Survey	amfori	Business association (other than association of financial institution)	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	We believe that the revised chapter simplifies and clarifies the DMA significantly, while retaining its core principles and keeping its robustness. We are especially glad to see clear and user-friendly explanations for the due diligence steps and the assessment of IROs, which preserve the logic of well-established international standards on due diligence (severity and likelihood) and provide enough flexibility for companies to conduct the DMA according to their level of maturity and specific circumstances (e.g. bottom-up or top-bottom approach). We greatly welcome the explicit consideration of value chain information (since most IROs materialise in deeper tiers of the value chain), in order to increase resilience and improve risk management, it is critical for companies to gain a better understanding of their value chain over time (while acknowledging that having a full granular picture might not be realistic from the start). In addition, we see the inclusion of 'gross impact' (assessing impacts with regard to actions undertaken that could reduce the severity and/or likelihood of the impact) as a step in the right direction to encourage proactiveness of the undertakings and reward/promote good corporate practice.

Survey	amfori	Business association (other than association of financial institution)	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	We view that companies willing to, should be able to report on their general efforts to address material risks, impacts and opportunities beyond what is required by the ESRS. Due diligence is not about perfection, but showing progress over time. For that reason, we find particularly positive the possibility for companies to provide more detailed information related to their entity-specific disclosure in a more readable manner.			
Survey	amfori	Business association (other than association of financial institution)	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	-IRO-1: we welcome emphasis given to consideration of VC information to properly inform the DMA (in the clarification of the scope), clarification on the interconnection between IROs, and preservation of the severity x likelihood logic. -GOV-3: we are glad to see the interconnection with the due diligence exercise remains a core disclosure under ESRS. However, a short description of how the reporting and due diligence exercise informs each other is missing. -SBM-3: we welcome the separation of IRO requirements from SBM-3 as this improves clarity and readability. We are glad to note that core elements of the DR - essential information for the company to understand the connection of its SBM with its IROs, and how to address them – have been preserved. We are particularly positive about the addition of AR 12, 13 and 14, which place a strong focus on the relationship between IROs and PTAs. -While the additional flexibility is welcome, it might be insufficient to encourage good due diligence practice and cause lack of comparability. A middle-ground could be to include a specific reference to avoiding generic, boiler-plate information and disclose plans to improve the 'granularity' of reporting over time. -IRO-2: we are positive to note the reference to actual and potential impacts as well as the connection with the business model, operations and VC. We are positive about the improved coherence to disclose IROs according to the same same level of aggregation (IRO or topic level) as they are managed, same location covered by the PTAs to manage them, and level of managerial priority reflected in the reporting structure. -GDR-P: the clarification to disclose the scope of the policy, including own operations and/or VC is welcome. We also welcome reference to third-party standards/initiatives, which supports industry best practice/joint efforts.			
Survey	amfori	Business association (other than association of financial institution)	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	Whereas we recognise the need to improve the implementability of the standards, we fear that paragraph 3 might undermine the capacity of undertakings and users to track progress and define adequate PAT, and the robustness of the methodology used to calculate the metrics and set targets. As in the case for Chapter 5, 5.2. on the "inclusion of upstream and downstream value chain information", we welcome a relief for the collection, use and disclosure of primary data in the supply chain, provided that the DR provides an incentive for companies to continuously improve the quality of their data collection process (and reporting exercise in general).			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We generally agree with the proposed simplifications and clarifications of the DMA and we support the intention to make sustainability reporting more focused and less granular. In line with these objectives, we have the following three suggestions for further clarifications of ESRS 1: 1. It should be made clear that a combination of the top-down and bottom-up approach to the DMA is possible to apply. 2. Clarify that AR 21 of ESRS 1 applies to each sub-topic within a standard, i.e. if a material IRO relates to two or more sub-topics, the entity needs only to report on those sub-topics. There should be no exemptions to this principle (i.e. we do not agree with the exemptions in ESRS S1 paragraph 3). 3. The interaction between topics and IROs is addressed in paragraph 22 of ESRS 1. The paragraph explains the process of identification of topics in relation to IROs and the presentation of information at either topical or IRO level. As we understand the proposal, an entity should not always have to disclose the detailed connection between an IRO and a corresponding topic/subtopic. This is a positive improvement that will enhance more focused reporting. However, the principle should be more explicitly clarified to avoid lengthy discussions around interpretation with auditors etc.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	How to consider remediation, mitigation and prevention actions when assessing impact materiality has been a reoccurring issue among preparers. From that point of view, the proposed guidance in paragraphs 34 and 36 of ESRS 1 is welcome, and the principles make sense. However, we believe that the examples in appendix C of ESRS 1 are confusing and thus adds rather than reduces complexity. Appendix C should therefore be removed.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	We agree as we favor more flexibility for preparers in preparing their sustainability reports. According to our understanding, there is no limitations in the current framework that prevents an entity from adding an executive summary to the sustainability report. EFRAG should therefore consider the necessity of this addition and the risk that it will give rise to discussions regarding other possible options for the display of information in the sustainability report that are permitted but not explicitly addressed in ESRS 1.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We welcome the amendments that will help entities avoid duplications in their reports and to disclose unnecessary details for pure compliance purposes. We believe that EFRAGs proposal will help entities focus on relevant and decision useful information. As we pointed out in our response to EFRAGs public call for input in the spring of 2025, there is a need for streamlining ESRS 2 and making the standard subject to materiality assessment. According to our understanding, EFRAGs proposal will accomplish this.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	We find that the amendments make the standards more concise and easier to understand.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We agree with EFRAGs recommendation that the NMIG should not be included in the Delegated Act. We also believe that EFRAG should refrain from publishing the NMIG as guidelines as we see a considerable risk that this material will add to the burden and trigger additional unnecessary analysis by reporting companies. Additional guidance by EFRAG, if any, should solely be motivated by the aim of providing necessary support that is of actual help to preparers. Such material thus needs to be subject to thorough consideration.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree	We welcome all the proposed reliefs. We believe they will contribute substantially to the aim of simplification.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	We agree with the proposed relief. We do not think a time limit is necessary to incentives entities to gradually improve data quality and the coverage of the calculation of metrics.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	Disclosure on anticipated financial effects are difficult to attain and based upon so many uncertainties, assumptions and estimations that the resulting information will lack in both reliability and comparability. The overall usefulness of the information will therefore be low. In addition, the information aligns poorly with financial reporting, where there is no similar disclosure. While these complications applies to both quantitative and qualitative disclosures on anticipated financial effects, we nevertheless favor option 2. However, EFRAG should preferably abandon these disclosures altogether as the cost of obtaining the information exceeds the benefits for users.

Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	We are generally concerned that the costs of the information does not motivate the benefits for users. Some of the information is also difficult or impossible to obtain. The information required in paragraph 40a for example - if an entity has taken climate change adaptation into account as an integral part of the construction of an asset. How should the requirement to disclose a monetary amount before such actions are taken be met? The information on revenue from business activities at material physical risk in paragraph 40d risk becoming a theoretical construction with little information value. Within, for example, a business segment the activities may be related to both assets at material physical risk and to other assets. How is an entity going to distinguish activities at risk from other activities and also separate revenue before climate change adaption from those activities? And in what way will users benefit from information that is based on such a theoretical construct?			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	A widely recognised global sustainability reporting framework based on effective and decision useful standards that will function well on global capital markets is key for the achievement of global climate agreements and targets. An international standard setter, such as the ISSB, has the practical ability to obtain the necessary support and acceptance needed to back up such a reporting framework. Principally, we therefore believe EU should strive for full convergence with the ISSB standards. However, considering the objective of simplification and that the long-term ambition to achieve and maintain a high level of interoperability between ESRS and the ISSB standards remains intact, we find the proposed reliefs that go beyond S1 and S2 well balanced.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree				
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	22.ESRS2	Comments on deleted datapoints in ESRS 2	I disagree	General comment: The 57% reduction in mandatory datapoints does not correspond to an equal reduction in reporting burden as a large part of the more demanding disclosures and administrative requirements in the ESRS framework remain intact. There is significant room for further reductions on metrics, please consider the proposals for simplification jointly developed by BusinessEurope, EBF, Insurance Europe and EFAMA. When deliberating additional reductions, EFRAG should adopt a cost-benefit approach and remove such disclosures whose costs clearly exceed the benefits of the information. Particular comment regarding ESRS 2: Despite our comment above, we generally welcome the amendments of ESRS 2 and that the datapoints in the standard are now subject to information materiality.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	22.E1.	Comments on deleted datapoints in ESRS E1	I disagree	General comment: The 57% reduction in mandatory datapoints does not correspond to an equal reduction in reporting burden as a large part of the more demanding disclosures and administrative requirements in the ESRS framework remain intact. There is significant room for further reductions on metrics, please consider the proposals for simplification jointly developed by BusinessEurope, EBF, Insurance Europe and EFAMA. When deliberating additional reductions, EFRAG should adopt a cost-benefit approach and remove such disclosures whose costs clearly exceed the benefits of the information. Particular comment regarding ESRS E1: Swedish Enterprise is particularly concerned with the information on anticipated financial effects (E1-11), please see our answer to question 20 above.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	22.E2.	Comments on deleted datapoints in ESRS E2	I disagree	General comment: The 57% reduction in mandatory datapoints does not correspond to an equal reduction in reporting burden as a large part of the more demanding disclosures and administrative requirements in the ESRS framework remain intact. There is significant room for further reductions on metrics, please consider the proposals for simplification jointly developed by BusinessEurope, EBF, Insurance Europe and EFAMA. When deliberating additional reductions, EFRAG should adopt a cost-benefit approach and remove such disclosures whose costs clearly exceed the benefits of the information. Particular comment regarding ESRS E2: EFRAG should consider further simplifications and improvements of the E2-5 disclosure on substances of concern and substances of very high concern. We suggest further alignment with REACH and clarifications regarding the application of the disclosure for entities whose main activity is not within the chemical industry.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	22.E3.	Comments on deleted datapoints in ESRS E3	I disagree	General comment: The 57% reduction in mandatory datapoints does not correspond to an equal reduction in reporting burden as a large part of the more demanding disclosures and administrative requirements in the ESRS framework remain intact. There is significant room for further reductions on metrics, please consider the proposals for simplification jointly developed by BusinessEurope, EBF, Insurance Europe and EFAMA. When deliberating additional reductions, EFRAG should adopt a cost-benefit approach and remove such disclosures whose costs clearly exceed the benefits of the information.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	22.E4.	Comments on deleted datapoints in ESRS E4	I disagree	General comment: The 57% reduction in mandatory datapoints does not correspond to an equal reduction in reporting burden as a large part of the more demanding disclosures and administrative requirements in the ESRS framework remain intact. There is significant room for further reductions on metrics, please consider the proposals for simplification jointly developed by BusinessEurope, EBF, Insurance Europe and EFAMA. When deliberating additional reductions, EFRAG should adopt a cost-benefit approach and remove such disclosures whose costs clearly exceed the benefits of the information.

Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	22.ESS.	Comments on deleted datapoints in ESRS E5	I disagree	General comment: The 57% reduction in mandatory datapoints does not correspond to an equal reduction in reporting burden as a large part of the more demanding disclosures and administrative requirements in the ESRS framework remain intact. There is significant room for further reductions on metrics, please consider the proposals for simplification jointly developed by BusinessEurope, EBF, Insurance Europe and EFAMA. When deliberating additional reductions, EFRAG should adopt a cost-benefit approach and remove such disclosures whose costs clearly exceed the benefits of the information.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	22.S1	Comments on deleted datapoints in ESRS S1	I disagree	General comment: The 57% reduction in mandatory datapoints does not correspond to an equal reduction in reporting burden as a large part of the more demanding disclosures and administrative requirements in the ESRS framework remain intact. There is significant room for further reductions on metrics, please consider the proposals for simplification jointly developed by BusinessEurope, EBF, Insurance Europe and EFAMA. When deliberating additional reductions, EFRAG should adopt a cost-benefit approach and remove such disclosures whose costs clearly exceed the benefits of the information. Particular comment regarding the S1 standard: EFRAG should look into the disclosure on persons with disabilities (S1-11) which is particularly burdensome and also highly problematic from an integrity point of view. To collect such highly personal information from employees may be considered as a discriminatory act in itself. In addition, the information required to disclose the average number of training hours per employee (S1-12) is costly and difficult to collect for entities and the relevance and decision usefulness of the information is questionable.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	22.S2	Comments on deleted datapoints in ESRS S2	I disagree	General comment: The 57% reduction in mandatory datapoints does not correspond to an equal reduction in reporting burden as a large part of the more demanding disclosures and administrative requirements in the ESRS framework remain intact. There is significant room for further reductions on metrics, please consider the proposals for simplification jointly developed by BusinessEurope, EBF, Insurance Europe and EFAMA. When deliberating additional reductions, EFRAG should adopt a cost-benefit approach and remove such disclosures whose costs clearly exceed the benefits of the information.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	22.S3	Comments on deleted datapoints in ESRS S3	I disagree	General comment: The 57% reduction in mandatory datapoints does not correspond to an equal reduction in reporting burden as a large part of the more demanding disclosures and administrative requirements in the ESRS framework remain intact. There is significant room for further reductions on metrics, please consider the proposals for simplification jointly developed by BusinessEurope, EBF, Insurance Europe and EFAMA. When deliberating additional reductions, EFRAG should adopt a cost-benefit approach and remove such disclosures whose costs clearly exceed the benefits of the information.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	22.S4	Comments on deleted datapoints in ESRS S4	I disagree	General comment: The 57% reduction in mandatory datapoints does not correspond to an equal reduction in reporting burden as a large part of the more demanding disclosures and administrative requirements in the ESRS framework remain intact. There is significant room for further reductions on metrics, please consider the proposals for simplification jointly developed by BusinessEurope, EBF, Insurance Europe and EFAMA. When deliberating additional reductions, EFRAG should adopt a cost-benefit approach and remove such disclosures whose costs clearly exceed the benefits of the information.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	22.G1	Comments on deleted datapoints in ESRS G1	I disagree	General comment: The 57% reduction in mandatory datapoints does not correspond to an equal reduction in reporting burden as a large part of the more demanding disclosures and administrative requirements in the ESRS framework remain intact. There is significant room for further reductions on metrics, please consider the proposals for simplification jointly developed by BusinessEurope, EBF, Insurance Europe and EFAMA. When deliberating additional reductions, EFRAG should adopt a cost-benefit approach and remove such disclosures whose costs clearly exceed the benefits of the information.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	Principally we believe that the move from "may" to "shall" datapoints is contrary to the objective of simplification.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	The introduction of new datapoints is contrary to the objective of simplification. However, the new datapoint in ESRS 2 General Disclosures that requires the entity to state that the general requirements of ESRS 1 have been applied is justified from a simplification point of view and therefore acceptable.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	We welcome the clarification that ESRS is a fair presentation reporting framework. To meet the concerns that it may be challenging to demonstrate fair presentation in relation impact materiality for relevant stakeholders, we suggest that EFRAG clarifies that, while stakeholder dialogue informs the process, the responsibility for the report, and thus the assessment of fair presentation, rests with the reporting entity's management. We propose that BP-1 of ESRS 2 is amended to make clear that the identification and grouping of stakeholders is determined from the perspective of the management.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	The reason for this amendment is not clear. We are hesitant to introduce amendments and new definitions that may alter reporting processes and the gathering of data if there is no evident simplification effect.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree	We agree with the proposed change, that we expect will be a minor simplification in comparison with the current methodology.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	If the PAIs are not relevant in practice there is a need to review the SFDR in order to streamline the flow of information, ensure decision usefulness and avoid unnecessary reporting.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	We believe that EFRAG should refrain from reviewing the AR at this stage due to the tight time frame.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	It is not clear from EFRAGs proposal weather an entity that wishes to disclose adjusted pay gap will still be able to do so. We agree with the removal of voluntary disclosures within the ESRS standards, but entities should nevertheless be able to disclose additional information in their sustainability reports. For example, adjusted pay gap may for some entities be considered material information. These entities should be able to disclose this metric as an entity-specific disclosure.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Despite the need for further simplifications, we generally welcome the amendments of ESRS 1. Please see question 11 for our suggestions for further clarifications.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Despite the need for further simplifications, we generally welcome the amendments of ESRS 2 and that the datapoints in the standard are now subject to information materiality.			
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. I disagree	There is room for substantial simplifications of the S1 standard. The disclosure on persons with disabilities (S1-11) should be removed as it is particularly burdensome and problematic from an integrity point of view i.e. there is not only legal problems with the information but also ethical. To collect such highly personal information from employees may be considered as a discriminatory act in itself. In addition, the information required to disclose the average number of training hours per employee (S1 12) is costly and difficult to collect for entities and the relevance and decision usefulness of the information is questionable.

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Confederation of Swedish Enterprise	Business association (other than association of financial institution)	Sweden	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Swedish Enterprise finds the proposed changes to ESRS 1 and the simplification of the DMA process a positive step towards a more simplified, effective and relevant reporting framework. Generally, the proposed amendments make the standards more concise and easier to understand. However, there is room for additional reliefs in mandatory datapoints in the topical standards. The 57% reduction in datapoints does not correspond to an equivalent effect on the total reporting burden on companies. When deliberating further reductions, EFRAG should consider the proposals for simplification jointly developed by BusinessEurope, EBF, Insurance Europe and EFAMA.			
Survey	CNA	Business association (other than association of financial institution)	Italy	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We welcome the simplifications, but question whether a formal DMA is necessary at this stage. The materiality principle alone could suffice, while DMA might be better introduced gradually or as guidance once practices are more mature.			
Survey	CNA	Business association (other than association of financial institution)	Italy	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	We consider the new guidance on remediation, mitigation, and prevention actions largely unnecessary. It adds complexity without improving the relevance or comparability of reported information.			
Survey	CNA	Business association (other than association of financial institution)	Italy	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	We agree that the proposed amendments improve readability, support concise reporting, and enhance connectivity with corporate reporting, providing preparers with appropriate flexibility to focus on relevant information.			
Survey	CNA	Business association (other than association of financial institution)	Italy	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	While the amendments simplify some aspects, the layering of requirements remains complex. More guidance or further simplification is needed to reduce preparers' effort while ensuring relevant and comparable disclosures.			
Survey	CNA	Business association (other than association of financial institution)	Italy	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree				
Survey	CNA	Business association (other than association of financial institution)	Italy	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	All this effort increases the degree of complexity.

Survey	CNA	Business association (other than association of financial institution)	Italy	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The proposed reliefs are welcome and address key preparers' concerns, but overall reporting remains burdensome. Further simplification or additional practical reliefs would better balance reduced effort with transparency and ESG objectives.			
Survey	CNA	Business association (other than association of financial institution)	Italy	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	CNA	Business association (other than association of financial institution)	Italy	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree				
Survey	CNA	Business association (other than association of financial institution)	Italy	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree				
Survey	CNA	Business association (other than association of financial institution)	Italy	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We agree that emphasizing fair presentation can support more effective use of the materiality filter and reduce unnecessary reporting. However, clear guidance and examples are needed to mitigate legal and audit risks and ensure consistent application.			
Survey	CNA	Business association (other than association of financial institution)	Italy	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	While an exception for financial institutions may be justified, it could set a precedent for other entities with only indirect GHG impacts, potentially reducing comparability. Clear limits and alternative disclosures are needed to maintain transparency and consistency.			
Survey	CNA	Business association (other than association of financial institution)	Italy	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	Not necessary			
Survey	CNA	Business association (other than association of financial institution)	Italy	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	We note the deletion of the voluntary adjusted gender pay gap datapoint. While maintaining alignment with the Pay Transparency Directive, removing it may limit insights into pay equity by employee category or country. Consider retaining it as optional for enhanced transparency.			
Survey	CNA	Business association (other than association of financial institution)	Italy	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree	The replacement of former payment practice datapoints may reduce transparency on SME engagement. We are concerned it may not fully meet CSRD objectives regarding SME protection and suggest clarifying or supplementing reporting requirements for SMEs.

Survey	CNA	Business association (other than association of financial institution)	Italy	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree

Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Despite welcome simplifications for the DMA, companies already reporting under ESRS will see little immediate relief. We support the option for a top-down approach but recommend removing conditional wording: •AR 18 for 1.48: "Unless more investigation is necessary" •ESRS 1.48: "may avoid". This clarification will help streamline reporting and reduce audit burden. However, several provisions risk ambiguity and divergent interpretations, potentially triggering disputes with auditors: •3.2 (22): "The information shall be presented either at topical level or at impacts, risk and opportunity level." Clarify that reporting at either IRO or topic level is acceptable. •3.3.1 (34): "Actual impacts in the reporting period include both newly arisen impacts and those persisting from previous periods." Without specifying the relevant number of past periods, interpretation remains too broad. Companies should be free to assess material past impacts pragmatically, consistent with a principles-based approach. We recommend deleting this sentence. •Par. 30/AR6: Assessing impacts across multiple tiers of the value chain is unworkable. Reporting should focus on tier-1 chains, and only when sufficient confidence exists regarding an impact's occurrence, severity, and likelihood. Finally, while we agree with using reasonable, supportable information without undue cost or effort, the link to Chapter 3.7 is unclear. Companies should be allowed flexibility to define the most relevant level of aggregation or disaggregation for material IROs, whether by topic or business line.

Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	The approach proposed by EFRAG appears complicated. Excluding all mitigation actions from the assessment of impacts in the reporting period could result in over-reporting. Preparers could report many potential negative impacts that are not material due to low likelihood and severity. This seems to differ from how IROs are managed, e.g. in bank's risk reports (risk is material after considering mitigating actions). We recommend that credible mitigating and remediating actions (e.g. implemented/decided policies, budgets) are always factored in. Appendix C is overly complex. The weight of "mitigation or prevention actions taken to reduce the severity and/or likelihood of potential negative impacts" should be clarified. The preparer can consider the effect of these actions in assessing the materiality of the impact, but it doesn't clarify how relevant this is when assessing materiality. The distinction between positive and negative impacts should be clarified to ensure consistentapplication. We recommend a more flexible, principle-based framework rather than the Appendix C's prescriptive approach. Judging the expected effectiveness of the actions is subjective and could be legally sensitive (also ESRS 2 GDR-A Par.37b). The term "expected outcomes" should be removed throughout. ESRS 1 Para. 35 lacks clarity: What defines a "significant" mitigation or prevention action? Any future mitigant requires ongoing action even if it is simply training regarding policies. This does not make them invalid, where there is an intent (policy, budget etc.) to ensure their availability. The paragraph should adapt accordingly. In ESRS 1 Par.36 the 2nd & 3rd sentence seem contradictory. Whereas legally required actions cannot be considered positive impacts, but actions mitigating impacts of upstream suppliers can. This is should be clarified. ESRS 1 is not clear how to perform the materiality assessment of risks. If impacts are assessed based on a "net" perspective, also risks should be assessed on a net basis.			
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	We generally welcome the increased flexibility introduced through the proposed amendments to the ESRS Sustainability Statements. The possibility of including an executive summary and the emphasis on using appendices to separate detailed information from key messages can be helpful steps toward improving readability and structure. The option to include non-material information, if presented clearly, is a good step to maintain continuity for stakeholders. However, we understand these changes primarily as clarifications rather than substantial simplifications. From our perspective, they do not result in significant relief in terms of implementation effort or reporting complexity. We do not consider that the removal of data points can be considered deletions, as they were duplicated in the first place. Additionally, certain disclosure requirements continue to be embedded in application requirements, which could benefit from further reduction efforts. Please ensure that that application requirements don't consist of any disclosure requirements.			
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The restructuring of the architecture and the clarified interaction between ESRS 2 and the topical standards enhance the overall readability and usability of the standards. The simplification of the GDR, the reduction of mandatory datapoints for policies, actions, and targets (PATs), and the removal of overlapping topical specifications contribute to a clearer and more accessible framework. The shift towards a more principles-based approach and the ability to report PATs at a higher aggregation level reflect a pragmatic and proportionate response to the challenges identified during the first-time application. This supports more effective and relevant sustainability reporting while maintaining the necessary level of comparability and transparency. However, we do not agree to maintain the requirement to disclose which topics are not covered by PAT. This would lead to 'empty' information, which contradicts the ESRS revision purpose. However, some changes introduce behavioral requirements. ESRS 1, Paragraph 84c requires adjusting the base year of the target following a major acquisition or disposal. This constitutes a behavioral requirement, contradicting Paragraph 5 stating that "the ESRS do not mandate behavior but set Disclosure Requirements[...]". Moreover, this is inconsistent with the possibility of investments or divestments being part of the business strategy to achieve the target. Regarding the presentation of metrics and monetary amounts, the requirement to adjust the base year and the comparative information provided following "major acquisition or disposals" is unclear and potentially problematic. For example, there are no criteria for assessing what is a "major" acquisition or disposal, and the phrase "adjust the base year" is not clear in whether it is referring to adjusting the base year or the value associated with that base year in relation to presenting progress against targets. We recommend that "major" be revised to "material" and "adjust the base year" be clarified by including "value".			
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We broadly agree that the proposed amendments will improve the clarity and accessibility of the ESRS. The removal of "may disclose" datapoints and the clearer separation between mandatory and non-mandatory content contribute to a more structured and comprehensible standard. However, we would recommend eliminating all the unclear terms like "shall consider" "may present", "may implement", "may include" and other ambiguous terms. These should be avoided and clarified in order not to create confusion and avoid misunderstandings with the auditors. The revised layout—particularly the relocation of mandatory Application Requirements, directly under the relevant Disclosure Requirements—makes the legal text easier to follow and reduces the need to navigate back and forth within the document. However, while the structure and readability have improved, the overall reporting requirements remain largely unchanged. As such, the simplification primarily supports better orientation within the standards rather than reducing the reporting burden itself. Moreover, we would like to flag that new mandatory disclosures have been added – clearly against the request of the EU commission and the aim of the revision to reduce reporting burden. Additional mandatory data points should be removed completely. The application requirements should not include any mandatory requirements. They should be seen as a guidance to follow while preparing the disclosures. Application requirements should not be included in the main body of the disclosure requirements Mandatory disclosure requirements should be part of the main body of the standard. Currently, the mandatory application requirements also consist of certain "may" or "shall consider" requirements. These should be omitted for the CSRD report without keeping an audit trail.

Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We consider the introduction of Non-Mandatory Illustrative Guidance (NMIG) and its exclusion from the Delegated Act a useful addition to the ESRS framework. The separation of mandatory and non-mandatory content improves the structure and readability of the standards. NMIG can serve as an orientation tool—especially for preparers in the early stages of implementation—by illustrating how disclosures might be structured or interpreted in practice. We recommend: •That the non-binding nature of NMIG remains clearly communicated and consistently understood by both preparers and auditors. •That there should be no implicit expectation that the examples provided must be followed or justified if not applied. •An explicit statement saying that the NMIG cannot be used for audit purposes and the separation of the NMIG from the legislative text would support this. •Avoiding guidance that references external standards, instead embedding directly into the standard setter's guidance itself. •The guidance should be fully aligned with the standards themselves and subject to robust due process in its development, to ensure it does not have unintended consequences, further complicated principles-based standards, and/or add to reporting burden. Otherwise, the intended simplification effect could be undermined by new uncertainties or perceived pressure to align with the illustrative content. Nonetheless, we view the "Flowchart for determining disclosures under the ESRS" to be very useful when it was a part of ESRS 1. We suggest reinserting this.			
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree	We strongly welcome the proposed burden reliefs as a meaningful step toward reducing the complexity and effort in ESRS reporting. 1.The "undue cost or effort" relief is particularly valuable, offering prepares a practical way to justify omissions or limitations when data collection would require disproportionate resources. However, it may increase the burden of proof if auditors challenge whether sufficient effort has been made to fulfill reporting requirements. 3.We appreciate the removal of the systematic preference for direct data in value chain metrics. Allowing estimates based on practicality and reliability better reflects the current state of data availability and maturity across the value chain, reducing effort in future reporting cycles. While these reliefs do not change the scope of reporting obligations, they provide greater flexibility in how requirements can be met and documented, supporting a more proportionate ESRS implementation. We invite greater clarity on when and how the relief applies to ensure that auditors do not request mandatory disclosure subject to relief. The relief should be useable for any metric, as value chain information often relies on estimations that lack reliability and consistency. 6.The amendments made to the anticipated financial effects do not solve the issue of data availability and reliability, as assumptions for this data point will vary so widely that any comparison between companies would be misleading. 7.Regarding the proposed relief for acquisitions, the one-year timeframe for integrating (or excluding) a subsidiary for sustainability reporting purposes is often insufficient and unrealistic. Greater flexibility should be offered to disclose metrics once the subsidiary is fully integrated. It should be clarified that reliefs do not contradict fair presentation, allowing companies to protect sensitive information without being pressured by auditors to report under this clause.			
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	We consider the proposed relief to be a practical and necessary addition. It acknowledges the real-world limitations many preparers face, especially in complex areas such as value chain reporting. The relief ensures that data collected for reporting is robust and reliable. Forcing the collection of weak data undermines 1) high quality reporting, 2) comparability, 3) avoiding legal risks linked to the disclosure of unreliable metrics and 4) might lead to distorted or misleading representation of the information. The relief helps companies to tackle the current lack of methodologies for some indicators and bridges preparers until methodologies are available. A relevant issue is the reporting of SVHC and SHC substances. Due to the highly specific nature of European chemical legislation, reliable data collection is currently feasible primarily within Europe. The relief allows us to transparently report metrics based on a partial scope e.g., limited to European operations, while outlining actions to improve coverage over time. We support allowing companies to exclude joint operations they don't control from environmental metric calculations (E2-E5). However, we seek clarification on the definition of "joint operations." We also support extending this relief to E1, aligning with the flexibility to disclose only "reasonable and supportable information available without undue cost or effort." We support not imposing a time limit on this relief, allowing organizations to decide when to take action. In cases like chemical data collection, expanding scope may only be possible if non-European regulations align with EU standards, which is beyond a company's control and cannot be planned within a fixed timeframe.			
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	We strongly oppose both mandatory quantitative and qualitative disclosures of anticipated financial effects. The underlying data is often unclear, and the risks cannot be reliably isolated due to a lack of mature and established methodologies, making any form of disclosure - whether narrative or numeric - legally risky and prone to misinterpretation. Such information lacks comparability and does not offer decision-useful insights to report to users from our point of view. Moreover, IFRS already define when future risks must be reflected in financial reporting, e.g. through recognition and measurement criteria. Sustainability reporting should not override or extend these principles through financial disclosure requirements in the sustainability statement. We therefore recommend that this disclosure requirement be removed entirely or made explicitly optional. It should also be noted that even for a qualitative statement on anticipated financial effects a quantitative assessment needs to be done. Also, qualitative information is subject to a high level of uncertainty but there is less likelihood of unjust comparison. This begs the question of what use this information could have for any stakeholder, esp. capital market participants. EFRAG could allow for the voluntary disclosure of information on anticipated financial effects if undertakings want to provide information to external stakeholders.

Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	We strongly oppose both mandatory quantitative and qualitative disclosures of anticipated financial effects. From our perspective, there is currently no reliable method to link specific climate-related risks or opportunities to financial metrics like assets, liabilities, or revenue. The complexity and lack of integration between sustainability and financial systems make such quantification impractical. Without this linkage, even qualitative disclosures carry significant legal uncertainty and risk of misinterpretation. Comparability across organizations is also limited due to unclear guidance on the level of detail for such disclosures. Capital market participants typically rely on standardised models and data, which are not meaningfully enhanced by inconsistent, company-specific disclosures. The practical use of such granular data remains questionable and does not justify the significant effort required from companies. We therefore advocate for the removal of the mandatory reporting of anticipated financial effects. completely. EFRAG could allow for the voluntary disclosure of information on anticipated financial effects if undertakings want to provide information to external stakeholders. It is crucial not to require the disclosure "before considering adaptation/mitigation actions", as this would not add value for readers and does not reflect how business strategy is defined. In fact, mitigation actions are often embedded within the strategy, structural in nature, and linked to multiple risks. Therefore, it would be overly complex and unreliable to conduct a hypothetical exercise calculating monetary amounts that are neither estimable nor dependable. For less technical readers, such assessments could be misleading, especially since they are not accounted for in the financial statements. For more details on the respective paragraphs see attached Excel file.			
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	1.Fair presentation in the ISSB standard applies only to financial materiality; extending it further could create problems (see Q.25). Guidance is unclear on prioritising user needs when conflicts arise between financial and non-financial users. Excessive disaggregation, for example, increases reporting burden while reducing usefulness. ESRS should prioritise primary users (e.g. investors). 2.IFRS permits any GHG boundary, while ESRS mandates financial control, diverging from the GHG Protocol. To ensure alignment, companies should be allowed flexibility to choose boundaries consistent with the Protocol. 3.Relief clauses in the simplified standard are welcome, but the revision timeline for Level 1 remains unclear. 4.Maintaining these reliefs is vital, as ESRS go beyond climate, where methodologies are less advanced and flexibility is essential. 5.Agree. 6.We support referencing SASB Standards and IFRS Industry-based Guidance as sources of disclosure to enhance transparency and interoperability with ISSB. 7.Agree. 8.Agree. 9.To further improve interoperability with IFRS, EFRAG should add reliefs on (1) commercially sensitive information and (2) proportionality to skills, capabilities and resources available. 10.Additional improvements: 11.Ensure all climate-related financial disclosure elements in IFRS S2 (e.g. financed emissions, carbon credits, resilience analysis) are cross-referenced in ESRS E1 or explicitly scoped out to avoid gaps. 12.Provide an interoperability mapping showing, datapoint by datapoint, how ESRS requirements correspond to IFRS S1/S2. 13.Where ESRS includes EU-specific concepts (e.g. double materiality), clarify how these complement rather than contradict ISSB.			
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree				
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	22.ESRS2	Comments on deleted datapoints in ESRS 2	I disagree	We acknowledge and welcome the improved structuring and consolidation of the ESRS requirements. The clearer separation and grouping of datapoints, especially the removal of voluntary datapoints and the streamlining of narrative PAT disclosures, enhances the usability of the standards. However, we would like to emphasise that the reduction in the number of datapoints does not necessarily translate into a proportional reduction in the substantive reporting scope or effort. In our view, the overall scope and complexity of the disclosures remain largely unchanged. The deletion of datapoints primarily affects how requirements are presented, not what is required. This means that preparers will still need to collect and disclose a substantial amount of data, and the core reporting obligations are largely preserved. The deletion of duplicated datapoints does not represent a reduction in effort. Based on the Exposure Draft, we do not expect a significantly reduced reporting volume under the amended ESRS. Instead, the changes may help reduce effort in data collection, documentation, and coordination with auditors. For example, the introduced options for burden reliefs may simplify internal discussions and reduce the need to justify the omission of non-material items. It is important that this distinction is clearly communicated: while the number of datapoints has decreased, the underlying disclosure obligations remain intact. This will help manage expectations and avoid misinterpretations regarding the actual simplification impact of the amendments. Moreover, we do have strong concerns regarding the new mandatory disclosure requirements that have been introduced and would request deleting them all to fulfill the purpose of the revision of the ESRS.

Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	We strongly disagree with the introduction of new mandatory datapoints that have not been proven necessary. Adding untested requirements at this critical stage poses a significant liability to the strength, coherence, and successful implementation of the CSRD. It contradicts the simplification mandate and risks undermining reliable sustainability reporting. We do not agree with the decision to make "Nature of incidents" and "Number of incidents" within ESRS G1 paragraph 14 (confirmed incidents of corruption and bribery) mandatory. Firstly, making additional quantitative datapoints mandatory will increase burdens. Quantitative data collection requires IT development or manual reporting, which are costly and time consuming. Secondly, the "may" provision for such sensitive data points allowed for necessary discretion. The specific context of each incident, might not be adequately conveyed by a simple numerical count or a brief description. The focus should be on the effectiveness of management systems in preventing and addressing corruption, not a potentially reductive tally of past failings. G1 Training datapoint will add complexity as companies evaluate the risk exposure of functions individually and then derive training needs from that. In cross-functional training settings it is close to impossible to derive that information. This data point should not be made mandatory. For G1 paragraph 14, it's unclear how materiality should be assessed—by monetary value or other criteria? What incidents need reporting (e.g., court decisions)? This datapoint should also be deleted.			
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	We strongly disagree with introducing new mandatory datapoints that have not been comprehensively tested by "Wave 1" companies. Adding untested requirements at this stage threatens the strength, coherence, and successful implementation of the CSRD. We particularly object to ESRS E2-4, which is unworkable, unmeasurable, and unauditable: 1.Beyond company control – secondary microplastics occur post-consumer (UV radiation, abrasion, degradation), outside company influence. 2.Impossible data collection – no methodologies exist to reliably estimate how many products enter the environment or the volume of secondary plastic releases. 3.Auditability concerns – without standardised methods, reported figures would be speculative and unverifiable, undermining audit credibility. Furthermore, new concepts intended as reliefs—such as "fair representation," "Gross vs Net," or amending base years after acquisitions—risk adding complexity and burden without addressing these datapoints. Other new requirements that should be eliminated include: •ESRS E5-4 para. 15(e): % of sustainably sourced materials by weight. •ESRS E1-2 para. 19: introduction of "spatial resolution." •ESRS E1-3 para. 21(c): ability to adapt strategy and business model to climate change over time. •ESRS E1-5 para. 24(c): stricter provisions on financial resources for climate actions. •ESRS E1 AR 26: new disaggregation for CO2 emissions. •ESRS G1-2 para. 10(c): extension of training to "business conduct" beyond corruption and bribery.			
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We welcome the explicit inclusion of the fair presentation principle in the ESRS, as it reinforces the goal of supporting relevant, decision-useful reporting rather than checklist compliance. It should be read alongside ESRS 1 Par. 21a to ensure only material information is reported. Both fair presentation and materiality assessment should focus on the usefulness of information for intended users. By emphasising fair presentation, the ESRS encourages preparers to exercise judgment, prioritising disclosures that enhance transparency and accountability. This reduces unnecessary reporting, especially when omitting non-material datapoints. However, challenges remain. The concept requires a precise definition to avoid subjectivity and minimise audit burden. Without clear guidance, it risks undermining the DMA's rigour. Past experience with similar notions (e.g. représentation fidèle in audit standards) shows auditors may use vague terms to challenge sound DMA conclusions, creating subjective disputes on materiality. Clear guidance on how companies can demonstrate "fair presentation" to auditors would be valuable. Ambiguity could also pressure companies to disclose voluntary datapoints ("may disclose"), which auditors may then treat as mandatory for fair presentation—contradicting materiality-based reporting. Finally, fair presentation may increase Board accountability for the Sustainability Statement, requiring assurance not only of compliance but also of whether information is "fair" to all stakeholders. While established in financial reporting, its boundaries in sustainability remain unclear, creating a grey area that could lead to litigation if stakeholders dispute adequacy.			
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We acknowledge the challenges faced by financial institutions in setting absolute climate reduction targets. Much of the GHG accounting for FIs is spend-based, meaning increased financing can lead to higher reported absolute emissions, creating both a disincentive and a practical hurdle for target-setting. Nevertheless, absolute emission targets are essential for meeting global climate agreements. Relying only on intensity targets can obscure overall emissions increases as business expands. Financial institutions play a key role in driving absolute reductions in the real economy. As such, rather than viewing this as an exception, the focus should be on developing more robust and refined methodologies for FIs to measure and report absolute financed emissions, ensuring meaningful disclosures that align with global decarbonization goals.

Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	Some of our members disagree with the assertion that the change to the threshold for country-by-country disclosure in ESRS S1-5 and S1-7 will result in a limited burden due to the easy accessibility of information. While the intent to gather more granular data is understandable, this change will, in many cases, significantly increase both the reporting requirements and, crucially, the audit scope. Additionally, this extra level of detail may not always be relevant. The current disclosure let emerge the most strategic countries in terms of business or production which may differ from those with the highest headcount. Shifting from a "50 employees and 10% of total headcount" threshold to reporting for the "top 10 largest countries by employee headcount (if >50 employees)" will expand the number of countries for which many multinational companies must disaggregate data. Each additional country introduces distinct challenges in data collection. More importantly, this expanded reporting directly increases the audit scope. Sustainability reporting, especially social data like employee characteristics and collective bargaining, requires thorough verification. Gathering and validating this data across multiple jurisdictions, each with its own labor laws, data systems, and cultural differences, is far from "easily accessible." It involves understanding local HR systems, ensuring data consistency, and verifying compliance with country-specific regulations—an intricate process requiring significant auditor resources and time. Thus, the claim of limited burden is misleading. This change will add to the complexities and costs of both preparing and auditing sustainability statements, potentially slowing the assurance process and placing a substantial new burden on companies and auditors. We strongly suggest the inclusion of an additional option to avoid additional increases, to only mandate disclosure until the first of either threshold is hit. So, either 10% or the top 10 – whichever causes least burden.			
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	We recognise the importance of ensuring adequate wages globally but have serious concerns with the proposed benchmark hierarchy for non-EU wages in ESRS S1 AR 22. Placing living wage datasets as a "last resort" undermines comparability. It allows companies to report against statutory minimum wages, which may be insufficient, producing inconsistent and non-comparable data and limiting stakeholders' ability to assess social impact. We propose revised wording for AR 22, para. 32: for reporting outside the EEA, the first step should require an "adequate minimum wage" rather than a "statutory minimum wage," aligned with Directive (EU) 2022/2041. Without this, comparability will be lost as some companies report on "minimum" and others on "adequate" wages. A single authoritative reference is essential. Allowing companies to select different providers risks inconsistent disclosures. A common database of adequate wages across jurisdictions would ensure comparability and reduce company burden in determining adequacy. We also caution that the requirement for wages to be "periodically reviewed/adjusted every two years and take into account ILO principles" could create excessive workload. As the indicator covers the entire workforce, assessments would be required in all countries of operation. For firms active across multiple sectors, numerous collective agreements would also need review, potentially resulting in hundreds of checks.			
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	Yes, we should always consider the importance of feasibility and coherence in reporting according to different legislations. As such, removing some of the SFDR datapoints is clearly appropriate, the ESRS simplification will need to better co-ordinate with the required three yearly review of the SFDR.			
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	AR 26 should be reviewed to provide more practical and effective guidance. The current text does not sufficiently acknowledge the difficulty of setting standalone biodiversity targets or the interconnected nature of environmental issues. The revised guidance should explicitly allow companies to use cross-referencing, in order to explain how their existing or new targets under other the other topical environmental standards also address the drivers of biodiversity loss. This clarification is vital for two reasons: 1. Integrated management: Biodiversity loss is not an isolated issue. It is driven by factors like climate change, water use, and pollution. Allowing this cross-referencing enables companies to report on their environmental strategy in a holistic and integrated way, reflecting how these issues are managed internally. 2. Reporting efficiency: It avoids the need for companies to create separate, and potentially less meaningful, biodiversity-specific targets when their existing environmental objectives already contribute significantly to mitigating biodiversity impacts. This makes reporting more efficient and focused on substantive actions rather than a check-the-box exercise. This approach would make the guidance more pragmatic, reduce reporting burdens, and allow companies to provide a clearer narrative on their most significant contributions to protecting nature. Some member would not deem it appropriate to reinsert the AR 26, considering that the methodologies for defining biodiversity targets are not yet well defined and are often site-specific. Furthermore, in the absence of a mandatory biodiversity standard, we do not see the opportunity to refer to specific frameworks (which are still voluntary). The risk would be that each company could adapt these standards to its own needs by making reporting incomparable

Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	No, we do not agree with deleting the voluntary datapoint. Instead, the adjusted gender pay gap should be mandatory, while the unadjusted gap should be voluntary or removed. 1.From 2027, the EU Pay Transparency Directive (2023/970) will require use of the adjusted pay gap. ESRS must align with EU law to ensure clarity and consistent datasets for stakeholders. 2.The adjusted pay gap is the only metric that reflects the principle of "equal pay for equal work or work of equal value." By accounting for factors such as role, seniority, location, and performance, it offers a precise, actionable measure of pay equity, enabling identification and correction of real disparities. The unadjusted gap, by contrast, conflates pay equity with gender representation, reflecting structural imbalances rather than discriminatory pay practices. Making it the sole mandatory metric risks misinforming stakeholders and unfairly penalising companies based on sector or workforce structure rather than actual pay policies. It should remain voluntary, as a complementary disclosure on representation. Finally, we regret the missed opportunity to improve clarity on what types of remuneration should be included in the calculation. Companies currently apply divergent definitions, resulting in non-comparable disclosures.			
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree	We support the removal of the datapoint on "average time to pay an invoice," as it offered limited insights and was difficult to interpret usefully. A focus on PATs better aligns with fair presentation. The previous approach, framing SMEs as risky suppliers, added unnecessary barriers by introducing size-based vetting. However, we also question the relevance and practicality of the remaining datapoint on percentage of payments aligned with standard terms (former ESRS G1-6 §33b). This metric is difficult to consolidate, particularly in international contexts with no legal standard, and provides little meaningful insight into supplier relationships. The percentage of payments under "standard terms" is hard to interpret and yields no useful conclusions on supplier impacts. Categorisation of suppliers, such as SMEs, remains problematic. Financial systems rarely track supplier size, and implementation would require disproportionate effort. Similarly, reporting the number of legal proceedings due to late payments (former ESRS G1-6 §33c) is not decision-useful without qualitative context (e.g. reasons for delays or thresholds of materiality). For significant cases, this is already covered in legal risk reporting and need not be duplicated in sustainability reports. Finally, while qualitative information on payment practices can demonstrate SME protection, the calculation of G1-6 metrics is overly complex for international groups with diverse payment standards. Overall, deletion of the datapoint appears the most viable option.			
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	The cross-cutting standard ESRS 1 remains critical, particularly regarding fair presentation, materiality, and provisions on gross versus net reporting. However, several concerns remain: •Aggregation/disaggregation: The disclosure requirement is highly subjective, risking interpretative challenges and disagreements with auditors. •Reporting boundaries: Scope of consolidation remains unclear. •Deleted sub-sub-topics: Attaching them in brackets after sub-topics increases reporting burden, as companies must still consider them in the DMA, making materiality harder to apply. •AR24: Could require DMAs at subsidiary level. We recommend deleting AR24 or clarifying that IROs need only be assessed at group level, unless subsidiaries have significantly different business models. •Positive impacts: The restriction to "impacts that derive from business activities, products and services" could prevent reporting of positive workforce impacts. •Para. 45(b): The requirement to use "reasonable and supportable evidence" to estimate severity/likelihood of impacts and financial effects will likely increase documentation burdens per IRO. •Paras. 51/52 and AR22/23: Could be interpreted as requiring materiality assessments deeper than site level. •Value chain assessments: Upstream/downstream materiality remains subjective and unclear. •Referencing existing reports: We recommend allowing references to legally mandated documents (e.g. Corporate Governance or Remuneration Reports) even with different assurance levels, reducing redundancy and avoiding inconsistencies.			
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	Regarding ESRS 2, we recommend eliminating the disclosure on anticipated financial effects. Preparers are not equipped to provide reliable forward-looking financial data, and such disclosures may involve commercially sensitive information. The current approach risks overburdening companies and producing low-quality data. Additional concerns that increase reporting burden include: •Site IRO matching (AR 22): Will significantly increase workload, lengthen reports, and reduce readability. •Datapoint on sustainability goals for product/service groups (40a)i): Adds complexity without clarity. •Banned products datapoint: Definition remains unclear and should be deleted. •AR24: Although it allows IROs to be linked with policies/actions in topic-specific chapters, it still mandates duplicative descriptions in ESRS 2, offering no real relief. •Anticipated resources for actions: Disclosures on economic resources distort relevance, add detail, and misrepresent sustainability priorities; this requirement should be eliminated. •Targets: The expectation for both measurable and qualitative targets is contradictory; further guidance is needed. •DR 41(b): Requires disclosure of environmental conditions and characteristics of the area where impacts occur. This risks excessively granular reporting and is inapplicable to climate change (E1), since emissions are transboundary. The terms "environmental conditions" and "characteristics of the area" lack clarity and should be reconsidered. Overall, these provisions increase complexity without improving decision-useful reporting.

I disagree	Several issues should be highlighted: •Pollutant thresholds: Now less clear than before. •Local permits: Expanding disclosures to include local-level environmental permits broadens scope excessively and prevents standardisation. •Water treatment plants: Counting transfers to these facilities as pollution is illogical, since they are service providers for cleaning water. •Secondary microplastics: The new datapoint risks unreliable, inconsistent data and places a disproportionate burden on companies. •Primary microplastics: No clear alignment between REACH-SPM and ESRS methodologies, risking confusion. •Role differentiation: The draft introduces different obligations for manufacturers/importers and users. Many companies under REACH hold multiple roles for specific substances, but do not report the same flow twice. ESRS wording could force duplicate reporting, adding complexity and contradicting the legislator's intention to relieve non-chemical companies—while increasing burdens for chemical companies. •SVHC/SoC disclosures: Introduced without harmonised thresholds. While SVHC has a 0.1% limit in articles, no uniform rule exists for mixtures or SoC. Outside the EU, such data are not consistently available. Collecting and harmonising would require major effort. We recommend deleting this datapoint and relying on ECHA data for EU activities. •Impurities: It is unclear whether SVHC/SoC present only as impurities must be disclosed. Since impurities are not intentionally manufactured, such reporting may lack stakeholder value.

I disagree	ESRS E4 raises significant concerns due to the level of detail required and the potential for excessive disaggregation. We do not agree with the approach for reporting at the site level for biodiversity. These requirements risk imposing disproportionate reporting efforts, especially in the case of biodiversity, where it remains unclear how to prioritize which sites to disclose. In particular, the newly introduced Application Requirement AR 8 in ESRS E4 would effectively require companies to conduct ad hoc analyses for hundreds of sites—specifically those not overlapping with biodiversity-sensitive areas—in order to identify a science-based buffer zone tailored to the ecological specificities of each site. Such a requirement represents an operational and documentation burden that is entirely disproportionate to the stated goal of simplification.			
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	33.E_5.	ESRS E5:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	The draft introduces several issues that create additional challenges for companies: •New metrics (e.g. amended waste requirements) impose additional reporting burdens and are not aligned with other EU legislation (EU Waste Framework Directive). •The introduction of new terms such as "strategic" and "key" adds significant uncertainty due to their lack of clarity. •There is an increased burden in disclosing information related to radioactive waste. •Glossary terms are often defined in a circular manner. For example, the circular material use rate is described as the ratio of circular use of materials to overall material use, yet the key definition of what qualifies as "circular" is omitted. •Waste definitions and categories based on European standards are expected to be applied globally, which is unrealistic and not useful in a broader context. •There is inconsistency between EU Directive 2008/98/EC and the ESRS regarding whether energy recovery (thermal incineration) should be classified as recovery or not.			
Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	33.S_1.	ESRS S1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	For social standards the removal of the term "severe" from the disclosure requirements for human rights incidents across all social standards is particularly concerning. Without a clear limitation to the most serious cases, companies may be required to report even minor or less relevant incidents. This broad scope risks undermining the materiality of disclosures and contradicts the objective of simplification. Maintaining a focus on severe human rights incidents is essential to ensure that reporting remains meaningful, proportionate, and aligned with the principles of relevance and efficiency. Additionally, the inclusion of contractors in own workforce increases the reporting burden. We think that non-employee related disclosures should be eliminated or made voluntary. Additionally, health and safety related metrics and definitions in the glossary should be reviewed as there are still terms which are not clearly defined and/or consistently used on this topic.

Survey	European Round Table for Industry	Business association (other than association of financial institution)	Belgium	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		The glossary still requires significant review to incorporate new terms. It is critical for both preparers and auditors, yet contains errors (e.g., "materiality consists of financial materiality and materiality" in double materiality). Specific comments include: •ESRS 1, para. 11: The requirement for sector comparability is challenging due to business model variations. This may create issues for auditors. We suggest removing this or changing it to 'may' with NMIG as a minimum. •ESRS 1, para. 84(c): We disagree with this provision which mandates organizational change. Adjusting baseline years should be determined by company policies, not mandated. For example, many companies achieve target progress by reshaping portfolios. Para. 72's relief, requiring inclusion in the "subsequent" period, is impractical. •ESRS 1, para. 84(c) wording: This specific language is not found in IFRS S2, although it originates from the GHG Protocol. •ESRS 1, para. 70: We disagree with the revised lease treatment in ESRS 1, as it creates challenges in data collection and traceability. We recommend basing reporting on operational control, not legal ownership, to better reflect impact management and reduce reporting burdens. Further clarification on leased assets in paragraph 70 is needed. •We also want to flag references to the 1.5°C target in the E1 transition plan provisions, particularly the long-term temperature goals of the Paris Agreement. While this is a Level 1 issue, we believe it warrants further review. •Value Chain: Assessing value chain impacts and data collection beyond Tier 1 remains difficult. Quantitative evaluation is often complex and insignificant, so reporting material facts when known is more practical than detailed assessments.			
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I disagree	We support strengthened emphasis on materiality of information in ESRS 1. However, we have concerns regarding paragraph 21(b). First, it will be hardly possible for undertakings to dismiss information as not material as it can never be verified that nobody requires this information. Consequently, companies may feel compelled to include information that they would not consider material otherwise. Second, it introduces differences to IFRS, diminishing interoperability. To enhance practicability and interoperability with IFRS, we propose either deleting paragraph 21(b) entirely; or amending it as follows: "it could reasonably be expected to be necessary for users of general purpose sustainability statements to understand the undertaking's material impacts and how it identifies and manages them." Regarding "Materiality of information as a general filter for reported information" it should be clarified that it applies to all DR / AR and single datapoints; all requirements throughout the standards should be worded in a way that they are subject to it (e.g. interaction of ESRS 1 3.5. and 3.3.1). Identical wording in paragraph 21 and paragraph 37 risks conflating the concepts of materiality of information and financial materiality. For conceptual clarity, they should be differentiated and duplications avoided. We welcome the addition in ESRS 1 AR 16 as it is a promising move toward harmonizing financial and sustainability reporting requirements. Financial reporting, particularly in financial statements, often presents financial risks on a net basis, reflecting their economic net effects. Allowing net risk disclosure in sustainability reporting can therefore enhance consistency with financial reporting. It also aligns with ISSB standards, which do not mandate a net or gross perspective. We propose integrating internal opportunity management into the provision as well to ensure consistency with established opportunity management and reporting practices. This would contribute to minimizing reporting burden and strengthen consistency across financial and sustainability disclosures.

Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	Overall, we would like to highlight that this newly introduced guidance introduces three additional assessment layers for the assessment of actual and potential impacts which significantly increases effort and penalizes wave 1 companies that have already implemented a sophisticated materiality assessment process, methodology, and governance setup. This clearly goes against the European Commission mandate of simplification. 1. Regarding ESRS 1 – 34: In practice, this distinction of actual negative impacts before and after mitigation or remediation measures is highly complex and often difficult to operationalize, particularly when impacts evolve over time or when mitigation is embedded in ongoing processes. The current wording may lead to significant documentation burden and interpretive uncertainty, especially in audit contexts. 2. Regarding ESRS 1 - 35: We welcome the proposed reliefs regarding the double materiality assessment. However, the requirement to report potential impacts subject to "significant ongoing mitigation or prevention efforts" in its current form leaves interpretive uncertainty that may lead to disproportionate complexity in application as well as difficulties in audit contexts. 3. Regarding Appendix C, There are several issues with its interpretation. The definition of occurrence within the reporting year is unclear and not meaningful, as typically impacts persist several reporting periods and mitigation actions are usually already in place for several years. Separating the assessment prior to and after mitigation is in practice very difficult. Moreover, it is questionable in how far reporting on impacts that are already well mitigated will be of use for users of the sustainability report. Hende, we propose to delete detailed guidance in ESRS 1 paragraphs 34-35 and Appendix C. We suggest an ongoing dialogue on this issue and to give market practice time to evolve as this will address currently existing divergence in practice.			
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	Regarding ESRS 1 - 103.: In order to align the wording with the CSRD requirement, we strongly recommend replacing "sustainability statement" with "sustainability report" Regarding ESRS 1 - 108.: We welcome the proposed amendment to paragraph 108. However, it remains unclear whether the additional information included in the sustainability statement formally constitutes part of the audited content. We recommend clarifying whether under takings have the option to include or exclude such information from the audit scope, and how this decision should be documented or disclosed.			
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	While we generally agree with the implemented changes regarding the architecture and interaction between ESRS 2 and the topical standards, especially deleting most topical specifications to GOV, SBM, and IRO, some prescriptive disclosure requirements on PAT level have been introduced that we cannot support and that were not required in the current standards. These specifically pertain to GDR-M, paragraph 41. Firstly, paragraph 41 (a) now requires, for each metric, information on data types and sources used as input to the calculation. While these disclosures are still subject to the concept of information materiality, providing information on data types and sources is not relevant for most metrics and certainly does not add additional value to users of sustainability statements. We therefore suggest deleting 'data types and sources used as input to the calculation' from the prescriptive requirements of the provision. Secondly, paragraph 41 (b) introduces new requirements for all environmental metrics regarding information on the specific environmental conditions and characteristics of the area where the impact is occurring. Such information is often not available, also is it near impossible to determine the area where the impact is occurring with precision – as such the required information would by highly judgmental, subject to significant uncertainties and therefore likely to not meet the criterion of faithful presentation. 41 (b) also creates additional requirements that were not present in set 1 by advocating such information for all environmental metrics, which also includes value chain metrics. We therefore suggest deleting subparagraph 41 (b) entirely.			
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I disagree	We support the objective of eliminating "may disclose" datapoints to enhance focus and reduce confusion. We also welcome the relocation of all mandatory disclosure requirements into the main body of the standards, along with the placement of application requirements directly below each relevant DR and Chapter in ESRS 1. We appreciate the efforts to improve language consistency, clarity, and conciseness. Nonetheless, we caution that changes to established terminology should be implemented with care. Many undertakings are already preparing or reporting under the original version of the ESRS, and terminology updates—even if well-intentioned—may introduce additional interpretation challenges or perceived reporting burdens if not clearly aligned with prior guidance. We also would like to highlight the following inconsistencies: • Usage of "material topics" vs. "material impacts, risks and opportunities": While ESRS 1 introduce a clarification that reporting undertakings shall report on material impacts, risks and opportunities but may choose to organize their reporting based on topic-level, several sections in the different documents use a wording that may suggest otherwise (e.g. ESRS 1-8: "[Draft] Amended ESRS 2 General disclosures establishes Disclosure Requirements (DRs) on the information that the undertaking shall provide for topics related to material impacts, risks and opportunities on the reporting areas of (i) governance, strategy, impact, risk and opportunity management, as well as (ii) policies, actions, targets and metrics.") The standards should overall be checked in this regard to ensure consistent wording. It should be ensured that throughout the standards, in all DRs only "material IROs" is used. • Adverse vs. negative impacts: it should be avoided to introduce different wordings for the same issue.			
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We welcome a strict and clear separation of mandatory and voluntary disclosure requirements, keeping in the standards all "shall" requirements and moving all "may" requirements to the NMIG. We also agree with EFRAG'S recommendation that the EC shall not include this content in the Delegated Act as it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. In this regard, it must be ensured that the NMIG does not introduce contradictory explanations in comparison with the ESRS.

Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	Overall, assessing achieved burden reliefs is difficult as several requirements were merged or differently organized instead of deleting them. We fully welcome the introduction of the "undue cost or effort" exemption, which offers much-needed flexibility for preparers facing disproportionate costs—particularly for complex data collection and metric calculations. We regret that relief for partial data coverage (ESRS 1 paragraph 91) explicitly excludes ESRS E1-8 (GHG emissions). GHG emissions accounting and calculation is the one metric area generally most subject to high measurement uncertainties, often unavailable and unreliable direct or estimated data, and high cost and effort requirements. As paragraph 91 is drafted, relief for metrics would not be possible for GHG emissions – as such full coverage would be required, irrespective of cost and effort considerations or the reliability of estimates. This creates a misguiding incentive for GHG emissions to achieve full data coverage with low-quality estimates, rather than prioritizing high-quality, verified data for management purposes, such as target setting. Using sector averages for low-quality data areas is simple, but investors need to differentiate companies to identify risks and oppor tunities. We therefore strongly recommend removing the exclusion of this concept for GHG emissions. "ESRS 2 AR 16 should explicitly state that it applies only to material risks and opportunities to ensure clarity and consistency with the materiality principle. Finally, the requirement of ESRS 1 paragraph 74 that sustainability reporting has to match financial reporting periods is unfeasible for investments, since investee data are only available after publication, inevitably creating a time lag. Hence "including for the calculation of metrics" should be deleted or the phrase "where possible/feasible" should be added as for emission calculation, usually e.g. extrapolations or prior year data have to be used.			
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	Unfortunately, the provision of ESRS 1 paragraph 92 is presented as a relief, however seems to establish disclosure requirements on joint operations over which the undertaking has operational control for [Draft] Amended ESRS E2 Pollution, [Draft] Amended ESRS E3 Water, [Draft] Amended ESRS E4 Biodiversity and ecosystems and [Draft] Amended ESRS E5 Resource use and circular economy, which contradicts the defined consolidation scope. Regarding ESRS E1, the comment in the Log of Amendments (ESRS 1) raises concerns regarding deviations to IFRS S2, although IFRS S2 does not prescribe an operational control approach ("This relief respond to concerns about data availability. For ESRS E1 this is not applicable as this would introduce a difference with IFRS S2"). Further explanation is therefore requested. For further comments on ESRS 1 paragraph 91, please note our answer on Question 17.			
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	We support the simplification of disclosure requirements for anticipated financial effects due to the complexity, uncertainty, and sensitivity of corresponding quantitative data. We would have preferred this topic to be introduced as a phase-in provision under the revised ESRS. As this has not been considered it results in significant additional effort for companies at this stage Option 1 raises several concerns, including high estimation uncertainty. Further, while option 1 is substantially aligned with the IFRS relief, it includes deviations that may lead to additional reporting burden and efforts for undertakings aiming to comply with both standards. If option 1 is implemented, we therefore suggest to fully align option 1 with the IFRS provisions, i.e. by: (1) deleting the specification that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Even though such a relief would also be applicable under IFRS, any difference in the wording of the provisions can create additional effort on the reporting undertaking's side. (2) including the provision that the undertaking may omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information. We cannot agree to the concern that the relief is not compatible with entities that are expected to be in scope of the amended ESRS. This judgement should be at the undertaking's discretion. Even though larger undertakings can be expected to have the necessary skills, capabilities, and resources, there may be cases in practice where such preconditions are not existent, given the complexity and lack of maturity for related disclosures. Choosing from the two options as they are provided, we recommend implementing Option 2, which focuses on qualitative disclosures and allows voluntary quantification.			
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	We appreciate the effort to simplify the disclosure requirements on Anticipated Financial Effects, particularly through the reduction in scope from the previous E1-9. However, we believe that further adjustments are needed to fully balance reporting effort with users' needs. Firstly, in line with the recommendation to establish option 2 for disclosures on anticipated effects (ESRS 2 paragraph 23), the DR and AR E1-11 should be classified as voluntary "may" provisions. Regarding paragraph 40 and 41: If option 1 is selected (ESRS 2 paragraph 23) we strongly recommend aligning the requirement with the provision on the DMA approach. If based on the specified financial perspective mitigation actions can be considered, this provision should also be aligned with that approach: Delete "before considering climate change mitigation actions". In view of paragraph 40 (b), the level of detail required for specifying the location is challenging to determine, and the term "key assets" allows for varying interpretations, potentially leading to ambiguity and inconsistency across the industry. With regard to 41 (c), while narrowing the scope to encompass only "real estate used as loan collaterals" is generally a positive direction, disclosing a breakdown of any within these assets by energy-efficiency class would not always provide material information. Regarding paragraph 42: • In case option 1 is selected (ESRS 2 paragraph 23): The wording of the DR "amount and percentage of assets or revenue derived from its business activities" suggests that information related to current but not anticipated financial effects is to be provided. We assume this as misleading and suggest deleting this DR. •Due to business sensitivity, the quantification of anticipated financial effects should be limited to risks remaining after mitigation actions and should not include a quantification of potential opportunities. •Moreover, the requirements should be aligned with other regulation, particularly Solvency II and EBA.

Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We appreciate EFRAG's efforts to enhance interoperability with IFRS S1 and S2. Still, there remain critical areas with deviations: Regarding IFRS S1, we see interoperability issues with the amended ESRS implementation of information materiality, cf. our response to question 11. Regarding IFRS S2, the requirements concerning financial and operational control (E1 AR 18 – AR 20) diverge significantly from IFRS S2, where undertakings have the flexibility to choose their preferred approach. This dual approach may result in inconsistencies in reporting and interpretation. Due to the features of the business model and prudential requirements, insurers are often forced to act as majority investors, which leads to the existence of financial control without being able to exercise operational control over related sustainability matters. Therefore, the requirements for (re)insurance undertakings should be specified to be based on the principle of actual control over investments. If this proves unfeasible, the require ment should be fully aligned with IFRS S2 or the current wording of the ESRS should be maintained. Further deviations to IFRS 2 related to the requirements around anticipated financial effects are still a concern, cf. our response to question 20. The inclusion of anticipated financial effects considerations to perform the resilience analysis (E1 AR 8 for par. 20) is another critical area that does not align with IFRS S2. It was not included in the original ESRS, introduces complexity and additional burdens for undertakings. Lastly, ESRS require companies to report on Energy consumption and mix metrics, while IFRS S2 does not. In conclusion, while the proposed amendments represent significant progress towards interoperability, addressing these critical areas will be essential to achieving a more consistent and aligned framework with IFRS standards. Further dialogue and refinement are needed to ensure that the simplification objectives do not compromise the integrity and comparability of sustainability reporting.			
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	We support the systematic reduction in mandatory and voluntary datapoints as a necessary and proportionate response to concerns around reporting complexity, excessive granularity, and the potential administrative burden for preparers. We welcome the prioritization of quantitative datapoints over detailed narrative explanations and the clear distinction between mandatory and voluntary requirements. However, we observe that some paragraphs in the ESRS text remain unclear or primarily descriptive, such as ESRS 1 paragraph 27, AR 16 related to paragraph 42, and AR 20 related to paragraph 49. Likewise, expressions like "is useful information" (e.g., ESRS 2, AR 32 to paragraph 37) or "is a possible aspect to cover" (e.g., AR 33 to paragraph 37) continue to appear. These formulations do not fully support the goal of simplifying the standards and may lead to uncertainty regarding the actual requirements for undertakings. Additionally, even the conceptual framework concerning "topics to be reported on" or "material IROs" could benefit from further clarification or streamlining. Finally, it is important to note that a 57% reduction in mandatory datapoint will not necessarily translate into a proportional decrease in report length or reporting burden. While we welcome the notable reductions in certain topical standards, significant concerns remain regarding newly introduced concepts and methodologies that may, in fact, increase the reporting effort.			
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	As a general principle, we oppose the introduction of new mandatory datapoints as part of EFRAG's simplification of the ESRS. The revised ESRS should focus on simplification, and converting 'may' datapoints into 'shall' requirements contradicts the European Commission's mandate. This being said, we can agree with the changes done to the requirements in E3 (water withdrawal and water discharges) and E4 (Transition plan). However, we strongly oppose the introduction of new metrics in G1, since this clearly goes against the mandate of simplification and reduction of reporting burden.			
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	We oppose the introduction of new mandatory datapoints. The revised ESRS should prioritize simplification, and adding new mandatory requirements runs counter the European Commission's mandate. If these datapoints are retained, we recommend the following: Regarding ESRS 2 BP 1, while we appreciate the streamlined 'comply or explain' approach to only state deviations from the ESRS 1 General requirements provisions, we would find it useful to provide that information in the relevant context and to not list all the details in the first section. We do not agree with the new provisions introduced by paragraph 5, as it creates duplicated information throughout the Sustainability Statement. For example, if the reporting undertaking makes use of the relief for metrics with a partial scope (ESRS 1 paragraph 91),or changes sustainability information due to a restatement need or error correction (ESRS 1 paragraph 95-97), sufficient transparency will be provided for the metrics concerned, i.e. by providing contextual information, disclosing the partial scope, and correcting/restating the previous reporting period figures. Following the new paragraph 5 and stating that the reporting undertaking has applied these "provisions" just creates duplicates and redundant information not helpful for readers and users. We therefore suggest limiting the disclosures required by paragraph 5 to those that do not create duplicated/redundant information. Otherwise, mandating such disclosure may introduce unnecessary complexity and reporting burden without significantly improving transparency. We recommend confirming that these detailed requirements are not intended to change current practice but simply formalize existing flexibility. New DR in E2-4 and E5-4 are not applicable for insurance undertakings, therefore, no objections. New DR in E5- 5 is meaningful and we agree.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We welcome that fair presentation has been explicitly included in the ESRS which also contributes to alignment with the ISSB standards and appreciate the aim to simplify reporting and provide more flexibility. However, as it is currently drafted there is a high risk for the fair presentation principle to even aggravate the reporting burden instead simplifying reporting. The current wording would result in an additional compliance approach due to additional auditor scrutiny. Given that the (amended) ESRS are written as a compliance framework, fair presentation may require additional disclosures that are not required by the individual requirements of the ESRS by reference to a "view" of fairly presenting impacts, risks, and opportunities. This can lead to additional requirements with respect to entity-specifics, transitional provisions, or the NMIG. IFRS and ESRS have fundamental differences in this regard. Under IFRS S1, fair presentation is about sharing relevant information on sustainability risks and opportunities that impact an entity's financial prospects, focusing on cash flows and capital costs. This is directly linked to financial statements. ESRS, however, require fair presentation not only on risks and opportunities but also of all material impacts (and effects of risks and opportunities beyond the direct implications on the financial statements), which is almost impossible to assess, let alone prove with sufficient evidence to the auditor. Given these differences, the wording needs careful adjustment.To ensure that the principle supports a more management-driven, judgment-based reporting approach, we recommend clarifying its context in ESRS 1, paragraph 17 as follows: „Fair presentation gives undertakings flexibility in complying with reporting requirements as it allows deviations from a given requirement in consider ation of the double materiality approach and materiality of information as a general filter for reported information as well as additional information in the context of reporting on entity-specific topics"			
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Overall, the need to disclose absolute values is understood. However, disclosure of absolute values alongside GHG emissions intensity targets presents significant challenges for financial institution due to two main reasons: 1. Fail to comply with qualitative characteristic of information: Estimating absolute targets involves assumptions about portfolio composition, production capacity, market shares, and emission intensity, leading to unreliable results and unmeaningful disclosures. On top of that, absolute targets may capture total impact but fail to consider business growth, potentially creating an unlevel playing field if exceptions are made only for financial institutions. 2. Key role to support the transition: The approach adopted by financial institutions makes it possible to reconcile the two objectives by distinguishing between financing oriented towards fossil fuel sectors which requires gradual de-commissioning and supporting sectors currently reliant on fossil fuels whose challenge is to invest in their technological transformation and thus reduce this dependence (e.g. electrification of vehicles). By setting GHG emissions intensity targets, financial institutions can finance companies committed to decarbonization without sectoral limits imposed by absolute targets, aligning with their role in supporting substantial investment flows needed for transitions. The current wording of the paragraph suggests that one must have an absolute target expressed in intensity terms, rather than allowing for an intensity target that is supported by absolute values. One has to read AR 12 to understand that targets may also be expressed in intensity values. We strongly recommend amending the wording as follows: "(a) GHG emission reduction targets for Scope 1, 2 and 3, either separately or combined…" to clarify this.			
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	We support efforts to improve the availability and comparability of country-level social data where it is relevant for users. However, the change in definition/threshold of significant headcount for the metrics regarding characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1) leads to additional effort as it triggers changes in methodology and additional disclosure requirements. In particular, with respect to S1-5 and S1-7 this additional effort to collect the relevant data is considerable. We also disagree with the new threshold for country-by-country disclosure as it significantly increases the burden of global data collection and the number of data points to be disclosed. The burden of global data collection is significantly increased when metrics on employees are collected primarily by operating entity rather than by country, which is the case in many companies for internal steering purposes. And an increased number of data points to be disclosed reduces the readability and conciseness of the final Sustainability Statement. Both aspects contradict the aim of the Omnibus initiative to simplify it and therefore, we disagree with the new threshold.			
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	We support the objective of promoting fair and transparent wage practices and welcome the reference to international frameworks. However, amend ments do not achieve simplification; instead, considerable additional effort is expected as the requirements regarding permissible sources (e.g. for living wage estimates in countries outside the EU) have been changed requiring review whether or not previously used sources can still be used. From a cost-benefit perspective, the DR on adequate wages (i.e. ESRS S1 paragraph 32 and related AR) appears to be inefficient for the insurance industry, as the substantial effort required to verify adequate wages yielded results indicating that fair compensation is not a significant concern in this sector. As a result, the disclosure should be limited to defined sectors, as follows: "For defined critical sectors, percentage of employees paid below an adequate wage by country". Besides this, we disagree with the requirements of new AR 22 (b), in particular: • the addition in AR 22 (b) i) regarding statutory minimum wage that it is "periodically reviewed/adjusted every two years and takes into account the ILO wage setting principles" and • the newly introduced last sentence of AR 22 (b) that the adequate wage benchmarks outside the EU "should take into account both needs of workers and their families, as well as economic factors, as stated in the ILO Minimum Wage Fixing Convention No.131". We contend that it is not the responsibility of individual undertakings to ensure this, and a list of applicable adequate wages should be provided by EFRAG.

Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	We support the objective of maintaining alignment between ESRS and SFDR frameworks. Generally, PAI indicators should remain as companies have integrated or plan to integrate most PAI indicators in their investment decision making processes or are relevant for their engagement strategies. PAIs are better understood and known by customers than other elements of disclosure. Retail customers well understand the PAI themes on GHG, biodiversity, waste, water and social and employee matters. Overall, supporting information needs of financial market participants under Regulation (EU) 2019/2088 (SFDR) is a key objective of CSRD/ESRS reporting. A dynamic and consistent link between ESRS and SFDR PAI indicators is essential, especially when considering the planned revision of the SFDR in the Commission work program. PAI reporting under SFDR at entity level should be removed by group aggregated disclosure, i.e. upon (group aggregate) PAI disclosure under CSRD, the Art. 4 SFDR requirement for entity level disclosure should be deemed as complied with. We disagree with the current formulation of ESRS S1paragraph 46(b), S2 paragraph 19, S3 paragraph 19 and S4 paragraph 15 for the following reasons: • Amended wording replaces "number of severe human rights [incidents/issues]" with "number of human rights [incidents/issues]." This broadens the scope from substantiated, high-impact cases to potentially all recorded incidents, regardless of severity. It also undermines alignment with SFDR PAI Indicator #14, which refers to "severe human rights issues and incidents". We recommend reintroducing the qualifier "severe" to ensure conceptual clarity and consistency. • ESRS S2, S3 and S4 are not classified as metric-containing standards (ESRS 2 AR 37). However, the phrase "disclose these" in DR S2-3 paragraph 19, DR S3-3 paragraph 19 and DR S4-3 paragraph 15 implies quantitative disclosure, creating confusion about whether these should be treated as metrics and how they fit into the overall metrics and targets framework.			
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	We support the review of AR 26 in Amended ESRS E4, insofar as it contributes to the overall simplification of the standard and maintains a degree of methodological guidance that can assist undertakings in defining relevant biodiversity and ecosystem-related targets. This being said, the current target-setting guidance in E4 AR 26 is primarily oriented towards the real economy, focusing on direct actions such as habitat restoration or number of projects/sites, which are applicable to production sectors. However, for financial institutions, biodiversity targets are rather connected to portfolio alignment, sector inclusion, engagement targets, or impact reduction based on metrics disclosed by investees, empha sizing the shift of capital flows rather than direct operational control. Therefore, any guidance included in a revised AR 26 on target setting will struggle to capture the diverse requirements across sectors. Given this disparity, we suggest not including specific target guidance in the ESRS, allowing flexibility for each sector to define targets that are relevant to their unique roles and impacts on biodiversity and ecosystems.			
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree	We welcome the deletion of this voluntary data point.			
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree	We welcome the inclusion of paragraph 33(b) in the revised ESRS G1, which introduces a clear requirement to disclose standard payment terms by supplier category, including SMEs, and the percentage of payments aligned with those terms.			
Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Regarding ESRS 1 paragraph 59: In order to ensure a faithful presentation, the word "usually" in the first sentence should enable financial institutions to account for own operations in a way that suits their business model, i.e. financial and non-financial investments should be exempted. To enhance clarity, we suggest the following rewording: „ 59. In the case of group reporting, the reporting undertaking, depending on its business model, usually considers as part of its own operations: the assets and liabilities, income and expense of the parent undertaking and its subsidiaries, located in or outside the EU, as determined in accordance with the applicable accounting requirement…". We welcome the clarification in ESRS 1 paragraph 59 sentence 3 according to which the "undertaking may exclude from the sustainability reporting boundary a subsidiary that has been excluded from the scope of the consolidated financial statements due to its non-materiality from a financial perspective […]" as it reduces uncertainty and can significantly lower the burden of reporting. However, it should be clarified that the undertaking would not be expected to reassess every non-consolidated subsidiary regarding their non-materiality for sustainability. As the current wording can be interpreted as having to re-assess every non-material subsidiary to reach a conclusion whether there are or are not specific facts and circumstances regarding material IROs, a clarification is needed. ESRS 1 paragraph 70 should be revised to explicitly allow exceptions beyond leased as-sets, including fully consolidated assets solely held for investment purposes. It should be clarified in ESRS 1 chapter 5.3 that exceptions other than leased assets (ESRS 1 paragraph 70) and long-term employees benefit fund (ESRS 1 paragraph 71) are permissible if they can be reasoned and enable more accurate sustainability reporting.

Survey	Gesamtverband der Deutschen Versicherungswirtschaft e.V. (GDV)	Association of financial institutions	Germany	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Overall, consistency is needed in the use of terms "May" and "Shall", other terms like "can" should not be used. Regarding ESRS1: •Chapter 3 conflates 'topics' with 'IROs'. A reporting undertaking may have a single IRO in a broader topical area without the whole topic being material. Conflating both terms can increase reporting effort through additional auditor scrutiny. Therefore, more consistent and clearer segregation between 'topics' and 'IROs' is necessary. •In paragraph 25 clarification is necessary that financial materiality arises only from risks and opportunities, not from impact. •Paragraph 26 should acknowledge that undertakings may start their materiality assessment from either impact or financial perspective, de pending on existing processes. •Regarding paragraph 38: Clarification is needed if it is sufficient to reference the risk and opportunity report to meet the requirement of addressing materiality beyond consolidation scope, as this report typically also covers business relationships? •AR15 should be deleted as assessing forward-looking financial effects based on impacts is difficult to operationalize and contradicts the reliefs in AR16. •AR16 should include opportunities. •In chapter 3.5 clarification is needed that specifications described under 3.3.1 are to be read in conjunction with 3.5 to make clear that e.g. paragraph 31 only applies for impacts that the undertaking did not identify as material in the first step. •In paragraph 47, internal expert judgment should be recognized as a valid source of "reasonable and supportable information". •The wording in AR19 is ambiguous regarding necessary or expected usage of quantitative information or scoring. To ensure clarity and consistent application, we recommend revising the text as follows: "The use of quantitative information or quantitative scoring is not a prerequisite. A qualitative analysis may be sufficient for the undertaking to reasonably conclude that the impacts, risks and opportunities related to a given topic are material or not material."			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We support the use of reasonable and supportable information available without undue cost or effort (ESRS 2 paragraph 47 & chapter 7.3), as well as ESRS 1 paragraph 48 on materiality based on the business model while excluding peer analysis. We also welcome the recent simplifications to the ESRS, which represent a positive step forward. However, important coherence issues remain. The revised definition of materiality in paragraph 21 does not sufficiently simplify the DMA or provide clarity. It should more explicitly derive from what is material to users of financial and sustainability statements, enabling undertakings to apply a clear standard based on their specific situation, relevant financial reporting rules, or risk programmes. It is unclear how the top-down approach aligns with chapter 3.7 on "aggregation, disaggregation and group reporting." Preparers may no longer consistently apply the top-down approach, as different levels of disaggregation may be required for reporting. We recommend granting undertakings discretion to define the appropriate level of disaggregation. While we welcome the removal of sub-sub topics, they remain in brackets in Appendix A and in several "Objective" sections (e.g. Appendix A E4 still refers to "Drivers of biodiversity and ecosystem change (terrestrial and marine habitat change, invasive species)."). This risks obliging preparers to assess each sub-sub-topic individually. We recommend deleting such references to avoid unnecessary burden. On the DMA, we stress it must remain a principles-led process that enables contextual judgment and a meaningful connection to strategy. Auditors should assess the soundness of the methodology, not challenge its outcomes. Companies should not be required to provide detailed methodological disclosures or scoring, especially where topics are clearly material or immaterial. Finally, we recommend making disclosures on positive impacts and opportunities voluntary (placed in NMIG) and clarifying that partial materiality declarations within (sub)topics are permitted, supported by narrative explanation.			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	We are concerned that the new guidance obliges companies to apply a gross approach to topics because it disregards ongoing mitigation actions inherent to responsible business operations in regulated industries. This is impractical and distorts reporting. We recommend a more flexible, principles-based approach rather than a prescriptive one. Real business practice is to evaluate impacts after accounting for credible and effective prevention and mitigation measures. Industrial companies invest heavily in regulatory compliance, site-level controls, monitoring systems, and global frameworks (e.g., ISO, OGMP 2.0). These measures are audited, budgeted, and improved. A gross-only assessment inflates disclosures with hypothetical risks already managed, creating burden and misrepresenting actual exposure. A net approach ensures disclosures remain decision-useful, rewarding companies for data-backed mitigation efforts. It avoids duplicative statutory-only exercises. Appendix C provides some clarity but remains complex and difficult to apply. For actual impacts, assessing materiality "before" remediation is challenging if timing or effectiveness is unclear, leading to diverging interpretations between preparers and auditors. For potential impacts, the rule to disregard significant ongoing actions introduces similar judgment challenges. The distinction between structural and ongoing actions is interpreted differently by preparers and auditors, reducing comparability. The definition of potential should be limited to cases where no prevention or mitigation action has been taken. The gross-net principle also creates unintended consequences. As mitigation measures evolve, companies may feel obliged to redo their DMA annually, shifting topics in and out of the threshold. Framing materiality around gross impacts risks turning the exercise into a theoretical checklist, disconnected from accountability, comparability, and faithful representation. E.g. Safety topics will be reported regardless, as they are priorities even without annual incidents. Finally, risk evaluation remains insufficiently defined. Without clarification, auditors may impose approaches inconsistent with residual risk methods, undermining connectivity with annual financial reporting. We recommend removing Appendix C.

Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	We welcome EFRAG for improving the readability and overall flow of ESRS 1. The inclusion of the Application Requirements (ARs) within the connected topics has made the necessary information available in situ, contributing to the consistency of the document. However, we would like to point out that the use of certain terms remains inconsistent. For example, the term "significant" is not clearly defined, yet it appears in several places. Similarly, the use of expressions such as "unless not appropriate" and "where applicable" leaves a wide margin for interpretation. We agree that confirming the two approaches to the Double Materiality Assessment (DMA) provides undertakings with an appropriate level of flexibility. However, the introduction of the gross-net principle goes against this spirit and further reduces alignment with the single materiality evaluation used in ISSB standards and broader corporate reporting principles. We also recommend the removal of ESRS 1, paragraph 108 (new). This provision allows for disclosures unrelated to material topics, risking the inclusion of non-essential information. Such disclosures undermine the principle of materiality and obscure key information. Removing this datapoint would better support concise reporting and avoid cluttering sustainability statements.			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	In general, PATs have been simplified, and we agree on the main changes. However, ESRS 1 Paragraph 84(c) requires adjusting the base year of the target following a major acquisition or disposal. Firstly, this constitutes a behavioural requirement, which contradicts Paragraph 5 stating that "the ESRS do not mandate behaviour but set Disclosure Requirements[...]". Secondly, it is inconsistent with the possibility of investments or divestments being part of the business strategy to achieve the target. ESRS 2 AR 35 the disclosure on resources allocation (in particular, capital expenditure and operating expenditure) should be "may". We further suggest that additional datapoints be deleted or moved to NMIG where they obscure more relevant disclosures, are duplicative, or overly prescriptive. For example, ESRS 2 paragraph 38 a–c (resources allocated to key actions) requires detailed financial data tracked at project level and reconciliation with financial statements, adding significant burden. Likewise, GDR-M paragraph 41 b duplicates 41 d and should be removed. Finally, ESRS 1 paragraph 40 should be clarified to confirm that disclosure of topical metrics is always subject to double materiality and the materiality of information. Overall, while the restructuring has simplified PATs and improved connectivity, important inconsistencies remain. Addressing these issues would better balance preparation effort with the need for relevant and comparable information. what hap			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	In general, we agree with the improvements performed and welcome the proposed amendments aimed at enhancing the clarity and accessibility of the ESRS. However, further simplification and precision are needed to improve usability and avoid confusion, particularly with auditors. Unclear and contradictory terminology should be eliminated. For instance, terms such as "shall consider" create ambiguity: "shall" implies mandatory action, while "consider" suggests discretion. This phrasing leaves room for interpretation and could result in inconsistent application or auditor disputes. Similarly, application requirements (ARs) that use "may" should be removed, as "may" implies voluntary action, which contradicts the stated objective of eliminating voluntary disclosures. Clear, mandatory language is essential to ensure consistency and enforceability across undertakings. Clarification of key terminology is required. For example, the term "significant" is currently ambiguous. We recommend explicitly stating that undertakings determine significance based on their specific business model and context, ensuring disclosures remain relevant, material, and decision-useful. These targeted adjustments will simplify the Standards, improve their practical application, and ensure the framework remains principles-based, enforceable, and aligned with the goal of reducing complexity for preparers while maintaining comparability and reliability for users.			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We strongly support excluding the NMIG from the Delegated Act to ensure it is clearly interpreted as non-mandatory. Indeed, the NMIG should remain a helpful reference tool for preparers, not a regulatory requirement. Its placement is important: by keeping it outside the Delegated Act, it is clear to assurance providers and auditors that the NMIG is not a compliance checklist. This distinction preserves the flexibility and usefulness of the NMIG, allowing companies to apply it in ways best suited to their context without creating unintended obligations. We therefore support EFRAG's recommendation and emphasize that exclusion of the NMIG from the Delegated Act is necessary to safeguard its role as non-authoritative, practical guidance.			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree	Relief clauses play a fundamental role, especially in the first reporting years, as they allow companies the necessary time to collect and consolidate data. It would be ineffective and disproportionate to require data solely for the sake of comparability when the underlying information is not yet sufficiently mature to ensure reliability – thereby defeating the real objective of comparability itself. Below, further explanation supporting why the use of reliefs is extremely important for preparers, in particular: Relief for metrics in the value chain: Collecting quantitative data from actors within the value chain can be particularly burdensome. Therefore, the possibility to use estimates focused on the most relevant parts of the value chain is crucial. Relief for acquisitions/disposals: Companies need sufficient time after an acquisition to set up systems for collecting sustainability data and to organize the information flow for reporting. It is estimated that at least six months are required for these activities; hence, the relief provides an adequate time frame to initiate high-quality data collection. Relief for data quality on metrics: Please refer to the comment provided in response to question 18. Relief for commercially sensitive information: Undertakings should not be required to disclose information that could undermine their competitive position. This is a reasonable and proportionate measure to balance transparency with legitimate business confidentiality.

Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	We strongly support the relief mechanisms provided in the revised ESRS, as they are essential for ensuring robust, reliable, and decision-useful sustainability reporting. The relief for lack of data quality is particularly important to allow companies the time needed to build reliable data systems and develop meaningful trends. Sustainability data must be collected consistently over several years to establish credible baselines and trajectories. Forcing the disclosure of incomplete or unreliable data does not strengthen reporting; rather, it risks undermining: The quality and integrity of reporting, The comparability of disclosures across companies, and Legal certainty, by exposing companies to risks linked to the publication of unreliable metrics. Relief provisions also play a key role in addressing the current lack of methodologies for certain indicators. They provide an essential bridge for preparers until recognized methodologies are developed and adopted, ensuring reporting remains feasible without creating undue burden. We particularly support ESRS 1, paragraph 92, which acknowledges the practical limitations of data availability in joint operations where the undertaking lacks operational control. Allowing the exclusion of such operations from environmental metrics is a pragmatic solution that enhances reporting feasibility and avoids duplicative or misleading disclosures. We endorse ESRS 1, paragraph 91, which permits the use of metrics based on a partial scope of calculation. This flexibility is vital in the early years of reporting, when data systems are still evolving. Importantly, the requirement for companies to disclose the scope limitations and outline plans to improve data coverage ensures transparency and demonstrates continuous progress. In sum, these reliefs strike the right balance: they safeguard reporting quality, comparability, and legal certainty while supporting preparers in gradually building the systems and methodologies to meet regulatory requirements.			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	We disagree with the current approach requiring companies to choose between: (1) providing quantitative data or (2) providing only qualitative data with the option to voluntarily add quantitative information. EFRAG's outreach highlighted significant divergence among stakeholders, with no clear consensus on either option. This lack of consensus demonstrates that neither option provides a workable solution for all stakeholders. We therefore recommend removing the provision and allowing voluntary disclosure of both qualitative and quantitative information. This flexibility is necessary given the lack of mature methodologies, the uncertainty and subjectivity of assumptions, the sensitivity of information involved, and most importantly, the significant legal risks. These risks are particularly acute where disclosures include financial data not reported in official financial statements and not reliably estimable. Such disclosures should fall under the remit of financial boards to ensure consistency with financial reporting requirements. Finally, we recommend exempting private subsidiaries, particularly foreign-owned ones, from anticipated financial effect disclosures. These entities do not independently raise capital or engage investors, and their sustainability risks are already captured at the group level. Requiring subsidiary-level reporting adds no value, creates duplicative burdens, and addresses a problem that does not exist.			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	Disclosure "before considering adaptation/mitigation actions" should not be required, as this does not reflect how business strategy is defined and adds little value for users. Mitigation measures are embedded in corporate strategy, structural in nature, and linked to multiple risks. Attempting to calculate hypothetical monetary amounts before mitigation is complex, unreliable, and not estimable. For less technical readers, such disclosures could be misleading, especially as they are not recognized in financial statements. In particular, ESRS E1 41(d) would create confusion by requiring disclosure of potential liabilities not recognized under financial reporting standards. While we acknowledge EFRAG's reduction in disclosure requirements for anticipated financial effects, the remaining provisions in paragraphs 40 and 41 remain problematic. Allowing preparers to comply through qualitative disclosures (Option 2) would reduce costs and address concerns about requiring more granular financial data than mandated under IFRS or U.S. GAAP. Requiring disclosure of the "percentage of assets at material physical risk" exceeds what is necessary, creates inconsistency with financial reporting, and confuses users. These clauses are difficult to implement given market volatility and frequent changes. They could also lead to legal liabilities as forward-looking statements, increase exposure to litigation, and are nearly impossible to verify or audit. Requiring financial disclosures in greater detail than current financial reporting could cause competitive harm. Such information may not be relevant to users or aligned with how management measures performance, particularly if absent from financial statements. There is no reliable or comparable method to link climate-related risks or opportunities to financial metrics such as assets, liabilities, or revenue. This information should instead be embedded in a financial reporting framework and disclosed in the notes to financial statements. We strongly recommend limiting anticipated financial effect disclosures to qualitative information only.			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	1. Fair presentation in the ISSB standard is only on financial materiality, so extending this concept could create problems (see question N. 25) 2. IFRS allows to have any GHG boundary while here financial control is mandatory, failing to align to the GHG Protocol. 3.The relief clauses introduced by the simplified standard are welcome and needed by preparers. 4.It is very important to maintain these additional reliefs in the IFRS because in the ESRS we go beyond climate aspects, where methodologies are less advanced, and these clauses are needed. 5. agree 6. agree 7. agree 8. agree			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	It is true that some simplifications have been introduced, particularly in the structure and presentation of the reporting framework. Flexibility introduced in how information is presented in the sustainability statement will also help improve usability, and the relief allowing for exclusion of joint operations over which the undertaking does not have operational control from the calculation scope of environmental metrics will reduce effort to obtain data from partners. However, in practice, the overall reporting effort will not change significantly. While the format of the PATs may be streamlined, many of the underlying metrics remain the same. Quantitative datapoints have been prioritised, and most of the requirements removed are narrative-based DRs that were of lower importance. As a result, preparers will still need to collect and disclose a substantial amount of data, and the core reporting obligations are largely preserved. We suggest a further detailed review of the "shall" disclosure requirements to remove those that are not decision-useful, are of lower priority while creating undue burden for preparers, or that risk obscuring more relevant disclosures. To truly align with the European Commission's objective of simplifying and streamlining the ESRS framework, further reductions are necessary. As currently designed, the changes fall short of meaningfully reducing complexity and administrative burden.			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	It is important to recall that this revision was intended as a simplification exercise. These six datapoints are not the only additions; concepts such as "fair presentation," requirements to amend the base year for targets in cases of major acquisitions add further complexity. If the gross approach were adopted, it would add burden by obliging disclosure of hypothetical risks already addressed through mitigation. Each of these elements burden preparers beyond the datapoints under discussion, and risks undermining the overarching objective of simplification. In this context, we stress the importance of avoiding duplication and over-prescription. We specifically propose removing ESRS G1 paragraph 10(c). This requirement is unnecessarily detailed and is already addressed under ESRS G1 paragraph 9, which mandates disclosure of business conduct actions in line with ESRS 2 GDR-A. Retaining both paragraphs creates overlap without adding value, and risks confusing preparers and assurance providers about the scope and distinctiveness of required disclosures. We also have significant concerns with ESRS G1 paragraph 14 on "confirmed incidents" of corruption and bribery. While we support transparency, requiring disclosure of internally confirmed violations risks self-incrimination, undermines the presumption of innocence, and creates misleading data. Companies with robust controls may appear to have more incidents simply because they detect and investigate them more thoroughly. These disclosures are highly sensitive, difficult to standardise, and of limited value to external users. We therefore recommend retaining paragraph 14 as voluntary. If kept mandatory, its scope should be narrowed to avoid requiring details that could expose companies to legal liability. In summary, while we support the revised approach to the six datapoints, we caution against incremental complexity from new concepts and prescriptive overlaps. Eliminating redundant requirements, such as paragraph 10(c) and 14, would help keep the Standards clear, proportionate, and aligned with the intended goal of simplification.			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	In addition to the four new datapoints already identified, further mandatory disclosures have been added within certain Disclosure Requirements (DRs). These additions run counter to the intended goal of simplification, as they increase complexity rather than streamlining the reporting process. Microplastics (ESRS E2 – 16(d)) The disclosure of secondary microplastics is presented by EFRAG as a clarification of existing Set 1 requirements. However, this interpretation is legally flawed and conflicts with the Commission's simplification mandate. The original Set 1 requirement addressed emissions, generation, and use within an undertaking's own operations. The new datapoint extends reporting obligations into the downstream value chain, introducing significant complexity and going beyond clarification. In practice, disclosures on secondary microplastics are neither scientifically nor technically supportable. There are no widely accepted methodologies for calculating such emissions, which depend on highly variable assumptions (e.g., degradation, wear, usage conditions). EFRAG itself acknowledges this gap, effectively relegating disclosures to qualitative narratives that add burden without delivering actionable or comparable insights. The amended draft also risks duplication and misalignment with other EU frameworks (e.g., REACH Annex XVII, Entry 78), while adopting an overly broad definition of microplastics (synthetic polymer microparticles). Moreover, the lack of measurability undermines auditability and legal reliability. We therefore strongly recommend removing paragraph 16(d) on secondary microplastics as well as related definitions in Annex II (including synthetic polymer microplastics and secondary microplastics). We also recommend amending the definition of 'dependencies' as follows: "The situation of an undertaking being directly dependent on natural, human and/or social resources for its business processes."			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I disagree	We do not support the introduction of a "fair presentation" regime into the ESRS framework. While the concept is well established in financial reporting, its application in sustainability reporting raises significant challenges and risks. The primary concern is the increased accountability of Board members for the Sustainability Statement. Under a fair presentation regime, Boards would not only need to ensure compliance with reporting standards but also demonstrate that disclosures are presented in a manner deemed fair to all relevant stakeholders. Given the less-defined boundaries of sustainability reporting compared to financial reporting, this creates a grey area that significantly increases the risk of litigation if stakeholders contest the adequacy of the information provided. Moreover, sustainability data differs fundamentally from financial data. It is often forward-looking, qualitative, and heavily reliant on professional judgment, rather than verifiable, historical records. In particular, impact materiality within ESRS covers environmental and social dimensions that extend beyond financial relevance, where established practices and assurance methodologies are still lacking. Applying a fair presentation requirement in this context risks disproportionate legal, assurance, and reputational exposure for preparers. Audit firms themselves have indicated that such a regime could complicate assurance engagements, especially given the absence of a common European standard for sustainability review. Embedding "fair presentation" as a legal requirement may inadvertently trigger regulatory enforcement and assurance challenges without improving reporting quality. Instead, enforcement should remain focused on the qualitative characteristics already embedded in ESRS—relevance, comparability, verifiability, and understandability. These principles already provide a sound basis for reliable and decision-useful reporting. Assurance can be effectively conducted against these standards, without introducing additional, ill-defined obligations that could create uncertainty, inconsistency, and unnecessary legal risks for undertakings.			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets Absolute emissions targets are not decision-useful in this context. The GHG Protocol, while the accepted basis for reporting, has significant limitations when applied to target-setting: it can double-count across Scopes 1, 2, and 3, fails to capture avoided emissions, and lacks product-level granularity. This penalises companies that scale low-carbon solutions such as hydrogen, LNG switching, or carbon capture, while discouraging innovation. Intensity targets, by contrast, provide a more accurate and comparable view of performance, reflecting efficiency and progress without distorting incentives. For financial institutions, requiring associated absolute values would add burden without improving transparency and risks misleading stakeholders.			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	We are concerned that the revised workforce disclosures introduce a level of detail that is not necessarily relevant or decision-useful, particularly for multinational companies. The requirement to disclose employee numbers per country with more than 50 employees may add little value, as in practice these employees may be concentrated in a single region (e.g., Europe) without enhancing the reader's understanding of global workforce distribution. A more representative and meaningful approach would be to return to the previous version of the disclosure, which required companies to report on countries where there are more than 50 employees representing at least 10% of the total workforce. This ensures focus on material geographies while avoiding unnecessary granularity. We recommend deleting DR S1-5, as it lacks a clear link to a specific material sub-topic and does not deliver decision-useful information beyond the limited context of secure employment. We also recommend removing the requirement to disaggregate employees by contract type (permanent, temporary, non-guaranteed). While well-intentioned, this requirement offers limited value to users and creates disproportionate complexity for preparers. Contract categories are defined differently across jurisdictions, leading to inconsistencies and undermining comparability. Moreover, workforce composition often fluctuates throughout the year, particularly in industries with seasonal demand or project-based work, which reduces the reliability of such disclosures. Without harmonized definitions, there is a significant risk of misinterpretation. The burden of aligning and reporting these figures across multiple jurisdictions outweighs the benefits, especially for multinational undertakings. If EFRAG decides to retain this split, it is crucial that clear, standardized definitions are provided to ensure consistency and comparability across companies and sectors. In summary, workforce disclosures should strike a balance between relevance, comparability, and feasibility. We recommend focusing on disclosures that provide meaningful insight into workforce structure while avoiding prescriptive requirements that increase burden without delivering added value to users.			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	It is necessary to provide greater clarity in the description of how the adequate wage is calculated in non-EU countries. Allowing companies to rely on differing benchmarks risks inconsistency and incomparability across geographies and undertakings. Given that definitions and calculations of living/adequate wages vary significantly by country, clearer expectations or a reference framework from EFRAG would be valuable. This could take the form of a single authoritative reference source or a commonly accessible database, ensuring comparability while avoiding excessive prescription. Such an approach would also reduce the burden on companies to independently determine what constitutes an adequate wage in each jurisdiction where they operate.

Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	It is necessary to provide greater clarity in the description of how the adequate wage is calculated in non-EU countries. Allowing companies to rely on differing benchmarks risks inconsistency and incomparability across geographies and undertakings. Given that definitions and calculations of living/adequate wages vary significantly by country, clearer expectations or a reference framework from EFRAG would be valuable. This could take the form of a single authoritative reference source or a commonly accessible database, ensuring comparability while avoiding excessive prescription. Such an approach would also reduce the burden on companies to independently determine what constitutes an adequate wage in each jurisdiction where they operate.			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	It would not be appropriate to reinsert the AR 26 considering that the methodologies for defining biodiversity targets are not yet well defined and are often site-specific. Furthermore, in the absence of a mandatory biodiversity standard, we do not see the opportunity to refer to specific frameworks (which are still voluntary). The risk would be that each company could adapt these standards to its own needs by making reporting incomparable. Finally, also in the light of the simplification process, we should not add guidance from non-mandatory frameworks. In addition, ESRS should not dictate how entities set targets, as this would amount to a behavioural requirement rather than a disclosure standard.			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	We do not agree with the proposed dual requirement for both adjusted and unadjusted gender pay gap disclosures. Only one metric should be required, ideally allowing undertakings some flexibility to determine an appropriate approach. There are two main reasons for this. First, starting in 2027, the EU Pay Transparency Directive (EU 2023/970) will require companies to report using the adjusted pay gap indicator. To ensure consistency and avoid confusion, it is preferable for ESRS to be consistent with this Directive. Requiring disclosure of both adjusted and unadjusted data risks creating conflicting narratives, making it more difficult for stakeholders to reconcile and interpret results. An adjusted indicator often provides more meaningful insights, as it accounts for legitimate explanatory factors such as job level, experience, location, and performance. This ensures a fairer and more accurate representation of pay equity across organizations. While gender pay gap reporting has been important in drawing attention to workplace disparities, the unadjusted metric often produces oversimplified and misleading results. By failing to account for legitimate differences, it risks distorting stakeholder understanding and diverting attention away from genuine equity issues. It also imposes unnecessary administrative burdens on preparers. A more constructive alternative would be to transition toward voluntary, context-sensitive reporting for gender-related disclosures beyond the adjusted pay gap. This would allow companies to provide relevant insights tailored to their unique workforce composition, industry characteristics, and strategic priorities, while respecting the principle of materiality. Voluntary disclosure fosters transparency by enabling organizations to communicate progress when it aligns with their values and stakeholder expectations, rather than through rigid, one-size-fits-all metrics.			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	The cross-cutting standard ESRS 1 remains critical, as it sets the foundation for sustainability reporting. We continue to have significant concerns with the provisions on fair presentation, the gross versus net approach to materiality, and requirements on aggregation/disaggregation. These elements remain highly subjective and risk creating interpretative challenges and inconsistent application across undertakings. The lack of clarity could lead to disagreements with auditors, undermining comparability and increasing assurance costs without improving reporting quality. On value chain reporting, we request that EFRAG limit the scope of the impact materiality assessment to entities with which an undertaking has a direct contractual relationship. For large multinational organizations, value chains are highly complex and global. Tracking and assessing impacts beyond direct contractual partners presents substantial practical, operational, and methodological challenges, particularly given the absence of consistent data availability and supplier transparency. In many cases, undertakings lack leverage to influence or collect reliable information from actors further down the supply chain, resulting in disclosures that are burdensome to produce yet incomplete or inaccurate. We also recommend deleting ESRS 1 §68, which adds confusion, and aligning §§123 and 127 with the "stop-the-clock" and "quick fix" directives to avoid conflicting interpretations. To address this, we propose revising Amended ESRS 1 paragraph 30 to clarify: The impact materiality assessment corresponds to the identification of information that relates to the undertaking's material actual or potential, positive or negative impacts on people or the environment over the short, medium or long term. Impacts include those connected with its own operations, products, or services, including through business relationships in its upstream and downstream value chain. Business relationships are limited to direct contractual relationships. Such clarification would enable preparers to focus reporting where they have the greatest visibility and influence, improving data quality, easing application, and ensuring more effective reporting outcomes.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We recommend eliminating the disclosure requirement on anticipated financial effects in ESRS 2. Preparers are not yet sufficiently equipped to provide reliable forward-looking financial data and there are significant concerns that such disclosures could expose commercially sensitive information. In practice, the current formulation risks overburdening companies with requirements that cannot be met at the desired level of quality. This may result in disclosures that are speculative, inconsistent, and potentially misleading for users, undermining the reliability and decision-usefulness of sustainability reporting. We strongly encourage the removal of this requirement until more robust methodologies, systems, and assurance practices are in place. Regarding ESRS 2 GDR-P for S1-S4, we note that the UN Guiding Principles on Business and Human Rights, the ILO Declaration on Fundamental Principles and Rights at Work, and the OECD Guidelines for Multinational Enterprises are important international frameworks, but they are not legally binding on businesses. To ensure both accuracy and legal clarity, we recommend amending the reference in the disclosure requirement. Specifically, when describing an undertaking's overarching human rights policy, the current wording "committing to implement" these frameworks should be replaced with "committing to respect for human rights aligned with" these frameworks. This is consistent with our concern raised under the SFDR datapoints (Q29) regarding human rights policies, where overly prescriptive wording risks creating unintended behavioural requirements. This revision would ensure alignment with international best practice, while avoiding the implication that undertakings are legally bound to implement instruments that have no binding legal force. It also ensures consistency with the language commonly used in corporate human rights commitments, providing clarity for preparers and auditors while supporting meaningful transparency. Eliminating anticipated financial effect disclosures and refining the language on human rights commitments would enhance the feasibility, accuracy, and credibility of ESRS 2 reporting requirements, while maintaining interoperability with ISSB standards.			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	We applaud EFRAG for streamlining and improving the readability of ESRS E1. We believe that the recent edits have indeed enhanced the balance between simplification and the achievement of EU objectives. However, we would like to note that certain articles risk distorting this balance. For example, various requirements related to the disclosure of financial resources not only make it difficult for undertakings to provide this information but may also create confusion with disclosures on IROs. Furthermore, AR13 potentially contradicts the requirements of the GHG Protocol. Additionally, some of the information requested is already covered under the EU Taxonomy reporting requirements, leading to redundancy. This could be further streamlined — for instance, §42 could be removed entirely.			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	33.E_2.	ESRS E2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	For all the social standards, we stress the importance of maintaining reference to "severe" human rights incidents within the disclosure requirements. Removing the qualifier "severe" significantly broadens the scope of reportable incidents. Given the breadth and complexity of the human rights domain, removing "severe" risks obliging undertakings to disclose numerous less relevant or minor issues. This would dilute the significance of reporting and create confusion during the selection of information to be disclosed. Importantly, this expansion contradicts the spirit of the ESRS simplification by adding unnecessary reporting burden. A focus on severe human rights incidents ensures that disclosures remain meaningful, proportionate and aligned with the principles of relevance, efficiency, and decision-usefulness. This is consistent with our concern raised under the SFDR datapoints (Q29), where removing the qualifier "severe" would broaden scope in a way that undermines clarity and proportionality. On S1 (Own Workforce), we recommend excluding "non-employees" from the scope of reporting. Non-employees should in principle fall under S2 (Workers in the Value Chain), as they are contractors and thus part of the value chain. However, current drafting creates ambiguity: S1 paragraph 7 includes "non-employees" in own workforce, while S2 paragraph 7 provides that all workers not included in own workforce are to be reported under S2. This overlap generates confusion and could also create unintended legal implications, even though S1 paragraph 7 clarifies that reporting does not affect status under labour law. In practice, metrics for non-employees are monitored under site contractor management systems. Expanding S1 to require full reporting on this group would necessitate major system and process revisions across operating and office assets, disproportionate to the reporting value delivered. We therefore recommend clarifying that non-employees should be covered under S2 only, ensuring consistency, avoiding duplication, and preserving alignment with how companies manage and monitor contractors in practice.

Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	33.S_2.	ESRS S2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	For all the social standards, we stress the importance of maintaining the reference to "severe" human rights incidents within the disclosure requirements. Removing the qualifier "severe" significantly broadens the scope of reportable incidents. Given the breadth and complexity of the human rights domain, such an approach risks obliging undertakings to disclose numerous less relevant or minor issues. This would not only dilute the significance of reporting but also create confusion during the selection of information to be disclosed. Importantly, this expansion contradicts the spirit of the ESRS simplification exercise by adding unnecessary reporting burden. A focus on severe human rights incidents ensures that disclosures remain meaningful, proportionate, and aligned with the principles of relevance, efficiency, and decision-usefulness. On ESRS 2, we applaud EFRAG for streamlining and improving the readability of ESRS S2. We believe that the recent edits have indeed enhanced the balance between simplification and the achievement of EU objectives. However, we would like to note that certain articles risk distorting this balance. For example, we advocate for the removal of the requirement for direct engagement with VCWs (§14), as it is impractical for our industry. We also recommend removing the requirement to extend the undertaking's grievance mechanism to VCWs (impractical and adds conflict of interest between HR of the undertakers and their suppliers), given that a whistleblowing mechanism is already in place and could be further clarified in §19.

I partially agree and partially disagree	The changes introduced in ESRS G1 have indeed improved the balance between simplification and the achievement of EU objectives. Nevertheless, we would like to highlight opportunities for further simplification and strengthening of this balance. We believe that undertakings should be allowed to determine which roles within their organisation are most at risk and therefore subject to training (§10c), rather than prescribing specific roles such as board members. Additionally, we find the disclosure of the highly detailed information required in §17 to be impractical, as undertakings may be part of multiple organisations across various countries and participate in numerous discussions, either individually or as a group. Requiring such a level of detail for each of this activity would significantly inflate the volume of information in the annual report.			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	33.Glossary.	Glossary:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. I partially agree and partially disagree	Incident should be changed to reflect that not all complaints are necessarily incidents as they may not be substantiated. Add "substantiated" before "complaint." Value Chain should be changed to eliminate point iii. regarding "the financing, geographical, geopolitical and regulatory environments in which the undertaking operates". This point is broad and can lead to inconsistent reporting.			
Survey	IOGP Europe	Business association (other than association of financial institution)	Belgium	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		On Reporting Boundary: We welcome the relief clause of paragraph 92 ESRS 1 (data of joint operations). If this relief clause were to be deleted, it is essential that it is explicitly stated that for fair presentation, for specific sectors, environmental data can be disclosed on an operated boundary. That said, the current phrasing "may exclude joint operations over which it doesn't have operational control" is not an operational boundary defined or used by the industry. We propose amending to: "For the environmental metrics disclosed in accordance with ESRS E2 Pollution, ESRS E3 Water, ESRS E4 Biodiversity and ecosystems and ESRS E5 Resource use and circular economy, the undertaking may adopt an operational control (consolidation) boundary." Value Chain: The assessment of impacts in the value chain and data collection, especially beyond Tier 1, remains a critical issue. About evaluation, quantitative evaluation is usually very complicated and not significant at the reporting level. It would make more sense to report material facts when material impacts are known without carrying out quantitative assessments. SOC/SVHC: It is still extremely complicated to consolidate the quantities of these kinds of substances as also for SOC it is very difficult. to classify It makes sense to disclose which SOC/SVHC substances are being used and what the company is doing to replace or reduce their use, rather than collecting quantities, which is very complicated given the wide variety of regulations across countries, including differences in usage limits for mixtures containing these substances.

Survey	LMU	Academia	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I disagree	On a positive note, the writing is clearer and more concise. Regarding impact materiality, section 3.3. of ESRS 1 remains abstract and overly ambiguous. The latter is particularly problematic from an academic perspective as it impinges on the quality and usability (see references in Q 34 for references elaborating on this) of the disclosed data for research purposes such as the creation of dataset and the testing of hypotheses. One example of this is the amended paragraph 28 (formerly 42) that pertains to the setting of thresholds for identifying material information. The problem here is that both in the original and the revised standard features no reference to methods, scientific or public databases or other sources from where such thresholds could be taken. Consequently, undertakings are required to set their own thresholds, which will likely result in disclosures that are hard to compare and aggregate. What is more, as impact materiality, unlike financial materiality manifests itself not at the level of the undertaking but the geographically specific ecosystem (for E topics) or the administrative boundaries of a nation-state or sub-national entity (for S and G topics), putting the responsibility of setting thresholds to undertakings may result in the loss of information on impacts that are material if their sources are distributed across facilities belonging to different companies. In this context the deletion of paragraph 28 from Set 1 on the approach employed to on the materiality filter is also problematic, because it removes a datapoint that would allow to assess and compare the quality and trustworthiness of the reported information from different undertakings.			
Survey	LMU	Academia	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	While the language of the paragraphs is somewhat complicated, I support that gross impacts shall be reported separately from remediation actions and that each datapoint should have its own timestamp. The rationale for separating the two variables from a research perspective is that it increases comparability and allows for more nuanced research questions addressing factors that influence the size of impacts, the size of mitigation actions and the interactions between both. If net measures were reported, instead, a differentiation between whether small impacts were the results of non-invasive operations or remediation actions could not be undertaken.			
Survey	LMU	Academia	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	I understand that the proposed changes relate to style and structure rather than to content and data generation and presentation aspects. As such, from a research perspective there are no objections and any improvements in human and machine-readability are to be welcomed.			
Survey	LMU	Academia	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	Consolidating overlapping disclosure requirements to ESRS 2 and putting method and data collection guidance into ARs rather than separate datapoints is generally a good development as it increases the clarity of the reported data. This also matters for academic users, who can then better interpret the disclosed values. One negative development from a research perspective is, however, the removal of the datapoint relating to the procedures for site-screenings. I understand that this datapoint has not been carried over from topical standards (e.g. E2) to ESRS 2. Removing this information has negative impacts for researchers, who will be deprived of a datapoint that could be leveraged to assess data quality and that could potentially serve as a point of connection with other datasets – including satellite imaginary and other earth-observation data – thus decreasing interoperability. While in the Basis for Conclusions the discussions on ESRS 2 seem to suggest that a "list of sites" disclosure with information about whether the respective site was considered material would be undesirable, from a research perspective that emphasizes completeness and interoperability, this type of disclosure would actually be very useful. This is because by having georeferenced sites, connections with other spatial datasets such as earth observation data or administrative data could be established. Using this connection could then be leveraged to assess and verify whether the disclosed values and/or the classification of a site as (non-)material is credible. Furthermore, from a data quality perspective, having some explicit information about the scope of sites is essential to know whether the disclosed values are complete. At the very least aggregate information about the scope of sites on which there is information vs. the ones where there is none and whether there are any systematic biases (e.g. country, size, sector, technology) regarding inclusion should be provided.			
Survey	LMU	Academia	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	The removal of the category of "may datapoints" is positive as those caused confusion and could have contributed to diverging, non-comparable reports. The wording has also become clearer in general. However, the move to more principles-based reporting has also led to examples and method explanation being in part removed or put into the NMIG. While from a researcher/data user perspective this is, at first, not problematic, there is the danger that data preparers might disclose idiosyncratic information that is hard to compare and aggregate as guidance and examples are harder to find.			
Survey	LMU	Academia	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	From a research perspective the NMIG do only matter indirectly insofar as their use or non-use could influence the comparability and quality of disclosures. As such, my main comment would that they should probably be presented more as a Question-Answer document for preparers and less as a residual category for datapoints that were deleted.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	LMU	Academia	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	The proposed reliefs will negatively impact data quality by allowing for incomplete and inconsistent disclosures thus making it very hard to impossible for researchers to construct comparable datasets (i.e. the burden is shifted to data users, not reduced). Importantly, the lack of expiry dates for the reliefs means that there is no incentive to improve data collection efforts. And while each of the reliefs creates problems by itself the combined effect will likely be multiplicative. A potential improvement would be to include a detailed list of (georeferenced) sites and activities that are in and out of scope whenever a relief is used. 1.Undue cost or effort The relief fails to provide any references for what might be "undue cost or effort", thus leaving it at the discretion of the undertaking. As a consequence, the relief can be used as a smokescreen to not disclose values that do not present favorable developments. Indeed, the literature on voluntary sustainability disclosures has documented such a positive news bias. From a research perspective the relief risks decreasing the completeness of information and might even introduce systematic (non-random) bias. 2.Partial scope of metrics Partial metrics are risky if not accompanied by very specific information what is in and excluded. This is because uninformed users – or LLMs – might take partial information as being representative of the whole entity, even if partial disclosures are biased. Analyzing and acting on biased information might, in turn, lead to inaccurate results and misguided policy or investment actions 3.No preference for direct data This relief offers a perverse incentive for companies with worse than average performance in their value chain to use sector averages rather than improving their performance through engaging with suppliers. 7. Excluding acquired and divested subsidiaries could result in "lost" or "double-counted" assets.			
Survey	LMU	Academia	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	The relief allows for incomplete disclosures if companies have doubts about data quality. While the intention of this relief is understandable (better no data than low quality data), in its current form it risks repeating the mistakes of older standards that led to inconsistent reporting. A big problem of the relief is that there is no time limit on companies to fix incomplete disclosures, meaning that they can do partial reporting forever. Another problem is that partial reporting might open the door to selecting artificially positive developments in a subset of operations thus leading to greenwashing. Incomplete reporting means that comparability between organizations using different subsets becomes hard if not impossible. If this relief is maintained, it should be accompanied by provisions that force reporters to be very transparent about what is included and excluded in the disclosures. Also clear time limits should be set for the use of the relief. In case particular metrics show a substantial use of this relief across companies, it would be up to EFRAG to check whether the datapoint should be amended, removed or whether additional guidance is necessary.			
Survey	LMU	Academia	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	Anticipated financial effects are particularly interesting to check and critically evaluate what and how risks and impacts of climate change are assessed and managed. An important research gap that could be closed by these disclosures is whether and how adaptation actions and investments (at site level) and mitigation actions and investments influence valuations and the pricing of financial instruments. Contributions from the emerging field of spatial finance are of particular interest in this context. In addition, critical scholars could evaluate biases and regional disparities in financial effects assessments that are currently only implicitly made by companies.			
Survey	LMU	Academia	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree	The location disclosure on physical risks is particularly important in this context.			
Survey	LMU	Academia	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	Aligning the GHG boundary with the financial control approach from the GHGP is a positive development from a researcher perspective as it increases comparability across geographies and, importantly, also time with regards to earlier partly voluntary reports. The emphasis on materiality as filter would, in principle, be able to make for more consistent disclosures. However, the still ambiguous definition of impact materiality stands in the way of that. Reliefs resulting in incomplete disclosures without additional information on which assets and operations are in or outside the scope of reporting are problematic from a data quality and researcher perspective independently of whether they are also part of the IFRS. As such, I strongly reject their inclusion.			
Survey	LMU	Academia	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	LMU	Academia	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	To answer this question it is first necessary to define what the ESRS "are". From a research perspective, the ESRS are building blocks to an information system about the interactions between undertakings' (and their financiers') operations, decisions and plans, on the one hand, and the environmental, social and political systems in which they are embedded on the other hand. Having such an information system then allows public and private entities to target regulatory interventions or financing and researchers to uncover links between company-level attributes and environmental, social and governance impacts. Against this background the question then becomes whether the reduced scope of datapoints is able to fulfill the function of contributing to an information system. To answer this question in the affirmative, two conditions should be fulfilled. First, the topical datapoints should accurately represent the most relevant aspects regarding the interaction of undertaking and the system it is embedded in. As I am not an expert on all the covered topics, I cannot comment on whether and to what extent the ESRS achieve this. Second, an information system requires high quality data that is complete, unambiguous, meaningful and correct (Wang and Wong 1996) to deliver on its purpose. Judged on these criteria, the revised ESRS do not fulfill the requirements of contributing to an information system that is fit for purpose, because several datapoints that help to ensure or at least to assess data quality have been either deleted or remain ambiguous. This applies inter alia to the still ambiguous definition of impact materiality, the removal of information on the nature of the materiality assessment (see Q 11) and removal of site screening which violates completeness (Q 14). Furthermore, the various reliefs and options for partial disclosures run counter to the principle of completeness (see Q 17, Q 18).			
Survey	LMU	Academia	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	The additional datapoints make formerly implicit aspects explicit thus adding to transparency. In particular, the inclusion of biodiversity aspects into the transition plans is welcome. This is because transition plans – especially if disaggregated at site level – allow for assessing the credibility of companies' plans by checking their interaction with political and physical dependencies as demonatrated amongst other by the work of the EC's DG JRC on climate transition plans.			
Survey	LMU	Academia	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	The new datapoints are clearly defined and measure the aspects which they seek to represent in an appropriate way. Consequently, their addition increases the use value of the ESRS for researchers.			
Survey	LMU	Academia	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	In principle, this emphasis on fair presentation could contribute to more consistent disclosures. As the definition of impact materiality remains, however, ambiguous different interpretations and practices might lead to diverging disclosures. Relatedly, overly narrow or company-centric (rather than ecosystem or social systems based) interpretations of materiality might result in underreporting and, thereby, the loss of information.			
Survey	LMU	Academia	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Intensity metrics or targets (e.g. tco2e / EUR) measure efficiency not total physical effects. Setting (and achieving) intensity targets thus does only tell us about the whether the financed companies become more resource efficient and not whether they reduce the planetary pressures for which absolute emissions and not their relation to human conceptions of financial value matter. In addition, market volatilities or inflation can affect the monetary unit in the denominator, thereby introducing noise. Having only intensity metrics thus does not allow to really compare the ambition of financial institutions, nor does their success or failure in achieving these targets necessarily allow to make inferences about emission reductions in the real world. A second aspect that speaks against the exemption is that excluding financial institutions from absolute target setting is that it inhibits cross-sector comparisons.			
Survey	LMU	Academia	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	The new definition of the threshold is simpler to interpret and to communicate.			
Survey	LMU	Academia	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	While I cannot comment on the subject matter any revised metric should make sure that it does not aggregate measures that are defined differently. As a last resort solution, two metrics on adequate wages (EU, non-EU) could be disclosed.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	LMU	Academia	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	The interoperability with the SFRD is crucial to build up an information system that spans the link from financial allocations via company operations to environmental and social systems' risks and impacts. I think that the revised version managed to largely retain this link while streamlining the wording and datapoints.			
Survey	LMU	Academia	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	Biodiversity targets (and metrics under E-4-5 for that matter as well) require additional guidance to reduce the risk that companies use aggregate metrics and models that rely on black-boxed data and assumptions to produce aggregate indicators. Points that EFRAG should consider when drafting guidance is that any metrics and targets related to ecosystem restoration need to explicitly include time and space. Regarding time, the restoration timeframe of a given ecosystem needs to be accounted for. Regarding space, geography and type of an ecosystem are aspects that do not lend themselves easily to aggregation. Measurable biodiversity targets should involve targets on reducing key biodiversity pressures (reducing land use change, GHG emissions, pollution, etc.). These should be completed by commitments to not operate in key biodiversity hotspots. Suggestions from data providers and specialized consultancies to express biodiversity targets in single synthetic measures such as "MSA x ha x year" or "PDF x ha x year" should be rejected. Such measures are based on coarse, global, and modelled pressure-impact relationships and are thus very misleading.			
Survey	LMU	Academia	Germany	33.E_4.	ESRS E4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	On E4-5 Metrics Allowing companies to self-select the metrics that they want to disclose on site-specific biodiversity impacts could lead to measurement problems. There will be no comparability and very likely a positivity bias with self-created metrics. One suggestion would be to emphasize metrics on pressures (land use, pollution) that can be reported in base units from the SI list or units that can be derived from these.			
Survey	LMU	Academia	Germany	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		My answers to this questionnaire are largely on data quality considerations regarding sustainability disclosures and an emphasis on georeferenced disclosures. The latter matter from a perspective of construct validity, allow for great interoperability with existing datasets from remote sensing and administrative data and enable users outside of the financial system (e.g. environmental agencies, urban planners) to use the data for their activities. I elaborate in more detail on these points in Sommer and Dimmelmeier (2025) https://greendia.de/wp-content/uploads/2025/09/greendia_efrag_policy_brief_09_11.pdf and in Dimmelmeier, Sommer and Cooke (2024). https://sustainablefinanceobservatory.org/resource/reframing-the-eu-landscape-for-corporate-sustainability-information/			
Survey	Allianz SE	Insurance	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I disagree	We generally agree that Chapter 3 of ESRS 1 is clearer and better organized. We are supportive of a simplified DMA process, strengthened information materiality filter and clearer articulation of IRO-topic relations. However, major issues remain regarding clarity and the potential for further simplification: (1) We welcome that the concept of information materiality has been strengthened. However, in its renewed form, we deem it still not sufficient to allow for a more principles-based view and application of the ESRS and creates interoperability issues with IFRS. Particularly, paragraph 21 (b) implements practical challenges. First, it is almost impossible to prove what kind of information 'is necessary' for users, as necessity generally is a subjective criterion. Some users may deem very detailed and highly granular information as necessary to understand the undertaking's impacts, risks, and opportunities and how it identifies and manages them, while other users may find overly detailed information to obscure relevant facts, therefore deeming it 'necessary' to provide crisp and to-the-point disclosures without granular details. The 'necessary' evidence will therefore prove impossible to justify in practice towards auditors. Second, the sub-paragraph (b) also introduces differences to IFRS, which complicates interoperability. We therefore suggest deleting paragraph 21 (b) and keeping only 21 (a). Alternatively, we suggest to amend the wording as follows. 21(b) - It could reasonably be expected to be necessary for users of general purpose sustainability statements to understand the undertaking's material impacts, risks, and opportunities and how it identifies and manages them. (2) We note the lack of amendments to ESRS 2 IRO-1, which would have allowed for less prescriptive disclosure requirements. (3) Appendix A should be relocated to the NMIG, as it provides non-binding guidance to support the application of provisions.

Survey	Allianz SE	Insurance	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	The new guidelines introduce three additional assessment layers for the assessment of actual and potential impacts – (1) the need to perform an effectiveness test of actions, (2) the requirement to distinguish between significant ongoing vs. temporary actions, and (3) the necessary differentiation in the assessment and disclosures between current and future reporting years – all of which were not present in the set 1 ESRS. We expect a significant increase in reporting burden through these additional layers, as they require supportable evidence and will be subject to high auditor scrutiny. This would particularly penalize wave 1 companies that have already implemented a sophisticated and comprehensive materiality assessment process, methodology, and governance setup. As such, the introduction of the new guidelines is clearly against the European Commission mandate of simplification. Our suggestion is to completely remove the new guidelines on gross vs. net, i.e. paragraphs 34/35 and Appendix C of ESRS 1, and give the market practice time to evolve, which by itself will address currently existing divergence in practice. Regarding paragraph 36 and the clarification of positive impacts, we agree with the addition, as it provides helpful guidance on the matter of understanding positive impacts.			
Survey	Allianz SE	Insurance	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	We strongly welcome the increased flexibility introduced by the amendments, particularly the ability to use appendices and sub-parts. The possibility of including an executive summary is also a useful addition to enhance relevance and conciseness, and we urge that this be allowed in a free format. However, we note that EFRAG has introduced additional obligations (ESRS 1, paragraphs 11 and 113) regarding the connections within the sustainability statement, with other corporate documents, and between PAT and IROs. Even if these obligations require only reasonable and sensible information, they still represent an objective additional reporting burden which would punish first movers and contradicts the Omnibus mandate on reducing the reporting burden. ESRS should leave it to the reporting corporate to secure completeness and compliance with disclosure requirements but give room for corporates as to how information is represented and where it is placed.			
Survey	Allianz SE	Insurance	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	While we agree with the implemented changes regarding the architecture and interaction between ESRS 2 and the topical standards, especially deleting topical specifications to GOV, SBM, and IRO, major concerns remain: Some prescriptive disclosure requirements on PAT level have been introduced that we do not agree with and that were not required in Set 1 of the standards. These additional information would not add value for decision making. These specifically pertain to GDR-M, paragraph 41. Firstly, paragraph 41 (a) now requires, for each metric, information on data types and sources used as input to the calculation. Providing information on data types and sources is not relevant for most metrics and certainly does not add additional value to users. We therefore suggest deleting 'data types and sources used as input to the calculation' from the prescriptive requirements of the provision. Secondly, paragraph 41 (b) introduces new requirements for all environmental metrics regarding information on the specific environmental conditions and characteristics of the area where the impact is occurring. Such information is often not available, also is it nearly impossible to determine the area where the impact is occurring with precision – as such the required information would by highly judgmental, subject to significant uncertainties and therefore likely to not meet the criterion of faithful presentation. 41 (b) also creates additional requirements that were not present in set 1 by advocating such information for all environmental metrics, which also includes value chain metrics. We therefore suggest deleting subparagraph 41 (b) entirely. The ESRS 2 IRO-1 disclosure requirements (paragraph 26) are still overly technical with little information value for users. Such technical information about the process and methodology of the double materiality assessment should continue to be shared with auditors for evidence but should not form a mandatory part of the disclosures.			
Survey	Allianz SE	Insurance	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We support eliminating most "may disclose" datapoints to enhance focus and reduce confusion. We welcome the relocation of all mandatory disclosure requirements into the main body of the standards, along with the placement of application requirements directly below each relevant DR and Chapter in ESRS 1. However, our remaining concerns include: 1) Some "may disclose" datapoints remain (e.g., ESRS 1.114, 1.115) and should be reconsidered to ensure consistency in mandatory reporting. 2) ARs are intended to constitute mandatory requirements, and that all guidance or illustrative examples should be moved to the NMIG. -Changes to established terminology should be approached with caution, given that many undertakings are already preparing or reporting under the original ESRS. The consistent use of "material IROs" should be ensured across the standards, avoiding references to "material topics," and wording should not alternate between "adverse" and "negative" impacts. 3) We remain concerned by the wording of certain ARs. Expressions such as "shall consider" create ambiguity, as it is unclear how "consideration" can be measured or audited, and such phrasing risks prescribing behavior in contradiction with ESRS 1 paragraph 5.			
Survey	Allianz SE	Insurance	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We welcome a strict and clear separation of mandatory and voluntary disclosure requirements, keeping in the standards all "shall" requirements and moving all "may" requirements to the NMIG. However, the revised standards introduces the new term "can", e.g AR4 "biodiversity and ecosystem scenario analysis can inform the identification […]". It is unclear if this is a mandatory or voluntary requirement. In general, EFRAG should refrain from introducing new terminology in the revised standards.

Survey	Allianz SE	Insurance	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We generally support the introduced horizontal reliefs (including "undue cost or effort" and "reasonable and supportable information"). However, financial sector firms face ongoing challenges in accessing high-quality value chain data. These practical challenges raises two concerns with the introduced burden reliefs in the revised ESRS: -Relief for lack of data quality on metrics: See our answer to the next question -Restatement needs for change in estimates: ESRS 1 paragraph 94(b) requires restatements of comparative figures for any change in estimates. Data quality from third parties – essential for calculating financed emissions – continues to develop and there will be a natural evolution in data quality. This issue is pertinent financial sector firms. It is common practice to report financed emissions using the fair value of the balance sheet and the latest emissions data of investee entities, which may be many months out of date. In a subsequent reporting period, there is more up-to-date emissions data relating to the prior period for those assets under management and paragraph 94(b) requires the prior period metrics to be revised using the up-to-date information. However, this same data is used to determine the current year financed emissions. This means that the difference between current year estimate and revised prior year financed emissions reflects changes in portfolio composition or fair value movements only – not actual change in emissions. Such a requirement leads to recurring, year-on-year restatements, which in our opinion is not in line with the qualitative characteristics of information, namely relevance and allowing for comparative and predictive value. As such, we suggest to reword 94(b): "identified new information in relation to the estimated figures disclosed in the preceding period, and the new information provides evidence of circumstances that existed in that period, unless the new information is reflective of time lags in data."			
Survey	Allianz SE	Insurance	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	We support the introduction of the 'undue cost or effort' relief and welcome its consistent application. Furthermore, we agree that flexibility without a fixed time limit provides companies with realistic pathways. We see however major remaining concerns: -The relief introduced through paragraph 91 of ESRS (note that paragraph 91 addresses the relief, not paragraph 92) is per definition not applicable to GHG emissions. However, GHG emissions accounting and calculation is the one metric area generally most subject to high measurement uncertainties, often unavailable and unreliable direct or estimated data, and high cost and effort requirements. In the way paragraph 91 is phrased, the relief for metrics would not be possible for GHG emissions – as such full coverage would be required, irrespective of cost and effort considerations or the reliability of estimates. Regulation should emphasize accuracy and reliability of reported data, ensuring that the mandatory use of estimates is limited to where it enables enhancing the understanding of the company's activities. Paragraph 91 creates a misguiding incentive for GHG emissions to achieve 100% data coverage with low-quality estimates, rather than prioritizing high-quality, verified data for management purposes, such as target setting. Using sector averages for low-quality data areas is simple, but investors need to differentiate companies to identify risks and opportunities. We fully support the relief concept of paragraph 91 and strongly call for removing the exclusion of this concept for GHG emissions. -Paragraph 91 specifies that in certain cases the respective metric can only be "partially estimated". There might however also be cases where the metric cannot be estimated or needs to be estimated entirely, if no real data is currently available. We therefore suggest to rephrase the wording to "(...), but the corresponding metric can currently only be entirely, partially, or not estimated at all."			
Survey	Allianz SE	Insurance	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	We see major challenges and issues with the concept of (anticipated) financial effects in general. As such, Option 1 raises several concerns, namely: -Lack of clarity relating to the scope of this requirement in the light of anticipated financial effects that are included in the management report / risk report of the undertaking -Absence of (standardized/harmonized) methodologies and comparable data to determine anticipated financial effects -High level of (measurement) uncertainty resulting in lack of usefulness of the information -Lack of comparability -Sensibility of this information, as it specifically also goes far beyond the usual planning horizon that undertakings have in place While Option 1 provides (permanent) reliefs it would still result in the need for further documentation while the disclosure outcome are expected to be similar to Option 2 (i.e. limited quantitative disclosure due to the reasons listed above). As such, we support Option 2, as it provides a more balanced and realistic approach. It acknowledges the practical challenges, legal risks and audit impracticability of disclosing forward-looking financial information and allows time for the development of reliable data and methodologies. It is important to note that Option 2 needs to be extended to ESRS E1 as well, as it is currently only anchored in ESRS 2.			
Survey	Allianz SE	Insurance	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	We welcome and appreciate the effort to simplify the disclosure requirements on Anticipated Financial Effects, particularly through the reduction in scope from the previous E1-9. However, we believe that adjustments are needed to fully balance reporting effort with users' needs: -40(a) and 41(a): The disclosure of "assets at material physical/transition risk" should not be mandatory, as there is no established standard for these indicators. Without such a standard, there is a risk that the disclosure will only be of very limited relevance to stakeholders. In addition, the required granularity in terms of regions and economic sectors is too high. There is a risk of disproportionately extensive reporting. -40(b): The level of detail required for specifying the location is challenging to determine and results in unnecessarily detailed reporting, and the term "key assets" allows for varying interpretations, potentially leading to ambiguity and inconsistency across the industry. -40(d) and 41(e) Mandatory disclosures should, if at all, only include those indicators that are also part of financial reporting. For Allianz, for example, "revenue at risk" is not such an indicator. -41(c): Real estate assets constitute only a minor portion of total assets for insurance companies in general. Therefore disclosing a breakdown of any within these assets by energy-efficiency class would not provide material information to stakeholders. -41(f): The disclosure of "stranded assets" should not be mandatory, as there is no established standard for this indicator. Without such a standard, there is a risk that the disclosure will only be of very limited relevance to stakeholders. In general, we would suggest adding a relief to the detailed datapoints that allows omission when there is no reasonable and supportable information derived from the reporting undertaking's business plans to be used as input in the calculation of anticipated financial effects.

Survey	Allianz SE	Insurance	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	While we acknowledge and appreciate the efforts made by EFRAG to enhance interoperability with the ISSB's Standards IFRS S1 and S2, there are still critical areas where deviations occur that need to be addressed to ensure a more seamless alignment. Regarding IFRS S1, we see interoperability issues with the amended ESRS implementation of information materiality. Please see question 11 for details. Regarding IFRS S2, firstly, the requirements concerning financial and operational control (E1 AR 18. For para. 32/ E1 AR 19 for para. 32/ E1 AR 20 for para 32) diverge significantly from IFRS S2, where undertakings have the flexibility to choose their preferred approach. This dual approach may result in inconsistencies in reporting and interpretation, requiring the need of a careful review to ensure clarity and uniformity. Secondly, the deviations related to the requirements around anticipated financial effects continue to be a concern. Please refer to the response in question 20 for further details. Additionally, the inclusion of anticipated financial effects considerations to perform the resilience analysis (E1 AR 8 for par. 20) is another critical area that does not align with IFRS S2. This new consideration, not included in the original ESRS, introduces complexity and additional burdens for undertakings. In conclusion, while the proposed amendments represent significant progress towards interoperability, addressing these critical areas will be essential to achieving a more consistent and aligned framework with IFRS standards. Further dialogue and refinement are needed to ensure that the simplification objectives do not compromise the integrity and comparability of sustainability reporting. Notwithstanding the above, we want to reiterate that fundamental concepts of ESRS like maintaining reporting over full value chain including scope 3 and the fundamental concept of DMA should always remain core.			
Survey	Allianz SE	Insurance	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	Allianz SE	Insurance	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	We support the systematic reduction in mandatory and voluntary datapoints as a necessary and proportionate response to concerns around reporting complexity, excessive granularity, and the potential administrative burden for preparers. We welcome the prioritization of quantitative datapoints over detailed narrative explanations and the distinction between mandatory and voluntary requirements. However, we see remaining major concerns: -It is important to note that a 57% reduction in mandatory datapoints will not necessarily translate into a proportional decrease in report length and burden. While we welcome the notable reductions in certain topical standards, significant concerns remain regarding newly introduced concepts and methodologies that may, in fact, increase the reporting effort (see our detailed responses to the other survey questions). -The simplification and reduction of datapoints has also been accomplished by merging, rephrasing, and restructuring many if not all disclosure requirements and datapoints. This represents significant additional effort for first year reporting under the revised ESRS for Wave 1 undertakings that have already published set 1 ESRS compliant sustainability statements – as each change, even a simple restructuring or addition/deletion of words, requires a re-assessment of already conducted and established standard interpretation.. It also led to unclear and primarily descriptive paragraphs, such as ESRS 1 paragraph 27 and AR 20 related to paragraph 49, on assessing the undertakings' materiality. -Expressions like "is useful information" (e.g., ESRS 2, AR 32) or "is a possible aspect to cover" (e.g., AR 33) continue to appear. These formulations may lead to uncertainty regarding the actual requirements for undertakings. Additionally, even the conceptual framework concerning "topics to be reported on" or "material IROs" could benefit from further clarification or streamlining.			
Survey	Allianz SE	Insurance	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	While we agree with and support the changes done to the requirements in E3 (water withdrawal and water discharges) and E4 (Transition plan), we do not support the introduction of new mandatory metrics in G1 , since this contradicts the mandate of simplification and reduction of reporting burden.			
Survey	Allianz SE	Insurance	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Regarding ESRS 2 BP 1, we do not agree with the new provisions introduced by paragraph 5, as it creates duplicated information throughout the Sustainability Statement. For example, if the reporting undertaking makes use of the relief for metrics with a partial scope (ESRS 1 paragraph 91), or changes sustainability information due to a restatement need or error correction (ESRS 1 paragraph 95-97), sufficient transparency will provided for the metrics concerned, i.e. by providing contextual information, disclosing the partial scope, and correcting/restating the previous reporting period figures. Following the new paragraph 5 and stating that the reporting undertaking has applied these "provisions" just creates duplicates and redundant information not helpful for readers and users. We therefore suggest limiting the disclosures required by paragraph 5 to those that do not create duplicated/redundant information with already existent disclosure requirements in the revised standards.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Allianz SE	Insurance	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I disagree	We welcome the clarification that the ESRS are designed and already included a fair presentation principle which is being achieved by complying with the ESRS. However, discussions about the draft ED indicate that the proposed wording could lead to unintended consequences, misinterpretations and finally, new complexity which would contradict the intended goal of Omnibus. The current ESRS are generally perceived by auditors as a compliance framework. Auditors generally recognize that fair presentation frameworks involve more than mere compliance and often include additional requirements. The issue is the auditor's understanding of a 'framework': If the revised ESRS determine a fair presentation framework – in contrast to the current ESRS – this would very likely not result in a significant reduction of the reporting burden as intended by EFRAG. Auditors understand that omitting information under a fair presentation framework would require additional efforts for both preparers and auditors, which is clearly not intended by EFRAG. Therefore, the wording around fair presentation and EFRAG's intention behind it, which we fully support, should be further clarified. We deem such clarification necessary -in the legal wording of the standard itself -the basis for conclusion, and -as well as in existing FAQs relating to the concept of fair presentation. The wording should explicitly outline that fair presentation is embedded into the standards as a principle, not a framework. Fair presentation (in the meaning of the ESRS) might require both, omitting requirements due to the outcome of the double materiality analysis or applying the materiality of information filter, or adding e.g. entity-specific information in order to properly reflect the business model of the reporting undertaking. It should become clear that fair presentation will be achieved by complying with the ESRS and it is intended to simplify reporting and not add burden.			
Survey	Allianz SE	Insurance	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	The disclosure of absolute values alongside GHG emissions intensity targets presents significant challenges for financial institution and it fails to comply with qualitative characteristic of information: Estimating absolute emissions associated with an intensity target involves assumptions about portfolio composition, production capacity, market shares, and emission intensity, leading to unreliable results and unmeaningful disclosures. On top of that, absolute emissions associated with an intensity target may capture total impact but fail to consider business growth, potentially creating an unlevel playing field if exceptions are made only for financial institutions. We agree with the exception for financial institutions due to the unique role they play in facilitating sectoral transitions.			
Survey	Allianz SE	Insurance	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	We disagree with the new threshold for country-by-country disclosure as it 1) significantly increases the burden of global data collection and 2) the number of data points to be disclosed. Reg 1) The burden of global data collection is significantly increased when metrics on employees are collected primarily by operating entity rather than by country, which is the case in many companies for internal steering purposes. Reg 2) An increased number of data points to be disclosed reduces the readability and conciseness of the final Sustainability Statement.			
Survey	Allianz SE	Insurance	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	We partly disagree with the amended Adequate wage benchmark outside the EU outlined in the new AR 22 (b). In particular, we disagree with -the addition in AR 22 (b) i) regarding statutory minimum wage that it is "periodically reviewed/adjusted every two years and takes into account the ILO wage setting principles". We contend that it is not the responsibility of individual undertakings to ensure this. -the newly introduced last sentence of AR 22 (b) that the adequate wage benchmarks outside the EU "should take into account both needs of workers and their families, as well as economic factors, as stated in the ILO Minimum Wage Fixing Convention No.131". Again, we contend that it is not the responsibility of individual undertakings to ensure this.			
Survey	Allianz SE	Insurance	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	1/ PAI indicators are generally supported and should be kept. 2/ Companies have integrated or plan to integrate most PAI indicators in their investment decision making processes or are relevant for their engagement strategies. Also, PAIs are better understood and known by customers than other elements of disclosure. The PAI themes on GHG, biodiversity, waste, water and social and employee matters are well understood also by retail customers. 3/ Consistency of the Sustainable Finance regulatory framework is key, especially with respect to the SFDR revision. PAI reporting under SFDR at entity level should be removed by group aggregated disclosure, i.e. upon (group aggregate) PAI disclosure under CSRD, the Art. 4 SFDR requirement for entity level disclosure should be deemed as complied with.			
Survey	Allianz SE	Insurance	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	The current target-setting guidance in E4 AR 26 is primarily oriented towards the real economy, focusing on direct actions such as habitat restoration or number of projects/sites, which are applicable to production sectors. However, for financial institutions, biodiversity targets are rather connected to portfolio alignment, sector inclusion, engagement targets, or impact reduction based on metrics disclosed by investees, emphasizing the shift of capital flows rather than direct operational control. Therefore, any guidance included in a revised AR 26 on target setting will struggle to capture the diverse requirements across sectors. Given this disparity, we suggest not including specific target guidance in the ESRS, allowing flexibility for each sector to define targets that are relevant to their unique roles and impacts on biodiversity and ecosystems.			
Survey	Allianz SE	Insurance	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree

Survey	Allianz SE	Insurance	Germany	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Own operations: We appreciate the inclusion of the term "usually" in paragraph 65, as it acknowledges exceptions to the general rule that the financial consolidation scope aligns with the own operations of the reporting undertaking. Additionally, we express our gratitude to EFRAG for incorporating paragraph 70 on leased assets, which highlights one of these exceptions. To enhance clarity and prevent misinterpretations, we propose two minor amendments: 1) Clarify that the exceptions mentioned in paragraph 70 are not exhaustive. We recommend adding the phrase "leased assets and other fully consolidated investments in real assets held solely for investment purposes" to paragraph 70. Alternatively, this addition could be included in the recitals to prevent the misunderstanding that paragraph 70 offers a comprehensive list. 2) Emphasize that the principle introduced in paragraph 70 is a universal principle applicable across all topical standards. In particular, it should be explicitly stated that the lessor should report emissions from leased assets as Scope 3 emissions, while the lessee reports these emissions as Scope 1 and 2.			
Survey	Allianz SE	Insurance	Germany	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	Allianz SE	Insurance	Germany	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree

Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We welcome the simplification of material information as a key principle and the flexibility introduced by the top-down approach, including the focus on reporting IROs at the management level. Nonetheless, it's our view that the criteria for determining material IROs and related topics are unclear and clearer definition with illustrative example would be needed to avoid complexity and excessive granularity. Furthermore, ESRS 1 (paras 48 a), 48 b) and AR 19) encourages excessive qualitative assessment of IROs reducing the quality of DMA process, strengthening burdens for auditors since would require additional efforts to assess the sufficiency of the analysis performed by undertakings to reasonably conclude on IROs as material. Therefore, guidance is needed on when qualitative analysis alone is sufficient. We discourage the introduction of the DMA to all datapoints of ESRS 2, hard to be applied considering that ESRS 2 sets out general disclosure requirements that apply across sustainability topics and defines the undertakings' reporting process for the ultimate identification of material information to be disclosed. Contrariwise, we encourage including clear examples on how DMA can apply to all datapoints of ESRS 2. We discourage including non-material information in the sustainability reporting, as this would be against the principle of materiality and could result in obscuring material information. In addition, it will even increase burden for undertakings, as unhelpful practices of reporting non-material information will likely spread across preparers. If such information is nonetheless included, even though it is outside the mandatory framework, it is our view that this should not be subject to mandatory assurance. Finally, we note the wording included in some datapoints (i.e. "significant", "key", "major"), might cause confusion and inconsistent application among entities. We recommend replacing them with the word "material" to improve consistency with the concept of materiality of information.			
Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	ESRS 1 para. 34-35 provide useful principles on considering remediation actions in assessing severity and likelihood of actual and potential negative impacts. However, ESRS 1 para. 35 references to "supportable evidence" raises doubts about whether mitigating and preventive actions without adequate evidence can be considered. Conversely, while Appendix C should focus on clear principles and examples, it is overly detailed, prescriptive and complex for preparers, causing varied interpretations. Indeed, there is no clear guidance on when the approach should be on a gross or a net basis. A notable concern is the differing treatment of one-off versus ongoing actions (impacts addressed by completed actions should be assessed after mitigation, while those requiring ongoing actions should be assessed before mitigation). This can lead to reporting bias, making static solutions seem more attractive, even if ongoing actions are more effective in practice. We therefore noted the following points of clarification: - in some cases, the treatment of the scenarios in the appendix C are inconsistent with our understanding of the ESRS 1 paragraph 34 and 35. To be noted that wave 1 undertakings mostly used gross approach in their first sustainability reports; -more guidance is needed on what constitutes 'significant ongoing actions', particularly the connection between policies and ongoing actions in AR12; -the definition of the baseline value against which past negative impacts need to be reported. Currently, these considerations apply only to impacts, not risks and opportunities. We recommend a general principle equally covering impact risks and opportunities, to ensure consistent application across the double materiality spectrum. We therefore disagree with the proposed modification and suggest providing clear and detailed guidance together with practical considerations, either directly within the body of the standard as Application Requirements, or alternatively in an appendix to the standard.			
Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	We agree with the inclusion of an "executive summary" at the beginning of the sustainability statement. However, it should be clarified that, if used, the executive summary shall adhere to principles of materiality and qualitative characteristics. Its content shall be fully supportable within the context of the entire sustainability statement and include only information already disclosed in detail elsewhere in the report. More criteria related to the structure and content of the executive summary are therefore needed also in light of the assurance. We disagree with the provision in ESRS 1 para 109 allowing the executive summary to be placed outside the sustainability statement, such as in another section of the management report. The executive summary shall be an integral part of the sustainability statement to help users navigate the report effectively. Given that the Association has expressed an unfavourable position on the digital tagging of sustainability information, it should be noted that the inclusion of the executive summary must also consider the implications of digital tagging required under the CSRD. The current tagging structure, as defined by the ESEF Regulation, does not support tagging by hyperlinked information outside the document itself. Finally, we disagree with the proposal to use appendices for reporting detailed information separately from key messages (except for taxonomy templates). The CSRD requires the sustainability statement to have a "binding" content within the management report. Allowing such flexibility risks undermining comparability amongst reports and may compromise the accuracy and completeness of the information. Furthermore, with reference to the connectivity with corporate reporting, the use of hyperlinks or appendices could reduce the overall clarity and understandability of information. It is also worth noting that financial reporting follows a strict and binding content structure, without such flexibility.

Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We agree with the proposed amendments to the ESRS; the simplification of general disclosure requirements, the reduction of mandatory data points ("shall"), the reorganization of mandatory and applicative content are positive elements that promote the understanding and applicability of the standards. Particularly, we support the introduction of General Disclosure Requirements (GDR), consistent with the intent to encourage reporting on IROs at the level at which they are managed and to discourage too granular information. However, we recommend further clarifying what is intended by reporting PATs on IROs at the level they are managed or for groups of IROs – without this, it would not likely be clear to an undertaking what is expected. We agree disclosing policies, actions, targets and metrics information at different level of aggregation (addressing its material IROs i.e. at topic or a sub-topic level). Following the removal of the MDR, the general disclosures could be structured by moving policies and actions into the Strategy area alongside ESRS 2 SBM 3, which already requires disclosure about the effects of IROs on an entity's strategy and how its strategy addresses or plans to address them, reinforcing the principle of reporting about policies at the strategic level. Furthermore we welcome the reductions of DRs in policies, actions and targets to eliminate redundancies and to improve clarity and overall readability as well as with the provision that the undertaking may disclose the information just once related to the same policies, actions, metrics and/or targets across more than one material impact, risk and/or opportunity (or topic), discouraging repetition or, in case of topics not covered by implemented PAT, presenting this information in a single place alongside the list of IROs (or topics) avoiding unnecessary repetition. Conversely, we suggest maintaining disclosure of a timing for adoption.			
Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	Extensive changes have been made to the overall structure, disclosure requirements and related guidance in a very short timeframe. While we observe that clarity has been improved, there is insufficient time to consider the implications across 12 standards. We welcome the principle that ARs are streamlined and do not include additional disclosure requirements but include (mostly) "shall requirements" needed to fulfil the objective of the DRs. However, the work to determine what should remain in ARs as 'shall' and what should be moved to NMIG was done in a very short timeframe. We recommend EFRAG validate that "hierarchy" is consistently applied across the standards and check: 1) all "shall disclose" ARs are embedded within the the standard after the related DR; 2) all "may disclose" datapoints have been deleted from mandatory material except for those gathered in NMIG or reformulated as supporting methodological elements within the standard without representing new information requirement; 3) using "shall consider" was one of difficulty in the first application; we recommend clarifying this language. As indicated in Q16, the content of the NMIG often addresses some relevant questions regarding the implementation of each topical standard and includes "how to report" guidelines and examples of possible items to cover when disclosing in accordance with a mandatory datapoint. For such reason, we suggest reviewing NMIG moving, to the extent needed, the most relevant illustrative and supporting materials within the body of the standard in association with the DR to which is related to and then removing the content from the NMIG: including part of such guidance within the standards could enhance clarity, while this additional guidance might be confusing. We believe disclosure requirements of the global baseline should be included as mandatory DRs/ARs in the ESRS to the extent they are consistent with the EU context.			
Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We agree with the approach to include only the mandatory ("shall") ARs in the main body of the standards. We acknowledge that while some ARs are not designated as "shall" requirements, including certain "may" ARs included in the NMIG that can be useful to provide important application guidance for users. Indeed, the NMIG contains helpful materials such as support to the implementation questions and illustrative contents anchored to "mandatory" DRs/ARs which would be helpful to re-integrate on the main standards. Therefore, as a general observation, we suggest EFRAG reviews the NMIG to ensure it does not include guidance that goes beyond what is required in the mandatory DRs/ARs included in the main standards. Furthermore, we observe that moving some ARs into the NMIG does not always simplify the ESRS content, as these ARs often provide explicit and clear guidance linked to specific paragraphs. Moreover, past experience shows that developing such materials separately from the standards has caused confusion and difficulties in interpreting ESRS provisions - such as the Implementation Guidance on value chain and materiality assessment - and in disclosing mandatory information, jeopardizing the simplification effort. Given the above-mentioned considerations, we recommend a detailed review of the NMIG content to consider moving certain specific elements back into the standards and deleting the NMIG. Suggestions on what to re-integrate into the standards have been provided in the "Amended ESRS Exposure Draft July 2025 Public Consultation Survey Excel Template for comments on paragraph level". In case NMIG still remain as guidance for preparers, we recommend not to include it within the Delegated Act and we suggest EFRAG delay issuance of any NMIG after the ESRS are finalised by the European Commission, to allow EFRAG to update the guidance for additional points of interpretation or other questions that arise in the implementation process.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	While we recognise the need for relief for specific circumstances (such as impracticability of obtaining data, or challenges arising from new IROs or business transactions), we do not support the proposed new reliefs on removing the preference to use direct data and permission to report "partial scope" (for example, instead of using estimation), or excluding data on activities that do not significantly drive IROs: we are concerned that the introduction of these reliefs could undermine the usefulness of information to users, and encourage selective reporting. We do not think that such reliefs should be included as permanent provisions for preparers as we expect that over time there should be less needed to apply them as practice matures. Instead, we recommend the introduction of a general relief based on a principle that the undertaking explains why it could not make full disclosure in specific circumstances such as impracticability of obtaining data, or other specific circumstances, together with an explanation as to why the full disclosure could not be made and when the undertaking expects to comply in full. In relation to the relief on acquisitions and disposals, we welcome such flexibility as certain information may take longer to be elaborated and integrated within the strategy and the business model of the undertaking. However, such simplification might create a misalignment with the financial consolidation perimeter and other reporting. At this regard we suggest introducing specific provisions in relation to the timing of the acquisition/disposal (i.e. excluding an acquisition/disposal if occurred during the second half-year while including an acquisition/disposal if occurred during the first half-year). Finally, we disagree with the relief introduced by ESRS 1 para. 73 as reintroduces the requirement excluded at par. 72; furthermore, the definition of "significant event", "major" transactions and "available information" is too vague and uncertain.			
Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	We acknowledge the intention to provide relief for lack of data quality on metrics as a useful proportionality mechanism, in connection with both own operations and value chain metrics. However, we recommend introducing a clear definition and detailed explanation of "undue cost or effort", aligned with the concept reflected in IFRS S1, according to which "applying a requirement is impracticable when the entity cannot apply it after making every reasonable effort to do so". Practical considerations should include specific examples (e.g, when quantitative information rely on processes not yet implemented, or reporting metrics not required by regulations, or complex estimations needing external expert). This relief should also be time-limited, similarly to the existing ESRS 1 relief for 'value chain' datapoints. Such simplification risks reducing incentives to improve data availability, which is essential for transition objectives and providing useful information to users. Particularly, we disagree with ESRS para. 91, which allows the undertakings to use reliable direct or estimated data only for part of the reporting boundary or value chain if material IROs are identified. It should also be considered that the relief mechanism as currently envisaged and the concept of "undue cost or effort" may pose challenges for assurance providers in assessing whether the information omission is justified and in assuring partially estimated metrics. While we support targeted burden relief to keep reporting proportionate and achievable, we emphasise the need to maintain high standards of relevance and reliability to ensure quality sustainability reporting. Any additional relief for data quality should be clearly justified to prevent arbitrary or indefinite omissions.			
Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	Information on anticipated financial effects is valuable to investors and has been identified to be integral to the global baseline. However, we recognise that this is a complex and difficult area for preparers and that practice is largely nascent. Therefore, we welcome the inclusion of a range of reliefs to ensure proportionate application of the requirements, consistent with the provisions of the ISSB standards. At this stage, we support Option 2 and an extention of the transitional provision in ESRS (Appendix C ESRS1), given the limited usefulness of quantitative data and the sensitivity of certain disclosures. Indeed, calculating and disclosing quantitative information for anticipated financial effects could provide little information value to investors, due to the lack of mature methodologies and the inability for many undertakings to measure them. Within the extent of Option 2, we suggest including specific requirements (for qualitative information) such as identifying line items, totals and subtotals within the related financial statements that are likely to be affected, or have been affected, by that risk or opportunity. At the end of the transitional provision, as practice matures, we support moving to Option 1 to achieve full alignment with the global baseline, subject to the development of guidance on appropriate methodologies on the presentation of anticipated financial effects.			
Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	Considering the content of question 19, disclosures regarding anticipated financial effects, once fully implemented, are primarily intended for investors. Achieving global comparability is therefore especially desirable. Accordingly, we strongly encourage EFRAG to align these disclosures with ISSB standards. While we acknowledge the provision allowing for disclosure within a range, further enhancements are needed to facilitate interoperability. For example, differences in the treatment of mitigation when reporting monetary amounts or the percentage of assets exposed to significant physical risk would be likely to result in inconsistent reporting outcomes under the different frameworks, which may affect comparability. Further, we remain concerned that the revised requirements, particularly the inclusion of loan collaterals (E1.41(c)), may introduce unnecessary complexity—especially for entities lacking centralised data collection systems. We suggest relocating such details to illustrative guidance (i.e. NMIG). As with other standards, several terms require clarification. For example, the phrase "leverages on the process" in paragraphs 40(e)/41(g) of ESRS E1 lacks clear definition, creating potential challenges for consistent interpretation and auditability. We recommend either clarifying or removing such requirements. Finally, the use of "aligned" in paragraph 42 in reference to business activities and climate-related opportunities appears unduly restrictive and may be difficult to substantiate or audit without further guidance. The current language also does not sufficiently address how potential adverse impacts should be reported in relation to opportunities. We encourage providing a clearer definition of "aligned" and addressing the treatment of adverse impacts. Overall, while we support the efforts already made towards simplification, further revisions are needed to ensure clarity, practicality, and global comparability in disclosures.

Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We do welcome the amendments presented to align the provisions and avoid unnecessary differences between the ESRS and the ISSB. Particularly, despite the difference in materiality perspective which was not changed (ESRS relies on double materiality - in contrast to IFRS that relies on financial materiality only) the concept of the "materiality of information" has been reinforced (ESRS 1 Chapter 3.1 new par. 21) becoming a general filter for the reported information, meeting users' needs and expectations and aligning to ISSB. Some existing differences related to the ESRS E1 and ISSB S2 have been addressed, such as the revision of the languages to adopt the same terminology of ISSB (i.e. transition plans, resilience, internal carbon pricing, anticipated financial effect/opportunities); the removal of MDR would permit EFRAG to align the content areas with the ISSB's approach. However there remain some differences: some disclosure requirements and reliefs/proportionality mechanisms have partially been brought into the proposals, but not fully or without the complete accompanying application guidance; furthermore, the allowance for the inclusion of non-material information (ESRS 1 para. 108), if confirmed, would undermine the core principle of materiality - the cornerstone of ESRS - and could weaken interoperability with the ISSB standards; some of the information required by ESRS E1-11 are additional with respect to ISSB S2. Failure to achieve the greatest possible alignment between ESRS and ISSB standards would be contradictory with the objective of reducing the reporting burden. Consideration should be given to undertakings that will be required to disclose under both frameworks, as well as the difficulties to obtain exemptions for subsidiaries in jurisdictions with mandatory ISSB application. Considering some misalignments will inevitably persist, we believe it's essential to update the interoperability guidance to provide concrete support for preparers applying both the frameworks.			
Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	We believe that the reduction of mandatory datapoints proposed in the EDs is an acceptable compromise between the objective of simplification and the information needs of users of the sustainability report.

Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	22.G1	Comments on deleted datapoints in ESRS G1	I agree	We believe that the reduction of mandatory datapoints proposed in the EDs is an acceptable compromise between the objective of simplification and the information needs of users of the sustainability report.			
Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	We believe that the decision to add new mandatory datapoints to ESRS E3, ESRS E4 is acceptable. On the specific proposal to require mandatory disclosure of a transition plan for biodiversity and ecosystems if such a plan exists, we are concerned by difficulties in assessing whether an undertaking plan would be considered a "transition plan" (as opposed to an extension of strategic policies, actions and targets). If mandating disclosure, we think it is important that the standards include within the glossary the definition of transition plan for biodiversity and ecosystems. With regard to the proposal to add to ESRS G1 a mandatory datapoint that provides for the separate indication of the participants to the training activity, we believe that this change does not add relevant information, entailing a burden both for preparers in the collection of detailed information, especially within groups, and, consequently, for assurance providers who must then verify the information provided". Regarding the proposal to add to ESRS G1 a quantitative mandatory datapoint on confirmed incidents of corruption and bribery, we recommend that the definition of corruption and bribery be better clarified in particular when the company operates in different jurisdictions. We also recommend clarifying what constitutes a "confirmed incident", in case of more than one level of judgment.

Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	In general, we consider the proposal to add new mandatory datapoints acceptable; however, we note the need for further action on the changes introduced to the Disclosure Requirement DR ESRS E2-4 and DR ESRS E5-4. With reference to DR ESRS E2-4, we note that paragraph 16 requires to provide information on secondary microplastics resulting from the degradation of the reporting entity's products; however, neither paragraph 16(c) nor paragraph 16(d) mention the secondary microplastics produced by the entity itself but only refer to the downstream value chain. We recommend that EFRAG reconsider this limitation and consider extending these datapoints to its own operations as well. With reference to the introduction of the new requirement in paragraph 15(c) of ESRS E5, we note that this datapoint can be difficult to apply in practice for entities operating outside the EU. The definitions of 'critical and strategic raw material' refer to EU legislation that identifies them according to EU political priorities. It is not clear how an entity with operations outside the EU should apply these definitions. In addition, the indicator may be difficult to calculate and considerations relating to the confidentiality and sensitive nature of the information requested are likely to be raised. It would be desirable that, alternatively, the new requirement be removed, or that its application be clarified directly in the standard.			
Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I disagree	We disagree with introducing the principle of "fair presentation" as it does not represent an element of simplification in the implementation of the standards. Quite to the contrary, it may increase efforts and costs for preparers (including with respect to assurance costs) and add complexity in assessing and disclosing material topics and information beyond what the standards require - in a context where information is not limited to primary users/investors, as it is in the case with the ISSB standards. The CSRD is built on a compliance-based model, and not on the principle of fair presentation as in financial reporting. If the EU legislator intended to apply the " fair presentation" principle also to sustainability reporting, it would have done so as explicitly as with financial reporting. In addition, introducing a fair presentation framework would imply an assurance conclusion that is inconsistent with the CSRD requirements. The concept of fair presentation sometimes is not well understood in practice which might lead to the gross misconception that fair presentation is "less than compliance". It should also be considered that if the fair presentation requirement is applied broadly to all relevant stakeholders, the scope of information to be disclosed in the sustainability statement could become virtually unlimited. For these reasons, we strongly recommend removing all references to fair presentation in ESRS 1 and clarifying that the purpose of the sustainability reporting is to ensure the compliance with the CSRD and of ESRS. We consider such approach fully appropriate in the context of the existing legal framework; furthermore, it has to be taken into account that sustainability reporting is still significantly less mature than financial reporting and requires further education for preparers and all players involved before the notion of "fair presentation" is sufficiently stabilized.			
Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We consider acceptable the proposal to exempt financial entities from the obligation to report GHG emission reduction targets if they have only set emission intensity targets. We believe, in fact, that the reporting of objectives expressed in absolute terms implies the use of complex estimates and, therefore, difficult to verify them. In addition, the targets expressed in absolute values by financial entities would risk being misleading as they may result in double counting, especially with reference to scope 3 emissions. In addition, requiring disclosure of absolute value targets when an entity has only set intensity targets requires the entity to perform additional analysis solely for the purposes of the disclosure, which might not produce meaningful information to users. In this perspective, we believe that reporting only on the objectives expressed in terms of intensity may be sufficient to provide relevant information for users of the sustainability report of financial entities.			
Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	We agree with the change in the threshold for reporting data at the individual country level in the DRs ESRS S1-5 and S1-7. The new approach, which includes the 10 countries with the highest number of employees (provided that each has at least 50 employees), ensures greater representativeness of information. We consider that this change will provide more transparent and easily interpretable data for stakeholders, contributing to a more effective communication; at the same time, it ensures the completeness of information by limiting the possibility of excluding countries in which the company/group is present with a significant number of employees. We are aware that, in some cases, the change could lead to an increase in the number of countries to be reported, resulting in greater efforts in data collection and preparation. However, we believe that the benefit in terms of transparency and availability of relevant information outweighs the additional burden, especially considering that such data is generally already available within companies and therefore easily accessible.			
Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	We agree with all three critical points raised by EFRAG SRB members. On the other hand, we believe that the request for alignment/reference of collective agreements or estimates on the minimum wage mentioned in points i), ii) and iii) with the ILO principles can represent a guarantee of the adequacy of the calculation methodology adopted. However, the methodology for the calculation of adjusted wages as amended and defined in § AR 22 (b) of ESRS S1 is not entirely consistent with the objective of the DR as it allows the use of the statutory minimum wage established by legislation or collective agreements, provided that these are reviewed and take into account the ILO principles on wage determination. Moreover, the reference to be used is not entirely clear, since § AR 22 (b) mentions the "ILO principles on wage determination" in point (i) of the paragraph, and the "ILO principles for the estimation of a living wage" in point (ii). It is therefore useful to clarify the methodology (e.g. ILO) to be used, to strengthen the guarantee of adequacy and ensure the correct application of the calculation, and to develop more guidance in order to make these references effectively used by companies in a consistent manner. Given the complexity of the issue and the fact that a benchmark for the appropriate salary is not always available, it is recommended to emphasize, within the DR, the importance of providing sufficient qualitative information to explain the methodology applied. Finally, we believe that the field test envisaged to assess the adequacy and applicability of the methodology is a necessary exercise, especially if implemented on a large scale, to include as many exceptional cases as possible. This will help to verify the correctness of the methodology adopted or, possibly, to highlight the critical application issues.

Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	We agree with the approach taken for the integration of SFDR PAIs into the ED ESRSs. Reducing data points can simplify reporting without compromising investors' information needs. For example, the consolidation of human rights in a single data point (ESRS 2 GDPR-P) is consistent with the UN Guiding Principles (UNGP) and the OECD Guidelines, making information more relevant and accessible. We agree that this simplification facilitates data collection and reporting, without excluding elements that are significant for SFDR. It also highlights the link with human rights policies, making the topic more understandable for both companies and external stakeholders. At the same time, we believe that the transparency and reliability of information, particularly on human rights, has been strengthened, without compromising the purpose of the SFDR. However, to further improve the effectiveness of the system, we suggest some additional interventions: •Greater granularity: provide more specific guidance on when to disaggregate data by stakeholders (e.g., employees, workers in the value chain, community, consumers). •Operational support: provide a connection table between the ESRS datapoints and the SFDR indicators, to facilitate alignment and understanding. •Ensure that all PAIs in Table 1 of EU Reg 2022/1288 are included among the mandatory datapoints; the same specific obligation could instead be exceeded for the PAIs in Tables 2 and 3 of EU Reg 2022/1288) where they are not already covered by other datapoints of the amended ESRS. These elements would help to ensure a balance between simplification, transparency and information relevance, strengthening the consistency of the system with the objectives of European legislation.			
Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	We acknowledge that the requirements in E4-4 have been largely removed, and that the purpose of AR 26 is to provide methodological guidance on what biodiversity and ecosystems-related targets can cover. We support the inclusion of methodological guidance, either in application requirements or illustrative guidance. We recommend that reference is made to established market practices and guidance, especially where methodologies from the Science Based Targets Network (SBTN) exist for freshwater, land, and ocean targets. Science-based targets, as defined by the SBTN, are measurable, actionable, and time-bound objectives grounded in the best available science. Companies should be encouraged to apply leading external frameworks—such as the SBTN guidance for land and biodiversity, the Kunming-Montreal Global Biodiversity Framework (GBF) targets, and the Taskforce on Nature-related Financial Disclosures (TNFD) target-setting guidance.			
Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	The total elimination of the voluntary datapoint on the adjusted gender pay gap reduces the analytical capacity and meaningfulness of the information, especially in cases where the unadjusted measurement alone is not able to adequately represent specific situations — for example, in the presence of large differences in the composition of the workforce or national contexts. Therefore, instead of considering the voluntary nature of such requirement in NMIG, since not binding in nature, we propose including such requirement in the ESRS standard, in line with the current ESRS S1. For this reason, we propose that the adjusted indicator be maintained at least as a voluntary or alternative methodology, to be used if the unadjusted is not applicable or not sufficiently representative. In this way, a balance could be found between the need for simplification and transparent information. To this end, it would be necessary to provide more guidance on the calculation methodology to be applied for the adjusted gender pay gap, to ensure greater comparability and reliability of the information reported.			
Survey	ASSIREVI - Association of the Italian Audit Firms	Auditor	Italy	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	The revision of ESRS G1, with the deletion of paragraphs 14 and 33(a) on payment practices and their replacement with PAT provisions and the new paragraph 33(b) dedicated to SMEs, leads to a significant reduction in transparency on aspects relevant to SMEs, such as cash flow stability. Reducing the number of data points from 4 to 2 limits the level of detail available, generating partial information that lacks context and a clear methodology. While this simplification may ease the burden on SMEs, it risks reducing the responsibility of large companies towards SMEs. Moving datapoints in PAT provisions can also lead to confusion, as it does not offer clear objectives or structured criteria for reporting, making it difficult for external stakeholders to correctly interpret the published data. The state of play of the 2024 reports showed a lack of comparability of the indicator relating to payment practices; therefore, it would be necessary to define a standard methodology to be applied. We believe that the current provisions alone can lead to narrative disclosures that are too generic, with a low degree of verifiability and comparability. To ensure consistency with the objectives of the CSRD, in particular the effective protection of SMEs, it would be appropriate to reintroduce clear and measurable indicators, proportionate to the effort required to preparers, and integrate them with the new regulatory provisions.			
Survey	ICAEW	Auditor	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I disagree	We acknowledge that more prominence has been given to the materiality of information as a general filter. This is welcome. It helps to clarify the reporting purpose and will be an important improvement over the existing standards. However, while the text of the revised standard appears simpler, in our view the underlying assessment remains complex. We believe that EFRAG could more clearly articulate the DMA process. The process could be explained with reference to the definition of materiality in the ISSB Standards so that preparers better understand the differences between the two approaches in practice. We also suggest the use of diagrams is explored to help communicate the concept more clearly and reduce the risk of differences in interpretation. We note that there are requirements, for example the reporting metrics required by ESRS S1 Own Workforce, which appear more prescriptive than we would expect from a principles-based approach under a fair presentation framework. The fact that these requirements introduce reporting thresholds (i.e. a breakdown by country for those countries in which 10% or more of the undertaking's employees are located) appears inconsistent with an emphasis on the materiality of information as a general filter. We are concerned that, as a result of the above, the application of ESRS will be treated by preparers as more as a compliance exercise than one where materiality is at the forefront of decisions about what to disclose. If so, this is likely to diminish significantly the usefulness of the information disclosed.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ICAEW	Auditor	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	We suggest that EFRAG revises paragraphs 34-36 of ESRS 1 and the accompanying guidance in Appendix C, which we find to be overly complex and difficult to interpret. We have also heard concerns that the comparability of information disclosed by companies within the same industry sector could be undermined as a result of preparers interpreting the standard in different ways. We would like to see a clearer set of principles that help preparers consider how to address mitigation actions and allow for the application of judgement in respect of fact and circumstances. We suggest that EFRAG considers possible simplification though the alignment of ESRS requirements with the interpretation given by the ISSB's Transition Implementation Group (TIG). This concluded that judgements about whether to disclose information about risk mitigation activities should be based on whether omitting, misstating or obscuring such information could reasonably be expected to influence the decisions of primary users. EFRAG may also want to consider this in the context of risks and opportunities as well as impacts.			
Survey	ICAEW	Auditor	United Kingdom	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We find the standards (commenting on ESRS 1 and ESRS 2 only) to be an improvement from the existing ESRS and are particularly pleased to see the removal of 'may disclose' datapoints, as well as the relocation of the 'shall disclose' datapoints to the main body of the standard. The fact that there have been significant changes to the standards, however, means there could be unintended consequences and new questions of interpretation (as raised in our answers to Q11, Q12, Q25). We urge EFRAG to carefully consider all feedback received.			
Survey	ICAEW	Auditor	United Kingdom	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I disagree	Ultimately, we would strongly favour the use of ISSB Standards as a baseline for the ESRS, whereby amendments and additions are made for requirements over and above the ISSB's global baseline. This would help to simplify the standards, reduce unnecessary divergence, and enable users to more clearly understand the reporting of sustainability information. Although this approach has not been taken forward, we believe there is still significant scope for greater alignment and suggest this is prioritised to reduce complexity and confusion for both preparers and users. We are particularly concerned by the proposed reliefs that would result in new and significant interoperability differences and suggest that these are reconsidered. We would also like to see greater alignment in the following areas: •ESRS 1, paragraph 21. The language used to define material information is similar but not the same as the ISSB's language, resulting in questions over interpretation. •ESRS 1, paragraph 28. The setting of qualitative and/or quantitative thresholds to determine IROs is likely to constitute a fundamentally different approach to the ISSB. •ESRS 1, paragraph 34 –36. The gross versus net considerations regarding impact materiality may benefit from being aligned with the ISSB's TIG interpretation on the matter to reduce confusion. •ESRS 2, paragraph 23 on anticipated financial effects. We would like to see requirements here aligned as closely as possible with the ISSB Standards, including with IFRS S1 paragraph 37(b) that requires an entity to use an approach that is commensurate with the skills, capabilities and resources that are available to the entity. •ESRS E1, AR19-20, GHG emission boundary – instead of mandating a single financial control approach, we would prefer interoperability to be prioritised and call for full alignment with the approach in GHG Protocol/IFRS S2 provisions.			
Survey	ICAEW	Auditor	United Kingdom	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We consider that ESRS should be a fair presentation framework and are supportive of amendments to clarify this. However, we note that the language used to describe what is meant by fair presentation differs from the ISSB's definition. We would support full alignment with the ISSB's language, which mirrors the financial reporting definition and is therefore widely understood. We also suggest that EFRAG reviews the implications of clarifying the fair presentation framework within the context of other requirements. For example, requirements to provide entity-specific information is already embedded within the fair presentation requirement (as it is in the ISSB Standards), and is therefore difficult to understand why it remains a separate requirement. Similarly, it is difficult to understand how the proposed relief regarding the reporting of acquisitions and disposals interacts with the fair presentation framework. We would expect that a reporting entity that makes a material acquisition or disposal during the year should disclose sustainability information related to that acquisition under a fair presentation framework. We accept that it may be difficult to acquire that information at the same level of detail as businesses owned for a full year but would expect that reasonable estimates should be possible and that uncertainties associated therewith could be disclosed and, where necessary, restated later. This would more closely mirror fair presentation requirements in financial statements.			
Survey	IBAT	NGO	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I would like to skip this question and provide my feedback in Part 3

Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I disagree	The proposed changes do not go far enough to resolve the core issues with the DMA process: the vague definition of materiality, the complex language and requirements that add unnecessary burden. The ESRS should focus solely on the ESG factors explicitly mentioned in the CSRD. Notably, social reporting standards should be based only on the 24 social and human rights factors specified in Art. 29b para 2 lit. b) of CSRD. The social sub-topics listed in the ESRS ED, such as privacy, adequate housing, water, and sanitation, remain problematic because they have no explicit basis in the CSRD. The wording in amended ESRS 1.21(b) on information materiality is a major concern as it could unintentionally expand reporting obligations. The current text states that information is material if it is "necessary for users... to understand the undertaking's material impacts, risks and opportunities". This definition is too unclear; it does not specify user knowledge or provide clear criteria for what makes information "necessary". To fix this, we recommend defining information materiality based on the concept of "decision-usefulness," a familiar principle from financial reporting. The criterion in ESRS 1.21(a), which currently applies only to financial reporting users, should be extended to all users to create a consistent framework. Additionally, the Appendix C of ESRS 1, are unnecessarily complex and should be removed. More accessible and explicit guidance is needed to ensure a consistent and efficient process that does not require excessive resources for the DMA itself.			
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	No, we do not agree that the new guidelines sufficiently clarify how to consider remediation, mitigation, and prevention actions in the DMA. Instead of simplifying the process, the guidance adds significant complexity, which could lead to overreporting and leaves companies at the discretion of auditors. Appendix C, while intended to address the gross versus net impact, is overly detailed and may not be feasible for companies to implement without manual solutions. We propose a more flexible approach that allows for the integration of effective mitigation actions and controls. It remains unclear when a mitigation or prevention action is considered "significant," which leaves companies without clear criteria. This ambiguity may force companies to report a high number of potential negative impacts, even if they are non-material, and risks undervaluing the strategic role of regulation. It is also unclear whether globally valid guidelines remain acceptable as a mitigating factor under ESRS 1 para 36.			
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	The proposed amendments introduce some positive changes that improve the structure and user-friendliness of the standards. Grouping Disclosure Requirements (DRs) and Application Requirements (ARs) together enhances readability and coherence. Additionally, the explicit option to include an executive summary and use appendices improves the structure and readability of reports. The introduction of the "undue cost or effort" relief is a crucial step towards providing companies with the necessary flexibility to address practical reporting challenges related to data collection, value chain scope, and metrics. While these changes are welcome, they are viewed primarily as clarifications of existing options rather than substantial simplifications that lead to significant relief in implementation effort or reporting complexity. The duplication of information remains a concern, particularly within the Policies, Actions, and Targets (PAT) sections, and this must be addressed consistently in the design of future disclosure requirements. For the amendments to truly promote more relevant and concise reporting, they must focus on simplifying the underlying requirements themselves, not just the presentation of the final report.			
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I disagree	Despite the efforts, the amendments fail to deliver significant relief in practice, especially for social standards. For instance, the number of Disclosure Requirements (DRs) in ESRS S1 was only reduced by one, and this was only achieved by merging two standards rather than by genuinely simplifying the content. We believe the current structure maintains an unnecessary level of complexity. The cross-references required throughout the topical standards to the General Disclosure Requirements (GDR) from ESRS 2 should be removed to streamline the process. Furthermore, the repetitive disclosure for communication channels regarding policies, which is reiterated across ESRS S1 to S4, should be either removed or at least streamlined within ESRS 2 to avoid duplication and reduce the reporting burden.			
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I disagree	The amendments fail to simplify by introducing new obligations and definitions that complicate reporting. For example, the requirement of the "top 10 countries" breakdown in social disclosures introduce additional, often unclear concepts across the standards. The changes expand the scope and granularity of disclosures in certain areas. This is evident in removal of the term "severe" for human rights incidents in social standards. This change could force companies to report on a wide range of incidents, rather than focusing on the most critical cases, which contradicts the simplification goal. The proposed social standards, in particular, offer only limited relief and fail to genuinely simplify the reporting process. This undermines the stated objective of reducing the administrative burden on companies.			
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	Eliminate the Non-Mandatory Implementation Guidance (NMIG) to avoid implicit obligations under a non-mandatory status. If retained, it must remain outside the Delegated Act.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The introduction of the "undue cost or effort" relief is a critical step towards acknowledging the practical challenges of sustainability reporting. This measure provides much-needed flexibility for companies when collecting data, particularly for metrics and value chain information. We also support the relief for a lack of data quality, which allows for partial scope reporting while requiring companies to disclose actions for future improvements. Despite these positive changes, the amendments still fall short of providing sufficient relief. The definition of "reasonable" effort is open to differing interpretations, which could lead to disagreements with auditors. Clearer, more specific guidance is needed to ensure consistent application and to prevent a new source of complexity. Further simplification is essential for supply chain reporting. Companies should be required to report only on their own targets, actions, policies, and metrics. Data from the supply chain should be required only to the extent that it directly relates to the company's own commitments. Companies should not be obligated to collect detailed, granular data from suppliers or customers, as this is often not feasible or proportionate. The relief measures should also apply to smaller subsidiaries (e.g., those with fewer than 50 or 20 employees). These subsidiaries face similar challenges as SMEs in gathering sustainability data, and their inclusion in relief provisions would significantly reduce the burden on corporate groups.			
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	While we support the general principle of the data quality relief, it does not strike an acceptable balance for social standards and is too limited in its scope. We consider the proposed relief to be a practical and necessary addition. It acknowledges the real-world limitations many preparers face, especially in complex areas such as value chain reporting. We generally support the newly proposed relief for lack of data quality as outlined in ESRS 1, paragraph 91. However, we suggest extending the relief in paragraph 92 to also include relevant metrics under ESRS S1-S4. This would promote consistency across reporting requirements and further reduce complexity in cases where operational control is limited. The reason for excluding these standards from the relief is not apparent. Furthermore, the relief lacks clarity and presents interpretation risks, as there is still potential for disagreement with auditors on what constitutes a "reasonable" effort to improve data quality. The standards must also set realistic expectations for ESG data, particularly from extended value chains, as it will never reach the same level of precision as financial data.			
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	We disagree with both Option 1 and Option 2. We believe the requirement for disclosing anticipated financial effects should be removed entirely. These disclosures are neither feasible nor reliable for reflecting a company's financial situation and pose serious legal risks related to financial statements. The underlying data for these disclosures is often unclear, and risks cannot be reliably isolated. This makes any form of disclosure—whether narrative or numeric—legally risky and prone to misinterpretation. Adding such a speculative requirement to sustainability reporting is inconsistent with established financial practices, as there is no comparable requirement for "anticipated financial effects" for non-ESG topics. For many non-listed companies, this information has limited relevance and is not decision-useful for stakeholders. The projections are highly subjective, which would likely reduce comparability across firms rather than improve it. Furthermore, quantitative disclosures of long-term financial effects are inherently speculative, uncertain, and resource-intensive, especially for family-owned or privately held companies. If the requirement is retained, Option 2 must be fully aligned with ISSB requirements to ensure interoperability and avoid creating additional burdens for companies that report on both standards.			
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	We strongly oppose both quantitative and qualitative disclosures of anticipated financial effects. From our perspective, there is currently no reliable method to link specific climate-related risks or opportunities to financial metrics like assets, liabilities, or revenue. The complexity and lack of integration between sustainability and financial systems make such quantification impractical. Without this linkage, even qualitative disclosures carry significant legal uncertainty and risk of misinterpretation. Comparability across organizations is also limited due to unclear guidance on the level of detail for such disclosures. Capital market participants typically rely on standardised models and data, which are not meaningfully enhanced by inconsistent, company-specific disclosures. The practical use of such granular data remains questionable and does not justify the significant effort required from companies. We therefore advocate for the reporting of anticipated financial effects to be either deleted completely or made entirely voluntary.			
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree				
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	No, we do not agree that these exceptions are appropriate and justified. The move of six "may" datapoints to "shall" contradicts the EU's simplification agenda and unnecessarily increases the reporting burden by introducing more binding requirements. For example, mandating the disclosure of training for the procurement team in ESRS G1 10(c) is questionable. In our view, this datapoint does not necessarily create significant added value, as the assignment of responsibilities within a company can be highly individualized. The focus should remain on key positions in terms of compliance training, rather than prescribing specific teams.			
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	We do not support the introduction of new data points. They impose significant additional effort on reporting entities without a corresponding increase in decision-useful information. We demand careful consideration of the cost-benefit ratio of expanding disclosure requirements, as the current framework already places substantial demands on preparers.

Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I disagree	We are concerned that the introduction such a principle may not lead to simplification and could increase legal risks and audit costs, particularly for sustainability reporting where practices are less mature. Adopting a fair presentation framework will be difficult for auditors, making it harder for them to demonstrate due diligence. This principle is less familiar to non-finance employees, which could lead to uncertainty and inconsistent application within companies. The explicit requirement for fair presentation could significantly increase the responsibilities of Board members regarding the sustainability statement. If interpreted broadly, this could create an open-ended obligation, making the scope of disclosure virtually unlimited and increasing the risk of litigation if stakeholders challenge the adequacy of disclosures. Unlike financial reporting, the boundaries of fair presentation are much less defined in the context of sustainability, which complicates the verification of first-wave reports, especially given the lack of a common European sustainability audit standard. In practice, the principle may not provide a significant additional benefit, as disclosures are already largely determined by the materiality analysis itself.			
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I would like to skip this question and provide my feedback in Part 3				
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	The methodology fails to provide clear guidance on how to deal with subnational agreements outside the EU, which is essential for consistent application. More detailed information is required on the benchmarks to be used for calculating adequate wages within the EU, particularly when national or sectoral agreements differ. Without these clarifications, the comparability of wage disclosures will remain limited across companies and regions. Additionally, the methodology's reliance on whether the statutory minimum wage accounts for ILO wage-setting principles is problematic, as these principles are not relevant to the estimation of living wages. ESRS must not turn voluntary international instruments into mandatory reporting tools for companies.			
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	This disclosure requirement does neither help nor simplify implementing the reporting obligation as set in the CSRD in a meaningful way and hence is considered superfluous and disproportionate. Despite the CSRD requirement of "equal pay for work of equal value," the focus of the reporting standard is on the unadjusted pay gap, which obscures the fact that equal work is already paid equally within companies, especially when covered by collective agreements, as is required by law. The unadjusted gender pay gap is a false indicator that fails to reflect pay discrimination. Its calculation is based on a general consideration of all employees and ignores important factors such as work experience, job type, sector, and qualifications, which distorts the reporting.			
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	We do not support the inclusion of SMEs as a separate category in the disclosure of standard payment terms. This approach is problematic for two main reasons. First, the definition of SMEs varies across different national legislations and often relies on a combination of several parameters, which makes a unified reporting requirement complex and impractical. Second, companies are already compliant with their respective national legal requirements concerning payment terms for SMEs, which makes this additional disclosure redundant. Instead of adding reviving disclosure burdens, the standards should focus on providing a clear and principles-based framework for reporting on supplier relationships that avoids such unnecessary and complex breakdowns.			
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	The proposed amendments do not sufficiently address the significant implementation problems inherent to the social standards. The number of disclosure requirements has been reduced by only one, which was achieved by merging two standards rather than by genuinely simplifying the content. Companies will continue to face major hurdles in providing the required disclosures due to lack of data, non-uniform methodologies, legal hurdles, high costs, a lack of comparability, and sensitive information. A primary challenge is the lack of uniform methodologies for social reporting, which undermines the comparability of data. For instance, in social protection, companies often report on compliance with national legal requirements that vary widely, making direct comparison impossible. The same problem exists with metrics like the gender pay gap, where the focus on unadjusted numbers can obscure the fact that equal pay for equal work is already a legal requirement. This approach is not applicable to the logic of most companies, which use a monthly or yearly earnings basis, not gross hourly earnings. Furthermore, the standards fail to provide a practical framework for handling sensitive information and legal hurdles. Disclosing data on disability inclusion, wage equity, and diversity is complex and can be subject to privacy regulations. This can also be considered commercially sensitive. The high costs associated with collecting, verifying, and reporting this information are disproportionate to the decision-useful insights provided to stakeholders. These issues demonstrate that the social standards have not been sufficiently simplified and leave companies with an immense burden.			
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	33.S_2.	ESRS S2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	The proposed disclosure requirements for workers in the value chain are disproportionate and go far beyond the requirements set by the CSRD. The standard requires companies to collect detailed, reliable data on a vast number of workers in their value chains, which can include millions of individuals across multiple countries. This is practically impossible and goes against the principle of proportionality. For instance, it is unreasonable to expect companies to assess the effectiveness of communication channels for all value chain workers or to collect data on whether they trust these processes. Mandating such far-reaching co-determination and third-party influence on company structures interferes with the right to entrepreneurial independence and fundamental freedom of decision-making. National laws already provide numerous opportunities for workers to report grievances, and imposing additional channels only creates more bureaucracy without adding value. Many workers in the value chain are independent entrepreneurs, so there is no thorough transparency about their workforce beyond basic compliance with human rights and labour standards. The standards need to show greater consideration for the level of leverage that companies have in reality. In practice, reporting can only be done in a more general way, based on a risk-based approach focused on material issues.			
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	33.S_3.	ESRS S3:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	The standard remains overly granular and prescriptive in certain areas, leading to a significant administrative burden. The definition of "affected communities" is still too broad and leaves disproportionate room for interpretation. For example, the definition neglects that communities in the supply chain can extend across different geographical borders or have different social affiliations. Furthermore, the standard's focus on non-binding international instruments, such as the OECD Guidelines for Multinational Enterprises, is a concern. These frameworks are not meant as corporate policy instruments, and making compliance with them obligatory or a de facto standard is not acceptable. While we call on companies to adhere to the UN Guiding Principles on Business and Human Rights, this must be in line with the clear division of responsibilities between states and companies. Requiring companies to report on their compliance with legal requirements has no added value. In addition, the communication of policies to affected communities in the supply chain may be challenging in practice, for example, due to issues of literacy or indigenous languages at times without a written language. Therefore, the standard should specify whether the policies themselves are required to be communicated or whether their relevant content should be communicated in an accessible way.			
Survey	Confederation of German Employers Associations (BDA)	Business association (other than association of financial institution)	Germany	33.S_4.	ESRS S4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	While we support the objective of increasing transparency, the proposed amendments to ESRS S4 are still not aligned with the CSRD and fail to simplify reporting. This standard uses the term "consumers and end-users," which is not consistent with the CSRD's focus on "customers" and the management of relationships with them. This topic is inadequate as a sector-agnostic disclosure as a requirement for all companies, as it risks raising the reporting burden significantly regardless of the company's sector. In addition, reporting on compliance with legal requirements has no added value, as the entire lifecycle of products and services is already regulated by law, and companies already demonstrate compliance. Then the standard is not consistent with the principle of voluntariness for CSR frameworks. While many companies already have governance structures based on voluntary frameworks like the UN Guiding Principles and the OECD Guidelines, making compliance with these frameworks obligatory is unacceptable. These are not meant to be corporate policy instruments. Adherence to the UN Guiding Principles must also respect the division of responsibilities between states and businesses, as clearly highlighted in the UNGPs.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Double materiality is essential and must remain at the heart of the ESRS framework and European Union sustainability regime for corporate reporting to be credible and useful. The principle of "materiality of information" is concerning since it introduces a further filter for companies to not report information. For example, it represents a step backwards from ID-177, which says that most S1 metrics must be reported if S1 Own Workforce is material. It is essential to maintain the principle of fair presentation in the reporting standards. It is positive that the revision of the AR 16 list of topics has maintained all of the sub-subtopics for S1 + S2. These are based on the list of social topics in the CSRD and should all be maintained. The emphasis on aggregation (as opposed to disaggregation) is concerning, as disaggregated information (both site-specific and country-specific) is key to understanding the distribution of IROs.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	It is important that companies report not just their net impact – the gross impact should be reported, and the recommended text preserves this principle.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	The proposed changes are helpful. However, para 113 is difficult to understand: "113. If the description of the material impacts, risks and opportunities prepared in accordance with [Draft] Amended ESRS 2 IRO-2 is not presented alongside the respective policies, actions and targets, the undertaking shall make explicit which policies, actions and targets relate to which material impacts, risks, or opportunities, in accordance with paragraph 22." Para 22 addresses the issue of appropriate aggregation or disaggregation of information on material impacts, risks and opportunities and their management, without setting any rules regarding the location of such disclosures depending (or not) on the level of aggregation.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The Exposure Draft removes duplications between the cross-cutting and topical standards. The preservation of the 4-part architecture in the social standards is important to respect the distinctiveness of different affected stakeholder groups. However, we have two critical concerns. First, the original DR in environmental standards concerning screening of sites in materiality assessment were replaced by an application requirement to ESRS 2 IRO-1. This in effect makes transparency on this aspect optional. Consideration of local context is a key element of an appropriate materiality assessment. This should be both recognised in Chapter 3 of ESRS 1, and in ESRS 2 IRO-1, which should include an explicit datapoint on how the undertaking screened its locations and value chains. We welcome that E standards provide a clearer reference on the importance of disaggregation of disclosures, but this can only be done well if locations are properly screened. Second, we strongly recommend adding an explicit reference to the disclosure of relevant, entity-specific metrics directly in S standards. The fact that S2, S3 and S4 do not include any metrics should not imply that entity-specific metrics for S topics should not be disclosed.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	The "may" (voluntary) data points should not be eliminated. In many cases they are "shall" in GRI standards, so it is important to keep them to align with GRI standards. Also, many of them were originally proposed as mandatory by EFRAG to the EC. The first wave of reports show that many companies have reported some "may" data points. Retaining them would help ensure standardization/comparability between company reports. Almost all of the datapoints for non-employee workers are voluntary, thus most datapoints for this vulnerable group of workers has been lost. Also, important datapoints on full time versus part time workers has been eliminated.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	S1	It is concerning that mandatory guidance in the Set 1 ESRS has been downgraded to "non-mandatory". Mandatory guidance is key to ensuring comparability and completeness of sustainability reporting. At a minimum, Non-mandatory Implementation Guidance (NMIG) should be included in the Delegated Act, and ideally called Mandatory Implementation Guidance. A major point of concern is that ID-177, which provided guidance that most S1 metrics should be reported if S1 Own Workforce is material, has now been downgraded into NMIG. Instead, EFRAG should preserve and promote the guidance that most S1 metrics shall be reported.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	As a whole the reliefs go too far, overshooting the balance between cost/effort and transparency. There is a danger of enabling green/social washing. The relief for "undue cost or effort" is too vague thus leaving too much room for interpretation. The relief for direct data for value chain reporting is too extensive, as direct data is key for transparency. The relief for reporting on operations which are not "significant drivers of IROs" also opens up too much leeway for interpretation.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	These combined reliefs overshoot the balance between transparency and cost/effort and risk enabling green/social washing. At a minimum, there should be a time limit introduced for these reliefs on value chain metrics.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	The ability to estimate financial effects is critical for the undertaking's ability to integrate sustainability into its business strategy considerations, planning and risk management. It is also key for the determination of financial materiality, including in terms of overreporting topics as financially material. Reporting on financial effects is crucial to achieving the objective of putting sustainability reporting on the same level as financial reporting and integrating both. The European Union has recognised the value of a double materiality approach to corporate reporting which requires disclosure of both material environmental and social impacts, risks and opportunities as well financially material data, It is important to keep the requirement on businesses to analyse and understand the financial effects of their business model. This will ensure investors have access to credible data as well as providing the underpinning for future business planning.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I would like to skip this question and provide my feedback in Part 3				
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	ESRS reliefs should not go beyond those set in IFRS. The principle of fair presentation needs to be protected to provide transparency on all material IROs. As noted in the response to question 15, it is also important to consider interoperability with GRI when considering changes to the ESRS, rather than only considering ISSB's standards.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)				
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	22.S1	Comments on deleted datapoints in ESRS S1	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	The reduction in the number of mandatory and voluntary datapoints goes far beyond striking an acceptable balance. As mentioned above, the voluntary datapoints should be maintained to provide alignment with GRI, which is currently in the process of strengthening its labor standards, as well as guidance and standardization for companies reporting more than just the mandatory datapoints. An explicit quantitative goal of 50%+ reductions was never set by the European Commission for EFRAG. A number of S1 datapoint metrics have been eliminated which should be reinstated: •S1-5 Employees: gender breakdown for zero-hour employees •S1-8 Diversity: age distribution; •S1-10 Social protection: reinstatement of retirement •S1-12: Training and development: gender breakdowns, •S1-13 Health and safety: fatalities from ill-health for non-employees and other workers on site; •S1-14 Work-life balance: employees that took family related leave;			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Adding a datapoint on training of the procurement team is needed to support the implementation of human rights in the supply chain. The addition of a datapoint on confirmed incidents of bribery is needed to improve transparency on the effectiveness of bribery/corruption policies and measures.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Agree that the following mandatory datapoint should be added: ESRS 2 General disclosures – BP 1 the undertaking shall state that the general requirements of ESRS 1 have been applied for the preparation of its sustainability statement

Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	The "fair presentation" principle is essential to reduce the risk of green/social washing, as it emphasizes the full disclosure of all material impacts, risks and opportunities and their management. It is not understandable why this principle is under attack, as it is included as one of the general principles of the Accounting Directive.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	It is essential that financial institutions disclose absolute targets to assess how their strategies align with the economy-wide transition to net zero. Absolute targets are relevant for users of sustainability statements and for understanding the real-world climate impact of financed activities. While intensity measures provide insights into efficiency, they can mask rising absolute emissions in growing portfolios or sectors. Granting an exemption would also undermine fairness in a sector-agnostic standard. Other industries could equally argue for exceptions based on their own difficulties, reducing comparability across sectors. Moreover, absolute financed emissions are already recognised in existing standards and regulations: the SBTi financial sector net-zero standard, the UNEP FI/NZBA recommendations, and EU SFDR all require or encourage absolute emissions disclosure. Exempting banks would risk misalignment and reduce the usefulness of reported data for stakeholders, including asset owners who depend on it for their own disclosures.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	The "top 10" threshold for reporting country-level data on employment, collective bargaining and social dialogue is a major improvement over the current 10% employment threshold. An analysis of the first sustainability statements from Wave 1 companies shows that the current 10% threshold results in country-level disclosures on as little as 21% of total employees. More country-level information is needed to understand the distribution of impacts across countries, as well as whether employment thresholds for specific labour rights have been exceeded. The new threshold does not require additional effort/cost by companies, since they must gather country-level data anyways to calculate the global figures. Furthermore, it does not result in extra datapoints, since the information currently is (and can be under the revised ESRS) reported as one table.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	An analysis of the first year ESRS reports shows that most companies are simply reporting that they pay minimum wages, whereas the intention (as outlined in the ESRS Basis for Conclusions) is that companies should be enabled to disclose commitments to paying a wage "sufficient to support themselves and their families in dignity" as well as the extent to which they do this. This shows that the methodology for non-EU countries needs to be changed. Furthermore, the new ILO agreement on a methodology for living wages needs to be taken into account. While the proposed new methodology takes a step forward in both regards, two key changes are needed: •The methodology for reporting on 'adequate wages' should measure actual wages against an adequate/living wage for all employees, not only those within the EU. In particular, for employees outside the EU, the methodology should allow employees' actual wages to be measured: oA) against the local legal minimum wage only when this is set in line with the ILO principles on estimating living wages; or oB) against living wage estimates that are set in line with ILO principles on estimating living wages. •Companies should be able to rely on local legal minimum wages or living wage estimates when the authorities or organisations that set them provide public evidence of their alignment with the ILO principles for estimating living wages. Furthermore, the transitional provision for the EU needs to be reinstated, as not all Member States have transposed the Adequate Minimum Wage Directive.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	The new, simplified framework makes it easier for companies to report on these SFDR-related matters in a way that corresponds to how their policies are set. For users, this consolidation makes it easier to locate the relevant information. However, the SFDR datapoints are very helpful and should only selectively be amended.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	The unadjusted gender pay gap should be kept as mandatory, since the methodology for calculating it is clear. The adjusted pay gap figure as voluntary. In practice many companies are reporting both figures, which is useful for improved transparency. However, since the methodology for calculating the adjusted figure is not standardized, the unadjusted should be kept mandatory.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	ESRS 1: As detailed above, cumulative impact of the various reliefs is concerning.

I partially agree and partially disagree	ESRS S1: The proposed "top 10" threshold for the reporting of country-level information for employee headcount, collective bargaining and social dialogue is a significant improvement over the current 10% employment threshold. Country-level information needs to be reported in more detail, and on other metrics as well, in order to have more transparency on the distribution of impacts across countries. In the metrics, voluntary datapoints need to be reinstated as well as the datapoints on gender breakdowns, workforce age distribution, etc. detailed above need to be reinstated. The proposed new methodology for adequate wages outside of the EU also needs attention, and the transition language for EU member states needs to be reinstated, since the Adequate Minimum Wage Directive has not been implemented in some Member States. We would also like to reiterate our longstanding demand for including franchise workers in the S1 definition of own workers, as well as the need for sector-specific standards to supplement the Set 1 sector-agnostic standards.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	33.S_2.	ESRS S2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	ESRS S2: We are concerned that the loss of many specific datapoints related to workers in the value chain will mean that disclosures about material impacts, risks and opportunities become more generic and have less information about the specific stakeholder groups because specifications about the level of granularity have been deleted. Many of the points that are being deleted from ESRS S2 had originally been included because they reflected effective practice in relation to improving supply chain labour rights, for example, AR 6 awareness of the impacts on value chain workers from an undertaking's strategy or business model, AR 20 illustrating how the perspectives of value chain workers have informed specific decisions or activities of the undertaking and AR 25 which looks at retaliation and whether workers can use grievance mechanisms confidentially.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	33.S_3.	ESRS S3:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	ESRS S1, S2, S3, S4: An explicit reference needs to be added to GDR-M (metrics) in the Disclosure Requirements concerning targets, in S2, S3 and S4, to clarify that metrics need to be reported in the case of entity-specific impacts.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	33.S_4.	ESRS S4:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). I partially agree and partially disagree	ESRS S1, S2, S3, S4: An explicit reference needs to be added to GDR-M (metrics) in the Disclosure Requirements concerning targets, in S2, S3 and S4, to clarify that metrics need to be reported in the case of entity-specific impacts.			
Survey	SZEF - Szakszervezetek Együttműködési Fóruma	Trade union	Hungary	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		The definition of own workforce should be expanded to include franchise workers. The term "non-employees" should be supplemented with the phrase "non-employee workers" or "non-employee workers in own workforce".			
Survey	Global Legal Entity Identifier Foundation	Other - please specify (required)	Switzerland	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		The Global Legal Entity Identifier Foundation (GLEIF) welcomes the simplification of the European Sustainability Reporting Standards (ESRS) to make sustainability reporting more manageable for companies while maintaining its objectives under the EU Green Deal. Background on the LEI The Legal Entity Identifier (LEI) is a 20-character, alpha-numeric code based on the ISO 17442 standard which connects to key reference information that enables clear and unique identification of legal entities. Its quality and availability as a public good are maintained by GLEIF on behalf of the Regulatory Oversight Committee (ROC) composed of seventy supervisors worldwide, including the European Commission (EC). The role of the LEI in supporting ESRS Although the current simplification efforts do not address identification, GLEIF believes that the use of the LEI can further streamline reporting under the ESRS: - Interoperability: The LEI can support interoperability between financial and non-financial data of companies, enabling seamless linkage across datasets. This is particularly valuable for double materiality and the value chain disclosures, which require consistent entity identification across different jurisdictions and sectors. - Reducing fragmentation: By embedding the LEI into sustainability reports, companies can reduce reconciliation errors and manual data matching. Each entity becomes uniquely and globally identifiable, simplifying the process of aggregating and comparing data. - Enhancing automation and analytics: Use of the LEI facilitates automated data processing and advanced analytics, supporting regulators and investors in the development of climate risk models and supply chain impact assessments. - Global alignment: Integrating the LEI into disclosures supports the ESRS's ambition to remain interoperable with global frameworks, and aligns with recommendations from the Financial Stability Board to use the LEI in climate-related financial disclosures. Conclusion By incorporating the LEI, the ESRS can further reduce complexity, enhance data reliability, and ensure its continued global relevance in sustainability reporting.

Survey	ZIA | Zentraler Immobilien Ausschuss e.V.	User Association	Germany	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Appreciation of Simplification Efforts The German Property Federation (ZIA) expressly welcomes the fact that EFRAG has initiated simplification processes for the ESRS and issued corresponding exposure drafts. This initiative demonstrates the necessary awareness of the challenges faced by market participants in implementing the CSRD and their wish to reduce effort and complexity. In practice, it has become clear that implementing the detailed reporting requirements entails an excessive burden that is no longer proportionate to the benefit. As a result, companies risk diverting already scarce resources into producing reports instead of allocating urgently needed capacity to in-house climate action tasks such as identifying measures, project planning and technical implementation. The ESRS exposure drafts must ensure that the administrative burden of sustainability reporting does not remain disproportionate. Protection Against Regulatory Circumvention We view as particularly critical the risk that reliefs from the CSRD omnibus are undone through the back door via banking reporting requirements. Not only large companies, but also small and medium-sized enterprises are affected when information demands are passed along the value chain. The so-called trickle-down effect should be limited. The standards achieved in the simplified ESRS must not be undermined through other regulatory channels. Positive Examples and Requests As a positive example, we refer to ZIA's work on practicable sustainability KPIs for the real estate industry, which has developed practice-oriented and focused approaches for the sector. We call on EFRAG, when finalising the simplified ESRS, to consider: •Focus on material data points rather than exhaustive completeness •Take into account the capacities of real estate companies •Protect against the trickle-down effect onto smaller and medium-sized enterprises The sustainability transformation will only succeed through proportionate, focused standards that free up resources for actual emissions reduction.			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Despite the welcome simplifications for the double materiality assessment, the burden faced by companies already report based on ESRS will not change significantly in the short term. 2. This is a valuable clarification for companies in streamlining the reporting and reducing the audit burden. 3. Some of the wordings lack clarity and invites interpretation, which could create divergent approaches between reporting companies and might cause discussions with the auditor. In particular: 3.2 (22): "The information shall be presented either at topical level or at impacts, risk and opportunity level". It should be clarified that presenting data at either the IRO or topic level should be acceptable. •3.3.1 (34): "Actual impacts in the reporting period include both newly arisen impacts and those persisting from previous periods". The lack of specification over how many previous periods should be included leaves far too much room for interpretation. Companies should have the ability to pragmatically assess material impacts from previous periods that remain relevant, in line with a more principles-based approach. The sentence should be removed. •Par. 30/AR6 – Identifying (and assessing for severity and likelihood) whether impacts occur that may be connected to an undertaking's products through multiple tiers of the value chain remains a requirement that cannot practically be executed. We recommend focusing on tier-1 value chains and reporting only if there's sufficient confidence about the impact's occurrence, severity, and likelihood. 4. Confirmation is needed that "non-material" information should not be subject to the assurance regime applicable to the CSRD. 8. We agree on using reasonable, supportable information without undue cost or effort, but it's unclear how this aligns with Chapter 3.7. The level of aggregation or disaggregation should be determined by the level most relevant to the material IRO.			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	The approach proposed by EFRAG appears complicated. Excluding all mitigation actions from the assessment of impacts in the reporting period could result in over-reporting. Preparers could report many potential negative impacts that are not material due to low likelihood and severity. This seems to differ from how IROs are managed, e.g. in bank's risk reports (risk is material after considering mitigating actions). We recommend that credible mitigating and remediating actions (e.g. backed by implemented/decided policies, budgets, action plans) are always factored in to provide useful information to users.			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	We generally welcome the increased flexibility introduced through the proposed amendments to the ESRS Sustainability Statements. The possibility of including an executive summary and the emphasis on using appendices to separate detailed information from key messages can be helpful steps toward improving readability and structure. The option to include non-material information, if presented clearly, is a good step to maintain continuity for stakeholders. However, we understand these changes primarily as clarifications rather than substantial simplifications. From our perspective, they do not result in significant relief in terms of implementation effort or reporting complexity. We do not consider that the removal of data points can be considered deletions, as they were duplicated in the first place. Additionally, certain disclosure requirements continue to be embedded in application requirements, which could benefit from further reduction efforts. Please ensure that that application requirements don't consist of any disclosure requirements.

Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The restructuring of the architecture and the clarified interaction between ESRS 2 and the topical standards enhance the overall readability and usability of the standards. The simplification of the General Disclosure Requirements, the reduction of mandatory datapoints for policies, actions, and targets (PATs), and the removal of overlapping topical specifications contribute to a clearer and more accessible framework. The shift towards a more principles-based approach and the ability to report PATs at a higher aggregation level reflect a pragmatic and proportionate response to the challenges identified during the first-time application. This supports more effective and relevant sustainability reporting while maintaining the necessary level of comparability and transparency. However, we do not agree to maintain the requirement to disclose which topics are not covered by PAT. This would lead to 'empty' information, which contradicts the ESRS revision purpose. However, some changes introduce behavioral requirements. ESRS 1, Paragraph 84c requires adjusting the base year of the target following a major acquisition or disposal. This constitutes a behavioral requirement, contradicting Paragraph 5 stating that "the ESRS do not mandate behavior but set Disclosure Requirements[...]". Moreover, this is inconsistent with the possibility of investments or divestments being part of the business strategy to achieve the target. Regarding the presentation of metrics and monetary amounts, the requirement to adjust the base year and the comparative information provided following "major acquisition or disposals" is unclear and potentially problematic. For example, there are no criteria for assessing what is a "major" acquisition or disposal, and the phrase "adjust the base year" is not clear in whether it is referring to adjusting the base year or the value associated with that base year in relation to presenting progress against targets. We recommend that "major" be revised to "material" and "adjust the base year" be clarified by including "value".			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We broadly agree that the proposed amendments will improve the clarity and accessibility of the ESRS. The removal of "may disclose" datapoints and the clearer separation between mandatory and non-mandatory content contribute to a more structured and comprehensible standard. However, we would recommend eliminating all the unclear terms like "shall consider" "may present", "may implement", "may include" and other ambiguous terms. These should be avoided and clarified in order not to create confusion and avoid misunderstandings with the auditors. The revised layout—particularly the relocation of mandatory Application Requirements, directly under the relevant Disclosure Requirements—makes the legal text easier to follow and reduces the need to navigate back and forth within the document. However, while the structure and readability have improved, the overall reporting requirements remain largely unchanged. As such, the simplification primarily supports better orientation within the standards rather than reducing the reporting burden itself. Moreover, we would like to flag that new mandatory disclosures have been added – clearly against the request of the EU commission and the aim of the revision to reduce reporting burden. Additional mandatory data points should be removed completely. Furthermore, it is not helpful to have mandatory requirements as part of the application requirements as these could easily be missed when checking the completeness of the CSRD narrative against the "shall" disclosure requirements. Instead, the suggestion is to include mandatory disclosure requirements as part of the main body of the standard. For mandatory application requirements, it should be made clear that if evidence needs to be kept showing that we followed the mandatory application requirements. The mandatory application requirements also consists of certain "may" or "shall consider" requirements. These should be omitted for the CSRD report without keeping an audit trail.			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We consider the introduction of Non-Mandatory Illustrative Guidance (NMIG) and its exclusion from the Delegated Act a useful addition to the ESRS framework. The separation of mandatory and non-mandatory content improves the structure and readability of the standards. NMIG can serve as an orientation tool—especially for preparers in the early stages of implementation—by illustrating how disclosures might be structured or interpreted in practice. We recommend: •That the non-binding nature of NMIG remains clearly communicated and consistently understood by both preparers and auditors. •That there should be no implicit expectation that the examples provided must be followed or justified if not applied. •An explicit statement saying that the NMIG cannot be used for audit purposes and the separation of the NMIG from the legislative text would support this. •Avoiding guidance that references external standards, instead embedding directly into the standard setter's guidance itself. •The guidance should be fully aligned with the standards themselves and subject to robust due process in its development, to ensure it does not have unintended consequences, further complicated principles-based standards, and/or add to reporting burden. Otherwise, the intended simplification effect could be undermined by new uncertainties or perceived pressure to align with the illustrative content. Nonetheless, we view the "Flowchart for determining disclosures under the ESRS" to be very useful when it was a part of ESRS 1. We suggest reinserting this.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree	We strongly welcome the proposed burden reliefs as a meaningful step toward reducing the complexity and effort in ESRS reporting. 1.The "undue cost or effort" relief is particularly valuable, offering prepares a practical way to justify omissions or limitations when data collection would require disproportionate resources. However, it may increase the burden of proof if auditors challenge whether sufficient effort has been made to fulfill reporting requirements. 3.We appreciate the removal of the systematic preference for direct data in value chain metrics. Allowing estimates based on practicality and reliability better reflects the current state of data availability and maturity across the value chain, reducing effort in future reporting cycles. While these reliefs do not change the scope of reporting obligations, they provide greater flexibility in how requirements can be met and documented, supporting a more proportionate ESRS implementation. We invite greater clarity on when and how the relief applies to ensure that auditors do not request mandatory disclosure subject to relief. However, we do not agree with the exception for Scope 3 GHG emissions. Value chain information should not be mandatory for any metric, as it often relies on estimations that lack reliability and consistency. 6.The amendments made to the anticipated financial effects do not solve the issue of data availability and reliability, as assumptions for this data point will vary so widely that any comparison between companies would be misleading. 7.Regarding the proposed relief for acquisitions, the one-year timeframe for integrating (or excluding) a subsidiary for sustainability reporting purposes is often insufficient and unrealistic. Greater flexibility should be offered to disclose metrics once the subsidiary is fully integrated. It should be clarified that reliefs do not contradict fair presentation, allowing companies to protect sensitive information without being pressured by auditors to report under this clause.			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	We consider the proposed relief to be a practical and necessary addition. It acknowledges the real-world limitations many preparers face, especially in complex areas such as value chain reporting. The relief ensures that data collected for reporting is robust and reliable. Forcing the collection of weak data undermines 1) high quality reporting, 2) comparability, 3) avoiding legal risks linked to the disclosure of unreliable metrics and 4) might lead to distorted or misleading representation of the information. The relief helps companies to tackle the current lack of methodologies for some indicators and bridges preparers until methodologies are available. A relevant issue is the reporting of SVHC and SHC substances. Due to the highly specific nature of European chemical legislation, reliable data collection is currently feasible primarily within Europe. The relief allows us to transparently report metrics based on a partial scope e.g., limited to European operations, while outlining actions to improve coverage over time. We support allowing companies to exclude joint operations they don't control from environmental metric calculations (E2-E5). However, we seek clarification on the definition of "joint operations." We also support extending this relief to E1, aligning with the flexibility to disclose only "reasonable and supportable information available without undue cost or effort." We support not imposing a time limit on this relief, allowing organizations to decide when to take action. In cases like chemical data collection, expanding scope may only be possible if non-European regulations align with EU standards, which is beyond a company's control and cannot be planned within a fixed timeframe.			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	We strongly oppose both quantitative and qualitative disclosures of anticipated financial effects. The underlying data is often unclear, and the risks cannot be reliably isolated due to a lack of mature and established methodologies, making any form of disclosure - whether narrative or numeric - legally risky and prone to misinterpretation. Such information lacks comparability and does not offer decision-useful insights to report to users from our point of view. Moreover, IFRS already define when future risks must be reflected in financial reporting, e.g. through recognition and measurement criteria. Sustainability reporting should not override or extend these principles through financial disclosure requirements in the sustainability statement. We therefore recommend that this disclosure requirement be removed entirely or made explicitly optional. It should also be noted that even for a qualitative statement on anticipated financial effects a quantitative assessment needs to be done. Also, qualitative information is subject to a high level of uncertainty but there is less likelihood of unjust comparison. This begs the question of what use this information could have for any stakeholder, esp. capital market participants.			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	We strongly oppose both quantitative and qualitative disclosures of anticipated financial effects. From our perspective, there is currently no reliable method to link specific climate-related risks or opportunities to financial metrics like assets, liabilities, or revenue. The complexity and lack of integration between sustainability and financial systems make such quantification impractical. Without this linkage, even qualitative disclosures carry significant legal uncertainty and risk of misinterpretation. Comparability across organizations is also limited due to unclear guidance on the level of detail for such disclosures. Capital market participants typically rely on standardised models and data, which are not meaningfully enhanced by inconsistent, company-specific disclosures. The practical use of such granular data remains questionable and does not justify the significant effort required from companies. We therefore advocate for the reporting of anticipated financial effects to be either deleted completely or made entirely voluntary. It is crucial not to require the disclosure "before considering adaptation/mitigation actions", as this would not add value for readers and does not reflect how business strategy is defined. In fact, mitigation actions are often embedded within the strategy, structural in nature, and linked to multiple risks. Therefore, it would be overly complex and unreliable to conduct a hypothetical exercise calculating monetary amounts that are neither estimable nor dependable. For less technical readers, such assessments could be misleading, especially since they are not accounted for in the financial statements.

Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	1.Fair presentation in the ISSB standard pertains only to financial materiality, so extending this concept could create problems (see question N. 25). There is unclear guidance on prioritizing user needs when conflicts arise between financial and non-financial users. For example, excessive disaggregation can increase the reporting burden and reduce usefulness. The ESRS should address such conflicts, prioritising primary users (e.g., investors). 2.IFRS allows for any GHG boundary to be used while the use of financial control is made mandatory by the ESRS, failing to align to the GHG Protocol. To ensure greater alignment with IFRS companies should be provided the flexibility to choose the boundary in line with the GHC Protocol. 3.The relief clauses introduced by the simplified standard are welcome and needed by preparers however the timeline for proposed revision for Level 1 remains unclear. 4.It is very important to maintain these additional reliefs because in the ESRS we go beyond climate aspects, where methodologies are less advanced, and these clauses are needed. 5.Agree 6.Therefore, we support the reference to SASB Standards and IFRS Industry-based Guidance as a source of possible disclosure to enhance transparency and interoperability with ISSB standards. 7.Agree 8.Agree In order to assure more interoperability with IFRS, EFRAG could also add reliefs on (1) commercially sensitive information and (2) commensurate with skills, capabilities and resources available. Ideas for additional improvements: •Ensure that all climate-related financial disclosure elements in IFRS S2 (e.g. financed emissions, use of carbon credits, resilience analysis) are clearly cross-referenced in ESRS E1 or, where appropriate, explicitly scoped out to avoid interpretative gaps. •Provide an interoperability mapping that shows, datapoint by datapoint, how ESRS requirements correspond to IFRS S1/S2. •Where ESRS include EU-specific concepts clarify how these complement rather than contradict ISSB disclosures.			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I disagree				
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I disagree	We acknowledge and welcome the improved structuring and consolidation of the ESRS requirements. The clearer separation and grouping of datapoints, especially the removal of voluntary datapoints and the streamlining of narrative PAT disclosures, enhances the usability of the standards. However, we would like to emphasise that the reduction in the number of datapoints does not necessarily translate into a proportional reduction in the substantive reporting scope or effort. In our view, the overall scope and complexity of the disclosures remain largely unchanged. The deletion of datapoints primarily affects how requirements are presented, not what is required. This means that preparers will still need to collect and disclose a substantial amount of data, and the core reporting obligations are largely preserved. The deletion of duplicated datapoints does not represent a reduction in effort. Based on the Exposure Draft, we do not expect a significantly reduced reporting volume under the amended ESRS. Instead, the changes may help reduce effort in data collection, documentation, and coordination with auditors. For example, the introduced options for burden reliefs may simplify internal discussions and reduce the need to justify the omission of non-material items. It is important that this distinction is clearly communicated: while the number of datapoints has decreased, the underlying disclosure obligations remain intact. This will help manage expectations and avoid misinterpretations regarding the actual simplification impact of the amendments. Moreover, we do have strong concerns regarding the new mandatory disclosure requirements that have been introduced and would request deleting them all to fulfill the purpose of the revision of the ESRS.			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	We strongly disagree with the introduction of new mandatory datapoints that have not been proven necessary. Adding untested requirements at this critical stage poses a significant liability to the strength, coherence, and successful implementation of the CSRD. It contradicts the simplification mandate and risks undermining reliable sustainability reporting. We do not agree with the decision to make "Nature of incidents" and "Number of incidents" within ESRS G1 paragraph 14 (confirmed incidents of corruption and bribery) mandatory. Firstly, making additional quantitative datapoints mandatory will increase burdens. Quantitative data collection requires IT development or manual reporting, which are costly and time consuming. Secondly, the "may" provision for such sensitive data points allowed for necessary discretion. The specific context of each incident, might not be adequately conveyed by a simple numerical count or a brief description. The focus should be on the effectiveness of management systems in preventing and addressing corruption, not a potentially reductive tally of past failings. G1 Training datapoint will add complexity as companies evaluate the risk exposure of functions individually and then derive training needs from that. In cross-functional training settings it is close to impossible to derive that information. This data point should not be made mandatory. For G1 paragraph 14, it's unclear how materiality should be assessed—by monetary value or other criteria? What incidents need reporting (e.g., court decisions)? This datapoint should also be deleted.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	We strongly disagree with the introduction of new mandatory datapoints that have not undergone comprehensive testing by "Wave 1" companies. Adding untested requirements at this critical stage poses a significant liability to the strength, coherence, and successful implementation of the final CSRD. Specifically, we strongly object the inclusion of ESRS E2-4. This requirement is entirely unworkable, unmeasurable, and un-auditable for several fundamental reasons: 1.Beyond company control: secondary microplastics primarily occur post-consumer, primarily due to UV radiation, abrasion, and biological degradation, outside the company's control. 2.Impossibility of data collection: it is currently impossible to estimate how many of a company's products end up in the environment as there are no established or practical methodologies to reliable estimate the volume of secondary plastics releases in the environment. 3.Auditability concerns: without robust and standardized data collection methods, reported figures on secondary microplastics would be speculative and unverifiable, creating challenges for auditors and undermine the credibility of the reporting process. Moreover, we must not underestimate that new concepts intended to provide relief, such as "fair representation", "Gross Vs Net" or the need to amend the base year for targets in case of major acquisition are all new concept, which will introduce further complexity for preparers adding further burden not linked to these specific datapoints. there are other examples of new requirements that should be eliminated. For instance: •ESRS E5-4, para. 15 (e) percentage of sustainably sources materials by total weight. •ESRS E1-2 para. 19: introduces 'spatial resolution'. •ESRS E1-3 para. 21 c): asks for the ability to adapt strategy and business model to climate change over time. •ESRS E1-5 para. 24 c): introduces more challenging provisions on financial resources for climate change actions. •ESRS G1-2 para. 10 c): extends the training activities beyond corruption and bribery.			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We welcome the explicit inclusion of the fair presentation principle within the ESRS, as it reinforces the standards' purpose of supporting relevant, decision-useful sustainability reporting rather than checklist-driven compliance. This principle should be interpreted alongside the criteria for material information in ESRS 1 Par. 21a, aiming to ensure that only material information is reported. Both fair presentation and materiality assessment should focus on the usefulness of information to the report's intended users. By emphasising fair presentation, the ESRS framework encourages preparers to exercise professional judgment, prioritizing disclosures that truly enhance transparency and accountability. This reduces unnecessary reporting efforts, especially when justifying the omission of non-material datapoints. However, several issues arise. The "fair presentation" concept needs a precise definition to avoid subjectivity and minimize audit burden. Without clear guidance, it risks undermining the DMA's methodological rigor. Past experiences with similar concepts in national audit standards (such as "représentation fidèle") show that auditors can use vague terms to challenge sound DMA conclusions, leading to subjective debates on materiality that are not aligned with the prescribed framework. Additionally, this ambiguity could pressure companies into disclosing voluntary datapoints ("may disclose"), which may then be deemed necessary by auditors for "fair presentation," effectively making them mandatory. This contradicts the goal of materiality-based reporting. Furthermore, fair presentation could increase Board members' accountability for the Sustainability Statement. They must ensure not only compliance with standards but also that the information is presented fairly to all relevant stakeholders. While fair presentation is well-established in financial reporting, its boundaries in sustainability reporting are less defined, creating a grey area that could lead to litigation if stakeholders dispute the adequacy of the provided information. We recommend that "fair presentation" be explicitly defined as a filter to taking into consideration the specific business model and activities of the undertaking.			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We acknowledge the challenges faced by financial institutions in setting absolute climate reduction targets. Much of the GHG accounting for FIs is spend-based, meaning increased financing can lead to higher reported absolute emissions, creating both a disincentive and a practical hurdle for target-setting. Nevertheless, absolute emission targets are essential for meeting global climate agreements. Relying only on intensity targets can obscure overall emissions increases as business expands. Financial institutions play a key role in driving absolute reductions in the real economy. As such, rather than viewing this as an exception, the focus should be on developing more robust and refined methodologies for FIs to measure and report absolute financed emissions, ensuring meaningful disclosures that align with global decarbonization goals.			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	Some our members disagree with the assertion that the change to the threshold for country-by-country disclosure in ESRS S1-5 and S1-7 will result in a limited burden due to the easy accessibility of information. While the intent to gather more granular data is understandable, this change will, in many cases, significantly increase both the reporting requirements and, crucially, the audit scope. Additionally, this extra level of detail may not always be relevant. Shifting from a "50 employees and 10% of total headcount" threshold to reporting for the "top 10 largest countries by employee headcount (if >50 employees)" will expand the number of countries for which many multinational companies must disaggregate data. Each additional country introduces distinct challenges in data collection. More importantly, this expanded reporting directly increases the audit scope. Sustainability reporting, especially social data like employee characteristics and collective bargaining, requires thorough verification. Gathering and validating this data across multiple jurisdictions, each with its own labor laws, data systems, and cultural differences, is far from "easily accessible." It involves understanding local HR systems, ensuring data consistency, and verifying compliance with country-specific regulations—an intricate process requiring significant auditor resources and time. Thus, the claim of limited burden is misleading. This change will add to the complexities and costs of both preparing and auditing sustainability statements, potentially slowing the assurance process and placing a substantial new burden on companies and auditors. We strongly suggest the inclusion of an additional option to avoid additional increases, to only mandate disclosure until the first of either threshold is hit. So, either 10% or the top 10 – whichever causes least burden.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I disagree	We recognise the critical importance of ensuring adequate wages globally. However, we have significant concerns regarding the proposed benchmark hierarchy for non-EU wages in ESRS S1 AR 22. The current hierarchy, which places living wage datasets as a "last resort," undermines comparability. It permits companies to report against statutory minimum wages that may be insufficient, resulting in inconsistent and incomparable data. This hampers stakeholders' ability to make fair assessments of a company's social impact. We propose revised wording for AR 22, para. 32. For reporting outside the EEA, the first step should require an "adequate minimum wage" rather than a "statutory minimum wage," and it should align with the definition of adequate wages in Directive (EU) 2022/2041. Without this adjustment, comparability will be impossible, as some companies will report on 'minimum wage' while others will report on 'adequate wage.' It is essential to have a single, authoritative reference for defining an adequate wage. Allowing companies to choose different providers could lead to inconsistent and non-comparable disclosures, ultimately compromising data quality. Creating a common database of adequate wages for all companies to refer to is critical. This would ensure comparability across jurisdictions and reduce the burden on companies in determining what constitutes an adequate wage in each country where they operate. Moreover, we anticipate that an extensive workload could emerge from the following phrase "periodically reviewed/adjusted every two years and takes into account the ILO wage setting principles." Indeed, as the indicator covers the entire workforce, an assessment would have to be conducted in all countries of operation to check the fulfilment of these two new criteria. Furthermore, should a company operate in different sectors of activity, it might have several collective agreements to check within a single country. Ultimately, this could lead to hundreds of checks to be performed.			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	Yes, we should always consider the importance of feasibility and coherence in reporting according to different legislations. As such, removing some of the SFDR datapoints is clearly appropriate, the ESRS simplification will need to better co-ordinate with the required three yearly review of the SFDR.			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	It would not be appropriate to reinsert the AR 26, considering that the methodologies for defining biodiversity targets are not yet well defined and are often site-specific. Furthermore, in the absence of a mandatory biodiversity standard, we do not see the opportunity to refer to specific frameworks (which are still voluntary). The risk would be that each company could adapt these standards to its own needs by making reporting incomparable. In the light of the simplification process, guidance from non-mandatory frameworks should not be added. AR 26 should be reviewed to provide more practical and effective guidance. The current text does not sufficiently acknowledge the difficulty of setting standalone biodiversity targets or the interconnected nature of environmental issues. The revised guidance should explicitly allow companies to use cross-referencing, in order to explain how their existing or new targets under other the other topical environmental standards also address the drivers of biodiversity loss. This clarification is vital for two reasons: 1. Integrated management: Biodiversity loss is not an isolated issue. It is driven by factors like climate change, water use, and pollution. Allowing this cross-referencing enables companies to report on their environmental strategy in a holistic and integrated way, reflecting how these issues are managed internally. 2. Reporting efficiency: It avoids the need for companies to create separate, and potentially less meaningful, biodiversity-specific targets when their existing environmental objectives already contribute significantly to mitigating biodiversity impacts. This makes reporting more efficient and focused on substantive actions rather than a check-the-box exercise. This approach would make the guidance more pragmatic, reduce reporting burdens, and allow companies to provide a clearer narrative on their most significant contributions to protecting nature.			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	No, we do not agree with the deletion of the voluntary datapoint. We would advocate for the opposite approach: the adjusted gender pay gap should be the mandatory datapoint, while the unadjusted gap should either be made voluntary or eliminated for the following reasons: 1.Starting in 2027, the European Directive on Pay Transparency (EU Directive 2023/970) will require the use of the adjusted pay gap indicator. The ESRS must align with EU legislative requirements to avoid confusion and ensure stakeholders can interpret and reconcile consistent data sets. 2.The adjusted pay gap is the only metric that truly reflects the principle of "equal pay for equal work or work of equal value." By accounting for factors like role, seniority, location, and performance, it provides a precise and actionable measure of pay equity, enabling companies and stakeholders to identify and address real pay discrepancies. The unadjusted pay gap is a blunt tool, conflating pay equity with overall gender representation. It often reflects structural imbalances, not discriminatory pay practices. Making it the sole mandatory metric risks misinforming stakeholders and penalizing companies based on their sector or structure, rather than actual pay policies. For meaningful reporting, the adjusted pay gap is the more accurate metric. The unadjusted gap, though useful for representation discussions, should remain a voluntary, complementary disclosure. Moreover, we regret that the opportunity to revise the metric to become more useable was not seized to introduce greater clarity concerning the types of remunerations to be taken into account when calculating the metric. This has resulted in companies calculating the gap using different definition resulting in non-comparable information disclosed by companies.

Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree	We support the removal of the datapoint on "average time to pay an invoice," as it provided limited insights and was difficult to interpret in a decision-useful way. A focus on PATs aligns more closely with a fair presentation approach. The previous stance, which framed SMEs as risky suppliers, created unnecessary barriers by introducing a new layer of vetting based on supplier size. However, we also question the relevance and practicality of the remaining datapoint on percentage of payments aligned with standard terms (former ESRS G1-6 §33b) which has been difficult to consolidate. This metric lacks clarity, particularly in international contexts where no legal standard exists, and doesn't provide meaningful insights for evaluating supplier relationships. The percentage of payments made under "standard terms" is hard to interpret and doesn't yield useful conclusions regarding impacts on suppliers. Additionally, the categorization of suppliers (e.g., SMEs) remains problematic. Financial systems do not always track suppliers by size, and implementing such a classification would require significant effort. Similarly, the requirement to report the number of legal proceedings due to late payments (former ESRS G1-6 §33c) is not decision-useful on its own. Without qualitative context, such as reasons for delays or materiality thresholds, the raw number lacks relevance. For material cases, this information is already covered in legal risk reporting and should not be repeated in the sustainability report. Lastly, while the qualitative information on payment practices is relevant to indicate how the protection of SME's is tackled within the company, the calculation of the G1-6 metrics is overly complex for international groups operating with a great variety of payment standards. As a consequence, we consider the deletion of the related datapoint appears to be the most viable option.			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	The cross-cutting standard ESRS 1 remains particularly critical, especially regarding the concept of fair presentation and the materiality approach, including the provisions on gross versus net reporting. However, a number of issues remain: •The disclosure requirement on the level of aggregation and disaggregation continues to be highly subjective, potentially leading to interpretative challenges and potential disagreements with auditors. •Scope of consolidation/reporting boundaries remain unclear. •Attaching the deleted sub-sub-topics in brackets after the sub-topics will effectively increase the reporting burden as it still necessitates considering all these in the DMA but makes it harder to apply materiality to exclude information. •AR24 might necessitate a DMA at subsidiary level. We recommend removing AR24 or clarifying that IROs that are material do not need to be identified to individual subsidiaries (which would be impractical for any group with multiple subsidiaries), but should be about whether any subsidiary have significantly different business models and therefore exposures, to the rest of the group. •"Only impacts that derive from business activities, products and services" will in practice likely forbid companies to report positive impacts on own workforce. •45 (b) on using reasonable and supportable evidence to estimate the levels of severity and likelihood of impacts and the likelihood and magnitude of financial effects of risks and opportunities. This will likely increase the practice of having to provide more evidence per IRO. •Par. 51/52 and AR 22/23 could be interpreted to require companies to dive even deeper than site level in their materiality assessment. •Materiality assessment of material upstream/downstream value chain remains very subjective/unclear as part of the exposure drafts. •We advocate for referencing legally mandated documents in the directors' report, even with different assurance levels. This reduces redundancy, avoids unnecessary extensions, and mitigates inconsistencies, with examples.			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	we recommend eliminating the disclosure on anticipated financial effects. Preparers are not yet adequately equipped to provide reliable forward-looking financial data, and such disclosures may involve commercially sensitive information. The current approach risks overburdening companies and generating low-quality data. Additionally, several other issues contribute to the reporting burden: •The site IRO matching suggested or mandated by certain standards will significantly increase the reporting burden, lengthen reports, and reduce readability and relevance (AR 22). •The new, non-disclosed datapoint on sustainability goals associated with groups of products or services (40a)i) adds complexity without clarity. •The inclusion of banned products as a datapoint remains problematic due to its unclear definition and should be deleted. •AR24 allows the IRO description to be presented with policies, actions, and targets in topic-specific chapters, but still mandates an IRO description in ESRS 2, which does not provide relief and simply maintains the status quo. •More disclosures are being requested regarding anticipated resources for actions, which increases complexity. Eliminate information on economic resources dedicated to actions, as it misleads relevance perception, adds unnecessary detail, and doesn't accurately reflect the importance of sustainability-related actions. •The expectation to provide both measurable and qualitative targets appears contradictory, or additional guidance is needed to clarify expectations. •In ESRS 2, the DR 41 (b) – for each metric the undertaking shall disclose, for environmental metrics, the specific environmental conditions and characteristics of the area where the impact is occurring - has been added and it is not clear and could lead to very granular reporting. Furthermore, this provision cannot be applicable for Climate Change E1, since emissions are a transboundary phenomenon and their impact is not location-based, unlike biodiversity E4. Overall, the expressions "environmental conditions" and "characteristics of the area" lack clarity and should be reconsidered.

In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	The current ESRS draft presents several issues that create confusion and complexity for companies: •The thresholds for pollutants are more unclear than before. •The inclusion of transfers to water treatment plants as pollution is illogical, as these plants are service providers for cleaning water. •The introduction of a new data point on secondary microplastics poses a risk of unreliable and inconsistent data, placing a disproportionate burden on companies. •There is no clear alignment of the reporting methodology for primary microplastics between REACH-SPM and ESRS, which can lead to confusion. •The revised drafting introduces significant role-differentiation (manufacturer/importer and user). While companies under REACH may hold multiple roles, these apply to specific substances and do not require duplicate reporting of the same material flow. However, the ESRS wording could be interpreted as requiring companies to report identical flows multiple times under different roles, leading to duplication and complexity that contradicts the legislator's intention of relieving non-chemical companies. In practice, this risks increasing obligations for chemical companies. •The ESRS draft introduces disclosure obligations for Substances of Very High Concern (SVHC) and Substances of Concern (SoC) without clear, harmonized thresholds. While a 0.1% threshold is set for SVHC in articles, no uniform rule exists for SVHC in mixtures or for SoC, creating uncertainty around reporting obligations. While these data are subject to mandatory reporting within the EU under REACH, outside the EU, they are not consistently available. Collecting and homogenizing this data would require significant effort. We recommend deleting this data point and referring to data available from ECHA for EU-based activities. •The draft does not specify whether SVHC/SoC present only as impurities in substances must be disclosed, creating uncertainty, as impurities are not intentionally manufactured and may not provide meaningful information for stakeholders.

I disagree	ESRS E4 raises significant concerns due to the level of detail required and the potential for excessive disaggregation of IROs unto site levels or even below. These requirements risk imposing disproportionate reporting efforts, especially in the case of biodiversity, where it remains unclear how to prioritize which sites to disclose. In particular, the newly introduced Application Requirement AR 8 in ESRS E4 would effectively require companies to conduct ad hoc analyses for hundreds of sites—specifically those not overlapping with biodiversity-sensitive areas—in order to identify a science-based buffer zone tailored to the ecological specificities of each site. Such a requirement represents an operational and documentation burden that is entirely disproportionate to the stated goal of simplification. It risks undermining the usability and clarity of the sustainability statement, especially when the prioritization logic is not clearly defined.			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	33.E_5.	ESRS E5:33. Overall feedback per standard The 12 ESRS Standards have been simplified. I disagree	The draft introduces several issues that create additional challenges for companies: •New metrics impose additional reporting burdens. •The introduction of new terms such as "strategic" and "key" adds significant uncertainty due to their lack of clarity. •There is an increased burden in disclosing information related to radioactive waste. •Glossary terms are often defined in a circular manner. For example, the circular material use rate is described as the ratio of circular use of materials to overall material use, yet the key definition of what qualifies as "circular" is omitted. •Waste definitions and categories based on European standards are expected to be applied globally, which is unrealistic and not useful in a broader context. •There is inconsistency between EU Directive 2008/98/EC and the ESRS regarding whether energy recovery (thermal incineration) should be classified as recovery or not.			
Survey	BASF SE	Preparer (non-financial preparing a sustainability report)	Germany	33.S_1.	ESRS S1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	For social standards the removal of the term "severe" from the disclosure requirements for human rights incidents across all social standards is particularly concerning. Without a clear limitation to the most serious cases, companies may be required to report even minor or less relevant incidents. This broad scope risks undermining the materiality of disclosures and contradicts the objective of simplification. Maintaining a focus on severe human rights incidents is essential to ensure that reporting remains meaningful, proportionate, and aligned with the principles of relevance and efficiency. Additionally, the inclusion of contractors in own workforce increases the reporting burden. We think that non-employee related disclosures should be eliminated or made voluntary. Additionally, health and safety related metrics and definitions in the glossary should be reviewed as there are still terms which are not clearly defined and/or consistently used on this topic.			
Survey	XBRL US	Other - please specify (required)	United States	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	When undertakings prepare narrative facts, it is important that they be discretely presented so that data consumers can easily identify and extract data from reported information consistently and accurately. This approach will ensure comparability across reporting entities. The approach proposed, breaking the sustainability statement into four parts, will make it easier for undertakings preparing their information and for investors and others using the data.			
Survey	XBRL US	Other - please specify (required)	United States	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	We agree with the ESRS approach to preparing the data in structured, machine-readable Inline XBRL format. This is not a change from the prior requirements, but we want to reiterate that structuring and standardizing the reported data using XBRL is important to ensuring that the goals of understandability, clarity and accessibility are met.

Survey	XBRL US	Other - please specify (required)	United States	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	We strongly support enabling full interoperability with ISSB. Undertakings that are tasked with reporting to another regulatory following ISSB standards should be allowed to submit the same report to CSRD to satisfy EU reporting requirements as well.			
Survey	XBRL US	Other - please specify (required)	United States	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	We agree with adopting the same reporting framework as that used for IFRS 1 and IFRS 2 so that data reported is interoperable and undertakings can reduce reporting burden by using the same report.			
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	The TNFD has concerns about the excessive flexibility introduced by these simplifications: -A 'top-down' approach (as provided in AR 17 for para. 48 (a) of ESRS 1 ED) will introduce a risk of incomplete identification of material nature-related IROs. The TNFD therefore suggests to delete this possibility and only include 'bottom-up' approach. -For what relates to para. 22, ESRS 1 Exposure Draft (on the relationship of IROs, and topics to be reported): oPresentation of the information at the topical level rather than at the IRO level would diverge from the TNFD recommendations and reduce transparency of information when aggregated at the level of the topic; oLack of consideration of dependencies at the same level of IROs in disclosure is not aligned with the recognition of the relevance of dependencies on natural, human and social resources as originating material risks and opportunities in paras. 40-41, ESRS 1 ED. -On the new/updated chapter 3.7 on the level of aggregation, disaggregation and group reporting, and specifically AR 23 for para. 52, the TNFD notes that a disaggregation of the information on material IROs by site would support alignment with the TNFD. The TNFD encourages EFRAG to consider requiring that the site information always be disclosed alongside the individual IROs, as it is the case for the recommendations of the TNFD (especially at the level of the metrics). The new paragraph and application requirement alone is not deemed sufficient to replace the individual topical standard's requirement for screening of sites as part of the former topical IRO-1 provisions in Set 1.			
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I would like to skip this question and provide my feedback in Part 3				
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The TNFD raises concerns on the deletion of: -IRO-1: disclosure of how a company has: oScreened its site locations and business activities, which has been removed for E2 and only retained but significantly streamlined for ESRS E3 and E4. The TNFD also does not deem the new AR 22 of ESRS 2 to sufficiently cover this aspect, as it does not explicitly ask companies to disclose whether and how the undertaking has screened its site locations and business activities. oConsidered dependencies, especially in ESRS E4 – this provision has been deleted and not transposed to ESRS 2; oConsidered systemic risk in ESRS E4 : – this provision has been deleted and not transposed to ESRS 2, creating a misalignment with the TNFD. -Provisions around biodiversity targets (PAT), on which the TNFD notes: oThe removal of specification of alignment of a target with the GBF and EU policy is a reduction in alignment with the TNFD. oThe removal of the requirement to specify geographical scope may result in a loss of usefulness of the disclosure. oIn the new general provisions on the disclosure of targets (para. 43, ESRS 2 ED), ESRS now state that targets may be qualitative, whereas the TNFD glossary specifically defines a target as quantitative. oThe new general provisions on the disclosure of targets as part of ESRS 2 remove the disclosure of involvement of stakeholders in target-setting, which reduces alignment with TNFD. oThe TNFD agrees with the decision to move the datapoints on ecological thresholds from the topical standards to ESRS 2, but notes that this has led to loss of specification about the information on these thresholds.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	As stated in its 10 July letter and subsequent technical note, the TNFD suggests a holistic aggregation of the environmental standards E2, E3, E4 and E5, which present a combination of environmental assets (e.g. freshwater resources, ecosystems), drivers of nature change (e.g. pollution, resource use), thematic issues (biodiversity) and response strategies (circular economy). The TNFD acknowledges, however, that aspects of E5 may warrant distinct treatment given its specific focus on resource use and the circular economy. The TNFD believes that this approach would align with the need and urgency for a holistic, science-based and practical approach to nature-related corporate reporting and contribute to the overall objective of simplification while retaining appropriate coverage of all of the overriding objectives of the EU Green Deal. For more information on TNFD's proposal, please refer to the technical note sent to EFRAG on 19 September: https://tnfd.global/tnfd-input-into-the-simplification-esrs-csrd-omnibus-package/			
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	E4	The TNFD welcomes the introduction of a NMIG to assist companies in their identification and assessment of IROs, based on the extensive use and positive feedback on the TNFD's LEAP approach to support TNFD-aligned disclosures. However, the TNFD notes that the creation of this guidance resulted in most of the 'may datapoints' being deleted from the main text of the standards, including metrics on impacts on biodiversity and ecosystems, for which now the main text of ESRS E4-5 only includes a general provision without any additional specification on the type of metrics, and the removal of the terms land-use change, freshwater-use change and/or sea-use change. This reduces alignment with TNFD core global disclosure metrics C1.0 and C1.1 and leaves companies with little direction on the issues that should be measured. The TNFD welcomes the use of 'shall' rather than 'may' for all these metrics, but believes that the guidance now moved to the NMIG should be expanded and moved back to the main text of the standard. In particular, the TNFD suggests for NMIG 17 for para. 21, where a general reference to TNFD is added, be adjusted to: -Make explicit reference to TNFD's core global disclosure metrics for all drivers of biodiversity and ecosystem change (terrestrial and marine habitat change, invasive species), which are in the scope of ESRS E4; and -Move this reference to the main text of the standard, e.g. as part of AR 9 for para. 21 of ESRS E4 Exposure Draft, by changing the wording from 'might consider' to 'shall consider'. For more information on TNFD's suggestion to incorporate all its core disclosure metrics (and especially the ones related to drivers of nature/biodiversity change) into ESRS, please refer to the technical note sent to EFRAG on 19 September: https://tnfd.global/tnfd-input-into-the-simplification-esrs-csrd-omnibus-package/			
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	The TNFD believes that quantitative disclosures of anticipated financial effects should remain mandatory rather than voluntary, and hence chooses Option 1. A summary of TNFD's rationale for this preference is provided below : -Anticipated – along with current – financial effects of nature-related risks are a core part of the TNFD disclosure recommendations (the TNFD includes 2 core metrics on 'vulnerability' to nature-related physical and transition risks). -While acknowledging that quantification of nature-related financial effects may be a source of concern given the potential for measurement uncertainty, the TNFD notes that examples of quantitative estimates have been presented in recent TNFD reporting and case studies. -Quantitative financial effects disclosures are also key for investors to evaluate how financial position and performance can be affected by nature-related risks and opportunities, and make informed decisions. For more information on TNFD's views on the disclosure of anticipated financial effects, please refer to the technical note sent to EFRAG on 19 September: https://tnfd.global/tnfd-input-into-the-simplification-esrs-csrd-omnibus-package/			
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I would like to skip this question and provide my feedback in Part 3				
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	The TNFD Secretariat welcomes EFRAG's efforts to enhance interoperability with the ISSB's Standards, and recognises the progress made through the changes introduced under Lever 6. We agree that achieving interoperability with IFRS S1 and S2 is critical, both to reduce reporting burden for companies operating across jurisdictions and to ensure that European companies remain comparable to global peers. In our view, the proposed Amendments represent a reasonable step towards balancing simplification objectives with interoperability. However, we encourage EFRAG to continue prioritising alignment with IFRS S1 and S2 wherever possible, as this will strengthen the credibility and global relevance of the ESRS framework and provide decision-useful information to investors			
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	22.ESRS2	Comments on deleted datapoints in ESRS 2	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	The TNFD supports EFRAG's efforts to reduce the reporting burden by streamlining the number of datapoints, particularly where this removes duplications or overly prescriptive narrative requirements. We recognise that such simplification can help undertakings focus on reporting decision-useful information in a more efficient and consistent manner. At the same time, we encourage EFRAG to ensure that this reduction does not come at the expense of alignment and consistency with the TNFD recommendations, particularly in relation to nature-related disclosures, including disclosure metrics, where the need for structured and comparable data remains critical. TNFD's detailed comments and concerns on individual datapoints we suggest be retained are included in Part 3.			
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	The TNFD supports the additions related to environmental standards, and does not have a view on the other adjustments related to standards beyond E. In particular: -ESRS E3 Water - Own operations total withdrawal (Amended ESRS E3 paragraph 28 (c): we agree with the move from 'may' to 'shall' as it reinforces the alignment with TNFD metric C3.0 -ESRS E3 Water – Own operations total discharges (Amended ESRS E3 paragraph 17): we agree with the move from 'may' to 'shall' as it reinforces the alignment with TNFD metric C3.0 -ESRS E4 Biodiversity and ecosystems- Disclosure of transition plan for biodiversity and ecosystems: we agree with EFRAG's position that including and disclosing nature in transition plans is an emerging practice, including through TNFD pilot testing now complete. The TNFD will release its final guidance on nature in transition plans on 4 November 2025.			
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	The TNFD agrees with the additions for environmental standards (E2 and E5) as they support and enhance alignment with the TNFD metrics. In particular, the TNFD welcomes: -The addition of a new qualitative datapoint on secondary microplastics in ESRS E2-4 and the explanatory definition of microplastics, as we believe it enhances alignment with TNFD metric C2.3. -The inclusion of the description of key materials in ESRS E5-4 paragraph 15(a) (revised) as we believe it enhances alignment with TNFD metric C2.3 . -The new addition of paragraph 18 (e) which requires a description, as we believe it enhances alignment with TNFD metric C2.2.			
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	The TNFD supports the provision of guidance on what biodiversity and ecosystems-related targets can cover. The TNFD strongly suggests the inclusion of additional text and guidance at least as part of AR 5 for para. 17 of ESRS E4 Exposure Draft, e.g. by pointing to the relevant content from science-based frameworks such as the Science Based Targets Network (SBTN). As biodiversity is location-specific, appropriate targets will differ depending on the local context, and guidance such as that developed by SBTN can aid companies in ensuring they have a robust, science-based approach to identifying the targets needed.			
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	Comment related to all standards selected: While the TNFD Secretariat supports the aim of simplification of the current Exposure Drafts, it is important that revisions do not undermine the good level of commonality with the TNFD already achieved in Set 1, as demonstrated in the correspondence mapping published with EFRAG in 2024. We also reiterate our proposal, as outlined in the letter sent by the Taskforce co-chairs on 10 July and the technical note sent by the TNFD Secretariat on 19 September, to consolidate ESRS E2–E5 into a single integrated nature-related standard, consistent with the TNFD approach. In the TNFD's view, our suggestions would align with the need and urgency for a holistic, science-based and practical approach to nature-related corporate reporting and contribute to the overall objective of simplification while retaining appropriate coverage of all of the overriding objectives of the EU Green Deal.

Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	35.ESRS2_GDR-T.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	There is a weakening of the language on reporting of progress and review of targets (paragraphs 80.i and 80.j of Set 1), reducing alignment with the TNFD recommended disclosure Metrics and Targets C: oParagraph 80.i previously asked about whether the target or metrics had changed since the last report. This is a broader requirement than the TNFD recommended disclosure, which only asks "If the organisation exceeded or fell short of the target trajectory or is projected to do so, an explanation of the reasons and disclosure of any resulting adjustment or resetting of targets from the prior period". However, the replacement text in ESRS 1 and BP-2 appears to focus on rectification of errors and changes in data, rather than revision of targets per se. oParagraph 80.j previously asked about, "the performance against its disclosed targets, including information on how the target is monitored and reviewed and the metrics used, whether the progress is in line with what had been initially planned, and an analysis of trends or significant changes in the performance of the undertaking towards achieving the target". This was slightly more specific than the TNFD recommended disclosure, which asks for disclosure information on, "Performance against the target relative to the baseline or reference condition on a historical and current year basis, updated annually, and expected performance against targets for the following year, where appropriate". However, the ESRS text in the amended ED has now been reduced, in new paragraph 42, to "overall progress and effectiveness towards the adopted targets over time. This includes - where applicable - whether the progress is aligned with related action plan and/or whether any significant facts and circumstances related to the action plan affect the achievement of the target." This misses the frequency of reporting and expected future performance.	ESRS2	General Disclosure Requirement for targets - GDR-T	
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	35.E2-2.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Topical standard E2 Exposure Draft completely removes the site screening requirement that was instead included in Set 1 (Set 1 para. 11 (a), ESRS E2). While the Basis for Conclusions notes that 'the removal of the site screening requirement was particularly requested and driven by the lack of observed reporting practices', the TNFD would like to point to the high number of examples of TNFD reporting and location-specific nature-related materiality assessments conducted by companies adopting the LEAP approach for their DMA, and would urge EFRAG to consider re-instating this provision. For related data showing uptake and examples, please see the TNFD 2025 status report: https://tnfd.global/release-of-tnfd-status-report-highlights-significant-market-momentum-on-nature-related-issues/ and TNFD case study library and example reports on the TNFD website: https://tnfd.global/	E2	Disclosure Requirement E2-2 - Actions and resources related to pollution	
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	35.E2-4.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Rather than removing important specifications that would guide undertakings in the identification of relevant metrics, the TNFD suggests EFRAG consider simplification of datapoints for E2 by explicitly aligning the nature-related metrics listed under DR E2-4 and E2-5 with the pollution-related 'core global metrics' (C2.0, C2.1, C2.3, C2.4) from the TNFD that apply to all sectors on a comply or explain basis.	E2	Disclosure Requirement E2-4 - Pollution of air, water and soil	
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	35.E2-5.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Rather than removing important specifications that would guide undertakings in the identification of relevant metrics, the TNFD suggests EFRAG consider simplification of datapoints for E2 by explicitly aligning the nature-related metrics listed under DR E2-4 and E2-5 with the pollution-related 'core global metrics' (C2.0, C2.1, C2.3, C2.4) from the TNFD that apply to all sectors on a comply or explain basis.	E2	Disclosure Requirement E2-5 - Substances of concern and substances of very high concern	
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	35.E3-4.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Rather than removing important specifications that would guide undertakings in the identification of relevant metrics, the TNFD suggests EFRAG consider simplification of datapoints for E3 by explicitly aligning the nature-related metrics listed under DR E3-4 with the water-related 'core global metrics' (C3.0, C3.1) from the TNFD that apply to all sectors on a comply or explain basis. We note the deletion of paragraph 28(e) which reduces alignment as this is where the identification of water source could have been covered. We agree with the inclusion of paragraph 17 to replace AR32. The removal of ESRS E3 paragraph AR10 and AR15 removes alignment with TNFD metric C3.1. We note that ESRS E5 paragraph 38(b) partially covers this, but only for materials sustainably sourced, which only aligns with the second half of TNFD metric C3.1.	E3	Disclosure Requirement E3-4 - Water metrics	
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	35.E4-5.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Rather than removing important specifications that would guide undertakings in the identification of relevant metrics, the TNFD suggests EFRAG consider simplification of datapoints for E4 by explicitly aligning the nature-related metrics listed under DR E4-5 with the biodiversity and ecosystems change-related 'core global metrics' (i.e. all the ones related to drivers of nature change excluding climate change and pollution – C 1.0, C1.1, C3.0, C3.1) from the TNFD that apply to all sectors on a comply or explain basis. Additionally, the deletions of Set 1 para. 39 of ESRS E4 and Set 1 para. 40(d) and 41(b)(i) remove any alignment with TNFD placeholder indicators C4.0 and C5.0. These are TNFD placeholder indicators that the TNFD encourages organisations to consider and report against where possible. The TNFD recommends that EFRAG continue to learn from the work of the Nature Positive Initiative (NPI) as it progresses to build consensus on state of nature metrics for these placeholder indicators. The deletion of ESRS E4 paragraph AR 12 further limits the alignment with TNFD metric C3.1, as it removes the requirement to report how procurement meets sustainability requirements that are relevant to TNFD. We therefore do not support this change.	E4	Disclosure Requirement E4-5 - Metrics related to biodiversity and ecosystems change	
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	35.E5-4.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Rather than removing important specifications that would guide undertakings in the identification of relevant metrics, the TNFD suggests EFRAG consider simplification of datapoints for E5 by explicitly aligning the nature-related metrics listed under DR E5-4 and E5-5 with the resource use and circular economy-related 'core global metrics' (C2.2, C2.3, C3.1) from the TNFD that apply to all sectors on a comply or explain basis. Additionally , the TNFD does not support the proposed removal of the following requirement as it reduces alignment with TNFD Risk and Impact Management pillar: •Description of methodologies used to calculate data and key assumptions used.	E5	Disclosure Requirement E5-4 - Resource Inflows	

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Taskforce on Nature-related Financial Disclosures	Standard setting initiative	United Kingdom	35.ESS-5.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	Rather than removing important specifications that would guide undertakings in the identification of relevant metrics, the TNFD suggests EFRAG consider simplification of datapoints for ESS by explicitly aligning the nature-related metrics listed under DR ESS-4 and ESS-5 with the resource use and circular economy-related 'core global metrics' (C2.2, C2.3, C3.1) from the TNFD that apply to all sectors on a comply or explain basis. Additionally , the TNFD does not support the proposed removal of the following requirements as it reduces alignment with TNFD metric C2.3: Disclosure of materials that are present in waste. We also note that: -The change of wording from 'incineration' to 'thermal based disposal' is a slight misalignment with the TNFD core metric C2.3 but do not consider this to be substantial. We support the new addition of paragraph 37(a) which requires a description. -By deleting the description of materials designed along circular principles, there is no longer alignment with the second half of TNFD core metric C2.3 which asks for percentage of plastic that is reusable, compostable, technically recyclable and recyclable in practice and at scale. However, we note that this is still partially covered in revised paragraph 36(c).	ESS	Disclosure Requirement ESS-5 - Resource outflows	
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	We recognise the effort made to simplify the double materiality assessment (DMA) process in Chapter 3 of ESRS 1, and we appreciate the emphasis on streamlining disclosures. However, from a due diligence standpoint aligned with the OECD Due Diligence Guidance, UN Guiding Principles on Business and Human Rights (UNGPs), and the GOTS Due Diligence Framework, several concerns remain: 1.Materiality must not dilute impact assessment. The proposed simplification risks weakening the visibility of actual and potential adverse human rights and environmental impacts, particularly where stakeholder consultation or rights-holder engagement is insufficiently integrated into materiality determination. 2.Due diligence must not equal to materiality filter. As clarified in OECD and UNGP frameworks, and operationalised in GOTS certification requirements, due diligence and materiality are related but distinct concepts. Due diligence requires identifying and addressing salient risks regardless of financial materiality, while ESRS 1 may risk overlooking this by prioritising information relevance to users over harm to affected stakeholders. 3.Need for clarity on severity criteria. GOTS supports a robust DMA process when it reflects severity and likelihood, as required under GOTS 7.0 Chapter 4 and our Due Diligence Handbook. Chapter 3 of ESRS 1 would benefit from explicit references to severity as a threshold for impact materiality, to ensure compatibility with existing responsible business conduct frameworks. 4.Recommendation: Reintegrate explicit references to internationally recognised due diligence standards (e.g. UNGPs, OECD) in Chapter 3, particularly where companies are expected to identify salient impacts prior to applying materiality filters.			
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	Global Standard welcomes the effort to clarify how prevention, mitigation and remediation measures are to be considered within the DMA process (Paragraphs 34–36 and Appendix C). However, from the perspective of the UN Guiding Principles on Business and Human Rights (UNGPs) and the OECD Due Diligence Guidance, the current guidance raises several concerns: 1.Remediation is not equal to reduced materiality: According to the UNGPs, the existence of mitigation or remediation measures does not eliminate the materiality of an adverse impact. Paragraph 35, which appears to allow undertakings to downgrade severity on the basis of actions taken, risks undermining the principle of stakeholder-centred, risk-based due diligence. 2.Backward-looking bias: The current wording places emphasis on measures already in place, potentially shifting attention away from potential or unresolved impacts. This is problematic where mitigation is not yet effective or outcomes have not been verified. 3.Lack of effectiveness assessment: While companies may report on actions, there is no explicit requirement to evaluate their effectiveness through measurable outcomes or feedback from affected stakeholders. This is an essential component of credible due diligence. Recommendation: Paragraphs 34–36 should be reframed to clarify that mitigation and remediation may influence prioritisation, but cannot negate the obligation to transparently disclose ongoing or potential risks, particularly where impacts remain only partially addressed. In addition, EFRAG should explicitly recognise the role of credible voluntary sustainability standards (VSSs), such as GOTS, which has undergone the OECD Alignment Assessment. Recognising such schemes as supporting evidence of due diligence systems would reduce duplication, promote convergence and help undertakings demonstrate robust alignment with international frameworks.			
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	We acknowledge that the proposed amendments offer improved structural clarity and increased flexibility for undertakings. However, several elements raise concerns from a human rights and environmental due diligence perspective. 1.Flexibility must not come at the expense of rigour: GOTS-aligned due diligence, following the UN Guiding Principles and the OECD Due Diligence Guidance, prioritises transparency on actual and potential adverse impacts over selective or outcome-based disclosures. Excessive flexibility, especially in materiality filtering and cross-referencing with general management disclosures, may result in omissions of salient impacts that are critical for rights-holders and civil society. 2.Connectivity should preserve stakeholder salience: While promoting coherence with financial and strategic disclosures is valuable, alignment with broader corporate reporting must not dilute stakeholder-centred reporting. 3.Need for sector specificity: Flexibility can be effective only if sector-specific risks are not overlooked. This is particularly important in textile supply chains, where risks such as forced labour, gender-based violence, land rights violations and chemical exposure are prevalent. GOTS provides contextualised guidance on these risks and encourages ESRS to take a similar approach to ensure meaningful and comparable reporting. Recommendation: Flexibility should be maintained, but disclosures must be more firmly anchored in internationally recognised due diligence expectations. EFRAG should also consider recognising voluntary sustainability standards (VSSs), such as GOTS, which have been assessed against the OECD framework, as supporting tools that companies can use to demonstrate robust due diligence practices.

Survey	Global Standard gGmbH	Other - please specify (required)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We appreciate the intention behind the amended ESRS to strike a balance between the reporting burden on undertakings and the need for relevant and comparable sustainability information. However, from a due diligence perspective grounded in the UN Guiding Principles, the OECD Due Diligence Guidance several tensions remain. 1.There is a risk of under-disclosure. Reduced prescriptiveness may allow undertakings to omit or downplay material negative impacts, particularly where double materiality assessments rely heavily on internal definitions or lack robust stakeholder input. GOTS requires certified entities to identify and disclose salient risks regardless of internal prioritisation frameworks. 2.Preparation effort is essential for credible due diligence. While simplification can enhance accessibility, robust sustainability disclosure, especially on human rights and environmental risks, necessarily requires effort and investment. GOTS views comprehensive risk identification and stakeholder engagement as essential components of both due diligence and credible reporting. 3.There is a need for consistent minimum expectations. For information to be comparable across companies and sectors, a certain level of baseline prescriptiveness is required. GOTS addresses this through its harmonised certification system, which sets minimum requirements that apply across diverse geographies and operations. Recommendation: ESRS should ensure that flexibility in reporting format or presentation does not compromise the quality or completeness of disclosures. Prescriptive elements related to impact identification, stakeholder engagement, and due diligence steps should be maintained or strengthened. EFRAG should also consider recognising credible voluntary sustainability standards (VSSs), such as GOTS, as supporting instruments that help companies demonstrate alignment with international due diligence frameworks.			
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	We appreciate the intention behind the amended ESRS to strike a balance between the reporting burden on undertakings and the need for relevant and comparable sustainability information. However, from a due diligence perspective grounded in the UN Guiding Principles, the OECD Due Diligence Guidance several tensions remain. 1.There is a risk of under-disclosure. Reduced prescriptiveness may allow undertakings to omit or downplay material negative impacts, particularly where double materiality assessments rely heavily on internal definitions or lack robust stakeholder input. GOTS requires certified entities to identify and disclose salient risks regardless of internal prioritisation frameworks. 2.Preparation effort is essential for credible due diligence. While simplification can enhance accessibility, robust sustainability disclosure, especially on human rights and environmental risks, necessarily requires effort and investment. GOTS views comprehensive risk identification and stakeholder engagement as essential components of both due diligence and credible reporting. 3.There is a need for consistent minimum expectations. For information to be comparable across companies and sectors, a certain level of baseline prescriptiveness is required. GOTS addresses this through its harmonised certification system, which sets minimum requirements that apply across diverse geographies and operations. Recommendation: ESRS should ensure that flexibility in reporting format or presentation does not compromise the quality or completeness of disclosures. Prescriptive elements related to impact identification, stakeholder engagement, and due diligence steps should be maintained or strengthened. EFRAG should also consider recognising credible voluntary sustainability standards (VSSs), such as GOTS, as supporting instruments that help companies demonstrate alignment with international due diligence frameworks.			
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	The Global Standard recognises the value of the NMIG as a tool to support implementation and improve the accessibility of the ESRS. By providing examples and methodological explanations, the NMIG can assist undertakings, particularly smaller entities and those in complex value chains, in interpreting disclosure requirements and aligning them with recognised due diligence expectations. This is especially relevant for narrative disclosures on policies, actions and targets, where practical illustrations can enhance understanding and comparability. At the same time, the absence of a clear legal status creates ambiguity and may lead to inconsistent use of the NMIG. Some companies may treat it as binding, while others may ignore it entirely. This could undermine both comparability and trust in the reporting system. The Global Standard therefore considers it important that the NMIG remains explicitly non-mandatory but with transparent communication on its role as a supporting reference, not an additional layer of reporting obligations. Furthermore, the NMIG could be strengthened by including sector-specific examples that address common risk areas, such as labour rights, chemical management and water use in the textile sector. Recognising voluntary sustainability standards such as GOTS as valid reference points within NMIG would provide preparers with concrete and internationally aligned examples of how to operationalise due diligence and disclose effectively. In this sense, the Global Standard sees NMIG as a valuable complement to the ESRS, provided its role is clearly defined and it is leveraged to enhance clarity without creating hidden compliance expectations.			
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	GOTS supports efforts to streamline reporting requirements and reduce disproportionate burdens, particularly for small and medium-sized enterprises and for actors operating in complex global value chains such as those found in the textile sector. However, from a due diligence perspective aligned with the OECD Guidelines, the UN Guiding Principles and the GOTS Due Diligence Framework, important reservations remain. Some of the proposed reliefs, including the expanded use of estimates, the exclusion of parts of the value chain and the new cost-or-effort exemption, risk leaving critical adverse impacts unreported, especially in upstream or outsourced operations. The introduction of partial disclosures also threatens comparability. Allowing exclusions based on control arrangements, such as joint ventures, or thresholds for identifying impacts, risks and opportunities could result in inconsistent datasets across companies. Relief mechanisms should therefore be limited to cases where materiality is not compromised and should always be accompanied by narrative explanations of the limitations, methodologies and improvement actions. In this way, the amended ESRS can maintain necessary flexibility while preventing strategic under-reporting and preserving the stakeholder-oriented transparency that underpins the EU Green Deal and international due diligence frameworks.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	GOTS recognises the challenges that undertakings face in collecting reliable metric data, particularly in complex global value chains where upstream and downstream information is often difficult to obtain. The inclusion of a relief for lack of data quality in ESRS 1 paragraph 92 offers flexibility that is especially relevant for small and medium-sized enterprises and for suppliers operating in less data-transparent contexts. At the same time, from a due diligence perspective aligned with the UN Guiding Principles, the OECD Due Diligence Guidance and the GOTS Due Diligence Framework, concerns remain regarding accountability and comparability. The absence of a time limit for applying this relief creates the risk of prolonged reliance on partial disclosures without sufficient incentive for improvement. Although undertakings are required to disclose actions to enhance data coverage, this safeguard may not be strong enough to ensure progress. For GOTS-certified entities, risk-based due diligence already requires identification and management of impacts even when data are imperfect, applying a precautionary principle. The Global Standard therefore recommends retaining the relief to support practicality, but pairing it with clearer safeguards. These could include an explicit expectation of progressive improvement, a maximum number of reporting cycles under which the relief may be applied unless fully justified, and a requirement for narrative disclosures on methodologies and limitations. Such conditions would preserve the usefulness of the relief while avoiding the erosion of transparency and comparability.			
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	Global Standard supports Option 1 as the more balanced approach to disclosing anticipated financial effects. We recognise that companies face real challenges in providing quantitative information, including immature methodologies and uncertainties in long-term forecasting. Nevertheless, from the perspective of the UN Guiding Principles and the OECD Due Diligence Guidance, some level of quantitative disclosure is essential for accountability and comparability. Quantitative disclosures help stakeholders, including investors, understand the scale and significance of sustainability risks and impacts. Option 1 enables flexibility by allowing omission of quantitative information where uncertainty is high or inputs are not available from business plans, but it does not eliminate the expectation to report entirely. This creates the right incentive for undertakings to build internal systems and methodologies over time. By contrast, Option 2, which limits reporting to qualitative information with optional quantitative disclosure, risks undermining comparability and discouraging improvement in data practices. The Global Standard therefore recommends adopting Option 1, with strengthened guidance on acceptable estimation methods, progressive improvement pathways and illustrative sector-specific examples. For high-risk industries such as textiles and apparel, this could include examples of financial impacts linked to raw material volatility, water scarcity or labour rights violations.			
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	GOTS recognises the importance of providing users, in particular investors and financial institutions, with disclosures on anticipated financial effects linked to climate transition and physical risks. The revised ESRS E1-11, including paragraphs 40 to 42, represents a simplification by reducing datapoints, while still retaining essential information. From the perspective of the GOTS Due Diligence Framework, which is aligned with the UN Guiding Principles and the OECD Due Diligence Guidance, the balance between simplification, reporting effort and user needs is only partially achieved. For companies in the textile sector, many of the remaining datapoints under paragraphs 40 and 41 are still difficult to quantify due to the absence of harmonised methodologies and the reliance on region-specific climate projections. This risks limiting comparability and creating uneven disclosures across undertakings. While quantitative information is critical, qualitative narrative also has strategic value, for example when companies disclose adaptation measures such as sourcing more resilient fibres or investing in water reduction technologies. Paragraph 42, which requires companies to explain data sources, is positive, but would be more effective if combined with explicit disclosure of plans to improve traceability and coverage over time. The Global Standard therefore recommends retaining the key disclosures under paragraphs 40 to 42 but strengthening the supporting guidance. This could include practical methodologies, sector-relevant examples and narrative pathways that reflect both current limitations and progressive improvement. In this way, the disclosures can be made more feasible while preserving their value for comparability and decision-making.			
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	Global Standard supports greater international convergence of sustainability reporting standards where this enhances comparability, clarity and accountability. The amendments made to improve interoperability between ESRS and IFRS S1 and S2, such as the alignment of greenhouse gas emission boundaries, the introduction of IFRS-style reliefs and the use of common terminology, are positive steps. At the same time, from the perspective of the UN Guiding Principles and the OECD Due Diligence Guidance, several risks remain. The adoption of a general materiality filter, reflecting the IFRS approach, may reduce the visibility of adverse impacts on affected stakeholders, particularly where these are not financially material. GOTS requires companies to identify and disclose salient risks regardless of their financial significance, and this principle should be preserved in ESRS. Similarly, the introduction of certain reliefs that go beyond IFRS S1 and S2, such as allowing partial metric scopes without time-bound corrective measures, risks creating divergence in practice and weakening accountability. Finally, while the permanent reference to SASB Standards may help companies identify sector-specific information, these standards do not always align with the risk-based due diligence model. For high-risk industries such as textiles, sectoral frameworks like GOTS provide stronger alignment with international expectations. The Global Standard therefore recommends that EFRAG maintain its efforts to harmonise with IFRS S1 and S2 but ensure that interoperability does not weaken the core principle of impact materiality. Interoperability should not only serve the needs of investors but also support companies in demonstrating alignment with internationally recognised due diligence standards.

