it easier for first-time preparers to understand what kind of information is likely to be relevant and provide a basis for the standardization of metrics. Having to consult another document, such as NMIG, is adding an unnecessary hurdle. The language and therefore understandability of the standards have been considerably improved, however in ESRS 1 especially there is still much to be done in this regard.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ShareAction	NGO	United Kingdom	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The standards are not clear in terms of what the combined effect of the reliefs is and how the reliefs are meant to interact. Interpreting and applying these reliefs independently of each other open doors to abuse and omitting material information, significant differences in reporting practice. Reporting of metrics is subject to a combination of undue cost and effort and lack of data quality reliefs. But the standards do not put these two reliefs in proper context and do not include any explicit requirement and timeframe for companies to improve the coverage and quality of data. This is exacerbated by the relief which unconditionally allows exclusion of joint operations. If the environmental metrics concerning such operations are material, then the standards should incentivise their eventual disclosure. The undue cost and effort and lack of data quality reliefs already provide sufficient flexibility in this regard. Similarly, there is a lack of coherence among the directions of the reliefs related to financial effects, i.e., information which is essential for understanding of the risks and company's ability to overcome them. The limitation related to the announced investment plans focuses the disclosures on effects which are easier to assess and therefore quantify, yet the standards also propose reliefs that enable omitting quantitative disclosures. We broadly agree with the relief provided in ESRS 1, para 90, which allows for calculation of metrics exclusion of activities that are not significant drivers of the IROs. However, the application of this option must be clarified for specific environmental and social metrics which are standardised in the ESRS. For instance, the GHG Protocol's completeness principle explicitly warns against misapplication of materiality criteria in this regard. Similarly, for S1 workforce metrics, such as characteristics of the employees and non-employees, such exclusions are not appropriate.			
Survey	ShareAction	NGO	United Kingdom	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	We are concerned that this clause could potentially become an excuse to omit critical data, weakening the transparency and comparability of sustainability information. We believe that companies should not be allowed to use poor data availability as a reason to avoid addressing Scope 3 emissions. While we are not necessarily calling for ESRS to impose explicit requirements on Scope 3 calculation methods, we believe it would be useful to highlight good practice — for example, starting with spend-based estimates and then engaging suppliers and customers to improve data quality over time. Companies have cited data gaps and cost concerns for years without presenting clear timelines for improvement or showing progress. Allowing open-ended relief on Scope 3 reporting would give companies excessive leeway and risk delaying meaningful action.			
Survey	ShareAction	NGO	United Kingdom	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	The ability to estimate financial effects is critical for the undertaking's ability to integrate sustainability into its business strategy considerations, planning and risk management. It is also key for the determination of financial materiality, including in terms of overreporting topics as financially material. Resigning on this ambition is at odds with the objective of putting sustainability reporting on the same level as financial reporting, the integration of both, and ultimately overcoming the tragedy of horizons. We find Option 1 unnecessarily extensive, and lacking time limitation, but broadly acceptable. We disagree with the assertion made in the question that it "[d]ifferent from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources ". In this regard, the new proposed ESRS include the undue cost and effort relief which seems to account for such a situation. With respect to Option 2, we don't find it justifiable to go beyond the IFRS relief. One of the most strongly voiced arguments from stakeholders who called for simplification of ESRS was that, as a matter of principle, ESRS must be aligned with the IFRS except where CSRD or other EU legislation require otherwise. Abandonment of this principle seriously undermines prospects of building a global baseline which both the EU and the ISSB support, and which is an important part of building a level playing field for the EU companies.			
Survey	ShareAction	NGO	United Kingdom	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	ShareAction	NGO	United Kingdom	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	Reliefs should not go beyond those set in IFRS. Going further would undermine the objective of setting a global baseline for ESG reporting, which is important for achieving a level playing field for EU companies in a global context. The undue cost and effort relief outlined in ESRS 1, para 87-89, is a powerful relief, which addresses virtually all situations where the undertaking may encounter practical obstacles. Explicit emphasis on fair presentation, combined with the strengthened focus on the use of materiality of information filter, provide companies with an increased flexibility in determining meaningful content of their sustainability statements. It marks a further move away from compliance-based to principle-based approach. However, such changes imply increased responsibility for the undertaking. Implementing further reliefs would undermine this responsibility and open the doors to abuse.			
Survey	ShareAction	NGO	United Kingdom	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ShareAction	NGO	United Kingdom	22.ESRS2	Comments on deleted datapoints in ESRS 2	I disagree	The number of datapoints in each standard represent the minimum necessary to ensure cohesive disclosure requirements, and consequently basic comparability and quality of the actual disclosures. We have not identified any instance where ESRS would include exorbitant requirements, considered common practice and internationally recognised reporting standards and frameworks such as IFRS, GRI, or TNFD. ESRS are generally more concise and less demanding. Introducing further reductions (while keeping the coverage of all ESG factors as required by the CSRD) would create serious quality gaps between the ESRS disclosures and those based on the standards.			
Survey	ShareAction	NGO	United Kingdom	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We agree with these changes, noting that the suggested changes do not add a new burden. E2-4 on secondary microplastics is not a new datapoint, as correctly pointed out in the Rationale above. We do not understand why it is included in this question, as such.			
Survey	ShareAction	NGO	United Kingdom	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	ESRS, being based on the materiality principle, the CSRD requirement to disclose impacts, risks and opportunities and their management, and the general principles of the Accounting Directive, has already been subject to a fair presentation regime. Making it explicit helps to clarify it. It provides companies with clarity on the discretion and judgement, as well as related safeguard, they are expected to exercise when applying the standards.			
Survey	ShareAction	NGO	United Kingdom	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We recognise the complexity of recalculating absolute GHG values and acknowledge that financial institutions often use intensity-based metrics to track performance. However, the global carbon budget — and the 1.5°C pathway — are defined in absolute terms. Financial institutions must therefore disclose absolute targets alongside any intensity metrics to show how their strategies align with the economy-wide transition to net zero. Absolute targets are critical for users of sustainability statements and for understanding the real-world climate impact of financed activities. Intensity measures can provide insights into efficiency but risk masking rising overall emissions in expanding portfolios or sectors. Absolute values, by contrast, clearly show whether institutions are contributing to the 90–95% global emissions reduction required by 2050, with steep cuts by 2030. Both approaches rely on similar underlying data, and estimation challenges are not unique to finance. Granting an exemption would undermine fairness in a sector-agnostic standard. Other industries could cite comparable data challenges, reducing consistency and comparability. It would also risk misalignment with existing frameworks such as the SBTi Financial Sector Net-Zero Standard, UNEP FI/NZBA recommendations, and the EU SFDR, all of which require or encourage disclosure of absolute financed emissions. Asset owners and other stakeholders depend on these data to assess their own transition plans and disclosures. Transition plans themselves typically include absolute targets. Preventing financial institutions from reporting them would hinder the ability to evaluate whether plans are being implemented. Experience shows the shortcomings of relying solely on intensity: Targets may incentivise shifting to "green" assets rather than decarbonising existing ones. Portfolio growth, revenue shifts or share price changes can distort progress. Metrics like Implied Temperature Ratings remain complex and inconsistent. Only absolute emissions reductions reflect real-world decarbonisation. Removing this requirement would weaken the standard, reduce transparency, and create perverse incentives misaligned with the 1.5°C pathway.			
Survey	ShareAction	NGO	United Kingdom	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	The new threshold is simpler and clearer, and therefore easier to apply. It also sets a clear cap. Any potential increase of breakdowns of the disclosed information is negligent in terms of added burden.			
Survey	ShareAction	NGO	United Kingdom	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	The proposed change is discriminatory and adds unnecessary burden on companies. It should be addressed through revisions to paragraph AR 22. Workers have a human right to a living wage — remuneration sufficient to support themselves and their families with basic dignity. The ILO's 2024 position, as well as EU policy and law, reflect this. The ILO distinguishes between: principles for estimating living wages (what level is needed for a decent life), and principles for wage-setting (how legal minimum wages are negotiated). Legal minimum wages today fall below living wages in most countries, particularly outside the EU. However, under S1-9 the draft methodology directs companies to compare actual wages with: an adequate wage benchmark for EU employees, but legal minimum wages outside the EU if they are agreed in line with ILO wage-setting principles — which do not determine living wage levels. Only if no legal minimum exists may companies use living wage estimates. This creates four problems: a) It undermines the objective by tying reporting to lower legal minimum wages. b) It is discriminatory, applying a weaker standard to non-EU employees. c) It is complex, requiring companies to judge whether each country's minimum wage or benchmark aligns with ILO principles — a task beyond most companies' capacity. d) It undermines comparability, as companies with different workforce locations will report against different standards. We recommend two key changes: Require wages for all employees — EU and non-EU — to be measured against an adequate/living wage benchmark, not default to legal minimum wages. Allow companies to rely on publicly evidenced local legal minimums or living wage estimates aligned with ILO principles, avoiding the need for companies to make complex, subjective assessments themselves.

Survey	ShareAction	NGO	United Kingdom	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I disagree	The proposed simplifications to the social standards in the amended ESRS risk undermining the usefulness of SFDR's Principal Adverse Impact (PAI) indicators. Under the 2023 ESRS, human rights policies and incidents had to be reported separately for different stakeholder groups, offering a degree of granularity that aligned with PAIs. In the new draft, these disclosures are consolidated into cross-cutting indicators. While this may reduce duplication, it also risks producing generic, boilerplate statements that obscure how impacts affect workers, value chain actors, communities, or consumers. At a minimum, EFRAG should require disaggregation by stakeholder group to preserve decision-usefulness. The merger of "severe human rights cases" into a single indicator raises a similar concern. A single number does not reveal whether harms disproportionately affect supply chain workers or local communities, weakening the visibility of salient risks. Likewise, the removal of fatalities (previously S1-13) is particularly problematic. Workplace deaths are one of the clearest and most material social PAIs, and their deletion would strip SFDR reporting of one of its most concrete indicators of harm. Fatalities should remain a standalone datapoint or, at the very least, be explicitly included under severe incident reporting. Finally, the narrowing of scope for human rights incidents and the relocation of methodological explanations into voluntary guidance risk excluding recurring systemic issues such as harassment or discrimination, while also reducing transparency into how companies identify and prioritise risks. While streamlining can ease reporting burdens, it should not come at the expense of accountability. In sum, unless the draft is revised to retain fatalities, mandate stakeholder-specific disaggregation, and preserve methodological disclosures, the changes will dilute the ability of SFDR PAIs to provide investors with meaningful, comparable information on corporate human rights performance.			
Survey	ShareAction	NGO	United Kingdom	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	Measurable targets related to biodiversity and ecosystems shall be set and disclosed according to the guidance and examples given by relevant global frameworks, such as SBTN (Step 3 - Measure, Set & Disclose Targets), TNFD (component P1 and P2 & Annex 5, sector guidance and guidance on Target Setting) & resources by World Economic Forum Nature-Positive Transitions.			
Survey	ShareAction	NGO	United Kingdom	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	Our proposal is to not include such datapoint, but instead provide a paragraph in the application requirements, explaining that the adjusted pay gap is an important entity-specific information, which is often necessary to contextualise and enable understanding of the information provided by the unadjusted pay gap. Further this AR could remind the undertakings that the unadjusted pay gap needs to be appropriately disaggregated. Unadjusted and adjusted perspectives on pay gap have different purposes. The unadjusted pay gap - appropriately broken down by countries or areas of operations in line with ESRS 1 - provides general context and the information on how the undertaking is affected by systemic drivers of gender inequality. The adjusted pay gap is primarily an entity-specific disclosure. It is particularly relevant for complex companies to better understand where and how the pay gap manifests, and what are the specific drivers of it. There is no one 'standardizable' way to adjust the pay gap calculation. Such adjustments must consider the undertaking's specific context and circumstances and avoid 'overadjusting'. If the calculation controls for every source of difference between males and females in the workforce, then it would obscure the pay gap and its causes. Therefore, including a datapoint - whether mandatory or voluntary - on adjusted pay gap in the standards is problematic, because it is impossible to provide a standardised methodology. On the other hand, for many companies' information on adjusted pay gap is likely to be material, and therefore such information should be provided.			
Survey	ShareAction	NGO	United Kingdom	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	The removal of paragraph 14 can be easily compensated by adding a reference to SMEs in the description of the topics in ESRS 1, Appendix A, and in ESRS G1, paragraph 4. The removal of datapoint originally located in para 33(a) concerning average days it takes to pay an invoice, does not seem to be necessary for the reduction of burden. The undertaking would still need to collect this data to be able to meet the other requirements, in particular the calculation of the % of its payment aligned with its standard payment terms (in para 20(a)).			
Survey	ShareAction	NGO	United Kingdom	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We are concerned about the concurrent effect of various reliefs. We are also concerned about the unintended confusion caused by a rather confusing explanation of the relationship between impacts, risks and opportunities on one hand, and sustainability topics on the other.			
Survey	ShareAction	NGO	United Kingdom	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We disagree with the downgrading of the transparency on site/assets/activities screening from the level of datapoints in the E standards to an Application Requirement in ESRS 2.

If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We do not think that the streamlining of the E1-1 Transition Plan for Climate Change Mitigation added value. If anything, more rather than less details and clarifications are needed. The glossary could retain the definition of net zero targets and related criteria, as use and reporting of such targets is a common practice. ESRS E2, E3, E5: We welcome the changes made, including the clarification and minor additions to the datapoints in the metrics section. They provide for greater clarity and do not add further reporting burden.			
Survey	ShareAction	NGO	United Kingdom	33.E_2.	ESRS E2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. I partially agree and partially disagree	Given the current state of art in this area, it would be helpful to include more guidance on how to set metrics and how to utilise the other reporting frameworks and standards such as the TCFD. The standard should also clearly require the disclosure of sites in/near biodiversity sensitive areas, rather than limiting it to those determined to be connected to material impacts only.

I partially agree and partially disagree	We would recommend adding an explicit reference to GDR-M (metrics) in the Disclosure Requirements concerning targets, in S2, S3 and S4, that is the standards that lack any metrics. In S1, we have strong reservations about the newly suggested methodology for adequate wages outside of the EEA. It would lead to misleading disclosures and add burden for companies.

Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I disagree	We acknowledge that the process has been simplified and flows better. As the fundamentals have not been amended, the revised process will, however, not lead to a substantially different conclusion on IRO-assessment. We believe the standards must ensure a reporting focused on the principal (most severe) impacts and the most significant risks and opportunities. To achieve this, a revised materiality threshold must be adopted (ESRS 1.28), requiring disclosures only on impacts with significant effects and of risks and opportunities of strategic importance to the business model of the preparer. Only entity-specific sub-topics to ESRS topics shall be included, not new topics. In addition, the materiality of information (ESRS 1, section 3.1) should only require information that is indispensable for the understanding of the entity's IROs and clearly necessary for users' decision-making. Therefore, the link to decision making (decision-usefulness) needs to be strengthened and the needs of primary user groups' should be better explained. The user group for impact materiality (ESRS 1-4b) remains overly broad and should be limited to those (potentially) having a financial or social engagement with the undertaking, i.e. to primary user groups. If the above-mentioned changes to the DMA threshold, the materiality of information and strengthened focus on user-groups is not achieved, it may lead to extensive and unfocused sustainability reporting, essentially obscuring the reporting for the primary user groups. The section on materiality of information should also clarify how the "shall requirements" work together with decision-usefulness and understandability and allow for assessment of DR's in the light of the entirety of information provided for a given IRO, emphasizing relevance and a faithful representation without cluttering the reporting. Finally, the requirements on entity-specific reporting – both the DMA-level and metric level (ESRS1-10) – needs to be limited to avoid a de-facto reintroduction of the removed DRs.			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	The proposed rules are complicated to comprehend, quite abstract and thus potentially challenging to apply in practice. Furthermore, the calculations and assessments of gross/net will be overly complex or even impossible for many undertakings. We are specifically uncertain about how to assess the severity and likelihood of potential negative impacts, especially those where mitigating actions are ongoing. It is difficult to assess and report on an impact/situation before mitigation actions are taken, when the actions are implemented, crucial for the operation and part of business as usual. Preparers would essentially have to assess a hypothetical situation. The description of gross/net should be amended, making it clear that the outset of the materiality assessment of actual impacts should always be based on the business as established and as it is operating throughout its normal operating businesses (e.g. including environmental approvals/rights to produce, H&S measures and other procedures and controls in places). Similarly, potential impacts, risks and opportunities should be assessed taking preventive and remediating actions into consideration when such are established and the entity has the ability and intention to activate those if/when relevant (for instance an internal fire brigade or a well-established system to quickly deal with minor oil-spills). Where mitigation has successfully taken place there is no real risk and thus, nothing to report on. Against this backdrop, we suggest deleting the proposed detailed rules on when mitigation activities can and cannot be taken into account. The preparers should be able to use the most meaningful and relevant assessment methodology provided it is explained in the sustainability reporting. In this regard, we note that ISSB leaves it to the preparers' judgment as to whether and how to consider risk mitigation activities.

Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	We partially agree. The provided flexibility is appreciated and important to provide relevant and easily accessible information to the primary user groups. We have identified the following measures to further enhance the flexibility and the relevance: Structure of the reporting: We suggest providing flexibility in the order of the E, S and G-sections (ESRS.1-105) as this would allow preparers to present the information more logically based on its business model and provide enhanced readability and accessible information for the primary users. This is particularly important when the social aspects are the most important to the reporting entity. We support the introduction of appendices (ESRS1-105+110), but suggest, further flexibility in location of appendices and extensive tables, e.g., allowing for a part 2 of the sustainability report located after the financial section (provided this is allowed under national legislation) as this provide clarity in the reporting. Incorporation by reference: We believe the requirements on "incorporation by reference" (ESRS1-9.3) should be less granular for ESRS 2, allowing for DR-references to the relevant (sub)section in the management review, e.g., "ESRS2-GOV1 is incorporated in section xxx of the management report". The practical solution on identifying sections with different levels of assurance should be left to the preparers and auditors. This would support better integration of, e.g. strategy, business model and the governance-information with the counterparts in the management report. Non-material information: We support the possibility to provide non-material information (ESRS.1-108) to meet the needs of specific stakeholders, when clearly labelled as non-material information. However, we believe the requirement for non-material information to provide a faithful representation (ESRS.1-108(b)) should be deleted as this goes beyond relevant criteria for such information, and that the requirement (108(a)) on non-obscuring is sufficient.			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We Partially Disagree We acknowledge the simplifications achieved by removing requirements on GOV, SBM and IRO, and certain details relating to PAT from the topical standards, but have noticed that the majority of requirements are maintained – some merely combined under one DR. Furthermore, the standards still require somewhat "generic" / boilerplate information regarding policies and targets. Consequently, we believe the sustainability reports will only be slightly reduced and the efforts on preparation are not considered to be reduced. In our opinion, the reporting should focus on the actions and targets, i.e. what the entity is doing to address the IROs and how it tracks progress as these are the key interests of most users. Furthermore, we would like to highlight that extensive descriptions of policies are not generally considered to support the need for relevant and comparable information. To facilitate better and more focused reporting, we encourage EFRAG to use the term AT or ATM and to separate reporting on Policies from the more specific actions, metrics and targets, thereby providing a more overarching approach to policies. In addition, we suggest that it's clearly stated that materiality on information apply to all DR, including the description of policies. Although the amendments provide a better structure and simplification, we believe there is a need for further significant reductions and enhanced focus on key aspects in the sustainability report why we suggest reducing/focusing the IROs to those most significant, and amending the materiality of information with strong focus on the key aspect of each IRO. EFRAG should (like GRI) frame the objective for each DR, thereby ensuring it's a description of the purpose, and not a separate datapoint. Finally, we believe there are some overlaps between GDR-T (ESRS2-43) and the requirements on GDR-M, and BP / description of accounting principles.			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We Partially Agree We support that all "may"-disclosures have been eliminated, and the new structure where all the "shall-disclosures" are included in the main body of the standards as well as the intention that ARs should not include any mandatory requirements. However, the AR's still provide a mix of mandatory requirements, examples and guidance. We suggest all ARs are reviewed and that any mandatory requirements moved to DR's, and examples and guidelines to the NMIG. Some datapoints have been merged to improve the readability and understanding of the requirements although still requesting the same information. We support this, but suggest that the objective of a disclosure requirement is clearly described to support a more principles-based approach and to ensure it is evident how it supports the fair presentation and fulfil the decision-usefulness of users. Overall, the language of the standards has improved, with some new terms being introduced. We suggest ensuring that all new terms are defined in the standard or explained in the Basis for Conclusion to reduce any interpretation challenges. The term "shall consider" should be clearly defined, both in relation to the difference to the term "shall disclose" and in relation to the need for documentation of the consideration, hence how can "consideration" be measured or assured. Furthermore, "is expected to" should be defined, including a clarification that the term does not impose additional documentation requirements. To reduce the transition costs, we strongly encourage EFRAG to publish a new Excel sheet of datapoints as soon as possible, with a correlation table linking the previous and updated datapoints. We believe further clarification is needed on how the value chain cap and the scope of VSME (ESRS2-63) affect the requirements for entity-specific disclosures. Furthermore, we suggest a systematic review of ESRS1-5.1+5.2 as outlined in part 3 of this questionnaire.

Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We agree with EFRAG that the NMIG should not be part of the delegated act. We believe a NMIG-document can provide valuable and helpful information and implementation support, but it needs to be re-written to include other guidance issued by EFRAG (FAQ's, IG1-3). At the same time, the old versions of these documents (FAQ's+IG's) need to be removed as they should be incorporated into the revised ESRS and/or revised illustrative guidance document if still relevant. The NMIG in the current form is not ready for publication -The current version of the NMIG is a collection of the left-overs of set 1 as indicated in the introduction to the question. -The NMIG needs to be stripped from "EFRAG SRB intentions" as these should be part of the "Basis for conclusions" -To the extend the NMIG tries to explain the intention of a definition, clarification of the definition itself may be more relevant. -The illustrative guidance should include more diverse examples (and always minimum 2), to the extent possible based on best practice sustainability statements, illustrating – where relevant – more than one approach to ensure that the intention is conveyed, but without limiting options for the actual reporting. This will strengthen the "non-binding nature of the document". We encourage EFRAG to make use of for instance 10 "standard-companies" representing different industries and/or complexities in the analysis to ensure a structured variation in the examples and to better tease out the diversity in reporting challenges. This will also alleviate part of the pressure on sector guidance and allow for ongoing additions to the examples, which should be thought into the design. EFRAG should work on the NMIG after handing in the revised ESRS with an aim of publication alongside the adoption of the revised standards by the EU-Commission.			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	We disagree as we do not find the overall burdens reliefs to be sufficient. We agree with the inclusion of the principles of undue costs and efforts, including the reliefs beyond IFRS S1 and S2. While we recognize the efforts made to reduce burden, we find that further burden reductions are possible while maintaining transparency in support of the EU green Deal. To ensure that the envisaged burden reductions are realized in practice, we would like to highlight our fundamental concerns iterated in Q11, 12 and 25 – including the application of materiality and the concerns regarding the scope of entity-specific information - as they also impact the elements highlighted here. We support the introduction of the "undue cost or effort" relief, as it will set a limit to the spending to prepare sustainability statements. The introduction of the "undue cost or effort" relief is therefore extremely relevant and necessary to achieve the needed simplifications. It is therefore important that the principle is applicable and consistent throughout the standards, also covering E1-6 (as also mentioned in Q18).We believe the "use of estimates" constitutes an important element (to be seen on equal footing as a source of reliable data) and should also be included by the undue cost and effort principle. We note that there seems to be some inconsistencies – or at least different nuances – due to the term being used slightly different in different parts of the standards. Finally, we would like to note that while we agree with the statement in ESRS1-89 that the assessment can change over time – and often will – there are instances where data is unlikely to become available in a foreseeable future. For comments regarding ESRS1-91, please refer to Q18.			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	We understand that this question addresses section 7.4 and ESRS1-91 in particular We support the relief proposed in ESRS1-91 and see no need for a time limit. Estimates shall meet the qualitative criteria of faithful representation, and QC9 clearly states that information can be accurate without being perfectly precise in all respects. For this reason, we suggest extending the relief to cover GHG emissions as well. The E1-6 exclusion is not justified and should be deleted. The incorporation of this relief is clearly positive, but it should be acknowledged that some data may be permanently unavailable, especially given the expected significantly reduced CSRD scope due to the omnibus, and that this is beyond the company's control. Therefore, there should not be a time limit to the relief. Furthermore, we believe this evaluation is not needed yearly, depending on the specific metrics and the nature/reasoning for data either not being available or for the use of estimates. We believe the principle in ESRS1-89 grasps this as it indicates that the assessment can change over time as circumstances change and hence the formulation of the last sentence in ESRS1-91 needs to be adjusted accordingly. Finally, the standards clearly state that they do not impose behavioral - or conduct requirements, only disclosure requirements. Hence, there is no requirement to cease cooperation if the counterparty cannot or will not provide data. The relief for missing data should be applied consistently regardless of the disclosure type.			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	The Danish business community is deeply concerned about the requirement to disclose anticipated financial effects. Such information is highly dependent on estimates and a large variety of possible developments and outcome, which cannot be reliably projected and for this reason subject to significant uncertainty. Anticipated financial effects would therefore not provide reliable insights for investors or other users, due to their potential variability. Disclosing premature information on matters that are not yet actively incorporated in the entity's financial planning may involve a measurement uncertainty and thus lead to unprecise or even unreliable information that may not only mislead stakeholders but also expose companies to reputational and legal risks associated with misinterpretation. Furthermore, the Market Abuse Regulation (MAR) would require that the issuer continuously and upon any change to the disclosed financial effects communicates these to the market, leading to excessive and disproportionate burdens. We appeal for a thorough investigation and debate about what the requirement on anticipated financial effects in reality entails, involving not only the Commission but also ESMA, EBA and other relevant bodies. If the requirement to disclose anticipated financial effects remains, then Option 2 (qualitative information) is highly recommended.			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	We disagree with most of the detailed disclosures on anticipated financial effects in the E1 standard. We generally believe, subject to our answer in Q19, that option 2 should also apply for climate-related anticipated financial risks and opportunities. Furthermore, we disagree with a significant amount of the detailed requirements and refer to our detailed answer on -ESRS E1 paragraph 40a, c and d; -ESRS E1 paragraph 40a, b, c, d and f; -ESRS E1 paragraph 42

Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We believe that undertakings should be able to comply with both ESRS and ISSB global standards without major obstacles, if they wish to. Users should be able to compare ESRS Sustainability Statements with ISSB sustainability statements without understanding difficult technical differences. We therefore support aligning basic concepts and overlapping disclosure requirements. It is, however, important to take into consideration that ESRS applies to both listed and unlisted undertakings, where ISSB generally shows consideration to listed entities. We find that ESRS should provide minimum requirements to ensure it's appropriate and proportionate for the smallest entities within CSRD. In addition, the ESRS requirements should be within (a subset) of the IFRS-S requirements, and we suggest EFRAG provides guidance on additional (voluntary) information to be provided to gain full interoperability with ISSB standards. For this reason, we support option 2 for anticipated financial effects. The consolidation-requirements in ESRS differ from those in IFRS that may be difficult for users to understand. Ideally, such general concepts should be aligned. Even though we find it important to ensure an alignment between ESRS and ISSB Standards on how to understand fair presentation and "undue cost or effort", we believe the primary alignment of the ESRS-standards should be with other EU-legislation (which applies to all companies in scope) and secondary with ISSB. The EU-alignment is especially important for the topical standards and governance sections which is significantly governed within EU. EFRAG should provide guidance on the alignment when language in the standards is not identical. The "may"-reference in paragraph 11 referring to the IFRS industry-based guidance and GRI sector standards should be moved from the standards to the "basis for conclusions" as this is a voluntary "may". Keeping the reference in the standards will de facto endorse these standards through the back door.			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree				
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	22.ESRS2	Comments on deleted datapoints in ESRS 2	I disagree	While we support the total reduction of disclosures by 68%, we see a need to stress that there is no 1:1 correlation between these numbers and the actual burden reductions for reporting entities. Based on our analysis and discussions with several of the largest Danish entities, their analysis and initial assessment of applying the amended standards, it is our conclusion that the draft standards will only result in very limited administrative burden reductions for reporting entities – only around 5-10 pct. The reduction in data points must also materialize in actual burden reductions, to ensure the Omnibus ambitions are met. We find that further burden reduction is possible while maintaining transparency in support of the EU green Deal and without impairing the needed data infrastructure to requirements for the financial sector in SFDR, CRR, Pillar 3 etc. We suggest considering further reduction in the mandatory datapoints for instance by removing granularity, in particular in S1. Furthermore, we suggest adding additional guidance to the assessment of materiality of information described in ESRS 1, section 3.1 or 3.6, making it easier for the preparer to deem information non-material taking the characteristics of the IRO into consideration, e.g. considering whether it is actual or potential, or material due to scale or scope being most important. This would be particularly relevant for the IROs that "only just" met the threshold set in accordance with ESRS 1, para. 28, and would – besides reducing the reporting burden – provide a more focused and decision-useful report. This also links to our comments relating to policies in Q14 that illustrate this point.			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	22.S1	Comments on deleted datapoints in ESRS S1	I disagree	While we support the total reduction of disclosures by 68%, we see a need to stress that there is no 1:1 correlation between these numbers and the actual burden reductions for reporting entities. Based on our analysis and discussions with several of the largest Danish entities, their analysis and initial assessment of applying the amended standards, it is our conclusion that the draft standards will only result in very limited administrative burden reductions for reporting entities – only around 5-10 pct. The reduction in data points must also materialize in actual burden reductions, to ensure the Omnibus ambitions are met. We find that further burden reduction is possible while maintaining transparency in support of the EU green Deal and without impairing the needed data infrastructure to requirements for the financial sector in SFDR, CRR, Pillar 3 etc. We suggest considering further reduction in the mandatory datapoints for instance by removing granularity, in particular in S1.			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	We are of the opinion that the amended ESRSs should not introduce new "shall"-requirements and support the deletion of the "may" disclosures. We cannot support the six datapoints added as they would impose significant additional reporting burden in particular on E3 Water requiring a full water-balance calculation independently of the structure of the group and reason for water being material. Although, E4 Ecosystems and Biodiversity only require information on transition plans when such a plan is in place, we believe that it is too early to add such requirement to the standard as global frameworks and models to measure biodiversity and ecosystems are still being developed. Therefore, most entities would be able to make a reliable estimate of the baseline whereby defining a transition plan would be impossible. Lastly, we note, that datapoints added to the governance standard add complexity and might impose risk of self-incrimination or other legal risk. As described in our answer to question 22, we suggest adding additional guidance to the assessment of materiality of information described in ESRS 1, section 3.1 or 3.6, making it easier for the preparer to deem information non-material taking the characteristics of the IRO into consideration, e.g. considering whether it is actual or potential, or material due on scale or scope being most important. We believe, it's important to facilitate a better use of materiality on information; and in particular with the addition of new "shall" requirements its important the preparers have the ability to deem these (as well as other) information non-material when that is the case.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new “shall” datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	Firstly, we want to highlight, that the imposed granularity in ESRS E5 in relation to detailed datapoints on inflow and outflow goes way beyond the elements mentioned in the question. We are of the opinion that the amended ESRSs should not introduce new "shall"-requirements and cannot support the datapoints added as they would impose significant additional reporting burden in particular on granularity of key resources/products in the inflow and outflow information required in ESRS E5. The datapoints required would be almost impossible to gather as the inflow/outflow does not only take place for each individual resource/products, but are complex components, e.g. when a resource inflow is embedded in semi-finished goods or a mix of several products. In relation to the two datapoints suggested to be added to E5-4 and E5-5, please note our comments provided in part 3 to this questionnaire on consistency between the definitions and terminology in ESRS E5 and the EU waste regulation. As described in our answer to question 22, we suggest adding additional guidance to the assessment of materiality of information described in ESRS 1, section 3.1 or 3.6, making it easier for the preparer to deem information non-material taking the characteristics of the IRO into consideration, e.g. considering whether it is actual or potential, or material due on scale or scope being most important. We believe, it's important to facilitate a better use of materiality on information; and in particular with the addition of new "shall" requirements its important the preparers have the ability to deem these (as well as other) information non-material when that is the case.			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	25.	Emphasis on ESRS being a “fair presentation” reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We Partially Agree. We support the purpose of introducing the fair presentation concept, which should make it easier to leave out information that is not material and/or unreliable. The purpose, however, is not directly reflected in the incorporated rules nor clearly defined. Overall, in its current version, the concept seems to create an additional burden rather than simplification. The description and definition of fair presentation need to be amended to define a fair presentation of the sustainability report in its entirety for the topics covered by the CSRD, rather than a focus on a fair presentation of each individual IRO and its related disclosure requirements. This would require changes to ESRS 1, paragraph 16 and 18, and consequential changes to the definition of faithful representation in Appendix B. It must be made absolutely clear that fair presentation is used as an overall assessment to see if additional information is needed and to more easily leave out information which is found not-material and/or unreliable by the reporting undertaking in the assessment of materiality of information as defined in ESRS 1, section 3.1. We do not find this sufficiently clear in the current description and therefore recommend that EFRAG states this more clearly in the standards. We find that the current draft standards simply impose requirements on companies to ensure that their sustainability reporting meets a range of qualitative criteria. Thus, the interpretation of the "fair presentation" concept and the impact on the assurance process is unclear. The concept has to be elaborated preferably with reference to a revised materiality threshold focusing on strategically important matters ensuring that that sustainability report as a whole fairly present decision-useful information on the material sustainability matters to the users of the sustainability report. Please see our response to question 11 regarding user-groups.			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 (“when only setting intensity targets”), to disclose also the associated absolute values” (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking’s progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We agree that financial institutions should be exempted from disclosing absolute GHG reduction targets. The reason is that financial institutions do not emit GHG to any significant extent. Therefore, financial institutions' targets aim at reducing emissions pr. invested/financed unit. Especially for insurers the estimation of absolute climate reduction targets would require extensive assumptions and be very complex, and provide a result with very limited value for users. Exempting banks from disclosing GHG emission reduction targets in absolute terms is needed. Over 90% of banks' GHG emissions typically stem from financing activities (Scope 3, Category 15), which means that their GHG emissions depend on companies and households that banks finance. Therefore, too many hypotheses are needed to calculate targets in absolute value, and the results are neither reliable nor comparable, because they ultimately depend on clients. Furthermore, the figures would reflect not only double counting but multiple counting of the same impacts and have no information value. For this reason, we strongly believe that banks should be exempted from disclosing GHG emission reduction targets in absolute terms. Intensity targets alone should be sufficient.			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking’s employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	We believe that the requirement to disaggregate the metrics for characteristics of the undertaking's employees as now suggested to be for the top 10 largest countries with more than 50 employees is too detailed and removes the focus on material and substantial countries. Such a requirement would increase the reporting requirements compared with ESRS Set-1 and thereby contradict the purpose of the Omnibus. Furthermore, it will lead to additional reporting on more details than necessary for a fair presentation, undermining overall relevance. We suggest that the threshold of 10% is reintroduced or, alternatively, that the minimum number of employees is increased to match the threshold of the entities required to report under the CSRD. We also note that fair presentation would normally drive reporting at more aggregated levels, for instance regional, to provide more relevant information for the primary user groups and better align with the management approach that should also prevail in S1.			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	We Partially Agree. Adequate wages is mainly a political subject. Therefore, disclosures on wages and wage-setting processes always needs to be seen in a national framework and in context of the national social dialogue. This is vital to ensure that local realities related to the cost of living and economic prospects are fully integrated, therefore the guidance and principles of ILO wage setting processes and principles on estimating a living wage are crucial. However, we believe that EFRAG and/or the EU-Commission needs to find practical solutions involving for instance databases that the reporting undertakings can rely on to promote comparability and consistency. We note that the OECD in 2023 published a policy insight "Living wages in practice" and would encourage EFRAG to invite OECD to provide their advice for a reporting basis that can lead to reliable and comparable principles.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	We would like to stress the importance and need for the data infrastructure being maintained and we find it positive that suggested changes etc. is communicated clearly to the EU-Commission to ensure consistency when the SFDR, CRR and other relevant regulations is to be updated to ensure the ongoing consistency in the infrastructure. To ensure the infrastructure is maintained in the future, we suggest incorporating a dynamic link between SFDR, CRR, Pillar 3 etc. and ESRS. This is especially relevant with the upcoming review of SFDR.			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	We Partially Disagree. We disagree with the proposal especially due to the maturity of measurement principles and the fact that these are still developing and expected to change and be further refined in the future. Instead, we suggest that EFRAG issue non-mandatory illustrative guidance which can be updated more frequently, adapting future developments in this area.			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	We Partially Agree. Any disclosure on remuneration metrics on possible pay disparities should be fully aligned with the EU Pay Transparency Directive for the part of the company operating in EU. Therefore, companies should be able to use directly the information country by country they have supplied according to the directive as required in the national legislation implementing the directive. Furthermore, it is not feasible to try to spread an EU Directive globally and a disclosure of global unadjusted pay differences does not seem meaningful due to national differences across borders as wages and levels need to be seen in a national framework and in context of the national social dialogue. Having said this, we do not believe the number provides meaningful nor relevant information – and hence conflicts with the fundamental qualitative characteristics like relevance. Furthermore, as the number is already reported under the EU Directive to the public authorities, the reporting requirement essentially duplicates other reporting and should be deleted. If reporting on gender pay gap is retained, we suggest to revert to a more meaningful disclosure, like the adjusted pay gap.			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree	We agree with the amendments suggested, and that setting up a specific metric, uniformly applicable without undue costs and efforts (including the challenges for identifying the relevant datapoints in the global ERP-systems) was not proportionate. We agree with the PAT-approach that ensures that the topic – if material – is addressed and that the reporting undertaking can set the relevant targets			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	As indicated in the above responses, starting in Q11, we believe ESRS 1 - and in particular the DMA process - while revised have not amended the fundamentals. We refer to the detailed comments in the other questions. Furthermore, we would like to highlight the importance of the need to delimit value chain reporting for financial institutions as well as resolving the issues for Investment Holding Companies. If no solution is provided at level 1, there is as a minimum a need for a general provision in ESRS 1 that allows financial institutions to adapt their sustainability reporting, including value chain reporting, to the specificities of financial institutions and that the issues around business model is addressed for the Investment Holding Companies to ensure that the qualitative criteria of relevance and reliability are satisfied for these types of entities.			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	33.Glossary.	Glossary:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	On the Acronyms and glossary of term "Incident": Partially agree The definition seems to be too narrow, as it only relates on the legal proceeding and complaints. The use of the term would generally be broader than this and include things that has happened "un planned" or even as accidents. This also seems to be thinking behind the use of the term in, e.g., ESRS E2 paragraph 16(a). We suggest broadening the definition.			
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Structure of ESRS 1: We have noted that ESRS 1, section 2, describes fair presentation and qualitative characteristics of information, while the materiality of (sub-section 3.1), determining the information to be reported (sub-section 3.6) and level of aggregation/dis-aggregation (sub-section 3.7) is included in section 3 on the double materiality. We suggest moving sub-sections 3.1, 3.6 and 3.7 to section 2 for clarity as all of these sections are inter-related and describe the requirements for the presentation of the sustainability report and elements to be included. Reference to EU regulations: We have noted that amended ESRS E2, AR2+3, refers to (EU) 2024/1244 (Industrial Emissions Portal Regulation), whereas the current ESRS 2 references (EC) No 166/2006. Regulation (EU) 2024/1244 apply from 1 January 2028 at which date it repeals (EC) No 166/2006. This possibly leaves entities with an amended E2-standard applicable from 1 January 2027 which references an EU-regulation applicable on a future date. We recommend that EFRAG considers how the standards respect current and future regulations, including any possible early adoption, and considers how this is effectively incorporated into the standards. EFRAG should include general guidance on this for entities to be able to plan for any future changes in the EU regulation. Furthermore, we observed that the draft amendments remove references to existing EU legislation and frameworks that previously provided some context for preparers. While we understand that the intention may be to simplify the standards, this poses a need for more guidance to alignment with existing EU frameworks. Greater consistency in definitions and scope - particularly in relation to current and upcoming EU initiatives - would support more coherent, comparable, and decision-useful reporting, while also helping to reduce the compliance burden for companies navigating multiple regulatory obligations. We suggest keeping reference in the ARs or in the NMIG.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	35.ESRS1_5.1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Partially disagree Sub-chapter 5.1 attempts in short to explain concepts from financial reporting on consolidation, including exemptions, and which assets, liabilities, income and expenses are usually considered as part of own operations. These paragraphs are neither accurate nor sufficient as accounting legislation on consolidation is complex. We encourage EFRAG to ensure consistency with legal provisions for financial reporting and provide more elaborated guidance on how to present consolidated sustainability statements within the remit of level 1 regulation. In addition, we encourage EFRAG to consider the description of consolidation in light of the issues for Investment Holding Companies, which – if not solved in Level 1 regulation – should be handled within ESRS.	ESRS1	5.1 Reporting undertaking and own operations	
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	35.ESRS1_5.2.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Partially disagree Sub-chapter 5.2 needs to be reworked in its entirety, by removing things covered elsewhere, e.g. undue cost or effort, use of estimates, examples of data sources, and separating paragraphs clearly being AR, e.g. ESRS 1 paragraph 63- 65.	ESRS1	5.2 Inclusion of value chain information	
Survey	Danish National Funding Mechanism	(National) standard setter	Denmark	35.ESRS1_7.3.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Partially agree Paragraphs are widespread on sources of information expected used, e.g. ESRS 1, paragraph-27, 47, and 62, and various paragraphs mentioning the undue cost or effort relief, e.g. ESRS 1, paragraph-47, 60, and 87-89. A gathering of these paragraphs in sub-chapter 7.3 may avoid different interpretations as to what applies when, e.g. whether data available in-house shall be used in ESRS 1, paragraph 65.	ESRS1	7.3 Use of reasonable and supportable information that is available without undue cost or effort 18	
Survey	EFFAS e.V.	User Association	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	EFFAS welcomes the simplification of the DMA and recognizes the value of a top-down, outcome-oriented approach. At the same time, the framework should preserve a degree of flexibility, allowing companies to frame and present their assessments in ways that reflect their specific business model, provided that disclosures remain comparable, reliable and focused on matters material to business performance and long-term value creation. The ESRS double materiality model is unique in combining both perspectives: the financial materiality dimension, aligned with ISSB standards, and the impact materiality dimension, consistent with GRI. This dual architecture not only strengthens the relevance of European reporting but also offers a bridge for greater global convergence, ensuring that sustainability information is useful for both corporate accountability and capital markets. For investors, the ultimate value of DMA reporting lies in its ability to improve risk pricing, enhance the efficiency of capital allocation and reinforce investor protection. To deliver on this objective, companies should document in their DMA process the coverage of value chain information per material topics and explain transparently reasons for limited scope as well as the reasons for critical sector topics being considered as immaterial. On the other hand, quantitative datapoints must remain mandatory wherever available. DMA disclosures should become increasingly aligned with broader international standards (such as ISSB) as well as internal European regulations (including SFDR and the wider sustainable finance framework), and digitalisation should be leveraged to strengthen comparability while lowering compliance costs. In this way, DMA reporting can build confidence among both Amended ESRS Exposure Drafts – July 2025 Public Consultation institutional and retail investors—an explicit goal of the EU's Survey Savings and Investment Union.			
Survey	EFFAS e.V.	User Association	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	EFFAS supports explicit disclosure of both gross and net impacts, as the two perspectives provide complementary insights that are essential for investors and other stakeholders. Gross data establish a consistent baseline for comparability and reveal the magnitude of risks and externalities. Net data, in turn, captures the effectiveness of management actions and progress in mitigating those risks or creating positive outcomes. Both dimensions should be disclosed in quantitative and digitalised form, aligned with SFDR PAI indicators, and accompanied by clear information on scope boundaries, coverage and underlying uncertainties. This dual disclosure will enable investors to distinguish between structural exposures and managerial performance, thereby strengthening the decision-usefulness, comparability and reliability of ESRS reporting.			
Survey	EFFAS e.V.	User Association	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	EFFAS agrees in structuring the sustainability statement in four parts, as it should facilitate the reporting and reading of the summary in an orderly manner. Regarding point 107, it should be considered whether the requirements, including additional disclosures related to specific jurisdictions, legislation, and frameworks, might be useful for stakeholders. We understand the need for information to comply with materiality assessment, yet the guidance should be made more concrete to clarify which "specific" users it is directed toward.			
Survey	EFFAS e.V.	User Association	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The elimination of the requirement to disclose whether an undertaking plans to implement a Policy, Action or Target (PAT) for material topics, as well as the related timeline, significantly weakens the usefulness of disclosures for investors. From an investor perspective, it is not sufficient to know that certain material impacts, risks or opportunities (IROs) are not currently covered by a PAT. What matters is the forward-looking trajectory: whether management acknowledges gaps and intends to close them, and over what timeframe. Without this information, investors cannot distinguish between: - material topics that are genuinely deprioritised by management, and - material topics for which policies or actions are in development but not yet disclosed. This lack of clarity reduces transparency on the company's strategic intent, governance priorities, and capacity to manage material sustainability risks. It also impairs comparability across peers, since some companies may actively work toward covering all material topics with PATs, while others may not plan to address them at all.			
Survey	EFFAS e.V.	User Association	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree

Survey	EFFAS e.V.	User Association	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The proposed introduction of a general relief for cases of "undue cost or effort" may appear sensible from a practical standpoint. Yet from an investor's point of view, there is a real danger that companies could rely too heavily on this clause—particularly in relation to value-chain metrics—as a way to ease their reporting obligations. To keep this risk in check, the use of such relief should only be allowed under strict conditions. Companies should be required to explain why the exemption is justified, specify which parts of the information were excluded, and highlight any resulting material gaps. Without these safeguards, the quality, comparability, and usability of the reported data—both at the individual company level and for portfolio aggregation—would be undermined.			
Survey	EFFAS e.V.	User Association	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	Although we recognise the practical need for a relief mechanism that allows partial reporting when data quality is insufficient, the absence of a clear time horizon is problematic. Companies should not be given an open-ended option to rely on limited disclosures, as this removes any real incentive to expand the scope and enhance the robustness of their reporting over time. An indefinite exemption would effectively stall the natural progression—or "learning effect"—that sustainability reporting frameworks are meant to foster. To avoid this, the use of such relief must be bound by strict conditions. Firms should provide a transparent explanation of why the relief is applied, outline the decision-making criteria used, and commit to time-specific plans for expanding data coverage. Only with these safeguards in place can reporting retain credibility and comparability			
Survey	EFFAS e.V.	User Association	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	It is essential to adopt Option 1 for several reasons. First, Option 1 preserves the requirement to provide both qualitative and quantitative information, while offering pragmatic relief when reliable measurement is not possible or uncertainty is too high. This mirrors the IFRS relief in IFRS S1/S2, ensuring interoperability between ESRS and global standards. By contrast, Option 2 would create a fundamental disconnect with IFRS and undermine comparability for multinational investors. Second, conditional quantitative disclosures are necessary for the objectives of the SFDR and the European Commission's sustainable finance agenda. These frameworks seek to influence capital allocation by giving investors decision-useful data on the financial effects of sustainability matters. Under Option 2, companies could omit quantitative information entirely, leaving investors without a basis to assess exposure and resilience. This would send the wrong signal: that the EU is retreating from transparency rather than reinforcing it. It is hard to accept that a company can label a sustainability topic as material while providing no quantitative estimates of its financial effects. Material matters must meaningfully affect performance, position, or prospects, so management should have at least an approximate sense of magnitude or direction. Stopping at qualitative descriptions would undermine the credibility of materiality assessments, leave investors without key information, and create an inconsistency between identifying a topic as material and providing no measurable implications. Quantitative disclosures are essential to uphold both the integrity of double materiality and the usefulness of information for decision-making. Adopting Option 2 would risk reducing sustainability reporting to narrative alone, depriving investors of the hard data needed for portfolio construction, risk management, and stewardship. It would weaken the European reporting regime and reduce its impact on directing capital toward sustainable activities. For these reasons, Option 1 strikes the right balance between feasibility, global alignment, and investor usefulness.			
Survey	EFFAS e.V.	User Association	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree	The current reporting requirements proposal is more understandable. The granularity of the former requirements were not providing sufficient added value for analytical work.			
Survey	EFFAS e.V.	User Association	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	EFFAS considers it a major step in the right direction to align ESRS-E1 and E2 with IFRS S1 and S2 to enhance interoperability while introducing simplified reporting. For users, requiring similar reporting information to IFRS S1-S2 implies more comprehensive and comparable information. We welcome particularly the alignment using the same language as frequently as possible. The double materiality approach should not be questioned.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	EFFAS e.V.	User Association	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)				
Survey	EFFAS e.V.	User Association	Germany	22.S1	Comments on deleted datapoints in ESRS S1	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	EFFAS considers quantitative indicators on wages, pay gaps and working conditions indispensable for risk analysis and integration into valuation models. Alignment with SFDR PAI indicators and the Pay Transparency Directive is critical to ensure consistency and comparability across jurisdictions. To enhance decision-usefulness, EFFAS recommends proportionate disaggregation of workforce data, for instance, focusing on the ten largest countries where companies employ more than 50 staff.			
Survey	EFFAS e.V.	User Association	Germany	22.S2	Comments on deleted datapoints in ESRS S2	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	EFFAS calls for explicit coverage of ESG-linked remuneration for senior management under ESRS 2 Governance, extending beyond board members to ensure full alignment of incentives with sustainability objectives and in coherence with the governance duties established under the CSDDD. Finally, the adoption of the VSME standard for SMEs in the supply chain, supported by digital data collection, is essential to safeguard proportionality while maintaining interoperability and data reliability.			
Survey	EFFAS e.V.	User Association	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	To safeguard proportionality along the value chain, EFFAS recommends the introduction of a reporting cap, with the VSME standard serving as the reference framework for SMEs. At the same time, a set of minimum core metrics, such as accidents and supplier audits, should be preserved and fully integrated within ESAP, ensuring both reliability and accessibility for investors and stakeholders.			
Survey	EFFAS e.V.	User Association	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	EFFAS e.V.	User Association	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	EFFAS recognizes the importance of targeted reliefs to safeguard proportionality, but strongly supports Option 1, which combines quantitative and qualitative disclosures with the possibility of conditional omissions. This embedding will secure the convergence and harmonizing of different sustainability regulations.			
Survey	EFFAS e.V.	User Association	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	EFFAS e.V.	User Association	Germany	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		EFFAS regrets the reduced references to the EU taxonomy, particularly outside E1. Users need alignment between sustainability and financial reporting, and omitting taxonomy links (e.g., Capex, turnover) weakens evaluation of transition plans. EFFAS warns that SMEs may face disproportionate burdens if ESRS lack proportionality. The VSME standard should be the baseline for supply chain disclosures, supported by a clear value chain cap. This aligns with the CSDDD's principle of proportionality. At the same time, investors need a reliable minimum dataset to assess risks. ESRS disclosures should therefore align with SFDR PAI indicators and VSME datapoints, focusing on core metrics such as GHG emissions, energy, waste, pay gap, and accidents. This ensures reporting remains proportionate yet decision-useful, strengthening investor confidence and EU sustainable finance. EFFAS also urges that S4 extends the coverage of client satisfaction and fair sales practices. The amendments risk omitting a clear understanding of client engagement and preclude a better financial forecasting. EFFAS suggests providing guidance on value chain boundaries for financial institutions. Deferring this to Level 1 risks leaving banks, insurers, and asset managers with continued uncertainty over "own operations" versus "value chain." The sector-agnostic approach overlooks key differences: asset managers act on client instructions, while banks and insurers take risks on their balance sheets. Without clarity, disclosures will remain inconsistent and non-comparable, reducing their usefulness for investors and undermining capital allocation. Finally, granting financial institutions optional downstream reporting would create a double standard. Non-financial companies must report comprehensively, while financial institutions would face lighter requirements. Such asymmetry compromises comparability weakens the ESRS framework and risks undermining its integrity.

Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	It's important to remember that "simplification does not necessarily mean freedom and flexibility" for undertakings. Simplification should not result in a multiplication of choices for undertakings, because this impacts the comparability between undertakings for investors. Moreover, this does not facilitate discussions with auditors who still lack clear guidelines on the application requirement. The simplification exercise should not only focus on the production of reporting, but should also aim to remove outputs that are not useful to the undertaking's sustainability report. From an investor's perspective, we believe that a top-down approach to financial materiality is more significant for investor to ensure data comparability. For impact materiality, we believe that a bottom-up approach is more appropriate, as external stakeholders (e.g.: civil society) are best suited to identify real impacts.			
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	As investors, we have faced a lack of data from undertakings that, having implemented corrective measures, consider the impact is not material for them. The introduction of this guideline should therefore be accompanied by further clarification — in particular, distinguishing between raw data and the information investors are confronted with in terms of regulatory requirements, as well as any remedial measures to be implemented, in order to derive the net impact. AFG considers the "gross approach" to be preferable, as the "net approach" could lead to reduced transparency. Less ambitious entities may disclose minimal information and limit themselves to fulfilling only the minimum requirements. As a general principle, priority should be given to the assessment and reporting before remediation actions (i.e. prioritizing gross over net). This is particularly important for investors, as it allows them to perform their own assessment of both the effectiveness of the remediation actions implemented by reporting undertakings and the effective reduction of adverse or potential adverse impact. We believe that Appendix C should be removed and that the definition of the "gross approach" should be clearly defined and allow for comparability between undertakings' reporting. It is important for investors not to convert this into a potential financial impact, but rather to report the impact itself rather than the adverse impact (i.e gross value). Indeed, for financial impact, asset managers already have their own risk models to address it. It is all the more imperative to thoroughly understand where financial risks are concentrated and what offers the greatest long-term sustainability for stakeholders			
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	AFG supports the work carried out by the ANC on simplifying the ESRS in order to meet the European Commission's request to simplify, enhance the clarity, and improve the interconnection of the ESRS. Accordingly, the ANC initially proposed a reorganization of the structure to better reflect the process followed by companies in conducting the DMA. This was followed by a modification of the minimum level of analysis, prioritizing the DMA at the sub-topic level, and, if necessary, at the level of individual IROs. The ANC also worked on proposals to strengthen the principle of materiality and improve the alignment between ESRS 1 and 2 and the thematic ESRS. We support the introduction of an executive summary to enhance stakeholders' understanding and engagement. However, in line with the goal of simplification, this executive summary should not create additional reporting requirements for preparers. The key point that EFRAG must maintain is the removal of duplicate indicators (which we welcome) as well as simplification supported by guidelines to enable smoother discussions with auditors. Furthermore, we support the proposal from ANC to introduce a presentation rule requiring undertakings to directly reference the disclosure requirement (DR) numbers within their sustainability statement (e.g., in section headings or paragraph titles), without the need for a separate mapping table. This "visual tagging" approach is already used by many companies and facilitates comparability for users. Suggested wording: BP1 - §6 [new]: The undertaking shall indicate the disclosure requirement number in section headings or paragraph titles presenting the related information (e.g., "S1-1_Policies related to own workforce").			
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	This is not a matter specific for investors. However, it is important to us that some indicators are maintained. AFG supports the ANC's proposal regarding the simplification of ESRS indicators. As ANC we support the removal of the topic requirement from ESRS 2, as they create redundancies in sustainability statements in most cases.			
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We welcome the efforts made to simplify the indicators. However, we would like to draw your attention to two key points: - It is essential that certain indicators have more precise definitions to ensure greater clarity. There is a strong need to clarify and explicitly state that all "may disclose" indicators, which have been reorganized into AR or integrated into the NMIG document, are optional elements intended to provide clarification for mandatory indicators, and do not in any way constitute reporting obligations. This clarification is particularly important in discussions with auditors, who in the absence of specific guidelines to date, have interpreted these elements according on their own understanding, leading to differing interpretation of certain indicators between auditors and investors. - It should be noted that if an undertaking wishes to publish additional information, it is very much welcomed by investors, as it provides valuable input for our analyses and investment decisions. In particular, clearer guidance is needed to ensure better readability and smoother collaboration between auditors and preparers.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	AFG welcomes the simplification proposals and the creation of the Non-Mandatory Illustrative Guidance (NMIG). However, we wish to draw your attention to the following points: - The risk of overinterpretation that these NMIG may entail, whether by certain stakeholders or by auditors. - The risk that these optional standards may become, or revert to, mandatory requirements. The creation of this "category" of standards runs counter to the simplification objective. The EFRAG should take a more prescriptive approach to methodology to enhance comparability, rather than relying on optional guidance. Moreover, there is a lack of clarity regarding the practicality of these elements. AFG requests clarification on the intended final use of this guidance, its legal status, and a clear statement that these are non-mandatory standards, whose sole purpose is to clarify mandatory DP requirements, and that the Non-Mandatory Illustrative Guidance is not intended to become mandatory elements for preparers of sustainability reports.			
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	AFG recalls the importance of coordination between sustainable finance regulations, both as investors and as users and preparers of CSRD sustainability reports. Particularly between the SFDR Regulation and the CSRD Directive. As a reminder, under SFDR reporting obligations, and in particular within the framework of the PAIs, investors have a strong need for data provided by companies across all E, S, and G topics. If the ESRS are simplified and enable more companies (large, medium, and small) to publish information, this would further reduce reliance on data providers, who often use estimated data and methodologies that are not transparent. This dependency is particularly high with data providers, most of which are still non-European. We request a precise definition of the notion of "undue cost or effort" to ensure that it may not go too far at the expense of meaningfulness and comparability information (for example: for climate disclosures, do not allow to use the relief except for scope 3 GHG emissions. Or as for relief for lack of data quality, require undertakings to disclose whether and how the undertaking will try to collect the data in future period). Finally, we consider it essential to establish a deadline for the use of proxies. If companies are allowed to use proxies following this ESRS review. It is necessary and crucial that they be given a "cut-off date" for the use of estimated data, in order to encourage them to obtain raw data by implementing the necessary actions. This would allow both financial actors and data providers to have homogeneous and transparent data for end use. As investors, we believe that the perimeter of the sustainability report should be aligned with the financial reporting perimeter (i.e. financial consolidation). AFG support the wording proposal from ANC about this subject.			
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	AFG understands the rationale for simplification but is against this proposal. There is a need for a clear phasing-in schedule. Without such a timeline, investors will face the same lack of comparability between companies as they do today. Implementing this proposal would represent a step backwards and would deepen the lack of comparability and data consistency across companies. We recommend, at the very least, clearly defining the scope to avoid misleading outcomes and to improve comparability. Furthermore, this would disadvantage companies that produce a "full" report, as the published data would be less "favourable." Regarding the proposal for companies to specify the actions taken to improve the coverage of their calculation in subsequent periods, we request that companies also be required to indicate the timeframe by which they expect to achieve full (100%) coverage of the scope. The following wording would therefore be more appropriate: "actions taken to cover 100% of their activities," with the aim of aligning sustainability reporting expectations with the company's financial reporting. Once a company considers an activity to be material, it should provide a precise timeframe for obtaining the relevant data. Estimates should therefore be framed within a clear consumption limit, with a deadline and details of the actions planned to address the gap. Finally, we request the deletion of the provision stating: "no time limit is included for the use of the relief."			
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	As investors, it is essential for us to have high-quality, transparent and reliable quantitative data from undertakings, particularly on well-established topics. Such quantitative data doesn't necessarily have to be expressed in monetary terms, but should at least highlight how the business model is affected. The possibility of including topic-specific provisions within the ESRS could be considered. At the same time, we understand that this quantitative requirement might be difficult to implement for undertakings in absence of common methodologies. In this context, we could envisage to have a phase-in implementation starting with mature topics (e.g. climate) and continue with less mature topics, in order to encourage their integration and treatment. In view of all these considerations, we believe that quantitative data on anticipated financial effects of climate should be published by undertakings, provided that, as a prerequisite, a common methodology is established under the EU Regulation. We therefore call the European Commission to develop a harmonised methodology for calculating such anticipated financial effects. This work should be undertaken without delay to enable a timely quantification and disclosure of these effects. Lastly, we would like to reiterate our support for the extraterritoriality principle, to ensure that European undertakings are not penalized compared to non-European undertakings when publishing such information.			
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree	We are aligned with this proposal and do not see any major concerns.

Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	To understand the undertakings' reporting, we believe that distinguishing between « NA », « 0 » and « not able to calculate » provides valuable information for investors to analyse and compare undertakings. AFG supports the ANC proposal about the integration of elements from ISSB framework is a positiv step towards interoperability. To address interoperability in a pragmatic manner, ANC recommends completing the ESRS with dedicated ISSB interoperability guidance. This would enable undertakings wishing to align more closely with IFRS S1 and S2 to disclose additional datapoints, without creating additional burden for other undertakings. Such guidance would reintroduce, on an optional basis, the datapoints originally derived from IFRS S1 and S2 but removed from the current draft for simplification purposes. Proposed wording: (outside of the standard): "If the undertaking aims to ensure interoperability with [IFRS S1 or S2] issued by the ISSB, it may disclose [relevant information]." It is recommended that EFRAG and the ISSB work together on updating the criteria mapping table in order to ensure consistent and up-to-date interoperability of the elements proposed in this consultation.			
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	General Comment: We welcome the simplification and reduction of ESRS indicators proposed by EFRAG. We particularly appreciate the effort to retain only quantitative indicators, as quantitative data from companies is a key element for investors, facilitating both the analysis and comparability of the companies assessed. We support the point of view of ANC that EFRAG has clearly engaged in a simplification effort, reflected in the reduced overall volume of the standards, improved readability, and a clearer distinction between may and shall provisions. Importantly, the key information required by investors to conduct ESG analyses remains available. The proposal strikes a reasonable balance between reducing the reporting burden and preserving the information necessary to meet the objectives of the EU Green Deal. We have duly noted the transfer of certain non-mandatory indicators to the NMIG document. However, we reiterate our position that it is essential to maintain a degree of standardisation for voluntary indicators to ensure sufficient consistency for companies wishing to go further in their sustainability reporting. We also emphasise the importance of clearly stating the non-mandatory nature of these illustrative guidance.			
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	We are not opposed to the inclusion of these criteria, provided that they are broadly agreed and we are aligned with technical suggestions from ANC about each KPI. With the exception of the ESRS G1 concerning Business conduct confirmed incidents: Mandatory reporting would pose risks to European companies' competitiveness. It could conflict with the right against self-incrimination guaranteed by the European Convention on Human Rights and expose EU companies to investigations by third-country authorities, such as the US Department of Justice, benefiting non-EU competitors not subject to similar obligations. In the joint statement on a US-EU framework for reciprocal, fair, and balanced trade, the EU is called upon to ensure that the CSRD and CSDDD do not impose undue restrictions on transatlantic trade. Introducing mandatory reporting of confirmed incidents risks creating an unlevel playing field, as US companies may be exempted from comparable constraints. Moreover, reporting confirmed incidents is not a reliable indicator of anti-corruption policy effectiveness. A low number of incidents could reflect strong preventive measures, while a high number may indicate a trusted reporting system, particularly through whistleblowing channels. A simple numerical count or brief description of an incident's "nature" cannot capture its context, resolution, or remedial actions.			
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	ESRS 2: Agree, without comments E2-4: Disagree: this indicator is for companies' specific approach. Not for a transversal approach. However we understand that this indicator addresses the objectives set by the European Commission regarding microplastics. E5-4: No comment. E5-5: Partially agree. It is already possible to obtain this information by subtraction. As investors, we are in favour of positive approach rather than a negative or punitive one. We are aligned if the objective is to have a 100% breakdown of waste destinations. In that case, the wording should be reviewed. Furthermore, is better to use "untracked" rather than "unknown".			
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	It is important to recall the risk of differing interpretations of the concept between undertakings and auditors. This matter falls more within the scope of accounting expertise. In this context, we reiterate our request for the establishment of Europeans guidelines for auditors, with the aim of facilitating exchanges and improving audit controls. AFG supports the ANC's position about fair presentation. ANC invites EFRAG and the European Commission to provide further clarification on the concept of fair presentation, in order to avoid divergent interpretations by preparers and auditors. Guidance is needed on how this principle will be applied by assurance providers and whether its inclusion may have implications for the ongoing simplification efforts. Specifically, ANC recommends clarifying: - The definition of fair presentation as a filter to taking into consideration the strategic specificities of the business model and activities of the undertaking; - The hierarchy between the use of reliefs and the requirement of fair presentation: confirm that applying a relief does not contradict the principle of fair presentation in general. - The audit procedures expected to ensure compliance with this principle.

Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We remind our support for the extraterritoriality and the necessity for France to keep her sustainable leadership on the world wide's vision. We support the proposal from ANC to introduce an exception in the AR for financial institutions' absolute climate reduction targets, allowing disclosure of intensity-based targets provided they disclose contextual information and the potential trend in absolute value. The intensity target is more representative than the absolute target for investors, especially when it comes to setting targets. An absolute result makes less sense for financial analysis. If Europe is the only continent requiring this information as an absolute target, it will be problematic for European investors, who are subject to KPI disclosure requirements under other regulations (e.g., SFDR). So we support the ANC proposal wording: AR X for §E1-6 §26a on target setting or Amendment to AR12 for para 26: "Financial institutions may disclose targets in intensity value with (a) a breaking-down per high-climate impact sectors for which it has set targets, (b) a concise indication on the trend of absolute emissions per target". Adaptation of concepts and lexicon, clarifications regarding (i) double materiality assessment and (ii) value chains considerations, links with sectorial regulations			
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	We agree with the proposed modification of the threshold			
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	The average wage can only be analysed on a granular basis. It is important to have a local view in order to understand practices, ideally corresponding to the top 10 countries in which the company operates. As investors, the concept of a "fair wage" is important. Nevertheless, we recognise the difficulty of establishing it on a global scale, as such an approach would lack relevance. So we support the ANC's proposal as a compromise, who propose a flexible model with mandatory transparency. Undertakings should be allowed to use either statutory wages or recognised living wage estimates, provided they disclose the methodology and country-level context. Given the novelty of this concept, companies should retain flexibility to select the most appropriate reference, while avoiding premature lock-in to a rigid framework. The ILO's work, although not yet fully comprehensive, could serve as a useful starting point.			
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	There is a clear need to ensure consistency between the sustainable finance framework and particularly between the ESRS and SFDR. The European Commission should ensure that the ESRS simplification are properly reflected in the SFDR disclosure requirements, particularly with regard to the PAI indicators.			
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	We understand the proposed simplification, given that biodiversity remains a relatively less mature topic at this stage. We are therefore aligned with the proposed modifications. However, to ensure improvement on the topic of biodiversity, we believe this issue should be revisited in the coming years and we request the inclusion of a review clause. The purpose of this clause would be to confirm that the topic is currently insufficiently mature to provide the necessary data, while ensuring that these thematic indicators will be revisited in a few years' time (3 to 5 years) once progress has been made. This would also encourage companies to adopt a long-term perspective on the issue.			
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	As investors, we consider it more useful to have the data point broken down by both gender category and socio-professional category, in order to obtain both breakdowns without necessarily having them reported separately. The adjusted gender pay gap is more interesting for investor than unadjusted (refer to PAI indicators).			
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree	We agree with the proposed simplification.			
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	AFG (Association Française de la Gestion d'actifs)	Association of financial institutions	France	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		ESRS E1 on net zero targets: We note that the reference to net zero has been completely removed from the standard. This is regrettable, as prior to ESRS, there was a significant proliferation of net zero communications, each with varying levels of ambition. Such claims were also identified by ESMA in its greenwashing report as a prevalent issue. The inclusion of net zero in Set 1 provided a clear, uniform definition for all actors and led to substantial improvements in disclosure quality and better differentiation from neutrality claims. This concept and its definition should be maintained in the standard. Proposed wording: Add in glossary previous entry "Net-zero target" Retain current Set 1 E1-7 §60 with clarifications regarding removals vs offsets: "In the case where the undertaking discloses a net-zero target in addition to the gross GHG emission reduction targets in accordance with Disclosure Requirement E1-6, it shall explain the scope, methodologies and frameworks applied and how the residual GHG emissions (after approximately 90-95% of GHG emission reduction with the possibility for justified sectoral variations in line with a recognised sectoral decarbonisation pathway) are intended to be neutralised by GHG removals. Comparability with preceeding reporting periods: To ensure comparability over time, undertakings should be required to make available, on a dedicated section of their website, all the sustainability statements their prepared in application of the CSRD. Proposal for the presentation of sustainability statements: To offset the potential loss of comparability that may result from granting flexibility to reporting entities, we propose (aligned with the French Market Authority – AMF) a new numbering rule for the Disclosure Requirements to which the information relates. This approach, which reflects a good practice observed in financial reporting, would allow for more efficient retrieval of information.			
Survey	Stakeholder Reporting Committee (European Accounting Association)	Academia	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We welcome the efforts made to simplify the DMA process and believe that the proposed amendments represent progress towards greater clarity and usability. The alignment of ESRS with a "fair presentation" reporting framework is particularly valuable, as it supports a more principles-based approach and helps avoid a compliance or checklist mentality. The emphasis on using reasonable and supportable information contributes to proportionality and facilitates implementation for preparers, especially in the first reporting cycles. However, we believe that further refinements are necessary to ensure that simplification does not come at the expense of completeness or accountability. In particular, the objective of sustainability reporting (paragraphs 3–4) and the definition of materiality (paragraph 22) could be made more explicit by linking both decision-usefulness and accountability objectives for all stakeholder groups. Likewise, impact materiality assessment (paragraph 30) would benefit from a clearer connection to the decisions and actions that the disclosed information is meant to enable, ensuring parity with financial materiality assessment (paragraph 37). We are concerned that the relief clauses based on "information available without undue cost or effort" might be used strategically to avoid disclosing material impacts. We suggest rewording to "with reasonable cost or effort" and reconsidering paragraphs 87(d) and 89 to prevent under-reporting. Finally, with reference to the scope of ESRS, we strongly encourage EFRAG to propose to the EC to include within the scope of CSRD the same set of companies that are currently under the scope of NFRD (i.e., all companies with more than 500 employees). Not doing so consists deregulation rather than simplification. Overall, we agree that the amendments have moved the DMA process in the right direction, but additional clarifications—particularly on objectives, impact materiality and relief clauses —would reinforce the robustness of the framework without re-introducing complexity.			
Survey	Stakeholder Reporting Committee (European Accounting Association)	Academia	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	We find the new implementation guidance provided in par. 34 and 36, and Appendix C useful. It may enable preparers to assess the materiality of their actual and negative impacts in an efficient and effective way. This in turn, is less likely to result in excessive reporting. We also agree that positive impacts should be assessed in their own right and should not be netted off against negative impacts. However, we would like to raise a concern regarding the treatment of prevention actions when a potential impact materializes. Under the current wording, no disclosure is explicitly required on prevention actions previously undertaken once an impact has occurred. Prevention actions are disclosed only for potential impacts, whereas actual impacts require disclosure of remediation actions. This approach may create a gap in reporting and make it difficult for stakeholders to understand the full sequence of actions taken by an undertaking over time. For example: • 2023: Firm A foresees a potential impact and discloses its prevention actions. • 2024: The potential impact remains, and prevention actions continue to be disclosed. • 2025: The potential impact occurs and becomes an actual impact. The disclosure now focuses exclusively on remediation actions, with no explicit link to the prior prevention actions. We suggest that Appendix C requires preparers to disclose relevant past prevention actions when an actual impact materializes, if decision-useful. This would not imply to restate all prior disclosures, but rather to provide sufficient context to illustrate the evolution from prevention to remediation We believe that comparability and the information characteristics set out in Appendix B should be recalled in Appendix C to ensure that these characteristics are maintained over time. Reinforcing these principles would strengthen the consistency of reporting across reporting periods and across undertakings and support stakeholders in making well-informed assessments.

Survey	Stakeholder Reporting Committee (European Accounting Association)	Academia	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	The reduction of anticipated financial effects reporting is necessary to comply with the requirement of reducing the number of disclosure points and decreasing the reporting burden of companies. Forward-looking financial effects are inherently hard to measure, subject to high estimation uncertainty; standard-setters explicitly recognize that in some cases quantitative information may not be decision-useful. Additionally, one can assume that (at least some) investors can use their own estimations for financial effects (e.g., expected carbon prices), drawing on internal carbon pricing and scenario analysis practices. This partially offsets the loss of some datapoints when disclosures are simplified However, the reduction of the disclosure requirements also decreases the benefits for users of sustainability disclosures. Additionally, connectivity between sustainability-related and financial information is important for both users and preparers, yet it remains an outstanding task (Michelon et al., 2025). Weakening forward-looking financial linkages risks widening the gap that connectivity aims to close. Empirical evidence also suggests that financial consequences are a key driver of decarbonization decisions. On the one hand, Hahn et al. (2025) find that financial benefits are an important driver of carbon-reducing investments. On the other hand, omitting related reporting requirements might lead to a disconnect of climate-related disclosure items and their financial effects, also for the reporting entities, especially if they consider ESRS as a check-box exercise. For these reasons, we support the EFRAG's decision to retain at least some of the requirements for anticipated financial effects, especially as they cannot be inferred from any other reported information. Additionally, we suggest that, considering the reduction of reporting requirements of anticipated financial effects (E1-11), it would be helpful and in line with connectivity to require at least an explicit but qualitative link to the anticipated financial effect. Hahn et al. 2025. Business Strategy and the Environment Michelon et al. 2024. ICAS			
Survey	Stakeholder Reporting Committee (European Accounting Association)	Academia	Belgium	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	Focus on ESRS E1:In general, we agree with the EFRAG's approach to achieve the required reduction in disclosure points through the omission of primarily voluntary, qualitative and "redundant" items, while keeping key disclosure points regarding scope 1, 2, 3 emissions, emission targets and climate-related risks. Some reductions occurred regarding emission intensities. While intensity measures are useful information for users of sustainability disclosures, the reductions focus on those intensity measures, which can be calculated using otherwise available information (e.g., emissions divided by revenues or total assets). We support keeping at least one sector-specific intensity metric because users benefit from both absolute and intensity views, consistent with TCFD guidance on Metrics & Targets. Regarding the transition plans, we welcome the explicit link to EU and international climate goals in the draft text. However, the clarification of the "compatibility with 1.5 degrees" and the resulting explicit connection to the Paris Agreement and the European Climate Law (§13 & §14) are useful to ensure consistency with the EU regulatory framework, and to limit discretion about the definition of "compatibility with 1.5. degrees", which fosters comparability between firms and across years. However, it would be helpful to further clarify the meaning of "compatibility with 1.5 degress". Scientific evidence (Bolton and Kacperczyk, 2021) supports preserving the core of E1: markets price emissions and climate risk, and credible climate disclosure can affect valuation and the cost of capital. Bolton, P., & Kacperczyk, M. (2021). Global Pricing of Carbon-Transition Risk (NBER Working Paper No. 28510). National Bureau of Economic Research.			
Survey	Stakeholder Reporting Committee (European Accounting Association)	Academia	Belgium	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Comment on Q11 subquestions: Q11.1. To reduce heterogeneous interpretations, we recommend setting minimum criteria for selecting top-down vs bottom-up approaches. An operational note should require documentation of: (i) the initial universe of topics/IROs, (ii) severity/likelihood thresholds per topic, and (iii) sources of evidence and/or stakeholders consulted. This balances simplification with traceability. Q11.2. Regarding paragraph 21.a), we propose re-phrasing "general-purpose financial reports" to "general-purpose annual reports" and deleting "including financial statements and the sustainability statement." Q11.3. We recommend requiring a simplified table linking each material IRO to related disclosures/DPs, metrics/targets, and policies/actions. Q11.4. Specific users (e.g., rating agencies) might seek datapoints that are not reported. Firms may introduce a numerical threshold to determine material topics and this could result in certain issues being excluded from "material information" solely because their amounts are considered insignificant. Allowing organisations to include such "quasi-material" topics ensures that relevant information is not overlooked. Q11.5. This "statement of compliance," together with paragraph 109 — which allows firms to include an executive summary highlighting key messages about their material environmental, social, and governance impacts, risks, opportunities, and related management — enables the creation of a report in which the "compliance" sections and the more "strategic" parts are clearly distinguishable, thereby improving readability. Q11.6. We have reviewed the "Comment/Rationale" related to this change (revised paragraph 22) in the document LOG OF AMENDMENTS ESRS 1 GENERAL REQUIREMENTS and found the explanation particularly helpful. We suggest considering its inclusion directly in the standard to provide clearer guidance on what is expected. Q11.7. The text "This Appendix is an integral part of ESRS 1 and provides nonbinding guidance to support the application of provisions in this Standard" is confusing because ESRS 1 is mandatory but Appendix A that is an integral part of ESRS1 is not mandatory. Please clarify.

Survey	Universidad de Burgos	Academia	Spain	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I disagree	The proposed amendments do not achieve an acceptable balance between simplification and robustness of the DMA. While point (a) defines double materiality clearly, point (b) is imprecise. a)Point (b) is tautological: "Information is MATERIAL when: (…) it is necessary (…) to understand (…) MATERIAL impacts, risks and opportunities …" (emphasis added) b)Including "risks and opportunities" in point (b) is inconsistent with the notion of impact materiality. c)Point (b) refers to the "understanding" of sustainability reporting users, without reference to the implications of such understanding. d)Additionally, in para. 30 impact materiality correctly refers to "the identification of information that relates to the undertaking's material actual or potential, positive or negative impacts on people or the environment over the short, medium or long term (…) Business relationships are not limited to direct contractual relationships." Any framing of impact materiality based on decision-making is insufficient, as most stakeholders are not in a position to make any decision (e.g., nature). A possible framing for point (b) could rely on the notion of stewardship and due diligence. An alternative wording is suggested: "(b) it is necessary for the corporation to show to a broad range of stakeholders that it identifies and addresses actual or potential, positive or negative impacts on people or the environment" The greater focus on the "materiality of information" as a general filter shall not be used as a reason to omit information on a topic that was identified as material. Allowing disclosing information on non-material topics (para. 108) may introduce noise and allow cherry-picking, which may eventually bias the "fair presentation" that the ESRS are now expected to support. Emphasis on "Fair presentation framework" can encourage a broad judgment approach without a common minimum baseline, reducing consistency and increasing the risk of litigation/disputes due to reasonable omissions.			
Survey	Universidad de Burgos	Academia	Spain	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	Universidad de Burgos	Academia	Spain	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	Universidad de Burgos	Academia	Spain	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I disagree	The simplification of ESRSs and the reduction of disclosure requirements and data points are premature. Companies, auditors and consultants have already invested in the implementation of ESRSs. However, the untimely revision will waste the learning that could be obtained from this experience. No less important, in general, the loss of the knowledge and positive externalities generated by the preparation, analysis and use of sustainability information and the increase in social and environmental regulation costs (e.g., government monitoring in the absence of corporate self-reported information) will overshadow the putative administrative costs savings from the ESRS simplification. The re-architecture between ESRS 2 and thematic standards reduces enforceability and comparability because although minimum "Shall" requirements are maintained in ESRS 2, their simplification weakens the common baseline and opens the door to overly flexible interpretations across companies and sectors. The elimination of the obligation to declare PAT plans and timelines diminishes forward-looking guidance and monitoring capabilities. Additionally, this omission limits the capacity of information users to evaluate the commitment of reporting organizations in achieving their stated sustainability goals.			
Survey	Universidad de Burgos	Academia	Spain	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	Universidad de Burgos	Academia	Spain	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	It is reasonable to include guidelines and examples on how to disclose datapoints in "Non-Mandatory Illustrative Guidance" (NMIG). However, the simplification proposal is depriving users of the sustainability report from crucial information to assess the due diligence of the company. For example, the policies to identify and manage actual or potential, positive or negative impacts on people or the environment, are crucial to assess due diligence. Therefore, it is paramount to perform an in-depth assessment to determine whether all disclosures currently presented in the NMIG should be made mandatory in the delegated act. While the NMIG may reduce implementation questions, encourage proportional innovation, and ease the burden on PAT narratives when rigid prescriptions fail, it could also reduce comparability. Without a minimum common ground, methodological heterogeneity hinders cross-sectional and time-series analyses. In this regard, the NMIG is useful if it complements—not replaces—a clear regulatory baseline that preserves consistency, traceability, and insurability.

Survey	Universidad de Burgos	Academia	Spain	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	The "undue cost or effort" principle is aligned with the goal of administrative simplification. However, the articulation of this "relief" in paragraph 89 ESRS1 is so imprecise that it may turn this set of standards into dead letter. The "undue cost or effort" principle risks transforming Directive (EU) 2022/2464 into a voluntary guideline. The limitation of considering resilience in terms of risks places an emphasis on financial materiality, overlooking how an organization's activities may also affect the resilience of the ecosystems in which it operates.			
Survey	Universidad de Burgos	Academia	Spain	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	The amendment is generally reasonable. But the "undue cost or effort" principle is too broad, as indicated in the response to question 19.			
Survey	Universidad de Burgos	Academia	Spain	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1				
Survey	Universidad de Burgos	Academia	Spain	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	Thorough information on dependencies is increasingly important to motivate organizations and industries to tackle sustainability challenges. This amendment goes against the tide. This modification is not justified on the grounds of administrative simplification, as the costs of processing this information is minimal: this information is present in information systems and calculations are trivial. Instead, this modification appears to be proposed on the grounds of avoiding information that may impact corporate reputation, at the expense of resilience.			
Survey	Universidad de Burgos	Academia	Spain	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I disagree	IFRS and ESRS have different objectives and scope. Alignment with IFRS twists the notion of double materiality with the introduction of materiality as a filter and fair presentation, for example. As a result, ESRS is less aligned with the Green Deal. This greater alignment with the ISSB reduces the interoperability with other relevant sustainability reporting standards that companies have been applying for decades (such as the GRI).			
Survey	Universidad de Burgos	Academia	Spain	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Universidad de Burgos	Academia	Spain	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	The simplification proposal is depriving users of the sustainability report from information. However, given the EU mandate the proposal has achieved a reasonable balance.			
Survey	Universidad de Burgos	Academia	Spain	22.E1.	Comments on deleted datapoints in ESRS E1	I partially agree and partially disagree	The simplification proposal is depriving users of the sustainability report from information. However, given the EU mandate the proposal has achieved a reasonable balance.

However, given the EU mandate the proposal has achieved a reasonable balance.			
Survey	Universidad de Burgos	Academia	Spain	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	No substantial increase in administrative costs. Datapoints are relevant.			
Survey	Universidad de Burgos	Academia	Spain	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	Datapoints are relevant.			
Survey	Universidad de Burgos	Academia	Spain	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	The notion of fair presentation is ambitious. It draws on financial reporting. Some ambition in this area is positive. However, it is inconsistent with the focus on limited assurance. Additionally, the application of fair presentation may dissuade companies from disclosing information on material topics, considering the inherent complexity and incompleteness of sustainability data.			
Survey	Universidad de Burgos	Academia	Spain	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Complex estimates are common to all sectors. The financial sector has a disproportionate effect on climate change. Absolute targets are essential for assessing progress on climate change, and banks are no exception in this regard. This exclusion is also at odds with other information on climate change required by financial institutions in other EU regulations (e.g. SFDR) and by banking supervising entities (Basel Pillar III).			
Survey	Universidad de Burgos	Academia	Spain	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	Thresholds are reasonable.			
Survey	Universidad de Burgos	Academia	Spain	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	Processing information about wages, considering notions such as living wages, is a significant concern for society. This modification is not justified on the grounds of administrative simplification, as the costs of processing this information is minimal: this information is present in information systems and calculations are trivial. Instead, this modification seems to be proposed on the grounds of avoiding information that may affect corporate reputation.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Universidad de Burgos	Academia	Spain	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I disagree	The "consolidation" and reduction of DPs results in a loss of granularity and breaks the traceability necessary for the SFDR to inform investors. Merging eight DPs into a single "HR policy" in ESRS 2 limits the relevance of human rights, erases nuances by stakeholder group, and weakens operational alignment with UNGP/OECD. The single "severe cases" indicator fails to capture typologies, severity, remediation, or geography. Excluding "fatalities" from the scope of the PAI on lost days is a material setback. Investors require explicit visibility into fatalities, rates, and trends. Moving content to ESRS 2 (general) instead of maintaining it in ESRS S1–S4 reduces consistency between IROs and specific metrics and hinders insurability. The supposedly "marginal" reduction in coverage is, in fact, material for time series, benchmarking, and alignment with the SFDR Annex I tables; it increases the risk of cherry-picking and mapping gaps.			
Survey	Universidad de Burgos	Academia	Spain	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	AR 26 could be further reviewed to better reflect current developments (e.g., SBTN).			
Survey	Universidad de Burgos	Academia	Spain	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	Disclosing this information has enormous social benefits in terms of increasing gender equality. This modification is not justified on the grounds of administrative simplification, as the costs of processing this information are minimal: this information is present in information systems and calculations are trivial. Instead, this modification seems to be proposed on the grounds of avoiding information that may affect corporate reputation.			
Survey	Universidad de Burgos	Academia	Spain	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	This formulation will contribute to damaging SMEs. The increase in government regulation and monitoring costs (in the absence of corporate self-reported information) will overshadow the putative administrative costs savings from this unsophisticated simplification.			
Survey	Universidad de Burgos	Academia	Spain	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Some emission-intensity datapoints have been trimmed. While intensity indicators are valuable to users, the cuts mainly target metrics that can be derived from other reported figures (e.g., emissions relative to revenue or total assets). We advocate preserving at least one sector-relevant intensity indicator, since stakeholders need both absolute and intensity perspectives—aligned with TCFD guidance on Metrics & Targets. On transition plans, we welcome the draft's explicit alignment with EU and international climate objectives.			
Survey	Universidad de Burgos	Academia	Spain	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. Survey	ANSA	Business association (other than association of financial institution)	France	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	These modifications make the DMA process easier and improve the effectiveness of material information. However, we believe it is feasible to reduce the complexity of double materiality assessment, and efforts should be made to clarify this concept. More generally, Chapter 3 is not clear enough, and we have identified various issues. For example, it is still not easy in practice to distinguish between financial and impact materiality within the impacts, risks and opportunities.			
Survey	ANSA	Business association (other than association of financial institution)	France	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	The approach is, in fact, quite complex. Moreover, while the gross approach to potential impacts might result in excessive reporting, it will be simpler for companies, particularly those in specific sectors. Otherwise, if the remediation measures already in place are reducing the impact materiality, it will result in an incomplete presentation of the impact of some companies, particularly those operating in hazardous sectors.			
Survey	ANSA	Business association (other than association of financial institution)	France	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	Introducing a summary could be beneficial if it does not create a new standardised obligation for companies. The proposed amendments provide an appropriate level of flexibility and improve connectivity with corporate reporting. Financial reporting is often the purpose for which they are used, and they are then checked by the financial auditor. Reference to other documents generated by other regulatory obligations may also be considered.			
Survey	ANSA	Business association (other than association of financial institution)	France	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The right direction for improvement is to enhance the connection between the PAT disclosure and the IRO description. It will also be beneficial to allow disclosure at a higher level of aggregation than the material IROs. This is because the management of IROs at an aggregate level could better reflect the most important issues that the company must deal with globally.			
Survey	ANSA	Business association (other than association of financial institution)	France	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	ANSA welcomes the proposed measures, which will make sustainability statements more concise and understandable. However, further improvements that lead to a clear understanding of what the auditors might require are welcome.			
Survey	ANSA	Business association (other than association of financial institution)	France	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	Most importantly, the NMIG must not be part of the delegated Act, as its role is merely to illustrate some cases. Furthermore, it is important to limit interpretations, Q&As, etc., which consume a lot of energy and complicate the understanding of the standards.

Survey	ANSA	Business association (other than association of financial institution)	France	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	While all these reliefs are important, they must be compatible with the idea of fair representation.			
Survey	ANSA	Business association (other than association of financial institution)	France	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				
Survey	ANSA	Business association (other than association of financial institution)	France	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	We would highlight that if a company is able to provide quantitative information on the financial effects, but has not included these figures in its financial accounts, the legal compliance of these accounts may be called into question. Projections of costs in the nuclear industry are made with a high degree of uncertainty, often more than 50 years into the future. Therefore, we strongly recommend option 2. More generally, in order to reduce unpredictable risks for companies, a qualitative rather than a quantitative description of the impacts should be required.			
Survey	ANSA	Business association (other than association of financial institution)	France	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	These steps are welcome, as they will reduce the duplication faced by multinational companies operating within multiple frameworks. However, many of the ESRS standards are not sufficiently aligned with existing international standards. From the outset of the standard-setting process, interoperability with the ISSB and other standards must be a core design principle. It is particularly important to eliminate additional EU reporting requirements for sector-specific sustainability matters.			
Survey	ANSA	Business association (other than association of financial institution)	France	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	ANSA	Business association (other than association of financial institution)	France	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	Simplification is one issue to consider, but it must also take into account information that is not too complex to provide, but which could threaten the company's future.

This includes all information related to organisational strategy weaknesses and difficulties in implementing appropriate business conduct.			
Survey	ANSA	Business association (other than association of financial institution)	France	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	The improvements are not sufficient. It is also important to keep the question open to ensure compliance with SFDR when the modifications will be made.			
Survey	ANSA	Business association (other than association of financial institution)	France	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	ANSA	Business association (other than association of financial institution)	France	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	The concept of 'fair representation' used here is entirely different from the concept used in the context of financial matters. This should be clearly stated here. Otherwise, given the numerous reliefs and phasing-in, and the restricted information likely to be obtained by SMEs in the value chain, auditors will not be able to provide any assurance, even limited, on the non-financial reports.			
Survey	ANSA	Business association (other than association of financial institution)	France	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	ANSA	Business association (other than association of financial institution)	France	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	We believe it is important to keep the possibility of amending these issues open, given that we are strongly calling for SFDR requirements to be simplified and reduced.			
Survey	ANSA	Business association (other than association of financial institution)	France	31.	ESRS S1 DR1S: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	ANSA	Business association (other than association of financial institution)	France	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree	When it comes to payment practices, it is important to consider the relevant metrics in order to allow for greater flexibility and adaptability. Given the thresholds, companies involved often have thousands of suppliers, including many different categories, sectors of activity and countries with different rules and practices. Therefore, a 'one size fits all' approach with uniform payment terms and classifications is not feasible. This means that communicating detailed figures will need to be adapted, which may result in significant differences between supplier categories. Lastly, it is also essential to define exactly when the payment period begins.

Survey	ANSA	Business association (other than association of financial institution)	France	33.G_1.	ESRS G1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	Although EFRAG has proposed measures to enhance the protection of business secrets, the ESRS should be simplified and rationalised further to safeguard business secrecy, particularly in an international context. Companies should not be required to disclose information that compromises business secrecy and is detrimental to their interests.			
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Our members broadly welcome the proposed amendments as an important step towards simplification. At the same time, several issues remain that should be clarified. Positive aspects: •Materiality filter: Stronger focus on materiality reduces the reporting burden. •DMA flexibility: Both bottom-up and top-down approaches allows practical implementation. •Fair presentation: Emphasis on fair presentation rather than a checklist helps avoid excessive documentation. •Streamlined topic list lowers complexity and risk of overreporting. •Clarity on sub-topics: AR 21 / para. 50 provides decisive clarification that only material sub-topics need to be reported. •Documentation relief: Excluding DMAs for obviously (non-)material topics and consolidating sub-sub-topics further reduces effort. •Link to IROs: Clearer connection between IROs (Impacts, Risks, Opportunities) and topics improves usability. Remaining concerns: • •The definition of when information is material is very broad. Not only are primary users not further defined but point (b) „users of general purpose" opens the discussion on what constitutes material information (especially against the fair presentation principle) even further. •Appendix A: oAR 16 should be clearly communicated as "Appendix A." oAdding topics (e.g. "water storage") contradicts simplification. oMerging S1 and S2 is problematic, as S1 is far more often material than S2. oSub-topics remain overly detailed in places; further simplification would be desirable. •Risk analysis linkage: In some cases, results of risk analysis cannot be clearly reconciled with reporting requirements, as sub-topics do not always map neatly.			
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	New Paragraphs provide helpful clarifications, but significant concerns remain about complexity and feasibility in practice. Positive aspects: •The guidance on distinguishing actual vs. potential impacts is useful and welcomed. However 3.3.1 (35) lacks clarity in several areas, creating potential confusion for firms. For example: What defines a "significant" mitigation or prevention action, and when is it not considered significant? Clearer definitions and concrete examples are needed to avoid unnecessary and lengthy discussions with the auditor about interpretations. •The clarification that remediation measures may be considered when assessing risks is a positive step, as it may reduce material risks and the related reporting effort. •Allowing consideration of actions that reduce the severity or likelihood of potential negative impacts reflects company practice and is in line with established risk management approaches. Concerns and challenges: •The gross approach for potential impacts with ongoing mitigation may lead to overreporting. •The guidance adds significant complexity to the DMA process, especially for smaller or less mature reporters. Current software tools cannot meaningfully map these requirements, creating practical difficulties for companies and auditors. •Appendix C attempts to address the gross vs. net issue, but in practice it requires companies to assess each negative impact in detail. This is unlikely to simplify reporting and may not be feasible beyond manual solutions. We therefore recommend to delete Appendix C. •. Further considerations: •Excluding compliance with legal and regulatory requirements as a "positive impact" risks undervaluing the strategic role of regulation. For many companies, regulatory frameworks are not merely minimum standards but central guides for sustainable action. •It is unclear whether globally valid guidelines remain acceptable as a mitigating factor under ESRS 1.36.			
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	Our members broadly agree that the proposed Amendments provide an appropriate level of flexibility to support more relevant and concise reporting and enhance connectivity with corporate reporting. Positive aspects: •Executive summary & appendices: The explicit option to provide an executive summary and use appendices (e.g. for taxonomy data) improves clarity, structure, and readability of reports. •Flexibility: The amendments reduce unnecessary detail in the main report and allow companies to focus on key messages, avoiding duplication and fragmentation. •Connected information: Clearer guidance strengthens connectivity with other elements of corporate reporting and avoids repetitive disclosures. •GDRs: The adapted logic for presenting GDRs (general disclosures) is seen as very positive. It allows GDRs at topic level, summarized for certain IROs or for individual IROs, with flexibility to adjust the level of detail to company-specific circumstances. This should be maintained. •Governance standard (ESRS-G): The restructuring and summarization of data points (e.g. G1-2 qualitative vs. G1-4 quantitative) provides for more concise and practical reporting. Remaining concerns / open questions: •PAT duplication: The need to avoid duplication in the Performance and Target (PAT) section must be consistently recognized in the design of disclosure requirements. •Climate methodology (ESRS E1 AR 5, para. 18): It is unclear whether companies are expected to conduct a climate scenario analysis when disclosing the methodology used to assess the impact of hazards and transition risks. Greater clarity is needed.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	Our members generally consider that the proposed amendments strike a good balance between simplification and the need for relevant, comparable information. Positive aspects: •Simplification: •Clear reduction of "shall" requirements in PAT lowers complexity and workload. •Deletion of topical specifications in GOV, SBM, and IRO simplifies the structure without major content loss; there should be no exceptions to this deletion. •Shortened standards and avoidance of duplication are highly welcomed. •Listing ARs directly after DRs improves readability and structure. Flexibility & pragmatism: •The new "undue cost or effort" clause is very positive, allowing companies to gradually expand databases without disproportionate burden. •Aggregation options reflect real management practice and increase efficiency. •Improved linkage between PAT and IROs enhances consistency and usability. •Absence of timeline explanations avoids unnecessary rigidity. Remaining concerns: •Sub-topic clarity: oRisk analysis results cannot always be clearly reconciled with reportable content; sub-topics should be reflected more explicitly in the topical standards or in a clear mapping table of DRs to sub-topics. oSome combinations (e.g. anti-corruption & bribery with animal welfare and complaints procedures) appear inconsistent and should be corrected (notably in G1). •Scenario/resilience analyses (ESRS E1): It must remain permissible to report that such analyses are not conducted; companies should not be indirectly obliged. •Phase-ins and NMiGs: Data points with planned phase-ins should be omitted or voluntary. NMiGs must remain voluntary in practice, with no indirect obligation created. •Formulation of PAT: Reformulating PAT as ARs risks confusion rather than simplification.			
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	Our members generally agree that the proposed amendments significantly improve clarity and accessibility of the ESRS. The changes make it easier for companies to identify mandatory content and apply the standards consistently. Positive aspects: •Removal of "may disclose" provisions: Eliminating these optional elements improves clarity, avoids confusion, and ensures a clearer distinction between mandatory and voluntary disclosures. •Structure and usability: Relocating mandatory ARs under their related DRs enhances readability and transparency. •Language improvements: Revised wording supports better understanding and fosters consistent application across companies. •Transparency: The clearer separation of mandatory and voluntary requirements increases accessibility for both preparers and users of sustainability reports. •Simplification: The removal of duplicate data requirements, the shortening of standards, and the exclusion of non-mandatory data points from the NMiG make it easier to determine reporting obligations. Remaining concerns: •E2-19 vs. AR7 scope: There is still a lack of clarity regarding whether disclosures should cover only Substances of Very High Concern (SVHCs) or also Substances of Concern (SoCs). Alignment is needed to avoid inconsistent interpretations and reporting burdens. •However, while the structure and readability have improved, the overall reporting requirements remain largely unchanged. As such, the simplification primarily supports better orientation within the standards rather than reducing the reporting burden itself. •Moreover, we would like to flag that new mandatory disclosures have been added – clearly against the request of the EU commission and the aim of the revision to reduce reporting burden. Additional mandatory data points should be avoided.			
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	Our members welcome the development of a Non-Mandatory Implementation Guidance (NMIG), but stress the importance of a clear definition of its purpose and legal status. We support keeping NMIG as a voluntary, illustrative tool that helps preparers but does not introduce implicit requirements. To ensure legal certainty and practical usability, the NMIG should remain outside the delegated act and its non-mandatory nature must be consistently emphasized Positive aspects: •We support that non-mandatory data points have been moved to NMIG, ensuring that the ESRS itself focuses strictly on mandatory content. •The NMIG can provide helpful illustrative examples that support understanding and application without creating additional obligations. Key conditions: •Legal status: The NMIG's non-binding nature must be clarified as soon as possible. It must not become a de facto "state of the art" that auditors, regulators, or stakeholders expect companies to follow. •Separation from ESRS: To avoid confusion, NMIG should remain clearly separate from the mandatory ESRS. Companies must be able to fulfill all reporting obligations by following ESRS alone. •No negative consequences: Non-compliance with NMIG must not result in disadvantages or be interpreted as a lack of compliance with ESRS.			
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	Positive aspects: •Undue cost or effort: The introduction of this principle is welcomed. •Value chain metrics: Allowing the use of estimates as well as direct data is a practical measure that reduces reporting burdens while maintaining relevance. •Scope reliefs: Exclusion of non-significant IRO activities and joint operations improves both feasibility and focus. •Resilience and financial effects disclosures: Limiting these to announced plans and qualitative information avoids speculative reporting and concentrates efforts on meaningful content. Remaining concerns: •Room for interpretation: A clear mention of any room for interpretation for the reporting company would facilitate cooperation between the reporting company and the auditor. Some CSRD definitions, such as the definition of "employee" ("according to national law or practice"), leave a lot of room for interpretation. •Supply chain reporting: Further simplification is necessary. Companies should report on their own targets, actions, policies, and metrics. Supply chain data should only be required insofar as it directly relates to the company's own commitments. Companies should not be obliged to collect detailed data from suppliers or customers. •Subsidiary thresholds: Relief measures should also apply to smaller subsidiaries (e.g. under 50 or 20 employees), which face similar challenges as SMEs in gathering sustainability data. •For large multinational companies to use the „undue cost or effort" principle might become quite challenging, as it also states that (1) Information needs of users needs to be considered and (2) the assessment of what constitutes undue cost or effort depends on the undertaking's specific circumstances. •we have some reservations regarding the newly proposed relief for acquisitions and disposals. We recommend removing paragraph 73 of ESRS 1 and retaining only paragraph 72. Paragraph 73 introduces an additional differentiation for major acquisitions and disposals, which unnecessarily complicates the application of the relief.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	Positive aspects: •Pragmatic reporting: The relief allows companies to report despite data limitations, which is especially valuable in complex value chains. •Continuous improvement: Requiring disclosure of actions to improve data quality ensures accountability and gradual enhancement over time. •No fixed time limit: Not setting a rigid deadline is reasonable, as data availability and maturity differ widely across sectors and supply chains. The requirement to disclose improvement measures already creates implicit pressure to strengthen data quality. •Alignment: The approach supports consistency with IFRS S1/S2 and significantly reduces the implementation burden without undermining credibility. •Undue cost or effort: The principle provides important flexibility for dealing with initial data gaps and enables gradual database expansion without disproportionate costs. Remaining concerns: •Interpretation risks: There is still potential for disagreement with auditors on what constitutes a "reasonable" effort to improve data quality. Clearer guidance could reduce uncertainty and ensure consistent application. •Realistic expectations: ESG data, particularly from extended value chains, will never reach the same level of precision as financial data. Standards should recognize these inherent limitations to avoid undue burden. •It is also important to note that many Wave 1 undertakings will benefit only to a limited extent from this relief. In many cases, data collection approaches—often based on workarounds—have already been agreed upon with auditors and implemented. Continuing with these established methodologies may require less effort than reassessing and justifying the application of the new relief •Regarding the relief proposed in paragraph 92: We suggest extending this relief to include relevant metrics under ESRS S1 and potentially also ESRS E1. This would promote consistency across reporting requirements and further reduce complexity in cases where operational control is limited. The reason for excluding these two standards from the relief is not apparent to us.			
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	Reasons for preferring Option 2: •A qualitative-only requirement keeps reporting practical, especially for companies with limited methodologies or resources. •Avoids undue burden: Quantitative disclosures of long-term financial effects would often be speculative, uncertain, and resource-intensive, especially for family-owned or privately held companies. •Option 2 preserves flexibility by allowing companies to voluntarily provide quantitative information where available and relevant, without creating a mandatory obligation. •Focus on clarity: Encourages companies to provide clear narratives of expected financial implications instead of uncertain projections, which may not be comparable across firms. •Alignment with practice: Mid- and long-term financial effects are rarely available in reliable, comparable form; focusing on qualitative assessment supplemented by quantitative information only where meaningful is the more pragmatic approach. •Comparability: Quantitative projections would be highly subjective and could reduce comparability rather than improve it. Critical observations: •Some members noted that the discussion reflects broader uncertainty about the purpose of these disclosures. In their view, financial reporting in annual reports already provides sufficient quantitative information, and sustainability reporting should not duplicate speculative forecasts. •Some ZVEI stakeholders argue that complete deletion of the requirement would also be acceptable, as this information has limited relevance for many non-listed companies. •The underlying data is often unclear, and the risks cannot be reliably isolated due to a lack of mature and established methodologies, making any form of disclosure - whether narrative or numeric - legally risky and prone to misinterpretation. Such information lacks comparability and does not offer decision-useful insights to report to users from our point of view. Moreover, IFRS already define when future risks must be reflected in financial reporting, e.g. through recognition and measurement criteria. Sustainability reporting should not override or extend these principles through financial disclosure requirements in the sustainability statement.			
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	Our members agree that the proposed Amendments strike a reasonable balance. Clearer guidance on relief provisions and greater stability of the standards are essential, ensuring that simplification measures do not come at the expense of consistency and comparability. Positive aspects: •Interoperability with IFRS S1/S2: Alignment of materiality and fair presentation principles with ISSB standards is a step toward global comparability. •Consolidation boundary: Adopting the financial consolidation boundary while allowing optional disclosure on an operational control basis reflects the logic of both the GHG Protocol and IFRS, improving consistency. •Reliefs and flexibility: Incorporation of IFRS-style reliefs, particularly the "undue cost or effort" clause, balances alignment with practicality for preparers. Remaining concerns: •Clarity of "undue cost or effort": While welcomed in principle, this concept remains vague and risks disagreements with auditors. Clearer definitions or guidance are needed to avoid inconsistent application and potential disputes.			
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	Reduction in mandatory datapoints lowers complexity and is valuable for companies with limited resources. Prioritization of quantitative over narrative information strengthens comparability and efficiency. Remaining concerns: Alignment with VSME standard: In some cases, the VSME still asks more questions than CSRD materiality reporting requires. A clearer comparison and alignment between ESRS and VSME datapoints is needed.. •Environmental datapoints: While simplifications were introduced for certain areas (e.g. financial effects, own workforce), the environmental datapoints have only been partially streamlined. Some "deleted" requirements were merely merged or shifted, and new requirements were added. •Substances of Concern (SoCs): We strongly question the effectiveness of including SoCs in ESRS. These substances overlap with existing categories such as SVHC, leading to double counting and incomparable data. Without clear hazard category ordering, reporting on SoCs adds complexity without added value. For simplification and consistency, SoCs should not be included for all stakeholders. The deletion of datapoints primarily affects how requirements are presented, not what is required, as especially duplicative requirements are deleted. This means that preparers will still need to collect and disclose a substantial amount of data, and the core reporting obligations are largely preserved. •Reclassification of mandatory data points: Many previously mandatory ("shall") disclosures have been shifted to Application Requirements (AR) or Non-Mandatory Implementation Guidance (NMIG). Since companies will still be audited against these, the preparation effort remains high. Our experience shows that auditors also use existing guidance documents in audits •Unaccounted changes in ESRS 1: ESRS 1 does not contain data points and is therefore excluded from the reduction calculation. Nevertheless, it includes the highest number of new and amended paragraphs across all standards. Even if these changes aim to reduce burden, they often require additional effort—such as adapting the DMA process or applying new principles like "fair representation."			
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	23.	Six datapoints exceptionally moved from “may” to “shall” In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, “may disclose” datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from “may” to “shall” subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	We strongly disagree with the introduction of new mandatory datapoints that have not undergone comprehensive testing by "Wave 1" companies. Adding untested requirements at this critical stage poses a significant liability to the strength, coherence, and successful implementation of the final CSRD. It directly contradicts the stated simplification mandate and risks undermining the very objectives of relevant and reliable sustainability reporting. •We particularly disagree with the disclosure of nature of corruption and bribery incidents since this information can be sensitive. We thus invoke ESRS 1 7.8 number 98: "The undertaking is not required to disclose classified information or sensitive information even if such information is considered material." •ESRS E3: It should be made explicitly clear that these metrics are only to be reported if the corresponding sub-topics ("water discharges" and "water withdrawal") have been assessed as material as part of the DMA. Otherwise, these requirements could entail effort without creating added value for the reader. •ESRS E4: In any case, it should be maintained that reporting on the transition plan is only required once the transition plan has been implemented and published. The introduction of such a transition plan should remain voluntary. •ESRS G1 10 (c): In our view, this data point does not necessarily create significant added value, as the focus on the procurement team does not necessarily appear relevant. How responsibilities are assigned within the company can be individual. Therefore, the focus should continue to be on the important key positions in terms of compliance training. •ESRS G1 14: The metrics relating to anti-corruption and anti-bribery are comprehensible and ok. However, it should be made clearer that only those metrics are to be reported for sub-topics that have been assessed as essential in the context of the DMA.			
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new “shall” datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	In general, we strongly disagree with the introduction of new mandatory datapoints that have not undergone comprehensive testing by "Wave 1" companies. Adding untested requirements at this critical stage poses a significant liability to the strength, coherence, and successful implementation of the final CSRD. It directly contradicts the stated simplification mandate and risks undermining the very objectives of relevant and reliable sustainability reporting. Positive aspects: •Relevance of new datapoints: The additional datapoints are useful as they address critical issues of sustainability, always under the condition that materiality applies (except for ESRS 2 General Disclosures – BP 1, which is always mandatory). •Critical raw materials (E5-4): Treatment of critical raw materials as a separate disclosure is reasonable if – and only if – they are assessed as material. This preserves proportionality. •Waste reporting (E5-5): The newly added "destination unknown" category is welcome as a pragmatic exception. Where companies are able to define all waste destinations, this datapoint will simply be "0," which is both feasible and transparent. Remaining concerns: •Data availability challenges: Obtaining reliable data on microplastics and critical raw materials remains very difficult for companies at the end of the value chain. Without clearer guidance, the exception may not provide sufficient relief in practice. •Waste reporting clarity: It is unclear how "destination unknown" differs in practice from "waste directed to disposal" under paragraph 18(d). Further clarification is needed to avoid inconsistent reporting.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	The amendments contribute to a more effective and relevant materiality filter overall, but the concept of fair presentation requires clearer definitions and practical guidance to avoid disputes, ensure consistent application, and safeguard auditability. Without these clarifications, the risk remains that simplification could lead to inconsistent reporting rather than improved relevance. Positive aspects: •The simplification and stronger risk-based approach are welcome and will reduce reporting burden by focusing on genuinely material topics. •Internal costs and efforts can be reduced, while the amendments provide clearer guidance for companies subject to ESRS. •The principle of fair presentation is positive in theory and helps avoid excessive reported information. Concerns and limitations: •Financial adequacy: Without clearer definitions, there is a risk of oversimplified or even misleading reporting, as well as disputes with auditors. •Auditor diligence: Applying fair presentation consistently will be challenging, and it may become more difficult for auditors to demonstrate due diligence. •Interpretation risks: Non-finance employees are often less familiar with this principle, which could lead to uncertainty and inconsistent application. Additional elaboration in sector-specific standards would help reduce room for interpretation. •Added value: In practice, the principle may not provide significant additional benefit, as disclosures are already strongly determined by the outcomes of the materiality analysis itself. •The definition of when information is material is very broad. Not only are primary users not further defined but point (b) „users of general purpose" opens the discussion on what constitutes material information (especially against the fair presentation principle) even further, as anybody could be a user and might not „feel fairly representative". The "fair presentation" concept needs a precise definition to avoid subjectivity and minimize audit burden.			
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets				
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	Our members recognize both advantages and drawbacks of the proposed change to the threshold for country-by-country disclosure.. Clearer guidance on definitions (especially regarding ESRS S1-6) is necessary to ensure consistent application and to avoid undermining the simplification objective. Positive aspects: •The new approach of reporting for the top 10 largest countries (with >50 employees) is more practical and easier to handle for many companies. •Using a percentage-based approach supplemented with a breakdown of the top 10 countries provides meaningful detail without requiring a disproportionate reporting effort. •Much of this information is usually available in existing HR systems, so for many companies the change will not create additional data collection challenges. Concerns and limitations: •For some companies, the new threshold will in fact require disclosure for a larger number of branches than before. This may increase workload and run counter to the simplification objective. •It remains unclear how to deal with ESRS S1-6 ("significant driver") and how to define significance transparently. The criteria for excluding or including datapoints on non-employee characteristics lack clarity and risk inconsistent application. •We disagree with the assertion that the change to the threshold for country-by-country disclosure in ESRS S1-5 and S1-7 will result in a "limited burden" due to the easy accessibility of information. While the intent to gather more granular data is understandable, this change will, in many cases, significantly increase both the reporting requirements and, crucially, the audit scope. Additionally, this extra level of detail may not always be relevant.			
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	Our members see the proposed changes as a step forward but highlight important areas where clarification is still required to ensure consistent application. While the proposed methodology is a reasonable starting point, clearer definitions, prioritization of data sources, and explicit guidance on subnational agreements and EU benchmarks are essential. This will ensure that reporting on adequate wages is both feasible for preparers and reliable for users. Concerns and remaining questions: •It remains unclear how to deal with subnational agreements outside the EU. Clearer examples or guidance are needed to ensure companies can apply the methodology consistently. •More detailed information is required on which benchmarks should be used for calculating adequate wages within the EU, especially in cases where national or sectoral agreements differ. •Without such clarifications, the comparability of wage disclosures across companies and regions will remain limited.			
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	If the disclosure specifications and application requirements for E4-4 (targets) have largely been removed from the application requirements for companies when setting biodiversity and ecosystem targets as part of the simplification process, then it is imperative that clear guidance be provided elsewhere. If ESRS Set 1, E4 AR 26 is truly outdated, then it urgently needs to be revised.			
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	Our members have differing perspectives on the deletion of the voluntary datapoint on the adjusted gender pay gap. Overall, while some simplification is achieved by deleting the voluntary adjusted datapoint, this comes at the expense of comparability and meaningful interpretation. Concerns about deletion: •An adjusted gender pay gap provides more meaningful and fair insights, as it takes into account the function, role, or qualification of employees. Without such adjustment, unadjusted figures may promote misleading conclusions or reinforce structural discrimination. •Deleting the voluntary adjusted datapoint risks reducing comparability and nuance, especially in industries with specific role- or qualification-based differences. •The overall aim is to provide transparency on whether a company pays an equal wage for the same type of work, no matter the gender (i.e. equal pay for equal work). While the adjusted gender pay gap compares gender pay gap based on the same job type, the unadjusted pay gap only compares men and women overall. Depending on the industry, this can lead to a distorted picture. Additionally, including benefits in the calculation further distorts the pay gap as they are managed individually by the respective countries independently of gender. Arguments for deletion: •Reporting only the unadjusted pay gap is consistent with other EU directives and avoids creating parallel or conflicting reporting obligations. •While the unadjusted figure can be open to misinterpretation, aligning with existing legislation ensures coherence and limits additional reporting burdens.			
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	Our members acknowledge that the revised formulation continues to provide some level of transparency on payment practices, but important concerns remain regarding the protection of SMEs. Positive aspects: •Even without clause 33(a), companies are still required to disclose standard payment terms and the percentage of invoices aligned with these terms. This ensures a degree of visibility on payment practices that affect SMEs. •This disclosure helps identify whether companies have consistent policies in place regarding payment periods. Concerns: •The omission of clause 33(a) is problematic, as it removes explicit transparency on how long suppliers actually wait to be paid. SMEs, in particular, are vulnerable to late payments and often lack the bargaining power to enforce fair practices. •The deleted requirement would have provided a more detailed and concrete picture of payment behavior by disclosing the average payment time. Its absence risks weakening protections for SMEs. •While average payment time is influenced by company-specific cycles (e.g. weekly or bi-weekly runs), it nevertheless offers valuable information on whether small suppliers face structural disadvantages. •Disclosing information of the standard payment terms by "main category of suppliers, including SME's" (as also suggested in the NMIG) is not possible. The standard payment terms generally do not make any differentiation between supplier types. Additionally, for multinational companies with thousands of suppliers globally, a categorization of suppliers into SMEs and Non-SMEs is not possible. •the definition of SMEs depend on different national legislation and includes several parameters in "and" combination			
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The proposed structural changes are received positively and are welcomed as it results in a clearer representation and reduced complexity compared to the original distribution of requirements. Also the removal of the operational control concept is considered a relief for many companies as it reduces the documentation effort. However, a number of key issues remain: •The proposed changes in reporting on financial resources related to the transition plan and actions increase the reporting burden. The proposed formulation seems to indicate that the complete financial and investment planning needs to be disclosed and the ranges of short-, medium and associated long-term CapEx/OpEx are an extension of reporting requirements, going against the aim of reducing the reporting requirements. Not only are future financial resources always anticipated, but the requirements go beyond anything that is required in financial reporting. •Changes in reporting on climate scenario analysis (i.e. application requirements for climate-related physical and transition risks) indicate rather behavioural obligation instead of being only reporting requirements •More clarity on how to treat leasing in GHG emission reporting would be appreciated. •As intensity values are frequently asked by Ratings and Rankings, we would suggest keeping the KPI.			
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	33.E_2.	ESRS E2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	S1-DR10 Social Protection This disclosure requirement requires international companies to collect data about the legal situation in all countries where they have employment. What is understood by e. g. maternity protection and parental leave is assessed very differently depending on the country and region. It cannot be ruled out that, for this reason, the legal situation for social security is assessed differently by various reporting companies in each country. To ensure the comparability of the data, information on the legal situation in each country worldwide should be made centrally available to companies. On this basis, companies should then report whether they compensate for insufficient social security in a country where they have employees through their own accompanying measures. S1-DR15 Remuneration Metrics 44b) In international companies, the annual total remuneration ratio of the highest paid individual to the median annual total remuneration for all employees is significantly influenced by the distribution of the workforce around the world. In European companies, top managers and CEOs who might be those "highest paid individuals" in many cases tend to be located in Europe whereas e.g. production lines might be located in low cost countries. Even if the workers in those countries might be paid a fair wage, and even if the "highest paid individual" might receive just an average remuneration, this ratio might indicate a severe disproportion although the remuneration for all employees is adequate. In a company with employment exclusively in Europe, however, the same figure might be an indicator for an improper high remuneration of the top earner. So this KPI is not comparable for different companies and should be omitted.

You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	1.The requirements demand information on expected durability, repairability, and the share of recyclable materials. A critical issue here is that the reference to using established assessment systems (such as those from the ESPR or PPWR) has been removed. Without standardized and regulatory-anchored methodologies for measuring these criteria, there is no reliable basis for reporting. This inevitably leads to company-specific, subjective assessments that are not comparable across different companies. As a result, the informative value of the data is significantly weakened. Recommendation: The disclosure requirement should be explicitly linked to the development and application of the relevant standards under ESPR and PPWR. Until these standards are finalized, objective and comparable reporting is not feasible. 2.The new requirement (17d) to disclose the share of recycled materials in key products raises questions about scope and added value. This KPI essentially captures the same information already reported through the accounting of resource inflow (in ESRS E5-4, 15(d)). The share of recycled materials used in production is logically reflected in the finished products. Therefore, separate data collection and disclosure for resource outflow is redundant. Disclosure for individual product streams (key products) requires complex tracking and allocation, which involves a significant administrative burden. This effort is disproportionate to the informational gain, as the core information is already captured elsewhere. Recommendation: This requirement (17d) should be removed to avoid duplicate reporting. The meaningful information about the use of recycled materials is already sufficiently covered by the disclosure obligations on resource inflow.			
Survey	ZVEI e.V.	Business association (other than association of financial institution)	Germany	33.S_1.	ESRS S1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. So this KPI is not comparable for different companies and should be omitted.			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Overall, we support the proposals on clarifying and simplifying the materiality assessment concept while preserving some key parts (consideration of own operations and the value chain, links with sustainability due diligence processes and engagement with stakeholders for identifying the material aspects). To improve usability, we recommend repurposing EFRAG's work on sector-specific standards into sectoral guidance. This guidance would help companies identify data points expected to be material for each sector and provide voluntary sector-specific data points that companies could choose to disclose. §22: we recommend a more explicit distinction between the concepts of reporting at topical level or at IROs level. Topical information is generally broader and thematic while IROs information is more entity-specific. We suggest highlighting that the latter should be the focus of the disclosures, and providing a mapping table that would help to cross-reference between the topics and the connected IROs. §29: to create positive feedback loops, we encourage requiring from preparers to disclose whether, and to what extent, they considered input from users on their previous sustainability reports. §48: we would recommend that the ESRS flag topics which are highly likely to be material for any company: climate change, own workforce, and business conduct. We strongly suggest that a company deeming either of these topics not to be material should be required to provide a detailed explanation of how the materiality assessment led to this conclusion – similarly to the current ESRS requirements on the topic of climate change. §51: in some instances, aggregation of information is relevant to avoid excessive and irrelevant details. However, when locational specificities are present, disaggregation is necessary. The explanation of why the company is providing aggregated/disaggregated information should be added as a specific data point in Chapter 3 of ESRS 1, and in ESRS 2 IRO-1.

Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	§34-35: Overall, we support the clarifications related to negative impacts and the efforts to distinguish the actual negative impacts from prevention, mitigation and/or remediations measures. Detailed information on measures taken and results of such actions are significant and can give an insight on future company performance. We agree that negative impacts should be considered regardless of any attempts at remediation/mitigation during or after the reporting period, and that only remediation/mitigation measures that led to an evidenced reduction of the severity and/or likelihood of the impact should be considered in materiality assessments. We also support the precision that if the undertaking needs to maintain significant ongoing mitigation and/or prevention actions, the impact shall be assessed without considering these. However, the proposed wording used to explain this is confusing and should be simplified. In particular, the use of the "gross vs net" term in the context of impact materiality assessment may create confusion for some stakeholders as this concept is usually used for risk identification. To resolve these, we'd suggest clarifying the difference between the impact materiality assessment described in the standards from a risk assessment and avoid using or referencing the "gross vs net" concept. §36: we agree with the clarification that the assessment of positive impacts must be conducted in their own right – rather than actions offsetting the negative ones. The specification that the reporting should focus on the company's business activities, products, and services, and no other types of activities e.g. philanthropy, is also welcome.			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	Overall, we agree that the changes proposed by EFRAG are likely to improve readability. §114: EFRAG's proposal regarding connected information related to monetary amounts or other quantitative information presented in the financial statements is concerning from a user perspective. Making these cross-references to financial statements voluntary would restrict the ability for investors to identify how the impacts, risks and opportunities disclosed in the sustainability statement affect the financial performance of companies. We would encourage to maintain all such cross-references as mandatory, also in line with the stated requirement for preparers to provide information enabling users of sustainability reports to understand the connections with the financial statements (§111). §109: an executive summary would be helpful for data users to quickly get an overview of the reports' content. The ESRS should explicitly mention that this summary should present a fair view of the reported information, meaning highlighting the positive aspects of the sustainability report but also covering the material risks, challenges, and negative impacts of the undertaking. To ensure this and improve comparability across reporting entities, EFRAG should provide an indicative template for this executive summary. §110: having detailed data in appendices can also make the standards clearer, under the condition that the data will be digitally tagged for machine-readability and cross-referenced in accordance with §107-110. It is important that greater flexibility does not impede investors' ability to find and compare information.			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We agree with the overall approach of simplifying and shortening the standards by removing duplications between ESRS 2 and topical standards, as it can reduce burden while maintaining much of the necessary content. We also support the renaming of the minimum disclosure requirements to general disclosure requirements. AR 24 for §28 a: we agree that disclosing IROs and PATs at the level at which the IROs are managed can simplify the standards. AR 27 for §30: we underline that it is essential that companies provide a detailed explanation as to why PATs would not be developed for material risks and impacts. Additionally, we strongly encourage maintaining the disclosure related to whether companies plan to develop PATs in the future and the timeline for this development. This information provides useful insights as to whether companies consider these IROs as less critical compared to others, or whether their absence constitutes an oversight from the companies.			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	Overall, the standards have become more readable, and many of the editorial changes in the language of the standards contribute to clarity. The decision to have the mandatory application requirements (ARs) close to the disclosure requirement to which they belong makes the standards easier to apply. The more consistent use of "topics" / "sub-topics" as wording throughout the ESRS also facilitates comprehension and navigation across the standards. We agree that distinguishing clearly between mandatory and voluntary data points by using different documents can simplify the reporting and prevent accidental overreporting. On the other hand, the voluntary data points are also likely to receive less attention in a separate document, which might lead to less reporting. However, on the content side, some of the ESRS data points that were voluntary were considered as useful by investors, so that we believe they should be included in the guidance (see our response to Question 22). To further facilitate usability by preparers, users and auditors, we would recommend the following adjustments: -Make more explicit in ESRS 1 that ARs attached to a DR are mandatory and covered by assurance requirements. This should be done at the beginning of every block of AR and would remove any possibility of misinterpretation. -Establish individual IDs for every data point and ARs to ensure that they can be referenced more easily and for use in digital tagging.			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We support EFRAG's efforts in reducing the number of ESRS data points by repurposing some of the formerly mandatory and voluntary data points under this non-mandatory illustrative guidance. We would recommend that the NMIG is included in the text of the Delegated Act to clarify its status as official ESRS guidance. However, this inclusion should take the form of an annex with a clear disclaimer explicitly stating that the NMIG has been designed for guidance and illustrative examples only, and that non-compliance with them does not need to be justified. Similarly, we believe preparers (and indirectly users) would benefit from more sector-specific guidance. For this, the work already conducted by EFRAG in preparing sector-specific standards could be re-purposed and help companies report in a more standardised and comparable way. This sector-specific guidance could take the form of an update of the NMIG, including sector-specific recommendations.

Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	While we understand the rationale to provide limited reliefs to companies throughout the ESRS, we see a risk that the proposed reliefs could compromise data availability, quality and comparability if abused by reporting companies. Particularly, the reliefs on undue cost and effort, lack of data quality, use of estimates in the value chain and joint operations on which reporting companies do not have operational control, might, if taken together, lead to serious gaps in reporting. As they apply horizontally and, so far, with little limitations, they are likely to have a major impact on the reliability of sustainability reports and further decorrelate them from financial statements. This would restrict the ability for investors to identify how the IROs disclosed in the sustainability statement affect the financial performance of companies which is critical to determine financial materiality. Additionally, this could lead to regulatory liability for financial market participants that need this information to comply with their own disclosure requirements, such as SFDR. We believe it is crucial to establish incentives ensuring companies strive to make this data available to users. Time limits and clearer obligations to improve the quality and availability of data over time should be explicitly required in the ESRS. This should include actions undertaken and how they will improve the data for the next reporting period. In the meantime, companies should need to be transparent about the origin and the quality of the estimates that they use.			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	See response to Q.17. While we understand the rationale to provide limited reliefs to companies throughout the ESRS, we see a risk that the proposed reliefs could compromise data availability, quality and comparability if abused by reporting companies. In particular, the proposed relief for "undue cost or effort" is broadly defined and risks being misused. For investors and other users of sustainability data, ensuring that the information is comparable and reliable is essential. Allowing such reliefs without safeguards, such as clear requirements and timelines for improving the data, disclosure of actions taken, indications of whether improvements are expected in the next reporting period, and transparency around the quality of estimates, could undermine the overall credibility of the reporting framework. This is especially the case when the reporting data points are linked with other mandatory disclosure rules for investors, e.g. the ones necessary for compliance under SFDR, where reliefs such as partial scope of calculation should be avoided (See also our response on question 17).			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	We are concerned with the suggestions to water down the disclosures on anticipated financial effects. Quantitative anticipated financial effects are one of the core pieces of information for investors and are essential for assessing financial materiality. In the development of the ESRS, it has been a priority to provide investors with this data, which is a fundamental requirement for managing the risks in their portfolios. We acknowledge that there can be challenges connected to producing this information, however the effort is worth the benefit for a company, its investors and the wider economy. Understanding these often-existential risks is necessary for resilience both at the level of the enterprise, and the economy as a whole. While Option 1 offers broad reliefs, we believe it could be a workable compromise in the spirit of simplifying the ESRS for preparers, subject to the caveats mentioned previously (see response to Q.17-18). Of the two suggested options, Option 1 is the only one to maintain the credibility of the ESRS – clearly establishing the expectation to provide quantitative data to users, while granting adequate reliefs for reporting companies when they encounter legitimate challenges to do so. Option 2 would entail a complete removal of the quantitative disclosures and leave companies able to choose the data to provide based on convenience rather than materiality or relevance, thus leading to critical loss of data and creating information gaps for investors that would undermine the consistency and reliability of the standards. Option 2 would also introduce reliefs that go beyond the ISSB standards, which would mean more effort for companies that report under both the ISSB and ESRS frameworks, and difficulties for investors that want to compare reports between both regimes. Option 1, while not being entirely aligned with the ISSB standards, would mitigate this fragmentation.			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	Quantitative anticipated financial effects are one of the core pieces of information for investors, and should remain a priority in the ESRS (see also our response to Q.17-19). This is especially important for the topic of climate, which is a key material topic for nearly all companies and users of sustainability data. Investors in our network highlighted that these disclosures are particularly relevant for them, and that they see limited to no space for simplification there. The removal of the different time horizons (short, medium and long-term) for climate physical and transition risks disclosures throughout these data points reduces the granularity of the information provided and its relevance for investors. Furthermore, datapoints related to the monetary amounts and percentages of assets and revenues at material physical and transition risk are important for investors and lenders to assess an undertaking's exposure. Finally, the proposed deletion of the disclosures related to scenario analysis would restrict important information enabling investor to assess the consequences of anticipated financial effects and take decisions accordingly. We welcome the efforts made to align with the ISSB standards and maintain some core disclosures, but it is important that diverse data points that are needed by a wide range of EU investors need are also maintained.

Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We strongly support maintaining interoperability between the ISSB's IFRS S1/S2 and the ESRS. However, some of EFRAG's proposals related to additional reliefs for preparers run the risk of widening the divergence between both sets of standards. As the introduced reliefs are already significant and should be subject to strict conditions (see our responses to questions 17 to 20), we agree with not adding the abovementioned IFRS reliefs. While we are not opposed to the references to SASB Standards and IFRS Industry-based Guidance, we strongly recommend repurposing EFRAG's existing work on the sector-specific standards in the form of guidance. Sectoral guidance which is well-adapted to the needs of ESRS preparers could be a source of simplification for reporting companies (see response to question 11). Deletion of 7 "shall" data points that were aligned with ISSB standards: some of the deleted data points that were aligned with the ISSB standards are valuable to investors, so we suggest reintroducing them: •ESRS 2 General disclosures- IRO-1, paragraph 53 (e) (disclosure on how IROs are integrated into overall risk management) has been highlighted by investors in our network as key information to assess data quality and the maturity of a company's practices regarding sustainability risks. It also overlaps with the TNFD framework, which means its deletion would create additional interoperability problems. •E1 Climate change (53 amended, gross GHG emissions intensity) has been highlighted by members of our network as a particularly useful disclosure. It is not only aligned with the ISSB standards, but also GRI standards, and provides data for SFDR, Pillar 3 and the Benchmark Regulation. •ESRS 2 GOV-2 - Integration of sustainability-related performance in incentive schemes is regarded by investors as particularly valuable information. Its inclusion would also improve alignment with GRI standards.			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)				
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	22.E1.	Comments on deleted datapoints in ESRS E1	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	We consider climate-related data points to be essential for informed investment decision making. While most of the critical data points needed by investors in E1 have been maintained, we call for maintaining E1.IRO-1_15 paragraph 21 on the use of climate scenario analysis to identify transition risks and opportunities, which is flagged as an essential indicator by many investors. Eurosif conducted a broad consultation exercise across its members and partners to identify which data points investors consider as essential to maintain. The following deleted datapoints were also highlighted as relevant due to their usefulness for investors, because they are required by other applicable EU disclosure requirements, or because they are already present in the ISSB standards and should be maintained for interoperability purposes: Mandatory data points: E1-1_1216 g E1.SBM-3_05 AR 7b E1.IRO-1_0120 a, AR 9 E1.IRO-1_0220 b E1.IRO-1_05AR 11 b E1.IRO-1_0920 c E1.IRO-1_14AR 12 d E1-3_02AR19d E1-3_05AR21 E1-4_1934 c E1-4_20AR 25 a E1-4_21AR 25 b E1-4_24AR 30 c E1-5_1840 E1-5_1941 E1-5_2042 E1-5_2143 E1-6_06AR 52 E1-6_3255 E1-6_33AR 55 E1-6_34AR 55 E1-6_35AR 55 E1-7_09AR 58e E1-7_12AR 61 E1-7_16AR 62 c E1-7_17AR 62d E1-7_18AR 62 e E1-7_19AR 64 E1-8_0163 a E1-8_0363 b E1-8_0663 d E1-8_0763 d E1-8_0863 d Voluntary data points: Not all of the 13 voluntary (may) data points deleted from ESRS E1 were included as illustration in the NMIG. As climate data has been consistently highlighted as a priority by investors, we recommend introducing them at least in the NMIG.			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	22.E3.	Comments on deleted datapoints in ESRS E3	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	The following deleted datapoints were highlighted as relevant due to their usefulness for investors: Mandatory data points: E3.IRO-1_02 8b

Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	22.S2	Comments on deleted datapoints in ESRS S2	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	Eurosif conducted a broad consultation exercise across its members and partners to identify which data points investors consider as essential to maintain. The following deleted datapoints were highlighted as relevant due to their usefulness for investors: Voluntary data points: S2-4_17AR 37			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	22.S3	Comments on deleted datapoints in ESRS S3	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	Eurosif conducted a broad consultation exercise across its members and partners to identify which data points investors consider as essential to maintain. The following datapoints were highlighted as relevant, but were deleted due to changes in the double materiality assessment. While some of their aspects is preserved in other datapoints / overall DMA guidance, we would encourage more explicit mentions of these data points e.g. in the NMIG: Mandatory data points: S3.SBM-3_01 9 S3.SBM-3_03 9 a i-iv S3-4_1035 Voluntary data points: S3-3_21AR 21			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	22.S4	Comments on deleted datapoints in ESRS S4	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	Eurosif conducted a broad consultation exercise across its members and partners to identify which data points investors consider as essential to maintain. The following datapoints were highlighted as relevant, but were deleted due to changes in the double materiality assessment. However, we would encourage a more explicit mention of e.g. in the NMIG: Mandatory data points: S4.SBM-3 10 a Voluntary data points: S4-2_22 22			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	22.G1	Comments on deleted datapoints in ESRS G1	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	Eurosif conducted a broad consultation exercise across its members and partners to identify which data points investors consider as essential to maintain. The following deleted datapoints were highlighted as relevant due to their usefulness for investors: Mandatory data points: G1-1_1010 g G1-2_0215 a Voluntary data points: G1-5_04 AR 12 a G1-5_05AR 12b			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	Several of the voluntary data points made mandatory are identified as relevant by investors according to feedback from our members and partners. We support in particular the data points related to biodiversity transition plans, total water withdrawals/discharges, as well as the number and nature of confirmed incidents of corruption or bribery. ESRS E4 Biodiversity and ecosystems: we suggest adopting a "comply or explain" approach for companies that consider biodiversity material but do not implement a biodiversity transition plan. The explanation should detail the reasons behind the decision, and whether and if so when such a plan will be implemented in the future.			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We support the proposed additional mandatory data points.			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	We support the explicit clarification of ESRS being a fair presentation framework. This would both promote further interoperability with the ISSB standards, of which the fair presentation principle is a cornerstone, ensure that reporting companies faithfully represent their sustainability-related risks, impacts and opportunities, and limit the burdens of a compliance-based approach.			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Both absolute and intensity-based targets are necessary to present an accurate reflection of undertakings' decarbonisation trajectories and the environmental and economic impact of the decisions a financial institution takes. Absolute metrics provide a clear, real-world representation of companies' actual impacts and are complementary to intensity-based metrics. While we acknowledge providing absolute metrics can be challenging, these challenges are not specific to the financial sector, and we do not consider this a justification for a dedicated exemption. Keeping the absolute targets would also improve consistency between different pieces of EU legislation, as this information is required under the SFDR. Furthermore, not including absolute emissions would create further fragmentation internationally, as SBTi also requires financial institutions to set absolute reduction targets for scope 1&2.			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	We support this development, which introduces a clearer threshold that helps comparability across companies.			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	A methodology should be chosen that ensures disclosures are comparable and reliable, for example not distorted by minimum wages that are below living wages in some countries. Adequate wages for workers from countries outside of the EU could be provided by the EU and updated annually, to serve as a reference point for reporting companies, ensuring comparability. It should be defined based on the ILO methodology to estimate a decent wage.

Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	While we appreciate the efforts to maintain the data points required under SFDR, some of the changes in the revised ESRS may create additional challenges for investors. It might become more difficult to find the relevant information in the sustainability reports and may induce additional challenges to calculate the metrics for SFDR. The removal of intensity-based data points from the ESRS may therefore create issues in complying with SFDR, given that financial institutions will have to identify the relevant ESRS data points in the sustainability reports and calculate themselves the corresponding SFDR indicators. Furthermore, different calculation methods may result in inconsistencies between the metrics disclosed by companies, hindering comparability. For this reason, we would recommend that intensity metrics – in particular indicator 3 on Gross GHG emission intensity – be maintained in the ESRS. Finally, the shift of indicators related to non-respect of UN GPs and OECD Guidelines on Multinational Enterprises to a footnote in another indicator may jeopardise the capacity of users to gather this information, which is required under a number of legislations including SFDR, BMR, but is also a basic information required for investors' exclusions policies.			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	E4 – 4 target disclosure specifications have been highlighted as being particularly important for investors, so we strongly support their reinstatement in the revised ESRS. In any case, E4 AR 26 should also be maintained and specify minimum criteria for these targets – e.g. measurable, time-bound, geography specific, and verifiable. It should indeed include stronger links to science-based frameworks, for example the SBTN or Kunming-Montreal Global Biodiversity Framework for target definition and TNFD for related disclosures. Companies could also refer to sectoral guidance, e.g. based on EFRAG's work on sector-specific standards that we support including in the ESRS (see response to question 11). Similarly to climate transition plans, biodiversity action plans could include details on restauration or renaturation strategies on protected areas including the methodologies of reference and progress updates and should avoid the use of biodiversity offsets. Given that the state of scientific research and methodologies on measuring biodiversity IROs evolve rapidly, we would encourage to include further regular reviews of these data points.			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	Despite being a voluntary ESRS data point, adjusted gender pay gap is an information often required by investors and is among the data points considered as essential by Eurosif's members and partners. Adjusted pay gap allows additional insights into pay-related equity and gender-related dynamics that go beyond structural workforce factors, and as such it is a relevant information for many investors. In consequence, we would support maintaining both the unadjusted and adjusted gender pay gap in the final revised ESRS, which have complementary uses.			
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	33.S_1.	ESRS S1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Survey	Eurosif - the European Sustainable Investment Forum	User Association	Belgium	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		The ESRS play a crucial role in enabling investors to allocate capital in line with their clients' sustainability preferences, support the green transition, and manage their own exposure to sustainability-related risks and impacts. A key strength of the ESRS lies in its double materiality perspective and its coverage of environmental, social, and governance topics. We welcome that these key components have been maintained fundamentally while simplifying the standards. We welcome many of EFRAG's suggestions on ESRS simplifications, including changes in structure and double materiality assessment, removal of duplications, and shifting some of the voluntary data points as non-binding guidance. We reiterate our strong support for introducing sectoral guidance based on EFRAG's existing work on sectoral standards. The 57% reduction of the initial ESRS set 1 data points proposed by EFRAG is significant. We would like to stress that the EFRAG proposals should be considered as the absolute minimum necessary for investors to make informed investment decisions. We strongly caution against further data points cuts, which would jeopardise the relevance and credibility of sustainable corporate reporting across the EU. Eurosif conducted a broad consultation exercise across its members and partners to identify which deleted data points investors consider as essential to maintain - these are highlighted in the response to Q.22. Additionally, some key issues remain. Importantly, clear requirements for disclosing quantitative and qualitative disclosures on anticipated financial effects are essential for the credibility and effectiveness of the ESRS from a user perspective. Interoperability with ISSB standards is also essential to maintain. Some modifications of the datapoints corresponding to the SFDR PAIs are also likely to create issues for investors and complexify regulatory compliance.			
Survey	Nordic Swan Ecolabel	Other - please specify (required)	Sweden	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	(please note that the reply above doesn't necessarily reflect our opinion but an option has to be chosen in order to fill out this free text section) Nordic Swan Ecolabel recommends consistency between the VSME standard and the ESRS standards. In the VSME standard there is a clear reference about how to report when an undertaking is in possession of an environmental label or certification (please see formulation "B1 Basis for preparation, point 25 in VSME standard: If the undertaking has obtained any sustainability-related certification or label, it shall provide a brief description of those (including, where relevant, the issuers of the certification or label, date and rating score"). Nordic Swan Ecolabel believes such a reference should be included in the ESRS standards. The formulation could be included in the introductory paragraphs of the standard where the basic information about the undertaking is described. This could be in ESRS 2 SBM-1, paragraph 17. The reference should focus on officially recognized ISO 140024 type I ecolabels as these ecolabels provide a detailed environmental analysis equivalent to the sustainability materiality assessment that is demanded in the DMA of the ESRS standard. Type I ecolabels set strict requirements for the undertaking (product or service) throughout the whole life cycle and work as an independent third party as the ecolabel certifies that the undertaking lives up to these requirements. Please also note that Type I ecolabels hold a special role in the Empowering Consumers Directive (2024/85) by demonstrating "excellent environmental performance".			
Survey	Toulouse Business School	Academia	France	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I disagree	The proposed amendments did not achieve an acceptable balance between simplification and robustness of the DMA. While point (a) in the definition of double materiality is clear, point (b) is imprecise. a)Point (b) is tautological: "Information is MATERIAL when: (…) it is necessary (…) to understand (…) MATERIAL impacts, risks and opportunities …" (emphasis added) b)The inclusion of "risks and opportunities" in point (b) is inconsistent with the notion of impact materiality, as illustrated in different parts of the same ESRS 1 (e.g., paragraphs 3 and 30). c)Point (b) refers to the "understanding" of sustainability reporting users, without reference to the implications of such understanding. d)Additionally, in paragraph 30 impact materiality correctly refers to "the identification of information that relates to the undertaking's material actual or potential, positive or negative impacts on people or the environment over the short, medium or long term Business relationships are not limited to direct contractual relationships." Consequently, any framing of impact materiality based on decision-making is insufficient, since many of the stakeholders are not in a position to make any decision. The greater focus on the "materiality of information" as a general filter (point 2) can help organisations in performing their DMA, however, the assessment of the materiality of information shall not be used as a reason to omit information on a topic that was identified as material. The possibility of providing disclosures at the topic or at the IRO levels (point 6), indistinctly breaks the traceability between impacts, risks, opportunities, and their corresponding metrics, complicating insurability and cross-sectional comparability. Allowing the disclosure of information on non-material topics, although it shall be provided "without obscuring" material information, it may introduce noise and allow cherry-picking practices that may eventually biased the "fair presentation" that the ESRS are now expected to support.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Toulouse Business School	Academia	France	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	Under the current text, there is no explicit requirement to report on preventive measures taken in prior periods when an impact has already occurred. If an impact materializes during the reporting period despite prior preventive efforts, those actions do not have to be disclosed. The standards only require disclosure of preventive measures for potential impacts, while for actual impacts, disclosure of remedial actions is required			
Survey	Toulouse Business School	Academia	France	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	Toulouse Business School	Academia	France	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I disagree	The simplification of ESRSs and the reduction of disclosure requirement and data points is premature. Companies, auditors and consultants have already invested in the implementation of ESRSs. However, the untimely revision will waste the learning that could be obtained from this experience. No less important, in general, the loss of the knowledge and positive externalities generated by the preparation, analysis and use of sustainability information and the increase in social and environmental regulation costs (e.g., government monitoring in the absence of corporate self-reported information) will overshadow the putative administrative costs savings from the ESRS simplification. The re-architecture between ESRS 2 and thematic standards reduces enforceability and comparability because although minimum "Shall" requirements are maintained in ESRS 2, their simplification weakens the common baseline and opens the door to overly flexible interpretations across companies and sectors. The elimination of the obligation to declare PAT plans and timelines diminishes forward-looking guidance and monitoring capabilities. Additionally, this omission limits the capacity of information users to evaluate the commitment of reporting organizations in achieving their stated sustainability goals.			
Survey	Toulouse Business School	Academia	France	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	Toulouse Business School	Academia	France	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	It is reasonable to include guidelines and examples on how to disclose datapoints in "Non-Mandatory Illustrative Guidance" (NMIG). However, the simplification proposal is depriving users of the sustainability report from crucial information to assess the due diligence of the company. For example, the policies to identify and manage actual or potential, positive or negative impacts on people or the environment, are crucial to assess due diligence. Therefore, it is paramount to perform an in-depth assessment to determine whether all disclosures currently presented in the NMIG should be made mandatory in the delegated act. While the NMIG may reduce implementation questions, encourage proportional innovation, and ease the burden on PAT narratives when rigid prescriptions fail, it could also reduce comparability. Without a minimum common ground, methodological heterogeneity hinders cross-sectional and time-series analyses. In this regard, the NMIG is useful if it complements—not replaces—a clear regulatory baseline that preserves consistency, traceability, and insurability.			
Survey	Toulouse Business School	Academia	France	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	The "undue cost or effort" principle is aligned with the goal of administrative simplification. However, the articulation of this "relief" in paragraph 89 ESRS1 is so imprecise that it may turn this set of standards into dead letter. The "undue cost or effort" principle risks transforming Directive (EU) 2022/2464 into a voluntary guideline. The limitation of considering resilience in terms of risks places an emphasis on financial materiality, overlooking how an organization's activities may also affect the resilience of the ecosystems in which it operates.

Survey	Toulouse Business School	Academia	France	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	The amendment is generally reasonable. But the "undue cost or effort" principle is too broad, as indicated in the response to question 19.			
Survey	Toulouse Business School	Academia	France	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1				
Survey	Toulouse Business School	Academia	France	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	Thorough information on dependencies is increasingly important to motivate organizations and industries to tackle sustainability challenges. This amendment goes against the tide. This modification is not justified on the grounds of administrative simplification, as the costs of processing this information is minimal: this information is present in information systems and calculations are trivial. Instead, this modification appears to be proposed on the grounds of avoiding information that may impact corporate reputation, at the expense of resilience.			
Survey	Toulouse Business School	Academia	France	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I disagree	IFRS and ESRS have different objectives and scope. Alignment with IFRS twists the notion of double materiality with the introduction of materiality as a filter and fair presentation, for example. As a result, ESRS is less aligned with the Green Deal. This greater alignment with the ISSB reduces the interoperability with other relevant sustainability reporting standards that companies have been applying for decades (such as the GRI).			
Survey	Toulouse Business School	Academia	France	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Toulouse Business School	Academia	France	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	No substantial increase in administrative costs. Datapoints are relevant.			
Survey	Toulouse Business School	Academia	France	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	Datapoints are relevant.			
Survey	Toulouse Business School	Academia	France	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	The notion of fair presentation is ambitious. It draws on financial reporting. Some ambition in this area is positive. However, it is inconsistent with the focus on limited assurance. Additionally, the application of fair presentation may dissuade companies from disclosing information on material topics, considering the inherent complexity and incompleteness of sustainability data.

Survey	Toulouse Business School	Academia	France	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Complex estimates are common to all sectors. The financial sector has a disproportionate effect on climate change. Absolute targets are essential for assessing progress on climate change, and banks are no exception in this regard. This exclusion is also at odds with other information on climate change required by financial institutions in other EU regulations (e.g. SFDR) and by banking supervising entities (Basel Pillar III).			
Survey	Toulouse Business School	Academia	France	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	Thresholds are reasonable.			
Survey	Toulouse Business School	Academia	France	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	Processing information about wages, considering notions such as living wages, is a significant concern for society. This modification is not justified on the grounds of administrative simplification, as the costs of processing this information is minimal: this information is present in information systems and calculations are trivial. Instead, this modification seems to be proposed on the grounds of avoiding information that may affect corporate reputation.			
Survey	Toulouse Business School	Academia	France	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I disagree	The "consolidation" and reduction of DPs results in a loss of granularity and breaks the traceability necessary for the SFDR to inform investors. Merging eight DPs into a single "HR policy" in ESRS 2 limits the relevance of human rights, erases nuances by stakeholder group, and weakens operational alignment with UNGP/OECD. The single "severe cases" indicator fails to capture typologies, severity, remediation, or geography. Excluding "fatalities" from the scope of the PAI on lost days is a material setback. Investors require explicit visibility into fatalities, rates, and trends. Moving content to ESRS 2 (general) instead of maintaining it in ESRS S1–S4 reduces consistency between IROs and specific metrics and hinders insurability. The supposedly "marginal" reduction in coverage is, in fact, material for time series, benchmarking, and alignment with the SFDR Annex I tables; it increases the risk of cherry-picking and mapping gaps.			
Survey	Toulouse Business School	Academia	France	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	AR 26 could be further reviewed to better reflect current developments (e.g., SBTN).			
Survey	Toulouse Business School	Academia	France	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	Disclosing this information has enormous social benefits in terms of increasing gender equality. This modification is not justified on the grounds of administrative simplification, as the costs of processing this information are minimal: this information is present in information systems and calculations are trivial. Instead, this modification seems to be proposed on the grounds of avoiding information that may affect corporate reputation.			
Survey	Toulouse Business School	Academia	France	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	This formulation will contribute to damaging SMEs. The increase in government regulation and monitoring costs (in the absence of corporate self-reported information) will overshadow the putative administrative costs savings from this unsophisticated simplification.			
Survey	Toulouse Business School	Academia	France	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	Toulouse Business School	Academia	France	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal? Survey	Toulouse Business School	Academia	France	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Some emission-intensity datapoints have been trimmed. While intensity indicators are valuable to users, the cuts mainly target metrics that can be derived from other reported figures (e.g., emissions relative to revenue or total assets). We advocate preserving at least one sector-relevant intensity indicator, since stakeholders need both absolute and intensity perspectives—aligned with TCFD guidance on Metrics & Targets. On transition plans, we welcome the draft's explicit alignment with EU and international climate objectives.			
Survey	SPOLCHEMIE - Spolek pro chemickou a hutní výrobu	Preparer (non-financial preparing a sustainability report)	Czechia	35.ESRS1_1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	•Standards must be clear, simple, unambiguous, and limit flexibility of interpretation. •We support launching with a minimalist version of ESRS for at least the first two years, and only tighten requirements later based on evaluation and evidence. •The ESRS (as any other main regulation) should be established by EU regulation, not directive or delegated acts, to minimize divergent interpretations. •The lifecycle of the ESRS (as any other main regulation) should be: define baseline scope, then after a predetermined period (e.g. 3–5 years) perform an evaluation, and only then adopt amendments. •We oppose inclusion of voluntary disclosure allowances within the mandatory standard text; instead, any burdensome provisions should lead to specific reduction proposals. We propose creation of Non Mandatory Illustrative Guidance (NMIG) as a separate, supporting instrument and not legally binding provisions. Note: Section on double materiality do not work and cannot be filled in. 3. Double materiality as the basis for sustainability reporting Impact materiality is currently too subjective, due to missing binding methodology and threshold definitions. •The scale and detail of disclosures may vary widely across companies depending on the auditor, undermining cross market comparability. •We propose a centralized database of examples (material vs non-material) to support internal methodology and audit dialogue. •Some areas are already regulated at national level or internally well managed, with no prior negative impact; such areas often get classified "not material," even though residual risks may exist (e.g. many topics in ESRS S1). •We recommend eliminating financial materiality for non listed entities: lack of public demand, absence of standard tools/methods, and sensitivity of financial data make consistent, valuable disclosure impractical. •Alternatively, companies should be allowed to state that no financial materiality assessment has been performed, even at reputational risk, rather than forcing weak estimations.	ESRS1	1. ESRS Standards, reporting areas and drafting conventions	
Survey	SPOLCHEMIE - Spolek pro chemickou a hutní výrobu	Preparer (non-financial preparing a sustainability report)	Czechia	35.ESRS1_1.1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	•Entity-specific disclosures (user defined IROs) should not be mandated as part of the main standard - these risk greenwashing or misunderstanding. •The entity-specific approach introduces risks to comparability and may foster strategic reporting manipulation. •If such disclosures are permitted, they must be distinctly segregated in a separate section or annex, so they do not distract from benchmarkable indicators	ESRS1	1.1 ESRS standards, reporting areas and entity-specific disclosures	
Survey	SPOLCHEMIE - Spolek pro chemickou a hutní výrobu	Preparer (non-financial preparing a sustainability report)	Czechia	35.ESRS1_4.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Due Diligence Requirements •Remove or delay the value chain due diligence obligation until a robust methodological framework is established. •In its current form, the requirement risks producing low-quality, fragmented, and subjective disclosures, lacking effective audit or control mechanisms. •The governance and oversight of due diligence must be aligned with G1 governance requirements.	ESRS1	4. Due diligence	
Survey	SPOLCHEMIE - Spolek pro chemickou a hutní výrobu	Preparer (non-financial preparing a sustainability report)	Czechia	35.ESRS1_7.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	•Reporting should rely on existing monitoring and metrics, not on expanded narrative requirements. •The standards themselves should restrict flexibility and interpretation to maintain consistency and comparability. •Disclosures must enable benchmarking and consistency across firms and sectors; qualitative narrative content alone adds limited value. •Avoid overly broad narrative "contextual" demands; requirements should focus on comparable metrics and limited necessary explanations.	ESRS1	7. Preparation and presentation of sustainability information	
Survey	SPOLCHEMIE - Spolek pro chemickou a hutní výrobu	Preparer (non-financial preparing a sustainability report)	Czechia	35.ESRS2_GOV-3.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	In accordance with ESRS 2 (GOV-3) and Chapter 4 of ESRS 1, CSRD/ESRS does not provide a legal basis for the obligation to perform due diligence, but only for its disclosure. Full liability may arise only upon implementation of CSDDD.	ESRS2	GOV-3 - Statement on due diligence

Survey	SPOLCHEMIE - Spolek pro chemickou a hutní výrobu	Preparer (non-financial preparing a sustainability report)	Czechia	35.E1-1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	We oppose a mandatory improvement plan or future roadmap, as these require speculative projections. •Requirements for net zero planning should be deferred until a clear, sector-appropriate methodology and toolset is available. •Imposing net zero obligations prematurely may be impractical or even destructive for some sectors whose business models cannot adapt rapidly. We suggest to postpone or eliminate net zero planning requirements until: •A clear methodology is defined. •Feasibility across sectors and production models is evaluated. •Avoid financially damaging expectations on industries without viable transition paths. We suggest to postpone or eliminate net zero planning requirements until: •A clear methodology is defined. •Feasibility across sectors and production models is evaluated. •Avoid financially damaging expectations on industries without viable transition paths.	E1	Disclosure Requirement E1-1 - Transition plan for climate change mitigation	
Survey	SPOLCHEMIE - Spolek pro chemickou a hutní výrobu	Preparer (non-financial preparing a sustainability report)	Czechia	35.E1-8.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	•Scope 3 emissions must not be compulsory, due to the unreliability of supplier data in non EU jurisdictions (e.g. China, India), immature methodology, and risk of incomparability. •If Scope 3 remains mandated, the European Commission should provide a centralized emissions factor database to enforce uniformity for non-EU suppliers. The requirement under Disclosure Requirement E1-8 is currently unrealistic due to the quality and availability of input data.	E1	Disclosure Requirement E1-8 - Gross Scopes 1, 2, 3 emissions	
Survey	SPOLCHEMIE - Spolek pro chemickou a hutní výrobu	Preparer (non-financial preparing a sustainability report)	Czechia	35.E2-4.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Plastic Items & Material Definitions •We request a clear legal definition of "plastics" or "microplastics", explicitly clarifying whether it includes or excludes thermoset materials and other materials.	E2	Disclosure Requirement E2-4 - Pollution of air, water and soil	
Survey	SPOLCHEMIE - Spolek pro chemickou a hutní výrobu	Preparer (non-financial preparing a sustainability report)	Czechia	35.S1-1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Many S1 topics are actively managed with no past negative impacts. Under current logic, these may be excluded from reports, even though material in principle. Clarification is needed on how to handle low-probability but high-stakes risks.	S1	Disclosure Requirement S1-1 - Policies related to Own workforce	
Survey	SPOLCHEMIE - Spolek pro chemickou a hutní výrobu	Preparer (non-financial preparing a sustainability report)	Czechia	35.G1-4.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	•The argument for excluding financial materiality for non-listed entities is grounded in the sensitivity of certain financial data and the risk of competitive harm if minimal disclosures are forced. •Governance frameworks should allow for safeguards around sensitive data and permit entities to decline financial assessments under certain conditions, while still ensuring accountability. •Also valid for G1-5 and G1-6.	G1	Disclosure Requirement G1-4 - Metrics related to Incidents of corruption or bribery	
Survey	Sonae - SGPS, S.A	Preparer (non-financial preparing a sustainability report)	Portugal	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	E4	We do not support the removal of the ESRS E4 biodiversity and ecosystems metrics metric specifications from the mandatory requirements. This is problematic because standardization is more limited at present than with other metrics. Specifying metrics (now in Non-Mandatory Illustrative Guidance (NMIG) 18-20) within the Standard would give companies the information they need to select and report practical, credible and comparable metrics and would support alignment with the TNFD disclosure metrics. If this does not occur, at the very least, it is important that (i) the NMIG stays attached to the Standard in some form and (i) a process is in place for ensuring updates are made on a timely basis, particularly for guidance on topics where data/tools for reporting are evolving rapidly.			
Survey	Sonae - SGPS, S.A	Preparer (non-financial preparing a sustainability report)	Portugal	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We support the simplified standards aligning with core elements of TNFD and encourage EFRAG to continue striving to maintain alignment with other international standards and frameworks, including ISSB and GRI. Improving the interoperability between the requirements in ESRS and the ISSB Standards, to enable companies to use the ISSB Standards as a starting point and 'top up' with specific impact disclosures to achieve compliance with the CSRD/ESRS, is important.			
Survey	Sonae - SGPS, S.A	Preparer (non-financial preparing a sustainability report)	Portugal	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	We recommend maintaining the disclosure specification on key relevant nature-related targets, ensuring alignment with key relevant frameworks particularly SBTN and the Global Biodiversity Framework			
Survey	Sonae - SGPS, S.A	Preparer (non-financial preparing a sustainability report)	Portugal	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We welcome the ESRS being simplified in a way that maintains the double materiality approach of the Corporate Sustainability Reporting Directive (CSRD), covering environmental, social and governance topics. This principle of double materiality is vitally important for the reported information to be meaningful for users. It is also essential for the EU to respect its international engagement under the UN CBD Global Biodiversity Framework Target 15.			
Survey	Sonae - SGPS, S.A	Preparer (non-financial preparing a sustainability report)	Portugal	33.E_4.	ESRS E4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We welcome the simplification effort mainly targeting unclear or duplicative requirements, maintaining essential disclosures on environmental metrics and ask EFRAG to maintain that approach in the simplification process. We also welcome alignment with the draft global consensus metrics on the state of nature, convened by the Nature Positive Initiative. This is important for ensuring metrics are credible, practical and aligned for companies. We highlight the importance of maintaining and reinforcing alignment with TNFD on nature-related financial risks, opportunities and impacts considering the entire value-chain. We recommend maintaining key relevant nature-related location/site based metrics (in line with key relevant frameworks such as TNFD, SBTN and others) in the standard.			
Survey	Sonae - SGPS, S.A	Preparer (non-financial preparing a sustainability report)	Portugal	35.E4-5.	Do you agree with the amendments of this chapter?	I disagree	The option to report metrics only for locations relevant to existing sustainability targets should be removed or made additional. In order to align with the double materiality concept in ESRS 1 and throughout the standards, metrics should be reported for locations that are material for biodiversity and ecosystems.	E4	Disclosure Requirement E4-5 - Metrics related to biodiversity and ecosystems change

Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Double materiality is essential and must remain at the heart of the ESRS framework and European Union sustainability regime for corporate reporting to be credible and useful. The principle of "materiality of information" is concerning since it introduces a further filter for companies to not report information. For example, it represents a step backwards from ID-177, which says that most S1 metrics must be reported if S1 Own Workforce is material. It is essential to maintain the principle of fair presentation in the reporting standards. It is positive that the revision of the AR 16 list of topics has maintained all of the sub-subtopics for S1 + S2. These are based on the list of social topics in the CSRD and should all be maintained. The emphasis on aggregation (as opposed to disaggregation) is concerning, as disaggregated information (both site-specific and country-specific) is key to understanding the distribution of IROs.			
Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	It is important that companies report not just their net impact – the gross impact should be reported, and the recommended text preserves this principle.			
Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	The proposed changes are helpful. However, para 113 is difficult to understand: "113. If the description of the material impacts, risks and opportunities prepared in accordance with [Draft] Amended ESRS 2 IRO-2 is not presented alongside the respective policies, actions and targets, the undertaking shall make explicit which policies, actions and targets relate to which material impacts, risks, or opportunities, in accordance with paragraph 22." Para 22 addresses the issue of appropriate aggregation or disaggregation of information on material impacts, risks and opportunities and their management, without setting any rules regarding the location of such disclosures depending (or not) on the level of aggregation.			
Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The Exposure Draft removes duplications between the cross-cutting and topical standards. The preservation of the 4-part architecture in the social standards is important to respect the distinctiveness of different affected stakeholder groups. However, we have two critical concerns. First, the original DR in environmental standards concerning screening of sites in materiality assessment were replaced by an application requirement to ESRS 2 IRO-1. This in effect makes transparency on this aspect optional. Consideration of local context is a key element of an appropriate materiality assessment. This should be both recognised in Chapter 3 of ESRS 1, and in ESRS 2 IRO-1, which should include an explicit datapoint on how the undertaking screened its locations and value chains. We welcome that E standards provide a clearer reference on the importance of disaggregation of disclosures, but this can only be done well if locations are properly screened. Second, we strongly recommend adding an explicit reference to the disclosure of relevant, entity-specific metrics directly in S standards. The fact that S2, S3 and S4 do not include any metrics should not imply that entity-specific metrics for S topics should not be disclosed.			
Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	The "may" (voluntary) data points should not be eliminated. In many cases they are "shall" in GRI standards, so it is important to keep them to align with GRI standards. Also, many of them were originally proposed as mandatory by EFRAG to the EC. The first wave of reports show that many companies have reported some "may" data points. Retaining them would help ensure standardization/comparability between company reports. Almost all of the datapoints for non-employee workers are voluntary, thus most datapoints for this vulnerable group of workers has been lost. Also, important datapoints on full time versus part time workers has been eliminated.			
Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	It is concerning that mandatory guidance in the Set 1 ESRS has been downgraded to "non-mandatory". Mandatory guidance is key to ensuring comparability and completeness of sustainability reporting. At a minimum, Non-mandatory Implementation Guidance (NMIG) should be included in the Delegated Act, and ideally called Mandatory Implementation Guidance. A major point of concern is that ID-177, which provided guidance that most S1 metrics should be reported if S1 Own Workforce is material, has now been downgraded into NMIG. Instead, EFRAG should preserve and promote the guidance that most S1 metrics shall be reported.

Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	As a whole the reliefs go too far, overshooting the balance between cost/effort and transparency. There is a danger of enabling green/social washing. The relief for "undue cost or effort" is too vague thus leaving too much room for interpretation. The relief for direct data for value chain reporting is too extensive, as direct data is key for transparency. The relief for reporting on operations which are not "significant drivers of IROs" also opens up too much leeway for interpretation.			
Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	These combined reliefs overshoot the balance between transparency and cost/effort and risk enabling green/social washing. At a minimum, there should be a time limit introduced for these reliefs on value chain metrics			
Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	The ability to estimate financial effects is critical for the undertaking's ability to integrate sustainability into its business strategy considerations, planning and risk management. It is also key for the determination of financial materiality, including in terms of overreporting topics as financially material. Reporting on financial effects is crucial to achieving the objective of putting sustainability reporting on the same level as financial reporting and integrating both. The European Union has recognised the value of a double materiality approach to corporate reporting which requires disclosure of both material environmental and social impacts, risks and opportunities as well financially material data, It is important to keep the requirement on businesses to analyse and understand the financial effects of their business model. This will ensure investors have access to credible data as well as providing the underpinning for future business planning			
Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	ESRS reliefs should not go beyond those set in IFRS. The principle of fair presentation needs to be protected to provide transparency on all material IROs. As noted in the response to question 15, it is also important to consider interoperability with GRI when considering changes to the ESRS, rather than only considering ISSB's standards.			
Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)				
Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	22.ESRS2	Comments on deleted datapoints in ESRS 2	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	The reduction in the number of mandatory and voluntary datapoints goes far beyond striking an acceptable balance. As mentioned above, the voluntary datapoints should be maintained to provide alignment with GRI, which is currently in the process of strengthening its labor standards, as well as guidance and standardization for companies reporting more than just the mandatory datapoints. An explicit quantitative goal of 50%+ reductions was never set by the European Commission for EFRAG. A number of S1 datapoint metrics have been eliminated which should be reinstated: •S1-5 Employees: gender breakdown for zero-hour employees •S1-8 Diversity: age distribution; •S1-10 Social protection: reinstatement of retirement •S1-12: Training and development: gender breakdowns, •S1-13 Health and safety: fatalities from ill-health for non-employees and other workers on site; •S1-14 Work-life balance: employees that took family related leave;

Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Adding a datapoint on training of the procurement team is needed to support the implementation of human rights in the supply chain. The addition of a datapoint on confirmed incidents of bribery is needed to improve transparency on the effectiveness of bribery/corruption policies and measures.			
Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Agree that the following mandatory datapoint should be added: ESRS 2 General disclosures – BP 1 the undertaking shall state that the general requirements of ESRS 1 have been applied for the preparation of its sustainability statement			
Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	The "fair presentation" principle is essential to reduce the risk of green/social washing, as it emphasizes the full disclosure of all material impacts, risks and opportunities and their management. It is not understandable why this principle is under attack, as it is included as one of the general principles of the Accounting Directive			
Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	It is essential that financial institutions disclose absolute targets to assess how their strategies align with the economy-wide transition to net zero. Absolute targets are relevant for users of sustainability statements and for understanding the real-world climate impact of financed activities. While intensity measures provide insights into efficiency, they can mask rising absolute emissions in growing portfolios or sectors. Granting an exemption would also undermine fairness in a sector-agnostic standard. Other industries could equally argue for exceptions based on their own difficulties, reducing comparability across sectors. Moreover, absolute financed emissions are already recognised in existing standards and regulations: the SBTi financial sector net-zero standard, the UNEP FI/NZBA recommendations, and EU SFDR all require or encourage absolute emissions disclosure. Exempting banks would risk misalignment and reduce the usefulness of reported data for stakeholders, including asset owners who depend on it for their own disclosures.			
Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	The "top 10" threshold for reporting country-level data on employment, collective bargaining and social dialogue is a major improvement over the current 10% employment threshold. An analysis of the first sustainability statements from Wave 1 companies shows that the current 10% threshold results in country-level disclosures on as little as 21% of total employees. More country-level information is needed to understand the distribution of impacts across countries, as well as whether employment thresholds for specific labour rights have been exceeded. The new threshold does not require additional effort/cost by companies, since they must gather country-level data anyways to calculate the global figures. Furthermore, it does not result in extra datapoints, since the information currently is (and can be under the revised ESRS) reported as one table.			
Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	An analysis of the first year ESRS reports shows that most companies are simply reporting that they pay minimum wages, whereas the intention (as outlined in the ESRS Basis for Conclusions) is that companies should be enabled to disclose commitments to paying a wage "sufficient to support themselves and their families in dignity" as well as the extent to which they do this. This shows that the methodology for non-EU countries needs to be changed. Furthermore, the new ILO agreement on a methodology for living wages needs to be taken into account. While the proposed new methodology takes a step forward in both regards, two key changes are needed: •The methodology for reporting on 'adequate wages' should measure actual wages against an adequate/living wage for all employees, not only those within the EU. In particular, for employees outside the EU, the methodology should allow employees' actual wages to be measured: oA) against the local legal minimum wage only when this is set in line with the ILO principles on estimating living wages; or oB) against living wage estimates that are set in line with ILO principles on estimating living wages. •Companies should be able to rely on local legal minimum wages or living wage estimates when the authorities or organisations that set them provide public evidence of their alignment with the ILO principles for estimating living wages. Furthermore, the transitional provision for the EU needs to be reinstated, as not all Member States have transposed the Adequate Minimum Wage Directive.			
Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	The new, simplified framework makes it easier for companies to report on these SFDR-related matters in a way that corresponds to how their policies are set. For users, this consolidation makes it easier to locate the relevant information. However, the SFDR datapoints are very helpful and should only selectively be amended			
Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	The unadjusted gender pay gap should be kept as mandatory, since the methodology for calculating it is clear. The adjusted pay gap figure as voluntary. In practice many companies are reporting both figures, which is useful for improved transparency. However, since the methodology for calculating the adjusted figure is not standardized, the unadjusted should be kept mandatory.

You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	ESRS S2: We are concerned that the loss of many specific datapoints related to workers in the value chain will mean that disclosures about material impacts, risks and opportunities become more generic and have less information about the specific stakeholder groups because specifications about the level of granularity have been deleted. Many of the points that are being deleted from ESRS S2 had originally been included because they reflected effective practice in relation to improving supply chain labour rights, for example, AR 6 awareness of the impacts on value chain workers from an undertaking's strategy or business model, AR 20 illustrating how the perspectives of value chain workers have informed specific decisions or activities of the undertaking and AR 25 which looks at retaliation and whether workers can use grievance mechanisms confidentially.			
Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	33.S_3.	ESRS S3:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	ESRS S1, S2, S3, S4: An explicit reference needs to be added to GDR-M (metrics) in the Disclosure Requirements concerning targets, in S2, S3 and S4, to clarify that metrics need to be reported in the case of entity-specific impacts			
Survey	Central Organisation of Finnish Trade Unions SAK	Trade union	Finland	33.S_4.	ESRS S4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. Survey	Datamaran	User (analyst, data provider, rating agency, etc.)	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I would like to skip this question and provide my feedback in Part 3				
Survey	Datamaran	User (analyst, data provider, rating agency, etc.)	United Kingdom	35.ESRS1_2.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	ESRS 1 16 now clarifies that the ESRS are a "fair presentation" standard. In accounting jargon, fair presentation frameworks are different from compliance-based standards as they focus on faithful representation, key characteristics of quality of the information, and management judgment rather than a detailed checklist of rules. In other words, in a fair presentation system, substance takes precedence over form. This is probably music for the ears of all those companies that went through the implementation of ESRS and have been vexed by auditors applying a very literal interpretation of the requirements, in particular on the DMA (I'm looking at you, auditors asking for IROs for each AR16 sub-sub topic). However, despite Patrick de Cambourg's opinion, slapping the label "fair presentation" on top of the standards (it is literally header 2 in ESRS 1) doesn't change the fact that the ESRS are still full of very specific and detailed requirements, including on the DMA process. The concern is that this inherent contradiction could potentially lead to even lengthier debates with auditors. ESRS should embrace a "fair presentation" regime. Take a principle-based approach with less detailed requirements (see the next points for more details).	ESRS1	2. Fair presentation and qualitative characteristics of information	
Survey	Datamaran	User (analyst, data provider, rating agency, etc.)	United Kingdom	35.ESRS1_3.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The Revised ESRS 34-35 seek to clarify how to take into account prevention, mitigation, and remediation measures when assessing negative impacts. Specifically, they indicate when assessment can be done on a net (taking into account mitigation/prevention actions) or gross (without taking into account mitigation/prevention actions) basis. In this effort to provide clarification, however, the Revised ESRS ends up adding yet another layer of analysis, as reporting companies will need to determine the assessment basis on their negative impacts. To quote one of the practitioners in our Harbor community: "Now another dimension is added on top of the standard DMA exercise". An additional point of concern in this approach is the ambiguity of the formulation "significant ongoing mitigation and/or prevention actions". Determining what mitigation and prevention measures qualify as "significant" and "ongoing" clearly requires a judgment call, and it is very likely to generate long internal debates on what those characteristics mean, as well as raise questions from assurance providers. ESRS should reconsider the Gross vs. Net debate. Overworked rules risk generating time-consuming disputes internally and with auditors. A blanket rule, assessing all impacts on a gross basis, would simplify matters while allowing exceptions where companies provide justification.	ESRS1	3. Double materiality as the basis for sustainability reporting	
Survey	Datamaran	User (analyst, data provider, rating agency, etc.)	United Kingdom	35.ESRS1_3.1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	While condition a) is effectively borrowed from the IFRS standards and thus relies on well established understanding of what "general purpose financial reports" are, who "primary users" are (i.e. investors and capital lenders), and which "decisions" it refers to (buy, hold, or sell equity or debt), b) is instead venturing in uncharted waters. Who are the "users of general purpose sustainability statements"? Are those different from the "affected stakeholders"? What are "general purpose sustainability statements"? And finally, most importantly, the test is predicated on a much broader and generic basis - "understand the undertaking's material impacts, risks and opportunities and how it identifies and manages them" - compared to the more specific "information that could reasonably be expected to influence decisions". Arguably, the universe of information useful to "understand" IROs is much broader than the information "expected to influence decisions", significantly diminishing the effectiveness of this new materiality of information filter, as it will be rather simple for auditors to insist that a piece of information is necessary to "understand" an impact, a risk, or an opportunity. It is unclear why the Revised ESRS departs from this well-established criterion in condition (b) under ESRS 1 21. A clearer test would be: "Information is material when omitting, misstating, or obscuring it could reasonably be expected to influence decisions that primary users of general-purpose sustainability statements make, including decisions about the undertaking's material impacts, risks, and opportunities."	ESRS1	3.1 Materiality of information as a general filter for reported information	

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Datamaran	User (analyst, data provider, rating agency, etc.)	United Kingdom	35.ESRS1_3.5.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Given their abstraction, the effectiveness of those principles dressed as practical considerations remains a question mark, especially considering the overreaching attitude auditors adopted in providing assurance to Wave 1 CSRD statements. ESRS 1 48 and related application requirements then introduce measures through which "the undertaking may avoid unnecessary complexity". The formulation based on "may" rather than "shall" already downgrades those measures to optional ones, which some auditors may interpret as: "only certain companies may use the lighter process described in ESRS 1 48, and there have to be companies out there that, in light of their complexity, reach, size, must do more than that". Similarly, AR 17 does nothing to remove the ambiguity: "The undertaking may adopt a top-down or a bottom-up approach to perform its materiality assessment." This is really puzzling, considering the follow-up comment: "Adopting a top-down approach may be more pragmatic and reduce the complexity of the process, and is expected to lead to the same outcome of the materiality assessment as the bottom-up approach." If that is the case, why on earth is the bottom-up approach still in the standards? Its presence, together with the "may" based language of these provisions, leaves a back door open to auditors to ask for a bottom-up approach whenever they deem it appropriate. More worryingly, one practitioner highlighted to me that certain auditors may even interpret this AR as a stress test, asking the reporting company to conduct both the top-down and bottom-up approaches and check that the results effectively match. Additionally, AR 18 is worded in a highly problematic way. While a) and b) are welcome clarifications that can be used to effectively push back on certain auditors' literal interpretation of the standards, making those 2 measures conditional on the ambiguous "unless more investigation is necessary" reduces their reach.	ESRS1	3.5 Practical considerations in determining the material impacts, risks and opportunities and their associated topics to be reported	
Survey	We Mean Business Coalition	NGO	Switzerland	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We support making the "materiality of information" the principal focus of the assessment. However, we suggest the following improvements: •Clarify the objective of the DR to explain why certain information should be reported. For financial effects, ESRS could mirror ISSB standards, which add: "[…] for users to understand the financial effects of […]". •Specify who the users are (particularly "other users") and what types of decisions they make, as this would help define relevance and user objectives. •Safeguard against the misuse of "undue cost or effort" as a justification for omitting material information. •Revise para. 37 to reflect that the purpose of financial materiality assessment is not only to identify material information but also to determine material risks and opportunities, as required by the CSRD. In this regard, risks and opportunities appear only midway through para. 38, making the text incoherent. •Ensure that the relief in para. 65 does not result in disregarding already available data. •Finally, we recommend deleting AR 18 and AR 19, as they may undermine the design of a proper materiality assessment process. See also reply to Q12			
Survey	We Mean Business Coalition	NGO	Switzerland	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	It is helpful that Chapter 3 addresses how prevention, mitigation, and remediation of impacts should be considered in materiality assessments. However, the rules could be expressed more simply and clearly. In 2024, many preparers attempted to connect their DMA with their ERM, which proved challenging due to the differing treatment of gross versus net risks. Yet, this connection is crucial: it maximises the relevance of using the DMA as input to the ERM and strengthens coherence between financial and non-financial reporting. At the same time, ongoing remediation must be considered, so that risks are not underestimated in the DMA if only net risks are applied. We believe EFRAG has made similar considerations but arrived at a somewhat complex solution. We therefore suggest a clearer distinction between: •permanently installed remediations (e.g., filters on water discharge facilities), and •remediations requiring continuous performance and maintenance (e.g., safety procedures). Permanently installed remediations could follow the logic of Appendix C (in simplified form), whereas remediations requiring continuous performance and maintenance should not be considered in the DMA. For better coherence between DMA and ERM, and hence more clarity for the report user, we further suggest adding a bridge-explanation, as financially material elements identified in the DMA may not appear in the ERM due to ongoing remediations. These should be clarified and explained to users in a separate note. We also call for clarification on: •whether potential impacts should be assessed before mitigation, prevention, or remediation measures; •whether the cases in Appendix C apply only to own operations or also to the value chain; •the distinction between positive impacts and actions (i.e., a positive impact as the consequence of a positive action).			
Survey	We Mean Business Coalition	NGO	Switzerland	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	We agree with the intention of the Executive Summary, but we would like some clarifications: -how to ensure fair presentation of IROs and avoid greenwashing; -where these sections should be incorporated (inside or outside the sustainability statement). We suggest clearly stating that these sections are not part of the sustainability statement because: (1) they are not foreseen in the CSRD; (2) they do not have to adhere to ESRS rules; and (3) they represent information that may be useful to certain users, but not to all ESRS users. This clarification would avoid repetition, establish the correct status, and simplify future issues with digital tagging and, in particular, assurance. We would also like to draw attention to para 113, which we find difficult to understand. In particular, it is not clear what the reference to para 22 is meant to imply. Para 22 addresses the issue of appropriate aggregation or disaggregation of information on material impacts, risks, and opportunities and their management. However, it does not set any rules regarding the location of such disclosures, whether or not they are aggregated. We also recommend reinstating the requirement in ESRS 1 para 114 to cross-reference the sustainability statement with the financial statements. The proposed optionality impairs connectivity and contradicts Articles 19a/29a of the CSRD. For regulators, investors, and other stakeholders, this cross-reference is essential. Without it, users' ability to understand the links between the two statements is reduced. Moreover, the current proposal creates divergence with ISSB standards.

Survey	We Mean Business Coalition	NGO	Switzerland	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We welcome the removal of duplications between the cross-cutting and topical standards and support the stronger emphasis on general disclosure requirements. Many PAT provisions in the topical standards had the character of examples or guidance rather than datapoints, so their removal is appropriate. We also welcome the preservation of the five-part and four-part architecture of the environmental and social standards, respectively. This structure is important in providing preparers with a clear framework and language to navigate the issues, communicate internally with colleagues, and organise their disclosures on social matters. The environmental standards similarly provide an architecture that supports this type of navigation, and we appreciate that it has been retained, including the specific metrics under standards E1 to E5. We believe the architecture should be complete and equivalent across all standards. We recognise that these changes may result in less comparable information in the short term. However, we accept this as a necessary trade-off to reduce reporting burden. Looking forward, we suggest that EFRAG and the European Commission help develop reporting practice guidelines on these elements in order to strengthen comparability over time.			
Survey	We Mean Business Coalition	NGO	Switzerland	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	We support the proposed changes and strongly agree with the removal of the "may disclose" elements, as their status has caused significant confusion. The language—and therefore the overall understandability—of the standards has already been considerably improved. However, we suggest the following additional improvements to further enhance clarity: -clarifying when an undertaking is considered "connected" with an impact; -deleting the last sentence of ESRS 1.59, as it gives the impression of being a relief; -avoiding the use of outdated language such as "shall consider." In particular, for GHG we suggest rewording to: "should apply GHG Protocol (version 2004), except where it contradicts other provisions of ESRS."			
Survey	We Mean Business Coalition	NGO	Switzerland	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	First and foremost, we support the NMIG not being part of the ESRS DA. We suggest finalising this guidance at a later stage to incorporate guidance from feedback received from this consultation as well as the final DA after the EC's revision and adoption. However, we also suggest that EFRAG clarify the legal role of the original supporting materials (e.g., the Q&As published for the original ESRS) and, for example, either retire or supersede them. It is also important to bring order to the due process of this ecosystem by clarifying the legal status and hierarchy of all guidance, as well as the due process followed—particularly for updates of these documents. There is no need to replicate the legal complexity created for the EU Taxonomy by the Platform and the EC with their endless FAQs; this should certainly not be a model to aim for.			
Survey	We Mean Business Coalition	NGO	Switzerland	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	Overall, we would have preferred that the reliefs were designed with one of the primary users – capital providers (the very reason for the Green Deal is to move capital) – in mind, rather than focusing mainly on preparers' wishes. Several of the proposed reliefs risk making reporting harder to use, or even useless, for capital providers. On #4 •We do not support para. 90, as it impairs connectivity with financial reporting and reduces usability, since the data loses its financial context. •Para. 91 should be replaced with a stricter relief: allow preparers to report metrics only at segment level (see IFRS 8). This preserves financial context, peer comparability, and usefulness. Excluding random subsidiaries would make the data context-free and unusable. •Para. 92 should be deleted. It would force companies to maintain two consolidation trees, both subject to assurance, creating cost without benefit. Joint operations should follow IFRS 11 – data included pro rata as in revenue and cash flow – to ensure comparability and enable integrated analyses. If oil & gas firms wish to report by operational boundaries, they may do so additionally, but for others it would create unusable, context-free data. Operational boundaries were a GHGP mistake 20 years ago – and remain so. On #5 We do not support omitting the most important information for capital providers: the quantitative and monetised value of climate risks. The CFA Institute's comment letter on the IFRS S1 exposure draft (Aug. 2022) stressed that qualitative data alone is insufficient. The EBA's 2025 guidance also requires banks to capture clients' climate risks in risk profiles – consistency is essential. On #7 We do not support this relief, as it weakens connectivity with financial statements (IFRS 3 and 5) and creates divergence from ISSB standards.			
Survey	We Mean Business Coalition	NGO	Switzerland	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	We do not support para 92 and suggest deleting it. We also recommend that the ESRS align more closely with the ISSB on this matter. We further call for that phase-ins must always be with a maximum number of years and with demands for providing clear plans on how to address data gaps. At a minimum, companies should explain why certain data is missing, as this ensures transparency. Ideally, companies should also provide estimates and disclose the assumptions used in those estimations. Finally, we also refer to our suggestion in Q17 to use segments as the lowest consolidation level – and hence the ability for the preparer not to report on a given KPI in the other segments and HQ. This would maintain comparability with financial reporting and ensure that users and peers can realistically make use of the reported data.			
Survey	We Mean Business Coalition	NGO	Switzerland	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	If we have to choose, we support option 1, as it better aligns with the ISSB standards. However, overall, we do not support the relief from providing quantitative and monetized information about risk impact. This is the most crucial information for capital providers, as also defined by the FSB in the original TCFD, and it is even explicitly included in the California Act. We do not understand why the EU should suddenly become the least useful ESG framework on this cornerstone part of the reporting.

Survey	We Mean Business Coalition	NGO	Switzerland	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	E1, 40(a): The monetary amount of risk to physical assets is important, but the percentage of assets is not. We also do not support reporting the risk value before considering adaptation actions. The real risk is not only the assets' book value – it also includes the cost of addressing the loss of useful assets, e.g. buying or leasing replacements or outsourcing operations. The monetary amount should be disaggregated by these purposes. E1, 40(b): This information is of no use to capital providers. Multinational companies hold assets across thousands of locations, some mobile by nature. Reporting this level of detail would be excessively lengthy and ultimately useless. It is not "need-to-have" information for capital providers – or anyone else. E1, 40(c): No use. E1, 40(d): The relevant metric is not revenue but anticipated lost profit from activities linked to physical assets at risk. E1, 41(a): Acceptable, except it should not be presented before considering mitigation actions. Quantification and monetisation of risk should also cover mitigation costs, disaggregated by purpose. E1, 41(b): No use. E1, 41(c): No use. What matters for capital providers is insight into the book value of loans and mortgages at risk if pledged assets are exposed. These include not only real estate but also vessels, rigs, trucks, and other equipment. E1, 41(d): Unclear. If this refers to contingent liabilities, we may agree. See IAS 37. Is the assumption that the incident is considered remote and thus excluded under IAS 37? E1, 41(e): As with physical risks, the focus should be on anticipated lost profit, not revenue. Including coal, oil, and gas activities here appears inconsistent – a financial risk is a financial risk. E1, 41(f): Acceptable. E1, 42: This conflicts with prudent financial reporting. A company should not monetise potential opportunities.			
Survey	We Mean Business Coalition	NGO	Switzerland	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I disagree	We do support increased interoperability between ESRS and ISSB, and most of the proposed interoperability solutions are acceptable. However, one element is fundamentally flawed from a user perspective: operational boundaries. These were introduced 20 years ago in the GHG Protocol, yet remain poorly defined and, from an integrated reporting perspective, entirely useless. Operational boundaries break the connection between emission data and financial data. They provide no link to revenue, cash flow, or production. As a result, GHG disclosures lack context: you cannot say that for a given level of revenue, production, or cash flow, a company emits a given amount of GHG. This makes it impossible to develop integrated KPIs, since financial and GHG data are not measured on the same basis. For capital providers—one of the primary users of annual reports—this information is therefore meaningless. From a preparer's perspective, operational boundaries also create more work, not less. They require companies to maintain and assure two separate consolidation trees within their systems. Completeness of data within operational boundaries becomes nearly impossible to validate, as there is no contextual anchor (such as fuel costs) to confirm that the reported consumption data is reasonable and complete. To maintain comparability both across companies and with financial reporting, we recommend that it be mandatory for all companies—including oil and gas—to report GHG emissions based on financial boundaries. If a company wishes, it may provide supplementary reporting using operational boundaries (whatever definition is applied), should it identify users with an interest in such data. But this should under no circumstances be mandatory.			
Survey	We Mean Business Coalition	NGO	Switzerland	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)

Survey	We Mean Business Coalition	NGO	Switzerland	23.	Six datapoints exceptionally moved from “may” to “shall” In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, “may disclose” datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from “may” to “shall” subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	We Mean Business Coalition	NGO	Switzerland	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new “shall” datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	We Mean Business Coalition	NGO	Switzerland	25.	Emphasis on ESRS being a “fair presentation” reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We do not express a preference for explicitly requiring the adoption of "fair presentation" in preparing ESRS sustainability statements, as we do not believe it is EFRAG's mandate to define how assurance should be concluded. Under the CSRD, the European Commission must adopt, through delegated acts, a limited assurance standard by 1 October 2026. That EU standard should set the expectations for practitioners conducting assurance engagements on sustainability reporting prepared in accordance with the ESRS. Moreover, we do not see how introducing "fair presentation" would reduce the reporting burden. Nonetheless, if the notion of fair presentation is maintained, we recommend addressing the following points more clearly: •Provide a stronger link with materiality and entity-specific information •Add the objective of the standard and of the report •Link with users' objectives and information needs •Consider including a definition of "fair presentation" in the Glossary These additions would help achieve better alignment with IFRS S1, which already addresses all these elements. Finally, we encourage further clarification—ideally through an Application Requirement—on what "fair presentation" means in practice. This would help preparers, auditors, and users apply the concept consistently and avoid unnecessary complexity.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	We Mean Business Coalition	NGO	Switzerland	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Requiring financial institutions, and any other company for that matter, to adopt targets they do not have would go beyond the CSRD mandate. In addition, it would conflict with the approaches of both SBTi FINZ and PCAF, which explicitly allow financial institutions to set intensity-only targets—and many currently only do so.			
Survey	We Mean Business Coalition	NGO	Switzerland	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	We do not recommend using arbitrary thresholds. Instead, we suggest that the split be based on segment reporting (IFRS 8), as this provides the financial context needed to make the S-data useful. At the same time, we recommend treating GDPR restrictions as the minimum safeguard for how granular S-information can be. It must never be possible to identify or infer characteristics about individuals.			
Survey	We Mean Business Coalition	NGO	Switzerland	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree				
Survey	We Mean Business Coalition	NGO	Switzerland	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Apendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				
Survey	We Mean Business Coalition	NGO	Switzerland	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	We recommend revisiting to allow for including SBTN elements and likewise, if this topic is considered material for the company.			
Survey	We Mean Business Coalition	NGO	Switzerland	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree	We recommend allowing the inclusion of the gender pay gap, not least because reporting on it is mandatory in some jurisdictions outside of EU.			
Survey	We Mean Business Coalition	NGO	Switzerland	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	We Mean Business Coalition	NGO	Switzerland	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	See previous replies

I partially agree and partially disagree	For the glossary, we recommend aligning as far as possible with the ISSB – with the exception of operational boundaries, which should not be included in the ESRS.			
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	EPRA welcomes the streamlining of the DMA. EFRAG's clarified requirements align with our own approach: in 2024, we introduced a materiality process tailored to listed real estate and based with the original sector agnostic ESRS. We believe the ESRS should remain high level, while ensuring clarity and consistency.			
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree				
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	EPRA fully supports the simplification of the ESRS. For over a decade, our Sustainability Best Practices Recommendations (sBPR) have been the most widely adopted sustainability reporting framework within the listed real estate sector in Europe and its going beyond. They combine qualitative and quantitative KPIs with a sector-specific materiality process, ensuring comparability and transparency. We therefore welcome EFRAG's general approach: a simplified, high-level ESRS complemented by sector-specific market led initiatives such as the sBPR.

Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	EPRA agrees with the restructuring of ESRS 2 and the move toward a more principles-based approach. Since 2011, the EPRA sBPR have provided detailed disclosures for real estate companies, covering environmental, social, and governance aspects. These go beyond the general ESRS framework, showing why it is appropriate for ESRS to remain simplified in architecture. EPRA would be pleased to engage with EFRAG, should the sector specific ESRS discussion comes back on the table.			
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2				
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	EPRA strongly supports interoperability between ESRS and global standards. From the very outset of both the ISSB and ESRS initiatives, interoperability has been highlighted as a priority. However, the lack of concrete alignment to date represents a significant missed opportunity. Ensuring interoperability is essential to reduce the reporting burden for corporates over the next 5–10 years. For the listed real estate sector, consistency with the EU Taxonomy is particularly critical, as it is deeply embedded in investment and financing decisions.			
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	EPRA supports reducing the number of mandatory datapoints. This will lower administrative burden while allowing sector frameworks to provide the necessary depth. The EPRA sBPR already include a comprehensive set of KPIs for listed real estate, widely used by both preparers and investors. Maintaining this balance ensures efficiency without sacrificing meaningful information.			
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets				
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree

Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	EPRA (European Public Real Estate Association)	Business association (other than association of financial institution)	Belgium	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		EPRA (the European Public Real Estate Association) promotes, develops, and represents the European listed real estate sector. With more than 290 members across the full spectrum of the industry (including companies, investors, and stakeholders) EPRA represents over EUR 930 billion of real estate assets and 95% of the market capitalisation of the FTSE EPRA Nareit Europe Index. In 2011, EPRA launched its Sustainability Best Practices Recommendations (sBPR), largely based on the GRIs, have since become the most widely adopted framework for sustainability reporting within the European listed real estate sector and beyond. The sBPR combines both qualitative and quantitative KPIs with a sector-specific materiality assessment process, ensuring comparability and transparency across companies. Recommendations were added that are aligned with the sector-agonistic ESRS . While we support simplification, we stress that the EPRA sBPR already deliver the level of granularity required by the real estate sector since 2011. We encourage EFRAG to maintain close engagement with EPRA if the sector-specific ESRS for the real estate sector are developed, to ensure alignment with existing practices. EPRA stands ready to share its expertise and experience in sustainability reporting to support this process.			
Survey	Oesterreichs Energie (association of Austrian electricity companies	Business association (other than association of financial institution)	Austria	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		ESRS1 ESRS 1 amend: („necessary for users […] to understand the undertaking's material impacts, risks and opportunities…", vgl. ESRS 1.21(b) amend, S.14). According to this proposal, the significance of information depends on whether a user considers it necessary to understand the company's key reporting objectives. However, there are no clear assumptions about user groups (e.g., their prior knowledge) or criteria for determining when information is considered necessary for them. This could mean that this unclear requirement for the materiality of information does not lead to a limitation, but potentially to an indefinite expansion of reporting requirements. There should be clearer guidance on materiality analysis to distinguish between actual and potential impacts, as the current proposal does not sufficiently clarify this important distinction. ESRS2 EFRAG is consulting on two options (p.26). The quantitative disclosures on the expected financial effects required under option 1 are subject to considerable uncertainty. Furthermore, such quantitative information is often not available in companies and does not generally play a significant role in internal management, which is why we prefer option 2. ESRSE1 The items subject to disclosure requirements should include: "financial and investment planning" (ESRS E1.14(a) amend, p. 8). The obligation to disclose "financial and investment planning" would lead to an expansion of the existing disclosure requirements and increase the reporting burden. ESRS E1 currently requires "explanation and quantification of the undertaking's investments and funding" for the relevant measures. ESRSS1 Own Workforce S1–7 (p.85) The proposal does not contribute to simplification but increases the reporting burden, especially for non-global companies, so it would be advisable to maintain the current requirements. General comments Non-Mandatory Illustrative Guidance The unclear legal status of the planned NMIG document could lead to inconsistent application and unnecessary challenges with auditors, so it should not be part of the standard/delegated act.

Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	ENNHRI welcomes chapter 3 as a simpler and clearer foundational chapter overall and share related observations below. First, ENNHRI welcomes the revised definition of information materiality in particular paragraph (para) 21b. This element of the definition is critical to balance impact and financial materiality dimensions and ensure alignment with international standards on sustainability due diligence (incl. UN Guiding Principles on Business and Human Rights (UNGPs)). The UNGPs clarify the responsibilities of business to communicate about their negative impacts and how they are managing them in a manner that sufficiently allows externals to evaluate the adequacy of the business' efforts (UNGP 21). We caution against any dilutions or deletions of para 21b. Second, ENNHRI welcomes the emphasis and clarity in Chapter 3 about the interrelation between the DMA and companies' sustainability due diligence, engagement with affected stakeholders and the relevance of the severity criteria. These are key to ensuring alignment with the UNGPs as well as interoperability with the EU Corporate Sustainability Due Diligence Directive (CSDDD). We caution against any dilutions or deletions of such content. Third, para 22 allows entities to present sustainability information at topical level. ENNHRI is concerned that this can result in over-aggregation of IROs resulting in very high-level disclosures that may hinder the 'understandability' emphasized in para 21b and undermine comparability. For example, there is a vast difference between reporting meaningfully on e.g. a company's health and safety or gender equality IROs that risks disappearing at 'topic' level. ENNHRI recommends that the topical level disclosure option is deleted and the original focus on IRO and/or sub-topic level disclosure is maintained. Finally, ENNHRI welcomes appendix A, and notes the importance of framing it as a non-exhaustive list as not all human rights impacted by companies or covered by the CSDDD are captured by the list.			
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	ENNHRI welcomes the attempt to clarify the so-called gross vs. net issue. In the first wave reports, lack of clarity on this aspect hindered comparability and led to divergence. ENNHRI largely supports the substantive content of paragraphs 34 to 36 and appendix C. However, the current drafting is not sufficiently clear and may lead to confusion, misinterpretation or a default 'always net' approach. In particular, paras 34-36 seem to not fully be consistent with Appendix C. For example, the temporality aspect between reporting years is clear in the table but not in the main body. We recommend full clarity and consistency across main body and the table in the final version, using Appendix C as the benchmark for adjustments to paras 34-36. In para 35 we support the nuance that potential impacts, which require significant ongoing preventative or mitigation efforts, shall be considered on a gross basis. This is relevant to many human rights impacts including those in companies' value chains and is aligned with the ongoing and iterative nature of sustainability due diligence required by international standards. The nuance is key to prevent companies from self-assessing prevention and mitigation efforts to be so efficient that they don't need reporting on, where this is not the case. The reverse risks hollowing out CSRD transparency objectives. It is key to preserve the basic logic of asking companies to tell users about their impacts and what they are doing about them, and then letting users consider whether this is considered adequate. In our understanding this element of para 35 is linked to para 21b and a gross approach is likely to be necessary for users to understand the undertaking's material IROs and how it identifies and manages them. We caution against any dilutions or deletions of this element of para 35.			
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	ENNHRI welcomes the reduction in overlap and redundancy across the cross-cutting and topical standards. It has two specific comments. First, to ensure full consistency across GDRs and related topical level reporting as it relates to metrics, ENNHRI recommends including 'metrics' to disclosure requirements SX-4 on targets across the four social standards, thereby making it about 'targets and/or metrics' rather than just targets. Metrics are mentioned in S2-S4 objectives and the heading before SX-4 reads 'metrics and targets', but metrics are not included in S2-S4 DRs and hence risk falling off the radar unless explicitly captured there. In addition to heightened consistency, making explicit reference to disclosure of metrics on an entity specific basis directly in S standards, where relevant, can a) compensate for the lack of predetermined metrics in S2-S4 and the unlikely provision of such in sector standards, b) recognize emerging trends observed for S2-S4 in year-1 reports on entity specific metrics (see also BCG State of Play report p. 31 and 32), and c) acknowledge the common and increasing use by companies of metrics in their social sustainability impact management and monitoring efforts (oftentimes more common that use of targets). ENNHRI appreciates the AR in GDR-M specifying that entity-specific metrics can be developed for S2-S4, but find it insufficient to address the points addressed above proportionately. Secondly, ENNHRI regrets the demotion of the original disclosure requirement in environmental standards related to materiality assessment concerning site and asset-level screening to an application requirement in ESRS 2 IRO-1. Context matters for environmental impacts such as polluted water streams and related impacts on local communities. ENNHRI recommends the site or location specific aspect of DMA is brought in as a direct datapoint in IRO-1 ideally not relevant to E standards only, due to its relevance to S3.			
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	ENNHRI only partially agrees with the deletion of all may-disclose datapoints. For the social chapters, some may-disclose datapoints were of particular relevance to capturing impacts and efforts related to vulnerable stakeholders such as non-employees or value chain workers. Such old may-disclose datapoints or ones that provide an illustration of emerging good practice disclosures, should be included directly in the Standards as examples rather than in the NMIG.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	ENNHRI agrees that NMIG contains helpful support material and supports its issuance in the format and status deemed most helpful to support companies' implementation efforts.			
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	ENNHRI is concerned with the cumulative or compounded effect of the different "reliefs" introduced, especially when considered in combination with the emphasis on 'fair presentation' as opposed to compliance, a new approach to materiality of information, fewer datapoints, and less granularity in the standards overall. It is not clear how the different reliefs interact with one another or with other key elements in the amended ESRS. For example, what is the interaction between 'undue cost and effort' and 'fair presentation' or 'materiality of information' considerations? Whilst these elements were introduced with a simplification purpose, ENNHRI is not convinced the end result is real simplification for companies or that it will bring the necessary clarity to exchanges between preparers and auditors. In addition to balancing 'undue cost and effort' with 'fair presentation' ENNHRI recommends that proportionality is required in relation to the 'undue costs or effort' relief, i.e. that their utilization is proportionate to related sustainability objectives. ENNHRI encourages EFRAG to further analyse the definitions of the individual reliefs, their interrelations as well as the cumulative effects of the different reliefs and consider whether they, alone or together, go too far. Such analysis should among other things consider the ultimate effect on metrics-reporting by companies, including in light of the European Commission's instruction for the ESRS review to emphasize quantitative reporting over qualitative. In addition, ENNHRI is concerned that these reliefs may in practice undermine the standards' scope covering impacts across both own operations and upstream and downstream value chain, where oftentimes some of the more severe human rights impacts are to be found, due to the different options not to report on value chain metrics. Where reliefs remain, ENNHRI recommends further inclusion of time limits on their use along with explicit emphasis on how improvement over time is expected.			
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	As declared in response to question 17 ENNHRI is concerned with individual and joint effect of the different reliefs introduced. This includes the relief for metrics with poor data quality in particular, its extension to also cover metrics for own operations, where companies are typically well-positioned to access data of sufficient quality and/or have sufficient influence to improve data quality within a reasonable time period. As such, we support the SRB members suggestion to include a time limit on the relief incentivizing progressive improvement and temporary use of this relief.			
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	Estimating financial effects is a key lever for incentivizing companies to integrate sustainability into business strategy, planning, risk management and decision making. It is also a key to investors and other financial market participants. At the same time, estimating financial effects can be a challenging task for companies and can be methodologically challenging. Disclosing on information uncertainty is recommended to address the latter point. In striking a balance between such considerations ENNHRI finds that Option 2 goes too far in both ruling out quantification and making it a voluntary disclosure requirement without having to meet any related conditions. Diluting 'financial effects' to this extent is at risk of undermining the objective of putting sustainability reporting on the same level as financial reporting and better integrating the two reporting disciplines.			
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	ENNHRI is not supportive of introducing reliefs in ESRS that go beyond already existing IFRS reliefs. This is to ensure maximum interoperability and thereby facilitate implementation and increase comparability, while avoiding starting a 'race to the bottom' between ESRS and IFRS as it relates to aligning reliefs across the standards. The switch from a compliance approach to one of 'fair presentation' marks a big shift and an overall reliance on business judgement. With it comes heightened responsibility on the companies to act in good faith. If not, the framework will lose its ability to underpin the necessary exchanges between preparers and users and ultimately the much needed factoring in of sustainability in business decisions. The many reliefs, on top of the emphasis on fair presentation, brings the risk that the standard opens itself to abuse by those not acting in good faith or those with limited faith in the value of the reporting exercise, thereby ultimately hindering the ability of the measure to achieve its stated sustainability objectives.			
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	ENNHRI supports the retained "shall disclose" datapoints while noting that the Amended ESRS offers a significant reduction. Given the materiality principle one could have kept more datapoints whilst emphasizing the 'if material' aspect, which on some accounts would have been preferable to blanket deletion. The amended ESRS represents the minimum necessary to ensure meaningful reporting meeting users' needs, allowing comparability and underpinning needed analysis and dialogue on companies' sustainability impacts and efforts crucial for the CSRD objectives and the Green Deal.			
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	ENNHRI welcomes overall the increased and explicit emphasis on 'fair presentation'. It does however recognize that 'fair presentation' is less established in the context of reporting on impact materiality and auditing impact materiality reporting than in the context of financial reporting. This could be addressed in guidance efforts aimed at both preparers and auditors.			
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets				
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	ENNHRI supports this changed threshold and finds it a pragmatic simplification and an improvement for both preparers and users.			
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	Methodology for calculation of non-EU adequate wages is ENNHRI's biggest technical and substantive objection to amended Social standards . As national human rights institutions, ENNHRI's members are critically aware of the challenges for the millions of workers living in poverty notably because of the failure of wages, including in many jurisdictions statutory minimum wages, to constitute adequate or living wages. Workers in and outside EU have a human right to a living wage, meaning sufficient remuneration to support themselves and their families in a life of basic dignity. The draft introduces unequal treatment of workers within and outside EU, disadvantaging non-EU workers by directing companies to compare wages paid with legal minimum wages aligned with the ILO's wage-setting principles and only when there are no legal minimum wages which apply a living wage benchmark. There are two main issues with the suggested non-EU methodology: oit incentivises use of legal minimum wage, oftentimes much lower than an adequate wage oit puts the task on each company to assess whether a certain wage in a certain country is adequate or not The ILO Wage setting principles quoted in AR 22 are not the right reference point, given they focus on the process of setting wages, rather than on the result of whether the wage is adequate or not. The latter is at the heart of the objective of S1-9. Instead, the drafting should refer to the ILO Principles for Estimating a Living Wage as the relevant benchmark for both statutory minimum wages or any other living wage estimates. In addition, the drafting should put the onus on the public authorities or the living wage data providers to provide evidence on alignment with the ILO Principles for Estimating a Living Wage rather than leave this as a burden on individual companies.			
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	ENNHRI welcomes and supports the approach taken in relation to SFDR datapoints relevant to the social standards. It would encourage future review of the SFDR PAIs to take into account the amended ESRS, thereby improving consistency across disclosure regulations further.

Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	ENNHRI suggests to specify in Application Requirement or in the NMIG that adjusted pay gap can be an important additional entity-specific disclosure to contextualise and enable improved understanding of the unadjusted pay gap disclosures.			
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	ENNHRI recognizes EFRAG's efforts for the amended ESRS to strike a balance between simplification and meeting the core objectives of the European Green Deal. However, in ESRS 1 ENNHRI is concerned with the cumulative or aggregate effect of the different reliefs when read in combination with a switch from a compliance approach to a principles based approach and including where reliefs go beyond those in the IFRS standards.			
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. I partially agree and partially disagree	For S1 ENNHRI has strong concerns on adequate wage methodology for non-EU employees and the related potential backstepping it can incentivize amongst companies otherwise committed to addressing concerns around in-work poverty. For S1-S4 disclosures 1-4 ENNHRI could support the suggested amendments, but wants to flag that these standards are now very slim and that any further reduction of them risk rendering them hollow, undercutting their alignment with international standards on business and human rights and removing their utility to function as an envisaged disclosure vehicle for CSDDD. Furthermore, ENNHRI strongly recommends to include metric disclosure directly in standards S2-S4 disclosure requirement 4 on targets. This to ensure consistency with GDR-M and compensate for these being the only topical standards without predetermined metrics.