Survey	Global Standard gGmbH	Other - please specify (required)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Global Standard understands the rationale for making six datapoints mandatory and agrees that these can be justified as exceptions within the broader simplification process. In particular, reporting on water withdrawals and discharges, the disclosure of biodiversity transition plans, and specific indicators on business conduct are aligned with internationally recognised due diligence expectations and reflect key sustainability priorities. However, these disclosures support transparency in areas that are especially relevant to high-risk sectors such as textiles. Water withdrawals and discharges are essential for understanding pressures on ecosystems in production hubs, and biodiversity transition plans are critical for aligning business strategies with global expectations on nature. Similarly, procurement training and disclosure of confirmed incidents of corruption or bribery reflect important elements of supply chain due diligence and responsible business conduct. At the same time, challenges remain. Smaller actors in global supply chains may face difficulties in developing and reporting on biodiversity transition plans, and disclosures on confirmed incidents of corruption or bribery require clarity on definitions and thresholds to ensure consistency. The Global Standard therefore recommends retaining these six datapoints as mandatory, while ensuring that practical guidance is provided to support implementation. Guidance should also recognise credible voluntary sustainability standards such as GOTS, which already require monitoring and reporting on water use, chemical management and business conduct, and can therefore help undertakings meet these disclosure obligations effectively.			
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	We recognise that the general principle of the amendments was to avoid introducing new mandatory datapoints, and therefore any exceptions should be carefully justified. The inclusion of four new "shall disclose" datapoints should be considered in this light. While additional requirements can strengthen transparency, they also raise questions of proportionality and consistency. New datapoints are appropriate where they fill a genuine gap in disclosure objectives and are directly linked to due diligence steps such as identifying salient risks, engaging stakeholders or tracking outcomes. Where datapoints serve primarily to increase comparability or reinforce existing disclosures, the benefit may not outweigh the added burden, particularly for small and medium-sized entities in global supply chains. The Global Standard therefore recommends that any new mandatory datapoints be accompanied by a clear explanation of their rationale, how they relate to internationally recognised due diligence standards and how they are expected to improve sustainability reporting in practice. EFRAG should also consider recognising credible voluntary sustainability standards such as GOTS as sources of supporting evidence. This would allow companies already operating under rigorous certification systems to demonstrate compliance more efficiently, while ensuring that the overall reporting framework remains coherent and avoids duplication.			
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We recognise the value of clarifying that ESRS is a fair presentation framework, particularly if this encourages companies to move away from a checklist mentality and towards disclosures that are more relevant, balanced and aligned with due diligence processes. This approach reflects the spirit of the UN Guiding Principles and the OECD Due Diligence Guidance, and which emphasises the importance of reporting that captures both the quality of processes and the significance of impacts. At the same time, there are risks that should not be overlooked. The exercise of judgement required under a fair presentation approach can create uncertainty, particularly for impact materiality where established reporting practices are still limited. For small and medium-sized enterprises in global supply chains, the risk of increased audit costs and legal exposure may lead to over-reporting as a defensive strategy, which could undermine the simplification objective. Furthermore, giving too much discretion to preparers risks weakening the visibility of adverse impacts on rights-holders if companies choose to frame materiality too narrowly. The Global Standard therefore supports the principle of fair presentation but recommends that it be supported with clear guidance, including examples that illustrate how to apply it in high-risk sectors such as textiles. Safeguards should ensure that fair presentation is consistently applied in a manner that upholds the dual materiality principle and maintains transparency on salient human rights and environmental risks. Recognition of credible voluntary sustainability standards such as GOTS could also help undertakings demonstrate fair presentation in a way that is consistent with internationally recognised due diligence expectations.			
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	We do not support an exemption for financial institutions from disclosing absolute greenhouse gas emission targets when they have only set intensity targets. While we recognise the methodological challenges of calculating absolute portfolio emissions, exempting financial institutions from this requirement would weaken climate accountability and create an uneven standard compared to other sectors. Absolute emissions are necessary to capture the full scale of impacts. Intensity targets may demonstrate efficiency gains, but they can mask situations where overall emissions continue to rise due to portfolio growth. Without disclosure of absolute targets, stakeholders cannot properly assess whether financing activities are aligned with transition pathways consistent with the Paris Agreement. The Global Standard therefore recommends that financial institutions be required to disclose both intensity and absolute measures wherever possible. If significant uncertainties remain, undertakings should explain their assumptions, outline methodological limitations and set out time-bound plans for improving accuracy over reporting cycles. In this way, transparency is preserved, comparability across sectors is maintained, and financial institutions are incentivised to strengthen their role in driving decarbonisation. Recognition of credible voluntary sustainability standards such as GOTS can also support institutions in demonstrating consistency with internationally recognised due diligence expectations.

Survey	Global Standard gGmbH	Other - please specify (required)	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I partially agree and partially disagree	We support the intention behind increasing country-level visibility of employee-related disclosures, such as characteristics of the workforce, collective bargaining coverage and social dialogue. These are important indicators for understanding labour rights risks and ensuring accountability. The change to a threshold based on the ten largest countries by headcount has the potential to provide more consistent information, but the balance is only partly achieved. The new criterion may exclude countries where headcount is relatively small but where salient risks are high, as is often the case in textile supply chains. For example, a brand headquartered in Europe may employ only a modest number of people directly in high-risk sourcing countries such as Bangladesh or Ethiopia, but those contexts remain critical for assessing collective bargaining and social dialogue. A threshold based only on headcount risks obscuring issues that are material from a rights-holder perspective. The Global Standard therefore recommends refining the threshold so that the ten largest countries are disclosed, but with the option to add other countries where material risks are present, regardless of headcount. This would ensure that disclosures remain both consistent and responsive to stakeholder-relevant risks. Recognition of credible voluntary sustainability standards such as GOTS can provide companies with tools to identify high-risk geographies and ensure that disclosures reflect international due diligence expectations.			
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	We weclcome the effort to integrate ILO guidance into the methodology for calculating adequate wages outside the EU. This is consistent with the UN Guiding Principles and the OECD Due Diligence Guidance. However, the amended hierarchy in ESRS S1 AR 22 creates challenges that limit its effectiveness in ensuring transparency and comparability. Placing living wage benchmarks at the bottom of the hierarchy risks normalising the use of statutory minimum wages that fall well below adequacy. In many sourcing countries for textiles, statutory minimum wages do not provide for basic needs, and relying on them could undermine the credibility of the disclosure. Equally, the lack of a requirement to disclose which prong of the hierarchy was applied creates a gap in transparency that prevents comparability across undertakings and sectors. Without clarity on whether a company used statutory wages, negotiated wages or living wage benchmarks, stakeholders cannot properly assess the adequacy of wage policies. The Global Standard therefore recommends revising AR 22 to prioritise living wage benchmarks where available and to require disclosure of both the data source used and the rationale for its selection. This would ensure that companies do not rely on lower standards without explanation and would create greater consistency across disclosures. Recognition of credible voluntary sustainability standards such as GOTS, which already operationalise living wage requirements, would further support undertakings in aligning their reporting with international due diligence expectations.			
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	We support a review of AR 26 in ESRS E4 to provide clearer and more up-to-date methodological guidance for setting biodiversity and ecosystem-related targets. The current application requirement usefully identifies certain areas, such as hectares restored or number of sites with improved ecological integrity, but it does not yet reflect the latest scientific frameworks or the complexity of value chain impacts in high-risk sectors such as textiles. The targets should be both measurable and relevant to the ecosystems affected by an undertaking's operations and supply chains. Textile production, for example, has significant upstream impacts on land use, water systems and chemical pollution, which must be addressed in a manner that is both science-based and stakeholder-relevant. Aligning AR 26 with frameworks such as the Science Based Targets for Nature (SBTN) would provide undertakings with clearer guidance on setting meaningful and credible targets. The Global Standard therefore recommends that AR 26 be revised to reflect the latest developments in biodiversity methodologies, to ensure that targets are measurable, time-bound and based on robust ecological indicators, and to encourage companies to disclose both baseline conditions and progress. Recognition of credible voluntary sustainability standards such as GOTS, which already require practices that protect biodiversity and ecosystems, would further help undertakings demonstrate alignment with international due diligence expectations.			
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree				
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree

In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	Global Standard gGmbH	Other - please specify (required)	Germany	33.E_3.	ESRS E3:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. Survey	EFPIA	Business association (other than association of financial institution)	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	"We welcome the clarifications and simplifications introduced, notably the option to publish non-mandatory information, the simplification of AR16, and the emphasis on avoiding excessive documentation. These measures should ease the reporting burden and strengthen the information materiality filter. However, several concerns remain: Double materiality must be maintained. We disagree with proposals to limit the CSRD to single financial materiality, as this would significantly reduce the scope and usefulness of sustainability disclosures for a wide range of users, including academics, NGOs, and other stakeholders. Double materiality should remain a core feature of the framework. Alignment with global standards while preserving double materiality. We support explicit recognition of the IFRS Sustainability Disclosure Standards (SDS) as the global baseline to improve comparability and reduce compliance costs. However, this must not come at the expense of double materiality. Alignment should focus on interoperability, allowing companies to meet both global and EU requirements. Definition of financial materiality. We recommend broader alignment with IFRS/ISSB's definition while maintaining flexibility for entities to apply the approach most suited to their structure and jurisdiction. IRO methodology and the gross perspective. The methodology for assessing Impact, Risk, and Opportunity (IRO) materiality remains unclear, particularly the interaction between severity and probability. Further guidance is needed to ensure assessments are based on a gross perspective to justify actions, targets, and metrics, and avoid confusion. Opportunities dimension. More guidance is also needed on how to identify and assess opportunities to improve consistency and comparability."

Survey	EFPIA	Business association (other than association of financial institution)	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	While the additional clarification for assessing actual impacts is welcome, the approach to potential impacts raises significant concerns. In particular, we do not support introducing new terms such as "significant ongoing mitigation," as they create uncertainty, add complexity, and risk misalignment with companies' existing risk management processes. We recommend that the standard: Respect existing frameworks: Allow companies to follow their existing risk management approaches when assessing impacts, ensuring consistency across reporting and avoiding unnecessary costs or duplication. Clarify gross impacts: Make clear that the starting point for assessing potential negative impacts should be based on gross impacts to ensure consistency and avoid underreporting. It would also be useful to provide examples of what gross impacts do not include — for instance, they should not assume a scenario in which a company operates without legally required pollution controls. Preserve gross perspective: Even when mitigation measures are considered, the standard should confirm that the gross perspective remains the baseline for assessment. Avoid prescriptive definitions: The standard should avoid prescriptive language on what constitutes "significant" mitigation or prevention. If EFRAG retains this concept, companies should have flexibility to explain their rationale for what qualifies, rather than applying a rigid definition. Acknowledge existing mitigation: Permit companies to consider all mitigation and prevention measures already in place when assessing potential negative impacts, without thresholds or qualifiers such as "significant." Where mitigation efforts are effective, companies should be able to disclose the net potential impact (based on severity and likelihood), rather than a gross impact that ignores existing measures.			
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	"We welcome the improvements in readability and conciseness, as well as the greater flexibility for companies to prepare sustainability statements that are better connected with corporate reporting. In particular, the possibility of including an executive summary is a practical and valuable addition that can help make sustainability reporting clearer for stakeholders. We also propose advocating for even more flexibility in how sustainability statements are structured — including the order and collation of standards — to support alignment with other reporting frameworks and reduce complexity for companies. At the same time, we remain concerned that the ESRS, even with these amendments, does not sufficiently align with global standards. We believe the ESRS should explicitly recognise the IFRS Sustainability Disclosure Standards (SDS) as the global baseline and move towards greater alignment to promote consistency, comparability, and efficiency for companies operating internationally."			
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	"The changes bring some benefits. In particular, the simplification of PAT requirements helps make reporting clearer and less heavy for companies. This is a positive step towards reducing the workload and achieving a better balance between ESRS 2 and the topical standards. At the same time, we are concerned about the duplication with the IFRS Sustainability Disclosure Standards (SDS). Many companies already report under IFRS/ISSB, and the overlap with ESRS means extra work, higher costs, and less efficiency. This duplication undermines the goal of simplification and makes reporting harder instead of easier. To strike the right balance, we believe ESRS should be better aligned with the IFRS SDS global baseline. This alignment should focus on identifying and addressing specific gaps between the standards to improve interoperability, while maintaining double materiality. Stronger alignment would reduce costs, avoid confusion, and improve comparability of reports across markets."			
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	Overall we see the simplification efforts supporting clarity and better distinction between mandatory and voluntary information. However, the duplication the ESRS causes companies with complying with the IFRS Sustainability Disclosure Standards will cause undue cost and effort.			
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1; S1	All: While we understand the intent behind NMIG, we are concerned that non-binding guidance may be interpreted as binding by assurance professionals. However, in the absence of more detailed implementation guidance, the NMIG can be a useful tool to provide additional context and support companies on their maturity journeys. We therefore propose maintaining it as supporting, non-mandatory material, while ensuring its non-binding nature is clearly communicated. NMIG - ESRS S1It would be helpful to include a direct source for adequate wages			
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We support recognising the IFRS Sustainability Disclosure Standards (SDS) as the global baseline and promoting stronger alignment to reduce duplication and improve comparability. We welcome the option to estimate future actions and the clearer treatment of acquisitions and disposals, which simplify reporting. We share concerns regarding the partial scope of metrics, as the proposed relief could erode comparability and data quality if companies individually determine when estimation is too burdensome. Alignment efforts should focus on addressing these gaps while maintaining robust data quality, standardisation, and comparability. We also welcome other relief measures, such as transitional periods for acquisitions, and stress that improving data maturity should not create undue costs for companies.

Survey	EFPIA	Business association (other than association of financial institution)	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	The notion of "undue cost and effort" will help simplify the reporting.			
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	Removing the quantitative requirement until there is a standard market practice on measuring anticipated financial effects will avoid the risk of disclosing unreliable information. Option 2 also allows companies to use business judgement to determine which financial effect disclosures are most meaningful for stakeholders. This flexibility is important given that IFRS and ESRS reliefs are not fully aligned, as strict requirements would otherwise lead to duplication of effort.			
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	To achieve faithful representation, the quantitative requirement should be removed until there is a standard market practice for measuring anticipated financial effects. Unlike historical data, these disclosures rely on forward-looking assumptions about climate scenarios, technology, and regulation. Providing specific figures may create a false sense of precision and certainty, leading to flawed decisions. Without standardised methods, companies would use different models and assumptions, undermining comparability and risking selective disclosures. Until methodologies mature, qualitative disclosures—focused on processes, strategies, and management—are more reliable and informative.			
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	"We strongly support closer alignment with the IFRS Sustainability Disclosure Standards (SDS) and would prefer full adoption as the most effective way to ensure interoperability, comparability, and efficiency. While the proposed amendments improve interoperability, gaps remain. In particular, we recommend that ESRS should: Allow flexibility in the method used to measure emissions (equity share, operational control, or financial control), in line with the ISSB and GHG Protocol. The current ESRS E1 requirement to use operational control creates misalignment and increases reporting burden for companies reporting under both frameworks."			
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	The reduction of mandatory narrative datapoints does simplify the redaction of the report, especially for the first year, however none of the quantitative datapoints were removed which means the annual reporting burden will stay the same			
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	"While some of the new metrics are warranted, the terminology used is too ambiguous to serve as a required disclosure. In particular, the definitions of "anti-corruption and anti-bribery" and "employees" are unclear and could lead to reporting on cases unrelated to the company. Any disclosure of fines should be limited to final court decisions to avoid misinterpretation. We also note that increasing mandatory disclosures is not consistent with the simplification objectives. If retained, these datapoints should remain optional and classified as NMIG. While many of the datapoints may not require significant effort, the procurement team training requirement is new and would add to the reporting burden."			
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	"We are concerned about the introduction of new terms and concepts such as critical and strategic raw materials. These will be difficult for companies to define and measure within the available timeframe and will require significant additional work. Increasing mandatory disclosures in this area also runs counter to the simplification objectives. If not removed, we suggest these datapoints remain optional and reclassified as NMIG. At the same time, the datapoint on waste with an unknown destination is helpful, as it will improve data quality and comparability and the additions seem justified to provide clarity."			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	"The more explicit language on fair presentation and the use of business judgement is welcome, as it supports a more principle-based approach to disclosures, even if the standards remain detailed and granular. However, the effectiveness of this approach will depend heavily on how auditors interpret and apply the concept of fair presentation. Without consistent interpretation, there is a risk of variability in application and additional reporting burden."			
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I partially agree and partially disagree	"A by-country breakdown of metrics may not provide the most meaningful information to users, as the relevance of data often depends on how a company's activities are organised. We believe disclosures would be more useful if structured around categories aligned with business organisation, rather than strictly by country. In addition, reporting disaggregated headcount data is complex and of limited value. Definitions of headcount can vary by country, creating inconsistencies, while the proposed threshold risks adding reporting obligations for countries that are neither material nor decision-useful. Moreover, changing the reporting approach would create an additional burden for wave 1 companies, which would have to alter reporting practices between year 1 and year 2. We therefore recommend that disaggregated social metrics remain optional and be reclassified as NMIG. Alternatively, flexibility could be introduced by requiring a breakdown only for countries where a majority of employees are based (e.g. covering 80% of the workforce), giving companies sufficient leeway to determine what is most practical to implement."			
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	We welcome the effort to provide more guidance on the calculation of adequate wages outside the EU, as this can support companies in improving reporting and comparability. However, this remains an area where practice is not yet settled, and imposing a calculation requirement at this stage risks producing inconsistent and unreliable results. An even more direct and standardised source of information would be needed to support meaningful disclosures and ensure comparability across companies and countries. Until such methodologies are mature, flexibility should be provided, and the requirement should not be mandatory.			
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I disagree	This regulation's scope is not settled for all financial institutions and therefore incorporating it through does not seem reasonable.			
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	We see value in providing guidance for setting biodiversity- and ecosystem-related targets. However, we have two key concerns: Reference to ESRS sectors should be removed until the sector standards are finalised. Introducing such references prematurely creates uncertainty and risks inconsistency. A broader re-review of ESRS E4, including AR26, is needed to ensure full interoperability and alignment with existing frameworks such as the Taskforce on Nature-related Financial Disclosures (TNFD).			
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	A gender pay gap that takes into account the specificity of different geographies would be more helpful for comparability and for the monitoring of this issue. Even when adjusted by country, this does not adequately reflect wage gaps. Instead, it should ideally be weighted by job-levels in order to sufficiently say anything about wage gaps. This will be difficult to implement, but would be necessary to allow for useful reporting information, and thus further guidance would be welcomed.			
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree	With respect to metric G1-6, we question the usefulness of the information. Unless benchmarks or best practice in terms of days for payment are established, many companies will continue to not find this data point relevant, and therefore limit comparability			
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	GDR-A: 38 (69 amended): Difficulties remain to define what constitutes "significant resources". Undergoing limited assurance on qualitative information, also means high burden to link relevant budgets with relevant actions and how to report on this year on year with changing budget constraints			
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	35.ESRS1_1.2.	Do you agree with the amendments of this chapter?	I agree	Changes here are reasonable as align better with IFRS Sustainability Standards where information is only required to be disclosed if material.	ESRS1	1.2 Drafting conventions	
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	35.E1-6.	Do you agree with the amendments of this chapter?	I disagree	The current approach restricts companies from updating their baseline year except in cases of major changes to boundaries, which may prevent the use of the most accurate and relevant data—especially when organizations improve data quality or undergo substantive changes that do not strictly meet the set criteria. To ensure that disclosed climate targets are both meaningful and credible, I recommend that the ESRS allow greater flexibility for companies to choose or revise their baseline year when justified by improvements in data or organizational structure, provided such changes are transparently disclosed and explained. This adjustment would enable more accurate reporting and better reflect business reality without compromising transparency or comparability.	E1	Disclosure Requirement E1-6 - Targets related to climate change

Survey	EFPIA	Business association (other than association of financial institution)	Belgium	35.E3-4.	Do you agree with the amendments of this chapter?	I disagree	"While in general the reporting of water recycled/reused is beneficial to demonstrate proactivity in circular use of water within direct operations, efforts to standardize definitions within our sector have proven difficult due to the varied nature of processes (e.g. interpretation of volumes recirculated/reused for required cleaning steps). The work needed to harmonize on these definitions was not critical, as ultimately, recycling/reuse is one of several ways to enhance efficiency and the values that matter regarding impact to the basin are limited to withdrawals and discharges, and consumption as the calculated difference between those figures. WWF has fed back that a lack of clarity in the definition of 'stress' has resulted in challenges for some companies reporting. WWF Water Risk filter basin risk assessment provides measures focused on scarcity and quality as separate risks, while stress brings these risks together under one metric. We support the clarity that separating the risk scores brings for us, as the challenges have different impacts on our business and drive different action. Clarity is needed."	E3	Disclosure Requirement E3-4 - Water metrics	
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	35.E4-1.	Do you agree with the amendments of this chapter?	I disagree	Transition plan requirement is not clear and we understand the concept is still being shaped and thus our preference is to remove this requirement until it is sufficiently clear.	E4	Disclosure Requirement E4-1 - Transition plan for biodiversity and ecosystems	
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	35.E4-2.	Do you agree with the amendments of this chapter?	I disagree	The requirement for a biodiversity and ecosystems scenario analysis is very vague on how exactly it would work in practice. Would it include projected changes for climate, water risk, etc. for example. Our preference would be to remove this requirement till practice is settled.	E4	Disclosure Requirement E4-2 - Policies related to biodiversity and ecosystems	
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	35.E4-5.	Do you agree with the amendments of this chapter?	I disagree	"Para AR10 notes ""Where possible measurement at site using state of nature metrics is best suited to determine impact on biodiversity and ecosystems. Measurement at site is especially relevant where those sites are in or near biodiversity sensitive areas."" We completely disagree. Example to demonstrate: A) Site is next to a freshwater biodiversity sensitive area (e.g RAMSAR wetland) B) Untreated stormwater run-off is directed into wetland. Clear impact identified. How is measuring state of nature metrics (extent, type, condiiton of ecosystems) within the site boundary at all best suited to determine the impact on the freshwater biodiversity and ecosystems in this example? We would suggest the best measurement/metric to be used on-site is related to an actual identified impact (in this case, surface run off). Anything related to state of nature should be measured in the receiving environment (freshwater sensitive area). Even so, current state of nature metrics are terrestrial focused, not marine or freshwater. "	E4	Disclosure Requirement E4-5 - Metrics related to biodiversity and ecosystems change	
Survey	EFPIA	Business association (other than association of financial institution)	Belgium	35.E5-5.	Do you agree with the amendments of this chapter?	I disagree	"There are challenges with the definitions that require clarification. The definition of waste throught the GRI has been ""anything that the holder discards, intends to discard, or is required to discard"" since at least 2020. This seems to be in direct contradiction to the definition of preparation for reuse ""checking, cleaning, or repairing operations, by which products or components of products that have become waste are prepared to be put to use for the same purpose for which they were conceived"". If you intend to reuse an item ""for the same purpose for which they were conceived"", either within your site or beyond site boundaries, then it wouldn't be waste per our interpretation. This wasn't an issue before since companies could just not align to this portion of GRI. However, now with regulations coming into scope, this challenge is becoming more impactful. Suggest to advocate that preparation for reuse be removed completely, as something being reused = not waste, but rather contributing to the circular economy. The EU needs to provide clear guidance on how to measure recyclability and this should align with the recyclability methodology anticipated in 2028 under the EU Packaging and Packaging Regulation (PPWR). Specifically, this needs to include packaging formats for pharmaceutical packaging e.g. blisters etc. If recyclability rates for material in products must be reported then clear guidance on how to assess and measure recyclability of pharmaceutical devices e.g. inhalers should be provided. "	E5	Disclosure Requirement E5-5 - Resource outflows	
Survey	IDH	Business association (other than association of financial institution)	Netherlands	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	s an organization with over 13 years of experience working alongside leading companies on adequate and living wage practices, we strongly support the ESRS objective to ensure employees are paid an adequate wage. To meet this objective, it is important to clarify that statutory minimum wages cannot, on their own, be considered sufficient to demonstrate adequacy. In most jurisdictions, minimum wages fall below the level required for a decent standard of living, and therefore do not align with ILO principles or with the intent of the ESRS. For consistency with the benchmark hierarchy already set out, adequacy should be assessed against: -Wages established through collective bargaining agreements, or - Living wage benchmarks that directly reflect what workers and their families require for a decent standard of living. This approach is consistent with the ILO's agreed principles on estimating living wages, reduces the risk of discrimination between EU and non-EU employees, and ensures comparability and credibility in company reporting. It also reflects the practical experience of leading businesses that recognize living wage benchmarks as the most reliable measure of adequacy.			
Survey	IDH	Business association (other than association of financial institution)	Netherlands	35.S1-9.	Do you agree with the amendments of this chapter?	I disagree	3 years of experience working alongside leading companies on adequate and living wage practices, we strongly support the ESRS objective to ensure employees are paid an adequate wage. Survey	Double Materiality Research Chair (chaire-double-materialite.org)	Academia	France	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Overall, the Double Materiality Research Chair supports the balance found by EFRAG to simplify the DMA while maintaining its core requirements (assessment at the level of positive/negative impacts, risks and opportunities when this is most appropriate, definition of materiality thresholds, minimum reporting requirements to describe the DMA process and results). These minimum requirements are needed to ensure that the DM principle is fully embedded in the ESRS. However, areas for improvement are: 1)The DM research Chair strongly advises against the new differentiation between primary users and other users as regards the definition of materiality. The deletion of the notion of "decision-useful" for other users is inconsistent with the core concept of materiality itself that relates to decision-making. We believe that this change would be not compatible with the notion of double materiality. 2)Gap between disclosure on financial materiality thresholds (some good practices) and impact materiality thresholds (often generic). Companies almost never articulate impact thresholds with ecological thresholds, which stresses the important need for guidance . There is an opportunity for EFRAG and the EC to reflect on an ecological thresholds benchmark for companies. The Chair also regrets that many useful AR on how to conduct the DMA have been moved to NMIG (ex: consider river basin level for water-related issues). 3)IRO-1:there is much less information on social input parameters compared to environmental topics, because ESRS S1-4 do not contain any IRO-1 "reminders" today. Warning to maintain an incentive to disclose input parameters at topic level where this is most useful (to avoid boilerplate disclosures). 4)Companies tend to give less specific information on "effects of impacts on people and the environment" than on financial effects. EFRAG could reflect on guidance to improve reporting on this aspect and avoid unbalance between impact and risk disclosures.			
Survey	Double Materiality Research Chair (chaire-double-materialite.org)	Academia	France	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	The Double Materiality Research Chair does not support the proposed approach and strongly recommends retaining the actual ESRS methodology based on gross assessment of impacts. This is because: - Information on gross impact is important to understand the context of mitigation measures. For consistency reasons, risks and potential impacts should also be treated in a consistent manner (both on gross basis). - There is a risk that many negative impacts will be considered not material and information on these will be omitted (including information on the mitigation measures that the company considers successful!) as a result. This will be a significant reduction of relevant information for all stakeholders. Based on its assessment of companies' first DMA reporting, the Chair also suggests clarifying the approach in the ESRS. Indeed, while most companies used the "gross" approach, this methodology was not always clear for all companies. It might be useful to differentiate results from IRO-1 (prior to mitigation) and disclosures under SBM-3 (net financial effects, resilience after mitigation).			
Survey	Double Materiality Research Chair (chaire-double-materialite.org)	Academia	France	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS2	Cf. comment above: Companies almost never articulate impact materiality thresholds with ecological thresholds, which stresses the important need for guidance . There is an opportunity for EFRAG and the EC to reflect on an ecological thresholds benchmark for companies.			
Survey	Double Materiality Research Chair (chaire-double-materialite.org)	Academia	France	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	The Double Materiality Research Chair is concerned by the application of the "undue cost or efforts" principle to the Double Materiality Assessment. EFRAG should better explain the implications of this relief to avoid undermining the robustness of the DMA which is at the core of the sustainability reporting. This relief on DMA could transfer the burden to stakeholders that will have further difficulties to access relevant information on companies' sustainability impacts and risks. A holistic approach to informing the examination of the burden for monitoring, controlling and mitigating companies I and Rs would be welcome.			
Survey	Double Materiality Research Chair (chaire-double-materialite.org)	Academia	France	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	Overall, the Double Materiality Research Chair supports EFRAG's balance and believes that it is important for the EU standards to maintain some level of difference with the ISSB standards. In particular, it is key not to undermine the principle of double materiality: impact-related information is as important as financial-related aspects and it should not be presented apart because it might "obscure" financial-related information. This is why EFRAG should be careful when revising the double materiality definition in ESRS 1. The DM Research Chair regrets that the notion of "decision-usefulness" has been removed when referring to stakeholders other than investors, because it creates an unbalance between stakeholders (cf. Q11).

Survey	Double Materiality Research Chair (chaire-double-materialite.org)	Academia	France	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	The Double Materiality research Chair is concerned by the new guidance on how to consider remediation actions in assessing materiality of negative impacts. The Chair also highlight areas for improvements in Q11). The Chaire has conducted an assessment of company's first sustainability statements focussed on the DMA (process and results). This study informed the Chair's answer to the EFRAG consultation. The study will be available in English on https://chaire-double-materialite.org/publications.html			
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I would like to skip this question and provide my feedback in Part 3				
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	The table provides a useful overview. However the column titled 'How to assess and what to report in future years' may cause confusion, as each 'future year' will eventually become the current reporting year. Restructuring the table to reflect a more time-neutral approach could enhance clarity and usability.			
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	An executive summary at the beginning of the sustainability statement is valuable for stakeholders - providing a clear and accessible overview of the key messages, without having to navigate the whole report			
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	It's positive that the 'may disclose' datapoints have been removed, as it was uncertain what their status and applicability was. We also appreciate language improvements which have enhanced clarity and readability.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We welcome the relief provided in ESRS 1 Para 91, which allows undertakings to report metrics based on partial data coverage where reliable data is only available for part of the reporting boundary/value chain. However we believe this relief should also apply to ESRS E1-6 GHG emissions which are currently excluded. Companies subject to CSRD should not be required to justify a broader scope or additional data collection efforts beyond what is already mandated by their climate commitments under internationally recognised standards. We request Para 91 be redrafted in more plain English in the interests of accessibility. Our understanding is that the intention of paragraph 91 is to clarify that both direct data and estimates can be used equally in reporting			
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	We welcome the reduction in data points. However, the majority of the removed data points are qualitative in nature or fall under the category of optional "may" disclosures. The quantitative data points, which typically require the most resources to collect and report, remain largely unchanged. The qualitative data points, which typically require the most resources to collect and report, remain largely unchanged. Therefore while the total number of disclosures has been reduced by 68%, this does not correspond to a proportional reduction in the reporting burden for companies.			
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	International and European standards should be aligned.			
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree				
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	The ESRS E4 Biodiversity transition plan is controversial and might introduce additional bureaucratic burden. Therefore and in light of "simplification", introducing a biodiversity transition plan is to be rejected.			
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	E2-4 Secondary microplastics. The requirement to report on the amount of secondary is not meaningful as long as no harmonised methodology has been developed at EU level. Current methodologies are costly and often unreliable. The upcoming Regulation on preventing plastic pellet losses to reduce microplastic pollution explicitly states that a standardised methodology is necessary and Art. 13 of the proposal sets out requirements for development of such a standard. This reporting requirement should be postponed until a harmonised methodology is in place at EU level.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We believe that clear and practice guidance for auditors is essential to ensuring consistent and effective implementation of this principle, without which, there is a risk the concept could be interpreted as a need to include additonal information beyond what is material. A balance is needed to ensure fair presentation enhances the quality of reporting without adding unnecessary complexity.			
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	The goal must be to reduce emissions per activity. However, this must not lead to a decline in the level of business ambition, for example, in lending to agricultural businesses.			
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I disagree	EFRAG should refrain from reintroducing the previous AR 26 or any revised application requirements that prescribe how measurable biodiversity targets should be expressed. Given that biodiversity target-setting is a rapidly evolving area, references to "latest trends" may quickly become outdated and risk reducing flexibility for undertakings.			
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	The proposed disclosure requirements for employees in the value chain are disproportionate and go far beyond the requirements of the CSRD. The proposals deeply interfere with the proportionality of data provision. Furthermore, this leads to far-reaching co-determination and influence on SMEs. This deep insight in the context of pure reporting impairs the right to entrepreneurial independence and fundamental freedom of decision-making and is rejected.			
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		The ESRS must strive for greater coherence with existing environmental legislation to avoid double reporting, and reduced environmental burdens for companies. E.g. many quantitative data points (such as use of raw materials, water, chemicals, and energy; emissions to air, water and soil; and waste generation) are already required as part of environmental permits or must be made available on the Industrial Emissions Portal - therefore a 2nd review of this data should not be necessary. Moreover, building on existing business practices (such as leveraging certified ISO management systems which are internationally recognised) can significantly reduce the administrative burden for companies already applying them. Closer alignment of sustainability reporting with frameworks that rely on management systems (e.g. under the European accreditation regulation (EC) No. 765/2008) would streamline compliance and support broader EU policy objectives by reinforcing the role of verified sustainability data across regulatory domains. It is positive that EFRAG has focused on the "own operations" of undertakings. This could be strengthened even more to demonstrate that undertakings should first analyse their own operations before seeking information from the value chain.			
Survey	Deutscher Bauernverband e.V.	Business association (other than association of financial institution)	Germany	35.ESRS1_3.3.	Do you agree with the amendments of this chapter?	I partially agree and partially disagree	The wording has been improved. However, there are still some incertainties. For instance, AR 5 requires undertakings to adopt thresholds to determine which impacts will be covered in its sustainability statement without explaining the conditions/classifications for these thresholds. This seems a bit arbitrarily and gives leeway to each undertaking to decide. Additionally, AR 11 elaborates on the relevance of stakeholders within the MA but does not clearly state that no primary data is needed. At the same time, it is necessary to include relevant stakeholders (the value chain) in the materiality assessment. Furthermore, the undertaking should include how and to what extent the value chain was involved in the assessment of the materiality assessment of all relevant datapoints. Clearer language (in line with Chapter 5.2) would be appreciated.	ESRS1	3.3 Double materiality assessment

Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	- Par. 21: Revision of the definition of materiality is welcome (information is material if its omission, misstatement, or concealment could influence the decisions of users of the reports and to understand the material IROs). However, it remains unclear how to interpret "necessary for users of general purpose" - Par. 22: Reporting at the topical or IRO level is useful - Par. 29: what is meant by "an update to take into account changed circumstances" -> specification needed - Par. 34: Actual impacts … include both newly arisen and those persisting from previous periods -> it has to be made clear how many previous periods need to be included_ - Par. 48: it is not clear what is meant by "a limited further assessment may be sufficient" - AR 18: Further specification is needed regarding the reliefs for detailed investigations when can these be used? How should it be documented? - Appendix A: With the sub-subtopics included in brackets the reduction is not really existing as companies will still have to gather IROs regarding those topics			
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	- Clarification regarding positive impacts is helpful. - Par. 34: overall, we appreciate the further specification regarding the consideration of remediation measures, however, there seems to be a contradiction between the first sentence "the severity of the impact shall be evaluated considering the outcome of any mitigation/prevention measures implemented before the impact occurred" and the rules in App. C. We would suggest for all negative impacts to be dealt with according to App. C. In order to generate meaningful reporting without any information that is not relevant it is important that companies are allowed to consider all mitigation/remediation actions. - Appendix C: it should be specified that regarding actual negative impacts the impact could also result from previous periods. - Par. 36: only remediation actions on negative impacts caused by compliance with law don't result in positive impacts, other remediation actions can result in positive impacts? Further specification would be appreciated.			
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	- Strengthening the fair presentation principle enables reports with more relevant content to be created. Creating an executive summary does not provide flexibility. Furthermore, an executive summary can help readers to better understand the report itself, however, it inevitably leads to unnecessary duplications.			
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	Deletion of IRO, GOV, and SBM entries in the topical standards is reasonable as they were duplicated in ESRS topical standards. However, it is necessary that in the standards itself, in the NMIG and in the basis for conclusion it is clearly stated that it is enough to provide this information on a more aggregate level and that a duplication is not necessary. We welcome the changes regarding the GDR esp. the reduction allowing a more flexible approach for entities to adopt reporting to the business context. However, it is crucial that this higher level of requirements is accepted esp. by auditors without resorting to the previous specifications			
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	Moving the AR from the end of the standards to the corresponding DR is very helpful. Furthermore, we welcome the deletion of the "may disclose" requirements as well as the inclusion of all "shall" requirements within the main body. However, we clearly oppose the new mandatory datapoints implemented in the drafts. There is no definition regarding "when applicable". We would like to suggest that reporting on such issues is only necessary if it is applicable. A company should not report any negative statements but instead simply not report. Furthermore, it is crucial that terms are clearly defined, for example: shall consider, may present, may implement, … -> if the same meaning is intended we suggest to always use the same term throughout the standards in order to avoid confusion.			
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	We consider NMIG a helpful orientation tool within the ESRS framework. Its non-binding nature must be clearly emphasized and understood by all parties to avoid uncertainty or implicit pressure to comply. We support EFRAG's decision not to include NMIG in the delegated act.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	Overall, we welcome the proposed simplication and consider it a meaningful step toward reducing the complexity associated with ESRS reporting. Implementing the principle of undue cost and effort does not necessarily provide any relief for wave 1 companies. On the contrary, it might increase the effort to prove sufficient effort has been made. Furthermore, we welcome the simplifications regarding metrics, however this might also lead to additional reporting effort as the assessment of whether data is available or not or whether the subsidiary impacts the IRO has to be documented. So not reporting about certain issues does not necessarily lead to less effort in preparation and documentation. The amendments made to the anticipated financial effects do not solve the issue of data availability and reliability, as assumptions for this data point will vary so widely that any comparison between companies would be misleading.			
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	It is to be welcomed that the scope of reporting is fundamentally that of financial control and that operational control should only be applied in cases of unfair presentation or complex structures. However, ESRS 1.92 is rather misleading while stating "the undertaking may exclude joint operations over which it does not have operational control" -> From our point of view, it seems to be intended to exclude operations under operational control and not only "joint operations". We would suggest to not only exclude joint operations. The principle of undue cost or effort is not clearly defined and leaves considerable room for interpretation, which can lead to uncertainty among companies and auditors. Implementing the principle of undue cost and effort does not necessarily provide any relief for wave 1 companies. On the contrary, it might increase the effort to prove sufficient effort has been made.			
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	Relief for anticipated financial effects: In general, we disagree with both options as qualitative and quantitative information is subject to high uncertainty. Additionally, there is no guidance on how to calculate or determine such information. It will lead to tremendous additional effort for companies as the underlying data is often unclear, there is no recognized method, and this information is likely not to be comparable amongst companies. However, if there is the necessity of such information, we would prefer Option 2 although even qualitative would be difficult to obtain. A as quantitative reporting would be based largely on estimates and assumptions and the added value (comparability, reliable information) would be low. Nevertheless, we also view this option critically, as qualitative reporting would also be associated with a high degree of uncertainty and would be virtually impossible without financial or quantitative data.			
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	ESRS E1 - 40. (a) -> high degree of estimation necessary, granularity and detail of data questionable, disclosures should always take into account adaptation measures already taken ESRS E1 - 40. (b) -> granularity of reported data to be discussed, it might not be helpful to publish lists of locations ESRS E1 - 40. (c) -> direct link between adaptation measures and single assets does not necessarily exist, therefore, such a linkage should not be artificially created only for reporting purposes ESRS E1 - 40. (d) -> high degree of estimation necessary, granularity and detail of data questionable ESRS E1 - 41. (a) -> high degree of estimation necessary, granularity and detail of data questionable, it is necessary to define when transition risks do occur ESRS E1 - 41. (b) -> direct link between adaptation measures and single assets does not necessarily exist, therefore, such a linkage should not be artificially created only for reporting purposes ESRS E1 - 41. (c) -> what is the added value of such reporting? ESRS E1 - 41. (d) -> disagree, if there is no accounting recognition criteria it is not useful to publish additional figures as this would have to be specifically explained ESRS E1 - 41. (e) -> disagree, significant effort, sensitive information ESRS E1 - 41. (f) -> high degree of estimation necessary, granularity and detail of data questionable ESRS E1 - 42. -> disagree, sensitive information In general the requirements are still very challenging, data availability seems questionable and therefore solid data is not readily available._ Furthermore, there is no feasible methodology for linking financial metrics and climate-related risks/opp.			
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree	Greater interoperability with ISSB standards seems advantageous. Aligning ESRS and ISSB will help prevent duplicate reporting, and preparers want ESRS to cover ISSB requirements

Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	Overall comments: In general we welcome the deletion of datapoints, however we would like to highlight the following issues: -For some disclosure requirements only granular datapoints have been deleted, the overall reporting requirements remain unchanged. This might lead to the same reporting amount as before as the definition of the requirements is just more open now. -The changes made nonetheless lead to implementation efforts for companies to apply for the changes -Some mandatory datapoints have been shifted to NMIG it should be clearly enforced that NMIG are no reporting obligation but should help implementation -Additional new datapoints have been introduced, this clearly contradicts the EU mandate and these should therefore be deleted again			
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	For our own reporting the changes are not relevant as we either already reported according to the "may" disclosure requirements or the topics are not material. However, in general, we not think that additional "shall" disclosure requirements should be introduced. It would be preferable that these new requirements remain "may" disclosures.			
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	The EU mandate does not allow for additional datapoints as it will lead to further effort for companies. Especially the additional datapoints regarding E5 lead to further effort. Furthermore, critical und strategic raw material seems to be sensitive information, companies should not be required to publish such information.			
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I partially agree and partially disagree	We welcome the introduction of the fair presentation principle in the ESRS. We are of the opinion that it is positive to put focus on materiality and the management approach and therefore rather avoid mere tick-boxing to fulfill reporting obligations. In this context we would also like to emphasize that it is necessary to define a primary user for sustainability reporting so that the principle can be applied in practice. Otherwise, the application of the principle allows for considerable leeway in interpretation, as the ESRS do not clearly define the principle.			
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	We agree with the proposed changes.			
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree	We agree with the proposed changes.			
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	Amendments and simplifications in the ESRS should not give rise to inconsistencies with other relevant EU legal frameworks (in particular the SFDR). Should the deletion of the terms 'severe' in S1-16 and "fatalities" in S1-13 result in additional burdens for undertakings, as they would then be required to identify and report human rights incidents or number of days lost under two concepts, such an amendment should not be pursued. If Input from investors or other evidence suggests that some of the Principal Adverse Indicators (PAI) are not considered relevant in practice (as you mentioned above), then the datapoints should be deleted in the SFDR legal framework.			
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	In general, aligning with common accepted frameworks may help to publish targets and also lead to comparability. However, we would also like to note that this might lead to companies not able to publish relevant data in early stages thus maybe discourage companies from further steps			
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	We are of the opinion that an adjusted gender pay gap delivers important insights for companies to truly control based on this information and in the best case scenario to close the gender pay gap. Therefore, we recommend to include the adjusted gender pay gap metric in the standard as a "may" requirement. However, it should remain voluntary.

Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree	The G1-6 is not material for us, so this change hardly affects us. However, we do not think that a separate disclosure of a SME category is useful. Categories should be chosen according to relevance for the company			
Survey	EnBW Energie Baden-Württemberg AG	Preparer (non-financial preparing a sustainability report)	Germany	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree

Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		S1-S4: Severe human rights incidents: deletion of "severe" leads to difference to SFDR requirement and should therefore be changed again and "severe" should be added, otherwise, extended reporting burden			
Survey	ECIIA	Other - please specify (required)	Belgium	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree

Survey	ECIIA	Other - please specify (required)	Belgium	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree				
Survey	ECIIA	Other - please specify (required)	Belgium	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree				
Survey	ECIIA	Other - please specify (required)	Belgium	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	ECIIA	Other - please specify (required)	Belgium	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree				
Survey	ECIIA	Other - please specify (required)	Belgium	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	G1	Disclosure requirements Internal Audit is independent (see Three Lines Model above), is professional (certifications…) and is required to comply with the International Professional Practices Framework of the IIA, and with the IIA Code of Ethics, which is a statement of principles and expectations governing behaviour of individuals and organisations in the conduct of internal auditing. These principles and behaviours include integrity, objectivity, confidentiality, and competency. Internal Audit reports directly to the Governing Body (Audit Committee). To support statutory auditors in auditing the wider corporate information, we believe there should be an important and enhanced role for the work of Internal Audit. To support statutory auditors having a better understanding of the company's broader financial and non-financial risk landscape, the Chief Internal Auditor and the partner responsible for the external audit, should ensure appropriate and regular communication and sharing of information. In order to maintain both assurance functions' independence and objectivity, whilst external/statutory audit cannot receive direct assistance and cannot rely wholly on the work of Internal Audit, and vice versa (in accordance with our respective professional standards), statutory auditors should make appropriate use of Internal Audit reports, to place maximum reliance of the work performed and the related findings, also to get a better sense of a company's approach to key risk areas (e.g. ESG corporate culture, ..), whilst maintaining professional scepticism. As some areas might be "non auditable" because of the lack of standards, lack of data (mainly the soft(er) aspects of the information), it would be useful to define the level of assurance required. Maybe internal auditors are best placed to report on these elements (e.g.: diversity and equality, behavioural board culture,…) in their "insight" role. The collaboration should be validated by the Governing Body and be explicitly published in the governance disclosure.

Survey	ECIIA	Other - please specify (required)	Belgium	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				
Survey	ECIIA	Other - please specify (required)	Belgium	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree				
Survey	ECIIA	Other - please specify (required)	Belgium	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1				
Survey	ECIIA	Other - please specify (required)	Belgium	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree				
Survey	ECIIA	Other - please specify (required)	Belgium	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	ECIIA	Other - please specify (required)	Belgium	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	ECIIA	Other - please specify (required)	Belgium	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	As the ESG Reporting is the result of internal processes, managed and controlled through the internal governance, risk management and control activities, Internal Audit's work is an important element of good governance. We strongly recommend to explicitly refer to the role of Internal Audit in the ESRS 2 and ESRS G1 when describing the monitoring and governance model related to the ESG information. The obligation to set up an Internal Audit function in organisations of a certain size, should be part of future regulations.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	ECIIA	Other - please specify (required)	Belgium	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree				
Survey	ECIIA	Other - please specify (required)	Belgium	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	ECIIA	Other - please specify (required)	Belgium	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets				
Survey	ECIIA	Other - please specify (required)	Belgium	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree				
Survey	ECIIA	Other - please specify (required)	Belgium	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to ii)) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree				
Survey	ECIIA	Other - please specify (required)	Belgium	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree				
Survey	ECIIA	Other - please specify (required)	Belgium	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree				
Survey	ECIIA	Other - please specify (required)	Belgium	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	ECIIA	Other - please specify (required)	Belgium	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I partially agree and partially disagree

Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Focus should be placed on key outcomes and metrics, not exhaustive documentation. The proposed distinction between gross and net assessments of potential negative impacts creates distortions. Under the current draft, impacts mitigated by past one-off measures can be assessed on a net basis, while those requiring ongoing management must be assessed on a gross basis. This framework risks misleading investors, reducing comparability, and creating perverse incentives—rewarding outdated passive controls while penalizing companies that invest in modern, active risk management systems. As a result, identical risks may be treated differently, undermining the clarity and credibility of sustainability reports. We recommend that all potential negative impacts be disclosed on a gross basis to ensure comparability and transparency across companies and sectors. Net impacts should then be reported as a secondary disclosure layer, providing insight into the effectiveness of mitigation actions and residual risks. This approach reflects investor needs—gross impacts reveal systemic exposure, while net impacts highlight management accountability. It also aligns with the capabilities of impact measurement and valuation data providers such as GIST Impact, who already model both gross and net impacts consistently. By adopting a "gross-first" framework with net as supplementary, ESRS will avoid reporting paradoxes and deliver more reliable, decision-useful information to markets. We encourage the use of impact valuation and impact measurement tools for impact materiality assessment. ESRS does not prescribe fixed quantitative thresholds for impact or financial materiality; companies must justify their own. This flexibility creates comparability challenges and assurance risks. Companies need criteria to determine when an environmental or social impact is "material enough" to disclose. EFRAG should recommend impact measurement and assessment tools to determine an environmental or social impact materiality. We recommend that EFRAG highlights alignment with existing impact frameworks & standards adopted by the market (i.e. Capitals Coalition & Value Balancing Alliance)			
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	The ESRS framework's emphasis on both financial and impact materiality is a major advancement. It encourages companies to assess and disclose sustainability matters that affect both enterprise value and broader societal outcomes. EFRAG should also focus more on both environmental and social impacts assessment and its valuation in assessing the materiality.			
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	The ESRS framework's emphasis on both financial and impact materiality is a major advancement. It encourages companies to assess and disclose sustainability matters that affect both enterprise value and broader societal outcomes. EFRAG should also focus more on both environmental and social impacts assessment and its valuation in assessing the materiality.			
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	We recommend a materiality-weighted approach to merging: datapoints should be merged only if they represent similar material impacts or risks. Effectiveness should be measured by how well the merged datapoints support impact valuation and comparability.			
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	Context-specific narrative datapoints should be reclassified as "may disclose" or included as illustrative examples. This allows flexibility while retaining a core set of mandatory disclosures for comparability across entities and sectors

Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I agree				
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree				
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	Clarify how to connect impact materiality with financial materiality while assessing anticipated financial affect. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS.			
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	Challenge with Anticipated financial effects: Lack of clarity on thresholds and calculation methods. Difficult to align with financial reporting standards. Suggestion for Anticipated Financial Effects: Adopt standardized valuation frameworks to quantify impacts in monetary terms. Clarify definitions and provide sector-specific guidance on thresholds			
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I agree				
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	22.ESRS2	Comments on deleted datapoints in ESRS 2	I agree	DR: ESRS 2 – Business Model & Strategy DP: Detailed activity-level metrics (e.g., emissions per product line) Challenge: These metrics are costly and complex to obtain, especially for companies with diverse operations. EFRAG should encourage using estimations in absence of actual data that often exceeds decision-usefulness for most stakeholders. Suggestion: Prioritize aggregated metrics that offer comparability and strategic insight. Provide guidance on estimation methodologies (e.g., sector benchmarks, modeled data) where actual data is unavailable. Encourage use of impact valuation and impact measurement tools for impact materiality assessment. EFRAG should highlight alignment with existing standards adopted by the market (i.e. Capitals Coalition/IFVI, VBA)			
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	22.E1.	Comments on deleted datapoints in ESRS E1	I agree	DR: ESRS E1 – Climate Change DP: Actual vs. Anticipated Financial Effects. Challenge: Lack of clarity on thresholds and calculation methods. Difficult to align with financial reporting standards. Suggestion: Adopt standardized valuation frameworks to quantify impacts in monetary terms. Clarify definitions and provide sector-specific guidance on threshold			
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	22.S1	Comments on deleted datapoints in ESRS S1	I agree	DR: ESRS S1 – Own Workforce DP: Metrics on non-employee workers Challenge: Often voluntary and difficult to collect consistently. Suggestion: Retain only core workforce metrics and allow flexibility for others. Promote phased-in disclosures for complex social datapoints			
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	22.G1	Comments on deleted datapoints in ESRS G1	I agree	DR: ESRS G1 – Governance DP: Board-level sustainability oversight metrics Challenge: Overlaps with ESRS 2 governance disclosures. Suggestion: Clarify division of governance disclosures between ESRS 2 and G1. Use digital templates to streamline reporting.			
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree				
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets				
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	DR: S1 – Own Workforce DP: Narrative on workforce engagement Comment: Difficult to compare across sectors Suggestion: Provide structured templates for workforce-related disclosures			
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree	Here EFRAG should release additional guidance on non-EU adequate wages in ESRS S1

Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	Many datapoints derived from SFDR, BMR, CRR are not material for general-purpose sustainability reporting. Their inclusion has increased reporting volume without proportional value. Many datapoints derived from LSME & VSME standard that need to be highlighted. GIST Impact recommends: Separate these datapoints into a dedicated section or annex. Apply a "Comply or Explain" approach for financial institutions, with clear mapping tables. Ensure interoperability with financial reporting frameworks but avoid cluttering core sustainability disclosures.			
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I partially agree and partially disagree	Leverage the LEAP approach for nature-related disclosures (E2–E5) to improve consistency and reduce duplication Promote interoperability between ESRS and TNFD metrics for biodiversity, water, and pollution.			
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	Adjusted gender pay gap and like that many datapoints derived from SFDR, BMR, CRR are not material for general-purpose sustainability reporting. Their inclusion should increase reporting volume without proportional value. Many datapoints derived from LSME & VSME standard that need to be highlighted.			
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The sustainability statement should be digitally integrated with the main financial report to enable seamless data flow, analysis, and comparability. A structured, machine readable format (e.g., XBRL tagging) should be mandatory to support automated data ingestion and reduce manual processing. This integration would allow stakeholders—including investors, regulators, and data providers—to analyze sustainability and financial performance holistically, improving decision-usefulness. Reporting Boundaries and Value Chain Clarity Clear and consistent guidelines on reporting boundaries are essential, especially for value chain disclosures. Preparers need clarity on how far upstream and downstream to report, and how to apply materiality filters across the value chain. The use of estimated data and modeled impacts should be explicitly permitted and supported with methodologies, particularly for SMEs and companies with limited access to supplier data. Materiality Assessment Disclosures The current requirements for disclosing the materiality with the IRO assessment process are overly complex and burdensome. This is despite decades of progress of organizations using impact valuation as a scientifically-supported approach to determining materiality. We recommend that EFRAG highlights alignment with existing impact frameworks and standards adopted by the market (i.e. Capitals Coalition and International Foundation for Valuing Impacts, Value Balancing Alliance) Procedural documentation should be minimized or moved to voluntary guidance, allowing companies to concentrate on decision-useful disclosures.			
Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. I partially agree and partially disagree	Redundancy Between ESRS 2 and Topical Standards There is significant overlap in disclosures related to policies, actions, and targets (PATs) between ESRS 2 and topical standards. A streamlined structure is needed, with clear mapping and consolidation of PAT disclosures to avoid duplication. This would reduce reporting burden and improve clarity for both preparers and users. Value Chain Reporting Challenges Data collection across the value chain remains one of the most difficult aspects of sustainability reporting. ESRS should provide sector-specific guidance, allow for proxy data, and encourage collaborative data sharing platforms. EFRAG should support the use of impact valuation models to estimate value chain impacts. Forward-Looking Information Disclosing forward-looking information is critical but currently too subjective and inconsistent. ESRS should adopt standardized frameworks for scenario analysis and future impact modeling. This aligns with global best practices and improves the reliability and auditability of such disclosures. Granularity vs. Decision-Usefulness Excessive granularity in some topical standards reduces the practical value of disclosures. ESRS should adopt a tiered approach, where core metrics are mandatory and granular details are optional or sector-specific. This would help preparers focus on material and comparable data, while still allowing flexibility for deeper reporting where relevant.

Survey	GIST Impact	User (analyst, data provider, rating agency, etc.)	Switzerland	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		Role of Data Providers can play a critical role in enabling high-quality, comparable, and forward-looking sustainability data. ESRS should recognize this role and encourage collaboration with data platforms, especially for value chain data, impact valuation, and digital reporting integration.			
Survey	PwC International Limited	Auditor	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I agree	We are supportive of the proposed changes to the double materiality assessment (DMA). We believe, however, that there are some provisions that should be revised to enhance consistency in application of materiality of information and provide further clarity on the requirements. The materiality of information filter in ESRS 1 paragraph 21 is focused on the information needs of users. However, the standard for each group of users is different. We recommend the standard proposed for users of financial reports—information that "could reasonably be expected to influence decisions"—should be applied consistently to both groups of users. We also believe that ESRS 1 paragraph 36 should be updated to state the two circumstances that do not result in a positive impact: 1) an entity's mitigation or remediation actions in response to a negative impact and 2) when an entity is simply complying with laws and regulations. Further, we believe ESRS 1 AR 18 should be re-worded to state if an entity has identified an impact, risk, or opportunity (IRO) that is likely to be material, it does not need to perform the additional detailed analyses to support the conclusion. We also believe ESRS 1 AR 20 should be removed from the standard. The inclusion of ESRS 1 AR 20 could result in the expectation from auditors and other stakeholders that the general disclosure requirements represent material information and do not allow an entity to apply the materiality of information filter to the general disclosure requirements. Lastly, certain datapoints include qualifying language without any accompanying guidance. Examples include the use of words such as "significant", "key", and "major", which may cause confusion and inconsistent application among entities. We would recommend these terms are replaced with the word "material" to improve consistency with the concept of materiality of information.			
Survey	PwC International Limited	Auditor	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	We believe the new guidance on how to consider remediation, mitigation, and prevention actions related to impacts in the DMA is helpful for preparers. We believe that EFRAG should provide complimentary guidance on how to assess remediation, mitigation, and prevention actions for sustainability related risks. The guidance is not clear on how an entity should consider its policies in its double materiality assessment. ESRS 1 paragraph 35 states that when supportable evidence exists related to mitigation or prevention actions, an entity is allowed to reduce the severity or likelihood for potential impacts. However, if significant ongoing action is required, then those mitigation or prevention actions cannot be considered. There is a tension between these two statements. For example, if an entity requires employees to sign annual certifications related to understanding and compliance with ethical policies and there is no history of non-compliance, it is unclear on how to assess this information in the materiality assessment. We believe additional guidance as to what constitutes "significant ongoing action" would be helpful. PwC's Sustainability reporting guide section 4.3.2.5 provides our view on areas an entity may need to understand when determining whether a previous action relies on "significant ongoing action" to reduce the severity or likelihood of a potential impact. Additionally, ESRS 1 AR 12 discusses policies and implies that if policies are implemented, the policies may be considered in the materiality assessment. Consistent with the point above and the AR "policies are implemented through actions", so the relationship between implemented policies and ongoing actions needs to be clarified. We have separately provided our detailed comments on ESRS 1 Appendix C on potential impacts (see Appendix D). We believe that in some cases the treatment of the scenarios in the appendix are inconsistent with our understanding of ESRS 1 paragraphs 34 and 35.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	PwC International Limited	Auditor	United Kingdom	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	We believe the proposed amendments to the structure of the sustainability statement—including the 'executive summary' and use of appendices—would address many of the challenges that preparers faced in the initial year of reporting. Further, we believe this enhanced flexibility would support more relevant and concise reporting, improving overall reporting quality. We believe, however, that EFRAG should expand the guidance in Amended ESRS 1 paragraph 109 to require the content and preparation of the executive summary to be consistent with fair presentation on a standalone basis. This would help to support that information included in the executive summary is not misleading in isolation of the remainder of the report. Connectivity with the financial statements is an important foundational concept in ESRS. To help foster this connection, we recommend that EFRAG retain certain of the disclosures about connectivity that were included in ESRS 1 v1 to provide appropriate transparency about the level of consistency of data and assumptions between the financial statements and the sustainability statement. Specifically, we believe the following disclosures should continue to be required: Overall connectivity—We recommend retaining the broad overall requirement to cross-refer to the financial statements from the sustainability statement (that is, changing Amended ESRS 1 paragraph 114 to a 'shall' requirement). 'Indirect connectivity'—We believe the Amended ESRS 1 paragraph 115 disclosures should be required instead of optional to provide sufficient transparency about these relationships. Inconsistent information—We recommend that ESRS 1 retains an explicit requirement to explain significant data, assumptions, and qualitative information that are not consistent (consistent with second sentence of ESRS v1 paragraph 127). We believe the retention of these disclosures is critical to retaining appropriate emphasis on the importance of connectivity of information between the financial statements and the sustainability statement.			
Survey	PwC International Limited	Auditor	United Kingdom	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We support the changes made to improve the interaction between ESRS 2 and the topical standards. We believe these changes meet the stated objective of simplifying the standards and will alleviate many of the difficulties encountered by wave 1 reporters in the first year of application of ESRS v1. Further, we believe that the elimination of the voluminous incremental detail required by certain of the topical standards on the topics of governance, strategy, and IRO management would enhance the focus on disclosure of material information about an entity's impacts, risks, and opportunities. We also support the streamlining of certain aspects of the new 'General Disclosure Requirements' for policies, actions, targets, and metrics which we believe would reduce complexity and ease application. We believe, however, that there is further opportunity for simplification by streamlining the guidance on the level of aggregation and disaggregation of reported information. As proposed, Amended ESRS 1 chapter 3.7 provides overall guidance on considerations in aggregating and disaggregating information for reporting. Amended ESRS 2 AR 12 and AR 24, however, also provide supplemental guidance focused on disclosures related to ESRS 2 SBM-2 and ESRS 2 IRO-2, respectively. We recommend deleting the application requirements in ESRS 2 and including the incremental concepts—including consideration of the nature of the matters and the level at which they are managed—directly in the guidance in ESRS 1. Ensuring all guidance on aggregation is discussed in a single location would add clarity in application. We also recommend deleting any references to aggregation of information at the level of a 'topic'. We are not aware of circumstances where providing these disclosures at the topic level would be appropriate and believe that this could result in obscuring material information.			
Survey	PwC International Limited	Auditor	United Kingdom	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	We believe the proposed amendments and restructuring of ESRS reflect significant progress in improving the useability of the standards, consistent with the stated objectives of the 'Omnibus' package. Specific changes that improve the understandability include the deletion of the 'may' disclosures, the clear delineation between disclosure and application requirements, and the mapping of application requirements to the related disclosure requirements. We believe these changes would benefit preparers in understanding the reporting requirements, especially in the first year of reporting. We believe it is important to note, however, that we would not expect the stated reduction in datapoints to directly translate to a proportionate reduction of effort in preparing the sustainability statement. In particular, many of the eliminated datapoints were voluntary, were merged with other requirements, or may need to be replaced with entity specific disclosures to the extent that the related impact, risk, or opportunity is material. Further, we believe that there is further opportunity for enhanced clarity in certain areas, including guidance around the reporting boundary. We recommend that EFRAG further clarify the reporting boundaries by providing guidance on specific structures, such as joint arrangements not accounted for using the equity method of accounting. As part of this effort, we believe that EFRAG should holistically assess the treatment of joint operations across the standards; pending this broader evaluation we recommend deleting ESRS 1 paragraph 92. In addition, from our experience, the use of the phrase 'shall consider' with respect to the greenhouse gas disclosures is one of the points of initial and ongoing difficulty in application of ESRS. We recommend EFRAG clarify this language as discussed in our comments related to ESRS E1-8 – Gross scopes 1, 2, 3 GHG emissions (see Appendix B).			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	PwC International Limited	Auditor	United Kingdom	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	The commingling of the 'may' or voluntary disclosures with the disclosure requirements in ESRS v1 confused preparers and made the standards unnecessarily complex. We support the changes made by EFRAG to remove the non-mandatory disclosures from the body of the standards. Certain of the 'may' guidance provided additional insight to preparers and could be helpful in the preparation of the sustainability statement. Therefore, we are also supportive of identifying a mechanism outside the body of the standards to convey this information to preparers. Consistent with the points highlighted by EFRAG—including the observation that the guidance may be helpful but could also require further analysis—we agree with its recommendation that the European Commission not include the NMIG content in the delegated act on the Amended ESRS. We believe additional time is needed to identify the appropriate structure for the NMIG, finalise the content, and support the appropriate quality. Preparers and other users also need more time to properly review and evaluate the information included in the NMIG. Thus, we recommend EFRAG delay issuance of any NMIG to ensure it is not a distraction given the tight timeline to produce the final recommendation on ESRS. In addition, postponing the release of the NMIG would allow time for EFRAG to update the guidance for additional points of interpretation or other questions that arise in the implementation process. For example, we encourage EFRAG to develop interpretative guidance on anticipated financial effects given the concerns expressed by stakeholders on the complexity and sensitivity of this information. We also recommend updating the interoperability guidance related to IFRS S2 and believe there may be guidance from ESRS S1 v1 Own workforce that could be incorporated in the NMIG to assist preparers.			
Survey	PwC International Limited	Auditor	United Kingdom	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	Broadly, we agree the reliefs provided in Amended ESRS 1 will be beneficial to preparers without reducing the usefulness of the sustainability reporting, with the exception of ESRS 1 paragraphs 91 and 92 which are discussed in questions 18 and 15, respectively. We support the inclusion of the concept of the use of reasonable and supportable information without undue cost or effort. This is a foundational concept used throughout corporate reporting, including within both the IFRS Accounting Standards and the IFRS Sustainability Reporting Standards. Its inclusion within ESRS would support connectivity with the financial statements and interoperability with the ISSB standards. We believe, however, that the principle of undue cost or effort is a general principle that should be expanded to apply across all aspects of reporting in accordance with ESRS. This would ease the reporting burden for preparers and recognise the evolving landscape of sustainability reporting, including the lack of availability of data in certain areas. ESRS 1 paragraph 87 appears to limit this principle to the list of areas provided. We believe that this paragraph should clarify that it is intended to provide a list of illustrative examples. Further, we believe that when an entity has omitted information from its sustainability statement due to the application of this principle, the entity should provide additional disclosures to provide transparency and relevant information to users (see Question 18). In addition, we believe the last sentence in ESRS 1 AR 24 should be deleted. We believe the requirement for an entity to provide information about only the activities that are relevant to the IRO is covered by ESRS 1 paragraph 90. ESRS 1 AR 24 is linked to the aggregation and disaggregation of information, and we do not believe this sentence is relevant to those concepts.			
Survey	PwC International Limited	Auditor	United Kingdom	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	As noted in Question 17, we support applying the relief for reasonable information across all aspects of reporting in accordance with ESRS. We recommend, however, that EFRAG introduce appropriate guardrails to achieve the objectives of fair presentation, comparability, and other qualitative characteristics of information. We therefore recommend that EFRAG move the disclosure requirements from ESRS 1 paragraph 91 to ESRS 1 chapter 7.3. We believe the disclosures about the actions an entity has taken to increase the coverage and quality of reporting, the progress made during the reporting period, and the requirement to reassess if new data or inputs have become available at each reporting date should be required in all cases where the 'undue cost or effort' relief has been applied. In addition, we recommend EFRAG require qualitative disclosures about the information available and related limitations to provide additional context and transparency. Further, we recommend changes to the current requirements to disclose partial metrics. Instead, we believe that EFRAG should define the circumstances when partial metrics may be provided. Specifically, we recommend that the definition of a 'partial metric' should be foundationally based on all information related to a boundary that may be objectively defined (for example, the total amounts related to 3 out of 10 chemicals included in the substances of high concern, all information related to one geographic region when only that region requires disclosure of the underlying information, all entities in the value chain above a certain size). We recommend revising this provision because the current requirement could result in obscuring material information or the reporting of a metric that does not meet the qualitative characteristics of information. We also believe the reporting of a partial metric as proposed here is inconsistent with the concept of the reporting boundary.

Survey	PwC International Limited	Auditor	United Kingdom	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	Broadly, we agree with the proposed Option 1. We support the requirements to provide quantitative disclosures about an entity's anticipated financial effects. Entities have long been required to make estimates about the financial effects of events for financial reporting purposes, such as impairment assessments, long term insurance liabilities, valuation of investments, etc. We appreciate that there is the potential for higher levels of estimation uncertainty over longer time horizons. We believe, however, the ability for entities to use scenario analysis and the option to provide a range rather than a single datapoint allow entities to manage this uncertainty. We also believe that providing quantitative information complements an entity's disclosure of its policies, actions, and targets and increases the credibility of the sustainability statement. Lastly, quantitative disclosure of financial effects would be interoperable with the ISSB standards. Consistent with the goal of interoperability, we recommend ESRS 2 paragraph 23 and the related ARs be updated to more closely align with the ordering, flow, and wording in IFRS S1 paragraphs 34 to 40. We believe alignment would make the guidance on current and anticipated financial effects disclosures easier to understand and apply as well as enhance interoperability. Notwithstanding these proposed changes, we support EFRAG's omission of the provision in IFRS S1 that permits an entity to exclude quantitative disclosures if it does not have the requisite skills, capabilities, or resources. We would generally expect entities of the size proposed to be subject to ESRS to have the skills, capabilities, and resources necessary to prepare quantitative disclosures. Additionally, entities would still be able to provide qualitative only disclosures if the criteria in Amended ESRS 2 AR 17 are met.			
Survey	PwC International Limited	Auditor	United Kingdom	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I agree	The interaction between the anticipated financial effects disclosures required in ESRS 2 and those required in ESRS E1 is unclear. The standards should clearly state if the ESRS E1 disclosures satisfy the disclosures in ESRS 2 or are incremental to the disclosures in ESRS 2. In addition, although this is noted in Question 19, we believe that the standards themselves should clarify if the reliefs provided in ESRS 2 related to anticipated financial effects are also applicable to the anticipated financial effects disclosures required in ESRS E1 Climate change.			
Survey	PwC International Limited	Auditor	United Kingdom	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	We believe that the changes made in the Amended ESRS are directionally positive from the perspective of interoperability with the IFRS Sustainability Disclosure Standards and are a significant achievement. We also believe that EFRAG was effective in balancing interoperability with addressing urgent practice issues (such as leases), achieving simplification, and ensuring that jurisdiction specific requirements to the EU are addressed. Given the current maturity of sustainability reporting, we believe simplification of the standards is an important objective which will both reduce the reporting burden and improve accessibility for preparers while improving the quality of reporting provided to stakeholders. One of the ongoing challenges in application, however, is differences in wording between ESRS and the standards of the International Sustainability Standards Board (ISSB) for requirements that appear to be substantially similar. These differences create questions of interpretation and may result in different disclosures where no difference is intended. We recommend EFRAG further assess whether additional alignment may be possible in these areas. Further, there are certain areas where IFRS S1 provides further context on concepts included in ESRS (for example, related to 'fair presentation'). We believe that this guidance would be helpful to preparers (see also Question 25). In addition, more broadly, we believe that the lack of comparable updates to the ISSB standards creates significant challenges in achieving interoperability. To achieve effective interoperability or alignment that meets the needs of the applicable stakeholders, both parties need to agree to the changes. Because only EFRAG is currently in the process of updating its standards, the opportunity to achieve interoperability is limited to the ISSB standards as issued in 2023. Thus, we agree with EFRAG's conclusion that "further joint work…is necessary in the next phase" (Basis for Conclusions, paragraphs 92 and 101).			
Survey	PwC International Limited	Auditor	United Kingdom	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	PwC International Limited	Auditor	United Kingdom	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	Overall, we support simplification of the requirements and clarity and consistency in sustainability reporting. In EFRAG's discussion of these six proposed 'shall' requirements, they state that these datapoints "do not add new disclosure obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information". EFRAG also states that the purpose of changing these datapoints from 'may' to 'shall' is to improve the clarity of the reporting requirements. We support clarity and consistency of the disclosure requirements. If an entity determines that these datapoints are material, then the required datapoints would provide consistent information across entities. An entity applies the materiality of information filter across the standards and would not be required to disclose datapoints that are not material. We believe the feedback from users and preparers is important in the determination of whether these datapoints are likely to provide material information on the related sustainability topics.			
Survey	PwC International Limited	Auditor	United Kingdom	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	Overall, we support simplification of the requirements and clarity and consistency in sustainability reporting. In EFRAG's discussion of the four new mandatory datapoints, they state that these datapoints "do not add new disclosure obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information". We support clarity and consistency of the disclosure requirements. If an entity determines that these datapoints are material, then the required datapoints would provide consistent information across entities. An entity applies the materiality of information filter across the standards and would not be required to disclose datapoints that are not material. We believe the feedback from users and preparers is important in the determination of whether these datapoints are likely to provide material information on the related sustainability topics.

Survey	PwC International Limited	Auditor	United Kingdom	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	We support the incorporation of fair presentation in Amended ESRS 1 as we believe it would provide more meaningful information to stakeholders and a potentially more complete view of an entity's impacts, risks, and opportunities. In addition, specifying that this is a fair presentation framework would enhance alignment with both the IFRS Sustainability Disclosure Standards—which are a fair presentation framework—and financial reporting. It is important to note, however, that we do not believe fair presentation will necessarily result in a reduction in the number of datapoints or further ease the reporting burden. An important concept in achieving fair presentation, however, is management's responsibility for the fair presentation of the information presented. We believe EFRAG should include a specific requirement to disclose that the statement has been prepared on a fair presentation basis in ESRS 2 BP-1. We also recommend certain changes to the proposed requirements to improve the operability of fair presentation and support the objectives of high-quality reporting. Specifically, we believe that the wording should be clearer in terms of what 'fair presentation' means and recommend that EFRAG incorporate additional wording from IFRS S1 paragraphs 11 to 16. For example, IFRS S1 paragraph 15(b) specifies that a fair presentation may require disclosures beyond the standards (that is, entity specific disclosures). This language clarifies the role of entity specific disclosures in a fair presentation framework. Further, although we support the provisions which would allow an entity to omit a disclosure when reasonable and supportable information is not available without undue cost or effort, we believe the current relief may provide flexibility that could result in conflict with a fair presentation. We believe additional disclosures should be required when this relief is applied to provide more transparency to users about the omitted information (see Question 18).			
Survey	PwC International Limited	Auditor	United Kingdom	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		We recommend that EFRAG provide specific guidance on transition from ESRS v1 to the Amended ESRS, including whether comparative information is required, when previously reported information would need to be revised or restated, and whether an entity is permitted to omit previously reported information from the comparative period when a datapoint would no longer be reported. In addition, we recommend that EFRAG specifically consider the transition provisions currently included in Amended ESRS 1 Appendix D in light of the 'quick fix' legislation as well as the broader changes to ESRS. This type of transition guidance would ease the burden on preparers and provide a level of consistency as wave 1 reporters transition to the Amended ESRS. Further, given the range of definitions of 'net zero' and inconsistency in how this term is used in practice, we recommend that EFRAG restore a definition of 'net zero' to enable consistency and comparability across entities. In addition, we recommend EFRAG consider the language used in the 'Basis for Conclusions' to the Draft Amended ESRS and assess how the revisions are described, to confirm that the descriptions are an accurate reflection of the intent of the revision. The current Basis for Conclusions uses the term 'clarified' to describe many of the revisions made to the standards. This terminology is resulting in questions from wave 1 entities about the effect on 2025 reporting and whether these 'clarifications' should be viewed as part of the intent of the original provisions and thus applied as part of ESRS v1. As a result, we believe caution is needed to make sure new or changed provisions in the Amended ESRS are not described as clarifications.			
Survey	PwC International Limited	Auditor	United Kingdom	35.ESRS1_7.6.	Do you agree with the amendments of this chapter?	I agree	ESRS 1 paragraph 94(a) requires an entity to provide contextual information and restated comparative figures unless it is impracticable to do so when it has: Identified new information in relation to the estimate figures disclosed in the preceding period, and the new information provides evidence of circumstances that existed in that period (change in estimate) EFRAG should clarify this provision to allow users to understand the circumstances in which they are required to revise estimates. First, the standards should be clear that an entity is only required to revise estimates when there is a material change in the information underlying the disclosure. Further, EFRAG should also clarify what disclosures an entity should make when revising an estimate or restating for a prior period error. ESRS 2 paragraph 5(g) cross references ESRS 1 paragraphs 96 and 97, however neither ESRS 2 nor ESRS 1 contain specific guidance on what needs to be disclosed for changes related to errors and estimates beyond the requirement to restate the comparative. The datapoints which were previously in ESRS 2 paragraphs 13 and 14 should be reinstated.	ESRS1	7.6 Changes in the preparation or presentation of sustainability information	
Survey	PwC International Limited	Auditor	United Kingdom	35.E1-8.	Do you agree with the amendments of this chapter?	I agree	We believe further changes are needed to the guidance on reporting of greenhouse gas (GHG) emissions to address implementation issues faced by wave 1 reporters—including the meaning of 'shall consider' the Greenhouse Gas Protocol and around the minimum boundaries. We believe these issues would be substantially resolved and reporting of GHG emissions would be simplified—without meaningfully reducing the quality of the information provided—by better aligning ESRS with the GHG Protocol. We recommend EFRAG clarify the guidance to require an entity to apply the GHG Protocol standards (that is, an entity "shall apply the GHG Protocol"), except where the standards are in conflict with ESRS. Further, we believe ESRS should specify that an entity should determine its minimum boundaries for reporting in accordance with the GHG Protocol Scope 3 Standard, with one limited exception as noted below. The reporting of GHG emissions related to financial institutions and financial instruments has evolved significantly since the GHG Protocol Scope 3 Standard was issued. EFRAG addressed this in ESRS v1 through reference to PCAF Part A, however, this resulted in numerous questions in application. To simplify reporting we recommend EFRAG consider identifying the specific classes of financial activities for which disclosure of scope 3 emissions is required. This would be consistent with the approach taken in IFRS S2, although EFRAG should assess which asset classes it believes are appropriate. Further, EFRAG should consider adding an explanation in the Basis for Conclusions related to those that are excluded. In addition, ESRS E1 should specify that there is a rebuttable presumption that application of the specified minimum boundaries is consistent with fair presentation. This would support that entities are not required to identify additional emissions outside the minimum boundaries, with perhaps limited exceptions for unique circumstances.	E1	Disclosure Requirement E1-8 - Gross Scopes 1, 2, 3 emissions

Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Fortum supports the proposed updates and the increased flexibility in the double materiality assessment. We appreciate that the core principles remain the same and find the proposed changes rather balanced and fit-for-purpose. We welcome the clearer and more prominent role of information materiality as a guiding filter for sustainability disclosures. That said, Fortum would like to express our concern that too much flexibility may reduce data comparability and lead to more stakeholder requests. In particular we disagree with point 4 above, the option to disclose non-material topics (ESRS 1, paragraph 108) where disclosures may be made based on the needs of specific users (e.g., investors), could open the door to additional reporting demands from users, increasing the burden on companies. We recommend limiting such additional disclosures to preserve the CSRD's initial goal that a CSRD-compliant sustainability statement should serve as a comprehensive and sufficient source of information for all stakeholders. This principle is a key benefit of harmonized reporting for large companies and should be maintained in the revised standards. We appreciate that the proposal still allows companies to conduct the DMA at a more detailed level if they choose. This flexibility is especially relevant for companies also subject to the CSDDD, as its impact assessment has many similarities with the DMA. Further aligning the Article 8 impact assessment under CSDDD with the DMA could ease companies' administrative burden. We also suggest further harmonizing key concepts like "value chain" and "chain of activities" so that a single assessment process could serve both frameworks. Since both frameworks draw on the UNGPs and OECD Guidelines for MNEs and share many methodological similarities, closer alignment of these processes would help ensure consistency, support mutual reinforcement between assessments, and reduce unnecessary duplication and burden for companies.			
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	Fortum finds the guidelines excessively complex and detailed, and sees that this detailed guidelines would make the materiality assessment more burdensome. We think that a more general guidance would be more appropriate. The preferred option would be to report the impacts (and risks) before mitigation/corrective actions, and explain how they will be mitigated/corrected. This would be a clearer way in our view and in line with general enterprise risk management practices. Additionally, there should be clearer guidance on when the impact is actual vs. potential, the proposal doesn't sufficiently clarify it.			
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	Fortum supports the proposals to improve the readability, conciseness and connectivity of ESRS Sustainability Statements. The possibility to include an executive summary is beneficial. Fortum has already earlier stated that the disclosure table formats should not be mandatory, rather companies should be allowed to present the required information in the most suitable format for them. We are pleased to see the added flexibility that preparers have in preparing their statements.			
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	Fortum finds it very important that the overlaps between the ESRS 2 and the topical standards have been addressed. Even if there still are some additional disclosure requirements in the topical standards, we find the proposed changes mainly beneficial. As Fortum has previously commented, the MDR disclosure requirements in the current ESRS 2 are too burdensome and detailed and lead to a lot of repetition when they need to be applied always when describing the policies, actions, metrics and targets under each topical disclosure. Additionally, the division of these requirements across multiple locations in the standard has not been user-friendly. A simplified structure will prevent users from having to check disclosure requirements in multiple locations. Also important that narrative information can be disclosed at aggregate level vs IRO level.			
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	Fortum supports the proposed changes.			
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	Fortum doesn't support the proposal that part of the removed mandatory content is placed in "Non-Mandatory Illustrative Guidance" (NMIG). We don't understand the benefit with having this information in the draft. The legal status of the NMIG is unclear and would only make discussions with the auditors more challenging. We therefore propose to delete this content from the standards/delegated act.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	Fortum has mixed feelings about the burden reliefs. Even if many of the proposals reduce the reporting burden, we have made a lot of efforts to collect this information. Some of the proposals however have clear benefits, e.g. the proposal that when disclosing financial effects, the information on investments and plans is now limited to those that are already announced. Although an understandable proposal, introducing the relief "undue cost or effort" might be open to interpretation.			
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	Fortum finds the proposed amendments mainly beneficial. The current rules for defining and reporting information from a company's value chain are overly complex. If the Omnibus proposal to limit larger companies' ability to request information from value chain is implemented, it would be particularly burdensome for these companies to report all the currently required value chain information. Fortum has already earlier proposed that the value chain definitions should be significantly simplified and better aligned with financial reporting and that the number of datapoints for which companies need to report value chain information should be limited to only essential information, such as scope 3 emissions.			
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	Fortum finds it problematic that neither option is aligned with the IFRS. An option that is completely aligned would clearly be the preferred option for companies reporting under both frameworks. The ESRS should at least be designed in such a way that companies adhering to them would also meet the IFRS reporting requirements.			
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	As we see it, the disclosure requirements remain pretty much the same and should therefore be further simplified e.g. by not requiring split of assets before and after actions. The ESRS should be designed in such a way that companies adhering to them would not need to consider additional data points when also reporting under IFRS.			
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	EFRAG has clearly considered in detail the interoperability between the ESRS and IFRS standards. While numerous adjustments have been made to enhance alignment, notable differences still remain. It would be beneficial for all stakeholders if these remaining gaps were addressed. At least, even if full interoperability would not be reached, the ESRS should be designed in such a way that companies adhering to them would not need to consider additional data points when also reporting under IFRS.			
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	The starting point should be that no new mandatory datapoints are proposed. We however don't see any major challenges with the proposals.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	The starting point should be that no new mandatory datapoints are proposed. We however don't see any major challenges with the proposals, except for E5-4 that might be challenging.			
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	Fortum supports clarifying that ESRS is a fair presentation reporting framework, as is the case for the IFRS standards. It is important to understand, as stated in the question, that confirming the fair presentation concept should reduce the check list mentality associated to the adoption of a compliance approach, and support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. It should be made clear that it must not lead to broader reporting burden beyond a compliance framework.			
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	Fortum disagrees with the proposal since we don't see the added value and since it would add the reporting burden especially for non-global companies. We propose to keep the current reporting rules.			
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I agree	Fortum agrees with the proposed approach.			
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	Fortum agrees with the proposal and supports the flexibility of the wording, since we don't support any fixed metrics on what the targets needs to include. We would like to underline that the targets should address the material impacts rather than some fixed attribute/metric, e.g. size of areas restored. A further review towards more methodology and framework-based target setting would also be appreciated.			
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree	We support reporting requirements that are in line with the Pay Transparency Directive.			
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree	Fortum supports the approach taken.			
Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree

Survey	Fortum Oyj	Preparer (non-financial preparing a sustainability report)	Finland	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		The XBRL / digital reporting requirement should not be made mandatory – consider whether AI could be used instead. Could EFRAG issue a (electronic) disclosure checklist to aid sustainability statement preparation?			
Survey	.	Consultant (including software vendor)	Germany	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	The top-down approach can lead to a lack of transparency and obfuscation, as topics can be excluded from the start. The outcome also heavily depends on who performs the assessment. If the analysis is conducted only at a high level, fewer experts may be involved, which in turn can result in less accurate and potentially incomplete findings. AR 21, related to paragraph 50 of ESRS 1, sounds confusing to me. "When a material impact, risk or opportunity relates to a particular sub-topic, the undertaking needs only to report the material information related to that sub-topic within the relevant topical standard." To me, this seems to clarify that a single material IRO is sufficient to make a sub-topic material. This, in turn, may lead to reporting on more sub-topics overall. In earlier versions of ESRS 1, this was not stated so clearly.			
Survey	.	Consultant (including software vendor)	Germany	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	From my perspective, Annex C only adds further confusion. The process is designed in a very complex way. I would generally recommend working and assessing solely with the gross method. If the net method were to be permitted, the standards for evaluating mitigation measures would have to be the same for everyone in order to avoid a lack of transparency. Moreover, the actions may change over time in order to offset negative (actual and potential) impacts. This undermines comparability.			
Survey	.	Consultant (including software vendor)	Germany	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	I do not see significant added value in including an executive summary, although I acknowledge this may be a matter of presentation preference. I also view the use of appendices with some caution, as important data points might be moved further back in the report. In addition, there is a risk that the executive summary, which could be formulated in a very positive manner, may not fully align with the actual data. Our aim should be to ensure that the sustainability report remains transparent and informative rather than taking on the character of a marketing document.			
Survey	.	Consultant (including software vendor)	Germany	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	I find the separation between GDRs (ESRS 2) and the topical standards challenging. The topical standards refer directly to ESRS 2. However, it would be preferable to report directly on the IROs and the relevant GDRs within the topical standards. ESRS 2 should only cover general matters, not the topics of individual standards.

Survey	.	Consultant (including software vendor)	Germany	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	In my view, the rules concerning data collection along the value chain have been relaxed too much. The removal of the systematic preference for direct data may result in lower data quality and reduced comparability across undertakings. A stronger emphasis on obtaining direct data, where reasonably possible, would enhance the robustness of disclosures. The current approach to resilience analysis seems too limited. Restricting disclosures to qualitative information on risks only does not fully reflect the importance of resilience in sustainability reporting. A more comprehensive approach, including quantitative aspects, would provide stakeholders with a clearer picture of how undertakings are prepared to manage material sustainability challenges.			
Survey	.	Consultant (including software vendor)	Germany	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1				
Survey	.	Consultant (including software vendor)	Germany	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	2. The replacement of the ESRS E1 GHG emission boundary with the financial consolidation approach reduces complexity and enhances alignment with the GHG Protocol. However, this change comes at the expense of transparency. By limiting the requirement for operational control reporting to entities with more complex ownership structures, significant emissions may no longer be captured where companies exert substantial operational influence without financial control. This shift risks placing too much emphasis on financial reporting structures rather than on actual emission responsibility. As a result, stakeholders may gain an incomplete picture of where emissions truly occur and who has the capacity to mitigate them. A broader requirement for operational control reporting would strengthen accountability and ensure that sustainability disclosures reflect real-world impacts, not just financial boundaries.			
Survey	.	Consultant (including software vendor)	Germany	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I agree				
Survey	.	Consultant (including software vendor)	Germany	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	I welcome this approach.			
Survey	.	Consultant (including software vendor)	Germany	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree	I believe that the new data points are important for providing a better understanding of specific topics. They also reflect the feedback previously provided, ensuring that the disclosures are more relevant and aligned with stakeholder expectations.			
Survey	.	Consultant (including software vendor)	Germany	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	I agree and have always considered ESRS a fair presentation framework. Explicitly requiring fair presentation should improve the materiality filter, enabling more relevant reporting and reducing excessive disclosures.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	.	Consultant (including software vendor)	Germany	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	From a critical perspective, the arguments for an exception for financial institutions appear weak. While estimating absolute targets may involve assumptions, such complexity is common across all sectors. Omitting absolute targets risks masking the total climate impact and undermines transparency. Moreover, granting an exception could create an uneven playing field and reduce comparability between sectors. Overall, both intensity and absolute targets are necessary for a meaningful assessment of progress.			
Survey	.	Consultant (including software vendor)	Germany	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I partially agree and partially disagree	The amended ESRS S1 aligns with international standards, but better guidance is required to ensure consistent and meaningful reporting. Without clarification—particularly on wage thresholds, the methodology hierarchy, and disclosure of the methodology used—there is a risk of inconsistent application and reduced comparability across companies.			
Survey	.	Consultant (including software vendor)	Germany	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	The adjusted gender pay gap provides greater transparency, as it reflects pay differences for comparable roles and qualifications, rather than just the overall average. Including this metric allows for a more accurate understanding of where pay disparities truly exist within the organization.			
Survey	.	Consultant (including software vendor)	Germany	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The top-down approach can lead to a lack of transparency and obfuscation, as topics can be excluded from the start. The outcome also heavily depends on who performs the assessment. If the analysis is conducted only at a high level, fewer experts may be involved, which in turn can result in less accurate and potentially incomplete findings. AR 21, related to paragraph 50 of ESRS 1, sounds confusing to me. "When a material impact, risk or opportunity relates to a particular sub-topic, the undertaking needs only to report the material information related to that sub-topic within the relevant topical standard." To me, this seems to clarify that a single material IRO is sufficient to make a sub-topic material. This, in turn, may lead to reporting on more sub-topics overall. In earlier versions of ESRS 1, this was not stated so clearly.			
Survey	.	Consultant (including software vendor)	Germany	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	The difference between ESRS 1 and ESRS 2 remains unclear to me. The topics are almost the same and often repetitive. How do they differ from the Application Requirements (ARs)?			
Survey	.	Consultant (including software vendor)	Germany	33.E_1.	ESRS E1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I disagree	ESRS E1 has been significantly weakened. The transition plan should be mandatory for all companies.			
Survey	.	Consultant (including software vendor)	Germany	33.E_2.	ESRS E2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Survey	International Transport Workers' Federation	Trade union	United Kingdom	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	Double materiality is essential and must remain at the heart of the ESRS framework and European Union sustainability regime for corporate reporting to be credible and useful. Lobbying of EU institutions by US-based standard setters and asset managers should not be allowed to undermine this principle and further water down corporate accountability for significant environment and social impacts, including breaches of fundamental labour rights. Over this year, the process to identify material issues using the ESRS and the first reports prepared until the Corporate Sustainability Reporting Directive (CSRD) have provided an important basis to engage with multinational businesses so that they better understand and address the very real risks and impacts in relation to their own workforce and workers in the value chain. The principle of "materiality of information" is concerning since it introduces a further filter for companies to not report information. For example, it represents a step backwards from ID-177, which says that most S1 metrics must be reported if S1 Own Workforce is material. It is essential to maintain the principle of fair presentation in the reporting standards. It is positive that the revision of the AR 16 list of topics has maintained all of the sub-subtopics for S1 + S2. These are based on the list of social topics in the CSRD and should all be maintained. The emphasis on aggregation (as opposed to disaggregation) is concerning, as disaggregated information (both site-specific and country-specific) is key to understanding the distribution of impacts, risks and opportunities.			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I agree	To be able to understand the information provided and place it in context, it is important that companies report not just their net impact – the gross impact should be reported, and the recommended text preserves this principle.			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I partially agree and partially disagree	It is a mixed picture and some of proposed simplifications could be counter-productive when it comes to supporting relevant reporting. For example, from ITF's perspective, there was already considerable flexibility built into the ESRS and many companies have already invested time and resources in establishing capacity to better understand their impacts, risks and opportunities, especially in relation to human rights due diligence in the value chain, including being able to report in line with the CSRD. It would have been better to have let the system as introduced bed down and then evaluate its effectiveness, rather than changing the ESRS at such an early stage in the regulatory cycle, which will create further costs. In addition, we are very concerned that the broader Omnibus proposals around the value chain cap would be very restrictive and coupled with the proposed changes to the scope of CSRD could even undermine progressive actions by the European companies leading on human rights due diligence and targeted industry initiatives to improve labour rights in global supply chains and drive meaningful disclosure. We also note that para 113 is difficult to understand: "113. If the description of the material impacts, risks and opportunities prepared in accordance with [Draft] Amended ESRS 2 IRO-2 is not presented alongside the respective policies, actions and targets, the undertaking shall make explicit which policies, actions and targets relate to which material impacts, risks, or opportunities, in accordance with paragraph 22." Para 22 addresses the issue of appropriate aggregation or disaggregation of information on material impacts, risks and opportunities and their management, without setting any rules regarding the location of such disclosures depending (or not) on the level of aggregation.			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I partially agree and partially disagree	The Exposure Draft removes duplications between the cross-cutting and topical standards. The preservation of the 4-part architecture in the social standards is important to respect the distinctiveness of different affected stakeholder groups. However, we have two critical concerns. First, the original DR in environmental standards concerning screening of sites in materiality assessment were replaced by an application requirement to ESRS 2 IRO-1. This in effect makes transparency on this aspect optional. Consideration of local context is a key element of an appropriate materiality assessment. This should be both recognised in Chapter 3 of ESRS 1, and in ESRS 2 IRO-1, which should include an explicit datapoint on how the undertaking screened its locations and value chains. We welcome that E standards provide a clearer reference on the importance of disaggregation of disclosures, but this can only be done well if locations are properly screened. Second, we strongly recommend adding an explicit reference to the disclosure of relevant, entity-specific metrics directly in S standards. The fact that S2, S3 and S4 do not include any metrics should not imply that entity-specific metrics for S topics should not be disclosed.			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	The "may" (voluntary) data points should not be eliminated. In many cases they are "shall" in GRI standards, so it is important to keep them to align with GRI standards which many EU companies are already familiar with and using and to support interoperability. Also, many of them were originally proposed as mandatory by EFRAG to the EC. The first wave of reports show that many companies have reported some "may" data points. Retaining them would help ensure standardization/comparability between company reports. Almost all of the datapoints for non-employee workers are voluntary, thus most datapoints for this particularly vulnerable group of workers has been lost. Also, important datapoints on full time versus part time workers has been eliminated.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	International Transport Workers' Federation	Trade union	United Kingdom	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	It is concerning that mandatory guidance in the Set 1 ESRS has been downgraded to "non-mandatory". Mandatory guidance is key to ensuring comparability and completeness of sustainability reporting. At a minimum, Non-mandatory Implementation Guidance (NMIG) should be included in the Delegated Act, and ideally called Mandatory Implementation Guidance. A major point of concern is that ID-177, which provided guidance that most S1 metrics should be reported if S1 Own Workforce is material, has now been downgraded into NMIG. Instead, EFRAG should preserve and promote the guidance that at the very least most S1 metrics shall be reported.			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I disagree	As a whole the reliefs go too far, overshooting the balance between cost/effort and transparency. There is a danger of enabling green/social washing. The relief for "undue cost or effort" is too vague thus leaving too much room for interpretation. The relief for direct data for value chain reporting is too extensive, as direct data is key for transparency. The relief for reporting on operations which are not "significant drivers of IROs" also opens up too much leeway for interpretation.			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I disagree	These combined reliefs overshoot the balance between transparency and cost/effort and risk enabling green/social washing. At a minimum, there should be a time limit introduced for these reliefs on value chain metrics. From our perspective this is an area where there are well-documented labour rights abuses faced by transport, logistics and warehouse workers linked to exploitative business models, both in value chains within European member states and in non-EU countries.			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 1	The ability to estimate financial effects is critical for the undertaking's ability to integrate sustainability into its business strategy considerations, planning and risk management. It is also key for the determination of financial materiality, including in terms of accurately reporting topics as financially material. Reporting on financial effects is crucial to achieving the objective of putting sustainability reporting on the same level as financial reporting and integrating both into decision-making at a senior level. There are too many historic examples where multinational corporations have externalised long-term environmental and social costs, leaving member states and ultimately EU citizens to pick up the bill. The European Union has recognised the value of a double materiality approach to corporate reporting which requires disclosure of both material environmental and social impacts, risks and opportunities as well financially material data. It is important to keep the requirement on businesses to analyse and understand the financial effects of their business model. This will ensure investors have access to credible data as well as providing the underpinning for future business planning and long-term success.			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	ESRS reliefs should not go beyond those set in IFRS. The principle of fair presentation needs to be protected to provide transparency on all material IROs. As noted in the response to question 15, it is also important to consider interoperability with GRI when considering changes to the ESRS, rather than only considering the ISSB's standards. The GRI is widely used by global companies and well-established in terms of impact disclosure. See for example, the response to Question 15 above in relation to "may" (voluntary) data points which are in many cases "shall" in GRI standards.			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)				

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	International Transport Workers' Federation	Trade union	United Kingdom	22.S1	Comments on deleted datapoints in ESRS S1	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	The reduction in the number of mandatory and voluntary datapoints goes far beyond striking an acceptable balance. As mentioned above, the voluntary datapoints should be maintained to provide alignment with GRI, which is currently in the process of strengthening its labor standards, as well as guidance and standardization for companies reporting more than just the mandatory datapoints. An explicit quantitative goal of 50%+ reductions was never set by the European Commission for EFRAG. A number of S1 datapoint metrics have been eliminated which should be reinstated: •S1-5 Employees: gender breakdown for zero-hour employees •S1-8 Diversity: age distribution; •S1-10 Social protection: reinstatement of retirement •S1-12: Training and development: gender breakdowns, •S1-13 Health and safety: fatalities from ill-health for non-employees and other workers on site; •S1-14 Work-life balance: employees that took family related leave;			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	22.S2	Comments on deleted datapoints in ESRS S2	I believe some of the deleted content should be maintained (please specify in the comments by indicating the relevant paragraph in the standard)	We are concerned about the lack of specific entity level metrics. It is noticeable that a lot of the points that were based on years of learning by companies and multistakeholder initiatives about useful disclosures which would help drive and demonstrate positive change in the value chain which were available to reporting entities in the previous version of ESRS S2 have been cut in this revised version.			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Adding a datapoint on training of the procurement team is needed to support the implementation of human rights in the supply chain. The addition of a datapoint on confirmed incidents of bribery is needed to improve transparency on the effectiveness of bribery/corruption policies and measures.			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I partially agree and partially disagree	Agree that the following mandatory datapoint should be added: ESRS 2 General disclosures – BP 1 the undertaking shall state that the general requirements of ESRS 1 have been applied for the preparation of its sustainability statement.			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I agree	The "fair presentation" principle is essential to reduce the risk of green/social washing, as it emphasizes the full disclosure of all material impacts, risks and opportunities and their management. It is not understandable why this principle is under attack, as it is included as one of the general principles of the Accounting Directive.			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I disagree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	It is essential that financial institutions disclose absolute targets to assess how their strategies align with the economy-wide transition to net zero. Absolute targets are relevant for users of sustainability statements and for understanding the real-world climate impact of financed activities. While intensity measures provide insights into efficiency, they can mask rising absolute emissions in growing portfolios or sectors. Granting an exemption would also undermine fairness in a sector-agnostic standard. Other industries could equally argue for exceptions based on their own difficulties, reducing comparability across sectors. Moreover, absolute financed emissions are already recognised in existing standards and regulations: the SBTi financial sector net-zero standard, the UNEP FI/NZBA recommendations, and EU SFDR all require or encourage absolute emissions disclosure. Exempting banks would risk misalignment and reduce the usefulness of reported data for stakeholders, including consumers and asset owners who depend on it for their own disclosures.			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	The "top 10" threshold for reporting country-level data on employment, collective bargaining and social dialogue is a major improvement over the current 10% employment threshold. An analysis of the first sustainability statements from Wave 1 companies shows that the current 10% threshold results in country-level disclosures on as little as 21% of total employees. More country-level information is needed to understand the distribution of impacts across countries, as well as whether employment thresholds for specific labour rights have been exceeded. The new threshold does not require additional effort/cost by companies, since they must gather country-level data anyways to calculate the global figures. Furthermore, it does not result in extra datapoints, since the information currently is (and can be under the revised ESRS) reported as one table.			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree	An analysis of the first year ESRS reports shows that most companies are simply reporting that they pay minimum wages, whereas the intention (as outlined in the ESRS Basis for Conclusions) is that companies should be enabled to disclose commitments to paying a wage "sufficient to support themselves and their families in dignity" as well as the extent to which they do this. This shows that the methodology for non-EU countries needs to be changed. Furthermore, the new ILO agreement on a methodology for living wages needs to be taken into account. The proposed new methodology takes a step forward in both regards but we would encourage EFRAG to engage further with the trade unions at European and global level on this important point.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	International Transport Workers' Federation	Trade union	United Kingdom	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	The new, simplified framework should make it easier for companies to report on these SFDR-related matters in a way that corresponds to how their policies are set. For users, this consolidation makes it easier to locate the relevant information. However, the SFDR datapoints are helpful and should only be selectively amended. In particular, we would be against any further changes to either the Amended ESRS or the SFDR PAI which would weaken the link between corporate respect for human rights, ESRS disclosures and the SFDR PAI.			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I partially agree and partially disagree	The unadjusted gender pay gap should be kept as mandatory, since the methodology for calculating it is clear. The adjusted pay gap figure as voluntary. In practice many companies are reporting both figures, which is useful for improved transparency. However, since the methodology for calculating the adjusted figure is not standardized, the unadjusted pay gap figure should be kept mandatory.			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "compatibility with 1.5 degrees" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	ESRS 1: As detailed above, cumulative impact of the various reliefs is concerning.			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	33.ESRS2.	ESRS 2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. I partially agree and partially disagree	ESRS S1: The proposed "top 10" threshold for the reporting of country-level information for employee headcount, collective bargaining and social dialogue is a significant improvement over the current 10% employment threshold. Country-level information needs to be reported in more detail, and on other metrics as well, in order to have more transparency on the distribution of impacts across countries. In the metrics, voluntary datapoints need to be reinstated as well as the datapoints on gender breakdowns, workforce age distribution, etc. detailed above need to be reinstated. The proposed new methodology for adequate wages outside of the EU also needs attention, and the transition language for EU member states needs to be reinstated, since the Adequate Minimum Wage Directive has not been implemented in some Member States. We would also like to reiterate our longstanding demand for including franchise workers in the S1 definition of own workers, as well as the need for sector-specific standards to supplement the Set 1 sector-agnostic standards.			
Survey	International Transport Workers' Federation	Trade union	United Kingdom	33.S_2.	ESRS S2:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree	ESRS S2: We are concerned that the loss of many specific datapoints related to workers in the value chain will mean that disclosures about material impacts, risks and opportunities become more generic and have less information about the specific stakeholder groups because specifications about the level of granularity have been deleted. Many of the points that are being deleted from ESRS S2 had originally been included because they reflected effective practice in relation to improving supply chain labour rights, for example, AR 6 awareness of the impacts on value chain workers from an undertaking's strategy or business model, AR 20 illustrating how the perspectives of value chain workers have informed specific decisions or activities of the undertaking and AR 25 which looks at retaliation and whether workers can use grievance mechanisms confidentially.

Survey	International Transport Workers' Federation	Trade union	United Kingdom	34.	Any other comments Please provide here any other comments on the 12 EDs or on the Glossary		The definition of own workforce should be expanded to include franchise workers. The term "non-employees" should be supplemented with the phrase "non-employee workers" or "non-employee workers in own workforce".			
Survey	LABORATOIRES PIERRE FABRE	Preparer (non-financial preparing a sustainability report)	France	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I partially agree and partially disagree	positive : possibility to report on topics, possibility to update DMA instead of reassessed negative : the process for DMA is still heavy and subject to different interpretations due to more flexibility and less comparability between companies			
Survey	LABORATOIRES PIERRE FABRE	Preparer (non-financial preparing a sustainability report)	France	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I partially agree and partially disagree	A positive point is that you consider this question and address it, because it was unclear in the previous version. But it remains complicated even with the information from Appendice C, in order to know clearly what to consider. It would be better to consider only the fact that an action plan is still needed or not, to keep the impact in the report (instead of considering reporting years/future years).			
Survey	LABORATOIRES PIERRE FABRE	Preparer (non-financial preparing a sustainability report)	France	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	No comment, we agree			
Survey	LABORATOIRES PIERRE FABRE	Preparer (non-financial preparing a sustainability report)	France	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree	We agree. Just a little point : in previous version (old) 80j , a comment on the result compared to the target is needed. It is deleted in the new version MDR-T, it does not seem relevant to us			
Survey	LABORATOIRES PIERRE FABRE	Preparer (non-financial preparing a sustainability report)	France	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I partially agree and partially disagree	OK with point 1 Regarding point 2, some AR still include datapoints and some others include "may". AR should be "how to disclose" requirements instead of guidelines. Example : AR24b in ESRS E1 is a datapoint, not included in the DR above. OK with point 3, even it could be still improved for more simplicity in wordings.			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	LABORATOIRES PIERRE FABRE	Preparer (non-financial preparing a sustainability report)	France	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	We agree except for the point 1. "Undue cost or effort" is not clear and may be subject to interpretation (paragraph 89 ESRS 1)			
Survey	LABORATOIRES PIERRE FABRE	Preparer (non-financial preparing a sustainability report)	France	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I partially agree and partially disagree	good to give flexibility but "undue cost or effort" is not clear enough and is subject to interpretation. In addition, it could be a good point to give a time limit to foster improvement in the quality of data.			
Survey	LABORATOIRES PIERRE FABRE	Preparer (non-financial preparing a sustainability report)	France	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I disagree with both Options	Option 2 is too limited with qualitative data with no commitments. Regarding option 1, it should be amended and simplified : c iii is not clear and should be deleted			
Survey	LABORATOIRES PIERRE FABRE	Preparer (non-financial preparing a sustainability report)	France	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I partially agree and partially disagree	It is still complicated. We should only focus on the main points, example in 41 : only a) and g) should be kept			
Survey	LABORATOIRES PIERRE FABRE	Preparer (non-financial preparing a sustainability report)	France	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	LABORATOIRES PIERRE FABRE	Preparer (non-financial preparing a sustainability report)	France	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	Positive point : reduction of narrative datapoints (avoidance redundancy between MDR and topical ESRS) Some deleted qualitative datapoints were only redundant datapoints or datapoints derived from other ones by calculation. The figure -57% is not representative of the real decrease of reporting and should not be interpreted as -57% of work !			
Survey	LABORATOIRES PIERRE FABRE	Preparer (non-financial preparing a sustainability report)	France	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	LABORATOIRES PIERRE FABRE	Preparer (non-financial preparing a sustainability report)	France	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I agree				
Survey	LABORATOIRES PIERRE FABRE	Preparer (non-financial preparing a sustainability report)	France	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I disagree	It is subject to interpretation			

Source	Company	Type of responder	Country	Question No	Question Text	Selected answer	Comment/Suggestion	Standard	Related Chapter/DR	Paragraphs
Survey	LABORATOIRES PIERRE FABRE	Preparer (non-financial preparing a sustainability report)	France	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually easily accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I agree	it is clearer			
Survey	LABORATOIRES PIERRE FABRE	Preparer (non-financial preparing a sustainability report)	France	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I agree				
Survey	LABORATOIRES PIERRE FABRE	Preparer (non-financial preparing a sustainability report)	France	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I agree				
Survey	LABORATOIRES PIERRE FABRE	Preparer (non-financial preparing a sustainability report)	France	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of "'compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree

The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I agree				
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	11.	Clarifications and simplification of the Double Materiality Assessment (DMA) (ESRS 1 Chapter 3) and materiality of information as the basis for sustainability reportingRationale for the changes The Amendments have clarified the requirements in ESRS 1 Chapter 3 about materiality of information and simplified the DMA process. They are described in Lever 1 of simplification in the Basis for Conclusions (see BfC Chapter 4). Link here to access the Log of Amendments, ESRS 1, Chapter 3 if you would like to review the detailed Amendments and their rationale. The Explanatory Memorandum (EM) which accompanies the EC Omnibus proposals (page 5) identified the following objective for this lever: "[the simplification] will provide clearer instructions on how to apply the materiality principle, to ensure that undertakings only report material information and to reduce the risk that assurance service providers inadvertently encourage undertakings to report information that is not necessary or dedicate excessive resources to the materiality assessment process".Description of the changes To meet this objective, EFRAG has introduced the following changes which aim to strike a balance between simplification and the necessary robustness of the Double Materiality Assessment (DMA): A new section presenting practical considerations for the DMA has been drafted, including the option of implementing either a bottom-up or top-down approach (Chapter 3.6 of ESRS 1) More prominence has been given to materiality of information as a general filter and all the requirements are subject to it. The relationship of impacts, risks and opportunities, and topics to be reported has been clarified (ESRS 1, paragraph 2 and 22) It has been explicitly allowed to include information about non-material topics (ESRS 1, paragraph 108) if they are presented in a way that avoids obscuring material information Emphasis is put on ESRS being a fair presentation framework, to reinforce the effectiveness of the materiality principle and avoid excessive documentation effort due to a compliance and checklist approach to the list of datapoints (DP); an explicit statement of compliance with ESRS is included in (ESRS 1, Chapter 2) To avoid excessive detail in reported information, it has been clarified that all the disclosures can be produced either at topical level or at impacts, risks and opportunities (IRO) level, depending on the nature of the IROs and on how they are managed The list of topics in AR 16 (now Appendix A) has been streamlined by eliminating the most detailed sub-sub-topic level and has now an illustrative only and non-mandatory status. More emphasis has been put on the aggregation and disaggregation criteria for reporting information at the right level. Explanations have been provided with respect to the consideration of sites for the DMA and reported information, so as to avoid long lists of sites being included in the sustainability statement. Please do not comment here in "Gross versus Net" as it is covered by the next question.Question If you intend to provide feedback also on Part 3 of this questionnaire (at level of DR or paragraph), please note that by answering this question, you will not be allowed to include comments on Chapter 3 of ESRS 1 in Part 3, to avoid duplication of input. Your comments on Chapter 3 can only be provided here. Do you agree that the proposed amendments have sufficiently simplified the DMA process, reinforced the information materiality filter and have succeeded in striking an acceptable balance between simplification and robustness of the DMA? Do you agree that the wording of Chapter 3 of ESRS 1 is sufficiently simplified?	I disagree	GIFAS welcomes the following simplifications to the DMA process: –the possibility of adopting a top-down approach in addition to a bottom-up one, –the shift in focus from the IRO level to the topic level –the clearer identification of internal/external sources to be used at the beginning of the section –the enhanced prominence given to the materiality of information, –the simplification of AR16. However, companies are concerned by the definition of impact materiality in paragraph 21 (b) of ESRS 1. In particular, the definition of 'general purpose' according to AR3 is too vague and could result in multiple requests from a variety of stakeholders. They call for a simplification of the update requirement by specifying that the DMA process and its conclusions shall be updated only in case of significant events or material changes in circumstances (§29). Furthermore, additional structural and editorial changes are still needed to ensure that the drafting consistently reflects the intended simplification: –The requirement to describe the DMA process in IRO 1 §26 are too detailed –The purpose of the top-down approach is sometimes weakened by elements carried over from Set 1, which do not make it sufficiently clear that an IRO-level assessment is not systematically required during the DMA –Some methodological or illustrative elements should be moved into the AR (severity-related factors (§31), criteria for assessing positive impacts (§32), details on risks and opportunities (§41), dependencies (§42)); –Nuance the requirement to use thresholds (§28 + AR5c): when ranking material issues, severity may be assessed through comparison without the need to score each sub-criterion separately or define strict thresholds. –Certain terms remain imprecise and risk creating contentious discussions with auditors, such as "relevant information" in §22 and "appropriate level of aggregation" in AR 23 of ESRS 2.			
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	12.	New guidance in ESRS 1 on how to consider remediation, mitigation and prevention actions in assessing materiality of negative impactsRationale for the changes To address a frequent implementation question and an area of divergence in practice, new guidance has been introduced (ESRS 1 paragraphs 34 to 36 and Appendix C; Basis for Conclusions (BfC) Chapter 8) on how to consider implemented remediation, mitigation and prevention actions in the DMA (the so called "gross versus net" issue). The EFRAG SRB has prioritised the guidance on impacts, as in financial materiality there is already reporting experience which can be leveraged.Description of the changes Appendix C, which has the same authority as other parts of the Standard, illustrates how to perform the assessment, i.e. before or after the actions that have been taken and have reduced the severity of the impact. The new guidance specifies how to treat actions in DMA differentiating 'actual' from 'potential' impacts. It also differentiates the current reporting period from the future reporting periods (the latter is relevant as impacts of previous years that are material are also to be reported in the current period). For impacts that are assessed as material, the respective actions are reported (which also include policies implemented through actions). Actual impacts are assessed for materiality before the remediation actions in the reporting period when they occur, while in future periods they are not reported if fully remediated. For potential impacts, when the undertaking must maintain significant ongoing actions to contain severity and/or likelihood below the materiality level, the impact is assessed before the actions are reported. This provision has been introduced to deal with cases such as health and safety negative impacts in highly regulated industries.Key discussion points at EFRAG SRB level Some of the EFRAG SRB members consider the added guidelines excessively complex. The approach to disregard implemented actions when assessing materiality of potential impacts, if there are significant ongoing actions, has been the source of split views in the EFRAG SRB. The members that supported the inclusion of this provision considered that it would be inappropriate to conclude that due to the high level of prevention and mitigation standards in a sector, a given topic is not reported. On the contrary, other members think that this gross approach to potential impacts will result in excessive reporting.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on Paragraphs 34 to 36 and Appendix C of ESRS 1, in Part 3 to avoid duplication of input. Your comments on Paragraphs 34 to 36 and Appendix C of ESRS 1 can only be provided here. Do you agree that the new guidelines clarify how to consider remediation, mitigation and prevention implemented actions in the DMA, contributing to more relevant and comparable reporting?	I disagree	Annex C is not clear and creates confusion because: –It is different from the principles. –It adds the theoretical case of information to be produced in the next reporting period (year N+1). In practice, when producing a sustainability report, companies are always focusing on the reported period. Impacts cannot be artificially divided into different periods. Therefore, GIFAS believes that Annex C introduces confusion and should be removed to avoid difficulties related to diverging interpretations. Moreover, in ESRS 1 (P28/34) QC 8 (addressing gross/net concepts) remains in revised ESRS, and creates a lot of confusion. It is the only occurence of gross vs net and must be removed.

Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	13.	Improved readability, conciseness and connectivity of ESRS Sustainability StatementsRationale for the changes Starting with the input gathered from the first-time adopters, EFRAG has introduced several changes to support the production of more readable and concise sustainability statements, that are better connected with corporate reporting as a whole. This corresponds to Lever 2 of simplification in the Basis for Conclusions (BfC) (Chapter 4).Description of the changes EFRAG has clarified the flexibility that preparers have in preparing their statements. The Amendments describe the possibility of including an 'executive summary' at the beginning of the sustainability statement and have put greater emphasis on the use of appendices to separate more detailed information from key messages. The amendments have also clarified the concept of 'connected information', discouraging fragmentation and/or repetition of information (ESRS 1, Chapter 8).Question Do you agree that these proposed Amendments, when combined with the other changes in the Amended ESRS, provide an appropriate level of flexibility to support more relevant and concise reporting, as well as to promote better connectivity with corporate reporting as a whole?	I agree	GIFAS is supportive of the changes (possibility to better organize the report in a meaningful way, to put some granular datapoints in appendix…) as we deem very important to have a concise report, focused on important subjects, enabling the reader to better understand their strategy, politic and actions.			
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	14.	Restructuring of the architecture and interaction between ESRS 2 and Topical Standards Rationale for the changes The Amendments have restructured the architecture of ESRS, focusing on the interaction of ESRS 2 and topical standards. They have also modified the standard-setting approach for policies, actions and targets (PAT) to adopt a more principles-based and less prescriptive approach. These Amendments are described as Lever 3 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes, which aim to strike an appropriate balance between (a) prescriptiveness of the requirements and preparation effort and (b) the users' need for relevant, faithful and comparable information: Minimum Disclosure Requirements in ESRS 2 (renamed "General Disclosure Requirements") have been simplified but retained as 'shall' disclose. A drastic reduction of 'shall' datapoints PAT has been achieved, sometimes reformulating them as Application Requirements ('ARs') to support more consistent application. Topical specifications to GOV, SBM and IRO (Appendix C of ESRS 2) have been deleted, with a few exceptions maintained as separate Disclosure Requirements in topical standards (e.g. resilience in ESRS E1). The requirement to disclose PAT for material IROs if adopted is maintained. But the requirement to disclose whether the undertaking plans to implement a PAT for material topics and timeline has been eliminated. The indication of which material topics are not covered by PAT is maintained. The amendments have improved the connectivity between the disclosure of PAT and the description of IROs (now in ESRS IRO 2) to which they relate. They have also improved the ability to disclose information at a higher aggregation level than the material IROs, if this reflects the way IROs are managed. Question Do you agree that these proposed amendments strike an appropriate balance between (1) prescriptiveness of the requirements and preparation effort from the one hand, and (2) need for relevant and comparable information from the other?	I agree				
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	15.	Improved understandability, clarity and accessibility of the StandardsRationale for the changes The Amendments have reorganised the content of the requirements, clearly separating the mandatory from the non-mandatory ones, and eliminating the "may" disclose provisions, which proved to be problematic to understand. These Amendments are described as Lever 4 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum (page 5) identified the following objective for this lever: simplify the structure and presentation of the Standards. Description of the changes To achieve this objective, EFRAG has implemented the following changes: "May disclose" datapoints have been all eliminated. All the "shall disclose" datapoints are now in the main body of the standard (no more datapoints in AR) and mandatory application requirements are relocated below the DR to which they belong (and below each Chapter in ESRS 1), covering 'how to disclose' guidelines. Language of the Standards has been improved for understandability, conciseness and consistency of ESRS. Question Please focus your considerations only on the mandatory content of the Exposure Drafts. The following question covers the Non-mandatory Illustrative Guidance ('NMIG'). If you intend also to provide feedback on Part 3, when providing your comments, please refrain from duplicating the comments that you will provide at Standard or DR level. Do you agree that these proposed amendments achieve the desired level of clarity and accessibility?	I agree	GIFAS and its members welcome the improved presentation of the Standards, including: –the reduction of the length of the text, the simplification of narrative paragraphs deemed overly technical or detailed; –the positioning of AR directly after the disclosure requirements, focusing only on essential methodological elements and key presentation points, which significantly improves readability and understanding of the standards. Nevertheless, the overall length of ESRS 1 could be further reduced, including by simplifying Chapter 3 on double materiality assessment (similar length as in Set 1 and simplified ESRS, 34 pages, 25 without annexes). Regarding the datapoints which are kept from the set 1, EFRAG should confirm that the wording changes brought to improve conciseness of the standards shouldn't lead to additional burden for the first application due to a "fresh interpretation" by the auditors or regulator.			
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	16.	All:16. Usefulness and status of "Non-Mandatory Illustrative Guidance" (NMIG) As a result of the simplification process, part of the mandatory content in the 2023 Delegated Act has been moved to "Non-Mandatory Illustrative Guidance" (NMIG). NMIG does not address all the existing implementation questions on each standard. It simply gathers the content that: a) was in the Delegated Act b) is now deleted; and c) contributes to the overall datapoints reduction. It contains 'how to report' guidelines (methodology) and examples of possible items to cover when disclosing in accordance with a mandatory datapoint, mainly for narrative PAT disclosures. Its content should not be understood as a list of items of information requiring justification when not reported, consistent with the fact that the previous datapoints are deleted. The legal status of the NMIG will be considered by the European Commission (EC) in due course. However, EFRAG recommends that the EC not include this content in the Delegated Act. On the one hand, NMIG contains helpful support material that may reduce the implementation questions. On the other hand, it could trigger additional efforts of analysis and/or have an ambiguous role as possible additional disclosure with entity-specific relevance if issued within the Delegated Act. You are invited to provide your comments on the purpose of NMIG, if any. You can access the NMIG at this link. Please select the NMIG you would like to comment on from the list below:	ESRS1; ESRS2; E1; E2; E3; E4; E5; S1; S2; S3; S4; G1	The NMIG should remain outside of the standards. The first wave companies' experience shows that EFRAG Q&As and Implementation Guidance have been used by auditors as a binding reference, with preparers expected to comply. Despite being issued by EFRAG for illustrative purposes only, the NMIG could be considered by stakeholders as having the same authority than the reporting standards. It is therefore essential that the NMIG remains outside the delegated act adopting the ESRS and is drafted in a way that cannot, under any circumstances, be used as an audit reference. The NMIG should remain a document published by EFRAG only and not by the European Commission. Furthermore, the treatment of previous lengthy and numerous Q&A and non-authoritative implementation guidance issued by EFRAG on Set 1 needs to be clarified by EFRAG. Companies shouldn't be required to read layers and layers of text to draft their CSRD, a reduction of the number and length of documents to consider and an improvement of their readability being particularly crucial for wave 2 companies. The basis for conclusion are very useful and should integrate the precise list of clarifications brought on the existing datapoints without requiring a modification of the standards. Indeed, it would enable preparers and auditors to already take them into account for the 2025 reporting. Some disclosures currently proposed by EFRAG in the environmental field should be transferred to the NMIG as mentioned in Questions 24 and 30 (see also EXCEL file on ESRS ENV).			
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	17.	Burden reliefs and other suggested clarificationsRationale for the changes The Amendments introduced several horizontal reliefs (i.e. applicable across different requirements) that were suggested in the input gathered from preparers. They are expected to contribute substantially to the reduction in the overall reporting efforts, beyond the datapoints reduction. These Amendments are described as Lever 5 in the Basis for Conclusions (BfC) (Chapter 4). The Explanatory Memorandum did not explicitly mention the reliefs, but the letter of the EC dated 5 May 2025 recommended including those foreseen in the ISSB's IFRS sustainability disclosure standards (IFRS S1 and S2). The Explanatory Memorandum nevertheless included the following objective (page 5): [the simplification] will also make any other modifications that may be considered necessary, considering the experience of the first application of ESRS. The revision will clarify provisions that are deemed unclear. It will improve consistency with other pieces of EU legislation. Description of the changes EFRAG has implemented the following changes: The relief "undue cost or effort" has been introduced, including for the calculation of metrics. A relief for lack of data quality has been introduced for metrics (ESRS 1 Paragraph 91), allowing to report a partial scope and disclosing actions to improve the coverage in future periods. The systematic preference for direct data as input to the calculation of value chain metrics has been removed and undertakings may use direct data or estimates depending on practicability and reliability (ESRS 1, Paragraph 91). Undertakings may exclude from the calculation of metrics their activities that are not a significant driver of IROs (ESRS 1, Paragraph 90) and may exclude joint operations on which they do not have operational control when calculating environmental metrics other than climate (ESRS 1, paragraph 60). Disclosure about resilience is now limited to risks only and limited to qualitative information only (ESRS 2, Paragraph 24 and ESRS E1, Paragraph 21). When disclosing financial effects, the information on investments and plans is now limited to those that are already announced (ESRS 2, AR 16 Paragraph 23(b)). A new relief for acquisitions (disposals) of subsidiaries has been introduced (ESRS 1 Chapter 5.4) allowing to include (exclude) the subsidiary starting from the subsequent (from the beginning of the) period. From October 2024 to February 2025, several implementation issues were identified in the EFRAG ESRS Appendix dedicated to the Q&A implementation platform (Chapter of Basis for Conclusions (BfC)). These issues have now been addressed by clarifying the corresponding provisions. Following the EC representatives' recommendation, EFRAG did not include additional relief for commercial sensitive information, pending the changes of level 1 regulation, where this issue is being considered.Question EFRAG considered how to improve consistency with other pieces of regulation. Considering what can be achieved in these Amendments (as opposed to what requires modification by the other regulation) EFRAG gave priority to the SFDR regulation. Please refer to question 28 if you intend to comment on this aspect. Other selected changes to enhance consistency are described in the Log of Amendments for each standard. Please note that some of the reliefs described above go beyond the ones in IFRS S1 and S2 described in question 21 below. As interoperability with IFRS S1 and S2 is specifically addressed in question 21 should be commented upon there. Please also refrain here from comments on the options proposed for quantitative financial effects, as question 17 is specifically dealing with them. Do you agree that these proposed Amendments provide sufficient relief and strike an acceptable balance between (a) responding to the stakeholders' demands for burden reliefs and (b) preserving the transparency needed to achieve the objectives of the EU Green Deal, as well as interoperability with the ISSB's IFRS S1 and S2?	I partially agree and partially disagree	GIFAS generally welcomes for its members the proposed reliefs which should lead to a more cost-effective reporting without compromising its quality: –the clarification that the starting point for reporting is the scope of consolidated financial statements; –the reduced emphasis on direct data collection from value chain partners, with possibility to use estimates; –the concept of "undue cost or effort" consistent with financial reporting practice; –the clarification that non-material activities may be excluded from the calculation of certain metrics. Even if some go beyond the ISSB provisions, being "optional," we do not believe this will hinder interoperability. However, clarifications are necessary regarding how these reliefs fit into the fair presentation framework if it is adopted. Concerning joint operations, ESRS §92 seems to increase the burden, implying that undertakings must include data from the joint operation over which they have operational control, whereas preparers interpretation of the current standards (E1 apart) was that only own operations were concerned (except in the specific case of entity-specific indicators if this scope was deemed relevant by the company). In any case, ESRS S1 should also be targeted as it may be very delicate to obtain data on the joint operations' workforce. We also wonder how this extension to operationally controlled joint operations fits in with the relief regarding data quality. For the setting of climate objectives (E1-8) : the relief mentioned in ESRS1 §91 on "undue costs and efforts" should also be applicable for setting scope 3 objectives. They are most of the time very hard to quantify as they address the actors across the whole value chain, without certainty for applying effectively the expected action plans. In any case, this relief should also apply to E1-8 on GHG emissions if estimates are subject to too much uncertainty.			
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	18.	Relief for lack of data quality on metrics (ESRS 1 paragraph 92) Amended ESRS have introduced the 'undue cost or effort' relief for all the elements of the reporting, from the identification of material IROs to the calculation of metrics (paragraph 89 of ESRS 1), in line with IFRS S1 and S2, extending it to all metrics. In addition, paragraph 92 of ESRS 1 has introduced a provision applicable both to metrics in own operations and in upstream and downstream value chain. This allows an undertaking to report metrics with a partial scope of calculation, when there are no reliable direct or estimated data to be used in the calculation. This relief does not exempt an undertaking from providing a disclosure, but it allows to disclose a calculation that includes only a partial scope. When using this relief, the undertaking shall disclose actions undertaken to improve the coverage of its calculation in next periods. This transparency is expected to provide sufficient incentive to improve the data quality and achieve a more complete scope in the calculation of the metrics. Accordingly, no time limit is included for the use of the relief. On this point, some EFRAG SRB members, while supporting the relief, considered it essential to include a time limit. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 92 of ESRS 1 in Part 3 to avoid duplication of input. Your comments on paragraph 92 of ESRS 1 can only be provided here. Do you agree that the proposed relief for lack of data quality on metrics strikes an acceptable balance between providing the necessary flexibility for preparers and avoiding undue loss of information?	I agree	GIFAS is supportive of this proposal because it is often very difficult for companies, to obtain even estimates on assets operated by third-party companies, for example. Even if companies implement improvement processes, it is not always certain that reliable data can be obtained at a later date, particularly when third parties operate in jurisdictions that are not subject to ESRS. We also agree that no time limit should be imposed since as mentioned in the basis for conclusion, transparency about such limitation would provide sufficient incentive for the undertaking to improve the data quality and achieve a more complete scope in the calculation of the metrics.

Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	19.	Relief for anticipated financial effectsRationale for the changes Preparers' feedback to the public call for input indicated that disclosing quantitative information for financial effects is particularly challenging. This includes issues of lack of mature methodologies and being commercially sensitive (refer to Basis for Conclusions (BfC) Chapter 7). Suggested solutions included the IFRS corresponding relief (IFRS S1 paragraph 37), the deletion of the requirement to report quantitative information, or to report them only on a voluntary basis. The EFRAG SRB is specifically seeking input that would support the determination of the most appropriate relief.Description of the changes The Amended ESRS currently includes two possible options, which would apply to all topics, including climate (DR E1-11): a) Option 1 requires an undertaking to disclose both qualitative and quantitative information but allows omission of quantitative information under certain conditions. Option 1 is substantially aligned with the IFRS relief, despite the fact that it includes some differences compared to it: under Option 1, as in the IFRS relief, the undertaking need not provide quantitative information when it is not able to measure separately the financial effect of a specific topic (or IRO) or when the level of uncertainty is so high that the resulting information would not be useful. Differently from the IFRS relief, Option 1 specifies that the undertaking may use the relief when there is no reasonable and supportable information derived from its business plans to be used as input in the calculation of anticipated long-term financial effects. Different from the IFRS relief, the undertaking cannot omit quantitative information when it does not have the skills, capabilities or resources to provide that quantitative information, as this part of the relief was considered not compatible with the entities that are expected to be in scope of the Amended ESRS. b) Option 2 limits the requirement to qualitative information only, and leaves companies to choose to report quantitative information on a voluntary basis, without having to meet any conditions. This option is not aligned with the treatment in IFRS S1 and S2. Some of the EFRAG SRB members noted that Option 2 would result in undue loss of information important for investors and would fail to provide the correct incentive to build more mature methodologies and reporting practices. Other members, on the contrary, supported the inclusion of Option 2.Question If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, you will not be allowed to include comments on paragraph 23 of ESRS 2 in Part 3 to avoid duplication of input. Your comments on that paragraph can only be provided here. Please select from the alternatives below the one that represents your view:	I agree with Option 2	GIFAS members consider that information on anticipated financial effects is problematic because it can reveal confidential and strategic information and raise issues in terms of liability considering the uncertainties attached to any projections or forecasts. Although disclosure of sensitive information will be dealt with ongoing developments on level 1, companies consider that anticipated financial information deserves specific relief in the ESRS. Companies point out the risks of disclosing projections covering medium and long-term horizons based on assumptions that change rapidly and dramatically. Such disclosures would significantly increase companies' liability without providing useful information to users. Furthermore, it is impossible to provide quantitative information without disclosing highly sensitive financial information. In the field of financial reporting, companies are not required to disclose their financial planning. Companies understand the expectations of some stakeholders for forward-looking financial information but highlights that they are useful only when they are reliable without exposing confidential information. A high-quality qualitative information is thus preferable to forcing companies to present unreliable and sometimes misleading quantitative data. The reliefs included in Option 1 are not sufficient as many stakeholders see these exemptions as temporary.			
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	20.	ESRS E1: Disclosures on Anticipated Financial Effects The content of the disclosure requirements on Anticipated Financial Effects (formerly E1-9 now E1-11) has been significantly reduced. Several datapoints are still included, which are considered necessary for investors and lenders to be able to assess the undertaking's exposure to transition and physical risk, including for lenders to be able to meet either supervisory expectations or sector specific disclosure requirements. This question focuses on paragraphs 40 (a) to (d), 41 (a) to (f) and 42 of ESRS E1 and aims at collecting feedback on the feasibility of the remaining datapoints. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering to this question, to avoid duplication of input, you will not be allowed to include comments on DR E1-11 or paragraphs 40, 41 and 42 of ESRS E1 in Part 3. Your comments on those provisions will only be provided here. Do you agree that the amended paragraph 40, 41 and 42 of ESRS E1 have been sufficiently simplified and that they strike the right balance between reporting effort and users' needs?	I disagree	Quantitative reporting on anticipated financial effects is still premature given the immaturity of methodologies. Mandatory qualitative disclosure should be the baseline, with quantitative elements allowed on a voluntary basis (see option 2 for relief ESRS2 §23 a). In §41, subparagraph f) on stranded assets should be suppressed as it leads to too much uncertainty.			
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	21.	Enhanced interoperability with the ISSB's standards IFRS S1 and S2Rationale for the changes EFRAG has implemented several changes to enhance the level of interoperability with the ISSB's standards IFRS S1 and S2. These amendments are described in Lever 6 of simplification in the Basis for Conclusions (BfC) (see Appendix 6). At the same time, however, the Amendments implemented for simplification reasons affect the level of interoperability with IFRS S1 and S2, as resulting from the joint EFRAG IFRS interoperability guidelines (May 2024). For example, reliefs beyond those in IFRS S1 and S2, described above, negatively affect interoperability. One of the Explanatory Memorandum (page 5) objectives is to further enhance the already very high degree of interoperability with global sustainability reporting standards. EFRAG prioritised the interoperability with IFRS S1 and S2, following the majority input gathered in the public call for input and outreach.Description of the changes To achieve this objective, EFRAG implemented the following changes, which aim to achieve a higher level of interoperability while being compatible with the objectives of the Amendments. In line with IFRS S1, emphasis has been put on ESRS being a fair presentation framework; materiality of information is now as general filter for the reported information. To remove one of the main interoperability differences, the ESRS E1 GHG emission boundary has been replaced by the financial consolidation approach (ESRS E1 AR19), aligned with the financial control approach in the GHG protocol, while a separate disclosure based on operational control is now required (and aligned with the corresponding disclosure in the GHG protocol) only for entities with more complex ownership structures (ESRS E1, AR 20). The IFRS reliefs (undue cost or effort, disclosure of ranges for quantitative financial effects) have been implemented, with the exception of the one on omitting commercially sensitive information about opportunities (pending the outcome of Level 1 discussions), the one allowing to omit Scope 3 GHG emissions when impracticable and the one allowing to omit quantitative financial effects when the undertaking does not have the necessary skills (please note that the relief on anticipated financial effects is treated in question 20). The implementation of reliefs that go beyond the ones in IFRS S1 and S2 results in new interoperability differences (see question 16). Language for requirements that are common to ESRS and IFRS S1 and S2 has been aligned whenever possible with the one in IFRS S1 and S2, in ESRS 1, 2 and E1. The reference to SASB Standards and IFRS Industry-based Guidance as a source of possible ("may consider") disclosure when reporting entity-specific sector information is now a permanent feature (before it was temporary, i.e. until the issuance of ESRS sector standards). The datapoint reduction resulted in the elimination of 7 "shall" datapoints aligned with ISSB standards described in Basis for Conclusions (BfC) (Chapter4). Several changes have been introduced to further advance interoperability in ESRS E1 (Basis for Conclusions (BfC), Chapter 4). Question Do you agree that these proposed Amendments achieve an appropriate balance between increasing interoperability and meeting the simplification objectives?	I partially agree and partially disagree	GIFAS members operate globally and have investors outside of the EU who may be asking for ISSB compliance or operating in jurisdictions planning to make ISSB standard compulsory. Any reporting duplication or discrepancy of principle should therefore be avoided. Nevertheless, in our view, the international standards shouldn't necessary be the absolute global baseline and some datapoints may remain specific to this framework without being always embedded in the ESRS. Indeed, to allow a real simplification of the ESRS without hampering the interoperability, any DP and DR which can be considered as less of a priority or too complex should be withdrawn from the standards and flagged in an appendix as necessary for the interoperability. It would enable any company needing to be interoperable an easy identification of what is needed without imposing an unnecessary burden on others.			
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	22.	Reduction in the number of mandatory and voluntary datapoints The Amendments have realised a substantial reduction in the number of mandatory (-57%) and voluntary (-100%) datapoints, described in the Basis for Conclusions (BfC), Appendix 3. The Explanatory Memorandum (page 6) specified that "the revision of the Delegated Act will substantially reduce the number of mandatory ESRS datapoints by (i) removing those deemed least important for general purpose sustainability reporting, (ii) prioritising quantitative datapoints over narrative text and (iii) further distinguishing between mandatory and voluntary datapoints, without undermining interoperability with global reporting standards and without prejudice to the materiality assessment of each undertaking." To achieve this objective, EFRAG undertook a systematic review of the datapoints, to eliminate the least relevant, i.e. those that are not strictly necessary to meet the disclosure objectives. Most of the deleted datapoints stem from the narrative PAT disclosures, where a less prescriptive and more principles-based approach has been implemented. Therefore, most of the deletions refer to narrative datapoints. In the context of such a systematic review, merging two distinct datapoints was not considered as a reduction. Do you agree that the proposed reduction in "shall disclose" datapoints (under materiality) strike an acceptable balance between burden reduction and preserving the information that is necessary to fulfil the objectives of the EU Green Deal?	I partially agree and partially disagree				
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	22.ESRS2	Comments on deleted datapoints in ESRS 2	I partially agree and partially disagree	GIFAS supports EFRAG's proposal, as planned in the Commission's mandate, to reduce the number of DPs by deleting the voluntary DPs, reducing overlap and increasing the focus on quantitative DPs with a reduction of the numerous narratives. Beyond the quantitative diminution of the number of DPs, companies highlight the difficulty to evaluate the concrete effect of that reduction on the reporting burden. Indeed, the quantitative DPs represent an important burden for companies considering the data collection in all the subsidiaries based in different countries with different legislations. GIFAS members note that some alleviations listed in the French proposals for a simplification have not been considered by EFRAG - notably the deletion of some difficult DPs - which, cumulatively, could enable a more significant decrease in the reporting burden. Therefore we believe that further alleviation is feasible and necessary.			
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	23.	Six datapoints exceptionally moved from "may" to "shall" In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, "may disclose" datapoints have not been transformed into mandatory ones (subject to materiality). In the context of the comprehensive revision of some of the DRs, to provide for more focused and relevant information, 6 datapoints have been moved from "may" to "shall" subject to materiality. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter Appendix 3. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	E3: GIFAS members do not have water meters installed at each point. Moreover, most industrial companies calculate their water consumption through estimations and modelling rather than by using the water balance approach. Consequently, these new datapoints contradict the principle of simplification create greater complexity, and increase the audit costs. E4: The notion of "transition plan" is not yet clearly defined. Companies explore the best ways to develop action plans on this highly complex subject, whether through national or international initiatives, but no official certification of such analyses and plans exists to date. Making this datapoint mandatory would discourage companies from taking initiatives, as it would trigger compulsory verification by auditors without existing auditing standards. Such a compulsory publication should be removed from the standard. G1-2 : Percentage of functions most at risk in respect with corruption and bribery should be included in G1-4 (sub topics). G1-4 : GIFAS strongly rejects the number of confirmed incidents. –It is irrelevant : it is not a reliable indicator to assess the effectiveness of the anti-corruption policies (a low number could mean a good policy to prevent the risks, a high number could mean a trustful reporting mechanism). –It is dangerous for EU competitiveness as it contradicts the right not to incriminate oneself guaranteed by the European Convention on Human Rights. Third countries authorities, such as the US Department of Justice, would investigate against EU companies to the benefit of their major strategic non-EU competitors who are not subject to similar reporting obligations. Finally, the specific point on CS3D and CSRD made in the recent joint statement on a US/UE framework on an agreement on reciprocal, fair and balanced trade, will lead to alleviate US companies from the main constraints of CSRD and create an unlevel playing field.

Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	24.	Four new mandatory datapoints (exception) In accordance with the simplification mandate received, EFRAG has adopted a general rule of not increasing the reporting obligations. Accordingly, no new "shall" datapoints have been added. In the context of the comprehensive revision of some of the DRs, to promote more focused and relevant information, 4 datapoints have been added. These exceptions are in the opinion of EFRAG justified. It is important to note that they do not add new obligations, as they refer to an already existing disclosure objective, but they make explicit a separate element of required information. In consideration of their very low number when compared to the overall datapoint reduction, they are not considered to jeopardise the achieved substantial simplification. On the contrary, their change of status improves the clarity of the reporting requirements. More details on these datapoints can be found in the Basis for Conclusions (BfC) Chapter 6. Do you agree that these exceptions to the general rule are appropriate and justified?	I disagree	E2-4: It must be reminded that the definition of secondary microplastics is not officially established, and their impacts are not yet clearly addressed by science. Companies wish that are entitled to refer to the relief on uncertainty when they consider official information is incomplete on this issue. E5-4: At present, the notion of critical and strategic raw materials may evolve over time with the development of the Critical Raw Materials (CRM) Act, and as the delegated acts deriving from the Eco-design for Sustainable Products Regulation (ESPR) are not yet approved. Companies consider this information hard to access and publish, particularly since these materials are often mixed with others. In this evolving context, this datapoint shall be inserted in the NMIG.			
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	25.	Emphasis on ESRS being a "fair presentation" reporting framework The Amendments clarify that ESRS is a fair presentation reporting framework, as it is for IFRS S1 and S2, with the expectation that this will support a more effective functioning of the materiality filter and reduce the check list mentality associated to the adoption of a compliance approach. Adopting fair presentation is expected to support a reduction in the unnecessary reported information and of the documentation needed to show that omitted datapoints are not material. The majority of the EFRAG SRB members consider that ESRS was already conceived as a fair presentation framework and interpret the CSRD as requiring it. A minority of the EFRAG SRB members think that the CSRD does not require fair presentation. They think that adopting fair presentation is not a simplification, due to the difficulty of exercising judgement of what is needed to fulfil the requirement, in particular for impact materiality where there are less established reporting practice. They think that the Amendments may result in increased legal risks and audit costs. Do you agree that explicitly requiring to adopt fair presentation in preparing ESRS sustainability statements will support a more effective functioning of the materiality filter, therefore enabling more relevant reporting and reducing the risk of excessive reported information?	I disagree	GIFAS members do not support introduction of "fair presentation" in the ESRS. EFRAG's rationale being to allow companies to focus on essential information and to avoid a compliance approach ; to enhance interoperability. Since the mandate given by the Commission is to reduce and streamline, new concept should not be introduced in the ESRS, especially when not clear. Fair presentation is a new concept not used in the Accounting Directive which only refers to "true and fair view" regarding financial statements. French and European stakeholders have diverging interpretations of potential impacts and consequences : for some key stakeholders, it means the addition of supplementary datapoints in the report and it increases liability for both preparers and auditors to reach completeness, thus not reducing the reporting burden. French auditors consider that they will have to perform more due diligences and that the audit burden will be increased. Regarding liability, companies highlights that consequences are different in a double materiality reporting framework than in a financial one given the number of affected stakeholders, the importance of narrative and forward-looking information required by the ESRS. EFRAG is trying to frame the double materiality assessment, stating that undertakings are not required to assess every possible IROs but this provision is not sufficient in case of litigation. As regards interoperability with the IFRS, the ISSB claims a level of interoperability of 95% regarding climate reporting. The remaining 5% are rather technical and clearly identified; they can be addressed directly without introducing fair presentation.			
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	26.	Exception for Financial Institutions' Absolute climate reduction Targets One of the implementation challenges noted by financial institutions relates to the requirement in ESRS E1 paragraph 26(a). This requires, when the undertaking has adopted GHG emissions intensity targets in conjunction with AR12 ("when only setting intensity targets"), to disclose also the associated absolute values" (refer also to Basis for Conclusions (BfC) Chapter 8). EFRAG SRB and SR TEG discussed whether an exception would be needed for insurance, banking and asset management sectors, but they decided that it would be appropriate to receive specific feedback before concluding. Those that support the exception argue that this information is not useful. They think that while for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. They also consider that estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. Those who oppose this exception note that complex estimates are common to all sectors. They also note also that both the information types of intensity and absolute targets are needed for a proper understanding of the undertaking's progress on climate and banks are no exception in this case. Intensity targets, while capturing efficiency, may mask rising emission levels. Absolute targets capture the total impact but fail to take into account the effect of business growth. They finally note that an exception only for financial institutions would result in an unlevel playing position for the other sectors.	I agree that financial institutions should be exempted from disclosing climate absolute GHG emission values targets when they have only set intensity targets	Financial institutions' GHG emissions typically stem from financing activities (Scope 3, Category 15), which means that their GHG emissions depend on companies and households that they finance. Therefore, too many hypotheses are needed to calculate targets in absolute value, and the results are neither reliable nor comparable, because they ultimately depend on clients. Moreover, absolute value targets are appropriate only for sectors where financing may be phased out due to lack of transition. While for fossil fuel sectors gradual de-commissioning is foreseen, emphasising the role of absolute targets for lenders and investors in all sectors would provide the wrong incentive, as high-emission sectors are those in need of transition financing. Estimating the absolute targets would require multiple assumptions (such as about the composition of the portfolios, the production capacity, the market shares and the level of emission intensity), making results unreliable and thus not leading to meaningful disclosures. For this reason, we strongly believe that financial institutions should be exempted from disclosing GHG emission reduction targets in absolute terms. Intensity targets alone should be sufficient.			
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	27.	ESRS S1: New threshold for reporting metrics disaggregated at country level Amended ESRS S1 changes the threshold for the requirement to disaggregate the metrics for Characteristics of the undertaking's employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of Amended ESRS S1). Refer also to Basis for Conclusions (BfC) Chapter 8. Instead of being defined based on at least 50 employees by head count representing at least 10% of the total number of employees, the requirement is now to disaggregate the metrics for the top 10 largest countries by employee headcount, to the extent that there are more than 50 employees in those countries. A minority of EFRAG SRB members noted that this change could trigger, in some cases, an increase in the number of countries to report on for these two disclosures, and so an increased burden to prepare the information. The majority of EFRAG SRB members supported the change because the current requirement has led to limited information available by country. In addition, the information is usually accessible, so the burden to prepare the information per the new requirement is estimated to be limited. If you intend to provide feedback also on Part 3 of this questionnaire, please note that by answering this question, to avoid duplication of input, you will not be allowed to include comments on DR ESRS S1-5 and ESRS S1-7 in Part 3. Your comments on those provisions will only be provided here. Do you agree with the change to the threshold for country-by-country disclosure for the DRs ESRS S1-5 and ESRS S1-7?	I disagree	GIFAS members have analysed the new definition of the threshold above which it is necessary to break down indicators relating to the characteristics of company employees, collective bargaining coverage and social dialogue in the European Economic Area (S1-5 and S1-7 of the amended version of ESRS S1). They are not in favour of this change in the definition of significant company workforce because they consider that: –the information is difficult to gather, –it involves a significant burden in terms of preparing information for companies that sometimes have a small workforce in these countries –when a company employs a small number of employees, the information will not be relevant for assessing the social or HR policies implemented. A top10 desagregation would lead companies to disclose non-material information (less than 10% of the workforce) which contradicts the objective of simplification. They therefore wish to return to the previously proposed definition, both for DR S1-5 and S1-7, but also for the majority of DRs, in particular S1-9.			
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	28.	ESRS S1: Calculation approach to adequate wages outside the European Union (EU) The Amended ESRS S1 reflects an amended methodology for the calculation of non-EU adequate wages set out in the Application Requirements (ESRS S1 AR 22). This change draws on language from different parts of the agreement on the issue of wage policies, including living wages, adopted by the ILO Governing Body in 2024, after the ESRS Delegated Act was adopted. A minority of EFRAG SRB members flagged three interrelated concerns: (1) the reference to wage-setting principles risks disclosures of minimum wages that fall well-below an adequate wage standard, (2) the hierarchy requires companies to only assess relevant living wage data sets as a last resort, and (3) the DR/AR does not require companies to disclose which prong of the methodology is used, which leads to lack of comparability. In consideration of the complexity of this issue, EFRAG is running a targeted field test and is interested in involving a diversified sample of companies. This entails participating in dedicated working sessions with EFRAG Secretariat where the company is expected to present how the revised methodology is feasible and relevant in practice (refer to the non-EU hierarchy described in ESRS S1 paragraph AR 22 (b) i) to iii) to ensure transparency and comparability on this issue. A dedicated questionnaire will be sent directly to the companies participating in the test to allow for their preparation. The working sessions will take place between 8 and 26 September. To confirm your interest in participating to the field test on Adequate Wage please send an email to fieldtestadeqwages@efrag.org by August 18, 2025. Do you agree with the proposed change to the methodology for the calculation of non-EU adequate wages in ESRS S1?	I agree	GIFAS is satisfied with the amendment made to AR 22. Outside the EEE, we believe it is entirely appropriate to compare the lowest wages in the company with the statutory minimum wage established by legislation or collective bargaining; and where these do not exist, to use the benchmarks developed by the ILO – a tripartite international organisation – on living wage estimates rather than resorting to consultants or private organisations.			
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	29.	SFDR and other EU datapoints in Appendix B of Amended ESRS 2 The Omnibus proposals have not changed the general objective of supporting the creation of the data infrastructure necessary for implementing the Sustainable Finance Disclosure Regulation (SFDR). Input from investors confirms the need to implement the correct flow of information from their investee. However evidence also suggests some of the Principal Adverse Indicators (PAI) are not considered relevant in practice. As part of the systematic review of the datapoints for their reduction, EFRAG has assessed the relevance of the SFDR PAIs, as well as the level of coverage of them resulting from the general datapoint reduction. Appendix 4 of the Basis for Conclusions (BfC) illustrates how the EU datapoints in Appendix B of ESRS 2 (now Appendix A of Amended ESRS 2) have been modified. The key changes for Environmental standards (ESRS E1-E5) are : (a) 8 SFDR PAI sensitive DPs have been deleted but they were either overlapping with other DPs or can be derived from other information (E1-5, para.38, 40-43; E1-6 para44, 53-55; E3-1, para 14; E3-4, para 29; E5-5 para 37 (d) and 39); (b) 1 SFDR PAI sensitive DPs in Appendix B (indicator number 12 Table #2 of Annex) was removed, following EFRAG's approach of reducing the content provisions related to PAT under topical standards. This refers to the topic of marine resources, which is not in scope of ESRS E3. The key changes for Social standards (ESRS S1-S4) are: (a) this was a consolidation exercise. Firstly, for the policies related to human rights and for the alignment with UNGP and OECD MNE Guidelines (two SFDR PAI number 9 Table #3 and Indicator number 11 Table #1 of Annex 1), eight datapoints from the four Social standards have been merged into a "human rights policy" in ESRS 2 GDPR-P, for the four affected stakeholder groups. Secondly, the indicator in relation to severe human rights cases (SFDR PAI number 14 of Table #3 and number 10 of Table #1 of Annex 1) have been merged into one and it is maintained across the four Social standards. (b) a small number of amendments on the scope has taken place for SFDR PAI Indicator 3 of Table #3 in relation to days lost. Fatalities (ESRS S1-13) has been deleted from its scope. The scope of revised human rights incidents datapoint (ESRS S1-16, S2-3, S3-3, S4-3) is now clarified. There were no changes in the ESRS G1. In conclusion, despite the general significant reduction in DPs, the coverage of SFDR PAI has been only marginally reduced and thanks to a limited number of amendments, the relevance of the corresponding information is increased. Do you agree with the way the SFDR PAI have been incorporated in the Amended ESRS? You are invited to explain the reason why you agree or disagree and to provide your suggestions for improvements or alternative simplification proposals, if any.	I partially agree and partially disagree	Simplifications brought in the ESRS must trigger changes in other regulations of the sustainable finance framework to ensure consistency between the different pieces of legislation. In particular, the upcoming review of SFDR should lead to deleting some PAI that are not particularly relevant and introduce a materiality principle. PAI should be strictly based on the information required by the ESRS and not impose additional disclosure requirements to investee companies. Prudential obligations need to be reviewed accordingly.			
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	30.	ESRS E4 DR E4-4: Application requirement to guide undertakings in setting biodiversity- and ecosystems-related targets As part of the simplification process, E4-4 (targets) disclosure specifications and application requirements have been mostly removed. In this context, methodological guidance for companies to what biodiversity and ecosystems-related targets can cover would be helpful. ESRS SET 1, E4 AR 26) outlines aspects that targets can address, including in relation to the size of areas protected or restored, the recreation of natural surfaces or the number of company sites whose ecological integrity has been approved. While this AR could be kept in the revised ESRS E4, some stakeholders highlighted that it could be further reviewed to better reflect latest trends in the evolving methodological landscape related to biodiversity and a stronger alignment with relevant content from science-based frameworks such as SBTN. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the review of AR 26 in Amended ESRS E4?	I agree	GIFAS members welcome the intention to provide guidance for companies in setting biodiversity targets, provided that the future application guidance remains voluntary and is integrated into the NMIG.

Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	31.	ESRS S1 DR15: Gender pay gap Some of the feedback obtained during the public outreach on the Remuneration metrics (ESRS S1-15), which are derived from the SFDR PAI, was to revisit the gender pay gap ratios and consider replacing it by the adjusted gender pay by employee category or, in some cases, by country. The gender pay gap metric in set 1 is aligned with the Pay Transparency Directive, (EU) 2023/970, where the unadjusted ratio is required as a global percentage and the adjusted gender pay gap by employee category is a voluntary ("may") datapoint. The voluntary datapoint of adjusted gender pay gap by employee ratio has not been included in Amended ESRS S1, following careful analysis and consideration of the EFRAG SRB where the pros and cons of changing the basis for gender pay gap were weighted. The conclusion reached was to maintain the global unadjusted pay gap and delete the adjusted gender pay gap by employee ratio that is a voluntary datapoint in set 1. The deletion of voluntary datapoints obey to the general approach in the revised architecture. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Do you agree with the deletion of the voluntary datapoint on adjusted gender pay gap?	I disagree	With regard to remuneration, whether it be the pay gap or the ratio (S1-15), companies question the value of unadjusted indicators that do not provide any useful information and which, if reproduced without contextual explanation, may contribute to damaging their reputation. The adjusted pay gap is the only metric that directly measures compliance with the principle of "equal pay for equal work or work of equal value."			
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	32.	ESRS G1 DR G1-2 and G1-6: Payment practices The revision of ESRS G1 has led -among others - to the deletion of former paragraphs 14 and 33(a), addressing "payment practices" (within the context of management of relationship with suppliers). These datapoints have been replaced by the PAT provisions and an additional specification for SMEs in paragraph 33(b). However, this deletion may still reduce visibility on how undertakings engage with and support SMEs. If the respondents intend to comment on the respective paragraphs of Section 3, they will not be permitted to do so. Is the current replacement/formulation sufficient to meet the objectives of the CSRD in respect to the protection of SME's?	I disagree	GIFAS members are in favour of deleting paragraph 14, which poses a feasibility problem for companies with tens of thousands of direct suppliers. This disclosure requirement raises the question of how to identify SMEs around the world: what definition should be applied in non-EU jurisdictions ? It is therefore impossible to calculate and provides no useful information (payment terms can differ between economic sectors rather than based on the size of companies). Companies consider that paragraph 14 should be deleted. In addition, this requirement is not aligned with Directive 2011/7 of 16 February 2011 on combating late payments in commercial transactions which does not make any distinction based on the size of companies.			
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	33.ESRS1.	ESRS 1:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree

Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1). In this question you are allowed to provide your overall opinion on the level of simplifications achieved per each standard. You can choose to reply to one or more of the Standards. If you intend to comment also at level of single DR in Part 3 of this questionnaire, you are kindly invited not to repeat the same content twice (here and in Part 3). You can access the Exposure Drafts of the Revised ESRS and the amended Glossary at this link. In case you would like to see the rationale behind the amendments, you can access the Log of Amendments and the markup of the Annex II (Glossary) at this link.Do you agree that the proposed Amended ESRS strikes an appropriate balance between the need for significant simplification and meeting the core objectives of the European Green Deal?	I partially agree and partially disagree				
Survey	GIFAS (Groupement des Industries Françaises Aéronautiques et Spatiales)	Business association (other than association of financial institution)	France	33.E_3.	ESRS E3:33. Overall feedback per standard The 12 ESRS Standards have been simplified. The Glossary (Annex II to the 2023 ESRS Delegated Act) has been amended to reflect the changes in the Standards. This includes the reduction of datapoints, the clarification of several provisions that created implementation issues, the enhancement of readability and streamlining of their structure and content. Amendments to the 12 Standards have been designed and implemented to achieve a substantial reduction in reporting efforts, while maintaining the core content that is needed to meet the objectives of the European Green Deal. Please note the following requirements that were not changed in the Amended ESRS as recommended by the EC representatives, as they are subject to ongoing developments on level 1 regulation: 1. Definition of value chain for financial institutions (ESRS 1); 2. Exemption from consolidating subsidiaries by undertakings that are financial holdings (ESRS 1); 3. Relief for omission of confidential/sensitive information (ESRS 1); 4. Phasing-in provisions (ESRS 1); 5. Clarify the meaning of '"compatibility with 1.5 degrees'" for the Transition Plans disclosure (ESRS E1).