In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	see answer to S1			
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	33.S_3.	ESRS S3:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	see answer to S1			
Survey	ENNHRI - European Network of National Human Rights Institutions	NGO	Belgium	33.S_4.	ESRS S4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Survey	Arup	Consultant (including software vendor)	United Kingdom	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	1.We welcome TNFD's proposal to consolidate the current nature-related standards (E2-E5) into a single, integrated nature standard and to (i) ensure a structured materiality assessment for nature-related issues; (ii) elevate reference to 'dependencies' on nature; and (iii) streamline and prioritize the number of quantitative nature-related data points. We call on EFRAG to make note of it and apply as possible. Consolidation must not dilute clarity — transition plans, offsets and targets need consistent definitions, assurance expectations and value-chain scope. Topic annexes should preserve key metrics, definitions and boundary rules.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Arup	Consultant (including software vendor)	United Kingdom	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	Arup	Consultant (including software vendor)	United Kingdom	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	E4	4.We do not support the removal of the ESRS E4 biodiversity and ecosystems metrics metric specifications from the mandatory requirements. This is problematic because standardization is more limited at present than with other metrics. Specifying metrics (now in Non-Mandatory Illustrative Guidance (NMIG) 18-20) within the Standard would give companies the information they need to select and report practical, credible and comparable metrics and would support alignment with the TNFD disclosure metrics. If this does not occur, at the very least, it is important that (i) the NMIG stays attached to the Standard in some form and (i) a process is in place for ensuring updates are made on a timely basis, particularly for guidance on topics where data/tools for reporting are evolving rapidly. If these remain in NMIG, they should stay attached to the standard and be subject to a formal update process to ensure companies can report credible, comparable metrics aligned with TNFD.			
Survey	Arup	Consultant (including software vendor)	United Kingdom	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	2.We support the simplified standards aligning with core elements of TNFD and encourage EFRAG to continue striving to maintain alignment with other international standards and frameworks, including ISSB and GRI. Improving the interoperability between the requirements in ESRS and the ISSB Standards, to enable companies to use the ISSB Standards as a starting point and 'top up' with specific impact disclosures to achieve compliance with the CSRD/ESRS, is important. We recommend explicit cross-references to TNFD LEAP and SBTN guidance, and that transition plans, offsets and targets have consistent definitions, assurance expectations and value-chain scope.			
Survey	Arup	Consultant (including software vendor)	United Kingdom	33.E_4.	ESRS E4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	3.We welcome the simplification effort mainly targeting unclear or duplicative requirements, maintaining essential disclosures on environmental metrics and ask EFRAG to maintain that approach in the simplification process. However, we note that the revised double materiality assessment (DMA) process, which is now more top-down and based on "reasonable and proportionate evidence" and "fair presentation", risks deprioritising biodiversity and ecosystems if organisational awareness or data availability is weak. We recommend EFRAG add guardrails to ensure that data scarcity alone is not a valid reason to deem ESRS E4 non-material, and that explicit assessment of dependencies is required. We also welcome alignment with the draft global consensus metrics on the state of nature, convened by the Nature Positive Initiative. This is important for ensuring metrics are credible, practical and aligned for companies.			
Survey	Arup	Consultant (including software vendor)	United Kingdom	35.E4-5.	Do you agree with the amendments of this chapter?	I disagree	The option to report metrics only for locations relevant to existing sustainability targets should be removed or made additional. In order to align with the double materiality concept in ESRS 1 and throughout the standards, metrics should be reported for locations that are material for biodiversity and ecosystems. We also recommend retaining site-level specificity rather than broad "location" terminology to preserve decision-useful granularity.	E4	Disclosure Requirement E4-5 - Metrics related to biodiversity and ecosystems change	
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	The proposed revisions to the ESRS provide useful clarifications and promote a more strategic and less compliance-oriented approach towards the DMA. In this context, the reinforcement of the materiality filter and the possibility to follow a top-down approach are major improvements. Other positive elements include: i) the deletion of sub-sub-topics which led to overly granular analysis, ii) the clarification that sub-topics shall not be seen as an exhaustive list, iii) the ability to evaluate materiality at a broader level and without covering all time horizons and iv) the possibility to disclose information at topical level. We believe that the possibility of including information about non-material topics contributes as well to greater flexibility, as long as the information remains relevant and does not become prominent in the sustainability statement. We are however concerned that the Exposure Draft does not sufficiently address the most critical issue in its "practical considerations", which is the level of effort required to justify the results of the double materiality assessment, and more specifically the non-materiality of certain IROs. In our view, each undertaking should be in a position to determine which IRO is material and which is not based on its unique understanding of its strategy, business model and stakeholders' interests and views, unless there are concrete elements that contradict this assessment. Although the notion of "undue cost and effort" supports this vision, the Exposure Draft misses the opportunity to better frame the role of the auditors when reviewing the DMA and, consequently, to avoid lengthy reviews. Finally, we are concerned that the importance given to "disaggregation" might have a counter-productive effect. Instead of ensuring that the undertaking focuses on what matters at the appropriate level, there is a risk of unnecessarily increasing the number of IROs.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	In our view, the so-called "Gross vs Net" debate is a critical issue as it fundamentally alters the results of DMA, which is the cornerstone of the sustainability reporting. The coexistence of different approaches seriously compromises the comparability of the information disclosed and the revision of the ESRS shall eliminate these discrepancies. In this context, we welcome the EFRAG's initiative in addressing this topic in the exposure draft. However, the approach described in the Exposure draft is not straightforward. While trying to accommodate different views, we are concerned that it is overly complex and will consequently lead to further debates about interpretation. Annex C, in its current form, should therefore be removed from the standard. Indeed, we understand that the proposed approach mixes gross and net assessments in different contexts which will complexify the work with the auditors and the evidence to be provided to them, and reduce comparability between companies. Furthermore the net approach also diverges from the one used in the vigilance plan (prepared under the French Duty of Vigilance Law), which is based on a gross approach. By contrast, the ESRS hybrid model risks creating confusion and duplication, especially when companies must reconcile both frameworks within their Universal Registration Document. If only one approach is to be retained, we believe that a purely "net approach" would not be adapted to the way the ESRS are designed and would make it difficult to disclose information on prevention, mitigation and remediation measures appropriately. We therefore strongly favor and recommend to withheld a "gross approach".			
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	The clarifications concerning the possibility to include executive summaries, to use appendices and the stronger link established with the overall corporate reporting are very much welcome enhancements that will improve the quality and the conciseness of the sustainability statement. The option to include non-material information, if presented clearly, is also a good step to maintain continuity for stakeholders without engaging in complex and lengthy discussions with auditors.			
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We fully support the rationalization measures that improve the overall structure of the ESRS. The redundancy between certain disclosure requirements in ESRS 2 and the topical standards, and the complexity of navigating between disclosure and application requirements, were major shortcomings. In our view, the Exposure draft does succeed in addressing these issues, which represents a significant improvement. Regarding PAT, we also welcome the simplification of the requirements in the absence of PAT. These changes are expected to significantly reduce one aspect of the reporting burden, although doubts remain on the real extent of datapoint reduction since many data points have been moved from the topical standards to the horizontal standards and/or merged with other requirements.			
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	We agree that deleting all "may disclose" data points makes the set of standards much easier to understand. However, in some cases, this has led EFRAG to propose making mandatory data points that were voluntary as per Set 1. The purpose of the ongoing simplification for which EFRAG was mandated by the Commission, is not to introduce mandatory data points and we therefore oppose this. The relocation of the AR right below the related DR however is very useful and provides far more clarity. Furthermore, editorial changes are overall very positive when it comes to clarity, conciseness and consistency (within the ESRS and with other regulations).			
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	During the first reporting exercise, companies' experience with the EFRAG Q&A and implementation guidance has demonstrated that these documents were often used by auditors as a binding reference, rather than for illustrative purposes as originally intended. While the NMIG may be a useful tool, it must be made clear from the outset that it is not a collection of former requirements, but rather a flexible tool to support companies in preparing their sustainability statements. Use of the NMIG should be entirely optional and non-binding. Therefore, the NMIG should remain outside the standards (i.e. the delegated act), and its non-binding legal status should be explicitly clarified. More generally, it should be made explicit that all documents other than the directive and the delegated act do not constitute binding references, but are merely guidelines (including EFRAG Q&As and implementation guidelines).			
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We welcome the proposed reliefs (reasonable effort, scope exclusions, use of estimates…) which are useful in reducing the reporting burden. While we appreciate the clarification that the starting point for reporting is the scope of the consolidated financial statements, we believe that the Exposure draft should go further in this direction by deleting ESRS E1 AR 19 which identifies circumstances in which additional information must be disclosed based on the operational control boundary. Indeed, this would reinforce connectivity between financial and sustainability information and provide a clear scope to be considered, both for preparers and their auditors.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	This relief provides useful flexibility, allowing partial scope reporting when data is missing, which will be instrumental to improve the quality of the data. However we consider that the relief should not be time-limited, and be expanded by removing ESRS 1 § 91, which stipulates that "the undertaking shall disclose the action it has taken to increase the coverage and quality in future reporting periods". This requirement fails to consider situations where a metric covers a large yet uncomplete scope and for which reaching full scope is not feasible. To this end, we recommend maintaining full transparency on the covered scope, while deleting the aforementioned requirement. This would enable each company to decide, on a voluntary basis, whether or not to disclose or not the actions taken to increase the coverage and quality.			
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	We believe that Option 2 strikes the right balance between transparency and feasibility, especially during the initial reporting cycles. This approach is consistent with the principle of proportionality embedded in the CSRD, as well as with the need to provide meaningful, decision-useful information without imposing disproportionate burdens to preparers. We therefore support Option 2, provided that clear guidance is given on what constitutes an acceptable qualitative disclosure, including examples and minimum elements.			
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	Provided that quantitative information is disclosed on a voluntary basis (option 2 as presented in response to question 19), we consider the proposed reduction in data points to be a clear step forward and the remaining requirements to be acceptable. However, it is important that their interpretation remains aligned with prudential expectations for lenders. Qualitative or range-based narratives should be allowed wherever figures would be speculative.			
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	We welcome EFRAG's ongoing efforts to align the ESRS with the ISSB standards (IFRS S1 and S2). Strong interoperability is essential to ensure that sustainability disclosures prepared under the CSRD can also meet global investors' expectations and avoid the duplication of reporting efforts. In our view, the current Exposure Draft represents clear progress. The terminology and architecture are now closer to IFRS S1/S2 and many data points in ESRS E1 either mirror or reference the corresponding requirements in IFRS S2. This facilitates "single set of data / multiple lenses" reporting. Nevertheless, we see room for additional improvements: 1) Ensuring that all climate-related financial disclosure elements in IFRS S2 (e.g. financed emissions, use of carbon credits, resilience analysis) are clearly cross-referenced in ESRS E1 or, where appropriate, explicitly scoped out to avoid interpretative gaps. 2) Providing an interoperability mapping (in an appendix or as on online tool) that shows, datapoint by datapoint, how ESRS requirements correspond to IFRS S1/S2. 3) Where the ESRS include EU-specific concepts (e.g. double materiality, EU Taxonomy links), clarify how these complement rather than contradict ISSB disclosures. 4) Promote a "building-block" reporting approach, allowing undertakings to prepare a single set of disclosures that can be used for both CSRD and ISSB purposes, with only limited additional work required for EU-specific needs. Finally, we encourage EFRAG and the ISSB to maintain an ongoing dialogue and synchronize future amendments, so that, once implementation has started, preparers do not face diverging requirements.			
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	Any simplification of the already highly complex framework should be achieved without introducing new requirements or moving "may" datapoints to "shall" datapoint, that also exceed the Commission's mandate given to EFRAG. In our view, the benefits to users are very limited while the reporting burden on companies is increased. At a time when companies are consolidating their understanding of the existing reporting framework, introducing of new mandatory elements is highly inappropriate and creates uncertainties related how the information will be audited. Consequently, we strongly oppose the move to make these six datapoint mandatory, and suggest including them in the relevant NMIG.			
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	Any simplification of the already highly complex framework should be achieved without introducing new requirements that also exceed the Commission's mandate given to EFRAG. In addition, the newly proposed datapoints related to ESRS 2, E2-4 and E5-4 raise serious concerns as, amongst others, these metrics referring to concepts that are either not available, or not clearly defined or subject to continued evolution and therefore creating uncertainty and low quality data points. By adding new concepts and related metrics, the proposed revision fails to deliver the expected reduction of the reporting burden and we therefore disagree with these datapoints becoming mandatory.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We recognize the importance of presenting the ESRS as a "fair presentation" framework, aligned with IFRS S1 and S2. This emphasis could strengthen the materiality filter and help reduce unnecessary disclosures and avoiding a purely compliance-driven or checklist-based approach. It also reflects the underlying spirit of simplification pursued by the amendments. However, we share significant concerns about this concept being introduced without further amendment and required clarifications. Should this happen, we believe it would have a very negative effect as auditors would add a layer of "fair presentation" to their compliance review, resulting in an increased burden on preparers. This should be avoided at all costs. Firstly, the term "fair presentation" is not clearly defined in the ESRS. References to IFRS are vague, and other international standards (e.g. ISSA) interpret fair presentation differently. Without clarification, there is a significant risk that preparers, auditors and regulators will have divergent interpretations. Secondly, there is a concern that "fair presentation" might be applied hierarchically, enabling auditors to challenge simplifications or to reopen debates on omitted datapoints, thereby undermining the intended relief. In conclusion, while we support the objective of reinforcing the relevance and proportionality of reporting by introducing the "fair presentation" concept, it is key to define this concept in such a way as to prevent any ambiguity, ensure consistent application, mitigate audit risk and preserve the intended simplifications. This should provide the necessary legal clarity that the 'fair presentation' would replace a compliance-driven approach, rather than be added to it.			
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	We believe that the previous requirement, which focused on countries accounting for at least 10% of the total workforce, was better suited to large groups. Indeed, the previous requirement was designed in such a way that a company should provide details for a maximum of 10 countries. However, with the proposed amendment, all large groups would now have to provide details for 10 countries. This change affects several datapoints and represents a significant increase in the number of metrics to be disclosed. In conclusion, we do not support changing the current threshold. Furthermore, should the threshold be revised, we would recommend to set it at 500 employees instead of 50. For large groups, this would better reflect countries of significant importance.			
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadequwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	Although it is a meaningful approach to refer to international references such as ILO principles, the proposed methodology creates many concerns as we anticipate that an extensive workload could result from the following phrase "periodically reviewed/adjusted every two years and takes into account the ILO wage setting principles." As the indicator covers the entire workforce, an assessment would have to be conducted in all countries of operation to check the fulfilment of these two new criteria. Furthermore, if a company operates in different sectors of activity, it may have several collective agreements to review within a single country. Ultimately, this could lead to hundreds of checks to be performed. Finally, in countries where an adequate minimum wage does not exist, which is the most critical issue met by preparers in 2024, the ILO principles are too vague and will necessarily make information difficult to audit and compare. To overcome the absence of a clear database of adequate wages, we recommend limiting the quantitative information to employees for whom a minimum wage is defined by regulation or by collective bargaining. For those operating in contexts where no adequate wage is clearly defined, we recommend disclosing a qualitative information explaining how the preparer ensures alignment with the ILO's principles.			
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	The coverage of SFDR PAIs remains broadly intact and relevance has improved. It is important to ensure that any remaining SFDR linkages are explicit and that overlaps between ESRS 2 and topical standards are avoided			
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	This application requirement is essential for a better understanding and should be aligned with the target setting.			
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	31.	ESRS S1 DR1S: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	We agree with the conclusion of the EFRAG SRB to keep the unadjusted gender pay gap as the mandatory metric and to delete the voluntary datapoint on the adjusted gender pay gap. However, we regret that the opportunity was not seized to revise more profoundly this metric. Indeed, producing the gender pay gap is very complex and significant discrepancies were observed in the 2024 sustainability reports, limiting its usefulness to users. A critical issue with respect to the Gender pay gap is the lack of clarity concerning the types of remuneration to be taken into account when calculating the metric. While the total remuneration ratio comes with a detailed list of types of remuneration, the gender pay gap seems vaguer. This results in some companies calculating the gap using only basic salaries, while others use a broader definition of remuneration. In this context, we observe that the information disclosed for 2024 is not comparable between companies and that auditors' expectations of this metric vary considerably.			
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	While qualitative information on payment practices is relevant to indicate how the protection of SME's is tackled within the company, the calculation of G1-6 metrics is overly complex for international groups operating with a great variety of payment standards. We therefore support the deletion of the quantitative datapoints G1-6 § 12 (a)(b).

Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We greatly appreciate the proposed relief introduced with respect to the lack of quality of metrics and the importance given to the materiality filter which gives a prominent role to the preparer's judgement. However, we believe that the DMA process should be further simplified, giving predominance to the preparer's own judgement, thus limiting extensive and unreasonable audit works, as experienced by wave 1 companies in 2024.While insisting on disaggregation in the DMA, we recommend clarifying that disaggregation is intended as a way to expand the materiality filter and, ultimately, focus on important information, rather than increase granularity. To this end, we strongly advocate adding an explicit statement to ESRS 1, clarifying that exhaustive "site by-site" data points should never be expected from preparers, who should only focus on significant sites. Finally, we consider that the Gross Vs Net debate is not adequately addressed in the exposure draft, notably due to the complexity of Annex C which should be deleted.			
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We consider the revision of ESRS E1 missed an opportunity to provide greater flexibility with regard to E1-10 by not allowing preparers to avoid report on carbon pricing when such a scheme is solely for internal use. Furthermore, it is crucial to clarify which option is retained with respect to anticipated financial effects in order to comment on those r related to climate change. We believe that E1-11 is too complex to produce reliable data in the context of "option 1" (cf Question 18) and would put companies at risk. Consequently, we strongly believe that E1-11 should not include any mandatory quantitative information. Finally, AR19 raises questions as it introduces operational control boundaries. For the sake of clarity and to ensure information auditability, we strongly recommend using the financial control boundary for all metrics, including scope 1 and scope 2 emissions.			
Survey	ENGIE	Preparer (non-financial preparing a sustainability report)	France	33.E_2.	ESRS E2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. I disagree	ESRS S1 includes many complex quantitative information. In this respect, we regret that the Exposure draft did not meaningfully simplify this standard. In S1-5, as stated in response to question 27, we disagree with the new threshold for reporting metrics at country level, as this creates the need to disclose additional information and increases audit risks. In S1-6, we regret that non-employees included in ESRS S2 instead of S1. This would better reflect preparers' organization, access to data and contractual arrangements. If non-employees remain in S1, we believe the quantitative metrics should become voluntary and be included in the NMIG, as they would, in most cases, be impossible to obtain without incurring significant costs and effort. In S1-9, there is a lack of precision with regard to countries where no minimum wages have been set, as covered by question 28. In S1-10, we recommend removing the rate related to unemployment coverage, as this is primarily the responsibility of public institutions in the countries in which the company operates. In S1-11, we recommend adding a relief to cover potential legal constraints at a local level that prevent preparers from collecting or disclosing information on people with disabilities. In S1-13, we strongly oppose the disclosure of data for non-employees and on-site workers. Finally, we urge for a profound revision of S1-16, whereby quantitative metrics should only cover "confirmed cases" rather than all "incidents", as this notion remains vague. In case the notion of incidents is maintained, one should revert to the original wording of "severe incidents". Without this limitation, less relevant information may be reported, creating confusion about which incidents to disclose and undermining the simplification objective. Focusing on severe incidents is essential to keep reporting meaningful, proportionate, and aligned with relevance and efficiency principles.

I disagree	Despite the useful simplification elements, we consider that the standard ESRS G1 should be improved by : -Deleting new requirements related to procurement team training on business conduct (G1-2) -Deleting requirements related to the number and nature of confirmed incidents of corruption and bribery -Deleting quantitative metrics on payment practices as this is too complex to collect for international groups with thousands of suppliers and operating in dozens of countries.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We support a simplified DMA process, strengthened information materiality filter and clearer articulation of Impacts/Risks/Opportunities-topic relations but major issues remain: •The concept of information materiality is still insufficient to allow for a more principles-based application of the ESRS. In particular, paragraph 21(b) poses practical challenges. It is almost impossible to determine what information is 'necessary' for users, as it is a subjective criterion. Some users deem highly detailed information necessary to understand an undertaking's IROs. Others find such information obscure relevant facts and deem it 'necessary' to provide concise disclosures. It will be impossible to justify the 'necessary' evidence to auditors in practice. Also, sub-paragraph (b) introduces differences to the IFRS, which complicates interoperability. We suggest deleting paragraph 21 (b) and the definition in ESRS 21 (a) for the primary user should apply to all the other users. The description of when information is material should be aligned with the one in IFRS S1. •We note the lack of amendments to ESRS2 IRO-1, which would have allowed for less prescriptive disclosure requirements. •Appendix A should be relocated to the NMIG, as it provides non-binding guidance to support the application of provisions. Some of the wordings in chapter 3 are still not sufficiently clear, e.g.: •Para. 22: If the provided options refer only to the presentation of IROs this will lead to a lack of comparability between reports of different companies. The presentation in tables/overviews etc. should be preferred on IRO level. This should be clearly stated in chapter 3.2. •Para. 34: Please give a definition of how many previous periods need to be included in the identification of actual impacts is missing. AR16 is now confusing as there is no clear differentiation between sub-topic and former sub-sub-topic. Please clarify.			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	ESRS 1 Para. 34/35: The new guidelines introduce three additional layers for the assessment of actual and potential impacts, that were not present in ESRS set 1. We expect a significant increase in reporting burden through these additional layers, as they require supportable evidence and will be subject to auditor scrutiny. This would particularly penalize wave 1 companies that have already gone through a comprehensive materiality assessment process, methodology, and governance setup. As such, the introduction of the new guidelines is clearly against the European Commission mandate for simplification. EFRAG´s approach also seems to differ from how IROs are managed, e.g. in bank's risk report in which a risk is material after considering mitigating actions. We suggest removing the new guidelines on gross vs. net completely, i.e. paragraphs 34/35 and Appendix C of ESRS 1, and giving the market practice time to evolve. ESRS 1 AR 9 should be deleted accordingly as its purpose is to name the existence of Appendix C. We recommend that credible mitigating and remediating actions (e.g. implemented/decided policies) always be taken into account to provide useful information to users. The clarification on net risks is missing. To be in line with financial reporting and risk management, this should be considered from a „net" perspective. We ask EFRAG to provide clarification. ESRS 1 Para. 36 This section states that, while an undertaking cannot state a positive impact, e.g. for implementing actions to prevent human rights violations along the value chain (because they are mitigation actions and also required by law), it could at the same time report a positive impact, because with these actions, the company helps to mitigate negative impacts of its upstream suppliers on these human rights topics. This doesn't seem to make sense. Please delete this part.			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	We welcome the increased flexibility introduced by the proposed amendments to the ESRS Sustainability Statement. The option to include an executive summary and the emphasis on using appendices to separate detailed information from key messages are helpful steps toward improving readability and structure. We urge that this be permitted in a free format. However, we primarily view these changes as clarifications of existing options rather than substantial simplifications. From our perspective, they do not significantly reduce implementation effort or reporting complexity. We also note that EFRAG has introduced additional obligations regarding the connections within the sustainability statement and between the sustainability statement and other corporate documents (ESRS 1, paragraphs 11 and 113). While these obligations require only reasonable and sensible information, they still represent an additional reporting burden, which would penalize first movers. The ESRS should allow corporates to decide how information is represented and where it is placed, while ensuring completeness and compliance with disclosure requirements.			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	Restructuring the architecture and clarifying the interaction between ESRS 2 and the topical standards enhance the standards' overall readability. Reducing the number of mandatory data points for policies, actions, targets (PATs), and removing overlapping topical specifications contribute to a clearer, more accessible framework. The shift toward a principles-based approach, as well as the ability to report PATs at a higher aggregation level, reflects a pragmatic and proportionate response to the challenges identified during the initial application. However, some prescriptive disclosure requirements on PAT level have been introduced that we do not agree with. This information would not add value to decision making. These specifically pertain to ESRS2 GDR-M, paragraph 41. Firstly, paragraph 41 (a) now requires, for each metric, information on data types and sources used as input to the calculation. While these disclosures are still subject to the concept of information materiality, providing information on data types and sources is not relevant for most metrics and certainly does not add additional value to users of sustainability statements. We therefore suggest deleting 'data types and sources used as input to the calculation' from the prescriptive requirements of the provision. Secondly, paragraph 41 (b) introduces new requirements for all environmental metrics regarding information on the specific environmental conditions and characteristics of the area where the impact is occurring. Such information is often not available, also is it nearly impossible to determine the area where the impact is occurring with precision – as such the required information would by highly judgmental, subject to significant uncertainties and therefore likely to not meet the criterion of faithful presentation. 41 (b) also creates additional requirements that were not present in set 1 by advocating such information for all environmental metrics, which also includes value chain metrics. We therefore suggest deleting subparagraph 41 (b) entirely.

Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We agree that the proposed amendments will improve the clarity and accessibility of the ESRS. The removal of "may disclose" data points and the clearer distinction between mandatory and non-mandatory content make the standard more structured and comprehensible. The structure has become simpler by moving the "may" provisions to the non-mandatory illustrative guidance, incorporating the application requirements into the standards, and eliminating redundant reporting in ESRS 2 and the topic-specific standards. The revised layout, especially the relocation of the mandatory application requirements under the relevant disclosure requirements, makes the legal text easier to follow and reduces the need to navigate back and forth within the document. However, our remaining concerns include: •EFRAG should delete all the unclear terms like "shall consider" "may present", "may implement", "may include" and other ambiguous terms that still are in the text to avoid confusion and misunderstandings with the auditors. (e.g., ESRS 1.114, 1.115). •ARs are intended to constitute mandatory requirements, and that all guidance or illustrative examples should be moved to the NMIG. •Expressions in certain ARs such as "shall consider" create ambiguity, as it is unclear how "consideration" can be measured or audited, and such phrasing risks prescribing behavior in contradiction with ESRS 1 paragraph 5. Please clarify. •Changes to established terminology should be approached with caution, given that many undertakings are already preparing or reporting under the original ESRS. The consistent use of "material IROs" should be ensured across the standards, avoiding references to "material topics," and wording should not alternate between "adverse" and "negative" impacts. •We also would like to point out that new mandatory disclosures have been added which is clearly against the EU Commission´s request of the EU Commission and the revision´s aim to reduce reporting burden. Please delete all additional mandatory data points.			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We consider the introduction of Non-Mandatory Illustrative Guidance (NMIG) a useful addition to the ESRS framework. NMIG can serve as an orientation tool, especially for preparers in the early stages of implementation, by illustrating how disclosures might be structured or interpreted in practice. However, it is crucial that both preparers and auditors understand and uniformly interpret the non-binding nature of NMIG. The examples provided should not be taken as a basis for expectations or justifications if they are not applied. Otherwise, the intended simplification effect could be undermined by new uncertainties. There could also be perceived pressure to align with the illustrative content. The revised standards also introduce the new term "can", e.g AR4 "biodiversity and ecosystem scenario analysis can inform the identification […]". As "can" is a voluntary requirement the EFRAG should transfer it to the NMIG. In general, EFRAG should refrain from introducing new terminology in the revised standards. We strongly recommend deleting the voluntary disclosure requirements in the NMIG to avoid discussions with auditors about adherence. We support EFRAG's proposal to not include the NMIG in the delegated act.			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We welcome the burden relief as it reduces the complexity and effort associated with ESRS reporting. The "undue cost or effort" relief provides preparers with a practical basis to justify omissions or limitations (e.g. towards the auditors), when collecting data would require disproportionate resources. However, it may increase the burden of proof if auditors challenge whether sufficient effort has been made to fulfill reporting requirements. We also appreciate the removal of the preference for direct data in value chain metrics and allowing estimates. However, the relief introduced through para. 91 of ESRS 1 is not applicable to GHG emissions. GHG emissions accounting/calculation is the one metric area generally most subject to high measurement uncertainties, often unavailable and unreliable direct or estimated data, and high cost and effort requirements. In the way paragraph 91 is phrased, full coverage would be required, irrespective of cost and effort considerations or the reliability of estimates. We call for removing the exclusion of this concept for GHG emissions. Paragraph 91 specifies that in certain cases the respective metric can only be "partially estimated". There might be cases where the metric cannot be estimated or needs to be estimated entirely. We therefore suggest rephrasing the wording to "(…), but the corresponding metric can currently only be entirely, partially, or not estimated at all." The amendments made to the anticipated financial effects (AFEs) do not solve the issue of data availability and reliability, as assumptions for this data point will vary widely. Any comparison between companies would be misleading. All data points on AFEs should be deleted. We welcome the proposed relief for acquisitions. However, the one-year timeframe for integrating a subsidiary for sustainability reporting purposes could be unrealistic. We ask for greater flexibility to disclose metrics once the subsidiary is fully integrated.			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	We consider the proposed relief to be a practical and necessary addition. It acknowledges the real-world limitations that many preparers face, especially in complex areas such as value chain reporting. The relief helps companies improve their data collection processes and quality, before reporting metrics externally. It ensures that data collected for reporting purposes is reliable and robust. Forcing the collection of weak data does not contribute to high-quality reporting or comparability. It also increases the risk of legal issues related to the disclosure of unreliable metrics and may lead to a distorted or misleading representation of actual information. It is also important to note that many Wave 1 undertakings will benefit only to a limited extent from this relief. In many cases, data collection approaches – often based on workarounds – have already been agreed upon with auditors and implemented. Continuing with these established methodologies may require less effort than reassessing and justifying the application of the new relief.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	The concept of "anticipated financial effects" is not an established and standardized concept. ESRS 2 does not give any guidance or insights on how to calculate the financial effects. E.g. it remains unclear what the basis for the calculation of the financial effects should be (planning data or the data from the last financial year) or which granularity is required regarding the effects on financial position, financial performance and cash flows. Generally, the reporting on anticipated financial effects will lead to tremendous additional effort for preparers without any expected added value for users or preparers. The underlying data is often unclear, and the risks cannot be reliably isolated. This makes any form of disclosure, whether qualitative or quantitative, legally risky and prone to misinterpretation. Such information lacks comparability and does not provide useful insights for decision-making purposes. Neither Option 1 nor Option 2 would yield comparable information. Estimates would be required either way as in case of doubt you must substantiate the qualitative information asked for in Option 2 for the auditor. Furthermore, the International Financial Reporting Standards (IFRS) already define when future risks and related current and anticipated financial effects must be reflected in financial reporting, e.g., through recognition and measurement criteria. Sustainability reporting should not override or extend these principles through financial disclosure requirements in the sustainability statement. We disagree with both proposed options. However, as we strongly support interoperability, we suggest that EFRAG and ISSB jointly examine what a meaningful, uniform, and practical definition and methodology should look like, as the disclosure requirement is currently not conceptually mature and therefore not ready for implementation. Qualitative, clear risk and opportunity reporting based on financial reporting could be a first step in this direction.			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	Please delete the requirements on anticipated financial effects or at least make them entirely voluntary. We support connectivity between financial and sustainability reporting, particularly regarding the assumptions and parameters used in both areas. However, currently there is no feasible methodology that can link climate-related risks or opportunities specifically to financial metrics, such as assets, liabilities, or revenue. In our view, such linkages should only be pursued when they are methodologically sound and practically feasible. Otherwise, even qualitative disclosures carry significant legal uncertainty and risk of misinterpretation. Furthermore, comparability across undertakings is severely limited due to the absence of clear guidance on the level of detail required for qualitative disclosures. Also, the information required in E1 goes beyond IFRS S1 and S2 leading to an uneven level playing field if European companies are required to disclose this information. Capital market participants typically rely on standardized models and data sources that are not meaningfully enhanced by inconsistent, company-specific disclosures. The actual use of such granular data is questionable and does not justify the immense effort it would require from companies. If banks or other financial institutions require information on anticipated financial effects, they should be provided through enhancements to financial reporting requirements not through disclosures within the ESRS framework. According to AR 16 of ESRS 1, the risk management system is defined as a key source for sustainability reporting. Therefore, anticipated financial effects should be derived from this source to ensure consistency and consolidate all relevant information. If the anticipated financial effects remain, we suggest adding a relief to the detailed datapoints that allow omission when there is no reasonable and supportable information derived from the reporting undertaking's business plans to be used as input in the calculation of anticipated financial effects.			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	To avoid double reporting, reporting according to the ESRS should also accommodate the ISSB standards. Therefore, we propose that companies should be allowed to use IFRS S1 & S2 as a starting point and add those requirements that are needed to comply with CSRD/ESRS e.g. to cover the impact requirements. Alternatively, the ISSB and the EU should work together on resolving the remaining major differences between IFRS 1 & 2 and the ESRS to pave the way for mutual recognition of the standards. Some of the critical areas that need to be addressed are the following among others: •Regarding IFRS S1, we see interoperability issues with the amended ESRS implementation of information materiality. •Regarding IFRS S2, firstly, the requirements concerning financial and operational control (E1 AR 18. For para. 32/ E1 AR 19 for para. 32/ E1 AR 20 for para 32) diverge significantly from IFRS S2, where undertakings have the flexibility to choose their preferred approach. This dual approach may result in inconsistent reporting and interpretation, necessitating careful review to ensure clarity and uniformity. •The deviations related to the requirements around anticipated financial effects continue to be a concern. Please refer to the response in question 20 for further details. •The inclusion of anticipated financial effects considerations to perform the resilience analysis (E1 AR 8 for par. 20) is another critical area that does not align with IFRS S2. This new consideration, not included in the original ESRS, introduces complexity and additional burdens for undertakings. •ESRS requires companies to report on Energy consumption and mix metrics, while IFRS S2 doesn't. Otherwise, an Interoperability Guidance to include a data point-by-data point comparison is necessary. This would allow every undertaking operating globally in Europe to claim compliance with IFRS S1 and S2, in addition to ESRS.			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I disagree	We welcome the improved organization and consolidation of the ESRS requirements. The changes made may reduce the effort required for data collection, documentation, and coordination with auditors. However, many changes seem cosmetic without altering the underlying substance of the disclosure requirements. We do not anticipate a significantly reduced reporting volume under the amended ESRS, as the scope and complexity of the disclosures remain largely unchanged. Major concerns remain: •Regarding newly introduced concepts and methodologies that may increase the reporting effort. •The simplification and reduction of datapoints have also been accomplished by merging, rephrasing, and restructuring many disclosure requirements and datapoints. This represents significant additional effort for Wave 1 undertakings as each change requires a re-assessment of already conducted standard interpretation. It also led to unclear and primarily descriptive paragraphs, such as ESRS 1 paragraph 27 and AR 20 related to paragraph 49, on assessing the undertakings' materiality. •We expect an increase in effort related to the new datapoints e.g. of E5 as well as through the changes in S1. •Expressions like "is useful information" (e.g., ESRS 2, AR 32) or "is a possible aspect to cover" (e.g., AR 33) continue to appear. These formulations may lead to uncertainty regarding the actual requirements for undertakings. We call for fewer mandatory indicators but that are clearly defined by the ESRS for everyone. Please delete: •Anticipated financial effects (in ESRS 2 & E1), reduction in reporting on the DMA (IRO-1) •Data points that aim to describe the "how" (e.g. ED ESRS 2. AR4, ED ESRS 2.25, ED ESRS 2.26, ED ESRS E1.AR5 und AR6, ED ESRS E1.18) •All new requirements, such as S1 breakdowns due to the changed country breakdowns. Further examples can be found in the Log of Amendments in column 3, marked as "NEW."			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	The simplification approach should not result in the introduction of new mandatory data points, nor should it convert voluntary data points to mandatory ones. We acknowledge that the number of datapoints moved from "may" to "shall" is limited and that the selected disclosures are aligned with existing disclosure objectives. However, sometimes changes are not always quite clear / identifiable. Amendments to the wording might result in datapoints being mandatory based on the reformulations. Example: S1-3 new para. 19 (b); E1-2 AR5 for para 18. We believe that the principle of not increasing reporting requirements should be applied consistently. Even if the data points themselves are not technically new or complex, their change in status to mandatory will require additional interpretation, internal coordination, and alignment with auditors—especially during first-time implementation. This effort should not be underestimated. We therefore recommend sticking to the rule of no additional reporting obligations. Making reporting on existing E4 Biodiversity transition plans mandatory is not supporting its development but rather hindering development and innovation in this field. The decision to include Biodiversity transition plan information in reporting shall remain voluntary. Also, some of the revised disclosure requirement will result in more extensive reporting obligations, for instance, there is now a reporting obligation on "human rights incidents" (previously "severe human rights incidents"). Please add "severe" again. Highlighting the training of procurement team within ESRS G1 is unnecessary detail and focus of one employee group. Please delete the addition.			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	We do not support the introduction of new data points, as they typically result in significant additional effort for reporting entities without a corresponding increase in decision-useful information. The cost-benefit ratio of expanding disclosure requirements must be carefully considered, and in our view, the current framework already places substantial demands on preparers. Please delete: ESRS 2 General Disclosures: ESRS 1 provides the framework for preparation. Including a mandatory data point to state that ESRS 1 was considered will increase the audit burden without improving the quality of sustainability statements. E2-4: Secondary microplastics shall not be added as separate data point since only narrative information is available. E5-4: Addition of critical and strategic raw material shall be deleted. Reporting on "critical and strategic raw materials" is not about ESG/sustainability reporting. Reporting must not be used as vehicle for data collection related to the EU's geo-strategic interests. Next to reporting effort, we also see the risk of disclosing sensitive information. E5-5: Addition of "final destination unknown" shall be deleted as the stated goal of avoiding unreasonable estimations can be achieved without introducing new data points. 25) Emphasis on ESRS being a "fair presentation" reporting framework			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We welcome the introduction of the fair presentation concept, familiar from financial reporting. The shift in focus toward materiality, away from viewing sustainability reporting as merely a compliance exercise, is viewed positively. This clarification reinforces the purpose of the standards, which is to support relevant, decision-useful sustainability reporting rather than checklist-driven compliance. Having fair presentation could make it easier for companies to tailor their IRO/DMA reporting to their business model. § 105 should be deleted or rephrased so that the structure of the Sustainability Statement fits with the concept of fair presentation and allows an undertaking to tell the story of its material sustainability-related IROs and how it manages these. By emphasizing fair presentation, the ESRS framework encourages preparers to exercise professional judgment and focus on disclosures that genuinely contribute to transparency and accountability. This can help reduce unnecessary reporting and documentation efforts, particularly when justifying the omission of non-material datapoints towards the auditors. However, there is a risk that the auditors misinterpret it, so under fair presentation an omission of datapoints is almost impossible. Therefore, it is essential that EFRAG and the auditors reach a common understanding in this regard. Also, in financial reporting, the primary user is the investor, to whom fair presentation is directed. It is necessary to define a primary user also for sustainability reporting. Since the goal of the Green Deal is to allocate capital to sustainable companies, investors should be identified as the primary users. We suggest that EFRAG should clarify the meaning that fair presentation is not only adding information (as interpreted by auditors) but also omitting it due to the DMA or information materiality filter. The "fair presentation" concept needs a precise definition to avoid subjectivity and minimize audit burden. It should be aligned with/the same as in IFRS S1.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	The disclosure of absolute values alongside GHG emissions intensity targets presents significant challenges for financial institutions due to the following reasons: Fail to comply with qualitative characteristic of information: Estimating absolute emissions associated with an intensity target involves assumptions about portfolio composition, production capacity, market shares, and emission intensity, leading to unreliable results and unmeaningful disclosures. On top of that, absolute emissions associated with an intensity target may capture total impact but fail to consider business growth, potentially creating an unlevel playing field if exceptions are made only for financial institutions. We agree with the exception for financial institutions due to the unique role they play in facilitating sectoral transitions.			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	We strongly disagree with the proposal to change the threshold for the disclosure to the TOP 10 countries as this would lead to a burden increased specifically when considering the disclosure for S1-7 social dialogue (former s1-8). This does not fulfill the intent of the European Commission to reduce the burden for companies as data and IT systems are not available to collect this information and make it more complicated In practice, we have seen that for this KPI, companies only collect data from 95% of their employees, while the remaining 5% is estimated. This approach was efficient and practical considering the old thresholds. However, the new threshold will increase the complexity and effort of data collection because many countries have one or two large entities and numerous small entities that so far have not been included in the data collection. We suggest changing back to the old threshold or reducing the threshold to the TOP 5 countries.			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	In general, alignment with the existing International Labour Organization (IlO) declaration does make sense. S1-9 AR 22: "Stand alone Reference in a) to the EU Directive 2022/2041 is understandable as it was already in the requirements before and therefore an agreed change. The new approach under b) should be rejected for the following reasons: •How should companies ensure that statutory minimum wage is set based on the ILO principle? •How should companies ensure that the authorized institutes apply the ILO principles? ILO principles suggest that minimum wages should be set based on workers' needs, but companies do not control how governments set these wages. Companies cannot ensure that national authorities or institutes use ILO methodologies. •iii) Who should estimate based on the ILO principle? It is highly desirable to have access to a reliable and consistent source for living wage data. Are there such sources available? Outside the EU, wage-setting mechanisms vary widely. Some countries lack statutory minimum wages or have weak enforcement, making alignment with ILO principles difficult. Due to activities in large numbers of countries and territories, companies are unable to meet/ensure the new requirements for ILO compliance of all local minimum wages used and queries to local authorities. These represent new, additional reporting burdens. We suggest that outside the EU, it should still be permissible to use benchmarks provided by external consulting companies.			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	We propose that the SFDR data points in the ESRS should not be mandatory for companies. They only should be obliged to report them if they are material. Removing some of the SFDR datapoints is clearly appropriate. The ESRS simplification will need to be coordinated with the review of the SFDR. Both the CSRD and the ESRS mark the boundary of corporate sustainability reporting. All information that financial companies are obliged to report under the SFDR or the regulatory framework governing the banking sector need to be derived from the sustainability reports of corporates subject to CSRD/ESRS disclosures. CSRD/ESRS and SFDR are interdependent parts of the same reporting ecosystem and should be closely aligned. The same goes for the prudential requirements of the banking sector. Although the SFDR does not address listed companies as such, they are indirectly required to not only cater to the reporting obligations of financial companies but also to report data points under the SFDR due to capital market requirements (ratings and direct investor dialogues). It is therefore essential that any future changes to the SFDR reflect current developments within the reporting ecosystem. To maintain a balanced ecosystem, the objective of substantially reducing reporting data points is to be reflected in the SFDR review. These reflections should also be incorporated into the framework governing bank disclosures e.g. the banking supervisory reporting requirements set out in the Capital Requirements Regulation (EBA-Guidelines on the management of ESG risks).			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	AR 26 is a special feature of E4. It is presented as a separate AR (26) due to the significant number and diversity of biodiversity drivers, including land use, pollution, invasive species and climate. In other standards the corresponding requirements are integrated, often within the AR of the relevant disclosure requirements for metrics and targets (E1, E5, S1 and S2). The basic requirement is to present the methodology and data sources in a way that makes the information traceable, verifiable and comparable. Due to the intended simplification, we would recommend that the same requirements apply to E4 as to the other topical standards, rather than there being any specific requirements for E4. For financial institutions, biodiversity targets are rather connected to portfolio alignment, sector inclusion, engagement targets, or impact reduction based on metrics disclosed by investees, emphasizing the shift of capital flows rather than direct operational control. Therefore, any guidance included in a revised AR 26 on target setting will struggle to capture the diverse requirements across sectors. Given this disparity, we suggest not including specific target guidance in the ESRS, allowing flexibility for each sector to define targets that are relevant to their unique roles and impacts on biodiversity and ecosystems. If guidance should be provided, we suggest including guidance in setting biodiversity- and ecosystems-related targets in the non-mandatory implementation guidance (NMIG).			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	We think it is appropriate to delete the voluntary datapoint and to align with the EU Pay Transparency Directive. However, we are still missing total alignment with the EU PTD with regards to the salary/wage components. This might lead to different calculation approaches, especially when the EU PTD is translated differently in the member states.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	Sustainability reporting should not be used to achieve other objectives, such as protecting SMEs. These requirements will not promote better payment terms for SMEs or ensure that large companies pay faster. Standard payment terms vary greatly by country and region. It is impossible for companies to track whether payments align with these terms. We support removing the "average time to pay an invoice" data point. However, we question the relevance and practicality of the remaining "standard payment terms" data point. This metric lacks clarity. It does not provide useful information for assessing supplier relationships. The percentage of payments made under "standard terms" is difficult to interpret and does not allow one to draw conclusions about the actual impacts on suppliers. Similarly, the requirement to report the number of legal proceedings due to late payments is not decision-useful in isolation. Without qualitative context, such as reasons for delays or materiality thresholds, the raw number lacks relevance. Also, disclosures on standard payment terms are already partially covered by existing financial reporting requirements, in particular IAS 7.44. There is a risk of duplication between ESRS and IFRS requirements. To avoid inconsistencies and unnecessary reporting burdens, it is essential to align and clarify the scope and purpose of such disclosures. The standard payment terms generally do not make any differentiation between supplier types. Therefore, the categorization of suppliers (e.g., SMEs) remains problematic. In general, financial systems of companies do not track suppliers by size class. For multinational companies with thousands of suppliers globally, a categorization of suppliers into SMEs and non-SMEs is not possible. Since it is a significant effort for companies to calculate these KPIs, we suggest deleting G1-6. If G1-6 remains, the KPI, please clarify what is meant by "the number of legal proceedings currently outstanding for late payments".			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	Overall, the overarching ESRS 1 standard raises new interpretation issues, such as the distinction between "governance/strategy/IRO management" and "policies/actions/targets/metrics.			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. I disagree	The ESRS revisions are not satisfactory overall. Although some areas have been shortened and disclosure obligations have been eased, some data points have been added or tightened further. We do not see any general simplification of the disclosure requirements. There is currently no balance. The European Green Deal can be better pursued with fewer but more precise requirements. The proposed changes in reporting on financial resources related to the transition plan and actions increase the reporting burden. The proposed formulation seems to indicate that the complete financial and investment planning needs to be disclosed and the ranges of short-, medium and associated long-term CapEx/OpEx are an extension of reporting requirements, going against the aim of reducing the reporting requirements. Not only are future financial resources always anticipated, but the requirements go beyond anything that is required in financial reporting. Changes in reporting on climate scenario analysis (i.e. application requirements for climate-related physical and transition risks) indicate rather behavioural obligations instead of being reporting requirements More clarity on how to treat leasing in GHG emission reporting would be appreciated. As intensity values are frequently asked for by Ratings and Rankings, we would suggest keeping the KPI. Please delete the disclosure requirements on anticipated financial effects completely. Unclear methodology and enormous discretion: e.g. Disclosure of expected short-, medium- and long-term financial effects on the financial position, net assets and results of operations from risks related to climate aspects is still required, despite the lack of generally accepted methods (Amended ESRS E1-11)			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	33.E_2.	ESRS E2:33. I disagree	New metrics impose additional reporting burdens and the introduction of new terms such as "strategic" and "key" adds significant uncertainty due to their lack of clarity and disclosing this information is sensitive information. Please clarify.			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	33.S_1.	ESRS S1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The exposure drafts reduce the volume of the S1, especially through deleted redundancies. Unfortunately, the associated efforts are not being reduced proportionally. The change in nomenclature alone is now leading to high implementation efforts. The new structure could lead to confusion with a view to the IRO mapping. The categorization into sub-topics is less consistent. They should be fully distinct and not mixed between previous sub-topics and sub-sub-topics. Also, S1-16 should be a data point that can be mapped and should not be material of its own. ESRS S1-11: The collection of data on persons with disabilities is only possible on a voluntary basis. Employees are not obliged to disclose this information. The approach proposed in AR23 using "may" is impractical, as it further distorts the indicator and reduces its already limited informative value. The KPI requires a huge amount of effort on the part of companies to collect the data (with legal risks) which ultimately has no informative value and therefore no added value. We suggest deleting S1-11 completely. ESRS S1-13 The same goes for work-related ill health cases. As companies do not receive any information about those, if not provided voluntarily by the employees, they cannot be reflected it in reporting. Please delete. Some of the revised disclosure requirements will result in more extensive reporting obligations, e.g. the reporting obligation on "human rights incidents" (previously "severe human rights incidents"). This also applies to the new threshold (question 27) that will result in significantly more reporting. We propose returning to the old wording of those two last requirements.			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	33.G_1.	ESRS G1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The reductions in ESRS G1 are reasonable. However, the new structure could lead to confusion with view to the IRO mapping. The categorization into sub-sub-topics is less consistent, for example, regarding the sub-topic 'corruption and bribery' and the previously more clearly separated sub-sub-topics 'prevention' and 'incidents'. It would be helpful for an effective materiality assessment if the topics were subdivided more distinctly again. Disclosure Requirement G1-2 – Actions related to business conduct: It is important to avoid merging broader procurement topics with compliance/responsible business conduct content and the associated IROs, to maintain a clear and consistent structure. Disclosure of standard payment terms and the proportion of actual payments in accordance with these terms is still required (Amended ESRS G1.20), even though such terms and information do not usually exist and information is not collected centrally. Please delete G1-6.			
Survey	Deutsches Aktieninstitut	Business association (other than association of financial institution)	Germany	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Specific comments on individual data points from the feedback collected in the spring were not considered. A good example is the suggestion to improve the definition of "hazardous waste" by adding that it can be recorded in accordance with local laws to avoid double counting. There is need to further work on the conceptual revision of the ESRS. The purpose of sustainability reporting is not sufficiently clearly defined in the revised ESRS draft and covers an unlimited and open-to-interpretation group of addressees. Due to this lack of specificity regarding the purpose of the regulation and the addressees of the reporting, we believe that there is a particular lack of an operational interpretative framework. ESRS E Particularly in the Environmental standards, the standards now increasingly refer to other EU directives and laws. Unfortunately, definitions in the glossary differ greatly from existing definitions from other regulations. This complicates the collection and coordination efforts enormously, sometimes resulting in additional work and rendering existing definitions unusable. It would be desirable to standardize the definitions in the glossary with definitions in existing regulations and laws.			
Survey	SBTi	Standard setting initiative	United Kingdom	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	The SBTi agrees that financial institutions should not be exempted from disclosing absolute GHG emission value targets when only intensity targets have been set. While the recently published SBTi Financial Institutions Net-Zero Standard permits emission intensity reduction targets for certain sectors under its portfolio near-term target criteria, its portfolio long-term targets require net-zero-alignment targets. Under these targets, financial institutions are required to increase their share of climate-aligned financial activities, such as supporting climate solutions and portfolio companies that are in transition or have reached a net-zero state. This combination of targets aims to reduce overall emissions, which through the Standard's further requirement for financial institutions to calculate and report absolute GHG emissions as part of the overall inventory (criteria FINZ-C6*) and reporting progress (criteria FINZ-C17.1**) serve to provide a comprehensive and transparent assessment of financial institutions' overall climate impacts. *Specifically under criteria FINZ-C6: GHG emissions inventory requires financial institutions to calculate a GHG emissions inventory for their base year across their operations, value chain, and in-scope financial activities (i.e. any lending, investing, insurance underwriting and or capital markets activities if >5% of total annual annual revenue). This includes gross portfolio absolute GHG emissions. **Further, criteria FINZ-C17.1: Reporting states that financial institutions shall commit to separately and publicly report annually on: emissions information for each in-scope financial activity annually, which includes gross GHG emissions inventory in FINZ-C6 for segments A, B and C climate-alignment and sector metric assessment (if relevant), as established in FINZ-C7, including a breakdown of climate-alignment methodologies used for the climate-alignment assessment.

Survey	Fundación ONCE	NGO	Spain	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I would like to skip this question and provide my feedback in Part 3				
Survey	Fundación ONCE	NGO	Spain	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	Fundación ONCE	NGO	Spain	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I disagree	We express concern regarding the removal of ESRS S1 Appendix A.1, which previously supported the application of ESRS 2 cross-cutting disclosures with specific references to disability and diversity. While we acknowledge and appreciate the effort to streamline the structure and interaction between ESRS 2 and the topical standards, we are concerned that this simplification has gone too far in some areas, reducing clarity — particularly for preparers addressing diversity and disability-related issues. The deletion of Appendix A.1: Application Requirements for ESRS 2-related disclosures in ESRS S1 removes valuable practical guidance for conducting the double materiality assessment. The former appendix supported the application of the cross-cutting ESRS 2 SBM-2 and SBM-3 disclosures. It provided a non-exhaustive list of factors to be considered when assessing the materiality of social and human rights matters. The former appendix included a non-exhaustive table of factors, including: •Employment and inclusion of people with disabilities, with examples such as % employment and accessibility measures for employees with disabilities. •Diversity, with examples to include indicators such as % of persons with disabilities in the workforce, in addition to other categories like gender or age. These examples were particularly useful for preparers aiming to ensure their assessments aligned with key social indicators, especially in relation to marginalised groups. We strongly recommend reintroducing these references as part of the glossary,to ensure definitional clarity and consistent interpretation. Otherwise, an alternative would be their inclusion as examples in the non-mandatory guidance, in order to somewhat preserve a shared understanding of how such topics are to be treated across companies. Their complete removal risks underreporting of relevant data, particularly for vulnerable groups such as persons with disabilities.			
Survey	Fundación ONCE	NGO	Spain	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree				
Survey	Fundación ONCE	NGO	Spain	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	S1	We are concerned regarding the loss of clarity and practical direction from this process, particularly in the case of NMIG related to ESRS S1-1. In the 2023 version of DR S1-1, undertakings were encouraged to disclose whether their workforce-related policies addressed a series of specific anti-discrimination grounds and commitments, including: Whether the following grounds for discrimination are explicitly covered: racial and ethnic origin, colour, sex, sexual orientation, gender identity, disability, age, religion, political opinion, national extraction or social origin, and other forms of discrimination covered by EU regulation or national law. Whether the undertaking has specific policy commitments related to inclusion or positive action for people from groups at particular risk of vulnerability in its own workforce, and what those commitments are. These references have not been retained neither in the DR S1-1 nor in the NMIG. We would like to emphasise our call to re-state these explicit references in the DR S1-1, to give clarity and regulatory guidance as part of the future act. While NMIG 1 still provides general examples for disclosing anti-discrimination policies and mentions training and procedures, it no longer contains the level of specificity found in the former Disclosure Requirement 24(b) and 24(c). Only the mention on "elimination of discrimination and promoting equal opportunities" remains. This dilutes the interpretive guidance for undertakings, particularly when it comes to minority and vulnerable groups. We recommend restoring these two references in the Topical Standard, to ensure visibility and consistent understanding of which vulnerable groups (e.g. persons with disabilities) should be addressed through policy commitments. In addition to reintroducing the references in the DR S1-1, we recommend that (following the example of other references included in the NMIG) they be incorporated into this guidance material to preserve, at least in part, the practical orientation provided by the policy examples			
Survey	Fundación ONCE	NGO	Spain	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Fundación ONCE	NGO	Spain	22.S1	Comments on deleted datapoints in ESRS S1	I partially agree and partially disagree	We understand and commend EFRAG's efforts to streamline and simplify the ESRS framework, particularly regarding voluntary datapoints. Simplification can enhance usability and reduce reporting burdens, especially for smaller undertakings. However, we caution that such streamlining must not come at the expense of the quality and completeness of sustainability reporting. In this context, we strongly advocate for the retention of all datapoints related to disability, inclusion, and diversity. These elements are not peripheral—they are central to understanding an undertaking's social impact and its commitment to human rights, equal opportunity, and inclusive growth. Inclusive reporting is strategically important. It enables stakeholders to assess how companies are addressing systemic inequalities, fostering diverse workforces, and ensuring accessibility for persons with disabilities. Removing these datapoints risks diminishing visibility for vulnerable groups and undermining the comparability and credibility of disclosures across sectors. Moreover, maintaining these datapoints aligns with EU policy priorities, including the European Pillar of Social Rights, the UN CRPD or even the UN Sustainable Development Goals at large. It also supports companies in identifying impacts, risks and opportunities linked to workforce inclusion, innovation, and long-term resilience. We therefore urge EFRAG to preserve all disability, inclusion, and diversity-related datapoints to ensure that simplification does not compromise substance.			
Survey	Fundación ONCE	NGO	Spain	33.S_1.	ESRS S1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Overall, we welcome the effort to simplify and streamline the standards. However, we note with concern that the elimination examples and/or specific mentions to vulnerable groups -such as people with disabilities-, especially within the Application Requirements (ARs) and former Appendix - ARs for the Disclosure Requirements, has reduced practical clarity for preparers. ESRS S1. Partially agree and partially disagree. The retention of key disclosure requirements — such as S1-11 "Persons with disabilities" — along with the continued references to persons with disabilities in related sections like S1-10 and S1-16, helps ensure that this and other vulnerable groups remain visible within company reporting, and that their situations and treatment in the workplace continue to be addressed and made transparent. Nevertheless, we note in S1 a significant number of aforementioned AR deletions, where important guidance on how to interpret and implement disclosures related to anti-discrimination, diversity, and inclusion of persons with disabilities has been removed. Such deletions risk: 1.Reducing clarity for preparers, who now lack structured references to know what constitutes a complete or meaningful disclosure on social topics. 2.Decreasing comparability across undertakings, since the lack of suggested indicators or common benchmarks (e.g., on workforce diversity, accessibility measures, vulnerable groups) may lead to widely divergent interpretations and implementation.			
Survey	Fundación ONCE	NGO	Spain	33.S_2.	ESRS S2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. I partially agree and partially disagree	Similar concerns apply to ESRS S4, where a prior AR that provided an illustrative example has been dropped. This absence, however, more critically weakens one of the few references of reporting on inclusion and accessibility for consumers with disabilities in this topical Standard. Glossary. I partially agree and partially disagree. While the updated glossary reflects structural changes, we regret the absence of key definitions that were previously included in the former Appendix A.1 to S1. Notably: •The term "diversity" is not defined or delimited, even though it is central to reporting across ESRS S1 and G1. Its omission limits the scope of interpretation to gender only, as is often the case in DRs like SBM-2, SBM-3 and even GOV-1. •The concept of "employment and inclusion of people with disabilities" is not included, even though it was explicitly referenced in earlier versions of the standards and relevant application appendices. We believe the glossary should include at least basic definitions or clarifications to maintain a shared baseline of understanding, particularly when such terms are fundamental to social disclosures and to the EU's commitments under the UN Convention on the Rights of Persons with Disabilities. Simplification should not come at the cost of substance. Maintaining clarity through examples is key to fostering robust, inclusive, and comparable sustainability reporting.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Fundación ONCE	NGO	Spain	35.S1-1.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	We welcome the continued inclusion of Disclosure Requirement S1-1 in the revised draft, as it remains a key tool for guiding workforce-related reporting. However, while the core obligation is preserved, much of the detail that previously supported consistent and inclusive disclosures—particularly for persons with disabilities—has been removed. The earlier version of S1-1 encouraged companies to specify whether anti-discrimination policies covered protected grounds like disability, and whether they had commitments to inclusion or positive action for vulnerable groups. These references, vital for visibility and accountability, are now absent from both the revised DR and the Non-Mandatory Illustrative Guidance (NMIG). We are particularly concerned by the removal of Application Requirement 17, notably points (d) and (e), which provided practical examples such as workplace accessibility and bias assessments in job requirements. These helped translate inclusion policies into meaningful action. Additionally, the deletion of Appendix A.2 has weakened the framework's guidance on disability inclusion. Its previous reference to policies for accessible workplaces sent a clear signal that accessibility is a reportable and essential aspect of workforce strategy. This reduction in accessibility-related parameters risks sidelining a core principle of disability inclusion, as defined by the UN Convention on the Rights of Persons with Disabilities and the European Accessibility Act. With the EAA entering into force in June 2025, restoring concrete references to accessibility would better align ESRS with legal and social expectations. We urge the reintegration of these elements—either in the Application Requirements or NMIG—to ensure clarity, comparability, and continued visibility of disability inclusion in sustainability reporting.	S1	Disclosure Requirement S1-1 - Policies related to Own workforce	
Survey	Fundación ONCE	NGO	Spain	35.S1-2.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	We appreciate the retention of Disclosure Requirement S1-2 in the revised ESRS. However, the removal of Application Requirement 25 significantly weakens the guidance on how such engagement should be conducted, especially for at-risk or marginalised groups such as persons with disabilities. Previously, AR.25 provided important clarifications and examples of how undertakings could ensure that their engagement processes were inclusive and accessible. It encouraged companies to disclose whether they had considered specific barriers faced by vulnerable individuals — including physical, communication, and social obstacles — and whether they took proactive measures to overcome them. It also invited disclosure on the use of accessible formats and culturally appropriate channels for sharing information with workers, both of which are key to enabling persons with disabilities to fully participate in workplace processes. The removal of this guidance risks weakening the quality and comparability of workforce engagement reporting and may result in less inclusive practices being overlooked in sustainability disclosures. Although we recognize this point was voluntary ("may"), it could be reinstated as illustrative examples within the new DR or its ARs, aligning with the simplification logic of limiting mandatory DRs. As stated in S1-1, The removal of these illustrative examples also reflects a concerning reduction in accessibility guidance. The original AR.25 specifically encouraged undertakings to disclose whether they provided information in formats that were understandable and accessible, an important enabler of meaningful workforce engagement — especially for persons with disabilities.	S1	Disclosure Requirement S1-2 - Engagement with own workforce and workers' representatives, existence of channels for own workers to raise concerns or needs and approaches to remedy	
Survey	Fundación ONCE	NGO	Spain	35.S1-3.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	In the 2023 ESRS set, Appendix A.3 to ESRS S1-4 provided concrete examples of actions that undertakings could disclose when addressing material social and human rights impacts. Among these, the employment and inclusion of people with disabilities was explicitly listed, with "increasing accessibility measures" cited as a relevant example. This type of illustrative content played an important role in guiding preparers towards meaningful and concrete disclosures. The removal of Appendix A.3 in the revised ESRS S1-3 thus represents a clear loss of accessibility-related references, reducing the visibility of disability inclusion and potentially diminishing comparability and depth in company reporting. Given the increasing relevance of the European Accessibility Act and the obligations stemming from the UN Convention on the Rights of Persons with Disabilities (see S1-1), we encourage EFRAG to consider reintegrating such illustrative content as an example in the DR S1-3; as a respective AR. Otherwise, their inclusion within the Non-Mandatory Illustrative Guidance could serve as a minimum basis that helps companies better understand where to include their accessibility measures mentions in their reports.	S1	Disclosure Requirement S1-3 - Actions and Resources related to Own workforce	
Survey	Fundación ONCE	NGO	Spain	35.S1-4.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	For the new ESRS S1-4 (formerly S1-5), the omission of Appendix A.4: Application Requirements for ESRS S1–5 Targets related to managing material negative impacts, advancing positive impacts, and managing material risks and opportunities results in the loss of key illustrative examples that supported companies in setting meaningful, concrete targets related to disability inclusion. In particular, this appendix listed examples under Social and human rights matters, such as "increasing the % of persons with disabilities in own workforce" and "increasing the % of underrepresented groups in own workforce and top management." These examples provided useful guidance for preparers on how to align their target-setting with the principles of inclusion and non-discrimination. Although this appendix did not impose mandatory requirements, its removal reduces clarity and risks weakening companies' accountability on disability-related targets. Reintroducing such examples in the updated corresponding AR would be fully compatible with the simplification approach while preserving visibility for disability issues in the ESRS framework. Alternatively, introducing these mentions as examples in the respective NMIG would ensure a minimum level of visibility of persons with disabilities in the targets related to companies IROs.	S1	Disclosure Requirement S1-4 - Targets related to Own Workforce	
Survey	Fundación ONCE	NGO	Spain	35.S1-10.	Do you agree with the amendments of this chapter?	I agree		S1	Disclosure Requirement S1-10 - Social protection	

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Fundación ONCE	NGO	Spain	35.S1-11.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	We agree with the revised ESRS S1-11 and welcome the decision to maintain a specific disclosure on persons with disabilities, in line with the CSRD and previous ESRS drafts. This is a crucial step toward ensuring visibility and accountability for disability inclusion in the workforce. However, we regret the removal of the optional reference to gender disaggregation within this disclosure. While we understand that the original formulation used "may," and was therefore non-binding, its presence offered valuable guidance for undertakings wishing to report more granular and intersectional data. Gender-disaggregated information—where permitted by national legislation—can provide deeper insights into the experiences of women and men with disabilities, helping to identify specific barriers and promote targeted inclusion strategies. Eliminating this reference may discourage richer disclosures and reduce the potential for meaningful analysis. We therefore recommend that EFRAG consider reintroducing gender breakdowns as an illustrative example, not as a requirement. This would preserve flexibility while encouraging more comprehensive and inclusive reporting practices.	S1	Disclosure Requirement S1-11 - Persons with disabilities	
Survey	Fundación ONCE	NGO	Spain	35.S1-16.	Do you agree with the amendments of this chapter?	I agree		S1	Disclosure Requirement S1-16 - Incidents of discrimination and other human rights incidents	
Survey	Fundación ONCE	NGO	Spain	35.S2-2.	Do you agree with the amendments of this chapter?	I agree		S2	Disclosure Requirement S2-2 - Engagement with value chain workers, existence of channels for value chain workers to raise concerns or needs and approaches to remedy.	
Survey	Fundación ONCE	NGO	Spain	35.S3-2.	Do you agree with the amendments of this chapter?	I agree		S3	Disclosure Requirement S3-2 - Engagement with affected communities, existence of channels for affected communities to raise concerns or needs and approaches to remedy	
Survey	Fundación ONCE	NGO	Spain	35.S4-2.	Do you agree with the amendments of this chapter?	I agree		S4	Disclosure Requirement S4-2 - Engagement with consumers and end-users, existence of channels for consumers and end-users to raise concerns or needs and approaches to remedy	
Survey	Fundación ONCE	NGO	Spain	35.S4-4.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	For the former ESRS S4-5 (now S4-4), we acknowledge and positively value that the example previously found in AR 44 (referencing progressive digital accessibility targets for persons with disabilities) has been retained in "NMIG 16 for para. 17". Its inclusion helps preserve some visibility of disability within the standard and offers preparers practical insight into how to set phased targets related to accessibility. Nonetheless, we would like to suggest the consideration of adding a broader, generalised example directly in the writing of the Disclosure Requirement itself. For instance, including a reference to setting targets for vulnerable or marginalised consumer groups (e.g. persons with disabilities, children, older people) would enhance inclusiveness and provide a clearer indication that such groups should be considered when designing and disclosing consumer-related sustainability targets (and further link it to the material found in the NMIG). This would reinforce the coherence of the ESRS new structure.	S4	Disclosure Requirement S4-4 - Targets related to consumers and end-users	
Survey	Community of European Railway and Infrastructure Companies (CER)	Business association (other than association of financial institution)	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	In general, we welcome these simplifications, particularly the streamlined terminology – now using only the term "topic". However, the structure involving sub-topics is still pending clarification. The changes insist on the importance of the double materiality analysis, a cornerstone of the CSRD, and simplify both its implementation and the description of the adopted process. Overall, the requirement has indeed become simpler, both in terms of wording and in terms of the interpretation of dual materiality. In our opinion, it will be easier for companies to identify material information. While avoiding excessive detail is an understandable and important goal, excessive flexibility may lead to issues with transparency, comparability, reliability, and inconsistency.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Community of European Railway and Infrastructure Companies (CER)	Business association (other than association of financial institution)	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	We welcome the effort to clarify what gross analysis vs. net analysis means, however the instructions described in "Appendix C : Assessing actual and potential negative impacts for materiality" might introduce more complexity. The main filter for "materiality of information" to be read in accordance with the introduction of the new "fair presentation" and in general the subjectivity of the DMA could lead to interpretations/grey area and to a lack of comparability between companies (that operate in the same business). Cross cutting standards or minimum DR related to business could help. The "gross vs net" issue is not clear and it risks and unnecessary complications. This is not aligned with the simplification concept. Furthermore not described for the financial materiality. The 8 possible scenarios could be simplified to help undertakings assess both their actual and potential negative impacts, keeping the overall objective of DMA in mind. While the intent to clarify is appreciated, the new guidance would benefit from further simplification, clearer definitions, and alignment between sustainability and financial materiality to enhance usability, comparability, and reduce reporting burdens.			
Survey	Community of European Railway and Infrastructure Companies (CER)	Business association (other than association of financial institution)	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	Community of European Railway and Infrastructure Companies (CER)	Business association (other than association of financial institution)	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We welcome these changes, particularly the removal of GOV, SBM, and IRO from the topical standards, as their inclusion previously made the structure complex and repetitive. We also appreciate the significant reduction in mandatory 'shall' datapoints. These changes will probably enhance the readability of the sustainability reports and help focus on major issues. However, an in-depth analysis of the changes made to each ESRS, and particularly of the deleted datapoints, will be necessary. In our opinion, the transparency of the standard's requirements has significantly improved by the removal of GOV, SBM, and IRO.			
Survey	Community of European Railway and Infrastructure Companies (CER)	Business association (other than association of financial institution)	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	We welcome in particular the elimination of the "may disclose" datapoints. These changes would help the auditing process as they clarify the status of the "may" datapoints and the "AR". The removal of the "May disclose" datapoints significantly simplifies the preparation of the report and enhances its transparency.			
Survey	Community of European Railway and Infrastructure Companies (CER)	Business association (other than association of financial institution)	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	These changes provide useful relief but weakens the comparability of data between undertakings (cf. ESRS 1 paragraph 90/91). For Chapter 5.3, we suggest to add the "guidance" reported in the non-mandatory illustrative guidance and the point 150 of "basis for conclusion" to clarify the reporting burden (lessor vs lessee). For Chapter 5.4, it is important to clarify what kind of information has to be reported for major acquisitions (disposals) not included in the materiality assessment and in sustainability statement.			
Survey	Community of European Railway and Infrastructure Companies (CER)	Business association (other than association of financial institution)	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	We are generally supportive of these reliefs, especially those aimed at reducing reporting burdens; however, they may complicate comparability in the coming years, as metrics could be based on varying scopes and methodologies. In our view, one of the fundamental objectives of the CSRD is to establish a transparent and consistent sustainability reporting framework. Such an objective is not compatible with reporting practices that rely solely on partial data disclosures. Furthermore, we are concerned that the current regulatory framework—especially the application of reliefs—may convey the message that minimal compliance efforts are sufficient to meet the standard's requirements. As a result, there is a tangible risk that some companies may focus on fulfilling formal obligations without making genuine efforts to provide comprehensive and well-founded disclosures on sustainability-related matters.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Community of European Railway and Infrastructure Companies (CER)	Business association (other than association of financial institution)	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	We understand the purpose of these amendments but we think that this relief in particular, the scope broader than IFRS S1 as it includes "impacts" and "all metrics" could lead to a new obligation (towards auditor) related to formalization of the assessment, and its confirmation/updated over time. As a first step, it would be important to clearly define what is expected in terms of disclosures. Making this voluntary, as proposed in Option 2, contradicts the promise of simplification and clarity in the omnibus package and ultimately shifts the burden back onto companies.			
Survey	Community of European Railway and Infrastructure Companies (CER)	Business association (other than association of financial institution)	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree				
Survey	Community of European Railway and Infrastructure Companies (CER)	Business association (other than association of financial institution)	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Community of European Railway and Infrastructure Companies (CER)	Business association (other than association of financial institution)	Belgium	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	It strikes acceptable balance however, regarding the PATs datapoints, it is regrettable not to encourage companies to project themselves onto a horizon to adopt a Policy, an Action Plan, or Targets on a material issue (cf. lack of consistency with CDP reporting practices on policies for example).			
Survey	Community of European Railway and Infrastructure Companies (CER)	Business association (other than association of financial institution)	Belgium	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Community of European Railway and Infrastructure Companies (CER)	Business association (other than association of financial institution)	Belgium	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	Community of European Railway and Infrastructure Companies (CER)	Business association (other than association of financial institution)	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I disagree	Risk of interpretations/grey area regarding what is a "fair presentation"; in general, we suggest to clear that applying the ESRS and follow the DMA enable the achievement of a fair presentation. Alternative is to delete the concept of "fair presentation".			
Survey	Community of European Railway and Infrastructure Companies (CER)	Business association (other than association of financial institution)	Belgium	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I partially agree and partially disagree	When it comes to employee turnover (S1-5-23c), we would prefer an option to use total headcount (end of year) as denominator instead of average headcount. We argue that since most of other disclosure requirements don't require to use of average, but the company can choose to use total et the end of the year or FTE instead, this requirement should have the same option. This new information on "ten largest countries" should be removed because it adds a specific granularity that may not be relevant.			
Survey	Community of European Railway and Infrastructure Companies (CER)	Business association (other than association of financial institution)	Belgium	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	E1-6-44 (d) Table for reporting emissions: this has been clarified, but what should go in the "year" column for the rows, if the emissions column already includes the emissions in tons for that row, and the reference year is mentioned in the column header? Although the reference year can now be defined independently (target comparison year/previous year, etc.), I assume it still needs to be consistent across the table. E1-6-45 (d) AR was one of our most challenging requirements and, although it has been clarified, it still requires reporting on the "share and type of contractual instruments." It remains unclear what "types" refer to, leaving the reporter to guess what needs to be reported (renewable/non-renewable, REC/GoO, bundled/unbundled, etc.). If we understand correctly, the requirement to report total emissions (E1-6-44 (d)) has been proposed for removal, with the justification that report users can calculate the sum of Scope 1, 2, and 3 emissions themselves. We believe that total emissions (and their changes compared to the baseline year) are crucial information for assessing a company's progress on climate issues. We think that this data should still be reported and should be required.

Survey	Community of European Railway and Infrastructure Companies (CER)	Business association (other than association of financial institution)	Belgium	33.G_1.	ESRS G1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	G1-4 we suggest to consider this datapoint "voluntary" (as in the previous ESRS) because the disclosure of incidents of corruption or bribery could be critical; in particular, the definition of "confirmed incident of corruption or bribery" is not clear and could lead to interpretations/grey area and not comparable data across companies that used different determinations.			
Survey	Community of European Railway and Infrastructure Companies (CER)	Business association (other than association of financial institution)	Belgium	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Companies most often conduct such granular analyses because it was required by auditors. To avoid not obtaining attestation, which would result in financial penalties, entities were often forced to perform in-depth, costly, and labour-intensive tasks. The situation could be resolved by more precise and binding guidelines for auditors that would not allow for their discretionary assessment.			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	The double materiality assessment is fundamental in preparing ESRS sustainability statements. However, due to the inherent complexity of the concept and also due to the lack of clarity, this has been perceived as a significant source of burden in practice. We welcome the proposed simplifications. Nonetheless, the standard should make it clearer that it is possible to apply a combination of a top-down and a bottom-up approach to DMA. It should be made clearer that AR 21 of ESRS 1 applies to each sub-topic within a standard, i.e. when a material IRO relates to two sub-topics in a standard, the undertaking needs only to report the material information that relates to those two sub-topics. Also, we do not support the exemptions from this principle in ESRS S1 paragraph 3. Paragraph 22 of ESRS 1 explains the interaction between topics and IROs. The purpose is to encourage more focused and less granular reports. Our understanding is that the paragraph address the presentation of topics/IROs in the sustainability statement. However, the paragraph may be interpreted as covering the DMA process. We recommend that this is clarified. Regarding to presentation, according to our understanding, it should be possible for an entity to provide disclosure on a topic without going into the detailed level of the corresponding IROs. We are concerned that the current wording may give rise to uncertainty regarding when an entity is required to disclose an IRO. We would therefore appreciate if this could be further clarified as to avoid misunderstandings or misinterpretations.			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	How to consider remediation, mitigation and prevention actions in assessing materiality of impacts have given rise to many inquiries. Guidelines are therefore welcome. However, the proposed Appendix C is theoretical and may be difficult to understand for many reporting entities. The Board therefore understands why some SRB members find the proposal overly complex. The proposed model makes sense but to categorise impacts according to when they occur (in the reporting period, before the reporting period or after the reporting period) may in some cases be challenging. The Board recommend EFRAG to withdraw the proposed Appendix C as part of the revised ESRS. Instead, EFRAG should develop practical examples to illustrate how the model should be applied and to make it easier for reporting entities to understand how they should assess remediation, mitigation and prevention actions when they perform their DMA. Generally, potential impacts should normally be assessed after mitigation and prevention actions that are standard practice such as the use of safety equipment and educational efforts to prevent injuries in the workplace. Information about such actions is only relevant if an entity fails to take them or is hindered from doing so.			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	The Board supports efforts that aim to promote more concise reporting. We therefore welcome amendments that will make the presentation and format of the report more flexible. We also support the proposed clarifications regarding connectivity. We do not see the need for the proposal to explicitly allow entities to provide executive summaries, appendices and sub-parts as this is – according to our view – is already possible under the current standards. However, we do not oppose that this clarification is added.			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We agree that the proposed amendments strike an appropriate balance and will help entities to avoid that duplications of information in the reports. But as we pointed out under Question 11, it should be made more clear when the provisions that address the interaction between ESRS 2 and Topical Standards refer to process, presentation or both. We welcome the amendments that explain that the disclosure requirements in ESRS 2 should be subject to materiality, but we recommend that this is expressed more explicitly in the standard to avoid divergence in the interpretation of the standards. As also mentioned under Question 11, we recommend that AR 21 of ESRS 1 is revised so that it is clear that the principle applies to each sub-topic within a topical standard, i.e. when a material IRO relates to two sub-topics in a topical standard, the undertaking needs only to report the material information that relates to those sub-topics. There should be no exceptions to this principle. We therefore do not support the proposed exemptions in ESRS S1 paragraph 3.			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	The proposed amendments make the standards easier to understand and more accessible for readers with less prior knowledge of the reporting framework.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We welcome the introduction of this illustrative content as a separate document so that only mandatory disclosure and application requirements are included in the main body of the standards. We also support EFRAG's recommendation to not include this content in the Delegated Act. More time is required to develop this implementation guidance to ascertain that it does not conflict with the requirements in the new ESRS or risk adding any disclosure requirements. We support NMIGs remaining as something that is published by the EFRAG in accordance with its due process even if this would mean that they are not translated in all EU languages. This will support in identifying the level of authority of this guidance, which shall not be same as for legal text published by the European Commission. It will also make it easier to update this guidance, when needed without the lengthy processes connected with changes to the regulations. The mapping of sub-topics to disclosures in the topical standards is currently included in the NMIGs. Equally to the changed wording of the earlier ESRS 1.AR 16, we welcome including this mapping in the NMIGs instead of the body of the standards. This will allow EFRAG to continue ascertaining the accurateness of this mapping and streamlining it where needed. We note that currently the language used in the NMIGs is not always consistent within the document and with the expected authority of this guidance. We recommend EFRAG developing standard wording to be used in this guidance that will be aligned with its level of authority, such as "could consider" instead of "considers" to ascertain that the NMIGs are not considered as an extension of the requirements included in the standards. EFRAG needs to establish a process and allocate resources to review the already published implementation guidance and FAQs.			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We welcome the additional reliefs now provided to tackle the practical challenges companies have been facing in developing their ESRS reporting. The proportionality mechanism in the ISSB standards, "undue cost or effort" provides a good mechanism for this purpose. EFRAG needs elaborate on the concept so that it is clearly understood and consistently applied. When this principle is well-defined, it will make the removal of the preference for direct data and permission to report "partial scope" instead of using estimations (for example) possible to work with. We anticipate this to be challenging initially and would welcome more language to support these considerations. When the "undue cost or effort" mechanism is well-defined, the list provided here could be examples of its practical application. When applied in a consistent way, we would not expect this principle to significantly diminish transparency in reporting. To ascertain this, we support adding a process of reevaluating the impact of this principle a couple of years after the start of the application. We note that change number 7 introduces an inconsistency between ESRS reporting and IFRS financial reporting and other parts of the annual report. It also goes beyond the reliefs provided in the ISSB standards. Introducing this relief, which we see to be justified due to the practical challenges that late changes in the group structure create, will prevent the reporting companies to incorporate information by reference from other parts of the annual report as the scope of activities reported there will not be the same as in the sustainability statements, if acquisitions and disposals are not included/excluded from the date on which control is transferred. More guidance would be helpful to define the expected reporting scope used for comparative information for year after the acquisition/disposal.			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	In principle, we support consistent application of the financial control approach. We welcome the introduction of "reasonable and supportable information available without undue cost or effort" relief as a helpful mechanism to introduce proportionality. As sustainability information is always going to include estimations and proxy data, key to the successful introduction of this mechanism are the disclosures that are required to accompany decisions to exclude some disclosures or data. What comes to ESRS 1 paragraph 92, we support the requirement to consider operational control.			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	We support Option 1, but with introduction of an additional phase-in optionality to allow companies with flexibility on this challenging area. We find the requirements in ESRS E1 paragraph 40 and 41 to still be challenging to understand and to create a possibility of inconsistent interpretations. These paragraphs would need to be clarified, perhaps through addition of Application Requirements or will be clarified through observing how practice evolves. Considering these challenges we do not consider that requiring mandatory quantitative disclosures would serve the needs of information users. These information needs can be served through other means without requiring complicated calculations and estimations from the companies. As a compromise solution we would recommend introducing disclosure requirements related to investment plans and to reevaluate the need to introduce mandatory quantitative disclosures in a couple of years' time. We support writing the standards with a longer time perspective in mind and expect reporting capabilities to evolve and grow quickly and would therefore expect Option 1 to provide a long-lasting principle that would support this development and that could be maintained unchanged over the years. We therefore recommend introducing this reporting requirement, but with a phasing-in so that it is made mandatory only in a couple of years time. This approach would provide much needed stability and consistency to the reporting requirements while still allowing for the time needed for reporting capabilities and practices to evolve.			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree	We find it important that the ESRS standards consider the specific requirements of the EU regulatory environment and the disclosure requirements of Sustainable Finance Initiatives. We find this approach to support the objectives of the Green Deal and therefore it is acceptable to maintain these disclosure requirements that are needed by the users while still meeting the objective of simplification at the more overall level.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	We welcome the amendments made to enhance interoperability, including on fair presentation and referencing the IFRS industry guidance in the absence of EU sector-specific standards. In our view a sufficient level of interoperability is currently achieved. We do recognize, that there are still several differences in the language used in the ESRS when compared with the ISSB standards or GHG Protocol, which is due to the alignment with other EU specific regulations. We would recommend EFRAG to work to restrict these differences to a minimum, while still considering the alignment needs within the EU. As an example, the language on fair presentation is not exactly the same as in ISSB standards and could be harmonized without jeopardizing the alignment with other EU regulations.			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	We welcome the reduction in the number of "shall disclose" data points. We believe that the standards now strike a good balance between the number of data points and disclosures that are relevant, given materiality. We see that the amended ESRS still supports the objectives and ambitions of the EU Green Deal.

Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	Given that these disclosure requirements are based on materiality, one can assume that they are relevant for a company that has identified these areas as material and reporting on them should not pose a large burden.			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	They appear to be justified.			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	We favor that it is stated that the ESRS is a fair presentation framework. To meet the concerns that it may be challenging to demonstrate fair presentation in relation to relevant stakeholders, we believe that it should be clear that, whilst informed by stakeholder dialogue, it is the management of the reporting entity that is responsible for the report and thus for the assessment of fair presentation. BP-1 of ESRS 2 should clarify that the identification and grouping of stakeholders is made from management's point of view. We find this to be a welcomed clarification and additional alignment with the ISSB standards. We do note, however, that the language used for "fair presentation" is not exactly the same as that used in ISSB standards. Partially this is to accommodate for the specificities related to ESRSs (for example reference to material IROs), but EFRAG has also not included a reference to the entity-specific information that is specifically mentioned in the ISSB definition of fair presentation. As this is a new concept introduced to the ESRS, it would be helpful to align as closely as possible with the global wording			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Financial institutions should be allowed to disclose intensity-based GHG emission targets without being required to convert them into absolute values. Translating intensity targets into absolute emissions values would require extensive and speculative assumptions, including static portfolio composition, future client production volumes and sales mix. Intensity-based targets may be more appropriate for financial institutions given the nature of their business. Sector-specific intensity metrics or absolute targets per sector (e.g., CO_2e per tonne of cement produced) are already used to track progress and are aligned with methodologies such as those of the Science Based Targets initiative (SBTi). However, absolute targets would introduce complexity to reporting.

Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	We agree that the suggested changes would in most cases lower the reporting burden.			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	As we understand the SFDR is under revision, and it is important that the suggested changes in ESRS are in line with the changes made in SFDR.			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	This should be a no answer. We have no view on this question, i.e. no comment our view from our side.			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree	We agree that voluntary datapoints should be removed to help with clarity within the ESRSs.			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree	We agree with the amendments suggested and believe that the changes are sufficient and do not reduce the objectives in respect to SMEs compared to the former phrasing.			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	Based on the same arguments as in question 22 above.			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree	Based on the same arguments as in question 22 above.			
Survey	Swedish Corporate Reporting Board	(National) standard setter	Sweden	33.S_4.	ESRS S4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I disagree	Further alignment with the basis - the UNGPs/OECDG - required.			
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	In appendix C in the draft ESRS1 there is a considerable risk that companies can argue not to report on inherent material potential impacts, when they assess that their prevention or mitigation efforts were effective – i.e., choose to report on residual risks only: "Report the potential impact after mitigation or prevention actions if it remains material. If it is reduced below the materiality threshold, in principle no need to report the impact, as it is not material." As an example: The company runs a restaurant chain. The most material potential impacts will be on the right to health of its customers. The investors would have great interest in reading what the company does to prevent or mitigate these impacts on the right to health, when investing in the company. However, the company that has done a lot to effectively manage this risk do not even need to report the risk. Please note that Sustainability Due Diligence per definition (confer the UNGPs) is DISTINCT from legal compliance.			
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I disagree				
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I disagree	ESRS 2, reflecting art. 19 a, 2. in the directive shall be maintained as mandatory - Policy Commitment / Sustainability Due Diligence (both in own operations and in external value chains - not to be conflated) / Access to Remedy through effective grievance mechanisms - shall be mandatory reporting. The draft ESRS still fail to recognise that companies need to conduct Sustainability Due Diligence in alignment with the UNGPs/OECDG in order to create the foundation for reporting. In wave 1 we noticed far to many companies that failed to report about Sustainability Due Diligence processes in alignment with the UNGPs/OECDG.			
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I disagree				
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	Misleading. It is very arbitrary, what has triggered the proposal of data points.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree				
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree				
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2				
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree				
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I disagree				
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree				
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	ESRS G1 proposal is unacceptable - why do the draft ESRS keep highlighting downstream business relationships (suppliers) only. Reporting companies should have the same responsibilities vis a vis all business relationships. It is not aligned with the UNGPs/OECDG. It is fine that anti-corruption is included in the ESRS - however the indicators are of very little value, as an investor would like to see the due diligence efforts on anti-corruption / extortion / fraud / anti-competition / tax evasion disclosed.

Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree				
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I disagree				
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets				
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree				
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to ii)) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree				
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree				
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree				
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree				
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree

Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	ESRS 1, ESRS 2, and the topical standards fail to align with the well-defined terms from the UNGPs (as copied into the OECDG) in relation to how companies can be connected to impacts: Causing, contributing to, or being linked to. Not applying the definitions make some of the text in the proposed ESRS in direct opposition to the definitions from the Standard (UNGPs/OECDG), that forms the basis of the regulation. As an example it appears that Disclosure Requirement S2-2 dramatically overstate, what can and should be expected from companies in relation to engaging with and providing for access to remedy to workers in the value chain. ESRS S1 mistakenly differentiate between the upstream and the downstream value chain e.g., "12. (18 amended) The undertaking shall also state whether it has a supplier code of conduct." – all companies that implemented the management system in alignment with the UNGPs/OECDG would know that a code of conduct for companies in the value chain shall encompass all business relationships and not merely suppliers (upstream value chain). Hence, EFRAG is promoting bad practice.			
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. I disagree	The user cannot understand why EFRAG has decided to divide the topical standards ESRS S1 – S4 in groups of stakeholders. The artificial division into predefined stakeholder groups is bound to leave out stakeholders that can also be materially impacted on their human rights by companies. The division further leads to the challenge that EFRAG in their definitions of sub-topics in relation to own workers (S1) and workers in the value chain (S2) appears to prioritise a few human rights from the bare minimum of human rights that businesses can have impacts on, and according to the UNGPs shall consider impacts on, confer UNGPs Foundational Principle 12: "The responsibility of business enterprises to respect human rights refers to internationally recognized human rights – understood, at a minimum, as those expressed in the International Bill of Human Rights and the principles concerning fundamental rights set out in the International Labour Organization's Declaration on Fundamental Principles and Rights at Work". There is a mayor risk that EU companies refrain from assessing risks against all distinct 48 human rights from the International Bill of Human Rights, that also include the core labour rights, and instead focus on the few human rights (app. 14 human rights) mentioned explicitly by S1 and S2. If the EU Commission accepts such proposal by EFRAG, i.e., prioritising a few human rights over others, it acts in direct contradiction to Vienna Declaration where all EU states declared to treat all human rights with equal importance and of equal value. The obvious lacuna further expose workers in the EU to lack of attention to their rights to freedom of information, freedom of expression, right to material gains from inventions, moral rights of authors, right to fair trial freedom from hate speech, right to participate in public affairs, etc.			
Survey	GLOBAL CSR	Consultant (including software vendor)	Denmark	33.S_2.	ESRS S2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Global Network Initiative (GNI)	NGO	United States	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	The simplification of the Double Materiality Assessment (DMA) process and emphasis on the materiality filter are welcome steps toward improving clarity and reducing unnecessary reporting burden. However, we remain concerned about the potential underrepresentation of important sustainability issues, particularly in the absence of sector-specific standards. With sector-specific standards no longer part of the ESRS framework, entity-specific disclosures (as referenced in ESRS 1, Paragraph 10) will play a crucial role in capturing material issues. To avoid a narrow or "checklist" approach to reporting, we urge EFRAG to reinforce the importance of these disclosures. In this context, we encourage EFRAG to explicitly guide companies toward credible, multistakeholder, sector-specific organizations that can help identify relevant risks, opportunities, and impacts. For example, organizations such as the Global Network Initiative (GNI) offer valuable guidance on sector-relevant topics like digital rights, privacy, and freedom of expression. Such external expertise can support more accurate and comprehensive sustainability reporting where sector-specific standards are absent.			
Survey	Global Network Initiative (GNI)	NGO	United States	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	Global Network Initiative (GNI)	NGO	United States	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree				
Survey	Global Network Initiative (GNI)	NGO	United States	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	Global Network Initiative (GNI)	NGO	United States	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Global Network Initiative (GNI)	NGO	United States	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		GNI is the preeminent multistakeholder organization focused on advancing freedom of expression and privacy in the tech sector. Drawing on our 17+ years of experience with stakeholder engagement and human rights due diligence (HRDD), we highlight the following priorities for consideration in the consultation. Changes that we support and urge EFRAG to safeguard, as they are central to effective reporting and should not be weakened: 1. Preserving the foundational four-pillar structure of the social standards. (Question #14) 2. Preserving the flexibility that allows companies to present a clear, connected narrative on their most significant sustainability issues. (Question #13) Additionally, we would like to shed light on the following points from the amended ESRS: 1. References to international human rights law: While we acknowledge that ESRS 2 appropriately references key instruments like the UNGPs and ICCPR, there is inconsistency across the standards. Notably, ESRS S4, which addresses users and consumers, fails to include references to international human rights instruments, unlike ESRS S1, S2, and S3. This omission weakens alignment with Recital 49 of the CSRD. For consistency and to ensure companies appropriately consider the full range of relevant human rights, ESRS S4 should reference the International Bill of Human Rights (UDHR, ICCPR, ICESCR) and other core UN human rights conventions. 2. Removal of "for example" in S3 and S4 (Para 4): The proposed removal of the term "for example" from the list of economic, social, cultural, civil, and political rights of potential relevance to ESRS S3 and S4 contradicts one of the core principles of human rights-based approaches by suggesting that only a narrower list of sub-topics be considered by companies, not a complete set of potentially relevant human rights. This is relevant for ESRS 1 Appendix A (List of Topics), ESRS S3 paragraph 4, and ESRS S4 paragraph 4.			
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We welcome the improvements to the ESRS and recognize them as a move towards clarity. Nonetheless, the level of simplification of the DMA process or the amendments to the materiality filter are, in our view, still not sufficient. We recommend considering a more flexible approach regarding the double materiality assessment by clarifying that companies should only carry out a full DMA periodically or whenever any significant changes in their strategy or business model appear as opposed to the current yearly basis requirement. Companies could instead review internally their DMA on a yearly basis to determine whether such a reassessment is compulsory. The DMA should therefore only be audited when updated periodically. A yearly re-validation would constitute a disproportionate burden and distract from truly material issues. It would also be of added value to clearly define what constitutes a reassessment to avoid divergent interpretations of this concept by both preparers and auditors. There should be clear rules on the correct manner of disclosing immaterial information, by way of categorization, so to avoid obscuring material information. We support the use of reasonable and supportable information available without undue cost or effort per ESRS 2 paragraph 47 & chapter 7.3, as well as ESRS 1 para 48 on materiality based on the business model and AR 17 on the top-down approach alike. It is important to grant undertakings discretion to define the appropriate level of disaggregation whether by topic, business or another relevant area. However, it would be worthwhile to concretely define the term "undue costs", given it leaves space for interpretation. In addition, we advocate deleting references to sub-sub-topics such as in Appendix A E4 ("Drivers of biodiversity and ecosystem change (terrestrial and marine habitat change, invasive species)"). We would like to avoid unnecessary burden and audit pressure.			
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	We endorse adopting a net approach to assessing potential negative impacts within the Double Materiality Assessment (DMA). This reflects real business practices, where impacts are evaluated after accounting for credible, systematic, and effective prevention and mitigation measures. Industrial companies already invest heavily in regulatory compliance, site-level controls, advanced monitoring systems, and global frameworks (e.g., ISO, OGMP 2.0). These measures are audited, budgeted and continuously improved to reduce risk exposure. A gross-only assessment would inflate disclosures with the hypothetical risks that are already effectively managed, creating excessive burden and misrepresenting actual exposure. A net approach ensures disclosures remain decision-useful, rewarding companies for proactive and data-backed mitigation efforts. However, at the same time, we caution against the rigidity introduced by the gross vs. net approach in Appendix C. Framing materiality around gross impacts poses a risk of turning the exercise into a theoretical checklist, disconnected from sustainability reporting's purpose of accountability, comparability, and faithful representation. Safety topics, for instance, would be reported regardless, as they are business priorities even without annual incidents. Overall, by treating all impacts as material, the gross approach risks over-reporting and obscuring meaningful disclosures. As per our comments above, we underscore that there should be a flexible approach to the matter of the frequency of reviewing DMA and IRO. For companies with a stable business profile, where there are no big expansions or large new projects, the DMA should be valid for at least 3 years, while retaining the possibility of more frequent review should a yearly internal adjudication point towards its necessity. Absent any real material reasons for doing so, a full IRO review carried out yearly would only expending extra resources with no uptick in the quality of reporting.			
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	We believe that the proposed changes provide companies with greater flexibility in preparing their sustainability reports and enable them to concentrate on the most relevant information. It is helpful that very detailed data, including information related to the EU Taxonomy, may be presented in separate sections or appendices, as outlined in [DRAFT] ESRS 1, section 8.2. At the same time, we recommend deleting or relocating the amended ESRS 1, AR 36. This provision allows companies to present detailed GHG emission calculations in a separate appendix or section. Since it is not mandatory and applies only to ESRS E1, retaining it within ESRS 1 risks creating confusion. For clarity, it would be preferable either to remove this requirement entirely or to place it under ESRS E1 (Climate Change).

Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We concede that proposed changes provide more clarity on how the disclosure requirements related to Policies, Actions and Targets are reported. However, the changes are not far-reaching enough, as they still do not address excessive burdens leading to the duplication of information and distract from truly material issues. We showcase on the basis of three examples, the issues which still hold: ESRS 2, paragraph 38 (a–c) – resources allocated to key actions The obligation to disclose detailed data on resources allocated to ESG-related actions does not reflect the way reporting processes are typically organized within large industrial enterprises. Some of our member companies indicate that such information is monitored primarily at the level of individual projects, rather than through the Impact–Risk–Opportunity (IRO) framework. Adapting these data to that structure and aligning them with financial reporting would require disproportionate effort compared to their informational value. A concise narrative description should be sufficient instead of extensive numerical reporting. ESRS 2 GDR-M, paragraph 41(b) – environmental conditions and characteristics of areas. This provision overlaps with paragraph 41(d) which already requires contextual environmental information. As a consequence, companies would be compelled to present the same data twice, generating additional administrative burdens without enhancing usefulness of reporting. These requirements should therefore be consolidated and streamlined. ESRS 1, paragraph 40 – application of the materiality principle. The standard should explicitly clarify that disclosure of metrics under topical standards is subject both to the principle of double materiality and to the materiality of information itself. For companies with a wide scope of operations, certain metrics may not be practically relevant. Providing this clarification would ensure that disclosures remain focused and proportionate. We would also like to encourage EFRAG to explore possibility of merging disclosure requirements on PATs in the topical standards as these are often implemented together			
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	We fully support the changes introduced pertaining to the distinction between mandatory and voluntary datapoints, as it was flagged as one of the main sources of confusion during the preparation of the sustainability statement. The same challenges apply to the auditors as a result. Furthermore, additional simplification and precision are needed to improve usability and to avoid confusion, particularly with auditors. - Unclear and contradictory terminology should be eliminated, for instance, terms such as "shall consider" create significant ambiguity: "shall" implies mandatory action, while "consider" suggests discretion. This phrasing leaves room for interpretation and could result in inconsistent application or auditor disputes. -Application requirements (ARs) that use "may" should be removed, as "may" implies voluntary action, which contradicts the stated objective of eliminating voluntary disclosures. Clear, mandatory language is essential to ensure consistency and enforceability across undertakings.			
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We strongly recommend excluding the NMIG from the Delegated Act to ensure its clear interpretation as non-mandatory to prevent an unintended increase in reporting burden. NMIG should remain a helpful reference tool for preparers, not a regulatory requirement. As a consequence, there is a need to move all voluntary and non-mandatory data points into a separate document to improve the clarity of the standards.			
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We strongly advocate the disclosure about resilience be limited to risks only as well as limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). Moreover, we endorse other relief measures introduced by EFRAG: •included in [DRAFT] ESRS 1 section 5.4 as regards acquisitions and disposal •included in [DRAFT] ESRS 1 paragraph 92 allowing reporting undertakings to exclude joint operations over which they do not have operational control for the calculation of certain environmental metrics. Yet, we believe additional alignment with financial reporting (i.e. IFRS 11-Joint arrangements) could be achieved. Following the financial consolidation method would improve the consistency of the information reported by companies. We also notice risk in the disclosure of detailed environmental information, especially as pertaining to ESRS E5 (as regards mass balance, material flows, resource consumption, waste and recycling), as well as ESRS E2 and ESRS E3, which may force companies to disclose sensitive information of the selected strategy in the specified scope, which in turn may lead to lower competitiveness due to reactive decisions of third-parties (including competitors), and exposure of the companies vulnerabilities. We would likewise highlight the need to consider the confusion and unclarities which appear when reporting confidential information, in particular justifying its omission to auditors.			
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	We fully back the relief measures as regards the use of reasonable and supportable information that is available without undue cost or effort as it will significantly reduce the administrative burden on reporting undertakings. We believe this provision should be permanent and not subject to a time limit as proposed by some EFRAG SRB members as mentioned in paragraph 76 of the [DRAFT] Basis for Conclusions. In the case of large Capital Groups, some information may not be available for a long time, not just a year or two, due to the fact it requires a complete remodeling of the current method of data collection. We support ESRS 1, paragraph 92, which acknowledges the practical limitations of data availability in joint operations where the undertaking lacks operational control. Allowing the exclusion of such operations from environmental metrics is a pragmatic solution that enhances reporting feasibility and avoids duplicative or misleading disclosures. Similarly, we endorse ESRS 1, paragraph 91, which permits the use of metrics based on a partial scope of calculation. This flexibility is vital in the early years of reporting, when data systems are still evolving. Importantly, the requirement for companies to disclose the scope limitations and outline plans to improve data coverage ensures transparency and demonstrates continuous progress.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	We would like to support the wording included in OPTION 2, since it addresses our concerns on the sensitivity of the information disclosed and the excessive burden on calculating quantitative disclosures. The issue of anticipated financial impacts is extremely difficult. Advisors themselves do not yet know how to approach the topic and preparing the input for the disclosure of such data can take years for large capital groups. In addition, such flexibility is required given the significant legal risks which are particularly acute where disclosures include financial data not reported in official financial statements and not reliably estimable. Such disclosures should fall under the remit of financial boards to ensure consistency with financial reporting requirements. If disclosure requirements are maintained, they should focus on qualitative information only, providing general indications of the time horizon and type of effects (e.g., financial position, performance, cash flows). Anticipated effects must be consistent with those considered for the current financial effects. Crucially, inherent effects should not be required, as these are theoretical, not grounded in reasonable and supportable information, and risk misleading external users.			
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	It is of key importance not to require disclosure 'before considering adaptation/mitigation actions', as this does not reflect how the business strategy is defined and on top of that adds little value for users. Mitigation measures are typically embedded within corporate strategy, structural in nature, and linked to multiple risks. Attempting to calculate hypothetical monetary amounts before mitigation is both overly complex and unreliable, producing figures that are neither estimable nor dependable. For less technical readers, such disclosures could be misleading, since they are not recognized in the financial statements. We therefore strongly recommend limiting anticipated financial effect disclosures to qualitative information only. As a suggestion, the IFRS S1 reliefs in § 38 and § 39 should be integrated in the ESRS: 38. An entity need not provide quantitative information about the current or anticipated financial effects of a sustainability-related risk or opportunity if the entity determines that: (a) those effects are not separately identifiable; or (b) the level of measurement uncertainty involved in estimating those effects is so high that the resulting quantitative information would not be useful per paragraphs 77–82. 39. In addition, an entity need not provide quantitative information about the anticipated financial effects of a sustainability-related risk or opportunity if the entity does not have the skills, capabilities or resources to provide that quantitative information.			
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	We fully support the amendment about the datapoint reduction resulting in the elimination of 7 "shall" datapoints described in Basis for Conclusions (BfC) per Chapter 4, Lever 6. In addition, we approve the changes introduced to enhance interoperability with the ISSB standards, especially the harmonization of the reporting boundary for GHG emissions.			
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	We endorse the deletion of mandatory datapoints as proposed by EFRAG as it will reduce the administrative burden on reporting undertakings and will enhance the effectiveness of sustainability reporting under the ESRS.

Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	We do not favour adding new datapoints, especially when these datapoints were assessed and concluded voluntary after a thorough drafting process of the ESRS and should remain as such since their content, and therefore their relevance, have not changed.			
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	The introduction of new mandatory datapoints contradicts with the stated objective of the standards' simplification. Businesses in Europe are already facing significant challenges in collecting and reporting the extensive information required under ESRS. Adding further datapoints - such as pertaining to microplastics, critical raw materials, or waste - will not only increase the complexity of the process and burden companies, many of which are still in the early stages of building robust reporting systems. This challenge is particularly acute in the downstream value chain, where companies have very limited visibility and control over how products are used after leaving the gate of their facilities. Obtaining reliable data from customers, distributors, or end-users is in practice extremely complex, and in many cases simply not feasible. Instead of introducing these requirements as mandatory at this stage, we strongly recommend that such topics are first developed and tested within non-mandatory guidance (NMIG). This would allow companies to experiment and progressively prepare their reporting systems. Imposing new obligations undermines the principle of burden relief and seriously threatens the feasibility of the entire reporting framework, especially for sectors with complex and fragmented value chains.			
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I disagree	We cannot endorse the proposed disclosure obligation concerning secondary microplastics. While EFRAG describes it as a mere clarification of existing rules, in practice it significantly broadens the reporting perimeter to include the downstream value chain. This would markedly increase the reporting workload and run counter to the declared aim of simplification. At present, calculating secondary microplastic emissions is not realistically achievable. There is no established methodology, and companies have very limited influence over the later stages of the product life cycle. Reporting requirements should therefore be limited to aspects that can actually be monitored and managed — specifically, emissions directly released from a company's own operations. Furthermore, the current definition of microplastics under REACH is overly expansive and does not suit this reporting context. For greater clarity and consistency, the term "synthetic polymer microparticles" would be more appropriate. On this basis, we propose removing the disclosure requirement on secondary microplastics from ESRS E2, along with the corresponding definition in Annex II.			
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	We are alarmed that the revised workforce disclosures introduce a level of detail that is not necessarily relevant or decision-useful, particularly for multinational companies. The requirement to disclose employee numbers per country with more than 50 employees may add little extra value, as in practice these employees may be concentrated in a single region (e.g., Europe) without enhancing the reader's understanding of global workforce distribution. A more representative and meaningful approach would be to return to the previous version of the disclosure, which required companies to report on countries where there are more than 50 employees representing at least 10% of the total workforce. This ensures focus on material geographies while avoiding unnecessary granularity. We also recommend removing the requirement to disaggregate employees by contract type (permanent, temporary, non-guaranteed). While well-intentioned, this requirement offers limited value to users and creates disproportionate complexity for preparers. Contract categories are defined differently across jurisdictions, leading to inconsistencies and undermining comparability. Moreover, workforce composition often fluctuates throughout the year, particularly in industries with seasonal demand or project-based work, which reduces the reliability of such disclosures.			
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree				
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	We recognize the importance of aligning EU legislation, in particular ensuring coherence between the CSRD and the SFDR, and we appreciate the simplifications proposed in the ESRS. At the same time, much of the requested information is not yet systematically gathered by companies. To ensure that the positive impact of the ESRS adjustments is not diminished, it is essential that other EU regulatory frameworks are also streamlined accordingly.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	We strongly agree with the objective of simplification in DR E4-4. When it comes to biodiversity and other nature-related issues, the central difficulty lies in the lack of standardized, well-defined, and comparable indicators. Unlike climate reporting, which benefits from the broadly recognized metric of CO_2 equivalents, this area remains fragmented, creating a high risk of inconsistency across disclosures. Moreover, the LEAP assessment process identified in the ESRS as the foundation for biodiversity transition planning is extremely demanding. For large companies, such an exercise may require 6–9 months to complete, involve considerable financial and human resources, and still produce results of limited comparability and questionable usefulness for decision-making.			
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	Current indicator does not make distinction between positions held by employees, neither taking into account purchasing power between markets, or other important socio-economic and macroeconomic factors that strongly feed into ultimate discrepancy in income between genders, not to mention matters associated with outcome differences that are based on personal choices and personality traits. Studies, including Harvard University "Why Do Women earn Less Than Men? Evidence from Bus and Train Operators" by Valentin Bolotnyy and Natalia Emanuel (2018), show that while there is inherent bias with regards to sexes, it is of no explicative utility in any statistically significant manner. Variable of highest explanatory power for differences in pay between males and females is different choices with regards to overtime and propensity to ask for raises – both levels of which vary greatly between males and females. Given the complexity of adjudicating what gender pay gap actually means, process of collecting said data is not meaningful, and certainly should not have any a priori bearing on the classification of whether a company rates highly in an ESG context, or for the needs of CSRD reporting. We propose that the indicator is removed or modified in a way that would make it meaningful from a disclosures perspective, for ex. by weighing the gender pay gap by overtime differences between sexes, so that it is properly contextualized. We recommend that [DRAFT] DR S1-15 paragraph 44(a) be based on comparable employee profiles and reformulated as "gender pay gap by employee category." Regarding [DRAFT] DR S1-15 paragraph 44(b), standard should either permit disclosure limited to an adjusted ratio, or adopt the earlier EFRAG approach of "countries with a significant number of employees." Another workable option would be to require disclosure for five largest countries in which a company operates, following model used in current S1-8.			
Survey	Business & Science Poland (BSP)	Business association (other than association of financial institution)	Poland	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		On value chain reporting, we respectfully would like to request that EFRAG considers limiting the scope of the impact materiality assessment to entities with which an undertaking has a direct contractual relationship. For large multinational organisations, value chains are highly complex and global in scope. Tracking and assessing impacts beyond direct contractual partners presents substantial practical, operational, and methodological challenges, particularly given the absence of consistent data availability and supplier transparency. In many cases, undertakings lack the leverage to influence or collect reliable information from actors further down the chain, resulting in disclosures that are burdensome to produce yet incomplete or inaccurate in practice.			
Survey	Bundesverband Nachhaltige Wirtschaft e.V.	Business association (other than association of financial institution)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I disagree	EFRAG is reducing the number of mandatory disclosures by over 56% and eliminating all voluntary disclosures. This significantly reduces the amount of information contained in the binding framework. These reductions affect all qualitative content relating to environmental, social, and governance issues. Although much of the content has been moved to the Non-Mandatory Illustrative Guidance (NMIG), it is no longer legally binding there. This carries the risk that key information for comparability and verifiability will be lost. This counteracts the goal of transparency through sustainability reporting. The BNW therefore calls for essential data points, especially those relating to climate impact, to remain mandatory. In addition, information that is crucial for regulatory connectivity—for example, in relation to the SFDR or the EU taxonomy—must remain mandatory in the mandatory standard section. Clear labeling of content moved from the NMIG The transfer of numerous content-relevant requirements from the binding ESRS standards to the Non-Mandatory Illustrative Guidance (NMIG) has led to increased confusion. For companies, auditors, and other stakeholders, it is not clear which content is still relevant and which serves only as supplementary guidance. We therefore call for all content transferred to the NMIG to be clearly and transparently labeled – both in the standard text and in the NMIG itself. This applies in particular to content from ESRS E4 (biodiversity), ESRS S1 (social) and ESRS G1 (governance). This labeling must clearly indicate which requirements were originally part of the binding standards and which are now considered illustrative guidance. Only through such transparency can the traceability of reporting and consistency in the application of the ESRS be ensured.			
Survey	Bundesverband Nachhaltige Wirtschaft e.V.	Business association (other than association of financial institution)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	Securing the SFDR indicators on significant adverse impacts (PAI) From the outset, one of the ESRS's key objectives was to establish close links with the Regulation on sustainability-related disclosures in the financial services sector (SFDR) in order to avoid duplication of effort. We expressly welcome this avoidance of duplicate reporting requirements. However, the deletion or postponement of individual indicators on significant adverse impacts (PAI) weakens the link to other disclosure requirements. For financial market participants, this means that they must collect the necessary data themselves or rely on external sources. This leads to additional work and carries the risk of inconsistencies. The BNW therefore calls for the publication of a complete overview of all SFDR PAI indicators, clearly indicating whether they remain mandatory, have been postponed, or have been deleted. In addition, it must be ensured that ESRS reports remain the central source for SFDR data in the future.

Survey	Bundesverband Nachhaltige Wirtschaft e.V.	Business association (other than association of financial institution)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I disagree	Gradual implementation of the so-called reliefs The newly introduced reliefs in ESRS 1 §92 and §93 allow companies to permanently omit certain disclosures if their collection is considered disproportionate. In general, it is questionable how this disproportionate nature is determined and whether determining it is not ultimately more costly than the original scope of the ESRS. This also applies to key performance indicators relating to the environment (ESRS E1–E4), biodiversity (ESRS E4-1), and social issues (ESRS S1-9, S1-14). The BNW calls for a phased implementation approach: the reliefs provided for should only be granted for a limited period, and companies should present a clear timetable and action plan for closing the data gaps. This time limit will allow companies to prepare for the full future scope of the reports and build up expertise and resources. In addition, EFRAG should require annual progress reports to ensure traceability. Furthermore, reliefs must not exceed the level of international standards such as IFRS S1/S2 in order not to jeopardize interoperability.			
Survey	Bundesverband Nachhaltige Wirtschaft e.V.	Business association (other than association of financial institution)	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I disagree	Ensuring financial materiality The amendments to ESRS 2 SBM-3 and ESRS E1-9 offer a choice between two options: Option 1 allows qualitative disclosures with justification, while Option 2 allows quantitative disclosures to be omitted entirely. Quantitative disclosures on expected financial impacts are essential for embedding sustainability issues in corporate governance. The option to omit such disclosures entirely would undermine this function. The BNW therefore calls on EFRAG to develop a uniform methodology and comprehensive guidelines to enable companies to justify missing disclosures and, where necessary, fill data gaps. This will allow companies to continuously expand their capacity to collect such information.			
Survey	Bundesverband Nachhaltige Wirtschaft e.V.	Business association (other than association of financial institution)	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	EFRAG is reducing the number of mandatory disclosures by over 56% and eliminating all voluntary disclosures. This significantly reduces the amount of information contained in the binding framework. These reductions affect all qualitative content relating to environmental, social, and governance issues. Although much of the content has been moved to the Non-Mandatory Illustrative Guidance (NMIG), it is no longer legally binding there. This carries the risk that key information for comparability and verifiability will be lost. This counteracts the goal of transparency through sustainability reporting. The BNW therefore calls for essential data points, especially those relating to climate impact, to remain mandatory. In addition, information that is crucial for regulatory connectivity—for example, in relation to the SFDR or the EU taxonomy—must remain mandatory in the mandatory standard section. Clear labeling of content moved from the NMIG The transfer of numerous content-relevant requirements from the binding ESRS standards to the Non-Mandatory Illustrative Guidance (NMIG) has led to increased confusion. For companies, auditors, and other stakeholders, it is not clear which content is still relevant and which serves only as supplementary guidance. We therefore call for all content transferred to the NMIG to be clearly and transparently labeled – both in the standard text and in the NMIG itself. This applies in particular to content from ESRS E4 (biodiversity), ESRS S1 (social) and ESRS G1 (governance). This labeling must clearly indicate which requirements were originally part of the binding standards and which are now considered illustrative guidance. Only through such transparency can the traceability of reporting and consistency in the application of the ESRS be ensured.			
Survey	Bundesverband Nachhaltige Wirtschaft e.V.	Business association (other than association of financial institution)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	Gradual implementation of the so-called reliefs The newly introduced reliefs in ESRS 1 §92 and §93 allow companies to permanently omit certain disclosures if their collection is considered disproportionate. In general, it is questionable how this disproportionate nature is determined and whether determining it is not ultimately more costly than the original scope of the ESRS. This also applies to key performance indicators relating to the environment (ESRS E1–E4), biodiversity (ESRS E4-1), and social issues (ESRS S1-9, S1-14). The BNW calls for a phased implementation approach: the reliefs provided for should only be granted for a limited period, and companies should present a clear timetable and action plan for closing the data gaps. This time limit will allow companies to prepare for the full future scope of the reports and build up expertise and resources. In addition, EFRAG should require annual progress reports to ensure traceability. Furthermore, reliefs must not exceed the level of international standards such as IFRS S1/S2 in order not to jeopardize interoperability.			
Survey	Bundesverband Nachhaltige Wirtschaft e.V.	Business association (other than association of financial institution)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	Ensuring financial materiality The amendments to ESRS 2 SBM-3 and ESRS E1-9 offer a choice between two options: Option 1 allows qualitative disclosures with justification, while Option 2 allows quantitative disclosures to be omitted entirely. Quantitative disclosures on expected financial impacts are essential for embedding sustainability issues in corporate governance. The option to omit such disclosures entirely would undermine this function. The BNW therefore calls on EFRAG to develop a uniform methodology and comprehensive guidelines to enable companies to justify missing disclosures and, where necessary, fill data gaps. This will allow companies to continuously expand their capacity to collect such information.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Bundesverband Nachhaltige Wirtschaft e.V.	Business association (other than association of financial institution)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	Ensuring financial materiality The amendments to ESRS 2 SBM-3 and ESRS E1-9 offer a choice between two options: Option 1 allows qualitative disclosures with justification, while Option 2 allows quantitative disclosures to be omitted entirely. Quantitative disclosures on expected financial impacts are essential for embedding sustainability issues in corporate governance. The option to omit such disclosures entirely would undermine this function. The BNW therefore calls on EFRAG to develop a uniform methodology and comprehensive guidelines to enable companies to justify missing disclosures and, where necessary, fill data gaps. This will allow companies to continuously expand their capacity to collect such information.			
Survey	Bundesverband Nachhaltige Wirtschaft e.V.	Business association (other than association of financial institution)	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I would like to skip this question and provide my feedback in Part 3				
Survey	Bundesverband Nachhaltige Wirtschaft e.V.	Business association (other than association of financial institution)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree				
Survey	Bundesverband Nachhaltige Wirtschaft e.V.	Business association (other than association of financial institution)	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I disagree	EFRAG is reducing the number of mandatory disclosures by over 56% and eliminating all voluntary disclosures. This significantly reduces the amount of information contained in the binding framework. These reductions affect all qualitative content relating to environmental, social, and governance issues. Although much of the content has been moved to the Non-Mandatory Illustrative Guidance (NMIG), it is no longer legally binding there. This carries the risk that key information for comparability and verifiability will be lost. This counteracts the goal of transparency through sustainability reporting. The BNW therefore calls for essential data points, especially those relating to climate impact, to remain mandatory. In addition, information that is crucial for regulatory connectivity—for example, in relation to the SFDR or the EU taxonomy—must remain mandatory in the mandatory standard section. Clear labeling of content moved from the NMIG The transfer of numerous content-relevant requirements from the binding ESRS standards to the Non-Mandatory Illustrative Guidance (NMIG) has led to increased confusion. For companies, auditors, and other stakeholders, it is not clear which content is still relevant and which serves only as supplementary guidance. We therefore call for all content transferred to the NMIG to be clearly and transparently labeled – both in the standard text and in the NMIG itself. This applies in particular to content from ESRS E4 (biodiversity), ESRS S1 (social) and ESRS G1 (governance). This labeling must clearly indicate which requirements were originally part of the binding standards and which are now considered illustrative guidance. Only through such transparency can the traceability of reporting and consistency in the application of the ESRS be ensured.			
Survey	Bundesverband Nachhaltige Wirtschaft e.V.	Business association (other than association of financial institution)	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	EFRAG is reducing the number of mandatory disclosures by over 56% and eliminating all voluntary disclosures. This significantly reduces the amount of information contained in the binding framework. These reductions affect all qualitative content relating to environmental, social, and governance issues. Although much of the content has been moved to the Non-Mandatory Illustrative Guidance (NMIG), it is no longer legally binding there. This carries the risk that key information for comparability and verifiability will be lost. This counteracts the goal of transparency through sustainability reporting. Survey	Bundesverband Nachhaltige Wirtschaft e.V.	Business association (other than association of financial institution)	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	Strengthening environmental standards The changes to environmental standards improve readability in some respects, but weaken the content. The reduction in emissions reporting is particularly critical, as companies will only have to use one control method in future. In ESRS E4, for example, key content has been removed, including site screenings, marine resources, and specific metric examples (formerly ESRS E4 ARs). This may lead to underreporting. The BNW calls for both operational and financial control to remain mandatory for emissions reporting, or for a requirement to justify any deviations to be introduced. In addition, deleted content must be reinstated or backed up by references to recognized international frameworks such as TNFD and SBTN. On the positive side, however, the new disclosures on water withdrawals, microplastics, and critical raw materials create greater transparency.			
Survey	Bundesverband Nachhaltige Wirtschaft e.V.	Business association (other than association of financial institution)	Germany	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Concluding remarks The proposed ESRS amendments will significantly weaken European sustainability reporting. The drastic reduction of mandatory disclosure requirements by more than half and the transfer of key content to the non-mandatory NMIG counteract the original goal of uniform, transparent, and comparable reporting. The BNW therefore calls for key content to be reintegrated into the mandatory standards and clearly marked. Reliefs must be limited in time and linked to progress monitoring. Quantitative reporting on financial impacts must remain mandatory, and climate reporting must be comprehensive and comparable. Without these improvements, there is a risk of a system that meets neither the demands of stakeholders nor the challenges of climate change. Furthermore, Europe's future as a business location can only be secured if companies monitor their long-term profitability and adapt accordingly to their risks. The EU itself would also jeopardize its pioneering role in sustainability reporting and undermine the credibility and attractiveness of European companies among international investors and insurance companies.			
Survey	Foundation for Family Businesses and Politics	Business association (other than association of financial institution)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Family businesses describe that even in the new version of the ESRS standard, there are formulations that are not yet completely clear and could possibly lead to different implementations of the standard or its requirements. For them, a definition of the scale of likelihood would be helpful. In addition, family businesses explain that there still seems to be room for interpretation which will result in discussions with auditors. Therefore, they would hope for a clearer definition of when an information is "necessary". Finally, family businesses describe it as unclear how to examine the new S-Subtopics with the former sub-sub-topics in brackets.			
Survey	Foundation for Family Businesses and Politics	Business association (other than association of financial institution)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	Family businesses explain that most of the changes make the materiality analysis easier. However, an initial review of the adjustments revealed that some could still lead to misunderstandings and additional work during implementation.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Foundation for Family Businesses and Politics	Business association (other than association of financial institution)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	For some family businesses concerns remain regarding the practicality of certain detailed requirements, the clarity of the wording, and the avoidance of unnecessary complexity and redundancy.			
Survey	Foundation for Family Businesses and Politics	Business association (other than association of financial institution)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	Foundation for Family Businesses and Politics	Business association (other than association of financial institution)	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	Family businesses explain that the proposed amendments largely aim to improve the clarity, comprehensibility, and accessibility of the ESRS by reducing complexity, eliminating redundancies, and increasing flexibility. This is also perceived and supported in many respects. However, there are specific areas where further clarifications are considered necessary by family businesses to fully achieve the "desired level of clarity and accessibility." Furthermore, some texts still appear quite long.			
Survey	Foundation for Family Businesses and Politics	Business association (other than association of financial institution)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	Some family businesses give the following feedback: ESRS 1: In general, a step in the right direction has been taken. However, there are still unclear topics that need to be reviewed and adjusted before the standard is finalized. See the compatibility of the requirements of the various standards.			
Survey	Foundation for Family Businesses and Politics	Business association (other than association of financial institution)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				
Survey	Foundation for Family Businesses and Politics	Business association (other than association of financial institution)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I would like to skip this question and provide my feedback in Part 3				
Survey	Foundation for Family Businesses and Politics	Business association (other than association of financial institution)	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I would like to skip this question and provide my feedback in Part 3

Survey	Foundation for Family Businesses and Politics	Business association (other than association of financial institution)	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	Some family businesses express that the level of interoperability should be further enhanced by incorporating certain other elements.			
Survey	Foundation for Family Businesses and Politics	Business association (other than association of financial institution)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Foundation for Family Businesses and Politics	Business association (other than association of financial institution)	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree				
Survey	Foundation for Family Businesses and Politics	Business association (other than association of financial institution)	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	E5-4: the critical raw materials should be treated separately, only if material			
Survey	Foundation for Family Businesses and Politics	Business association (other than association of financial institution)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	Some family businesses explain that the principle of "fair presentation" should be further elaborated to prevent from room for interpretation.			
Survey	Foundation for Family Businesses and Politics	Business association (other than association of financial institution)	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Some family businesses are concernced that if the standard begins with individual exceptions, other industries will also come up with justifications.			
Survey	Foundation for Family Businesses and Politics	Business association (other than association of financial institution)	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	Foundation for Family Businesses and Politics	Business association (other than association of financial institution)	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	Family businesses express different views here.

Survey	Foundation for Family Businesses and Politics	Business association (other than association of financial institution)	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	Some family businesses propose a renewed review of whether the changes actually bring relief and clarity.			
Survey	Foundation for Family Businesses and Politics	Business association (other than association of financial institution)	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree
